At the beginning of September, Soviet broad-front attacks came to a standstill. Not only was Operation BAGRATION against Army Group Centre at an end but, to the Germans' surprise, a sudden relaxation of the overwhelming pressure was also noted in the sector of Army Group North. During the ensuing pause in operations, the usual ritual took place. The army generals tried once again to get Hitler to agree to withdraw from the Baltic area, and the Finnish government's decision on 2 September to withdraw from the coalition with Germany added two more arguments to their arsenal. On the one hand, there was no longer any need to take political account of their former Axis partner. On the other, the Finnish armistice had released so many Soviet troops in Karelia for deployment in the neighbouring Baltic area that there was no longer the slightest chance of being able to carry on defending that exposed territory. Guderian, above all, now thought the most favourable time had come to push through the 'major solution' for which he had long been calling. On 5 September he told Army Group North's chief of staff that evacuation of the Baltic area 'could not be avoided and that he would certainly be needing the units of Army Group North very soon at other threatened places on the eastern front'.<sup>56</sup> Significantly, he asked him to 'make the preparations for implementation of this decision in a camouflaged manner'<sup>57</sup>—a conspiratorial precaution that speaks volumes, given the relationship between the generals and Hitler. In the event, the attempt to get the Führer to change his mind failed once again. On 6 September Guderian nevertheless instructed Army Group North HQ to make the necessary preparations for the evacuation of Estonia in accordance with a game plan, code-named 'Königsberg', drawn up by the army group in secret in the preceding weeks. The OKH chief of staff stressed that 'the preparations must be practical, and not only on paper'.<sup>58</sup> In so doing, Guderian riskily embarked on the opposite course to Hitler, if only in secret. Significantly, he refused to 'issue anything in writing'.<sup>59</sup>

Finland's withdrawal from the Axis coalition made the German naval command nervous, and it promptly overreacted. Grand Admiral Dönitz feared a thrust by the Soviet fleet from the Bay of Finland, and therefore wanted to occupy the Finnish island of Hogland (Suursaari). A plan code-named 'Tanne Ost' had already been prepared for the purpose, but it was considered controversial even within the Naval War Staff because of doubts as to whether the German mine barriers could be monitored from the island. Moreover, Hogland would be hard to capture and very difficult to supply in the longer term. The Luftwaffe thought it would also be

<sup>56</sup> KTB HGr Nord, 5 Sept. 1944, BA-MA RH 19 III/318, fo. 49.

<sup>57</sup> Ibid.

<sup>58</sup> Ibid., 6 Sept. 1944, fo. 58. See also Forwick, 'Der Rückzug der Heeresgruppe Nord', 106.

<sup>59</sup> KTB HGr Nord, 6 Sept. 1944, BA-MA RH 19 III/318, fo. 58.

unable to take on the task. Above all, the idea was rejected by the army generals, who were still intent on evacuating Estonia. The OKH was therefore excluded from the planning process, and the Naval War Staff went ahead with the project on its own. In comparison with the perfectionism with which lighting actions such as the attack on the Belgian fort of Eben Emael were planned and rehearsed up till then, the negligence displayed in this case is truly amazing. The decisive mistake on the part of the Naval War Staff was its assumption that, despite the changed political situation, the Finnish garrison on the island would put up no, or only symbolic, resistance to its erstwhile German ‘brothers-in-arms’.<sup>60</sup> In fact, it was clear to Finland’s military leadership that it was obliged to engage in a demonstrative act of resistance; otherwise the Soviet government would be given an excuse to break its guarantee of Finnish neutrality. The Finnish troops were therefore determined to defend the island to the last extremity.

On 12 September, on advice from Dönitz, Hitler gave the order to begin the operation. Two days later an improvised German unit consisting of minesweepers, S-boats, and landing craft set out under the command of Capt. Mecke. On board were parts of an infantry regiment, reinforced by naval artillery units. The amateurish operation was conducted so hastily that there was not even a radio link with Admiral East Baltic. It ended in fiasco. Above all, the Finns were warned by a prior German call for peaceful surrender, and opened fire by surprise on the far-too-weak landing force. The Soviet air force also intervened. The attempted landing began on 15 September shortly after midnight and failed the same day, leaving 132 dead, 1,200 captured, and several vessels sunk.<sup>61</sup> As one author puts it, ‘the most senseless German operation of the year 1944 was over’.<sup>62</sup> In comparison with the army’s operations, Dönitz’s Hogland escapade was merely a marginal curiosity. It is nevertheless of symbolic importance, since it clearly reveals the divergent forces within the German leadership. While the operations staffs of the army and Luftwaffe wanted to withdraw southwards from the Baltic area, Dönitz and Hitler were bent on taking possession of an exposed island in the far north.

How senseless it really was to give even a moment’s thought to holding on to Estonia is clear from the massing of Soviet forces that was taking place at the same time, which was no secret to the German command. On 14 September, the very day on which the German ships set out for Hogland, Army Group North was hit by the most powerful offensive that its units had ever experienced. The Soviet command, seeking the decisive blow, was out to enclose the German troops positioned north of Riga in Estonia and northern Latvia. In the offensive now beginning, it deployed four army fronts with a total of 1,546,400 men. They comprised 14 armies and one armoured army, totalling 135 divisions, six armoured corps, and one mechanized corps, as well as other independent units.<sup>63</sup> They were

<sup>63</sup> *Grif sekretnosti sniat*, 208.

supported by 17,480 cannon and grenade launchers, 3,080 tanks and assault guns, and 2,640 combat aircraft.<sup>64</sup>

Given the enemy's overwhelming superiority, it seemed illusory for Army Group North to attempt to hold a front more than 700 kilometres long with its two-and-a-half armies. In August it had suffered losses of 70,566 men and had received only 41,839 in replacement.<sup>65</sup> Only the shortage of armour had been somewhat relieved. Whereas in July, Army Group North essentially had only one armoured battalion (502nd Heavy Armoured Battalion) at its disposal, it had since been reinforced by 14th Armoured Division and the two armoured brigades of the Lauchert Group (formerly the Strachwitz Group). That brought the number of operational tanks, of which there had been only 30 on 30 June, to 262. At the same time, the number of assault guns had risen from 206 to 299.<sup>66</sup> The newly brought-in armoured units had been taken from the hard-pressed Army Group Centre, as Hitler wanted to transfer as many forces as possible to the Baltic area, his favoured theatre of operations. Air Fleet 1 also received considerable reinforcements. Instead of 137 operational aircraft on 26 June, it had 321 on 5 September (see Table V.IV.1). That rate of increase seems enormous, but compared with the Red Army, whose army fronts in the Baltic area had, as we have seen, over 2,640 combat aircraft at their disposal (excl. long-range aircraft), it hardly weighed in the balance.

Beginning at 04.00 hours on 14 September, the German front between Lake Peipus and Šiauliai was subjected to a ninety-minute artillery barrage 'of hitherto unimagined force'.<sup>67</sup> At the same time, Soviet aircraft attacked *en masse*. The Red Army broke through in several places, above all at Bauska to the south of Riga. The following day Col.-Gen. Schörner applied to the OKH for permission to proceed with Operation ASTER, the new name given to the 'Königsberg' game plan for the evacuation of Estonia.<sup>68</sup> Despite his position as OKH chief of staff, Guderian had no power to authorize major withdrawals, and so he referred Schörner to Hitler. Schörner flew to Führer headquarters on 16 September, and presented the situation in such dramatic terms that Hitler gave permission for the evacuation of Estonia and northern Latvia after only fifteen minutes.<sup>69</sup> The movement was initiated by Army Detachment Narva in the night of 18 to 19 September. The units stationed right in the north, on the Bay of Finland, withdrew along the coast to Riga. From there, as well as from other Estonian ports, German naval units evacuated a total of 108,825 persons by sea from 17 to 23 September.

<sup>64</sup> *Deutschland im zweiten Weltkrieg*, vi. 2.

<sup>65</sup> KTB HGr Nord, 21 Sept. 1944, BA-MA RH 19 III/319, fo. 132. The same entry gives the actual strength (on paper) at 1 Sept. 1944 as 571,579 men and 42,833 paramilitary auxiliaries. That figure seems irrelevant to a comparison of strength, however. What was decisive was the daily strength of the divisions and independent combat units, i.e. 215,664 men at the beginning of July. No corresponding figures are available for August and September.

<sup>69</sup> KTB HGr Nord, 15 Sept. 1944, 'Punkte für Führervortrag am 16.9.44', BA-MA RH 19 III/318, fos. 189–94. See also KTB, 16 Sept. 1944, RH 19 III/319, fo. 3.

Their number was made up of 46,168 soldiers, 13,049 wounded, 26,131 civilians, and 23,474 prisoners of war.<sup>70</sup> The remaining units of Army Detachment Narva, whose staff was subsequently disbanded, withdrew southwards into the sector of Eighteenth Army, while the latter, on Schörner's orders, pulled back to the Segevold line in the forefield of Riga. Operation ASTER was brought to a close on the morning of 27 September. The Red Army had tried in vain to prevent the German withdrawal, mainly by attacking at Tartu and Valga. Nevertheless, despite heavy pressure from the Soviet forces, Army Group North managed to evacuate Estonia and northern Latvia in good order.

The point of concentration of the fighting during Operation ASTER, however, was in the sector of Sixteenth Army south-west of Riga, where the enemy did everything in its power to cut off the German units by means of a thrust to the coast. The situation had already attained critical proportions by 19 September, when the Soviet attacking units reached Baldone, only 20 kilometres from the outskirts of Riga. Developments further west in the Tukums sector were considered equally serious, with strong enemy forces, separated from the coast by only a narrow corridor, standing ready to attack. Army Group North was now threatened with a repeat of the Soviet attack of 31 July, which had cut it off in exactly the same place. It was perfectly clear that, without support from Army Group Centre, it would be unable to prevent a breakthrough. There was also repetition on the German side, since, from the operational viewpoint, the planned supporting attack by units of Army Group Centre was strikingly similar to Operation DOPPELKOPF, which had been carried out in the same place in August. The difference was that the second armoured operation, code-named 'Caesar', was preventive—a relief attack with a limited objective. The plan was for the German tanks to hit the Soviet attacking forces before they were in a position to break through Army Group North's positions and reach the Gulf of Riga. To that end, Army Group Centre was to mass its mobile units on the left wing in the area of Third Armoured Army.<sup>71</sup> Execution of the attack was entrusted to XXXIX Armoured Corps, comprising 4th and 7th Armoured Divisions, parts of 5th and 12th Armoured Divisions, and Armoured Infantry Division 'Grossdeutschland'. The attack was launched on 16 September, with a total of 323 tanks and assault guns. The surprise effect was so great that a breakthrough was achieved immediately. The German units advanced from Auce to Dobele, where the operation was broken off on 18 September. Although the territorial gain was small, the indirect effects were very important in two respects. For one thing, the Soviet attacking units were unable to exploit their tactical breakthrough at Baldone, south of Riga, because they now had to use their reserves to fend off the armoured thrust by Army Group Centre. Above all, the planned Soviet thrust towards the coast at Tukums could not even

<sup>70</sup> KTB Skl, pt. A, lxii/I, 3 Oct. 1944, 72, fo. 42. See the chapters by Werner Rahn in vol. x of the present series.

begin, since the attacking units brought up for the purpose were under attack from the rear.<sup>72</sup>

Given the balance of forces, this was yet another astonishing defensive success for the Germans.<sup>73</sup> On 24 September, when the Red Army ceased its attacks on Army Group North, it nevertheless did not suspect that the enemy was scarcely capable of continuing the fight. Schörner had told Guderian: 'It's hard for me to say this, but we're finished.'<sup>74</sup> He subsequently informed him that 'our own divisions are no more than weak combat units'.<sup>75</sup> Many of the German units were down to their last remaining stocks of fuel and ammunition, and the Luftwaffe was also largely paralysed by logistical bottlenecks. From the Soviet viewpoint, the outcome of the offensive, especially in the direction of Riga, was highly unsatisfactory. The Red Army had been unable to prevent an orderly German withdrawal from Estonia, despite doing its utmost to split the units of Army Group North and cut them off. In effect, it had achieved the opposite of its original intention, since Schörner had managed to concentrate all his units around Riga, making an attack on that important city considerably more difficult than it had been at the start of the offensive.<sup>76</sup> As a result, the Stavka changed its whole plan of attack and switched the main direction of thrust from north to west.<sup>77</sup> Army Group North was no longer to be enclosed by means of a thrust to the Gulf of Riga but by a thrust to the Baltic coast at Memel. The attacking forces were restructured for that purpose, the whole point of main effort now being on the left wing, with the hugely reinforced 1st Baltic Front. The new operational plan showed that the Soviet command had learned well from its mistakes. Now an offensive was to be launched against East Prussia at the same time, to prevent Army Group Centre from once again coming to the help of its neighbour to the north.

With the Red Army preparing to deliver a new blow, it was now Army Group North's last chance to escape enclosure by withdrawing south through the Tukums corridor, which it had narrowly managed to hold. Furthermore, its neighbour, Army Group Centre, was not in a position to repel a new major offensive on its own. The Red Army was concentrating strong attacking units immediately before the East Prussian border too, so that every single unit of Army Group North, especially every armoured unit, was urgently needed as reinforcement.<sup>78</sup> To general amazement, however, Hitler even transferred Third Armoured Army from Army

<sup>72</sup> On this, see Niepold, *Panzeroperationen*, 87–99, 114; BA-MA, Study ZA 1/2047, 911–12, and Study ZA 1/2054, 107–8; Grier, 'Hitler's Baltic Strategy', 126.

<sup>73</sup> The ferocity of the fighting to repel this Soviet offensive is shown by the following comparison: whereas the total number of enemy tanks reported shot down from 22 June to 13 September was 1,900, the corresponding figure for the short period of time from 14 to 30 September was 1,192; see 'Feindliche Panzerverluste vor Heeresgruppe Nord 1944' in KTB HGr Nord, 28 Nov. 1944, CAMO, F. 500, Op. 12459, d. 80, fo. 393.

<sup>74</sup> KTB HGr Nord, 17 Sept. 1944, BA-MA RH 19 III/319, fo. 25.

<sup>75</sup> Ibid., 19 Sept. 1944, fo. 82. <sup>76</sup> Grier, 'Hitler's Baltic Strategy', 131.

<sup>77</sup> Muriev, 'Nekotorye kharakternye cherty', 26 ff.

<sup>78</sup> Guderian was mistaken in supposing (*Erinnerungen eines Soldaten*, 320, 322, 341) that Schörner halted the oncoming Army Group North armoured units at Jelgava on his own authority, contrary to a strict directive from the OKH. In reality, the commander-in-chief of Army Group North had no freedom of action in the matter, owing to an 'extremely categorical Führer order'; see BA-MA, Study ZA 1/2047, 1064.

Group Centre to Army Group North. Obsessed with offensive operations, he intended to deploy it in yet a third armoured thrust, after Operations DOPPELKOPF and CAESAR, against the salient between Šiauliai and Jelgava, in order to cut off the Soviet troops in the northern part of the salient and thus shorten the front.<sup>79</sup> In the event, there was no time to launch the new operation, code-named 'Blitz', because the Soviet offensive in the direction of Memel had already started.

The Red Army used the pause between the Riga and Memel operations to take possession of the Baltic islands to the west of Estonia.<sup>80</sup> Although Hitler wanted to hold the islands at all costs in order to shield the Gulf of Riga, Army Group North HQ thought this was unrealistic since there were no forces available for the purpose. In 1941 there had been seven Soviet divisions on the island of Saaremaa alone, but the German landings had not been prevented. In September 1944 Army Group North was able to send only 23rd Infantry Division, which had been decimated in previous fighting, to defend the islands. On the other side, Leningrad Front had marshalled 78,000 men for an amphibious operation.<sup>81</sup> On 26 and 29 September respectively, Soviet units took possession of the islands of Vormsi, abandoned by the Germans, and Muhu, which was only lightly defended. On 2 October they landed on Hiumaa, which was cleared after a brief fight. The only sustained fighting was on Saaremaa, where the Soviets' first landing took place on 5 October. In the end, the German garrison withdrew south to the Sörve peninsula, whose isthmus was defended by a blocking position. Possession of the finger-shaped peninsula opposite Courland was considered important by the German naval command because from there it was possible to conduct an effective fight against a breakout by Soviet naval units from the Gulf of Riga into the Baltic Sea.<sup>82</sup> The naval command accordingly supported the army garrison with artillery fire from ships' cannons. Nevertheless, by the beginning of October all of Estonia was lost, except for a small peninsula.

#### 4. THE FINAL SEPARATION OF ARMY GROUP NORTH IN COURLAND

##### (a) The Soviet Advance to the Baltic Coast in October

While the Red Army's attacking units in the Baltic were being continuously reinforced, above all by the troops freed up on the former Finnish front, the condition of Army Group North was visibly worsening. September's defensive success had been achieved at the cost of considerable losses, and 37 battalions had

<sup>79</sup> Ibid. 925–6; Grier, 'Hitler's Baltic Strategy', 130–1.

<sup>82</sup> KTB Marineoberkommando Ostsee: Annex 3 to KTB section 16 to 30 Sept. 1944: OKM 1. Skl. Eins A 31447/44 Gkdos.: Telex 17 Oct., 23.10: 'Bedeutung Halbinsel Swörbe für Seekriegsführung', BA-MA RM 31/3217, fo. 359; Marineoberkommando Ostsee—Führungsstab—B.No. Gkdos 600/45, 17 Mar. 1945: 'Rückblick auf die wesentlichen Ereignisse und Aufgaben im Bereich MOK Ost im Kriegsjahr 1944', BA-MA RM 31/3219, 12–14, fos. 244–6.

to be disbanded. Even so, the average combat strength of the remaining battalions was no more than 150 men.<sup>83</sup> The Luftwaffe too, which had repeatedly compensated for army weaknesses in the previous years of the war, could no longer provide any support worth mentioning. On 3 October Air Fleet 1 had only 267 operational aircraft at its disposal and not a single bomber.<sup>84</sup> Above all, the assignment of Third Armoured Army to Army Group North did not prove to be of much benefit, since its front now stretched almost 200 kilometres further south, as far as Memel, and it was precisely in that section that the point of concentration of the imminent Soviet offensive had been detected. After the conclusion of Operation CAESAR, the armoured units temporarily assigned to it from Army Group Centre had been withdrawn again, so that Third Armoured Army now had only one armoured division and five infantry divisions. Although the endangered section of the front had been specially reinforced, only an average of 86 men (combat strength) and one artillery cannon could be deployed per kilometre.<sup>85</sup> Moreover, there was so little fuel left that most of the motorized units were no longer even capable of tactical manoeuvres.<sup>86</sup> In previous weeks the Red Army had made astonishing mistakes, especially during the attack on Riga, and given proof of striking weaknesses in operational technique. It did not understand how to turn its manifold superiority to best advantage and failed to exploit tactical successes at operational level. Now, however, it put up a remarkable performance in moving the point of concentration to the south in a very short time. Within six days some 500,000 men, 9,300 artillery cannon, and 1,340 tanks and assault guns were moved to reinforce the units already in the starting position.<sup>87</sup>

On 5 October Third Armoured Army's positions in the section to the west of Šiauliai were subjected to a powerful artillery barrage, accompanied by massive bombardment by the Soviet air force.<sup>88</sup> There then ensued an attack by a total of seven armies, plus strong armoured forces.<sup>89</sup> The first wave consisted of 2nd and 6th Guards Army, 43rd Army, and 4th Shock Army. It was followed by a second wave consisting of 5th Guards Armoured Army and 51st Army, while 39th Army (belonging to 3rd Belorussian Front) pressed forward on the left wing towards Tauragė. The hopelessly inferior German Third Armoured Army could expect only little support, since shortly afterwards Army Group North's two other armies were also attacked by 2nd and 3rd Baltic Fronts. By 7 October the breach in Third Armoured Army's lines was already 50 kilometres wide, and on 10 October Soviet advance forces reached the Baltic coast at Palanga, to the north of Memel. Although XXVIII Army Corps had managed to withdraw to the port of Memel and establish a bridgehead on the coast,<sup>90</sup> Army Group North was cut off for the second time, this time for good.

<sup>89</sup> Including, e.g., I and XIX Armoured Corps.

<sup>90</sup> On the fighting for the Memel bridgehead, which was not evacuated until the end of January, see Kabath, 'Seebrückenköpfe', 219 ff.

The OKH planned a pincer attack by units of Army Groups Centre and North to explode the enclosing corridor. On 11 October Third Armoured Army was reassigned to Army Group Centre for that purpose. Meanwhile, Army Group North attempted to establish a new southern front running from Mažeikiai to the coast, south of Liepāja, to block the Soviet breakthrough. Its only possibility of releasing forces for that purpose was to abandon Riga and withdraw behind the Tukums line on the eastern coast of Courland. But Hitler stubbornly ordered that Riga be held. Thereupon Schörner flew to Führer headquarters on 11 October and finally managed to get permission to withdraw to Courland. It should not go unmentioned that Schörner had already begun the withdrawal of Sixteenth Army from the Latvian capital, Riga, on his own authority.<sup>91</sup> As a result, it proved possible to complete the complicated manoeuvre by 17 October.

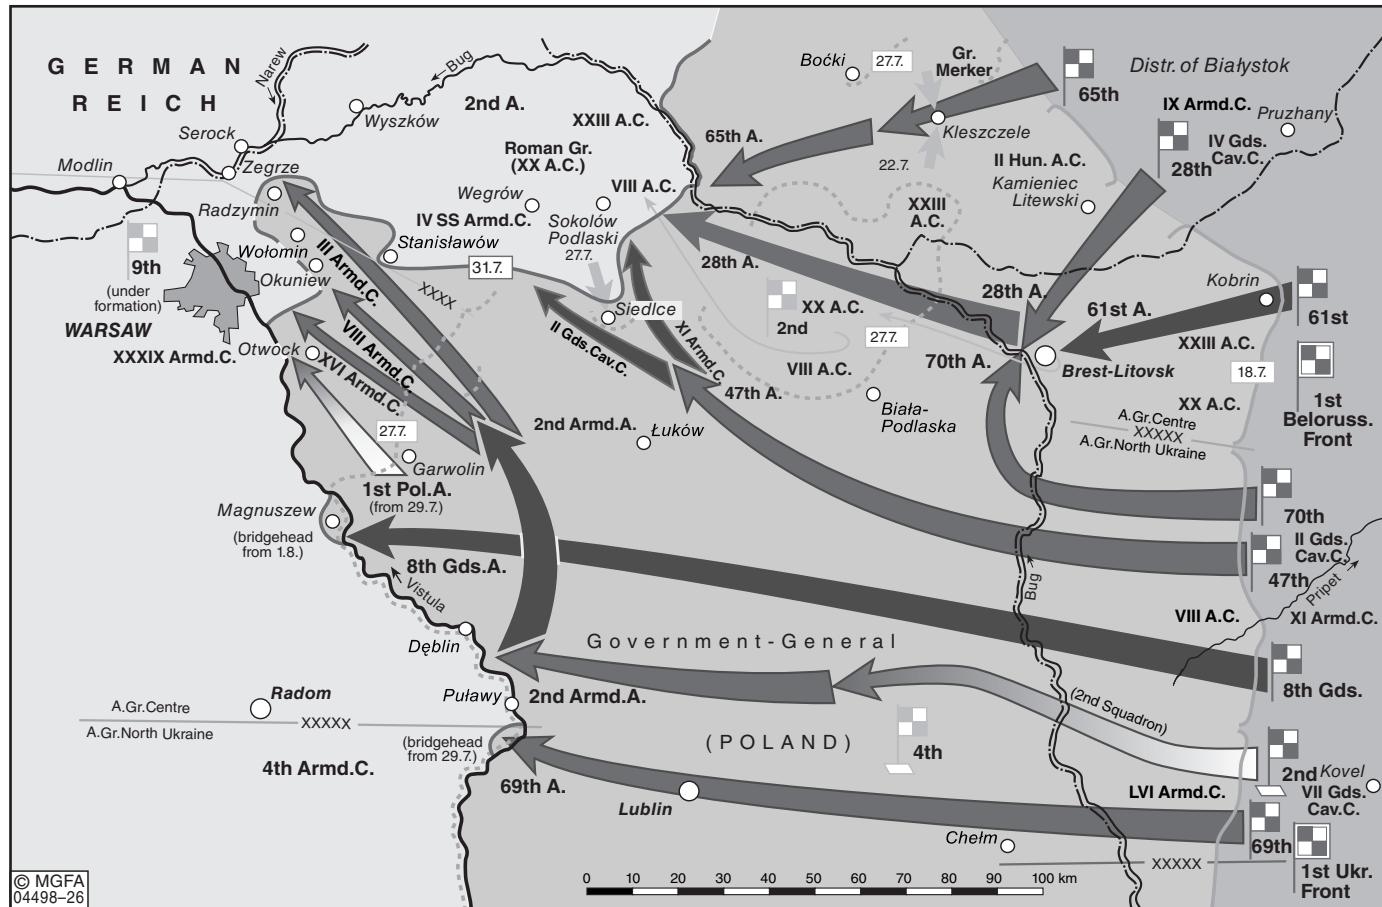

The pincer counter-attack by Army Groups Centre and North was supposed to begin that same day, but the previous day the Red Army opened two new offensives with its virtually inexhaustible forces. One thrust, discussed in a later chapter, was directed at the left wing of Army Group Centre in East Prussia (towards Gumbinnen). The other, carried out by 1st and 2nd Baltic Fronts, struck Army Group North, which was enclosed in Courland. Once again the German counter-attack had to be called off, since the newly occupied blocking front threatened to collapse. The main thing was to prevent a Soviet breakthrough on the right wing, on the coast, to the important port of Liepāja. There now arose one of the worst crises that Army Group North had ever had to face. Its still unconsolidated front came under continuous attack by far superior Soviet units. For the Red Army, which repeatedly conducted unsuccessful offensives with enormous losses in this very sector right up to the end of the war, this would have been its greatest chance to overrun the German troops, who were fighting from hastily occupied positions. But rapidly improvised attacks were not the Soviet staffs' strong point, and their middle-level commanders in particular showed very little flexibility. The German units managed *in extremis* to prevent an operational breakthrough to Courland and thus avoided total collapse. On 20 October the Red Army halted its offensive. It had by no means achieved its perfectly realistic aim of smashing Army Group North. The intensity of the attacker's efforts is shown by the casualty figures. Above all, in the offensive directed at Riga and Memel, which lasted from 14 September to around 20 October, personal losses amounted—according to Soviet figures—to 280,090 men, of whom 61,468 dead or missing.<sup>92</sup> At the same time, 522 tanks and self-propelled guns, 2,593 cannon, and 779 aircraft were lost.<sup>93</sup> For Army Group North, the files show only the personnel losses for the month of October, which totalled 30,834 men.<sup>94</sup>

<sup>91</sup> Grier, 'Hitler's Baltic Strategy', 136; Haupt, *Heeresgruppe Nord*, 246.

<sup>92</sup> *Grif sekretnosti sniat*, 208. The individual major formations were deployed for different lengths of time: 1st and 2nd Baltic Fronts from 14 Sept. to 20 Oct.; 3rd Baltic Front from 14 Sept. to 10 Oct.; 39th Army (3rd Belorussian Front) from 1 to 10 Oct.; Leningrad Front from 14 Sept. to 24 Nov.

Map V.iv.11. Hitler's utopian two-front strategy (1944)

### (b) The Plans for a Breakout to East Prussia

In this phase of the war, the conflicts within the staffs were sometimes just as dramatic as those at the front. October saw the last act in the dispute over the withdrawal of Army Group North. The demand for its withdrawal had dominated Hitler's conflicts with the Army General Staff, and with Army Groups Centre and North HQs, since the end of July. Hitherto, except during a brief period of enclosure in August, a withdrawal of that kind would have been relatively easy to carry out in the form of a large-scale march manoeuvre. Since 10 October, however, when the Soviet troops had reached the Baltic coast, there remained only the possibility of a major breakthrough by force through the Soviet enclosing corridor.

There now flared up, as Guderian wrote, a 'bitter struggle between Hitler and me over the withdrawal of these valuable troops, which were indispensable for the defence of the Reich'.<sup>95</sup> The army's chief of staff wanted at all costs to deploy the units of Army Group North in defence of East Prussia, since Army Group Centre's front was overstretched. Now Hitler, 'pressed on all sides', was about to launch Army Group North on a decisive thrust southwards.<sup>96</sup> On 9 October, with enclosure in the offing, Guderian had already tried in vain to change Hitler's mind. Shortly afterwards, Maj.-Gen. Oldwig von Natzmer, the chief of staff of Army Group North, appeared at Führer headquarters with the same demand, but was equally unsuccessful.<sup>97</sup> Instead, on 10 October, as already mentioned, the Führer gave the order for a pincer attack by both Army Groups on the flanks of the Soviet enclosing ring.<sup>98</sup> However, since at that point in time Army Group North, at Hitler's insistence, still had to hold not only Courland but Riga too, there were not enough forces available for a thrust southwards. The intended northward attack by Army Group Centre was a non-starter anyway, since Third Armoured Army, which had been reassigned to it, was tied down sealing off East Prussia's northern border. The intended two-pronged pincer attack was then reduced to a single prong. Army Group North was now to attack essentially on its own. The first phase was to be a thrust against the Memel bridgehead, where XXVIII Army Corps was enclosed, and in the second phase the attack was to be continued southwards against Heydekrug to restore the connection with Third Armoured Army.<sup>99</sup> For this operation, code-named 'Vulture', there were in any case only three armoured divisions and two infantry divisions available. They had to break through a section of the front in which four to five Soviet armies were standing. In mid-October, however, the Red Army opened two offensives: one against East Prussia and the

other against Courland. As a result, the armoured divisions intended for Operation VULTURE had to be deployed to fend off the Soviet attacking forces.<sup>100</sup>

On 20 October the dangerous Soviet offensive against Courland had finally been beaten back, but that very day Hitler called off Operation VULTURE and ordered Army Group North to go over to the defensive in Courland.<sup>101</sup> In the meantime Col. Bogislaw von Bonin, the new chief of the operations division of the OKH General Staff, had drawn up a plan for the evacuation of Courland and the thrust to East Prussia. On 19 October he communicated his ideas to Col.-Gen. Schörner, who finally agreed to a modified version of the plan, whereby Army Group North would withdraw to a bridgehead around Liepāja. Some units could be evacuated from that port, but the bulk of the army group's forces were to advance along the coast to Memel and from there push forward to Tilsit to connect with the front held by Army Group Centre.<sup>102</sup> Hitler, however, rejected the 'Bonin plan'.

Now, in a final attempt, Schörner had plans prepared for an operation code-named 'Viper'. So as not to provoke rejection by Hitler from the outset, he aimed at a partial solution, namely unification of the Courland and Memel bridgeheads. The port city of Memel, still held by XXVIII Army Corps, was to be the target of a thrust by three armoured divisions and three infantry divisions.<sup>103</sup> Although Schörner avoided revealing his longer-term intentions, it can be clearly assumed that for him Memel was merely the springboard for a thrust towards East Prussia.<sup>104</sup> But Hitler saw through the game and rejected Operation VIPER too.<sup>105</sup> That finally drew a line under the conflicts over withdrawal of Army Group North. It was now firmly established, once and for all, that Army Group North would have to stay and fight a losing battle. Hitler had got his way: 'The German soldier does not voluntarily yield a metre of ground; the army group fights where it stands!'<sup>106</sup> And thus came about one of the strangest curiosities of the final phase of the eastern campaign. The Courland pocket became a 'Dunkirk' voluntarily created by Hitler, but with a ban on evacuation.

## 5. THE COURLAND BATTLES

### (a) The First Three Courland Battles up to the End of 1944

'Fortress Courland' consisted of a peninsula open to the south, with the cornerstones of Liepāja on the Baltic coast and Tukums on the Gulf of Riga. It had to be

<sup>100</sup> On the plan of attack for Operation VULTURE, see Forwick, 'Der Rückzug der Heeresgruppe Nord', 168 ff.

<sup>105</sup> KTB HGr Nord, 26 and 27 Oct. 1944, BA-MA RH 19 III/331, fos. 153 and 155; OKH/GenStdH/Op.Abt. (Ia), No. 440662/44 gKdos. Chefs., 26 Oct. 1944, BA-MA RH 19 III/16, fo. 96.

<sup>106</sup> Lederer, 'Kurland', BA-MA RH 19 III/667, 4, fo. 6.

defended along a 240-kilometre land front and secured against enemy landing attempts along 320 kilometres of coastline. At the beginning of the encirclement, Army Group North's actual strength on paper was around 500,000 men, including all attached units (as well as civilian personnel).<sup>107</sup> Of those, some 250,000 must have been front-line troops.<sup>108</sup> In many divisions, however, as much as three quarters of the fighting strength consisted of 'scrapings', that is, a hotchpotch of rear service units and navy and air-force troops hastily trained for deployment at the front.<sup>109</sup> Initially, 33 divisions or combat groups, that is, rudimentary divisions, were deployed in Courland, but three of them had to be evacuated immediately.<sup>110</sup> Since the OKH regarded the Courland divisions as a 'standby reserve', it subsequently transferred further divisions by sea for deployment in threatened sectors of the front. By the spring of 1945 the number of divisions remaining had fallen to 19. That erosion carried a considerable risk in view of the far superior opposing Soviet forces, which repeatedly launched offensives to force a decision. On 25 October the Courland divisions had only 248 operational tanks and assault guns available.<sup>111</sup> The lack of spare parts was also making itself felt. Air Fleet 1, for example, was left in mid-October with only 170 operational aircraft and not a single bomber.<sup>112</sup> In comparison with the 4,700 Soviet aircraft with which Army Group North was directly confronted, its own air power seemed almost non-existent.<sup>113</sup> On 21 October Schörner, who was in reality opposed to remaining in Courland, issued one of his notorious 'stand firm' orders: 'The Führer has ordered us to hold Courland and at first go over to the defensive on the present main front. Our task, now more than ever, is not to yield a foot of the territory we hold, to tie down the 150 enemy units facing us [...] and thereby to facilitate the defence of the homeland.'<sup>114</sup>

The ensuing battles, which lasted seven months until the end of the war, are a blank space in official Soviet historiography.<sup>115</sup> All we find are suggestions that the Red Army essentially remained passive and was content to seal off the German units. In reality, however, the Soviet command was firmly determined to annihilate the German defence forces, and to do so as quickly as possible.<sup>116</sup> This also

<sup>107</sup> Grier, 'Hitler's Baltic Strategy', 256.

<sup>108</sup> Lederer, 'Kurland', BA-MA RH 19 III/667, 4, fo. 6.

<sup>109</sup> BA-MA, Study ZA 1/2047, 1078.

<sup>110</sup> For breakdown and composition, see *ibid.* 951, 956–7, 961, as well as 1076–7 in the appendix. Also belonging to Army Group North were those sections of 23rd and 218th Infantry Divisions which, together with a small contingent of navy and air-force troops, were defending the Sõrve peninsula (on the island of Saaremaa).

<sup>111</sup> BA-MA, Study ZA 1/2047, 1077.

<sup>112</sup> Köhler, 'Einsatz der Luftwaffe', 87.

<sup>113</sup> Even towards the end of the year, the number of Soviet aircraft in the Baltic region was estimated at 4,750. That figure consisted of the 4,200 aircraft of Air Fleets 3, 13, and 15, which were assigned to the two Baltic Fronts and Leningrad Front, plus 550 aircraft in the area of the Baltic fleet; see Grier, 'Hitler's Baltic Strategy', 401.

<sup>114</sup> KTB HGr Nord, 21 Oct. 1944, BA-MA RH 19 III/331, fo. 88.

<sup>115</sup> On this, see Haupt, *Heeresgruppe Nord*, 291.

<sup>116</sup> This is also the finding of recent Russian research. As the author learned from P. Tsygankov at the Military History Institute in Moscow on 22 March 2000, there were three main reasons for the Red Army's vehement offensive efforts against the Army Group North forces enclosed in Courland: (1) the threat to the right flank; (2) fear of a German breakout towards East Prussia; (3) the risk of timely

involved a change in the Red Army's strategy. Instead of attacking further west in the direction of East Prussia, it moved the point of main effort northwards and massed huge troop concentrations round the Courland peninsula. Army Group North was caught in the trap. Meanwhile, Stalin had prematurely announced the final destruction of the German army group to the western Allies and had thus put his generals under pressure.<sup>117</sup> In the six Courland battles which now followed, the Red Army units bitterly attacked the Germany front time and again but, despite great losses, did not succeed in breaking through. The main target of attack in all these battles was the same, namely the coastal city of Liepāja, without whose port the army group could not be supplied or evacuated. All the enclosed German troops were aware that they were fighting with their backs to the sea and that a single lost battle would inevitably mean the end of Army Group North. Clearly, the contribution of that awareness to the morale of the German troops should not be underestimated.

The first *Courland battle* lasted from 27 October to 7 November 1944.<sup>118</sup> Meanwhile, enormous efforts had been made on the German side to build up its positions, which had hitherto been only fleetingly occupied, into a halfway stable defensive system. 'Trenches not graves!' was the slogan.<sup>119</sup> Nevertheless, given the impressive enemy superiority, there seemed little likelihood of being able to hold out in the long term. The Red Army tried to overpower the Germans, deploying its armoured units, particularly 5th Guards Armoured Army, like battering-rams. When all his reserves were used up, Schörner, acting against Hitler's orders, evacuated all those front salients that were not directly under attack in order to gain new forces. For a while it seemed that the thin German line between Auce and Zeitweilig was bound to be broken through on a broad front. But then came an unexpected turnaround: 'It was like a miracle. The Soviets gave up!'<sup>120</sup> Army Group North may have been saved by a lucky accident, for just then the Red Army's meteorological department made an inaccurate weather forecast, as a result of which the time of the main attack was badly chosen. The Soviet air force, which up till then had sovereign control of the skies, was mostly grounded by the cloud cover. Most of all, however, the already muddy terrain was further softened by sudden downpours of rain, and numerous T-34s and Joseph Stalin tanks got stuck in the mud. Furthermore, the German units managed to shoot down 522 fighting vehicles.<sup>121</sup> Thus, despite some losses of ground, the front was held. In the course of the fighting Army Group North lost a total of 21,292 dead and wounded.<sup>122</sup>

German evacuation. Moreover, the Soviet forces tied down in Courland were needed for the planned attack on Germany. The Soviet command therefore assembled a very strong concentration of forces in order to resolve the Courland problem as quickly as possible.

<sup>117</sup> Grier, 'Hitler's Baltic Strategy', 228 ff.; Haupt, *Heeresgruppe Nord*, 239.

<sup>118</sup> The periodization of the Courland battles adopted here is based on the files of Army Group North. Haupt's monograph, *Das war Kurland*, adopts a different periodization, in which the Soviet offensive of 13 to 24 October, which led to the enclosure of Army Group North, is counted as the first Courland battle.

<sup>119</sup> Haupt, *Heeresgruppe Nord*, 300.

<sup>120</sup> See ibid. 297.

<sup>121</sup> See *Hitlers Lagebesprechungen*, 679.

<sup>122</sup> KTB HGr Nord, 31 Dec. 1944, CAMO, F. 500, Op. 12459. d. 81, fo. 345.

Immediately before the *second Courland battle* (19 to 25 November 1944), according to German estimates, the Soviets had assembled 16 armies comprising around 200 units against the two armies of Army Group North.<sup>123</sup> They included some 130 infantry divisions and over 50 armoured units—even more than during the first Courland battle. What was decisive, however, was not just the Soviets' multiple superiority in military units but their superiority in material supplies. Not only were the Soviet troops largely motorized, but they clearly had no shortage of fuel or ammunition. On 23 November alone, the Soviet artillery fired approximately 275,000 shells.<sup>124</sup> In this battle the Red Army made positively furious efforts to force a decision at last. The front was held only *in extremis*, as is clear from an entry in the army group's war diary for 24 November: 'Today's headline: "It turned out well again!"'<sup>125</sup> But this success was due not only to the Germans' own defensive efforts. To the Germans, the Soviet attacks 'almost gave the impression of a lack of planning'. It seemed 'remarkable' that the enemy, 'despite his superiority, especially in tanks and rapid operational forces, had failed to achieve a decisive breakthrough'.<sup>126</sup> This time too, at the cost of 13,667 casualties, the Red Army's offensive was brought to a halt—but only just.<sup>127</sup>

At the same time, the battle for the small Sõrve peninsula came to an end. On the advice of the Naval War Staff, Hitler had insisted that the southern tip of the island of Saaremaa opposite Courland be held at all costs in order to secure entry to the Gulf of Riga. In Col.-Gen. Schörner's estimation, however, the peninsula was no longer of any importance after the abandonment of Riga. Above all, the fate of his army group hung by a thread, so he needed every soldier for the front in Courland. Moreover, it seemed only a matter of time before the defenders of Sõrve were overrun by the superior strength of the Soviet attacking forces. In those circumstances, Schörner disregarded Hitler's explicit order and had the peninsula evacuated on his own authority. The army group's war diary contains the following telling comment: 'The OKH is to be informed accordingly.'<sup>128</sup> Thus Schörner once again presented the higher command with a *fait accompli*. In the night of 23 to 24 November 4,491 troops and 678 wounded were evacuated from Sõrve.<sup>129</sup> The battle for the Baltic islands was finally over.<sup>130</sup>

The strength of the German military personnel on the Courland peninsula at 1 December 1944 is given rather vaguely as approximately 500,000 men.<sup>131</sup> But this was the figure for ration strength, which is scarcely meaningful since, apart from members of the army, air force, and navy, it included the SS, police, and

German and Baltic civilian personnel, as well as prisoners of war. The first differentiated data available is for the end of December; according to those figures the daily strength of the divisions totalled 200,355 men, and the combat strength was still 98,234 men.<sup>132</sup> The pause in the fighting of around four weeks after the second Courland battle was used for logistic purposes, especially for repairs. As a result, the number of operational armoured vehicles rose to 525.<sup>133</sup>

The *third Courland battle*, which lasted from 21 to 31 December, was the heaviest of all. According to German figures, the Soviet air force flew some 11,430 sorties.<sup>134</sup> Once again, the attacking forces were on the brink of a decisive breakthrough but failed to exploit their initial tactical successes to operational advantage. The German command threw the last reserves, mainly Baltic volunteers, into the battle in order to plug the numerous gaps. In the end, the Soviet attacks failed, with heavy losses. According to German figures, 513 Soviet tanks were shot down, bringing the total figure for tanks shot down in the first three Courland battles to 1,237 enemy fighting vehicles.<sup>135</sup> However, the Germans' own personnel losses were particularly high this time, at 27,114 men.<sup>136</sup>

### (b) The Fighting up to May 1945

On 12 January the Red Army launched the large-scale Vistula–Oder Offensive Operation, which led to the collapse of large parts of the eastern front. The OKH was unable to react, since it had no operational reserve. It could now be seen how urgently Army Group North, cut off in Courland, was needed. Guderian, as chief of the Army General Staff, demanded its accelerated withdrawal.<sup>137</sup> He managed to get two armoured divisions and two infantry divisions transported out of the peninsula,<sup>138</sup> but that was a really half-hearted measure. It was both too little to constitute any significant support on the home front, and too much to permit the defence of Courland with the troops remaining there. The extent to which the enclosed troops were marginalized is shown symbolically by two of Hitler's actions. He ordered his 'favourite general' Schörner to return, and on 18 January 1945 appointed him commander-in-chief of Army Group A. His former post was to be taken over provisionally by Col.-Gen. Lothar Rendulic. Secondly, on 25 January Hitler had Army Group North renamed 'Army Group Courland', and the designation 'Army Group North' was transferred to the former Army Group Centre. The Courland units were thus marginalized in name also.

Seeking to exploit the weakness of the German troops, the Red Army began the *fourth Courland battle*, which lasted from 24 January to 3 February. Whereas the previous offensives had been carried out in very stereotypical fashion, the Soviet units now adopted a different tactic. They attacked in several places simultaneously

<sup>132</sup> BA-MA, Study ZA 1/2047, 1086.

<sup>133</sup> KTB HGr Nord, 21 Dec. (19.00), CAMO, F. 500, Op. 12459, d. 81, fo. 173.

<sup>136</sup> KTB HGr Nord, 31 Dec. 1944, CAMO, F. 500, Op. 12459, d. 81, fo. 345.

<sup>137</sup> BA-MA, Study ZA 1/2047, 987. <sup>138</sup> Grier, 'Hitler's Baltic Strategy', 421.

and shifted the point of main effort in an attempt to shatter the few German reserves. But this time too they failed to achieve the breakthrough. After suffering heavy losses, especially 541 tanks, the Red Army called off the attack.<sup>139</sup> While this battle was going on, the Memel bridgehead, situated between East Prussia and Courland, was evacuated. The divisions of Third Armoured Army deployed there were withdrawn across the Baltic by the end of January. From the beginning of December to the beginning of February, 87,000 combat-fit troops from Army Group North/Courland were also evacuated.<sup>140</sup> On 3 February the daily strength of the divisions was 155,820 men and the combat strength 79,880.<sup>141</sup>

After the military disaster in January 1945, when the Red Army advanced to the Oder and enclosed East Prussia, there was hardly a conference at Führer headquarters at which Guderian failed to expressly demand immediate withdrawal from Courland. He needed those divisions—which had been placed in quarantine, as it were—urgently for defence of the Reich. His demands were motivated not only by military operational considerations. As a Prussian by birth, he also had a subjective motive. He was very well aware of the violent excesses committed by Soviet troops the previous October against the German civilian population which had fallen into their hands. As a result, he had several clashes with Hitler, including a ‘dramatic scene’ at the beginning of February.<sup>142</sup> During a conference with the Führer, Guderian had become so furious in his demand for the evacuation of Courland that Göring, to avoid further escalation, dragged him into a side-room. When he was summoned back and again broached the subject of Courland, Hitler burst into a rage: ‘He stood in front of me shaking his fists, so that my good chief of staff, Thomale, felt constrained to seize me by the skirt of my uniform jacket and pull me backwards lest I be the victim of a physical assault.’<sup>143</sup>

Army Group Courland HQ had also undertaken a new initiative, which resulted in a compromise. At the end of January, Col.-Gen. Heinrich von Vietinghoff-Scheel had been appointed as the new commander-in-chief. Immediately realizing the operational absurdity of continuing to defend Courland, he had ordered the preparation of a study code-named ‘Fall Laura’ (the Laura Case),<sup>144</sup> which proposed withdrawal to the two bridgeheads of Liepāja and Ventspils. The mass of the divisions cut off in Courland were to be evacuated from those two port towns.<sup>145</sup> Hitler nevertheless remained absolutely insistent on holding the existing positions.

There now began the *fifth Courland battle*, which took place in two phases. The initial phase, from 20 to 27 February 1945, seemed to go very well for the Red Army. With the German army group further weakened by the withdrawal of several

<sup>139</sup> Haupt, *Heeresgruppe Nord*, 309. The German losses amounted to 13,315 men; see BA-MA, Study ZA 1/2047, 991.

<sup>140</sup> BA-MA, Study ZA 1/2047, 993, 1084, 1109. <sup>141</sup> Ibid. 1086.

<sup>142</sup> Guderian had already demanded withdrawal from Courland from Hitler on 17 occasions in the preceding weeks, at the situation conferences on 9, 16, and 5 Oct.; 11, 18, 20, 23, 26, and 28 Nov.; 5 and 12 December; 9, 18, 19, 20, 22, and 28 January; see Haupt, *Kurland. <sup>144</sup> On the ‘Fall Laura’ study, see BA-MA RH 19 III/338.

<sup>145</sup> Haupt, *Heeresgruppe Nord*, 309–10; BA-MA, Study ZA 1/2047, 992 ff.

divisions, the Soviet units succeeded in capturing Priekule, which had been heavily fought over in previous battles. They then pushed forward to within 20 kilometres of the port city of Liepāja, before being stopped after losing 399 tanks and assault guns.<sup>146</sup> At that point, according to German figures, 21 German divisions, two of which were armoured, were facing approximately 100 corresponding enemy formations, including 25 armoured units.<sup>147</sup> The defenders' infantry combat strength was no more than 39,067 men. In the second phase of the battle (3 to 13 March), the Germans were able to reconfigure their units and stop the Soviet advance.<sup>148</sup> Immediately after the conclusion of the fighting, Gen. Carl Hilpert, until then commander-in-chief of Sixteenth Army, took over command of the army group.

The subject of Courland was raised at Führer headquarters for the last time on 18 March, when Grand Admiral Dönitz submitted a plan for a large-scale operation that would enable a considerable portion of the units enclosed on the peninsula to be evacuated. When Hitler categorically refused, the fate of the army group was finally sealed. The previous day had seen the start of the *sixth Courland battle* (17 to 28 March), the last battle fought on the peninsula. The violence of the attacks made it clear that the Soviet command was determined to deal the enclosed army group a death blow and resolve the Courland problem once and for all. Yet again, the Red Army massed all available forces for the decisive battle so as to be able, after the destruction of the German army group, to deploy as many units as possible in the offensive against Berlin. Its aim was to break through the German positions with 10th Guards Army as its spearhead and then push west via Saldus to the port city of Liepāja. To the defenders, 18 March seemed 'a day full of dread and terror'.<sup>149</sup> The Soviet artillery hammered the German positions with a rolling barrage, sparing only a few corridors through which the T-34s and Josef Stalin tanks rolled forward. This time the battle dissolved into a chaotic mêlée of separate engagements in which, in the endless expanse of forest and marsh, individual farms, road junctions, and bunkers were fought over.<sup>150</sup> The attackers' losses rose by leaps and bounds, with 263 tanks shot down in the first few days.<sup>151</sup> That was too much even for the Soviet high command, which broke off the offensive on 28 March. There was no seventh Courland battle. Instead, the mass of the Soviet units were withdrawn for deployment in the final attack on Germany.

Once again the army group was saved by good fortune. The attackers gave up just when the German units were at the end of their tether and another offensive thrust would probably have finished them off. The remaining 19 Courland divisions<sup>152</sup> were supplied only sporadically with ammunition and fuel. Moreover,

<sup>148</sup> Personnel losses on the German side in the fifth Courland battle amounted to approximately 22,500 men; see *ibid.* 1005.

<sup>149</sup> Haupt, *Das war Kurland*, 172.

<sup>150</sup> During the sixth Courland battle the Germans lost 17,037 men, 13 tanks, and 31 assault guns; see BA-MA, Study ZA 1/2047, 1016.

<sup>151</sup> Haupt, *Das war Kurland*, 181.

<sup>152</sup> See BA-MA, Study ZA 1/2047, 1023. According to Grier ('Hitler's Baltic Strategy', 310), there were 20 divisions. That makes no significant difference, however, since most of the divisions were no more than rudimentary combat units.

as a result of the increasing evacuations, they were so short of personnel that the 240-kilometre land front could be secured only by double sentries placed every 100 metres or so.<sup>153</sup> Yet in the last days of the war the defenders of Courland were more or less a 'forgotten army group'. The Soviet units adopted a waiting attitude, and in some sectors hardly a shot was fired. When the news of Hitler's death and the fall of Berlin arrived, it seemed like a far distant, almost unreal event. Attention was paid to the Courland units one last time, 'five minutes before the end', as it were. On 3 May a radio message arrived from the headquarters of Grand Admiral Dönitz, Hitler's successor, ordering withdrawal to the bridgeheads round the port towns of Liepāja and Ventspils, and 'the accelerated evacuation of numerous troop units'.<sup>154</sup> In any case, withdrawal of the front could be effected only on the extreme left wing near Tukums.

The enclosed troops learned of the impending German capitulation on 7 May. The war finally ended for them at 00.00 hrs on 9 May.<sup>155</sup> A total of 189,112 troops from Army Group Courland and Air Fleet 1, as well as 14,000 Latvian volunteers, were taken into captivity.<sup>156</sup> Before that, in the six Courland battles, the German defenders had suffered total losses of 117,871 dead, wounded, and missing.<sup>157</sup> The losses incurred by the Soviet forces, who repeatedly attacked the German positions frontally, must have been many times higher.<sup>158</sup>

## 6. CONCLUSION

### (a) Military-Operational Analysis

While the rest of the German eastern front was collapsing in the summer of 1944, Army Group North was able to hold its positions for a long time and finally make an orderly withdrawal. After its enclosure in Courland, which had been avoidable but was ordered by Hitler, it held off the Soviet attacks for seven months and was the only German army group remaining intact when the war ended. The following factors lay behind its successful defence:

<sup>153</sup> Haupt, *Heeresgruppe Nord*, 316.

<sup>154</sup> See *ibid.* 317. From 1 to 8 May 1945, 18,000 troops and 7,000 wounded were evacuated from Liepāja by ship; see KTB Skl. pt. A, lxviii, 468–9, 508.

<sup>155</sup> KTB Skl. pt. A, lxviii, 455.

<sup>156</sup> Haupt, *Das war Kurland*, 212. Of these approximately 203,000 men, around 125,000 were actual front-line troops; see BA-MA, Study ZA 1/2047, 1023.

<sup>157</sup> See list in Grier, 'Hitler's Baltic Strategy', 220.

<sup>158</sup> According to Haupt (*Heeresgruppe Nord*, 343), from October 1944 to May 1945 the Soviet units incurred total losses of 90,000 dead, 300,000 wounded, and 4,000 taken prisoner, and also lost 2,651 tanks and 722 aircraft. In his statistical appendix, however, Haupt gives no source for those figures. Comparable Soviet figures are largely missing. Gurkin provides some statistical data in a more recent account, but they relate only to 2nd Baltic Front and specifically to the period from 16 February to 8 May 1945, when the Red Army had already withdrawn a large number of its units and was fighting only half-heartedly in the final phase. In that period 2nd Baltic Front nevertheless lost 160,948 men, of whom 30,501 were irretrievable losses; see Gurkin, 'Liudskie poteri Sovetskikh Vooruzhennykh Sil', Table 1, No. 67.

### *Adaptation*

In the summer of 1944 Army Group North was fortunate to be attacked relatively late and thus had time to adapt to the new Soviet attacking methods. Its neighbour, Army Group Centre, fared very differently at the start of Operation BAGRATION. Thus Army Group North was able to react immediately and position deeply staggered blocking units and armoured reserves along the enemy's presumed main direction of thrust. Another reason for the collapse of Army Group Centre was Hitler's crazy idea of 'forward defence'. The destructive power of the Soviet artillery had increased to such an extent that several German front-line units were pulverized by rolling barrages of unimagined dimensions right at the beginning of the offensive. For that reason, Army Group North repeatedly adopted the 'major battle procedure' developed in the First World War, withdrawing the bulk of its units to a rearward major battle position in good time, before the start of the enemy's artillery barrage.<sup>159</sup>

### *Commander's Personality*

Army Group Centre was commanded by Field Marshal Ernst Busch, an unconditional Hitler 'yes man'. In exceptional situations requiring independent action—against wrong orders from the supreme command—he was no use at all. It was thus an advantage for Army Group North to have commanders-in-chief at the time who were cut from very different cloth. Although Generals Lindemann and Friessner were dismissed by Hitler very quickly, they had already taken independent decisions that protected their troops from disaster. During the critical phase from 23 July 1944 to 18 January 1945, command of the army group was in the hands of Col.-Gen. (later Field Marshal) Schörner, one of the Wehrmacht's most controversial generals.<sup>160</sup> He is repeatedly portrayed as a man who adhered slavishly to Hitler's concept of rigid defence and whose talent as a commander consisted solely in the ability to impose draconian measures that deterred his men from running away—hence the unflattering nickname 'Wild Ferdinand'. Detailed study of the files, however, yields a much more differentiated picture, as can be seen from recent research by the American military historian Howard Davis Grier.<sup>161</sup> Grier describes Schörner as a 'talented commander',<sup>162</sup> and shows the astonishing organizational skill with which he carried out a series of extremely difficult withdrawal operations in the Baltic region, such as Operation ASTER.<sup>163</sup> The attempt by a whole army group of half a million men to evade a far more motorized enemy could easily have ended in disaster if it had been less skilfully managed. Grier also takes issue with the

<sup>159</sup> Niepold, *Panzeroperationen*, 127.

<sup>160</sup> Kaltenegger's biography of Schörner is useful as a source of factual information but, in terms of historical analysis, sheds little light on his deployment as commander-in-chief of Army Group North.

<sup>161</sup> The author was also able to consult the German booty files in the Russian Military Archive in Podolsk, on which Grier himself drew in his doctoral thesis on 'Hitler's Baltic Strategy'. Examination of those files confirmed Grier's account.

<sup>162</sup> Grier, 'Hitler's Baltic Strategy', 613.

<sup>163</sup> See *ibid.* xiii–xiv, 167, 235–6, 243–4.

popular cliché of Schörner as a devoted follower of Hitler who carried out his orders uncritically. In reality, Schörner displayed harshness to his superiors as well as to the men under his command. In that phase of the war there were few German generals who opposed Hitler's wrong decisions so resolutely, and even fewer who managed to get their own way. At all events, Schörner had a mind of his own and was anything but a 'yes man'. No other military commander, with the possible exception of Model, dared so often to contravene Hitler's orders when they were obviously wrong.<sup>164</sup> The evacuation of the Sôrve peninsula on his own authority, for example, was an act of open disobedience. This clarification of Schörner's military qualities, however, should by no means be taken as throwing his whole personality into a new light. There can be no doubt that he was a fanatical Nazi who enforced his decisions with extreme harshness. Nevertheless, as Grier puts it, the contemporary portrait of Schörner needs some 'revision'.<sup>165</sup>

### *Primary Group Effect*

The battles fought by Army Group North during the Russian campaign took a distinctly untypical course compared with those of the other army groups. Until the summer of 1942 the German troops on the southern wing stormed forward over huge distances to the Volga at Stalingrad and right into the Caucasus. They subsequently had to fight protracted and dramatic withdrawal battles over the same distances. In contrast, in the summer of 1941 Army Group North managed in only a few weeks to advance 800 kilometres into the Leningrad–Lake Lagoda area, its operational target. It held that position almost unchanged until the beginning of 1944, when it had to make a relative short withdrawal to the Narva on the eastern border of the Baltic region. Thus it had gone through the war until then relatively unscathed. While the armies in the southern sector of the eastern front had suffered painful losses and had been through the mill in terms of personnel resources, the units of Army Group North had remained remarkably intact. Many of those units still contained men who had been fighting in them since 1941 and were firmly welded together in primary groups. Those who had joined them later were also fully integrated. The importance of such a cohesion factor in the inferno of war cannot be overestimated. Immediately after the end of the Second World War, American military sociologists had already reached the conclusion that the military impact of an army was primarily a function of the internal cohesion of the 'small fighting community', from squad to company level.<sup>166</sup>

<sup>164</sup> Ibid. 167; see also 243–4, 613.

<sup>165</sup> Ibid. 613.

<sup>166</sup> The article by Shils and Janowitz, 'Cohesion and Disintegration in the Wehrmacht in World War II', has become a classic on the subject. During the war the two military sociologists interviewed numerous German prisoners on behalf of the US Army, which led them to revise fundamentally their preconceived ideas about the role of ideology. One German officer told them: 'the political indoctrination and rhetoric were total nonsense'. Rather, 'the readiness of men to obey their officers' depended on the latters' personality; *ibid.* 29. The role of the internal cohesion of primary groups was later also analysed in the context of the US Army's shortcomings in the Vietnam War; see, e.g., Gabriel and Savage, *Crisis in Command*.

Furthermore, the phenomenon of the ‘Courland divisions’ confirms once again the argument of the Israeli military historian Martin van Creveld that the fighting power of the Wehrmacht was attributable less to National Socialist conviction than to ‘the army’s internal organization’.<sup>167</sup> At all events, Army Group North possessed probably the best units on the eastern front, on account of its largely intact primary groups, which was certainly one of the reasons why it was able to hold out so long against such enormous superiority. That also explains why Hitler’s decision to place those valuable divisions on the sidelines in Courland aroused such incomprehension and fury on the part of Guderian and other generals. Instead of them, numerous newly formed units, lacking both combat experience and group cohesion, were thrown into the front line to defend the Reich territory.

### *Enemy Inefficiency*

The defensive successes of Army Group North were of course due not only to the ability of its own forces but also to mistakes on the part of the enemy. The following example is particularly telling: while the officers of Army Group Centre who reported after Operation BAGRATION were full of astonishment at the new Soviet attacking methods, those of Army Group North wondered why the enemy, with his superior strength, was still unable to prevail. It seemed as if the qualitative leap which had led to the Red Army’s surprising successes in the summer of 1944 had not affected all troop units. Only two operational phases impressed the German General Staff officers: the unstoppable advance of 1st Baltic Front to the Gulf of Riga in June–July and its surprisingly swift change of the point of main effort on the left wing at the beginning of October 1944. In any case, the enemy was by no means underestimated, as a later study shows: ‘The Russians were the most dangerous enemy imaginable. The danger lay in the primitive toughness, willingness to serve, and endurance of the individual soldier, the numerical superiority of the units and personnel reserves, and the brutality of the commanders.’<sup>168</sup> Their closeness to nature, the ability to cross seemingly impassable swamps and even to fight in arctic conditions, also made them thoroughly awkward opponents. However, what could never be sufficiently eliminated, despite all the progress in the course of the campaign, was the remarkable conventionality and sluggishness of the Soviet command. The numerous tactical successes were almost never exploited at operational level. In the words of the study, the enemy achieved ‘no victory of annihilation, only “ordinary” successes. His troops clearly lacked autonomy, decision-making capability, and manoeuvrability at the middle, lower, and lowest levels of command.’<sup>169</sup> These observations culminate in the sentence: ‘The execution of purely tactical assaults by the Russians against the front of the weak Army Group North can only [ . . . ] be described as unimaginative and, as regards the high level of forces deployed, absurd.’<sup>170</sup> The astonishing failures of the army fronts deployed on the northern wing aroused displeasure even on the part of their own

<sup>167</sup> Creveld, *Fighting Power*, 163.

<sup>168</sup> BA-MA, Study ZA 1/2047, 1034.

<sup>169</sup> BA-MA, Study ZA 1/2046, 697.

<sup>170</sup> Ibid. 781.

command. This can be seen even from the Soviet-era *History of the Great Patriotic War of the Soviet Union*, despite the fact that this serial work otherwise inclines to a decidedly iconographic presentation of history. Thus, the discussion in the chapter on offensive operations in the Baltic region ends with the noteworthy sentence: ‘There were also considerable shortcomings in the command of troops.’<sup>171</sup>

### (b) Hitler’s Utopian Strategy: Courland as a Bridgehead for ‘Final Victory’

The ‘fortified places’ designated by Hitler were large towns that were usually defended by a single division. The concept had now been taken so far that the whole of Courland was to be held, as a ‘fortified area’, by an entire army group. The consequent ‘sidelining’ of Army Group North was later described as an operational and strategic ‘enormity’.<sup>172</sup> Almost all the arguments which Hitler had still been invoking in the summer of 1944 to justify keeping the army group in the Baltic area were invalid by September at the latest: Finland was out of the war; the Soviet fleet had broken through the German mine barriers and advanced into the Baltic; Sweden had closed its ports to German ships and was no longer delivering any ore.<sup>173</sup> Thus, after the loss of almost the whole Baltic area, possession of the Courland peninsula seemed strategically irrelevant. But the most important reason to evacuate Courland was that the divisions stationed there were needed urgently to defend the Reich on the eastern front. Guderian was propounding the idea of a core-area defence of central Europe, and wanted all troops withdrawn from the periphery—from Italy, Norway, and the Balkans, and above all from Courland.<sup>174</sup> Opposition was growing even within the Party. Erich Koch, for example, the Gauleiter of East Prussia, called insistently for the withdrawal of Army Group North.<sup>175</sup> The units in Courland constituted the largest troop contingent ever enclosed by the Red Army. The number of soldiers was about twice as high as that of the Sixth Army troops in the Stalingrad pocket, with the difference that Army Group North had let itself be enclosed in the pocket ‘voluntarily’, on Hitler’s orders. We shall now examine the real or imagined grounds for Hitler’s decision.

#### *Tying Down Enemy Forces*

At the end of November Army Group North HQ asked why the Red Army would not attack East Prussia or the centre of the eastern front ‘with all available forces’ and use only ‘the necessary minimum’ to keep the Courland divisions enclosed in

<sup>171</sup> *Geschichte des Großen Vaterländischen Krieges*, iv. 413. Muriev’s article also contains critical remarks, especially about the deployment of tanks; see Muriev, ‘Nekotorye kharakternye cherty’, 28.

<sup>172</sup> BA-MA, Study ZA 1/2047, 1027.

<sup>173</sup> Grier, ‘Hitler’s Baltic Strategy’, 213. On Hitler’s estimate of Swedish neutrality, see *ibid.* 452 ff. and 601–2. On Germany’s long-lasting trade relations with Sweden, see *Germany and the Second World War*, v/II, 547–50.

<sup>174</sup> Guderian, *Erinnerungen eines Soldaten*, 337, 374.

<sup>175</sup> Lasch, *So fiel Königsberg*, 28.

the peninsula. It believed the answer to that question was as follows: ‘The peripheral fortress of Courland is close enough to the concept of a “flanking position” in Moltke’s meaning of the word [...] for the Russians, however unwillingly, not to bypass it operationally.’<sup>176</sup> That calculation seemed accurate at first sight. Even though both sides were continually withdrawing troops, the number of Soviet units was always many times greater than the German. At the end of October there were two German armies in the Courland pocket, with a total of 33 divisions or combat groups. In contrast, the Soviet forces numbered around 200 units.<sup>177</sup> In May 1945 there remained 19 emaciated German divisions, and they were still faced by nine Soviet armies with some 86 rifle divisions and up to 85 armoured units.<sup>178</sup> It is a remarkable fact that in the spring of 1945 relative Soviet superiority was even greater than during the first Courland battle in October 1944.<sup>179</sup> Hitler’s plan of tying down the greatest possible number of enemy units in Courland seemed to have succeeded.

However, as Lt.-Gen. (ret.) Friedrich Sixt showed in a later study, the absence of the Courland divisions on the home front weighed ‘many times more heavily’ than that of the Soviet forces tied down by them. Moreover, Army Group North had ceased to be an ‘operational factor’ and was primarily engaged in a struggle for ‘self-preservation’ that had ‘virtually no effect’ on the main front.<sup>180</sup> At that point in time the German forces on the eastern front were barely sufficient to cover the front lines. But the main problem was the lack of any operational reserve. In the event of a major Soviet offensive there was the danger that a single operational breakthrough would bring down the front like a house of cards. In those circumstances, the deployment of an entire army group—one of a total of four on the eastern front—in Courland, far from the main front, must have seemed positively absurd. In the summer of 1944, when that army group had a huge area to defend, there had been hardly any tanks at its disposal. Now, however, when the army group was pressed together in a small area, Hitler had a large number of fighting vehicles deployed on the small peninsula. In March 1945 there were 510 tanks and assault guns, of which 330 were operational, in that confined space. As Guderian pointed out sarcastically, that was about as many fighting vehicles as there were on the whole western front.<sup>181</sup>

The deployment of German units in Courland was successful tactically but it proved to be a mistake at the strategic level. That was shown by the speed with which the Vistula front collapsed in January. Hitler’s decisions had disastrous consequences above all for the civilian population of Germany’s eastern territories which fell into the hands of the Red Army. As explained in the previously mentioned study by Friedrich Sixt, Army Group North felt ‘called upon to defend East Prussia’.<sup>182</sup> Motivation must have been a factor, since most of its troops came from East Prussia or Germany’s other eastern provinces. Now those men were

<sup>176</sup> KTB HGr Nord, 30 Nov. 1944, CAMO, F. 500, Op. 12459, d. 80, fo. 414.

<sup>177</sup> Grier, ‘Hitler’s Baltic Strategy’, 398. <sup>178</sup> Ibid. 399.

<sup>179</sup> Ibid. 403. <sup>180</sup> BA-MA, Study ZA 1/2047, 1027–8.

<sup>181</sup> Grier, ‘Hitler’s Baltic Strategy’, 223. <sup>182</sup> BA-MA, Study ZA 1/2047, 1024.

required to defend a distant peninsula instead of their endangered homeland. When the Red Army on the Oder began its storming advance on Berlin in April 1945, it finally became clear that the defence of Courland had been perverted into a pure end in itself. The troops stationed there shared the fate of the Wehrmacht soldiers who had been obliged to stay behind on the Channel Islands after the withdrawal from France. In the middle of the war they had already established their own prisoner-of-war camp.<sup>183</sup>

In conclusion, the tying down of enemy forces, successful at first sight, was carried to absurd lengths given the negative consequences for defence of the Reich. It would nevertheless be wrong to see it as only one of many wrong operational decisions on the part of the 'dilettante' Hitler. For Hitler, tying down forces—even if he often made use of that argument for propaganda purposes—was in fact of secondary importance. After all, the temporary tying down of enemy forces could only win time, not the war.

### *Testing New U-boats*

The army generals could not offer Hitler a recipe for victory. All their proposals were aimed at delaying the inevitable defeat. The prospects opened up by the naval command were of a wholly different order.<sup>184</sup> Dönitz wanted to regain the initiative in the sea war by deploying the new Type XXI and Type XXII U-boats.<sup>185</sup> The two new models represented a qualitative leap in terms of technology in comparison with conventional submarines.<sup>186</sup> But the navy needed a little more time to test the new U-boats and train the crews. In that respect, possession of Courland was definitely important: on the one hand, because of its naval bases, and on the other, because of control of the eastern Baltic. One may therefore suppose that Hitler may have been thinking less of the eastern front than of the Atlantic Ocean. That would also accord with his main strategic idea of first forcing the Anglo-American adversaries in the west out of the war and then concentrating on the real enemy in the east. Hitler's overall strategy envisaged a combined land-sea operation against the western powers, in which the planned Ardennes offensive was intended to defeat them decisively on the European mainland.<sup>187</sup> It was by no means accidental that the said offensive was directed towards Antwerp, whose port was particularly important.

At this point, a word of clarification is needed. However necessary the testing of the new U-boats and the training of their crews may have been, it could have also been carried out to a limited extent off Germany's Baltic coast. The 'Assmann Report' of 19 July 1944 had already pointed out that the Gulf of Danzig was considerably more important for E-boat and U-boat training than was the Baltic Coast.<sup>188</sup> In the

<sup>187</sup> Weinberg, *A World at Arms*, 720–1.

<sup>188</sup> See the previously quoted 'Assmann Report', BA-MA RM 7/101, fos. 101–2.

literature so far, Grand Admiral Dönitz has repeatedly been blamed for talking the Führer into holding on to Courland unconditionally. In reality, the matter is not so clear-cut. It is true that Dönitz originally demanded categorically that the Baltic area be defended. At the end of July 1944, however, under the shock of the collapse of Army Group Centre, his staff—as already mentioned—submitted ideas regarding the evacuation of Estonia, designed to spare Army Group North a similar fate. During the conference at Führer headquarters on 9 July, the commander-in-chief of the navy surprisingly switched sides and contradicted Hitler, who was refusing withdrawal on grounds of maritime strategy. In the grand admiral's view, possession of the Baltic coast was of no value if the Red Army succeeded in advancing to the Baltic Sea further south.<sup>189</sup> That was precisely what happened in mid-October, when Army Group North was enclosed in Courland. Dönitz had started shifting his ground anyway, and finally, with considerable reluctance, he took the opposite course to that of the Führer.<sup>190</sup> It suited him very well that Hitler was now taking a great interest in the navy's new U-boats, and that he himself was becoming a favourite of Hitler's, but unconditional retention of Courland was by no means a demand of his.<sup>191</sup> This misunderstanding apparently arose because, without Dönitz's knowledge, Hitler invoked reasons of naval strategy vis-à-vis the Army General Staff.<sup>192</sup> On 17 March 1945, Guderian sought a meeting with Dönitz in order to clarify the matter. The grand admiral assured him that he had 'no interest in holding on to Courland' and that 'supplying Courland was simply a burden for the navy'.<sup>193</sup> That was also confirmed at the following situation conference by Hitler, who stressed that his reasons for holding Courland lay 'solely in the field of land warfare'.<sup>194</sup> Dönitz stated clearly after the war: 'In no form, and at no Führer conference, did I ever demand that Courland be held.'<sup>195</sup> As he went on to explain, 'holding a strip of land in the Baltic

<sup>189</sup> *Lagevorträge*, 596; KTB HGr Nord, 9 July 1944, BA-MA RH 19 III/311, fos. 177–8. On this, see the letter to Ruge of 11 July 1961 in the Dönitz papers and the appended record of the conference at Führer headquarters on 9 July 1944, BA-MA N 236/7, fos. 61–3.

<sup>190</sup> A particular role was played indirectly by the assassination attempt on Hitler on 20 July. The day before, Capt. S. Assmann, an operations staff officer in the Naval Operations Division of the OKW Operations Staff, had taken the initiative on evacuation of the Baltic region. Via Grand Admiral Dönitz, he had tried to persuade the Führer of the need for a partial withdrawal of Army Group North. But Assmann had been wounded during the assassination attempt and was absent during this important phase. In addition, the assassination attempt had suddenly altered the mood: now only 'stand firm' slogans were acceptable. Given the heated atmosphere, Dönitz temporarily accepted Hitler's concept of rigid defence of the Baltic region; Salewski, *Die deutsche Seekriegsleitung*, ii. 464–5.

<sup>191</sup> Dönitz's role in the retention of Courland is frequently overstated. That is also one of the few weaknesses in Grier's otherwise excellent dissertation. See Grier, 'Hitler's Baltic Strategy', 114, 602–3, 606–7. On the one hand, Dönitz did not consider Courland particularly important in terms of naval strategy; on the other, it was Hitler who influenced Dönitz with regard to Courland—not the other way round.

<sup>192</sup> On this, see the letter to Ruge of 11 July 1961 in the Dönitz papers, BA-MA N 236/7, fos. 61–2, in which a whole series of minutes of conferences are cited in support.

<sup>193</sup> Admiral z.b.V. beim Ob.d.M. Brief-Nr. 244/45 Gk. Chef-Sache, 'Teilnahme des Ob.d.M. an der Führerlage am 17.3.1945 um 16.00 Uhr' (copy), BA-MA, Dönitz papers, N 236/7, fo. 64.

<sup>194</sup> Ibid.

<sup>195</sup> See the previously cited letter from Dönitz to Ruge, BA-MA N 236/7, fo. 61.

area [ . . . ] which served no blocking purpose' was 'of no major significance in terms of naval strategy'.<sup>196</sup>

### *Courland as a Strategic Bridgehead for 'Final Victory'*

Hitler is often described as a pure "stand firm" strategist<sup>197</sup> who confined himself in the second half of the war to preventing (necessary) withdrawals. The fate of Army Group North enclosed in Courland is cited as a prime example. However, comparison with other front sectors does not confirm that cliché. In the summer and autumn of 1944, when Army Group North was repeatedly stopped by his 'stand firm' orders, Hitler approved a whole series of large-scale withdrawal movements in other theatres of war. In the west, his armies retreated from the Atlantic coast through France and Belgium, in some places as far as the German border. The northern sector of Finland was evacuated, as were parts of northern Italy and most of the Balkans, especially Greece, Albania, and Serbia. In western Europe, Hitler abandoned several regions which were important for the war economy or for reasons of prestige, without further ado. The same criteria did not apply to the relatively unimportant area of Courland. It follows that Hitler must have been pursuing a quite specific plan with regard to that peninsula.

There appears to be a parallel in the case of the Kuban bridgehead. At the end of 1942 Army Group A was similarly deployed on the periphery, in the Caucasus, like Army Group North later on in the Baltic region. In both cases a disaster occurred in the neighbouring sector of the front: first at Stalingrad and then with the collapse of Army Group Centre. On each occasion the generals called for a counter-attack by the army group stationed on the periphery, but Hitler refused. Instead, at the beginning of 1943, the bulk of Army Group A, consisting of some 400,000 men, was ordered to withdraw to a bridgehead on the Kuban peninsula, opposite Crimea. Supposedly, the purpose was to tie down the Red Army's Transcaucasian units on the east coast of the Black Sea. In the medium term, however, Hitler adopted an offensive strategy, since he intended to use the bridgehead as a springboard for the conquest of the Maykop oilfields in front of the Caucasus, which he did not want to relinquish for reasons of war economy. Hence his motto, as recorded by Zeitzler: 'I shall attack there again.'<sup>198</sup> During the second half of the war Hitler pursued similar aims with other bridgeheads too, such as the Tunis bridgehead to which the Africa Corps had withdrawn.<sup>199</sup>

Hitler thought strategically, whereas his generals tended to think in operational and tactical terms. As a result, the far-reaching ideas the dictator was actually

<sup>196</sup> Ibid., fo. 62.

<sup>197</sup> The expression "stand firm" strategy is inherently self-contradictory. The term 'standing firm' (= static defence) is a tactical concept and is not equivalent to strategic defence. Operational defence itself comprises several *tactical* combat methods, from static defence to active delaying tactics and mobile defence by means of counter-attacks.

<sup>198</sup> Col.-Gen. (ret.) Zeitzler, 'Das Ringen um die großen Entscheidungen im zweiten Weltkriege', pt. 2, BA-MA, Zeitzler papers, N 63/80, 30, fo. 31,

<sup>199</sup> The author is grateful to Capt. (ret.) Gerhard Schreiber for drawing attention to this.

pursuing in the case of Courland did not even occur to many of them. Even those who did learn of them, like General Otto Lasch, tended to dismiss them as 'wanton fantasy'.<sup>200</sup> Yet in internal discussions Hitler declared unmistakably his intention to 'return to the attack from this bridgehead'.<sup>201</sup> His grounds were as follows: 'I am expecting a change in the situation shortly and will need Courland in order to thrust into the Russian flank'.<sup>202</sup> Thus, the Courland bridgehead was intended to be used as the springboard for a future offensive, just as Hitler had intended to do with the Kuban bridgehead at the time. Not only did that idea seem like reckless fantasy to the generals who were in the know, but almost all historians subsequently failed to take it seriously.<sup>203</sup>

In reality, the solution to the Courland puzzle lies not in the waters of the Baltic Sea but in the forests of the Ardennes. That is where Hitler's sought-after 'change in the situation'<sup>204</sup> was to be achieved, since he planned to inflict a decisive defeat on the supposedly war-weary western Allies by means of a 'lightning offensive'. That in turn was to be the precondition for an ensuing offensive in the east, which he intended to launch against the Red Army from Courland.<sup>205</sup> Hitler's top priority was to force the western powers out of the war: he considered them, in any case, as adversaries imposed on him and, once they were out of the way, he would be able to throw all his forces against the real enemy in the east. That, in his view, was where the great area lay for expansion of the German people's 'Lebensraum'. The dictator considered the inherent contradictions in the Allied coalition so serious that in December 1944 he predicted it would soon split apart, 'with a huge clap of thunder'.<sup>206</sup> He even speculated on the possibility of the western powers' changing sides, in which case Courland could be an important bargaining counter.<sup>207</sup> Those musings were not entirely devoid of substance, since the mistrustful Soviet leadership also feared that, if the tide of war turned in the west, the United States and Britain might leave the alliance owing to the mood of disappointment in their own countries. Nor did it rule out the possibility that those two countries might later come to an arrangement with Hitler or another German government and turn against the Soviet Union. That being so, the Courland bridgehead must have

<sup>200</sup> Lasch, *So fiel Königsberg*, 28.

<sup>202</sup> Haupt, *Kurland. Die letzte Front*, 66. See also Tippelskirch, *Geschichte des Zweiten Weltkrieges*, 489; Dieckert and Grossmann, *Der Kampf um Ostpreußen*; Görlitz, *Der Zweite Weltkrieg*, 462; Kabath, 'Seebrückenköpfe', 253.

<sup>203</sup> The best example is the study by Lt.-Gen. (ret.) Sixt, to which we have already referred several times, 'Feldzug gegen die Sowjetunion im Nordabschnitt der Ostfront' ('The campaign against the Soviet Union in the northern sector of the eastern front'); see BA-MA, Study ZA 1/2046 and 2047. While the military-operational relations are analysed brilliantly, it lacks a strategic interpretation that examines Hitler's overriding ideas.

<sup>204</sup> See Haupt, *Kurland. Die letzte Front*, 66. See also Tippelskirch, *Geschichte des Zweiten Weltkrieges*, 489; Dieckert and Grossmann, *Der Kampf um Ostpreußen*; Görlitz, *Der Zweite Weltkrieg*, 462; Kabath, 'Seebückenköpfe', 253.

<sup>205</sup> Grier pointed to this connection in his dissertation supervised by Professor Weinberg; see Grier, 'Hitler's Baltic Strategy', 438 ff.

<sup>206</sup> See Jung, *Ardennen-Offensive*, 118.

<sup>207</sup> Lakowski, 'Ostseebrückenköpfe', 31–2.

seemed a serious threat.<sup>208</sup> It should be remembered in this connection that the Baltic region had already served as a German bridgehead in 1919.

A chronological comparison of the withdrawal from the Baltic countries with the course of planning for the Ardennes offensive reveals remarkable connections. While Hitler was preparing the next offensive in the Ardennes, he was already planning the next but one, namely an offensive from the Baltic region against the Red Army. That strategic view also explains his rejection—against all operational logic—of his generals' repeated demands for the withdrawal of Army Group North. At the end of July, when the invasion battle in Normandy was lost, Hitler had already decided on an offensive against the western powers. On 16 September—for the first time at a widely attended conference—he revealed his plan to launch an attack from the Ardennes in November in the direction of Antwerp.<sup>209</sup> That same day he authorized Schörner to evacuate Estonia, but ordered Riga to be held unconditionally with Courland as hinterland. When the Red Army temporarily halted its attacks in the Baltic region on 24 September, the last chance had arrived to extract Army Group North from the 'Baltic trap'. Hitler rejected that demand,<sup>210</sup> and almost simultaneously (on 25 September) instructed Alfred Jodl to draw up a detailed plan of operations for the Ardennes offensive.<sup>211</sup> Then, in October, the Red Army launched a new large-scale offensive and immediately achieved an operational breakthrough. As Hitler still forbade withdrawal, Army Group North was cut off in Courland. The decisive date was 20 October, when the exhausted Soviet troops stopped their attacks. Yet that same day, to Schörner's great disappointment, Hitler banned Operation VULTURE, the intended breakthrough to East Prussia. Instead, the Führer definitively ordered Army Group North to remain in Courland. Two days later, on 22 October, he announced that the Ardennes offensive was to begin on 25 November, that is, in about a month's time.<sup>212</sup> The start of the operation had to be postponed in any case, since more troops had to be withdrawn from other fronts. And to the amazement of his generals, Hitler left an entire army group, including strong armoured units, standing in Courland, when it would have been urgently needed in the Ardennes.<sup>213</sup> When the Ardennes offensive failed, however, the dictator had a noticeable change of mind. Whereas he had previously uncompromisingly refused the removal of units from Courland, in January 1945 he allowed the withdrawal of several divisions, and even had the Memel bridgehead to the south evacuated completely. Clearly, the Courland bridgehead had lost strategic importance as the result of a far-distant event in the Ardennes.

<sup>208</sup> The author is grateful for this pointer from the Russian military historian Tsygankov, whom he was able to consult at the Military History Institute in Moscow on 22 March 2000.

<sup>209</sup> Jung, *Ardennen-Offensive*, 101–2.

<sup>210</sup> Significantly, Hitler further assigned Third Armoured Army to Army Group North to reinforce his intention to hold part of the Baltic region.

<sup>211</sup> Jung, *Ardennen-Offensive*, 102.

<sup>212</sup> Ibid. 108–9.

<sup>213</sup> At the beginning of December, for example, Waffen SS General Felix Steiner demanded of Heinrich Himmler 'the evacuation of the Courland pocket, which is now urgently necessary'. In his view, 'an estimated 30 divisions' were lacking for the attack on Antwerp. That was more or less the number of divisions stationed in Courland at that point in time; see Steiner, *Die Freiwilligen*, 310.

Astonishingly, Hitler could not even now be persuaded to withdraw his troops from the Baltic region entirely, although the eastern front collapsed in January and the Soviet units could advance from the Oder to the Vistula. There would have been enough time for a comprehensive evacuation, since the Red Army had then to prepare its final offensive against Berlin. In the spring of 1945, while improvised German units struggled in vain to hold back the onrushing Soviet divisions, the number of battle-tried troops still in Courland would have sufficed to repel the attacks of the nine enemy armies. Hitler's refusal to allow their withdrawal was one of the strangest acts in the final phase of the war. His determination to hold on to Courland in that desperate situation, however, proves that he had not yet finally given the war up for lost. On the home front the Courland divisions could only have delayed defeat, whereas from their exposed position in the Baltic region they were intended, in the event of the turnaround which Hitler was awaiting, to play a decisive role in 'final victory'.

It is precisely the fate of Army Group Courland that reveals Hitler's irrational 'all-or-nothing' strategy with shocking clarity. He despised the operational damage-limitation management of his general staff, which was entirely geared to what Clausewitz termed the 'negative purpose' of war.<sup>214</sup> Instead, he worked himself up into an 'auto-suggestive victory euphoria'.<sup>215</sup> He apparently believed in a last-minute 'miracle', comparable to the 'miracle of the House of Brandenburg',<sup>216</sup> when Frederick the Great had been saved by the sudden collapse of the enemy alliance after the war seemed already lost. Hitler was clearly no longer counting on a military solution, and positioned his remaining military potential with regard to the political turnaround which he still hoped would happen. He was like a gambler going for broke who puts all his remaining money on a single risky throw of the dice. Thus he also refused to evacuate 'Fortress Norway', despite Guderian's vehement insistence that he needed every man for defence of the Reich. In October 1944, when the Red Army first set foot on German soil in East Prussia, half a million Wehrmacht troops were stationed in Norway, ready to take part in 'final victory'.<sup>217</sup>

As we have seen, Hitler was convinced that wars could not be won defensively, but only offensively. In the view of his armaments minister, Albert Speer, he had manoeuvred himself into such a hopeless position that there remained only the choice between 'the offensive or defeat'.<sup>218</sup> It therefore seems wrong to see Hitler's

<sup>214</sup> Clausewitz, *Vom Kriege*. Pt. 2, Bk. 6, Ch. I/2, 615.

<sup>215</sup> On this, see the author's remarks in Part V, Chapter I.1 of the present volume.

<sup>216</sup> The radio message sent by the newly established Dönitz government to the German embassy in Tokyo on 7 May (!) 1945 is particularly telling. It begins with the words: 'The Führer seems to have believed to the last moment that he would be able to achieve a turnaround in this war by means of a military success in the decisive battle for Berlin.' See Oberkommando der Kriegsmarine, Marine Attaché [sic] Abteilung z.Zt. Flensburg-Mürwik, 7 May 1945, '[Johann Ludwig] Graf Schwerin von Krosigk an Mar. Att. Tokio für Botschafter [Heinrich Georg] Stahmer', BA-MA RM 7/854, fos. 154–5.

<sup>217</sup> October 1944 saw a huge increase in German forces in Norway with the arrival of 20th Mountain Army, which had been deployed in Finland up till then; see Bohn, 'Der Rückzug am Eismeer', 115.

<sup>218</sup> Speer, *Spandau: The Secret Diaries*, 15.

decision of 20 October 1944 to keep Army Group North in the Courland pocket simply as a rigid operational ‘stand firm’ order. ‘Fortress Courland’ had more than the defensive function of a dike against the advancing Red Army. Rather, that bridgehead was intended to serve as the springboard for an offensive once the tide of war had turned in the west as a result of the thrust from the Ardennes.<sup>219</sup> The dictator was acting absolutely consistently, within the confines of his own imminent logic. The Courland plan was a re-edition of his strategy in the early summer of 1944, which can be expressed by the simple formula ‘hold on in the east, strike in the west’. At that time, the idea had been to inflict a decisive defeat on the western powers in the invasion battle on the Atlantic coast so as to force them out of the war, while the German units on the eastern front rigidly defended Hitler’s ‘fortified places’. The divisions which had been deployed in the west could then be transferred to the eastern front and all forces concentrated against the exhausted Red Army.

Let us now take another look at Hitler’s concept of ‘fortified places’ in the light of his Baltic strategy. Like ‘Fortress Courland’ at a later stage, the ‘fortified places’ in the Russian interior in the summer of 1944 by no means had only a defensive function. Rather, they were intended to serve as springboards for a new offensive in the east after the expected turn in the war.<sup>220</sup> That also explains many incongruities in the designation of those areas and in the course of the front, which sometimes appeared to defy all military logic. From the defensive viewpoint, it made no sense to mass so many divisions in what was probably the most endangered sector of the eastern front, namely the Vitebsk salient—hence the protest by Col.-Gen. Georg-Hans Reinhardt. The assessment is quite different, however, if such front salients were intended to serve as points of departure for a future offensive. Similarly, it seemed incomprehensible on tactical grounds that, further to the south, Hitler required Fourth Army to hold an enormous bridgehead east of the Dnieper at Mogilev instead of withdrawing the main defence line to the elevated west bank of the river. That decision too can be understood only in the light of plans for a future offensive. Hitler pursued an extremely risky ‘all or nothing’ strategy which, in the event of failure, was bound to have catastrophic operational consequences. Thus, Army Group Centre was forced to hold the Belorussian balcony, which protruded far to the west, from exposed positions, instead of developing a favourable defensive position in depth along the Berezina as its HQ demanded. The subsequent fiasco was thereby programmed in advance.

Hitler was absolutely determined to get out of the ‘permanent defensive’<sup>221</sup> and seize the initiative, and his attacking mania finally assumed bizarre forms. The more desperate the situation became, the more resolutely he plunged ahead regardless. He no longer believed in anything but the ‘power of the will’.<sup>222</sup> But although at

<sup>219</sup> Grier (‘Hitler’s Baltic Strategy’, 438 ff., 601 ff.) explicitly assigns an offensive bridgehead function of that kind to Courland alone. In reality, Hitler applied the same offensive concept to the ‘fortified places’ located in Germany’s interior.

<sup>220</sup> The ‘Belorussian balcony’ was seen by the Soviets as a ‘strategic bridgehead’ of the Wehrmacht; see Timokhovich, ‘Operatsia Bagration’, 55.

<sup>221</sup> See Jung, *Ardennen-Offensive*, 103.

<sup>222</sup> Manstein, *Verlorene Siege*, 307.

the end of 1944 he again staked everything on one card and threw his last reserves into the balance against the western powers, that effort too proved insufficient, precisely for reasons of logistics. The 1944 Ardennes offensive turned into a parody of the first Ardennes offensive in 1940—a ‘blitzkrieg without petrol’.<sup>223</sup> Some of the armoured units did not even have enough fuel to reach the Allied supply camp, which the German forces were supposed to capture so as to refuel and continue the attack to Antwerp. The failure of that second ‘sickle cut’ to the Channel coast put paid to the preconditions for Hitler’s unrealistic plans in the Baltic. With the Ardennes offensive ending in a farce, the planned Courland offensive proved a chimera.

By that time Hitler’s visions and utopias could scarcely still be transformed into a strategy. He was engaged in a pure all-or-nothing wager in which he placed his only hope in a last-minute collapse of the enemy alliance. Such an act of desperation was a criminal risk, given what total defeat would mean for the German people. The German quartermaster-general, Erich Ludendorff, later designated the ‘prophet of total war’,<sup>224</sup> had shown no qualms about the numbers of lives sacrificed in earlier battles of attrition, but even he finally came to realize that ‘warfare had assumed the character [...] of a reckless game of chance, which I have always considered pernicious. For me, the fate of the German people was too important to gamble with. The war had to be ended.’<sup>225</sup> Hitler, on the other hand, had no such scruples. For him there was only ‘final victory’ or downfall. At the end of 1941 he had already cynically declared: ‘In this, too, I am as cold as ice. If the German people proves no longer strong enough, or sufficiently self-sacrificing, to pay for its existence with its own blood, then let it perish and be destroyed by another, stronger power [...] then I shall shed no tears for the German people.’<sup>226</sup>

# V. The Battles for Galicia and the Beskid Mountains

*Klaus Schönherr*

When Army Group South halted in eastern Galicia at the end of March 1944, it had been obliged to move back more than 300 kilometres since December 1943 in the face of enemy forces that were superior in almost every respect. Albeit with great difficulty, the German troops had managed to withstand the Red Army's latest attempts to destroy them while they were still east of the Carpathians and the Beskids. Fortunately for the army group, after an offensive lasting several months, 1st and 2nd Ukrainian Fronts no longer had the necessary strength to achieve their operational objectives. The Soviet attack lost its drive and momentum, and the German withdrawal was put on hold for the time being.

## 1. ARMY GROUP NORTH UKRAINE IN GALICIA

After a three-month retreat Army Group North Ukraine, as Army Group South had been called since 5 April, was able to establish a weak defensive front on the Kovel–Brody–Kolomyia line at the beginning of the month. The Galician territory, which the army group was now shielding to the east, covered the northern slopes and the foothills of the Carpathian forest between the upper Vistula and the upper Prut, and was of considerable strategic and economic importance.

From a military point of view, the area consisted of two parts. While the northern part of Galicia formed a bridge to the industrial district of southern Poland and Upper Silesia, the mountain barrier of the Carpathian forest provided almost perfect protection for the Hungarian lowland plain. The Brody–Lvov–Cracow axis, pointing directly through the centre of Galicia to the Polish–German industrial area, was destined to be the theatre of extensive operations, as it was ideal terrain for tanks and was consequently bound to be of particular interest to the Soviet military leaders.

From an economic point of view, both the manufacturing industries and the raw-material resources were of considerable importance. Apart from the coal deposits at Sokal and Rava Ruska, the petroleum extracted and refined in the

Drohobych area was urgently needed.<sup>1</sup> Galicia also contained substantial deposits of potash and phosphates, essential to German war production, and it also had an important role to play in respect of food supplies for the Reich. However, optimal exploitation of these resources was hampered by the problem of the partisans. Although partisans represented a destabilizing factor for the German occupation, Galicia could be regarded as a relatively stable hinterland from a military point of view, in that the armed conflicts between Polish and Ukrainian nationalists almost completely absorbed any resistance to the occupying forces.<sup>2</sup>

### (a) The Army Group's Situation in the Spring of 1944

On 2 April, while First Armoured Army was still fighting for its life and attempting to escape from the deadly enemy encirclement,<sup>3</sup> Hitler issued a directive setting out the basic principles for the conduct of operations on the left wing of the southern section of the eastern front. A front was to be established on the Kolomyia–Tarnopol–Brody–Kovel line. And the encircled First Armoured Army was to be relieved by a newly formed assault group, which would launch an attack from the Lvov area.<sup>4</sup> The Soviet 1st Ukrainian Front too had suffered substantial losses in the course of its three-month offensive, with the result that, by 6 April, Field Marshal General Walter Model was able to extricate First Armoured Army, reduce the length of the front, and move forward again to the east.<sup>5</sup> The Soviet breakthrough in the Carpathians, to the west of Kolomyia, was also halted, with the assistance of the Hungarian 1st Army, and the enemy forces were driven back to the eastern edge of the mountain range.

At the end of the Soviet winter and spring offensive, the army group, with Fourth Armoured Army, the rest of First Armoured Army, and the Hungarian 1st Army, occupied the almost 450-km-long section of the front between Kovel and Kolomyia. To protect this defensive line, the high command in Lvov deployed nine German and two Hungarian corps, with 34 German and five Hungarian divisions, including ten armoured units, and two Honved mountain brigades. The German divisions were now reduced to regimental strength as a result of the heavy losses suffered in engagements during the withdrawal. Although the army group had lost a great many men in the past few months,<sup>6</sup> it now had the Hungarian 1st Army under its command, so its actual strength was still approximately 400,000 men. However, the stock of heavy weapons was also severely depleted. Thus, in

<sup>1</sup> *Germany and the Second World War*, v/II. 472.

<sup>2</sup> Ibid. 18, 186 ff.

<sup>3</sup> Philippi and Heim, *Der Feldzug gegen Sowjetrussland*, 237–41; Elishev and Mikhalev, 'Osvoboždenie', 41–4.

<sup>4</sup> *Hitlers Weisungen*, 251.

<sup>5</sup> See Part IV, Chapter III.8(c) of the present volume.

<sup>6</sup> Between 1 January and 10 April 1944 First Armoured Army HQ lost approximately 74,700 men and Fourth Armoured Army HQ about 44,400 (BA-MA RW 6/v. 559, fos. 3–14, 18). As a result, the strength of Army Group South/North Ukraine dropped from approximately 400,000 to about 350,000 men between 1 March and 1 May 1944 (BA-MA RH 2/1341, fos. 14, 36, 37).

**Map V.v.1.** Army Group North Ukraine: course of the front in June 1944

Source: OKH situation map, 1.6.1944, BA-MA, Kart RH2, Ost/1043, Study P-114c, pt. VII, i. 2.

April 1944 the army group had approximately 850 tanks and assault guns, about 480 of which were operational, and 845 artillery cannon.<sup>7</sup>

If it was to comply with Hitler's directive, the army group would have to attempt within the next few weeks to restore its units' manpower and materials, and secure the lines that had been reached. That was the only possible way to withstand the Red Army's attacks for a reasonable length of time.

### (b) The Enemy Forces and Their Plans

On the Soviet side, 1st Ukrainian Front was taking a break in April 1944 in order to enable the exhausted units to recover and prepare to continue the offensive. However, Marshal Ivan Stepanovich Konev was obliged to hand some units over to his northern neighbour at the beginning of June to reinforce the planned offensive against Army Group Centre in Belorussia.

The Red Army showed every sign of achieving an outstanding success in the opening phase of the offensive, so Stalin issued a directive on 24 June ordering the operations to be extended to the south. Konev was to prepare the Lvov–Przemyśl operation<sup>8</sup> against Army Group North Ukraine with the aim of liberating Galicia. 1st Ukrainian Front was to destroy the German forces in the Rava Ruska–Lvov area in the first phase of the attack. It was then to press on with all speed to the San and capture the strategically important crossing points. The Soviet high command's directive required Konev to plan an operation with two spearheads. He accordingly launched the offensive against the right wing of Fourth Armoured Army from the area south of Lutsk, and also against the central section of First Armoured Army from the area between the Seret and Tarnopol.

In the right-hand section of the front, 1st Ukrainian Front had four armies on the Styr to the north of Lutsk, which were to advance to Rava Ruska to the south-west. The 3rd Guards Armoured Army was to lead the main attack, which was to break through XXXXII Corps' defensive positions at Gorokhov and proceed to Sokal. In addition to these massive offensives against the German front, the Soviet 13th Army deployed further to the south was to attack the section held by XXXXVI Corps and open up a breach in the front at this point through which the Soviet forces could advance directly to Rava Ruska. After disposing of the enemy's defence systems, the Soviet 13th Army was then to press on to the south-west and, with the assistance of 60th Army, encircle and destroy the German troops at Brody.<sup>9</sup>

Under the operational plans for the southern group of forces, the Soviet 60th Army was to lead the attack on First Armoured Army's defensive line in the area covered by XXXXVIII Armoured Corps south of Koltov and break through the German positions. Once it had succeeded in breaching the defensive front, 60th

<sup>7</sup> OKH/GenStdH, comparison of forces as at 1 May 1944 (tanks/artillery guns: 1 Apr. 1944), BA-MA RH 2/2949.

<sup>8</sup> Traktujew, 'Die Zerschlagung', 446; Glantz and Orenstein, *The Battle for the Ukraine*, xi.

<sup>9</sup> Glantz and Orenstein, *The Battle for the Ukraine*, 17–19.

Army, assisted by 3rd Guards Armoured Army and 38th Army, was to destroy the enemy forces at Lvov. In order to perform this task, 60th Army would have to move north to the west of Brody, while parts of 3rd Guards Armoured Army advanced towards Busk and trapped the German defenders between the Prinz Eugen Line and Strumilova–Busk. After he had reached the two intermediate destinations, Rava Ruska und Lvov, Konev hoped to advance on a broad front to the San. It would then be possible to proceed rapidly across the Vistula plain, which was ideal terrain for tanks, and so reach the industrial district of Cracow in southern Poland.

The Soviet high command's directives required Konev to concentrate his troops in the northern command area, leaving only 18th Guards Armoured Army to protect the left wing from its position in the Kolomyia area. Although the army was only supposed to undertake defence duties, it nevertheless had to prepare for an offensive along the Carpathian forest to Przemyśl. This would not only roll up the enemy defence system on the Strypa river from the south but also capture the Drohobych oilfields, which were vital to German conduct of the war.

When the operation was launched on 13 July 1944, 1st Ukrainian Front numbered more than a million men,<sup>10</sup> almost 850,000 of whom were in the foremost line.<sup>11</sup> Konev had ten armies under his command, of which nine were deployed in the area of operations while 5th Guards Army was held in reserve in the rearward area of the front. The eight armies that were to take central Galicia comprised, in all, 74 rifle divisions, seven armoured corps, three mechanized corps, two cavalry corps, five artillery divisions, and numerous army units and special units. As to heavy weapons, 1st Ukrainian Front was equipped with more than 2,200 tanks and assault guns,<sup>12</sup> 13,800 artillery cannon and mortars, and 2,400 anti-tank cannon. And, to support the troops on the ground, Konev also had 2nd Air Army, with close on 3,250 aircraft.<sup>13</sup>

In addition to the Lvov–Przemyśl operation, the military leaders in Moscow also planned an offensive—to be launched at much the same time by Marshal Konstantin Konstantinovich Rokossovsky's 1st Belorussian Front—against the extreme right wing of Army Group Centre and the left section of Army Group North Ukraine on the southern edge of the Pripet marshes. In conducting the offensive in Belorussia, the Soviet high command decided that the Brest–Lublin operation should not be confined exclusively to the central section but should include the southern flank, where it should focus on the boundary between Army Group Centre and Army Group North Ukraine. Rokossovsky was accordingly ordered to prepare an offensive to be launched in the direction of Lublin–Warsaw.

In view of the difficult conditions on the ground in 1st Belorussian Front's section of the front, Rokossovsky decided to launch the operation primarily from the Kovel area, advancing in a north-westerly direction, so as to avoid the enemy

<sup>10</sup> 1st Ukrainian Front strength on 13 July 1944 was about 1,002,000 men; *ibid.* 165 (annex 4).

<sup>11</sup> With the Second Air Army units at the front, the combat units contained altogether 843,772 men on 13 July 1944; *ibid.* 162 (annex 2).

<sup>12</sup> This figure includes approximately 530 artillery cannon on self-propelled carriages.

<sup>13</sup> Glantz and Orenstein, *The Battle for the Ukraine*, 22–8, 149–62 (annexes 1–3).

troops in the Brest-Litovsk area to the south-west and, at the same time, bring pressure to bear on the German units fighting east of the Bug. In order to ensure that the Brest–Lublin operation was conducted successfully, the forces south of the Pripyat had to be expanded considerably.<sup>14</sup> By the time the offensive was launched, on 18 July, 1st Belorussian Front had five armies in all, most of them starting from positions in the greater Kovel area. The two German corps—LVI Armoured Corps and VIII Army Corps—defending the section of the front from the Pripyat north of Kamin-Kashirskiy to the bend in the Turiya east of Dubenka, faced the Soviet 47th, 69th, 70th, and 8th Guards Armies, and the Soviet 2nd Armoured Army, numbering approximately 400,000 men in all. The five Soviet armies had almost 1,700 tanks and assault guns, and more than 8,000 artillery cannon. With this enormous power, 1st Belorussian Front was able to deploy an average of 350 artillery cannon and 80 tanks per kilometre in its centre of attack. Rokossovsky also had almost 1,500 fighters at his disposal, to ensure Soviet command of the air in the operational area.<sup>15</sup>

### (c) The Operational Possibilities of Securing Galicia

In his directive of 2 April, Hitler had made it clear that ‘it is imperative [...] to hold or win back the following line: Dniester to the north-east of Chişinău–Iaşi–Târgu Neamţ—the eastern exit from the Carpathians between Târgu Neamţ and Kolomyia–Tarnopol–Brody–Kovel’.<sup>16</sup> This meant that Army Group North Ukraine, with its decimated units,<sup>17</sup> was required to drive the enemy forces out of the Turiya salient south of Kovel, out of the salient north-west of Brody, and out of the Carpathians west of Kolomyia. Although the two corps at Kovel—LVI Armoured Corps from Army Group Centre and XXXXII Army Corps from Army Group North Ukraine—and XIII Army Corps north-west of Brody only partly fulfilled the task set by Hitler, the Hungarian 1st Army counter-offensive at Kuty in the Carpathians, conducted with the assistance of III Armoured Corps, was eminently successful. In the face of increasing resistance from three Soviet armies, the forces in the northern Carpathians managed to move the front forward in the second half of April to the north-eastern edge of the mountains near Kolomyia.<sup>18</sup>

For its own purposes, the army group needed to know what operations 1st Ukrainian Front was planning. On the basis of the deployment of enemy forces, the high command in Lvov concluded that the Soviet offensives would probably be launched from the Tarnopol, Brody, or Kovel areas. The OKH’s Foreign Armies East section also ascertained at the end of April that ‘a concentrated attack by Belorussian Front forces was to be expected, striking west to Lublin from the Lutsk–Kovel area, to provide initial cover for the enemy operations that were

<sup>14</sup> Lessnjak, ‘Die Operation von Lublin–Brest’, 431–4.

<sup>15</sup> See detailed account in Part III, Chapter II.5(d) of the present volume.

<sup>16</sup> *Hitlers Weisungen*, 251.

<sup>17</sup> By the end of April, the strength of First Armoured Army had dropped from approximately 211,500 men (1 Mar. 1944) to 172,450; BA-MA RH 2/1341, fos. 14, 37.

<sup>18</sup> Study P-114c, pt. 6, 472–5, BA-MA ZA 1/2074, fos. 210–13.

expected to be launched against the Lvov–Przemyśl area from the Stanislav–Tarnopol and Brody area'.<sup>19</sup> The troop concentrations in the vicinity of Brody and Tarnopol, in particular, suggested that 1st Ukrainian Front might attack First Armoured Army and attempt to encircle it in the Lvov–Stryi area. A deep defence system was therefore established, extending from the Dniester north of Kolomyia to Kovel.

The army group was aware that, in May, 1st Ukrainian Front was still moving substantial forces from the Dniester to the area round Brody and Tarnopol. This appeared to confirm the OKH findings. So Model dispatched II SS Armoured Corps to the Berezhany–Brody area to strengthen the section of the front east of Lvov.

Despite the signs of a new offensive, the Red Army did not resume its attacks immediately, so the army group used the short break to restore its decimated forces. Within two months it had managed to increase its strength by almost 150,000 to a total of 550,000 men. The strength of the Hungarian 1st Army also increased from 30,000 to close on 255,000 men. These increases were achieved partly by obtaining replacements, but in particular by extending the army group's area of responsibility. This included, above all, command of LVI Armoured Corps, which had previously formed the right wing of Army Group Centre. So Fourth Armoured Army HQ alone was responsible for the conduct of operations in the Turiya salient from the end of May. The army group's boundary moved north again at the beginning of July, when VIII Corps was incorporated in Fourth Armoured Army.<sup>20</sup> The high command in Lvov now had two German armoured armies and a Hungarian army under its command, with ten German corps and two Honved corps.<sup>21</sup>

Both wings had to be strengthened first of all, in view of what was assumed to be 1st Ukrainian Front's operational intentions. The Hungarian ally assigned further units to 1st Army, and Army Group North Ukraine submitted a request to the OKH for additional divisions. Despite the tense situation, the OKH dispatched three divisions to the Galician area of operations by the end of June: 88th Infantry Division, 28th Light Infantry Division, and 14th Waffen SS Division 'Galicia'. To enable the forces to withstand a massive Soviet offensive, the high command in Lvov produced an operational plan under which mobile units would be deployed in the rearward area of the front, ready to conduct mobile combat. This, it was thought, would deal with any enemy breakthroughs. This was a good start, but the available transport capacity posed a problem. The army group was short of trucks, in particular, so supplies were under threat and troops could not be transferred quickly on demand. Even so, in June 1944 Army Group North Ukraine was still reasonably confident that the Galician front could be held, at least for a limited time.

This changed when the army group was seriously weakened as a result of the Soviet offensive against the central section of the eastern front. By mid-July the high command in Lvov had been obliged to transfer nine of its 33 divisions to Army Group Centre. Model reacted to the situation by regrouping his reserves,

assigning three mobile units to each of the two armoured armies for reserve purposes.<sup>22</sup> However, the army group was seriously concerned not only about

<sup>22</sup> 20th Armoured Infantry Division was to cover the Tarnopol area and the army group's southern section. III Armoured Corps was stationed with 1st and 8th Armoured Divisions between the focal points of Tarnopol and Brody. 16th and 17th Armoured Divisions were available in an area south of

the mobile units it had lost,<sup>23</sup> but also about the number of units that were left. Every division on the main battle line had to defend a section of the front that was 15 kilometres wide on average. And, as the army group could not expect the OKH to send any reinforcements, the only solution was to shorten the front.

The OKH met the army group's demands at the end of June by agreeing to 'abolish the Kovel and Brody fortified places'.<sup>24</sup> At the same time, the army group command ordered LVI Armoured Corps to move the main battle line at Kovel back to a shortened defensive line west of the city, so that it could withdraw at least two divisions from the front to hold in reserve. In addition to straightening the front at Kovel, XXXXVI Army Corps also moved the main battle line at Torczyn back to a shortened defensive line.<sup>25</sup> Ultimately, the army group benefited from these measures only to a limited extent, as it was obliged to transfer one of the two divisions to Army Group Centre immediately. However, the situation in the Galician area of operations was now slightly less tense, and there was some hope that a Soviet advance could be halted, at least for a time.

## 2. THE WITHDRAWAL BATTLES IN GALICIA

Although Army Group North Ukraine had used the three-month pause in the fighting on the Galician Front to prepare for a new offensive by 1st Ukrainian Front, the disastrous events experienced by its neighbour on the left had demolished important parts of its defence plans. So, at the beginning of July, the army group found itself without any reserves or armoured units worth mentioning. Indeed, with the departure of six armoured divisions and three infantry divisions, the very idea of defence could no longer be entertained.<sup>26</sup>

The army group was also obliged to take over Second Army VIII Corps at the beginning of July, with the result that its left wing now extended to the southern edge of the Pripet marshes.<sup>27</sup> In view of this development, Col.-Gen. Josef Harpe<sup>28</sup> was afraid that the army group would not be able to hold its ground for long against a massive offensive by 1st Ukrainian Front. There were almost no

Volodymyr–Volynskiy to be deployed with Fourth Armoured Army in its northern or central section. And 5th SS Armoured Division 'Viking' stood ready west of Kovel.

<sup>23</sup> Of the 9 divisions that had been taken from Army Group North Ukraine by the middle of July 1944, only 7 were armoured divisions (4th, 5th, 6th, 7th, 20th Armoured Divisions; 9th, 10th SS Armoured Divisions).

<sup>28</sup> After Hitler had decided on 28 June 1944 that the C-in-C of Army Group North Ukraine, FM. Gen. Model, was also to be C-in-C of Army Group Centre, the C-in-C of Fourth Armoured Army, Col. Gen. Harpe, took command of Army Group North Ukraine; KTB Pz.AOK 4, Abt. Ia, 1–30 June 1944 (28 June 1944), BA-MA RH 21-4/227, fo. 67.

available reserves, and it was therefore to be feared that Army Group North Ukraine might suffer the same fate as its northern neighbour if there were to be a breach in the front.

At the beginning of July the army group had about 630,000 German and 210,000 Hungarian troops at its disposal to defend the eastern front between Kolomyia and the Pripet. As to heavy weapons, it had more than 1,550 artillery cannon and 1,510 tanks and assault guns, about 1,300 of them operational.<sup>29</sup> 1st Ukrainian Front, on the other hand, had 1.1 million men, 950,000 of them deployed on or near the front. And as to relevant weapons, the Soviet forces had 2,050 assault guns and tanks, and close on 4,900 artillery cannon to use in the battle.<sup>30</sup> In this situation, all that the high command in Lvov could do at the beginning of July 1944 was hope against hope that its section of the front would be spared a major Soviet offensive.

### (a) **The Battles in the Army Group's Central Section (13 to 19 July 1944)**

The situation had remained relatively quiet in Army Group North Ukraine's section of the front until the beginning of July, but increased troop movements indicated that a new 1st Ukrainian Front offensive was in the offing. On 24 June Stalin had already approved Konev's operational plan for an offensive aimed primarily in the direction of Rava Ruska and Lvov. Konev's intention was to split Army Group North Ukraine, and to encircle and destroy the bulk of it while it was still east of the Bug at Brody. To achieve this objective, about 70 per cent of the available artillery and 90 per cent of the tanks and assault guns were to be deployed at the points where it was planned to break through the enemy front.<sup>31</sup>

The Soviet 3rd Guards Army launched the operation against the southern wing of Fourth Armoured Army on 13 July.<sup>32</sup> Although the German front northeast of Gorokhov was breached in the first attack, Fourth Armoured Army HQ did not consider that this advance posed a direct threat to its defensive positions. The army HQ was convinced that 'there were as yet no signs of the attack being extended to other sections of the front'.<sup>33</sup> As a result, Fourth Armoured Army thought it could clear the breach in the front with its own resources, despite the fact that the enemy forces were now more than 8 kilometres inside the German defence system.<sup>34</sup> However, a counter-attack by 16th and 17th Armoured Divisions failed to achieve the desired result, so the army group decided to move XXXXVI Armoured Corps from the Dniester to the Bug at Sokal.

The high command in Lvov had already realized, on the second day of the action, that 'in view of the situation of the enemy forces and our own, there now

<sup>34</sup> Glantz and Orenstein, *The Battle for the Ukraine*, 57.

appears to be no prospect of continuing the counter-attack to secure the main battle line'.<sup>35</sup> The armoured army had already deployed all its reserves on 14 July, so the army group was obliged to bring in 20th Armoured Infantry Division from the front on the Strypa river, a tributary on the left of the Dniester south-west of Tarnopol, in order to contain the Soviet breakthrough. However, Konev exploited the success at Gorokhov to good effect, with 1st Ukrainian Front despatching substantial forces to the breakthrough area to speed the advance.<sup>36</sup>

Apart from the critical situation at Gorokhov, the developments in Army Group Centre's situation were also giving Harpe considerable cause for concern. The military disaster north of the Pripet had forced the army group to move Second Armoured Army back to the Brest–Grodno line, and the high command in Lvov had consequently been obliged to move VIII Corps back too. Harpe therefore withdrew the left wing of the army group to the west bank of the Bug at Włodawa on 19 July,<sup>37</sup> while the tense situation at Gorokhov immediately to the south meant that Fourth Armoured Army HQ had no alternative but to allow XXXXVI Armoured Corps to go to its defence. Despite the Soviet 3rd Guards Army's massive inroads, the army HQ was still under the illusion that the enemy offensive could be repelled and the main battle line re-established.<sup>38</sup>

After the breakthrough, Konev ordered 3rd Guards Army to press on south-west, through Rava Ruska, to the San at Jarosław. And, following its success at Gorokhov, 1st Ukrainian Front launched a further attack on 15 July, against First Armoured Army's left wing, in the area north-west of Tarnopol. By the third day of the operation, Fourth Armoured Army was no longer really in a position to prevent the Soviet 3rd Guards Army and 13th Army from breaking through. However, against all expectations, XXXXVI Armoured Corps was just able to block the enemy advance. In view of the critical situation, the armoured corps sought permission to move back to the Prinz Eugen Line, in order to re-establish the defensive front in that position. The army HQ and the army group both refused to grant permission, as the move would not have saved any forces worth speaking of.<sup>39</sup> The battles on Fourth Armoured Army's southern wing continued unabated, but the army managed to prevent any enemy breakthrough, at least for a time, though it used all its reserves in the process.<sup>40</sup> First Armoured Army's situation became critical only when the Soviet 3rd Guards Armoured Army succeeded in breaking through in the section covered by XXXXVI Armoured Corps. A counter-attack by 1st and 8th Armoured Divisions failed because the units were unable to close the gap at Gorokhov and cut off the enemy forces that had broken through.<sup>41</sup>

<sup>41</sup> Study P-114c, pt. 7, i, 18, BA-MA ZA 1/2077, fo. 70.

In the light of events, Army Group North Ukraine had concluded by 15 July that '*shortly after the enemy operation was launched*, it was faced with the fact that it had been obliged to deploy *almost all its reserves* in the sections of the front north-west of Tarnopol and south-west of Lutsk, *even before* the enemy forces were fully engaged [...] It had been obliged to deploy its few reserves in a rapid gathering of forces, designed at all costs to prevent the army group from breaking up.'<sup>42</sup> In the circumstances, the army group 'was obliged to take the risk of withdrawing units from quiet sections of the front in order to deploy them at focal points in the defences'. Harpe also asked the OKH to assign '20,000-strong marching units immediately',<sup>43</sup> to replace the substantial losses. The army group commander believed that this was the only way to stabilize his front and mount a successful defence against the Soviet enemy.<sup>44</sup>

Despite numerous efforts, none of the measures had any appreciable effect. 1st Ukrainian Front continued to advance without let or hindrance. The army group thought the best answer to Konev's operational plans was to withdraw to the Prinz Eugen Line. So First Armoured Army was assigned the task of closing the gap at Koltov again in an extensive counter-attack from that position. To achieve this operational objective and support the units that were under attack on both sides of Brody, the army group command brought two German divisions in from the Carpathian section of the front.<sup>45</sup> Despite all impediments, on 16 July Harpe still had hopes that the First and Fourth Armoured Army counter-attacks would be successful, and would prevent 1st Ukrainian Front from taking central Galicia.<sup>46</sup>

The Red Army, having broken through the defensive lines north and south of Brody on 17 July, pressed on into the heart of the German defence system protecting Lvov. While the armoured enemy spearheads in the southern section of the breakthrough reached the Bug at Busk, 1st and 3rd Armoured Guards Armies were able to cross the river at Kamyanka Strumilova in the northern section. As a result of this enemy pincer movement, XIII Army Corps was trapped between the Prinz Eugen Line and the Bug. Neither the speed of the Soviet spearhead attacks nor the considerable amount of ground lost in the first few days of the Soviet offensive persuaded the OKH to move the left wing of First Armoured Army back to the positions on the Zolota Lypa and Bug rivers. So the decision taken by the army group HQ, which had moved to Łanicut on 17 July, namely to conduct the defensive battle on the Prinz Eugen Line, still stood. In order to achieve this objective, the army group's plan was that First Armoured Army should close the gap at Zolochiv, while Fourth Armoured Army HQ was assigned the task of covering the battle, on the one hand, and preventing the enemy from breaking

<sup>42</sup> ObKdo H.Gr. Nordukraine, Abt. Ia, No. 3291/44 g.Kdos., 15 July 1944, 3, BA-MA RH 19 VI/19, fo. 245 (emphasis in original).

<sup>45</sup> 101st Light Infantry Division left the Prut section west of Kolomyia on 16 July 1944, and 68th Infantry Division left its position in the section south of Stanislavov on 18 July 1944.

<sup>46</sup> H.Gr. Nordukraine, Abt. Ia, No. 3304/44 g.Kdos., 16 July 1944, BA-MA RH 19 VI/19, fo. 240. KTB Pz.AOK 4, Abt. Ia, 1 July–15 Aug. 1944 (16 July 1944), BA-MA RH 21-4/237, fos. 103 ff.

through the Prinz Eugen Line, on the other.<sup>47</sup> The plan could be executed only if Fourth Armoured Army moved its right wing back to that line, and Hitler gave the necessary permission for the move on 18 July.<sup>48</sup>

By that time, 1st Ukrainian Front had 20 rifle divisions and five tank corps in the breakthrough area at Zolochiv–Busk, and 14 rifle divisions and three tank corps already stationed south-west of Lutsk.<sup>49</sup> On the same day, Rokossovsky's 1st Belorussian Front launched the expected offensive against the LVI Armoured Corps and VIII Army Corps defensive positions west of Kovel. The forces on the boundary separating the army group from Army Group Centre proved to be too weak to repel this massive attack at the outset. As a result, 1st Belorussian Front established a 20-kilometre-wide breach in the LVI Armoured Corps system of positions on the very first day.

As Army Group North Ukraine's defensive measures had still had no success by the end of the day, and the gap had not been closed, Harpe decided to gather all the available forces together in order to prevent an enemy breakthrough on both sides of Lvov. In the commander-in-chief's view, it was 'essential that the army group hold on to Lvov, which is an exceptionally important hub for all troop movements, that it stop the enemy armoured forces breaking through to Lvov, that it prevent First Armoured Army from being driven back to the Carpathians in any circumstances and, lastly, that it succeed in closing the gap in Fourth Armoured Army's southern wing at Krystynopol'.<sup>50</sup> There were not enough troops in Lvov to perform the necessary tasks, nor were they strong enough. Harpe brought additional forces in from the right wing of First Armoured Army HQ. The commander-in-chief thought he could do this without running any great risk, because 1st Ukrainian Front was moving forces back to its section at Kolomyia. In addition to strengthening the troops in the Lvov area, the army group HQ intended to move First Armoured Army back to the established 'Drohobych–Lvov defensive position', reducing the length of the front from 210 to 160 kilometres. In accordance with the commander-in-chief's plan, the preparations for these measures were to be timed so that the troop movements in the Lvov area and the operations to shorten the front could start on 24 July.<sup>51</sup> However, Army Group North Ukraine as a whole reacted much too statically, and above all much too late, to the 1st Ukrainian and 1st Belorussian Front offensive in the Galician area; it was unable to hold out, even for a short time, against the opposing Soviet forces and their flexible tactics.<sup>52</sup>

<sup>52</sup> Study P-114c, pt. 7, i, 16–26, BA-MA ZA 1/2077, fos. 68–78. *Geschichte des zweiten Weltkrieges 1939–1945*, ix. 95–105; Glantz and Orenstein, *The Battle for the Ukraine*, 56–68; Traktujew, 'Die Zerschlagung', 449–52; *Die geheimen Tagesberichte*, x. 346, 349, 352, 355, 359, 362.

It was already clear to the army group, at a very early stage, that the 38th Army attack at Gorokhov marked the opening of the major 1st Ukrainian Front offensive. Despite all the experience of recent months, the high command in Lvov believed it could halt the offensive, at least for a time. This is borne out, in particular, by Harpe's plan to conduct the defensive battle on the Prinz Eugen Line, even at this late stage. This is all the more surprising in that, so far, the counter-attacks had not been successful, nor had it been possible to close the breaches in the front and cut off the enemy spearheads. Ultimately, all the measures taken and the orders given by Army Group North Ukraine indicated that the high command had simply underestimated the force of the major offensive, at least until 18 July. As a result, the army group was too late in ordering XIII Army Corps to break out of the pocket. That being so, Fourth Armoured Army was obliged to fight a defensive battle for a week, and then to move back across the Bug and employ delaying tactics in an attempt to slow down the massive Soviet attacks. And First Armoured Army only had enough forces left, in the second half of July, to delay the offensive before it reached Lvov. By 20 July, therefore, Army Group North Ukraine had almost no chance of holding eastern Galicia.

### (b) The Enclosure of XIII Army Corps

The army group HQ had learned, from experience during the 1943 withdrawal, to move particularly exposed sections of the front back from the first to the second defensive position as soon as Soviet offensives were launched. This was designed to avoid substantial losses of men and materials during the initial artillery and air bombardment. However, Konev foiled any such plan Army Group North Ukraine might have had: he planned an envelopment operation on both sides of Brody, an operation which was to cause the centre of the army group's front to collapse and opened up the possibility of pressing forward into the heart of Galicia along the Brody–Lvov–Przemyśl axis. XIII Army Corps was stationed at the first point on this strategically important axis, since First Armoured Army had moved it back to the Prinz Eugen Line to protect the highway to Lvov, which was essential for transporting supplies to the army group front. However, within a few days, the Soviet 1st Mechanized Cavalry Group and 3rd Guards Armoured Army met north of Busk on the Bug, thus successfully completing the first phase of the operation—the enclosure of XIII Army Corps.<sup>53</sup>

XIII Army Corps—with Corps Detachment C,<sup>54</sup> 349th Infantry Division and 454th Security Division, 14th Waffen SS Division 'Galicia', and 349th Infantry Division from XXXXVIII Armoured Corps—was trapped in the pocket. On

<sup>53</sup> Glantz and Orenstein, *The Battle for the Ukraine*, 135–44; *Geschichte des zweiten Weltkrieges 1939–1945*, ix. 102–6; Jaggi, 'Der Ausbruch', 227 ff.

<sup>54</sup> The heavy losses in the withdrawal battles in the autumn of 1943 prompted the OKH to form corps detachments from the remnants of several divisions (division groups). Corps Det.C consisted of Div.Gr. 183, 217, and 339. Division groups were more or less equivalent to infantry regiments in terms of strength.

16 July First Armoured Army HQ had still been confident that the gap at Koltov could be closed again by 1st and 8th Armoured Divisions mounting an attack on the Soviet 3rd Guards Armoured Army flank from the south, while 349th Infantry Division attacked it from the north. It had therefore felt that there was no need to move XIII Army Corps back behind the Bug. Although there were already signs of impending enclosure on 16 July, the high command in Łajćut did not decide to move XIII Army Corps west until 18 July. By that time, the army corps was already surrounded. The only possibility now was to break out of the pocket.<sup>55</sup>

As XIII Army Corps was to aim for the escarpment south-west of Zolochiv, the commanding general, Gen. Arthur Hauffe, had to realign the corps so that Corps Detachment C, which was to be the spearhead, turned to the south. 349th Infantry Division, which was to open the circle to the south, was stationed on its left.<sup>56</sup> The other two divisions were assigned the task of protecting the breakout on the north. In making his plans, Hauffe hoped that XXXXVIII Armoured Corps would break through from the south and open up a corridor. Although it was essential to act quickly in this precarious situation, the corps HQ decided not to start the breakout until the next day. As a result of poor organization, which prevented preparations being made in good time and delayed the initial attack,<sup>57</sup> the plan could not be executed in time. Even so, the operation got off to a very good start because the enemy did not respond immediately. The breakout was the target of heavy air attacks, which caused such high losses in Corps Detachment C and 349th Infantry Division that the operation almost had to be wound up.<sup>58</sup> And errors on its own part, such as loss of communications in Corps Detachment C, caused serious friction and made unified leadership in the pocket impossible. The spearheads finally attempted to fight their way through to XXXXVIII Armoured Corps front lines.<sup>59</sup> On 20 July the First Armoured Army commander-in-chief, Gen. Erhard Raus intervened, ordering the enclosed army corps 'to break through with all divisions on the morning of 21 July, and move east past Zolochiv into the wooded mountains south of the highway',<sup>60</sup> but that too had no effect.

As a result of serious command errors by XIII Army Corps HQ and divisional staff, as well as the massive resistance of the enemy forces and their overwhelming superiority in the air, only parts of Corps Detachment C and 349th Infantry Division were able to escape from enemy enclosure. They succeeded in fighting their way through to 1st Armoured Division at Zolochiv.<sup>61</sup> The bulk of XIII Army Corps did not manage to escape from the surrounding enemy forces, and ended up in Soviet prisoner-of-war camps. All in all, as a result of the enclosure

of XIII Army Corps, the army group lost some 40,000 men and all their heavy equipment.<sup>62</sup>

### (c) The Loss of Unity in the Front North of Lvov

Although First Armoured Army endeavoured to relieve XIII Army Corps, establish a line of interception east of Lvov, and preserve the connection with Fourth Armoured Army, the forces available were insufficient. XXXXVIII Armoured Corps could not open up the ring round the enclosed army corps, nor could XXXXVI Armoured Corps<sup>63</sup> re-establish the connection with its neighbour on the left. The situation was becoming much more critical in the northern part of the army group area, where the enemy had launched a massive attack on both wings of Fourth Armoured Army and achieved deep breaches in the front.

<sup>62</sup> Raus, 'Die Schlacht bei Lemberg', 839–43; Jaggi, 'Der Ausbruch', 227–31; Lange, *Korpsabteilung C*, 110–19; *Geschichte des zweiten Weltkrieges 1939–1945*, ix. 102–10.

<sup>63</sup> This corps had been placed under First Armoured Army command on 19 July 1944. KTB Pz.AOK 4, Abt. Ia, 1 July–15 Aug. 1944 (19 July 1944), BA-MA RH 21-4/237, 124.

First Ukrainian Front, attacking westwards with three armies between Sokal and Zolochiv, broke through the German defences in the Krystynopol and Kamyanka Strumilova line on the Bug at the first assault. Kamyanka Strumilova was held but, with XIII Army Corps out of the picture, XXXXVI Armoured Corps had been forced to move south-west and was consequently unable to intercept the 1st Guards Armoured Army offensive north of the town. Harpe now faced the problem that the unity of the army group front was in danger of being lost, both in the central section and on the left wing, where 1st Belorussian Front had launched an offensive.

Within a few days, Fourth Armoured Army HQ was obliged—under strong enemy pressure—to move its front back to the Chełm–Hrubieszów line. Above all, the enemy advance south of Sokal had forced the army to extend its defensive line far to the west. Meanwhile, the Soviet 1st Guards Armoured Army had succeeded in extending the deep breach at Kamyanka Strumilova, establishing an operational breakthrough to the south and west and breaking the connection between the two German armies. This created a 120-kilometre-wide gap between the southern wing of XXXXII Corps north of Rava Ruska and the northern flank of XXXXVIII Armoured Corps at Zolochiv, a gap through which Konev's troops were able to press forward to the west unimpeded. In this situation, the high command in Łanicut ordered First Armoured Army HQ to form two groups of forces, one to protect the broad area round Lvov, the other to establish a weak security line with Fourth Armoured Army to the west of Rava Ruska. The only option was to engage in delaying action, since most III Army Corps and XXXXVI Armoured Corps units were still moving in. Nevertheless, the army group had to ensure that the Lvov and Tomaszów Lubelski–Zamość area remained in its hands, because the traffic arteries that were essential for conveying supplies to both armies all ran through that area.

While First Armoured Army was able to keep its left flank in the Lvov area relatively stable, Fourth Armoured Army was exposed to constant attacks on its deep southern flank. Gen. Walther Nehring therefore decided to form the Meden Combat Group southwest of Sokal,<sup>64</sup> which was 'to attack the rear and flanks of enemy forces advancing south of Krystynopol'.<sup>65</sup> The gap in the front in the area of XXXXVI Armoured Corps was also to be closed, with 17th Armoured Division endeavouring to extend its section of the front to the south. Fourth Armoured Army HQ's plan could not be carried out because the forces available were insufficient. In view of the position of the troops in the Rava Ruska area, the army group was obliged to place XXXXVI Armoured Corps under the command of First Armoured Army, as it had been forced to move south, while the Meden Group remained under the command of Fourth Armoured Army HQ.<sup>66</sup>

<sup>64</sup> The combat group, led by the commander of 17th Armoured Division, Lt.-Gen. Karl-Friedrich von der Meden, under the overall command of Fourth Armoured Army HQ, consisted of 17th Armoured Division, 219th Infantry Division, Fourth Armoured Army HQ's shock regiment, and parts of 231st Security Division and 210th Assault Gun Brigade; Pz.AOK 4, Abt. Ia, Panzerarmeebefehl No. 70, 19 July 1944, BA-MA RH 21-4/245.

<sup>65</sup> KTB Pz.AOK 4, Abt. Ia, 1 July–15 Aug. 1944 (18 July 1944), BA-MA RH 21-4/237, fo. 117.

<sup>66</sup> Ibid., fo. 124.

All the measures taken by the high command in Łanicut proved to be inadequate in view of the Soviet 3rd Guards Armoured Army's rapid advance. For example, XXXXII Corps was in danger of being cut off in the rear if sections of the enemy army moved north. The Meden Group was therefore instructed to engage in mobile combat to prevent possible enclosure.<sup>67</sup> However, it did not have sufficient forces to close the 50-kilometre-wide gap at Zhovkva, so the 1st Guards Armoured Army spearheads were able to reach the Rava Ruska area. Konev now sought to use his operational advantage to push on towards Zamość behind Fourth Armoured Army, cutting its rear communication lines. As the Germans saw it, the enemy's intentions were as follows: 'exploiting the open southern flank, [...] first, to follow First Armoured Army west to the Rava Ruska–Zamość road, and then to turn north, unhinge the Bug line, and press forward into the deep flank and rear of the armoured army'.<sup>68</sup> Harpe now had to improvise: he formed a blocking unit which protected the Army's threatened left flank south of Zamość;<sup>69</sup> he then moved his right flank back to the north, substantially widening the gap at Rava Ruska.

In addition to the attacking wedge north of Rava Ruska, the Soviet 4th Armoured Army was attacking the III Armoured Corps defensive block further south at Peremyshlyany. The Soviet spearheads pierced the German line at the interface between III and XXXVIII Armoured Corps, posing a serious threat to Lvov, the cornerstone of the German defence system. The situation escalated when parts of the Soviet 3rd Guards Armoured Army, which were located behind the German defensive lines north-west of Zhovkva, veered south-east. Even so, First Armoured Army managed to close the gap at Peremyshlyany by 27 July.<sup>70</sup>

Unlike the section at Lvov, the Soviet 1st Guards Armoured Army and 13th Army continued to advance almost unimpeded, reaching Rava Ruska by nightfall on 20 July. This increased the danger of the army group's northern area collapsing. The massive offensive mounted against Fourth Armoured Army meant that there was almost no hope of closing the gap in the front east of the San unless the army group received reinforcements. However, on the army group's southern front, First Armoured Army still had enough strength to hold the front line from Zhovkva to the upper course of the Dniester and protect the Drohobych oilfields. The army group had already deployed all its reserves, so it was scarcely possible to prevent two Soviet armies from getting through to the San. In its despair, the army group HQ transferred three reserve divisions to the San–Vistula section,<sup>71</sup> to establish a weak security line and halt 1st Ukrainian Front's advance.

The bulk of Fourth Armoured Army was in an exposed position far to the east of the two Soviet spearheads, and Nehring was therefore obliged to deploy his forces so that the enemy could not get round either of the army's two exposed flanks.

<sup>67</sup> Ibid., fo. 127.

<sup>68</sup> Ibid., fos. 130 ff.

<sup>69</sup> Ibid., fo. 130.

<sup>70</sup> *Geschichte des zweiten Weltkrieges 1939–1945*, ix. 106 ff.; Glantz and Orenstein, *The Battle for the Ukraine*, 73–8.

<sup>71</sup> 154th Reserve Division was assigned to the Przemyśl–Nisko section of the front, 18th Artillery Division to the Nisko–Annopol section, and 174th Reserve Division to the area extending to the army group boundary at Puławy.

Fortunately for XXXXII Corps, the enemy attacks on its deep right flank became less intense after 21 July because the Soviet 1st Guards Armoured Army had advanced so quickly that it no longer had the substance required to mount a direct attack.

On 18 July, while the German First and Fourth Armoured Armies were still endeavouring to close the gap at Rava Ruska in the centre of the army group, Rokossovsky's troops launched an offensive at Kovel. Their first assault did serious damage to Fourth Armoured Army's left flank at the interface between Army Group Centre and Army Group North Ukraine. The superiority of 1st Belorussian Front was so overwhelming that the connection with VIII Corps was broken, and the possibility of encirclement could no longer be ruled out. In view of the delicate situation, Fourth Armoured Army HQ noted explicitly that 'with the situation in the front and the deep flank becoming more threatening by the hour, immediate withdrawal of the armoured army to the Vistula offers the only prospect of keeping the units fit to fight, and therefore fit to be assigned further tasks'.<sup>72</sup> Despite this dramatic situation, the army was obliged to remain in a line far to the east of the Vistula and the San, because Hitler rejected the suggestion of a withdrawal to the Vistula.

The enemy had the initiative, and the army group was completely at its mercy. The enemy breakthrough north of Lvov, in particular, must have given Harpe considerable cause for concern. He simply lacked the necessary force to delay or stop 1st Guards Armoured Army's advance to the San. Now, at the end of July, the opportunity presented itself for Konev to advance directly into the Polish industrial area of Cracow, if he concentrated all his forces in an attack on the San–Vistula section of the front. Army Group North Ukraine's only hope now was that 1st Ukrainian Front's attack would lose momentum. For the desperate position of the army group's neighbour on the left, and the tense situation in the southern and western European areas of operations,<sup>73</sup> precluded any possibility of the OKH despatching fresh units to establish more stable defensive positions in the San–Vistula section of the front.

#### (d) **The Breakthrough on the Army Group's Northern Wing**

When 1st Belorussian Front launched the Brest–Lublin operation against Army Group North Ukraine's left wing on 18 July, it found itself up against LVI Armoured Corps and VIII Corps, which were defending the section of the front to the west and north-west of Kovel with five German divisions and a Hungarian reserve unit. Both corps' forces consisted almost entirely of infantry, and they were seriously short of tanks, assault guns, and artillery. There were only about 100 tanks and assault guns, and 160 heavy anti-tank cannon to employ in the battle against almost 600 enemy armoured vehicles. Given the shortage of heavy weaponry and

<sup>72</sup> KTB Pz.AOK 4, Abt. Ia, 1 July–15 Aug. 1944 (22 July 1944), BA-MA RH 21-4/237, fo. 153.

<sup>73</sup> See in this connection *Germany and the Second World War*, vii (chapters by Vogel), and Gruchmann, *Der Zweite Weltkrieg*, 177, 222.

the numerical inferiority, there was little chance of successfully resisting a massive attack by 1st Belorussian Front, which, by the middle of July, was already deployed in the region of Kovel with 2nd Armoured Army, 8th Guards Army, and 47th, 69th, and 70th Armies.<sup>74</sup>

Rokossovsky used 1st Belorussian Front's immense force potential to achieve a breakthrough of almost 100 kilometres through the German defensive system at the first assault. For the purposes of the offensive, 1st Belorussian Front HQ had allocated a 1-kilometre-wide combat section to each rifle division. The infantry attack had strong artillery backing, with approximately 360 cannon per combat section. There was no doubt that Rokossovsky would get around the German defensive block in front of Brest-Litovsk in the south-west, and press forward in the general direction of Lublin and Warsaw.<sup>75</sup> Army Group North Ukraine was powerless in the face of this enormous fighting force.

The attack on VIII Corps on 17 July, in the section held by the Hungarian 12th Reserve Division, had caused the defensive front to waver. So when the Brest-Lublin operation was launched on the following day, the three Soviet armies encountered a Fourth Armoured Army left wing that was already weakened. Although Harpe decided, that same day, to move VIII Corps' defensive positions back to a shortened line, the corps still had insufficient forces to hold the section of the front for long.

On 18 July Rokossovsky launched 8th Guards Army and 47th and 69th Armies, with 15 rifle divisions, on a major offensive against Fourth Armoured Army's left wing.<sup>76</sup> The three armies advanced on either side of the Kovel–Lublin railway line, directing the main effort at the defensive positions of LVI Armoured Corps. The armoured corps put up a vigorous defence but the enemy forces were so much stronger that it was a lost cause. The German defence had to contend not only with stronger forces on the ground but also with enemy superiority in the air and massive deployment of ground-attack aircraft. As a result, the Soviet forces achieved deep breaches in the defensive front on the very first day of the operation.<sup>77</sup> 1st Belorussian Front's intention was thus already clear at this early stage, namely that its left wing should break through the defence system constructed to the east of the Bug and advance rapidly to the river.<sup>78</sup>

In view of the critical situation in the Kovel area, Harpe had already authorized Fourth Armoured Army HQ to move the army's left flank back to the Bug line.<sup>79</sup> However, the decision proved to be highly problematical for LVI Armoured Corps, because that section of the Bug line was only partly constructed. As a result of the

<sup>79</sup> Developments in the situation of Army Group Centre, which no longer precluded the possibility of moving the right wing back to the west bank of the Bug, prompted Army Group North Ukraine to make appropriate arrangements to deal with that eventuality.

armoured corps' heavy losses, the fighting strength on Fourth Armoured Army's left wing steadily declined, so there was little hope of halting the Soviet offensive at the Bug.<sup>80</sup> Fourth Armoured Army HQ had to assume that 1st Belorussian Front would push forward to the Vistula, as well as turn north and roll up Army Group Centre from its southern flank.<sup>81</sup>

LVI Armoured Corps was only partially able to withstand the Soviet assault. Three days after the operation was launched, the corps already found itself in a critical situation<sup>82</sup> when enemy spearheads crossed the Bug on its northern and southern flanks while it was still massively engaged in defending its position east of the river. The Fourth Armoured Army commander-in-chief was seriously concerned about the situation on the left flank, in particular, where there was a danger that the connection with VIII Army Corps might be cut. When the Soviet Brest-Lublin operation was launched, VIII Army Corps had only just managed to maintain the link with its neighbour on the right by dint of the most strenuous efforts.<sup>83</sup> It was to be feared that the enemy would 'endeavour to encircle Fourth Armoured Army operationally by the Russian 1st Armoured Army, advancing via Sokal and past the southern wing of Second Army north of Brest, cut its communication lines with the west, and, after reaching the immediate operational objective of Brest-Litovsk, create the necessary conditions for an operational advance on Warsaw'.<sup>84</sup> All Fourth Armoured Army could do was employ delaying tactics to slow the pace of the enemy attack, while withdrawing, section by section, to the San-Vistula line. Given its inferior strength, with only eleven infantry divisions with 15 to 20 operational tanks and about 160 assault guns at its disposal on 18 July,<sup>85</sup> Nehring had no alternative but to withdraw to the front line constructed on the left bank of the Bug.

Despite the critical situation, the OKH was determined that Fourth Armoured Army should remain in its positions on the west bank of the Bug. But, as at Rava Ruska, there were already signs on the Army's left wing that the Bug line would shortly be lost. The German troops were virtually helpless in the face of the attack by the Soviet 47th and 69th Armies, especially as 'LVI Armoured Corps was simply overrun by the massive enemy infantry forces'.<sup>86</sup> The two corps on the army group's left wing nevertheless managed, by calling on their last remaining reserves, to preserve the unity of the front north of the Kovel-Chełm railway line, even though VIII Army Corps too was under massive attack by 8th Guards Army.<sup>87</sup>

<sup>85</sup> Ibid., fos. 128 ff. On 18 July 1944 1st Belorussian Front had 34 rifle divisions and 3 mobile corps, with more than 500 to 600 tanks, in the German Fourth Armoured Army's combat zone.

<sup>86</sup> KTB Pz.AOK 4, Abt. Ia, 1 July–15 Aug. 1944 (20 July 1944), BA-MA RH 21-4/237, fo. 136.

<sup>87</sup> Ibid., fos. 139 ff.

On the fourth day of the Brest–Lublin operation, after the Soviet 47th and 69th Armies had received reinforcements to make up for their losses, the German defensive front west of the Bug collapsed. Only small combat groups, forming a security line, attempted to delay the enemy advance to the Sawin–Włodawa road. But the armoured corps was unable to reduce the momentum of the 69th Army attack. The army group had moved VIII Army Corps back to the Bug line, but this tactical measure did not suffice to stop 8th Guards Army. VIII Army Corps too was now obliged to move its right wing back to the west. 1st Belorussian Front was now able to complete the breakthrough at the interface between LVI Armoured Corps and VIII Corps. The Red Army took advantage of the gap at Sawin to push rapidly to the west, with the result that by 20 July the enemy stood in the deep flanks of both army corps.<sup>88</sup>

In view of the events at Sawin, the army group concluded that 1st Belorussian Front would ‘take advantage of the good roads to press westwards *en masse* towards Lublin while dispatching some units to try to take Chełm. It [the enemy] would also attempt, using more shock troops, to roll up the VIII Army Corps defence on the Bug northwards and take Włodawa’.<sup>89</sup> The Soviet 69th Army broke through the security line north-west of Chełm on 21 July. Lublin now lay open and virtually unprotected in the path of the advancing Soviet 2nd Armoured Army, as there was only a weak security line on the Wieprz guarding the eastern approach to the city.<sup>90</sup> The Soviet 69th Army threatened to penetrate LVI Armoured Corps’ northern flank, cutting off the retreat to the Vistula. Nehring now wanted to shorten the section defended by XXXXII Army Corps, so that he could take one of its divisions out of the front to secure the deep left flank. As the Soviet 69th Army was concentrating on taking Lublin, the armoured corps was able to stabilize its left flank temporarily. However, at this stage in the operation, the army commanders’ hands were tied, because ‘the enemy is taking advantage of the breakthrough, pushing its armoured and motorized forces relentlessly westwards, and pressing into the Lublin fortified place from the west in the afternoon’.<sup>91</sup> The almost 900-strong garrison, consisting mainly of local defence conscripts and anti-aircraft defence personnel, mustered all its forces to repel the attack. Lublin had been designated a ‘fortified place’ by Hitler, but it had no chance of successfully defending itself for long, nor was it strong enough to tie down major enemy troop concentrations in the long term.<sup>92</sup> Despite the acute threat, Harpe decided that Lublin, ‘as an important node, cannot be surrendered without a struggle, especially at a time when there are still some forces east of the fortified place’.<sup>93</sup> However, the army group was in favour of giving up Lublin because, ‘given its location and the forces allocated to it, it was unable to fulfil its mission of tying

<sup>88</sup> *Geschichte des zweiten Weltkrieges 1939–1945*, ix, 74 ff.

down strong Russian forces'.<sup>94</sup> The commander-in-chief therefore repeatedly asked the OKH to cancel the designation of Lublin as a fortified place. Despite all those misgivings, Hitler stuck obstinately to his decision.<sup>95</sup> In view of the developments at Lublin, Fourth Armoured Army concluded, in its situation report, that 1st Belorussian Front intended to press forward to the bend in the Vistula east of Radom and cross the river at Puławy. This conclusion was in line with Rokossovsky's operational plan, which was that Lublin should be taken quickly and the Soviet 2nd Armoured Army and 69th Army should advance rapidly to the Vistula.<sup>96</sup> With 69th Army engaged in driving LVI Armoured Corps south, and 47th Army endeavouring to roll up VIII Corps from the south at Włodawa, the Soviet enemy had created the conditions for increasing the gap between the German corps and then pressing on to the Vistula without any appreciable impediment.<sup>97</sup>

In the area of operations between Lublin and the Bug, 1st Belorussian Front was taking advantage of the army group's weakness to put Rokossovsky's operational plan into effect, steadily extending the area of the breakthrough and also advancing north-east towards Warsaw. That would break up the army group's right flank and roll back, from the south, its remaining front east of the Vistula.<sup>98</sup> On 24 July, at this critical stage in the fighting, the high command in Cracow received Hitler's directive on the future conduct of operations on the eastern front. The directive took account of the current situation on the army group's left flank, in that the OKH was to place VIII Army Corps under the command of Army Group Centre. At the same time, Hitler assigned the army group the task of restoring the front's connection with its neighbour on the right.<sup>99</sup>

Although Army Group North Ukraine's section of the front had been reduced by the reassignment of VIII Army Corps, the situation on its northern flank remained tense. The Soviet 69th Army was not only attempting to take Lublin, which was encircled on 23 July, but was also threatening Fourth Armoured Army's deep flank. Only mobile combat by LVI Armoured Corps saved the left wing from penetration. Although the armoured corps' northern wing was holding its ground against the enemy pressure, Fourth Armoured Army HQ nevertheless had to secure the army's withdrawal to the west. It therefore gradually moved the armoured corps back to the Wieprz section of the front.

On 22 July, when it became clear that the Vistula section was in danger, the army group had already assigned to Fourth Armoured Army HQ responsibility for securing the stretch of river between Nisko and Dęblin. The army group placed two reserve divisions under its command for the purpose: 18th Artillery Division was

deployed behind the point of concentration of the armoured army's defences in the San–Vistula triangle, and 174th Reserve Division was given the task of securing the west bank of the Vistula on both sides of the Chełm–Lublin–Puławy–Radom road.<sup>100</sup> However, the security line between Annopol and Dęblin was in very great danger, because the Soviet 69th Army was driving LVI Armoured Corps south. Given the lack of reserves, the army group could only hope that, after advancing more than 150 kilometres, the Soviet forces would no longer have the offensive strength to overcome the river line.

At the end of July, the Lublin fortified place was the last obstacle standing in the way of 1st Belorussian Front's advance from the Bug to the Vistula. The Soviet forces surrounded the city. By the second day of the siege, it was apparent that the weak garrison forces could not cope with the attacks. The army group commander-in-chief nevertheless decided to dispatch 17th Armoured Division to relieve the 'fortified place', because 'holding Lublin had proved to be thoroughly worthwhile'.<sup>101</sup> By 24 July it was clear that the city was about to be lost completely. A radio message from the commander read: 'A few houses still in our hands. Impossible to wait any longer. Request permission for immediate breakout'.<sup>102</sup> The armoured unit's attempts to relieve the city having failed, the OKH finally, after lengthy discussions, gave its consent.<sup>103</sup> So, on 25 July, some 300 to 400 men attempted to fight their way through to the German lines, which about 170 of them reached on the following day.<sup>104</sup>

After taking Lublin, the Soviet forces increased the pressure on LVI Armoured Corps' northern flank. The corps was now engaged in fierce defensive battles at Krasnystaw; once again, it had to withdraw to the west. Some of the Soviet 69th Army forces no longer required at Lublin pressed on to the Vistula at Annopol, posing a strong threat to the corps' rear communication lines. The first enemy units had already reached the Vistula, where they encountered 174th Reserve Division's weak security line at Puławy. At the same time, the situation on the San at Jarosław had become so acute that even the hard-pressed LVI Armoured Corps had to dispatch some units to endeavour to halt the advance of the Soviet 1st Guards Armoured Army and 13th Army. Fourth Armoured Army lost a substantial part of the forces securing its northern flank. Now, at last, it received permission from the OKH to 'move west as far as it considered possible and essential in order to avoid being outflanked'.<sup>105</sup> In the altered conditions, which made it impossible to hold out east of the Vistula, the only option was to withdraw immediately to the San–Vistula line. Rokossovsky redirected the offensive towards Warsaw and Siedlce.<sup>106</sup> So the

pressure on the armoured corps' left flank eased off at the end of July, and it was able to withdraw to the west bank of the Vistula, where it took over the defence of the area between Annopol and Janowiec. This successful withdrawal saved Fourth Armoured Army, at the last minute, from 'being outflanked on both sides east of the Vistula'<sup>107</sup> and destroyed. However, LVI Armoured Corps succeeded only partially in keeping the enemy forces on the eastern bank of the Vistula, and the Soviets were able to establish several bridgeheads.<sup>108</sup> Although efforts to drive the Red Army from the left bank of the Vistula were only partly successful,<sup>109</sup> Fourth Armoured Army established its left flank on the Vistula at the end of July, and the situation there improved after the OKH inserted Ninth Army in the section of the front north of Puławy, thus closing the gap between Fourth Armoured Army and Second Army.

The Wehrmacht's inferiority became clear on Army Group North Ukraine's left wing in the second half of July, when Rokossovsky's troops broke through 'the best possibly secured section of Germany's eastern front' at the first assault.<sup>110</sup> Harpe was able to palliate the crisis to some extent by employing mobile tactics, taking advantage of the Soviet high command's intention to roll up Army Group Centre's defensive positions from the south and weaken the central section of the eastern front so as to open up a direct route to the very centre of German power, Berlin.

#### (e) **Fourth Armoured Army's Withdrawal to the Vistula**

After 1st Belorussian Front had taken up position at Kovel and 1st Ukrainian Front had advanced to the San, the mass of Fourth Armoured Army had been compressed into the Chełm–Zamość area, west of the Bug. That was where it stood on 24 July, completely isolated, with enemy forces rapidly approaching its 120-kilometre-deep flank as they advanced westwards.<sup>111</sup> The army had to withdraw to the Vistula without delay if it was to avoid encirclement. Although Hitler had refused Fourth Armoured Army HQ permission to withdraw behind the Vistula section of the front, Harpe partly acceded to its request to move back to the Vistula section.<sup>112</sup> He insisted that 'the Zamość–Krasnystaw area must be held', but stressed how important it was for the purpose of future operations 'to maintain a continuous front and to avoid encirclement'.<sup>113</sup> Fourth Armoured Army was already outflanked on both sides by enemy forces. However, Konev did not order part of 3rd Guards Army to move north, nor did Rokossovsky order 69th Army units to press in to the south. So, until 25 July, Fourth Armoured Army still had a corridor south of Lublin, which it was to use for its withdrawal.

<sup>107</sup> ObKdo Pz.AOK 4, Abt. Ia, No. 5495/44 g.Kdos., 28 July 1944, Panzerarmeebefehl No. 74, 1, BA-MA RH 21-4/244.

<sup>110</sup> On this, see Part III, Chapter II.5(d) of the present volume.

<sup>111</sup> *Die geheimen Tagesberichte*, x. 374.

<sup>112</sup> KTB Pz.AOK 4, Abt. Ia, 1 July–15 Aug. 1944 (22 July 1944), BA-MA RH 21-4/237, fo. 153.

<sup>113</sup> Ibid. (23 July 1944); RH 21-4/237, fo. 155.

Hitler wanted the front to be held at the Bug, but Fourth Armoured Army had been gradually withdrawing from the Chełm–Zamość area since 23 July and moving west, constantly fighting off the advancing 3rd Guards Army. When XXXXII Corps secured the withdrawal movement at Frampol, 70 kilometres south of Lublin, Konev ordered 3rd Guards Army to move in from the south and cut off the escape route. At the same time, 1st Belorussian Front attacked LVI Armoured Corps' left flank on 24 July, after Lublin had fallen.<sup>114</sup>

The OKH held firmly to its decision that Fourth Armoured Army was to defend on the Zamość–Krasnystaw line.<sup>115</sup> Only on 24 July, when the situation on LVI Armoured Corps' northern flank clearly deteriorated and it became virtually impossible to hold the security line at Krasnystaw, did the OKH authorize withdrawal to the Wieprz section of the front. The OKH's hesitation prompted Fourth Armoured Army HQ to note in its 24 July situation report that:

only rapid and comprehensive decisions [...] now [offer] any prospect of maintaining, at least to some extent, the fighting strength of the XXXXII Army Corps and LVI Armoured Corps divisions—which are succumbing to the speed and mobility of the enemy forces operating against their flanks—and enabling them to defend the San–Vistula line with the inadequate forces and means so far granted to the army in its section of the front.<sup>116</sup>

In spite of the deep breach in the area between the Bug and the San, which the Soviet 3rd Guards Army exploited in intensive attacks on Fourth Armoured Army's right flank, the German units managed to reach the Wieprz section at the last moment, some XXXXII Corps units having to fight their way through against considerable resistance from the enemy. However, despite the successful withdrawal, conditions in the army's area of operations were by no means calmer, as 1st Guards Armoured Army had broken through LIX Corps' defensive positions on the San between Jarosław and Przemyśl. At this stage, the armoured army urgently needed all its strong units if it was to reach the Vistula–San line without incurring substantial losses, but on 25 July the army group ordered Fourth Armoured Army HQ to relinquish certain units for transfer to the central section of the army group front. They were to carry out counter-attacks in the breakthrough area in order to close the gap in that section of the front and prevent the San–Vistula line from being rolled up. For that purpose, the army group took 88th Infantry Division and 17th Armoured Division from Fourth Armoured Army HQ's left wing, and transferred them to the seriously endangered central section. Harpe felt obliged to concede that Fourth Armoured Army should 'move west as far as it considered possible and essential in order to avoid being outflanked'.<sup>117</sup> Both units were to be deployed in LVI Armoured Corps' combat zone that very day.

<sup>114</sup> Glantz and Orenstein, *The Battle for the Ukraine*, 72.

<sup>115</sup> KTB Pz.AOK 4, Abt. Ia, 1 July–15 Aug. 1944 (24 July 1944), BA-MA RH 21-4/237, fo. 165.

<sup>116</sup> Ibid., fo. 169.

<sup>117</sup> KTB Pz.AOK 4, Abt. Ia, 1 July–15 Aug. 1944 (25 July 1944), BA-MA. RH 21-4/237, fo. 177.

The army group HQ intended to establish a bridgehead in the Vistula–San triangle, in order to attack the 1st Guards Armoured Army spearheads already operating in the area, and drive them back to the east bank of the San. Despite the situation of XXXXII Corps, which was under constant attack from 3rd Guards Army forces and was engaged in a race with the enemy to reach the Vistula line, the OKH ordered the bridgehead to be established at Annopol. In addition, the army group requested the transfer of two infantry divisions behind the army's right wing at Sandomierz. As a result, the situation of XXXXII Corps deteriorated once again. This substantial crisis was overcome by the evening of 28 July, when the first units reached the San at Nisko, avoiding the danger of being outflanked.<sup>118</sup>

LVI Armoured Corps, on the other hand, was assigned the task of establishing a defensive line on the west bank of the Vistula, running north from Annopol to the junction with Army Group Centre at Janowiec. The gap between Army Group Centre and Army Group North Ukraine to the north of Puławy had been successfully closed by the insertion of Ninth Army, but the OKH still feared that enemy forces might be able to break through at the interface between the two army groups. This was to be prevented by Fourth Armoured Army conducting its defensive combat with the point of concentration on its left wing.<sup>119</sup> After the heavy losses in the withdrawal battles, Fourth Armoured Army HQ was forced to conclude that, 'with these scant and in most cases extremely weary forces, taking up what are only nominally prepared positions [...] in stretches of the front that are inevitably far overextended, neither the bridgehead nor the San–Vistula line can be held for long against a planned attack by strong enemy forces'.<sup>120</sup> Fourth Armoured Army HQ therefore requested permission not to establish the bridgehead and to employ its few forces to defend its section of the front effectively. The army group HQ agreed with this analysis of the situation, so Harpe endeavoured to persuade the OKH to amend the operations order.

While the bulk of Fourth Armoured Army was withdrawing according to plan, the 1st Guards Armoured Army spearhead was pressing ahead through the gap, which was more than 50 kilometres wide, and the first Soviet tanks crossed the Vistula at Baranów on 29 July. There was only a small defence force at this point, so the armoured army was unable to clear up the penetration. 1st Ukrainian Front established a bridgehead on the west bank of the Vistula at the first assault.<sup>121</sup> The Soviet 3rd Guards Army too succeeded in breaking through the defensive front on the San between Jarosław and Przemyśl in the last few days of July. By the end of the month it stood on the Sanok–Krosno–Rzeszów line, threatening Fourth Armoured Army's southern flank. Above all, 1st Guards Army, which was pushing northwest at Jarosław, was aiming to advance in the direction of Sokołów and confront the armoured army defending the Vistula.<sup>122</sup>

<sup>122</sup> Glantz and Orenstein, *The Battle for the Ukraine*, 87–92.

The conditions in the central section of Army Group North Ukraine forced Harpe to take incisive measures at the end of July to prevent the enemy forces advancing any further and to restore a continuous front. The army group accordingly assigned Fourth Armoured Army the task of 'defending the west bank of the San downstream from Nisko, and the Vistula, including the Annopol bridgehead. It forces shall be kept to a minimum in view of the planned offensive operation.'<sup>123</sup> The army group's order left Fourth Armoured Army HQ free to evacuate the Annopol bridgehead if operational considerations made it necessary to do so.<sup>124</sup> The situation led the OKH to decide 'that Fourth Armoured Army's task is to prevent the enemy from crossing the Vistula in any circumstances'.<sup>125</sup> The OKH also specified that the bridgehead was to be held only so long as the available forces were not needed for more important tasks. So, after a prolonged tug-of-war, the problem was now solved to the mutual advantage of the army group and Fourth Armoured Army.

The last units of Fourth Armoured Army reached the defensive positions in the San–Vistula triangle in the course of 28 July. Since, despite all the defensive efforts, advance units of 1st Guards Armoured Army had broken through the Nisko–Baranów security line and crossed the Vistula in the Baranów area, the Fourth Armoured Army commander-in-chief decided to evacuate the bridgehead and to use the forces that became available to clear the area south of Sandomierz and secure the armoured army's right flank against encirclement by enemy forces. The armoured army had only just escaped a threat of encirclement, but it now had to move its southern flank west again if it was to prevent an enemy thrust against its rear. By 30 July the whole of LVI Armoured Corps had moved to the left bank of the Vistula and taken up positions along the Vistula and on the San, which curved west towards Baranów south of Sandomierz. Fourth Armoured Army settled in on the river line, giving the advancing enemy forces no time to recover or to establish a stable defensive front.

Although considerable losses had been incurred during the withdrawal from the Bug to the Vistula, Army Group North Ukraine, with a great deal of luck, had nevertheless managed to save an entire army from destruction. The enemy had at least been thwarted in its rapid push west into central Poland. The insertion of Ninth Army had closed the gap between Army Group Centre and its neighbour to the south, and the enemy advance to the Vistula and the San north of Nisko had been brought to a standstill for the time being. The army group now had to devote all its attention to its central section in order to halt the enemy forces that had broken through there and—if at all possible—drive them back to the San.

#### (f) The Crisis on the Middle San

At the beginning of the last ten days of July, Army Group North Ukraine faced an existential crisis, having failed to close the gap between First and Fourth Armoured

<sup>123</sup> KTB Pz.AOK 4, Abt. Ia, 1 July–15 Aug. 1944 (28 July 1944), BA-MA RH 21-4/237, fos. 197 ff.

<sup>124</sup> Ibid. BA-MA RH 21-4/237, fo. 198.

<sup>125</sup> Ibid.

Armies in the Rava Ruska–Lvov area. Both armies were engaged in fierce defensive battles at this point, so the high command in Cracow could not take units away from the front to close the gap. Nor was there any hope of further forces being assigned to the army group. By 22 July Army Group South Ukraine alone had transferred five armoured divisions and two shock brigades to its neighbour on the left,<sup>126</sup> and it had no more reserves. The Soviet 1st Guards Armoured Army was able to advance towards the San through the 75-kilometre-wide gap at Rava Ruska, almost without impediment. How was the San line to be held now, and the collapse of the army group front in central Galicia prevented? There were only three reserve divisions west of the San, hardly a strong enough force to protect the San–Vistula line, which was more than 300 kilometres long. Given the rapid tempo of the 1st Guards Armoured Army attacks, the army group had to act quickly to prevent the central section of its front collapsing at the San itself. There was very little room for manoeuvre. The enemy advance forces would be on the east bank of the San by 22 July or thereabouts, and by 23 July 1st Guards Armoured Army had already reached the high ground at Jarosław on the east bank, while the Soviet 13th Army had advanced to Radymno, 20 kilometres south of Jarosław, with little resistance from the German forces. So Konev had very nearly achieved the operational objective set by the Stavka, namely to liberate Galicia and advance into the industrial area of southern Poland.<sup>127</sup>

The army group moved LIX Armoured Corps staff to the Rzeszów area where, with 24th Armoured Division and 208th Infantry Division, they were to set up improvised defences to prevent Soviet forces from crossing the river and establishing bridgeheads. In addition to the one reserve division, LIX Armoured Corps deployed the two strong fighting units in the front sections at Jarosław and Przemyśl. On 25 July the Soviet forces already broke through the improvised San defensive line—1st Guards Armoured Army north of Jarosław and 13th Army at Rudnik.<sup>128</sup> Thus, the ‘Directive on the Conduct of Operations on the Eastern Front’ was a dead letter after only two days. It had stipulated that the army group was to hold the area of Lvov and Stanislavov, and, with the forces arriving from Army Group South Ukraine, ‘[launch an attack] northwards between Lvov and the San, in order to destroy the enemy forces that had broken through and close the gap between First and Fourth Armoured Armies’. Above all, as Hitler had ordered, ‘enemy forces were to be prevented from crossing the river’.<sup>129</sup> In view of this situation, Harpe ordered LIX Army Corps to delay the enemy advance until reinforcements arrived. The German defensive efforts centred on the two traffic nodes of Jarosław and Przemyśl, which were the cornerstones of the German defence on the San and must therefore remain in German hands for as long as possible. At this point, the army group commander, Harpe, was still confident that

<sup>126</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 3, x. 95 (22 July 1944), BA-MA RH 19 V/29, fo. 95.

<sup>127</sup> Glantz and Orenstein, *The Battle for the Ukraine*, 70–2; *Geschichte des zweiten Weltkrieges 1939–1945*, ix. 97, 106 ff.

<sup>128</sup> ‘Lvov–Peremyshl-Operation’, II. 630–2; ‘1st Ukrainian Front’, 198–252.

<sup>129</sup> OKH/GenStdH/OpAbt (I), No. 440398/44 g.Kdos. Chefs., 23 July 1944, BA-MA RH 19 VI/19, fos. 204–7.

'the enemy can be driven east in a series of concentric attacks, once our own reinforcements have arrived and a First Armoured Army group has been formed west of Sambor'.<sup>130</sup> The reinforcements would launch their counter-offensive at the beginning of August. This optimism was prompted, in particular, by Hitler's directive of 23 July, according to which the army group was to have an additional army HQ inserted in the gap between First and Fourth Armoured Armies. The OKH also announced that three infantry divisions would be brought in to overcome the operational crisis.<sup>131</sup>

Although the west bank of the San on both sides of Jarosław was secured by the strong 24th Armoured Division, the Soviet 13th Army crossed the river on 26 July and pressed on towards the Vistula, north of the German defensive block. LIX Armoured Corps delayed the Soviet 1st Guards Armoured Army advance west of Jarosław for a time, but it was unable to prevent strong sections of 3rd Guards Armoured Army from crossing the river between Jarosław and Przemyśl, and advancing rapidly to the Wisłoka river. On 27 July the corps withdrew to the west in order to avoid encirclement.<sup>132</sup>

Harpe decided to launch local counter-offensives in which separate groups would attack Sambor and Rzeszów respectively. The concentric attack on Przemyśl would then restore a continuous defensive front between Sambor and Przemyśl, and on the San.<sup>133</sup> As the deployment of the two groups could not be completed before the beginning of August,<sup>134</sup> 17th Army had to delay the enemy offensive east of the Sanok–Krosno–Rzeszów line by means of mobile combat. During its offensive preparations, the high command in Cracow also had to take measures to limit 1st Guards Armoured Army's advance to the Vistula. The Soviet spearheads crossed the San on 25 July. All attempts to bring the Soviet forces to a standstill were fruitless, and by 29 July they had reached the Vistula at Baranów and established a bridgehead on the west bank.

When, at the end of July, the German defence on the San collapsed in the face of the massive onslaught by 1st Ukrainian Front, the army group endeavoured to mount a defence against the Soviet offensive by establishing tactical strongpoints west of the river. Harpe had originally intended to attack 1st Guards Armoured Army from the flanks and in the centre of the breakthrough at Rzeszów, in order to cut the spearheads' rear communication lines. III Armoured Corps was standing in

<sup>130</sup> ObKdo H.Gr. Nordukraine, Abt. Ia, No. 3466/44 geh., 26 July 1944, BA-MA RH 19 VI/19, fo. 197.

<sup>131</sup> In addition to Seventeenth Army HQ, which had been refreshed at Königsberg after the Crimea evacuation, 78th, 544th, and 545th Infantry Divisions were also to be assigned to Army Group North Ukraine; OKH/GenStdH/OpAbt (I), No. 440398/44 g.Kdos. Chefs., 23 July 1944, 2, BA-MA RH 19 VI/19, fo. 205.

<sup>132</sup> Glantz and Orenstein, *The Battle for the Ukraine*, 76–8; Senger und Etterlin, *Die 24. Panzer-Division*, 252 ff.

<sup>133</sup> ObKdo H.Gr. Nordukraine, Abt. Ia, No. 0852/44 g.Kdos. Chefs., 29 July 1944, BA-MA RH 19 VI/19, fo. 182.

<sup>134</sup> The group that was to attack at Sambor, comprising III Armoured Corps with 1st and 16th Armoured Divisions, 20th Armoured Infantry Division, and 101st Light Infantry Division, could not be in place until 2 August 1944, and the group that was to attack at Rzeszów—LIX Army Corps with 17th, 23rd, and 24th Armoured Divisions—not until 5 August 1944; *ibid.*, fos. 182 ff.

the south ready for this counter-offensive, and the army group assembled another detachment south of Sandomierz, on the northern edge of the breakthrough. The army group could not expect to receive any reinforcements, so Fourth Armoured Army HQ was obliged to provide three divisions for the purpose, despite the risk of encirclement. While 72nd and 88th Infantry Divisions established a security line from the San at Rozwadów to the Vistula north of Baranów, 17th Armoured Division was moved to the Rzeszów area. With the forces deployed in these positions, the high command in Cracow hoped to re-establish the front between Sandomierz and Rzeszów by means of concentric attacks on 1st Guards Armoured Army's flanks. A similar operation was planned for III Armoured Corps, which was to launch an attack from the Chyrów–Sambor line and, in cooperation with 208th Infantry Division and 23rd Armoured Division, close the gap between Rzeszów–Przemyśl and Sambor.<sup>135</sup>

In view of developments, Harpe was obliged to launch the offensive at the end of July, because any further delay would have drastically reduced the chances of success.<sup>136</sup> The army group decided not to wait for the forces that were still on the way, but to launch an attack immediately on the flanks of the enemy forces advancing through the gap, in order to re-establish the San–Vistula front, cut their rear communication lines, and destroy them.<sup>137</sup> In spite of this plan, the offensive, both north of Rzeszów and from the Chyrów–Sambor line, had no decisive effect because 1st Ukrainian Front, with forces that were vastly superior in every respect and with massive air support, quickly repelled the German attacks. Konev now proceeded to launch a massive offensive according to plan, with three armies advancing in a north-westerly direction. The intention was to prevent the Germans from establishing a defensive front along the Vistula. For that purpose, Konev needed to establish large bridgeheads on the west bank of the Vistula.<sup>138</sup> Despite Soviet superiority, however, only 1st Guards Armoured Army managed to achieve the aim of the operation by establishing a bridgehead at Baranów. The German forces were defeated there, and Harpe could only minimize the crisis.

### (g) The Developments on the Army Group's Southern Wing

While 1st Ukrainian Front was advancing to the San through the gap in the front on both sides of Rava Ruska, First Armoured Army HQ received a directive setting out the basic principles for the conduct of operations in the area east of Lvov and in the Carpathian fringe. It stipulated that First Armoured Army was to 'hold the front on the Drohobych–Lvov protective position–Lvov–north-west Lvov [...] line,

<sup>135</sup> ObKdo H.Gr. Nordukraine, Abt. Ia, No. 0852/44, g.Kdos. Chefs., 29 July 1944, BA-MA RH 19 VI/19, fos. 182–4.

<sup>136</sup> ObKdo H.Gr. Nordukraine, Abt. Ia, No. 3567/44 g.Kdos., 30 July 1944, BA-MA RH 19 VI/19, fo. 177.

<sup>137</sup> KTB Pz.AOK 4, Abt. Ia, 1 July–15 Aug. 1944 (30 July 1944), BA-MA RH 21-4/237, fos. 203 ff.

<sup>138</sup> *Geschichte des zweiten Weltkrieges 1939–1945*, ix. 110–13; Glantz and Orenstein, *The Battle for the Ukraine*, 87 ff.

and ensure its continuity'.<sup>139</sup> Although the army HQ had already moved the point of concentration of the defence to the left wing as a result of enemy pressure, a crisis was developing in the section of the front before Lvov. The Soviet 4th Armoured Army had broken through the positions north-west of Peremyshlyany, so that III and XXXVIII Armoured Corps were again threatened with encirclement. If the front was to be held before Lvov, the armoured army would have to close the gap at Peremyshlyany and eliminate the enemy forces that had broken through. Harpe planned to block the Soviet breakthrough north of Lvov at the end of July, so the army group command ordered First Armoured Army HQ 'to assemble the bulk of the mobile units [...] with all speed in the area west of Lvov, so that they can intervene to prevent encirclement of the west wing and then advance north-west, depending on how the situation develops'.<sup>140</sup>

While First Armoured Army was striving to maintain the stability of its left wing, as well as to avoid any withdrawal in the Carpathian fringe and prevent the loss of Lvov, the situation in the army group's southern section appeared to be relatively quiet. The Hungarian 1st Army was maintaining contact with its neighbour on the right. Although it had been obliged to transfer its German units (68th Infantry Division and 101st Light Infantry Division) to First Armoured Army, it was nevertheless holding the positions in the Carpathian fringe. However, in view of the tense situation, this was not enough, and the Hungarian 1st Army was obliged to extend its section of the front further north after 23 July so that more forces would be available to strengthen First Armoured Army's left wing. In response to the situation north of Lvov, First Armoured Army also moved XXIV Armoured Corps back from the Styrya to Berezhany on the Zolota Lypa, a tributary of the Dniester. As a result, 75th, 208th, and 254th Infantry Divisions became available and were dispatched to strengthen XXXVIII Armoured Corps in the Peremyshlyany area. Although the corps was under massive attack by 38th Army in the right-hand part of its area, the threat to its left wing proved to be much more dangerous, because the Soviet 4th Armoured Army attacked the wide bend on the western flank in an attempt to roll up the corps from the north. Only when the armoured corps had been reinforced and First Armoured Army had withdrawn to the Zolota Lypa river, did the situation become less tense. However, there was still a risk that the Soviet forces might nevertheless still fulfil their mission to take Lvov from the south.<sup>141</sup>

As a result of Hitler's directive of 23 July, according to which Army Group North Ukraine was also required to hold both the Carpathian front and the Stanislavov–Lvov area,<sup>142</sup> First Armoured Army was forced to remain in the positions before Lvov despite the ever-increasing risk of encirclement. However, the section of the front extending north before Lvov effectively held up the Soviet 38th Army in its advance to the San.

<sup>139</sup> ObKdo H.Gr. Nordukraine, Abt. Ia, No. 3414/44 g.Kdos., 23 July 1944, BA-MA RH 19 VI/19, fo. 214.

<sup>140</sup> Ibid.

<sup>141</sup> 'Lvov–Peremyshl-Operation', II. 633.

<sup>142</sup> OKH/GenStdH/OpAbt (I) No. 440398/44 g.Kdos. Chefs., 23 July 1944, 1, BA-MA RH 19 VI/19, fo. 204.

Up to 25 July, First Armoured Army had managed to hold the strategically important section of the front at Lvov, which covered access to the industrial area of southern Poland, and also to repel limited local attacks against the southern section of the army's front, but the situation changed radically in the last few days of July. On 25 July the army group command formed Army Detachment Raus, thus ensuring unified conduct of operations on its right wing by placing the Hungarian 1st Army under the command of First Armoured Army. The detachment's main remit was to defend the Carpathian fringe, and General Raus was allowed a degree of latitude, in that the high command in Cracow simply ordered him to 'move the front salient north of the Dniester back gradually to the southern bank of the Dniester, abandoning Lvov'.<sup>143</sup> The detachment was to engage in defence only on the southern bank of the river between Sambor and Stanislavov in order, above all, to protect the Drohobych oilfields. The fact that Lvov had to be abandoned was attributable to errors in the conduct of operations by the high command in Cracow, and to the very small degree of operational latitude which the OKH allowed the army group.<sup>144</sup> In addition, on 24 July the Soviet 3rd Guards Armoured Army was already north of the city, having advanced to Przemyśl on the San. Konev now intended to implement the Stavka's operational plan to enclose the Galician metropolis with three armies and destroy III Armoured Corps, for which task the Soviet 4th Guards Armoured Army, 4th Armoured Army, and 60th Army were available.<sup>145</sup> First Armoured Army HQ therefore had no alternative but to abandon the Lvov region and withdraw both III and XXXXVI Armoured Corps to the Dniester by the end of July.<sup>146</sup> The army detachment moved its armoured units, as ordered, to the Chyrów–Sambor area, where they prepared for the counter-offensive. In view of the precarious situation west of the San, Army Group North Ukraine HQ planned to launch a concentric attack on Przemyśl, with III Armoured Corps from the Chyrów–Sambor line and LIX Corps from the Rzeszów area, in order to cut off and destroy the enemy forces that had broken through. Its stated aim was 'to restore a continuous front between Sambor and Przemyśl, and on the San'.<sup>147</sup>

The pressure which the Soviet 1st Guards Army brought to bear on First Armoured Army's left wing did indeed force Raus to move the defensive front back gradually to the Dniester at Rudki, but it was not strong enough to force the German troops to abandon the Drohobych–Stryi oilfields. The oilfields, which were important for the war economy, were threatened in July 1944 not only by the enemy forces assembled in the Lvov–Berezhany area, but also by the Soviet 18th Army from the front salient at Kolomyia. If 18th Army were to advance along the Stanislavov–Dolina axis, the Soviet forces would have a good prospect of pressing

<sup>147</sup> ObKdo H.Gr. Nordukraine, Abt. Ia, No. 0852/44 g.Kdos. Chefs., 29 July 1944, 1, BA-MA RH 19 VI/19, fo. 182.

forward into the Drohobych region. On 14 July Konev instructed 18th Army and 1st Guards Army to plan an operation to take possession of the oilfields. After completing the preparations, the army launched the offensive east of Stanislavov on 21 July. At the same time, 18th Army launched an offensive at Delatyn against the Hungarian 1st Army,<sup>148</sup> which proved to be too weak to withstand the massive assault. The shortening of the front south of Kuty on 24 July had very little effect on the Hungarians' ability to resist.<sup>149</sup> While VI Corps essentially held its defensive positions at Delatyn in this phase of the battle, the Hungarian VII Corps collapsed completely, leaving access to the Carpathian passes in the neighbourhood of the Beskid and Toronya passes nearly open. So the army group's right front too was not free from crisis. Harpe now faced the prospect of losing the connection with Army Group South Ukraine. Within two days, 18th Army forced the Honved units back to the foot of the Carpathians. To avoid a disaster, Raus ordered XI Corps<sup>150</sup> to establish secure defences on the Bolechów-Dolina line, in order to prevent the enemy from advancing across the Carpathians. Although the situation on Army Group North Ukraine's right wing was stabilized, Army Group South Ukraine was seriously concerned, above all about the prospect of losing the connection with the Hungarian 1st Army. Fortunately, XI Corps was able to intercept the Soviet advance and move the front further to the south once more, and the Hungarian VI Corps also managed to hold a weak security line at the foot of the Carpathian forest. As a result, the Drohobych region remained in German hands, and the continuity of the front with Army Group South Ukraine was preserved. The Hungarian 1st Army came to a halt on the Kuty–Delatyn–west of Dolina line, securing the mountain passes to the Carpathian forest.<sup>151</sup>

By the time 1st Ukrainian Front's attack lost momentum at the end of July 1944, and 1st Belorussian Front moved its point of main effort to Army Group Centre's southern wing, Army Group North Ukraine had been driven back more than 200 kilometres to the west in the course of an eighteen-day defensive battle, and had lost almost 90,000 men.<sup>152</sup> Despite this painful defeat, the threat of destruction had been averted and the continuity of the army groups' sections of the front essentially preserved.

The guidelines laid down by Hitler and the OKH, which were sometimes extremely detailed, left Harpe with little chance of conducting defensive operations so as to reduce the momentum of the Soviet attacks by employing delaying tactics.

<sup>148</sup> *Geschichte des zweiten Weltkrieges 1939–1945*, ix. 117 ff.; Glantz and Orenstein, *The Battle for the Ukraine*, 81 ff.

<sup>150</sup> XI Army Corps had 96th Infantry Division, 100th Light Infantry Division, and 10th SS Armoured Infantry Division under its command.

<sup>151</sup> Study P-114c, pt. 7. i. 41 ff., BA-MA ZA 1/2077, fos. 93 ff.; Neidhardt, *Mit Tanne und Eichenlaub*, 333–7.

<sup>152</sup> Army Group North Ukraine lost 31,800 men between 11 and 31 July 1944. In addition, Army Detachment Raus recorded the loss of some 64,560 men between 11 July and 10 August 1944. BA-MA RW 6/v 559, fos. 24–6. During the same period, 1st Ukrainian Front recorded the loss of approximately 290,000 men, of whom 65,000 dead or severely wounded. *Grif sekretnosti sniat*, 204 ff.

Only if the principle of flexible combat were adopted could the limited manpower and materials be deployed in such a way as to leave sufficient forces available for the establishment of an effective defensive line on the San and the Vistula. But these were not the only factors that had a strong bearing on Army Group North Ukraine's conduct of operations in July 1944. The course of Army Group South Ukraine's front also had a considerable effect. The neighbouring army group's southern wing stood far to the east, on the Dniester, so Harpe had to leave Army Detachment Raus on the eastern edge of the Carpathians in order to preserve the continuity of the front. Given the developments in central and northern Galicia, the high command in Cracow was obliged to keep the front permanently overextended, with the result that the German forces, severely decimated in some cases, were hardly capable of fully occupying the defensive positions.

### 3. THE STRUGGLE TO ESTABLISH A DEFENSIVE FRONT FROM THE VISTULA TO THE NORTHERN CARPATHIANS

Army Group North Ukraine had not made the most of its opportunities. It now had to attempt, under far less favourable conditions, to bring the enemy offensive to a standstill. At the end of July, all the army group could do was endeavour to establish a new defensive front in western Galicia and on the eastern edge of the northern Carpathians.

After 1st Ukrainian Front took Lvov on 22 July,<sup>153</sup> the military leaders in Moscow were prompted to try out the plans for further operations in western Galicia. Above all, the Stavka wanted to prevent Army Group North Ukraine from re-establishing its front in the San–Vistula section. Konev and Rokossovsky were accordingly instructed that 1st Ukrainian Front and Rokossovsky's left wing must continue to pursue the retreating enemy forces and must establish bridgeheads on the left bank of the Vistula. Furthermore, 1st Ukrainian Front's southern wing was to attack across the Carpathians in the direction of Uzhgorod–Mukachevo. Konev was therefore obliged to conduct operations in two opposite directions, towards Sandomierz–Breslau and into the Carpathians. In view of the differing terrain conditions and enemy troop groupings, the Stavka also decided at the end of July to form 4th Ukrainian Front from the units in 1st Ukrainian Front's left wing and to place it under the overall command of Col.-Gen. Ivan E. Petrov. The new Soviet army group was assigned the task of attacking swiftly across the Carpathians in the direction of Mukachevo and pressing forward into the Hungarian lowland plain.<sup>154</sup> The Red Army had about 880,000 troops, 1,450 tanks and assault guns, and more than 5,000 artillery cannon at its disposal for the operations in Army Group North Ukraine's area—not including the reserves of about 165,000 troops, 980 tanks and assault guns, and 210 artillery cannons. Harpe could only muster about 550,000

<sup>153</sup> *Geschichte des zweiten Weltkrieges 1939–1945*, ix. 108.

<sup>154</sup> Ibid. 110 ff.

German and 250,000 allied troops. As to heavy weapons, the army group had 850 operational tanks and assault guns, and 980 artillery cannon.<sup>155</sup>

As a result of the Stavka's revised intentions, the enemy pressure eased off for a time, giving the high command in Cracow an opportunity to establish defensive positions on the San and the Vistula, and to bring the enemy offensive to a standstill. However, Harpe's plans were subject to substantial material constraints arising from the course of the front in the areas of the two neighbouring army groups. In particular, Army Group South Ukraine's right flank, which extended far to the east, might well collapse very quickly in the event of a massive enemy offensive. A solution had to be found that would secure the continuity of the eastern front by means of a favourable defensive line, and would also secure the connection with the neighbouring army group. It would necessarily involve defending the Carpathian passes; otherwise the supply lines for the whole of the southern section of the eastern front, running to the west of the mountain range, would be at risk. In particular, the army group would have constantly to increase the length of its defensive front as the Soviet forces pressed forward to the west.

### **(a) The Establishment of a New Defensive Front**

In view of the desperate conditions determining the course of the front between Kuty and Puławy at the beginning of August, the top priority was to close the 120-kilometre-wide gap between First and Fourth Armoured Armies. As the army group did not obtain any additional forces, it was obliged to try to reduce the length of the main battle line so that units would be available to establish a security line between Sanok and Baranów. Given the situation in the Galician area of operations, this could be done only in the southern section of the front.

Although Army Detachment Raus was still successfully defending the Drohobych–Stryi oilfields at the end of July, the army group decided only a few days later to withdraw from the salient in the area of First Armoured Army. On 2 August Harpe issued the following order: 'Army Detachment Raus is to withdraw First Armoured Army from the projecting Dniester salient and take over the Sanok–Krosno–Jasło area, with the ultimate aim of freeing up the strongest possible forces, especially all mobile units, for offensive deployment in the centre of the army group's front.'<sup>156</sup>

As a result of allied air raids starting in July 1944, the Drohobych oilfields were no longer of use to the war economy, so First Armoured Army took the opportunity to withdraw to the 'Hunyadi position' on the Kuty–west of Dolina–Sanok line. Army Detachment Raus thus fulfilled the main tasks assigned to it, on the one hand, by releasing forces for the threatened section of the front west of Baranów and, on the other, by securing the important Carpathian passes. While the army detachment was able to maintain the connection with Army Group South

<sup>155</sup> OKH, 'Kräftegegenüberstellung, Stand: 1.7./8.1944', BA-MA RH 2/2649, fo. 23.

<sup>156</sup> OB H.Gr. Nordukraine, Abt. Ia, No. 3615/44 g.Kdos., 2 Aug. 1944, BA-MA RH 19 VI/19, fo. 167.

Ukraine's northern wing at Kuty without any difficulty, the withdrawal movement to the 'Hunyadi position' gave rise to considerable friction as the Soviet 4th Armoured Army and 38th Army attempted to outflank XXIV Armoured Corps in the Sanok–Krosno area. The corps was able to prevent this, but the enemy moves made it difficult to transfer the mobile units to Seventeenth Army and Fourth Armoured Army. Konev's aim was to shield the flank of his main thrust against the Sandomierz–Baranów line, and to widen the gap in the German front so as to create the necessary conditions for a rapid advance on Cracow and the industrial region of Upper Silesia.<sup>157</sup> In particular, the Soviet forces were able to achieve their operational objective of tying down the enemy on the upper course of the San and the Wiślka. Since reinforcements for Seventeenth Army were slow in arriving, the army group's central section was left at the beginning of August virtually unprotected against the advance of 1st Ukrainian Front. While II and XXIV Armoured Army Corps repelled the Soviet attacks at Chyrów–Lesków on the edge of the northern Beskids and in the Jasło–Krosno area and established a defensive front, developments in the situation between Krosno and Sandomierz were causing concern. At this focal point, LIX Corps attempted to form a defensive block in the Łanicut area at the end of July to halt the advance of the Soviet 60th Army.<sup>158</sup> On 30 July Seventeenth Army HQ<sup>159</sup> took over responsibility for the section of the front between the Vistula in the Baranów area and the San south of Sanok. By the end of that month, Harpe's attempt to halt the 1st Ukrainian Front offensive at the San–Vistula line had failed. Seventeenth Army now had to try, with all means at its disposal, to close the 120-kilometre-wide gap between First and Fourth Armoured Armies. Together with XXXXII Corps, it would have to cut the rear communication lines of the enemy forces that had reached the west bank of the Vistula, and destroy them.<sup>160</sup> When Seventeenth Army HQ took over the conduct of operations east of the Wiślka on 31 July, LIX Corps had already been striving for some days to halt the advance of the Soviet 1st Guards Army and 3rd Guards Armoured Army by means of delaying combat. Given the scant forces available, Seventeenth Army HQ had no alternative but to resort to mobile combat in order to slow the momentum of the attack by no fewer than four Soviet armies,<sup>161</sup> which were advancing *en masse* towards the Wiślka and the Vistula south of Sandomierz. That was the only way to gain enough time to establish a security line. Together with the forces sent in by the OKH and the units of Army Detachment Raus, Seventeenth Army managed to delay the advance of the far superior enemy

<sup>161</sup> 1st and 3rd Guards Armies, and 13th and 60th Armies; Glantz and Orenstein, *The Battle for the Ukraine*, 206.

forces.<sup>162</sup> These counter-measures eased the crisis in the Sandomierz–Baranów–Mielec area (Mielec lies 25 kilometres south of Baranów).

Seventeenth Army succeeded in establishing a weak security line south of the Wiślka–Vistula triangle, which gave reason to hope that a solid front could be re-established between Mielec and Kuty. In the case of Fourth Armoured Army too, the enemy forces were halted at the new defensive line. The Soviet 69th Army and 3rd Guards Army nevertheless managed to establish four bridgeheads on the far bank of the Vistula, which Fourth Armoured Army could block off only provisionally<sup>163</sup> as it was not strong enough to ‘mount a successful counter-attack’.<sup>164</sup> The armoured army had obtained no replacement troops at this stage in the operations, and the shortage gave rise to a critical situation in the Sandomierz area. Konev launched the offensive at the beginning of August, and 13th Army succeeded in breaking into the San–Vistula triangle and forcing XXXXII Corps’ right wing northwards. As a result, despite intensive counter-attacks by 72nd and 88th Infantry Divisions, the army group was unable to achieve its aim of holding the section of the Vistula south-west of Sandomierz.

As Seventeenth Army had been unable to close the gap separating it from Fourth Armoured Army by the beginning of August, Konev took the opportunity to strengthen the bridgehead west of Baranów.<sup>165</sup> In this situation, Harpe thought the important thing was that ‘strong enemy forces continue to be tied down at Baranów, so that the enemy should not be able to advance further west of the Vistula before new forces now on their way could be deployed on the west bank of the river’.<sup>166</sup> However, the only force on the left bank of the Vistula was 213th Security Division, which was engaged in a well-nigh hopeless defensive battle against two enemy armies.

Army Group North Ukraine managed to contain the critical situation in the centre of the western Galician theatre at the end of July and the beginning of August, but it did not have the necessary human and material resources to prevent two Soviet armies from crossing to the west bank of the Vistula. Both wings of the army group’s front had been stabilized, but the gap between Frysztak, 20 kilometres east of Jasło, and Sandomierz had merely been narrowed. The operational attempt to cut off the enemy forces that had broken through in the section of the front at Baranów also created good conditions for establishing an effective defensive line and weakening 1st Ukrainian Front, but the course of the operations at the beginning of August made it painfully clear that the substantial shortage of men and materials precluded any possibility of a decisive success. Army Group North Ukraine had nevertheless managed to establish a new front against a far superior but exhausted enemy.

<sup>162</sup> Despite the tense situation with respect to human and material resources, the OKH assigned two infantry divisions (544th and 545th People’s Infantry Divisions) and two infantry brigades (1134th and 1136th Infantry Brigades) to Seventeenth Army HQ; Study P-114c, pt. 7, l. 50, BA-MA ZA 1/2077, fo. 102.

### (b) The Battles for the Baranów Bridgehead

Although both the army group's wings held their ground against the pressure from Soviet forces at the beginning of August, there were signs of disturbing developments in the centre of the western Galician theatre of operations. As the army group's efforts to resolve the situation had failed, the high command in Cracow decided on 5 August to prepare an offensive on the west bank of the Vistula.<sup>167</sup> All Army Detachment Raus armoured units and an OKH armoured division would be involved in the operation.<sup>168</sup> Seventeenth Army HQ was ordered to assemble a strong attack group on the left wing.<sup>169</sup> While the forces were regrouping, Army Detachment Raus moved to the 'Hunyadi position' to strengthen the army group's southern wing. Things were now quieter in First Armoured Army's section of the front, but Konev increased the pressure on Fourth Armoured Army's right flank, which formed a loop extending back to the west, with the aim of rolling up the German Vistula front from the south. Although XXXXII Corps initially lost some ground, it eventually succeeded in stopping the Soviet advance and restabilizing the army's southern flank.<sup>170</sup> Nevertheless, three Soviet armies crossed to the west bank of the Vistula at Baranów and extended the bridgehead, with the result that, on 10 August, 1st Ukrainian Front spearheads were about 40 kilometres west of the river.<sup>171</sup> In view of the ever-increasing threat to the unity of the front north-east of Cracow, the army group proposed to send two groups to attack the rear and flanks of the Soviet 1st Guards Armoured Army and 13th Army, which were pressing forward to the north, in order to destroy the enemy forces and regain the Vistula line. The main group,<sup>172</sup> led by Fourth Armoured Army, was to push eastwards from the Michów area, then turn north and, together with XXXXII Corps, enclose the Soviet 1st Guards Armoured Army west of Sandomierz and destroy it. III Armoured Corps was then to move south and, with the assistance of the Seventeenth Army attack group, enclose the Soviet 3rd Guards Armoured Army and 4th Armoured Army west of the Vistula and wipe them out.<sup>173</sup> The execution of the proposed operation was hampered by the fact that some of the armoured units were not available, because the critical situation at Sanok and on the lower Vistula precluded any reduction in the strength of Army Detachment Raus.

III Armoured Corps opened the offensive on 10 August according to plan. The enemy was taken by surprise, but the Soviet forces were stronger, and the attempt to

take possession of the crossing points over the Vistula at Baranów failed. The attack did at least relieve Fourth Armoured Army's right flank and reduce the pressure from enemy forces. As a result of the ground gained by III Armoured Corps, the army group was obliged to launch an attack, in conjunction with the Edelsheim Group, to eliminate the enemy forces standing to the south of the corps.<sup>174</sup>

<sup>174</sup> OB H.Gr. Nordukraine, Panzerarmeebefehl No. 83, 12 Aug. 1944, No. 5803/44 geh., BA-MA RH 21-4/237, fos. 272 ff.—On 12 Aug. 1944 Army Group North Ukraine HQ ordered Seventeenth

This offensive was launched on 12 August, but it too was soon stopped, because Konev temporarily transferred units from the western bridgehead to the south-west section of the front. Despite all the friction, which made any possibility of achieving the operational objective very remote, the high command in Cracow remained determined until 18 August to compress the Baranów bridgehead. By the middle of August, Army Group North Ukraine had still not managed to drive the Soviet enemy from the west bank of the Vistula, as it lacked the necessary force. Fourth Armoured Army's counter-offensive was not a complete failure, however, in that the bridgehead was narrowed and the enemy's advance was halted. Clearly, the operational objective had been too ambitious, and the element of surprise alone had not sufficed to achieve the aims of the operation with the limited resources available.<sup>175</sup>

In mid-August the objectives had to be redefined. The high command in Cracow again concentrated on further reducing the width of the bridgehead by means of locally confined attacks, and on closing the gap between III and XXXXVIII Armoured Corps<sup>176</sup> in order to shorten the front and gain some forces. The first action in line with this concept was taken on 28 August south of the Opatów–Annopol line, where the army group had assembled four armoured divisions with about 100 tanks and assault guns.<sup>177</sup> Despite this concentration of mobile armoured units, the combat strength was not sufficient to capture the high ground north of the Opatówka river. The enterprise was cancelled on the third day of the attack, and Harpe ordered Fourth Armoured Army HQ to move the attack group west, in order to drive the Soviet 4th Armoured Army and 13th Army south of Opatów back to the line between Staszów (30 kilometres southwest of Opatów) and Sandomierz, and establish the connection with III Armoured Corps. Fourth Armoured Army HQ failed to achieve this, and the operation was accordingly wound up on 4 September after the gap in the front had been closed.<sup>178</sup> The counter-attacks had nevertheless helped to strengthen the front in Fourth Armoured Army's area, namely 'at the Baranów bridgehead in a line running in a northerly direction from the Vistula north of Szczucin to Łagów, then turning east and reaching the Vistula south of Zawichost',<sup>179</sup> with the armoured army benefiting from the new developments in the southern section of the eastern front.

Army to join 1st and 24th Armoured Divisions, 201st and 300th Assault Gun Brigades, and 6th Launcher Brigade to the Edelsheim Group, which was placed under Fourth Armoured Army command; KTB H.Gr. Nordukraine, Abt. Ia, No. 3781/44 geh., 12 Aug. 1944, BA-MA RH 19 VI/19, fo. 139.

In parallel, Army Group North Ukraine attempted to clear the smaller front salients on its left wing. This action was successful to the north of Annopol but failed at Puławy, in particular,<sup>180</sup> because the German divisions were completely exhausted after weeks of uninterrupted defensive combat.

There was a marked reduction in military activity in southern Poland and the northern Carpathian forest after 20 August, when the Soviets moved the point of concentration of their offensive to the Romanian area of operations. With the decline in combat action, Army Group North Ukraine's operations settled at the beginning of September 1944 into a war of position. The fighting between Kuty and Puławy ceased at the end of August. While Army Group North Ukraine had not achieved its optimum objective, the continuity of the front had been restored. In this partial success, in the course of which 40,500 losses (15,000 of them irretrievable) were incurred,<sup>181</sup> the German units had benefited from the Soviet decision to move the point of concentration of their operations to the Romanian theatre. But the fact that the Soviet troops were exhausted after pushing more than 200 kilometres to the west since the beginning of July, had also enabled the German defence forces to halt the enemy advance. Army Group North Ukraine's operational options were severely restricted by the course of the front in the areas of the two neighbouring army groups. Merely to maintain the connection between the central and southern sections of the eastern front, the high command in Cracow needed such extensive human and material resources that there were no forces available to mount incisive counter-attacks or form the necessary reserves. Nor were the forces available in the summer of 1944 strong enough any longer to straighten the front in such a way as to make a durable defence against future Soviet offensives possible.

#### 4. THE AUTUMN BATTLES IN THE BESKID MOUNTAINS AND SLOVAKIA

In the middle of August, after a defensive battle lasting four weeks, in which Army Group North Ukraine was obliged to withdraw from its positions in eastern Galicia for almost 350 kilometres behind the Vistula and to the edge of the Carpathian forest, the German troops finally succeeded in reducing the momentum of the Soviet advance. The army group brought the enemy's Lvov–Sandomierz operation to a standstill, with the German forces benefiting primarily from the exhaustion of their Soviet opponents. Army Group North Ukraine now established a weak security line, and obtained the pause that was urgently needed to enable the battered units to recover.

<sup>180</sup> In the operation against the Puławy bridgehead, XXXXVI Armoured Corps (Army Group Centre) was temporarily placed under Fourth Armoured Army HQ; OB H.Gr. Nordukraine, No. 0875/44 g.Kdos. Chefs., 4 Sept. 1944, BA-MA RH 19 VI/19, fos. 94 ff.

<sup>181</sup> Figures for August 1944 BA-MA RW 6/v. 559, fos. 26–8.

The hope that the German troops would be refreshed by a break in the operations was short-lived. Not only had partisan activities in the rear of Army Detachment Heinrici increased during the summer of 1944, but political conditions within Slovakia had also changed. Impressed by the Allied successes, particularly the Red Army's superiority in its advance in Galicia, a partisan movement had developed which was under the strong political and military influence of the Soviet Union.<sup>182</sup> The problem of the partisans mainly affected First Armoured Army, because Army Detachment Heinrici had held executive powers in eastern Slovakia since 15 August 1944, when the region had been declared an operational zone.<sup>183</sup> The army now faced the units of 4th Ukrainian Front, but for operational purposes it also had to bear in mind the unstable political conditions in the country, over which the national authorities in the protectorate had no more control than they had over the problem of the partisans in the rear of the German front.

### (a) The Slovak National Uprising

In view of the military and political situation in the first half of 1944, the Slovak National Council<sup>184</sup> decided on 17 July to begin an open uprising against the Tiso government in Bratislava and the German protecting power.<sup>185</sup> Its decision was motivated decisively by the fact that the preparations for military resistance were relatively far advanced. Unnoticed by the German authorities in the country, the resistance group around Lt.-Col. Jan Golian had assembled units of the replacement army in central Slovakia, set up supply depots, and established a command centre in Banská Bystrica. The operational aim of the armed uprising by the resistance was 'to open and secure the Carpathian passes so as to enable the Soviet armies advancing in the Ukraine and Poland to liberate Slovakia quickly and press on towards Bohemia and into the Hungarian lowland plain'.<sup>186</sup> The central element in the plan of operations was the army corps stationed in eastern Slovakia. This relatively well-trained fighting force, comprising 24,000 men with modern military equipment at their disposal, was to occupy the Beskid mountain ridge in the rear of Army Detachment Heinrici and, in cooperation with Konev's troops, attack First Armoured Army. The resistance assigned the protection of central Slovakia and the command centres in the Banská Bystrica–Brezno–Zvolen area to the approximately 14,000-strong training and replacement units. Despite their relatively low combat strength, these units were to defend central Slovakia

<sup>182</sup> KTB GenKdo XXIV. Pz.Korps, Abt. Ia, No. 5/44, 169 (29 Aug. 1944), BA-MA RH 24-24/306, fo. 86; *Geschichte des zweiten Weltkrieges 1939–1945*, ix. 191 ff.; Lipták, 'Das politische System der slowakischen Republik', 320; Venohr, *Aufstand*, 92–104; Schönfeld, *Slowakei*, 141–7.

<sup>186</sup> Schönfeld, *Slowakei*, 146.

until the Soviet troops had established connections with the insurgents and liberated the country.<sup>187</sup>

The preparations for the uprising were able to pass almost unnoticed at first, but the increasing partisan activities interfered with the military preparations from the early summer of 1944 'because they drew the attention of the Slovakian and German agencies to the centre of the conspiracy'.<sup>188</sup> The guerilla groups, mostly under the influence of Soviet partisan leaders, posed an increasing threat to the Slovakian resistance group's plans because the partisan operations, which were directed against the armed German power and militarily important infrastructure as well as the Tiso regime, were making the German authorities more nervous and increasing their sensitivity to political changes within the country. First Armoured Army was obliged to take preventive measures in mid-August in order to be able to react without delay in the event of any major actions. As the East Slovakian Army Corps, to which Army Group North Ukraine had assigned security duties in the area of operations to the rear of Army Detachment Heinrici,<sup>189</sup> had not solved the problem to its satisfaction, XXIV Armoured Corps realized that particular difficulties with the Slovak army were to be expected in the near future. 'To deal with these rapidly and simultaneously, the corps orders each division to prepare the rapid assembly of one advance battalion as a precautionary measure.'<sup>190</sup> Similar measures were extended at the end of August to the whole area under the command of First Armoured Army, in order to be able to intervene immediately in the event of any action against the German armed forces.<sup>191</sup>

Although there had been many minor anti-government and anti-German incidents, a major occurrence in the town of Sv. Martin was the first to provoke German intervention. On 27 August Slovak mutineers arrested 22 German officers in the railway station at Sv. Martin, on their way from Romania to the territory of the Reich. The next morning, the group of officers were shot by the Slovaks. Given the unstable political situation in the country, this provocation was bound to meet with a strong response from the protecting power.<sup>192</sup>

The first improvised Wehrmacht units marched into the country just 24 hours after that incident. Army Group North Ukraine was responsible for conducting operations in the east, and the German General in Slovakia, SS-Obergruppenführer Gottlob Berger, took command in the other areas. In this critical situation, Army Detachment Heinrici's precautionary measures paid off: on 31 August, with two regimental-strength units,<sup>193</sup> it was able to disarm and intern almost all the Slovak Army Corps. Only 2,000 Slovak troops escaped capture and joined the uprising

*en masse.*<sup>194</sup> The internment of almost 22,000 Slovak troops in the rear of Army Detachment Heinrici was to have fatal consequences for the national liberation movement. With the elimination of this military force, a major component of the resistance struggle was lost, a component that was absolutely essential if the uprising was to succeed.

In contrast to Army Detachment Heinrici's success in the east Slovakian area of operations, Berger faced considerable problems. Although an important element in the resistance struggle had been successfully removed with the elimination of the Slovak Army Corps, the military centre in Banská Bystrica still had more than 20,000 men at its disposal at the beginning of September. Given the geographical conditions in central Slovakia, this force had every chance of conducting a successful campaign against the protecting power, especially as the liberation movement managed to increase the strength of the insurgent army to 47,000 men by the middle of September.<sup>195</sup>

The insurgent army also benefited from the manner in which Berger conducted operations, since he believed the 'problem' could be solved in a few days by employing a few ad hoc combat groups<sup>196</sup> in a kind of 'expiatory exercise'. As he made no detailed assessment of the situation, the German commander in Slovakia did not know that his units were numerically inferior to the resistance fighters, although the German side had the advantage of better equipment and better weapons. To defeat the uprising, Berger initially had some 10,000 men at his disposal, divided into three combat groups. He deployed the three units in a concentric advance on the insurgent area, from the south, south-west, and north-west. Essentially, each combat group fought on its own, because the German operational command neglected to establish a continuous front.<sup>197</sup> This, with the added advantage of favourable terrain, gave the resistance fighters the opportunity to establish defensive points of concentration, with the result that the German combat groups were able to penetrate the insurgent area only partially. In those circumstances, it was hardly surprising that Berger had scarcely any successes to report in the first ten days of the campaign. Only the Schäfer SS unit succeeded in advancing to Ružomberok in the Váh valley and cordoning off the insurgent area to the north,<sup>198</sup> but the Schill Combat Group also managed to liberate the Nitra valley and establish a front to the west of the centre of resistance. Despite the ground it had lost, the Slovak insurgent army was extremely successful in resisting the German offensive at the beginning of September and in stabilizing the defensive front. The situation, nevertheless, remained highly critical for the insurgents.

Source: Venohr, Aufstand

Since 1st Ukrainian Front's offensive was making scarcely any progress, there was not much prospect of the Soviet troops joining forces with the insurgent army in the near future.

The unsatisfactory course of the operation led Himmler to relieve Berger of his command on 14 September and appoint General Hermann Höfle in his stead. Prior to the change of command in the middle of September, the German troops had established a continuous front only to the north and west of the insurgent area, and there was still a gap in the area between Prievidza and Strečno. The SS battalion in the south had also been unable to break the Slovak resistance.<sup>199</sup> The situation was becoming much more critical in the east Slovakian area of operations, where Army Detachment Heinrici had been obliged to withdraw its combat group when 1st Ukrainian Front launched its offensive on 8 September to capture the Dukla Pass and the Beskid mountains. The army group now had only a few local defence units at Telgárt and the 154th Reserve Division in the Prešov area at its disposal to establish a security line on the eastern edge of the insurgent area. As a result of their scant combat strength, these units had been obliged to withdraw almost 40 kilometres to the east by the time the final German offensive was launched in the middle of October.<sup>200</sup>

Although the operational situation remained much the same after Höfle took command, the conduct of operations entered a new phase in that, for the first time, a plan was drawn up in which priority was given to the coordinated deployment of all the available forces. First of all, the gap between the northern and western fronts was to be closed, and connections were to be established with the combat group in the southern part of the resistance area. Once the 'Tatra' Division, the former 178th Armoured Division, at Strečno had taken over the task of the Colonel von Ohlen Combat Group, the defensive positions north of Sv. Martin were broken through, and the city was captured on 21 September. Two days later, the gap separating the Schill Combat Group in the Nitra valley was closed. In the south, however, there was no change in the situation until the end of September, when the Slovakian resistance forces finally yielded to German pressure and withdrew northwards, giving the SS battalion an opportunity to establish the connection with the Nitra valley. By the end of September, the German forces had compressed the liberation army in central Slovakia to such an extent that the centre of the uprising, Banská Bystrica–Brezno–Zvolen, was within striking distance of the attackers.<sup>201</sup> In order to relieve the units at the front from the burden of security duties, and to get a firm grip on the partisan problem, the commander of the replacement army transferred three divisions<sup>202</sup> to Slovakia in mid-September.

At the beginning of October, when the German lines were within 25 kilometres of the centre of the uprising in Banská Bystrica, Höfle decided to launch a frontal attack on the city and eliminate the command centre of the resistance. But, once

<sup>202</sup> 153rd Field Training Division (Slovakian-Hungarian border at Balassagyarmat); 271st People's Infantry Division (Nitra valley); 708th People's Infantry Division (Váh valley at Nové Mesto).

again, the attempt was foiled by the Slovaks' resolute defence. Clearly, it would take a long time to overcome the insurgents with the forces that were available.<sup>203</sup> It was nevertheless essential to put an end to the uprising quickly in view of the precarious situation in the southern section of the eastern front. On the one hand, the permanent danger in the rear of Army Groups A and South would be eliminated and, on the other, the troops tied up in Slovakia would become available for deployment in the fight against the Red Army. However, this could be achieved only by greatly increasing the strength of the forces deployed in Slovakia. In mid-October Höfle, the commander of the replacement army, therefore made SS Brigade 'Dirlewanger', as well as a combat group from 14th Waffen SS Division, available in the north, and the 18th Waffen SS Division in the south, for the final offensive in the middle of October. That raised the strength of the German attacking forces to 22,000 men, more than twice as many as at the beginning of the operation. The final operation began on 18 October, with a concentric offensive in which Army Group A units in the east Slovakian area of operations also took part. Despite their superior strength, it took the German forces ten days to capture Banská Bystrica. The fall of the city spelled the end of the two-month-long anti-German uprising, and the protecting power was once again in full control of all Slovakian territory from 31 October.<sup>204</sup>

### **(b) The Battles for the Dukla Pass and the Beskid Mountains**

Although there were fewer Soviet attacks in August, there were more and more local skirmishes on the eastern edge of the Beskid mountains. The German forces were generally able to hold their positions, despite the superior strength of the enemy forces, because the nature of the terrain facilitated defence against enemy attacks. In view of the political and military changes in Slovakia, the Soviet forces revised their operational plans at the end of August. They continued their successful campaign in Romania but they launched their offensive on the Beskid front earlier than originally intended. Only a short time after the Soviet units had gone over to the defensive, 1st Ukrainian Front in the Krosno–Sanok section of the front received the order to prepare an offensive with its point of concentration in the Dukla Pass–Prešov area and to launch it on 8 September.

The plan of operations was for two spearheads to break through the German defensive positions and, within three days, press forward with superior forces through the Dukla Pass into the Poprad–Prešov area some 100 kilometres further on. The dual aim of the offensive was to connect with the insurgents and, with the assistance of 2nd Ukrainian Front, to encircle First Armoured Army and parts of Army Group South to the west of the Beskids and the Carpathian forest.<sup>205</sup>

Army Detachment Heinrici had taken over defence of the Frysztak–Krosno–Sanok section of the front. For this purpose, the army HQ had XXIV Armoured Corps in the northern section and XI Army Corps on the right wing at its disposal. Both corps had been engaged since the beginning of August in defending the Krosno–Sanok line, where fighting broke out again on 7 September to the east of Sanok. Two days later, 1st Ukrainian Front launched its offensive against the German defensive positions. The defenders were unable to withstand the massive assault, with the result that the enemy forces succeeded in breaching XXIV Armoured Corps' defensive line south of Krosno on 9 September,<sup>206</sup> and the city had to be abandoned on the following day. In spite of this, the two corps had at least made effective use of the favourable terrain to reduce the momentum of the enemy attack. The First Armoured Army units, facing superior enemy forces, were obliged to withdraw gradually over the next few days.<sup>207</sup>

Within days it became clear that First Armoured Army was not strong enough to repel the constant attacks successfully, so Harpe decided to strengthen Army Detachment Heinrici.<sup>208</sup> First Armoured Army HQ now deployed two armoured units to cordon off the breakthrough area south of Jasło.<sup>209</sup> Despite the extra strength, XXIV Armoured Corps was unable to defend its positions for long, and was obliged to withdraw slowly to the south. On 12 September, during fierce battles in the Dukla area, 1st Ukrainian Front succeeded in opening up an 8-kilometre-wide gap in the German front, enabling two regiments to get through and reach the top of the pass.<sup>210</sup> With Konev about to achieve the main objective of the operation, Col.-Gen. Gotthard Heinrici deployed two divisions in a counter-attack to block off the breach.<sup>211</sup> At the same time, 357th Infantry Division attacked the enemy units that had broken through, to destroy them before they reached the top of the pass.<sup>212</sup> Even so, it took the German units almost two weeks to overpower the enemy forces that had advanced into Slovakian territory.<sup>213</sup>

In response to the stubborn German resistance, the Soviet forces south of Krosno were reinforced, with the result that, by the end of September, XXXXIX Mountain Corps was forced to move back towards the Dukla Pass. From mid-September 4th

Ukrainian Front also took part in the offensive, opening hostilities with an attack on First Armoured Army's right wing south-east of Krosno. But the German forces repeatedly established new interception and defence positions east of the Dukla Pass–Czirokatal Pass–Uzsok Pass line, blocking off the enemy breakthroughs.<sup>214</sup> When 4th Ukrainian Front too attacked the German defensive positions in the Beskid mountains, Army Group North Ukraine saw that it would have to reorganize the command structure on the southern wing. To tighten up the conduct of operations on the Beskid front, Harpe removed XXXXIX Mountain Corps from Hungarian 1st Army command on 19 September, and placed it under the command of First Armoured Army.<sup>215</sup>

After three weeks of defensive battles, Army Group North Ukraine suffered the first decisive setback on 20 September, when Soviet units penetrated XI Corps' defence system and opened up a breach in the German front east of the Łupków Pass. The armoured army was unable to close the gap, and 1st Ukrainian Front units occupied the pass. As a result, by the end of the month, the Soviet forces were over the ridge and pressing forward into Slovakian territory.<sup>216</sup>

With the loss of the Łupków Pass, the adjoining sections of the front were also thrown into disarray. While XXIV Armoured Corps managed to slow the massive momentum of the enemy attack on Army Detachment Heinrici's left flank by means of delaying combat, there were extremely dramatic developments in the situation of XI Army Corps in the Habura area. Only with great difficulty was the corps able to stabilize this greatly endangered section of the front by the end of the month.<sup>217</sup> On 24 September, during the heavy defensive battles in the Beskid mountains, Army Group North Ukraine was renamed Army Group A, but this did not entail any organizational changes.

It was nevertheless clear that the exhausted German troops would not be able to keep the front stable for long. At the end of September XXIV Armoured Corps was forced to abandon the area north of the Dukla Pass, under massive pressure from the Soviet 1st Guards and 38th Armies. Although the armoured corps endeavoured to establish a continuous front line in this area, its combat strength was no longer sufficient for the task. The spearheads of the two Soviet armies gradually drove its left wing backwards, occupied the Dukla Pass on 6 October, and advanced into Slovakian territory.<sup>218</sup> First Armoured Army's defensive front on the Beskid ridge was now in disarray, and by the middle of October the Czirokatal Pass also had to

<sup>214</sup> A.Gr. Heinrici, Abt. Ia, daily reports 15 Sept.–8 Oct. 1944, BA-MA RH 21-1/495; *Die geheimen Tagesberichte*, xi. 38–101.

be abandoned.<sup>219</sup> Thus, by the beginning of October, 1st and 4th Ukrainian Fronts had managed, in the face of bitter German resistance, to cross the Beskid ridge on a broad front and press forward into the border regions of eastern Slovakia and Hungary. It became clear in the middle of October 1944 that the defensive front on the western edge of the Beskid range—especially in the area covered by XXXIX Mountain Corps—threatened to collapse. Harpe therefore decided to deploy parts of 1st Armoured Division briefly in the Nagyberezna area, 30 kilometres southwest of the Uzsok Pass, in order to stabilize the front.<sup>220</sup>

After Army Group A had bitterly resisted the Soviet forces for a month, the offensive eased off temporarily in the second week of October.<sup>221</sup> As a result, First Armoured Army was able to establish a shortened defensive front on a line to the west of the Beskid ridge, a front that was attacked by the exhausted 1st and 4th Ukrainian Front units at only a few points and forced back slightly to the west.

With the marked let-up in the enemy offensive in the first half of October, Heinrici hoped that the Red Army would close the Beskid operation altogether. So the army group command was extremely surprised when 1st Ukrainian Front once again intensified its hostilities on the whole of the Beskid front. The Stavka had recognized the advantages of continuing the operation in the eastern Carpathians with the aim of enclosing sections of Army Detachment Heinrici. Although the arrival of fresh units improved the situation of the exhausted 1st and 4th Ukrainian Fronts, the Soviet forces—especially Konev's troops—were no longer strong enough to restore the momentum of the offensive and break through the German defensive lines.<sup>222</sup> Once again, Army Detachment Heinrici defended its front so skilfully that the 1st Ukrainian Front attacks eased off again after 15 October.<sup>223</sup> It was only in the area of XXIV Armoured Corps south of the Dukla Pass that hostilities flared up again five days later, when the Soviet 1st Guards Army attempted, after all, to reach the Prešov area, the operational objective set at the beginning of September. XXIV Armoured Corps was once again able to fend off the attack, and Konev closed the operation on 28 October.<sup>224</sup> The action

now became a war of positions on Army Group A's right wing too, and First Armoured Army's situation stabilized.<sup>225</sup>

Since the beginning of September, 1st Ukrainian Front, and later 4th Ukrainian Front too, had been trying to break through the Beskid front, advance rapidly, and capture eastern Slovakia, so as to cut off Army Group South Ukraine (South), which was fighting in Transylvania. In addition to this ambitious operational objective, the aim was also to connect with the insurgents in central Slovakia and liberate the country from German control. Only the skilful conduct of operations by Army Group North Ukraine (A), which made the best possible use of the geographical conditions, prevented the rapid realization of these Soviet objectives. The units of First Armoured Army were absolutely determined to resist and, by means of delaying combat, they quickly reduced the momentum of the enemy attacks. The army group had to give ground, but it benefited from operational errors on the Soviet side, which, first and foremost, underestimated the difficulties of mountain warfare. The premature launch of the Beskid operation, for which Konev's exhausted troops were insufficiently prepared, also contributed to First Armoured Army's successful defence. However, Army Group A paid a heavy price in human losses for this highly successful defensive battle for the Beskids and in eastern Slovakia. In September and October 1944 Army Group A lost approximately 60,000 men, of whom 47,000 wounded, 8,500 dead, and 4,400 missing. Army Detachment Heinrici bore the brunt of the losses, with almost 37,000 casualties.<sup>226</sup> The price paid by 1st and 4th Ukrainian Fronts for the successful operation in the eastern Carpathians—almost 125,000 human losses, of whom 27,000 dead or seriously wounded—also bears witness to the intensity of the fighting.<sup>227</sup>

### (c) The Situation of Army Group A in the Autumn of 1944

While fighting in connection with the Slovakian national uprising broke out again on the northern edge of the Beskid mountains at the beginning of September, and Army Detachment Heinrici was caught up in the major Soviet offensive in Romania and Transylvania at the end of the month, operations on the army group's left wing settled into a war of position. However, although hostilities had virtually ceased in the area of Fourth Armoured Army, the armoured army was nevertheless in a precarious situation. It was defending the large Vistula salient which protruded far to the east between the Baranów and Magnuszew bridgeheads. The Soviet forces could launch flank attacks from the bridgeheads, cutting off the bulk of the army in the rear and encircling it. This fact led Harpe to seek permission, when he was in Rastenburg on 8 September, to move Fourth Armoured Army back to the '3rd position'—a shortened defensive line running north from the mouth of the Nida past Busk and Chmielnik, and joining the existing front line at the south-west corner of the Magnuszew bridgehead. His request was not heeded, 'because the

<sup>225</sup> Schönherr, 'Obranné operácie armádnej skupiny Heinrici', 85–93.

<sup>226</sup> BA-MA RW 6/v. 559, fos. 29–34. <sup>227</sup> *Grif sekretnosti sniat*, 206 ff.

OKH did not regard such a measure, which also meant giving up valuable territory, as a matter of urgency'.<sup>228</sup> Despite the problematic course of the front in the Vistula section and the heavy fighting in the eastern Beskid mountains, the high command in Cracow was obliged to transfer not only a corps HQ but also four armoured divisions to other sections of the front at the beginning of September.<sup>229</sup>

The army group HQ followed with deep concern the military developments in Transylvania, where Army Group South was driven back to the Tisza river in the course of October. As a result of this development, Army Detachment Heinrici had great difficulty in holding the 'Hungarian position'. At the end of October, after the 4th Ukrainian Front attacks in the Krosno–Jasło section of the front had failed to achieve the desired success, Petrov extended the offensive to the south. 4th Ukrainian Front, in collaboration with Marshal Rodion Yakovlevich Malinovsky's troops, now stepped up the pressure on First Armoured Army. In the course of the month, Heinrici pulled his army back to the western edge of the Beskid mountains, and 4th Ukrainian Front advanced *en masse* in the Uzhhorod area. Since 2nd Ukrainian Front launched its major offensive at the same time, heading north from Debrecen towards Nyiregyháza, the OKH placed the Hungarian 1st Army under the command of Eighth Army, and formed Army Detachment Wöhler to ensure coordinated conduct of operations in the Debrecen–Nyiregyháza–Uzhhorod area. The aim of the Soviet operations in this area was to roll up the Beskid defences from the south, and to encircle and destroy the German units on the western edge of the mountain range. The fighting increased in intensity from the beginning of November and came to a head in the period from 21 November to 26 December 1944. Army Group South was forced to abandon the *Alfold*, the Hungarian lowland plain to the south of Budapest, but the army group's right wing was essentially able to hold its ground. First Armoured Army, which had been transferred to Army Detachment Heinrici on 12 December along with the Hungarian 1st Army again under its command, was obliged to give ground, but it managed to bring the enemy offensive to a standstill on the Slovakian–Hungarian border south of the Rimavská Sobota–Košice line, and so preserve the continuity of the front. The closing weeks of 1944 saw substantial changes in Army Group A. In the last few days of November, the OKH transferred Ninth Army from Army Group Centre, where it had been responsible for securing the section of the Vistula from the Puławy bridgehead to Serock north of Warsaw, and placed it under the high command in Cracow. As a result of this measure, Army Group A's border was moved north and it was now responsible for securing one of the most critical sections of the front. Just three weeks later, the OKH decided to place the Hungarian 1st army under the command of First Armoured Army again, thereby extending the right flank almost 150 kilometres to the west. The effect of these OKH decisions was to increase the length of this section of the front from approximately 450 kilometres to almost 750 kilometres, thereby putting the Vistula section in particular, and also the right flank at Košice, under threat.

<sup>228</sup> Study P-114c, pt. 7, i. 226, BA-MA ZA 1/2077, fo. 278.

<sup>229</sup> XXXXVIII Armoured Corps HQ, 1st, 3rd, 23rd, and 24th Armoured Divisions.

At the end of 1944, Army Group A faced the vastly superior forces of 1st Belorussian Front and 1st and 4th Ukrainian Fronts, which were preparing for the winter offensive to be launched in the direction of the Reich border.

The massive 2nd and 3rd Ukrainian Front attacks in Hungary affected Army Group A only to a limited extent, so the high command in Cracow took the opportunity offered by the pause to refresh its units and establish a defence system. By taking these measures, Harpe hoped to be able to hold out against a major Soviet offensive, at least for some time. The Soviet forces also took advantage of the pause in the fighting to prepare for the resumption of hostilities. According to the army group's information, the Red Army was stepping up its advance between the Beskid mountains and the mouth of the Pilica river, and the Vistula bridgeheads were consequently of crucial importance. In anticipation of the 'forthcoming defensive battle', the high command in Cracow drew up an operational plan that paid particular attention to the enemy's armoured forces and to front breakthrough by mobile units. The army group pulled all its armoured and armoured infantry divisions back from the main battle line and stationed them in the rear of the operational area as army group reserves.<sup>230</sup> Harpe intended 'to strike any enemy troops that broke through on the backhand, in free combat, using mobile forces from the reserve'.<sup>231</sup> But all forward planning inevitably faced the dilemma that defence of the large Vistula salient was an illusion from the start. The problem could have been solved only if the OKH had granted Harpe's requests to move Fourth Armoured Army back to a shortened defensive line. Despite all the difficulties, in the autumn of 1944 Army Group A managed to establish a stable front from the northern edge of the Beskid mountains to Warsaw, although it was doubtful whether the available forces would suffice for successful resistance against an enemy that was vastly superior in every respect.

# VI. The Withdrawal Battles in Romania and Transylvania in the Summer and Autumn of 1944

*Klaus Schönherr*

The Red Army launched its winter offensive against the southern wing of the German eastern front, which was defended by Army Groups A and South, in December 1943. The two army groups, battle-worn and short of reserves, had almost nothing to pit against the massive Red Army attacks, and they were consequently driven up to 300 kilometres west within two months. Further withdrawal was briefly prevented by the onset of the thaw in February 1944, until the Red Army resumed hostilities at the beginning of March. The Soviets then shifted the point of concentration of their attacks to the central section of Army Group South's front. The German defence front collapsed altogether in the closing phase of the Soviet winter offensive. Only when the Soviet units were completely exhausted and the attack lost momentum were their German adversaries able to re-establish a continuous defensive line in the southern section of the front. The kingdom of Romania was particularly hard hit by the Red Army winter offensive. It lost occupied Transnistria, and the old Romanian territories in Bessarabia and Moldavia north of the Chișinău–Iași line were conquered. When the Soviet offensive closed at the end of March, the German–Romanian forces were standing on the Brody–Kolomyia line east of Iași, and on a line extending eastwards from there beyond the Prut to the Tiligut, which formed the front line up to the Black Sea. In April 1944, however, this line together with its southern wing had to be moved west again, because Army Detachment Dumitrescu (Col.-Gen. Petre Dumitrescu), comprising the German Sixth Army and the Romanian 3rd Army, was unable to stop 3rd Ukrainian Front in its advance on Odessa. The defensive positions were therefore moved back to the west bank of the Dniester.<sup>1</sup> Army Group South Ukraine's front, which had extended from the edge of the Carpathians at Kolomyia to the Dniester and the Black Sea since April 1944, remained essentially unchanged until the second half of August.

<sup>1</sup> See Part IV, Chapter III of the present volume.

## 1. ARMY GROUP SOUTH UKRAINE ON THE ROMANIAN DEFENCE FRONT (SUMMER 1944)

While Army Group A was engaged in heavy defence battles on its northern wing at the end of March 1944, in the area covered by Army Detachment Wöhler (Gen. Otto Wöhler), which comprised the German Eighth Army and the Romanian 4th Army, Hitler dismissed the commander-in-chief, Field Marshal Ewald von Kleist, on 30 March<sup>2</sup> and transferred command to Col.-Gen. Ferdinand Schörner. When Kleist carried out the transfer of Army Group A command by telephone on 3 April,<sup>3</sup> Schörner took over a battle-worn, decimated force that was only just holding out with its last remaining strength against the Soviet attacks.

On 2 April 1944, almost at the same time as the change of command, Hitler issued Operational Order No. 7 on the conduct of operations on the southern wing of the eastern front in the coming months. In issuing this order, the commander-in-chief of the Wehrmacht was proceeding on the correct assumption that the units of 3rd and 4th Ukrainian Front were battle-worn and exhausted, and that the enemy offensive in the southern Ukraine had accordingly passed its peak. 'The Crimea must therefore be held fast, and the Dniester line north-west of Chișinău–Iași–Târgu Neamț–east Carpathian exit routes between Târgu Neamț and Kolomyia–Tarnopol–Brody–Kovel must be held or recovered at all costs.'<sup>4</sup> With regard to the Crimean peninsula, which had been cut off from the main German battle line since October 1943, Hitler's directive stipulated that it too must remain in German hands at all costs. For Army Group A, Operational Order No. 7 stated explicitly that the line from the Tiligul estuary to the Dniester at Dubossary was to be held in all circumstances, at least until the German and Romanian units making up Seventeenth Army in the Crimea could be fully supplied from Romania and the port of Odessa was no longer needed for transporting supplies. Hitler nevertheless authorized preparations to move the front back to the Dniester in an emergency. In the further course of hostilities it was absolutely essential to close the yawning gap between Eighth Army and the east Carpathian exit routes in order to prevent a Soviet breakthrough in the German front. The commander-in-chief of the Wehrmacht no longer had much confidence in the fighting strength of the Romanian army, and he accordingly ordered that Romanian divisions be deployed only in such a way that front sections liable to attack by enemy armour were defended exclusively by German units.<sup>5</sup> To carry out these plans, Hitler was counting on the uncompromising executive ability of the new commander-in-chief of Army Group A, which was renamed Army Group South Ukraine on 5 April without any change in its organizational structure.

Even Schörner could not put Hitler's intentions into practice. While operations in the northern part of the army group's area were wound up at the end of March, the Red Army launched massive attacks on Sixth Army's defensive positions, with

<sup>2</sup> KTB H.Gr. A, Abt. Ia, No. 3, vi (1–31 Mar. 1944), 253 ff., BA-MA RH 19 V/25, fos. 255 ff.

<sup>3</sup> KTB H.Gr. A, Abt. Ia, No. 3, vii (1–30 Apr. 1944), 18, BA-MA RH 19 V/26, fo. 19.

<sup>4</sup> Ibid., fo.14.      <sup>5</sup> *Hitlers Weisungen*, 250 ff.

the result that the defensive line on the Tiligul had to be abandoned. Army Group South Ukraine was obliged to withdraw to the Dniester in the course of April, so Odessa too was lost. On 8 April 1944, almost at the same time as the offensive on the mainland, the Red Army launched its large-scale attack on the Crimea in order to liberate the peninsula from the occupying forces. Seventeenth Army could not hold out against the massive Soviet attacks, and the Axis powers were obliged to abandon the peninsula on 13 May, after battles involving enormous losses and a dramatic rescue operation in which some 35,000 men were carried over the Black Sea to Constanța.<sup>6</sup>

Army Group South Ukraine had succeeded in bringing the Russian offensive in Bessarabia and northern Moldavia to a standstill by the middle of April. Schörner, with the Romanian Army Detachment Dumitrescu and the German Army Detachment Wöhler under his command, now had time to refresh his battle-worn units, whose human and material resources had been decimated. At the same time, he consolidated the defences on the new front line, which ran along the Dniester to the north of Chișinău and then turned west to the eastern edge of the Carpathians in the Târgu Neamț area.<sup>7</sup> When the Red Army ended its operations in northern Bessarabia in March and on the Dniester in April, the army group had 17 severely depleted German divisions and 23 equally depleted Romanian divisions under its command, plus 26 Wehrmacht division groups. The first task of their new commander-in-chief, at the end of the Russian winter offensive, was therefore to replenish the battle-worn units as quickly as possible, secure the supply lines, and consolidate the front line for defence purposes.

#### (a) The Situation in the Romanian Theatre of War

Three months after the Soviet offensive on the Dniester and in north-eastern Romania had come to a standstill, Schörner was able to draw up a balance-sheet that was essentially positive from the military point of view.<sup>8</sup> By the second half of June, the army group had succeeded in replenishing and training the German divisions so that they were again at full operational strength. The southern section of the eastern front had been stabilized, so even heavy locally circumscribed enemy attacks no longer had adverse effects. The army group was able to reduce the length of exposed sections of its main battle line on its own initiative—particularly in the area north of Iași—to give itself more favourable defensive lines. Similar progress had been made in consolidating defensive positions in Moldavia and Bessarabia. The army group had also achieved the central aim of its operational plan: the

<sup>6</sup> KTB H.Gr. Südkraine, Abt. Ia, No. 3, vii (1–30 Apr. 1944), and viii (1–31 May 1944), BA-MA RH 19 V/26, fos. 56–284, and RH 19 V/88, fos. 3–123; Hillgruber, *Die Räumung*. On this, see Part IV, Chapter IV of the present volume.

<sup>7</sup> Duțu, 'A Difficult Situation'.

<sup>8</sup> This does not apply to Schörner's style of leadership, in which he did not shrink from employing means and methods that were disproportionate and sometimes beyond the limits of the law, as Gen. Ulrich de Maizière very benignly pointed out after the war (Kaltenegger, *Schörner*, 242). See also Schönher, 'Ferdinand Schörner'.

constitution of ample reserves of mobile armoured units in the rear area. By the end of June, the defensive measures in the north-east of the kingdom of Romania appeared so far advanced that there was a good chance of successfully repelling Soviet attacks. In addition to all the defensive efforts on the Dniester, in northern Moldavia, and in Bessarabia, the Carpathian–Danube line<sup>9</sup> was also being intensively consolidated, and an in-depth interception line was established to prevent an enemy offensive from spilling over into the Balkans.

On 22 June 1944 the Red Army launched its long-planned operation between Lake Peipus and the upper reaches of the Prut with seven army fronts. According to Army Group South Ukraine's chief of staff, Lt.-Gen. Walter Wenck, the army group was in excellent shape; if necessary, it could even let the OKH have armoured units to deploy in endangered sections of the eastern front.<sup>10</sup> This assessment was in some respects inconsistent with Schörner's directive on the conduct of future operations, issued on 14 June. According to that directive:

attention is drawn, [...] in the case of Army Detachment Dumitrescu, to the enemy bridgehead at Rascati and the salient at Chișinău and, in the case of Army Detachment Wöhler, to the area on both sides of the Prut and on both sides of the Seret valley, as future sources of danger. In the next few weeks [...] Army Detachment Dumitrescu is to further consolidate the Dniester front with a deeply staggered defensive system, and Army Detachment Wöhler is to consolidate the [...] positions north of Iași and prepare limited attacks to eliminate the front salient in the Prut valley [...]. Armies are also informed that the army group intends to establish an operational reserve in the Huși area, consisting of Armd. Inf. Div 'G.D.', 14th Armd. Div., and subsequently 10th Armd. Inf. Div., under the command of XXXX Armd. Corps.<sup>11</sup>

On 22 June, just a few days after the Russian summer offensive was launched, there were signs of an impending disaster facing Army Group Centre, which forced the OKH to assemble 'anything and everything that can move' in the central section of the eastern front.<sup>12</sup>

The crisis in Army Group Centre naturally affected Army Group South Ukraine too, especially as the hostilities spread to the Baltic countries and Galicia, with the result that only the southern wing of the eastern front remained quiet. On 1 July the OKH transferred 17th Armoured Division to Army Group North Ukraine. The high command in the Carpathian spa town of Slănic, to which the staff of Army Group South Ukraine had moved on 30 May, made no objection to this decision, indicating that the army group could cope with the withdrawal of an armoured division. On this occasion Wenck expressed the view that the army

<sup>12</sup> Telephone call from the chief of the Army General Staff to commander-in-chief Army Group South Ukraine, 29 June 1944, 21.30, KTB H.Gr. Südukraine, Abt. Ia, No. 3, ix. 175 ff. (29 June 1944), BA-MA RH 19 V/28, fos. 178 ff.

group could ‘even part with further forces if the overall situation so required’,<sup>13</sup> since there was no sign of an enemy attack. With this offer to the OKH, the chief of staff laid the foundation for the failure of the operational concept for the Romanian theatre of war. The military situation between the Baltic and Galicia in July 1944 required a constant supply of fresh forces, including forces from the Romanian theatre. If the army group initially believed it was entitled to be consulted when its units were handed over, it was obliged to recognize just three weeks later that the OKH paid no attention to objections from Slănic. By the end of July the forces available to the German–Romanian command had been substantially reduced as a result of the military disasters between the Baltic and Galicia. It now had scant chances of holding out against a major Soviet offensive. Within three weeks, the army group had been obliged to transfer five armoured divisions, one infantry division, two assault-gun brigades, and XXXX Armoured Corps HQ to its neighbour on the left.<sup>14</sup> Wenck now considered that the limit had been reached and no more forces could be transferred. Even the additional deployment of 18 Romanian divisions, below standard in respect of training and equipment, could only partly make up for the substantial loss of strength.<sup>15</sup> But the military situation in the summer of 1944—not only on the eastern front—was so desperate that no attention was paid to protests from Slănic.

The situation of Army Group North, where the connection between its southern wing and Army Group Centre had been severed and it was consequently in danger of being enclosed in the Baltic States, had led in July to serious differences between the commander-in-chief, Gen. Johannes Friessner, and Hitler. In this precarious situation, Hitler once again believed that the tough and uncompromising Col.-Gen. Schörner would be able to resolve the almost hopeless situation on the northern wing of the eastern front, so he decided that the commanders-in-chief of the two army groups should change places.<sup>16</sup> On 23 July 1944 Hitler accordingly appointed General Friessner as the new commander-in-chief of Army Group South Ukraine, promoting him at the same time to the rank of colonel-general. During Hitler’s introductory briefing on the situation in the Romanian theatre, Friessner identified a weak point in the army group’s front. The new commander-in-chief was convinced that the open north flank between the Carpathians and the Dniester was a direct invitation to the enemy to launch an attack to the south along the Prut and Seret valleys, which would enable the Soviet forces to advance rapidly, block the Prut river crossings behind Army Detachment Dumitrescu, and enclose it in Bessarabia. The German Sixth Army was extremely at risk because, in the event of a simultaneous attack by 3rd Ukrainian Front, probably westwards from the Tiraspol bridgehead, it would be enclosed in the area between Chișinău and Bender and would then have little chance of escaping destruction. Hitler did

<sup>16</sup> Kaltenegger, *Schörner*, 243–5; Friessner, *Verratene Schlachten*, 26–30.

not accept Friessner's arguments and categorically rejected the requests to rectify the army group's exposed front.<sup>17</sup> Even when Friessner 'then asked for authorization at least to move the army group's far protruding front back to the other side of the Prut *in good time*, should there be signs of a north–south Russian attack, Hitler refused, telling him [...] first to look into the situation on the spot. He could then always—if necessary—submit appropriate operational requests.'<sup>18</sup>

In addition to the change of commander-in-chief, the chief of staff, Lt.-Gen. Wenck, was removed from his post at the same time—a most unusual procedure in the armed forces—and replaced by Maj.-Gen. Helmuth von Grolman.<sup>19</sup> Even before the new commander-in-chief arrived at headquarters in Slănic, Friessner's objections had led the OKH to issue a further directive on the 'conduct of operations on the eastern front'. The order issued by the operations division confirmed once again Hitler's determination to keep the army group in its current positions. The army group HQ was also instructed to exploit weaknesses in the enemy position by carrying out limited local attacks aimed at tying down enemy forces and preventing units of 2nd and 3rd Ukrainian Front from being withdrawn for deployment in the northern section of the eastern front. Apart from the operational instructions, the OKH also requested the army group to see 'what other divisions could be prepared for transfer, in addition to those whose transfer had already been ordered (six armoured divisions, including Armoured Infantry Division "Grossdeutschland", 1st Infantry Division, and 1st Mountain Division)'.<sup>20</sup> Despite the problematic course of the front, the Army General Staff was not prompted by Friessner's proposals and suggestions to organize the defence of Romania more effectively, but fell in once again with Hitler's arguments. As a result of the OKH's ideas and demands, which were geared to the situation on the eastern front as a whole, Army Group South Ukraine's defence concept was deprived of important elements that were essential to the conduct of a successful defensive battle.

The new commander-in-chief arrived at headquarters in Slănic on 25 July 1944. The colonel-general's staff presented an assessment of the situation on the same day, providing him with a direct insight into the army group's operational problems. Section Ia concluded that the reserves still at the army group's disposal at this point, namely two armoured divisions and two infantry divisions, an armoured infantry division and a Romanian armoured division, after it had been obliged to part with eight divisions and two brigades, were just sufficient to withstand an offensive, given the enemy's current situation. However, the forces would no longer suffice to defend the German–Romanian front in the event of a large-scale enemy attack. Lastly, the army group HQ asked the OKH to grant it operational freedom to withdraw independently to rearward positions if, in the course of a Soviet

<sup>20</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 3, x. 110 ff. (24 July 1944), BA-MA RH 19 V/29, fos. 110 ff.

offensive, it became apparent that the enemy forces would break through the defensive lines. The army group's strength should not be further reduced; otherwise it would no longer be able to fulfil its task of defending the territory of north-eastern Romania. The army group HQ also asked for more armoured vehicles. It was prompted to submit this request after having been obliged to part with more than 60 per cent of its operational tanks and a third of its assault guns since mid-July 1944.<sup>21</sup> Even this alarming assessment of the situation, which the commander-in-chief did not pass on to the Army General Staff but which nevertheless served as the basis for reports, reviews, and requests to the OKH, did the army group no good, in view of the disastrous situation in the central and northern sections of the eastern front.<sup>22</sup>

Friessner had noted the army group's difficult situation when he was receiving his introductory briefing in Rastenburg. He wanted to form his own picture of the state it was in without delay. During his tours of inspection, Friessner was confronted with the political mood in Romania. Just a few days earlier, Hitler had asserted that conditions in the kingdom were completely stable: 'The marshal [Ion Antonescu] is loyal to me. And the Romanian people and the Romanian army are behind him to a man.'<sup>23</sup> However, Friessner was obliged to recognize, during his visits to the front at the end of July, that Hitler's conviction was a complete delusion. During his travels he frequently came across rumours that the political reliability of the Romanian officer corps was highly doubtful. This impression became even stronger when, in the summer of 1944, numerous high-ranking officers, commanding generals, and divisional commanders were relieved of their posts and replaced without the army group leadership being informed.<sup>24</sup> The commander-in-chief also learned of a number of meetings in Alba Iulia attended by generals and members of the political opposition who were suspected of dealings with enemy powers and of plotting to overthrow the Conducător. According to Friessner, his findings on political conditions in the kingdom and in the Romanian army were repeatedly passed on to the OKH.<sup>25</sup>

<sup>21</sup> On 11 July 1944 Army Group South Ukraine's operational inventory comprised 424 tanks, 390 assault guns, and 40 assault howitzers. By 1 August 1944 it had been reduced to 155 tanks, 294 assault guns, and 30 assault howitzers; KTB H.Gr. Südukraine, Abt. Ia, No. 3, ix. 38 (11 July 1944), and x. 3 (1 Aug. 1944), BA-MA RH 19 V/29, fo. 39, and RH 19 V/30, fo. 3.

<sup>22</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 3, ix. 115 ff. (25 July 1944), BA-MA RH 19 V/29, fos. 115 ff.

<sup>23</sup> Friessner, *Verratene Schlachten*, 33. Hitler's assertions are to some extent at odds with statements on the situation in Romania made by [Carl August] Clodius, head of department in the foreign ministry, on 12 July 1944; ADAP, Series E, viii. doc. 110, 199 ff.

<sup>24</sup> In the summer of 1944 such personnel policy was not confined to the Romanian Axis partner but was also common practice on the German side. Thus, on 30 March 1944 Hitler relieved Field Marshal Ewald von Kleist of his command and appointed Col.-Gen. Schörner in his stead without informing Marshal Antonescu of his intentions. The Conducător was extremely annoyed by Hitler's action, as the head of the German military mission, General Erik Hansen, informed the army group; KTB H.Gr. Südukraine, Abt. Ia, No. 3, vii. 14 (2 Apr. 1944), BA-MA RH 19 V/26, fo. 15.

<sup>25</sup> Friessner, *Verratene Schlachten*, 51 ff. There is nothing in Army Group South Ukraine's records to support these claims made by Friessner after the war.

Friessner was particularly surprised by the change in the Romanian 4th Army high command. Although the situation in the Romanian 4th Army section of the front was becoming increasingly acute, the commander-in-chief, General Mihai Racoviță, left the army on 31 July, officially to go on leave, and never returned to his post.<sup>26</sup> Marshal Ion Antonescu then placed the Romanian 4th Army under the overall command of General Gheorghe Avramescu, who was already acting head of the army HQ. During his visits to the front, Friessner observed the workings of the covert 'Cosma' operation, by which the Romanian Great General Staff (Marele Stat Major Român) sought to record the number and location of all German troops in the kingdom. 'Cosma' was to have extremely adverse consequences for Army Group South Ukraine and the German forces in the kingdom.<sup>27</sup>

The political changes in south-eastern Europe, which in July 1944 were particularly apparent in Turkey's distancing itself from the German Reich and culminated in its breaking off diplomatic relations on 2 August, and the military situation on the invasion front and the eastern front, which was disastrous for the Axis powers, both had a considerable impact on the political situation in Romania. The growing war-weariness of large sections of the Romanian population in the summer of 1944 also made the new commander-in-chief doubt whether the Romanian forces would continue to fight on the German side. During his tours of the front, Friessner had already noticed the waning readiness to continue the war, and his observations were confirmed by his staff.<sup>28</sup> To round off his impressions, Friessner contacted the German ambassador in Bucharest, Baron Manfred von Killinger, on 1 August, together with the two highest-ranking German officers in the city, General Erik Hansen, head of the German military mission, and Lt.-Gen. Alfred Gerstenberg, commander of the German air force in Romania. During his talks in the capital, Friessner discovered that the representatives of the German authorities took a completely different view of the political situation in the country. The prevailing opinion in German diplomatic circles was summed up by Killinger in the following words: 'Marshal Antonescu has the people and the government behind him.'<sup>29</sup> These views did not dispel Friessner's scepticism. That same day, he ordered the German Sixth and Eighth Armies to set up undercover emergency units, so that the army group would be in a position to intervene immediately in the event of a coup or political unrest.<sup>30</sup>

His reservations about the opinion held by the higher German authorities in Bucharest prompted Friessner to write a personal letter to Hitler in which he first analysed the military situation on the southern wing of the eastern front and the question of the reliability of the Romanian troops, and then described his own extremely disturbing impression of the political position in Romania. With regard to the army group's situation, Friessner said in his letter, which was to be handed to Hitler by his 1st general staff officer, Col. Ivo Thilo von Trotha, that 'there is no cause for concern at present, and the army group's front can be held if it is allowed to keep the few reserves that are still available (two medium-strength German armoured divisions, one German armoured infantry division, and one Romanian armoured division)'.<sup>31</sup> On the basis of his assessment of the internal situation in Romania, he considered it essential 'to take all the necessary measures in advance, in order to be able to cope with any eventuality that might arise in this connection'. He emphasized, in particular, that 'these measures include the establishment of *unified* command authority in the Romanian area. The commander-in-chief therefore requests the Führer to transfer to him the authority to issue orders to the armed forces'.<sup>32</sup> At the same time, Army Detachment Wöhler submitted to the army group HQ a study of how much Romanian territory Eighth Army would still be able to defend if the Romanians withdrew from the war. The conclusion was that with the forces available it would only be able to occupy defensive positions on the eastern edge of the Carpathians along the Seret river as far as the Adjud area.<sup>33</sup> So, if Romania withdrew from the alliance, the whole area east of the Seret and north of the Danube would have to be given up.

Despite the serious military and political problems which had prompted him to approach Hitler in person, Friessner's state of health prevented him from intervening in his 1st general staff officer's negotiations on the army group's behalf. So, in the end, the commander-in-chief had to be content with the results Trotha managed to obtain. During his stay at Führer headquarters in the 'Wolf's Lair', Trotha had talks with Field Marshal Wilhelm Keitel, Col.-Gen. Alfred Jodl, Col.-Gen. Heinz Guderian, and Wenck. As Trotha informed his commander-in-chief on his return from Rastenburg, he had discussed the situation in the Romanian theatre of war with the chief of the Army General Staff, and had pointed out that it would no longer be possible to hold the front in the event of a major Soviet attack if the OKH continued to withdraw troops as it had been doing, and if the Romanian troops became increasingly unreliable. That being so, the Army General Staff should come to terms with the fact that the army group would have to withdraw to the Danube-Carpathian Fringe position. Although Guderian essentially agreed with the army group's reservations, he said nothing specific about plans for troop withdrawals, so the army group had no firm basis for planning in the immediate future. After consulting Hitler, the chief of the Army General Staff could only say: 'if the situation should develop in this way, he hopes that he will be

able to give the necessary orders to the army group *in good time*.<sup>34</sup> Trotha's talks with the chief of the OKW also yielded no successful results for the army group. Keitel neither changed the German command structure in Romania by transferring authority over the Wehrmacht to the army group's commander-in-chief nor authorized precautionary measures to be taken in case Romania ceased fighting alongside the Germans. Keitel's response to Friessner's request at their first meeting on 4 August had been very favourable. At that point, Keitel had also shared the commander-in-chief's scepticism about Romania's continued support for the alliance.

The attitude of the chief of the OKW changed radically on 5 August, after Hitler had spent several hours in conference with the Romanian head of state. This change of mind is all the more surprising since, when Hitler asked whether Romania under the marshal's leadership would remain firmly committed to the alliance with the Third Reich to the very end, the Conducător's answer had been highly evasive.<sup>35</sup> Antonescu had emphasized, in his conversation with Hitler, that 'should it become impossible for the German troops to hold this section of the front [Army Group South Ukraine's main battle line] on the present line, Romania would not be in a position to stand at Germany's side to the point of complete destruction'.<sup>36</sup> Even the Conducător's closing remark, that Romania 'cannot maintain the present position indefinitely if Germany does not create the possibility for our defence [...] ',<sup>37</sup> did not alter Hitler's and Keitel's conviction that the kingdom remained committed to the alliance with the Third Reich. The chief of the OKW continued to maintain that 'Romania is with us, for good or ill.' Consequently, 'he did not think anything would happen in the near future'.<sup>38</sup> Once again, Keitel had avoided taking a decision that could be of considerable importance for the future conduct of Army Group South Ukraine's operations, and had adopted Hitler's preconceived idea in order to avoid a confrontation with the Führer. On his return, Trotha informed his commander-in-chief of the course which the talks in Rastenburg had taken. Friessner was forced to draw the sobering conclusion that his letter had prompted neither Hitler nor Keitel to change the army group's unfavourable situation with regard to a Soviet offensive. All the chief of the OKW had done was reluctantly promise to bear in mind 'the question of transferring authority over the Wehrmacht in the Romanian area to the commander-in-chief'.<sup>39</sup> So conditions in the Romanian theatre of war remained unchanged, and the army group had to go on handing over forces, even though 2nd Ukrainian Front's activities in the area facing the army group's front had increased considerably since 7 August.

On 9 August, while the army group staff were receiving the first reports of substantial enemy troop movements in the area to the north-east of Iași, the chief of

the Romanian Great General Staff, General Ilie Șteflea, arrived in Slănic for operational talks with Grolman. Apart from a report on the Conducător's visit to Hitler from the Romanian perspective, the main topic of the exchange of views was consolidation of the Danube–Carpathian Fringe position. On behalf of the army group, Grolman emphasized the demanding nature of this defensive rear position, but he also made it very clear that, in view of the serious consequences for the kingdom, withdrawal to the Carpathian–Focșani–Galați–Danube estuary line would be considered only if it became absolutely necessary. Șteflea, for his part, explained that intensive work was being done on the Romanian side to consolidate the position, and many of the installations had already been completed. In this connection, the chief of the Romanian Great General Staff pointed to the need to make preparations for a possible withdrawal of the front. The two generals also agreed on the conduct of operations in the immediate future. In view of the critical enemy position in the area facing Army Detachment Wöhler's right wing, they agreed on preparatory measures for defence against a possible Red Army offensive.<sup>40</sup>

Although Friessner had considerable reservations about the reliability of the Romanian Axis partner and was extremely concerned about political developments in the kingdom, the situation on the German–Romanian defence front appeared to be extremely quiet and stable in the first days after he took command. So, until 6 August, the army group thought that, as the Red Army was engaged in a major offensive against the central and northern sections of the eastern front, it no longer had the necessary forces to seek a decision in the Romanian theatre by means of a decisive large-scale operation. The picture changed slowly but fundamentally after 7 August, when Army Detachment Wöhler first observed substantial enemy troop movements opposite its right wing, east of the Prut. This area to the east of Iași was a weak point in the army group's defence system, lying as it did on the border between the areas under the command of Army Detachment Wöhler and Army Detachment Dumitrescu respectively. Although, at this early stage, the staff in Slănic did not expect a Soviet offensive in the next few weeks, it took the purely precautionary measure of placing 10th Armoured Infantry Division as a reserve force behind the left-hand section of Sixth Army.<sup>41</sup> In addition to the troop movements in northern Bessarabia, Air Fleet 4 observed during reconnaissance flights that there were now 'many more ships in the harbour of Odessa than there had been earlier'.<sup>42</sup> The first signs that enemy troops were being mustered opposite the Târgu Frumos and Iași bridgeheads became more marked in the next few days, as the troop movements from the eastern bank of the Prut shifted further to the west. Despite the events in the area of 2nd Ukrainian Front, Army Detachment Wöhler and the staff in Slănic were still not sure whether the troop movements were simply a regrouping of forces, or preparations for a possible attack. At this

<sup>42</sup> Ibid. 31, BA-MA RH 19 V/30, fo. 33.

early stage, Sixth Army HQ still considered the troop movements in the area facing the Dniester front to be perfectly normal.<sup>43</sup> The army group HQ still had no clear idea of the enemy's intentions a week later, even though 2nd Ukrainian Front's activities between the Prut and the Seret continued unabated. However, Grolman and his 1st general staff officer now no longer ruled out the possibility that the Soviet forces were preparing a limited local attack.<sup>44</sup> While the enemy situation in the area facing the Romanian 4th Army's defensive positions was changing constantly,<sup>45</sup> the situation on the Dniester front appeared to change very little until the middle of the month. The commander-in-chief nevertheless concluded in his situation assessments that a Russian offensive, probably directed exclusively against the Moldavian section of the front between the Seret and the Prut, was to be expected in the near future. Presumably, the enemy's intention was to cut off the two bridgeheads at Târgu Frumos and Iași. Although German aerial reconnaissance observed a huge increase in Soviet artillery, which was a further indication of an imminent offensive, Eighth Army HQ nevertheless believed that its own forces would suffice to repel an enemy attack.<sup>46</sup>

In the area under Army Detachment Dumitrescu's command, there was no change in the situation until 15 August, when strong troop movements were observed in the Tiraspol bridgehead and on the left wing of the German XXIX Army Corps, at the interface between the German Sixth Army and the Romanian 3rd Army. Sixth Army HQ's situation assessment stated that 'the general impression is that the Russians are conducting relief operations in the area facing XXX Army Corps'.<sup>47</sup> Only two days later, when 3rd Ukrainian Front had strengthened not only its forces in the Tiraspol bridgehead but also its artillery in the area opposite the German XXIX Army Corps, the situation was deemed to be far more dangerous. Despite all the changes in the areas of Army Detachment Wöhler and Army Detachment Dumitrescu, Sixth Army HQ still did not think there would be a large-scale Soviet offensive. It judged the enemy measures to be preparations for a secondary attack designed to keep the German troops tied down on the Dniester front and prevent any move to the northern section of the front between the Dniester and the Seret. The operations division of the Army General Staff agreed with this assessment.<sup>48</sup>

But at the point when the Army General Staff and Foreign Armies East both thought there would only be a limited local attack in the Târgu Frumos–Iași area, Army Detachment Wöhler revised its assessment of Soviet operational intentions, even though the army HQ considered that the enemy forces facing this section of the front were not strong enough to conduct 'an attack on an operational scale with

far-reaching objectives'.<sup>49</sup> Worried by the constant intensification of enemy troop movements in the area facing the army detachment's right wing, Wöhler and his chief of staff, Maj.-Gen. Hellmuth Reinhardt, became convinced, given the exceptionally large troop build-up, that 2nd Ukrainian Front was preparing a large-scale attack aimed at achieving a breakthrough.<sup>50</sup> Despite Eighth Army HQ's alarming assessment of the enemy situation, neither the OKH nor the staff in Slănic believed that the Soviet forces in northern Moldavia and at Tiraspol were assembling for an operation designed to destroy Army Group South Ukraine and conquer Romania.<sup>51</sup>

### (b) The Soviet Enemy on the Dniester and in Northern Romania

At the beginning of May 1944, after the Red Army's plan to break through the German–Romanian front in both the Iași area and the Bender–Tiraspol section had failed, the high command in Moscow brought the operation in north-eastern Romania to an end. 2nd and 3rd Ukrainian Fronts went over to the defensive, as the other Soviet combat forces between the Baltic States and Galicia had already done. The Soviet military leadership was obliged to take this measure because, as a result of the high losses, exhaustion, and supply difficulties caused by the heavy fighting in the spring, the front-line troops were in no condition to break the enemy's resistance. In the early summer of 1944, after the units had been refreshed, the Soviet high command decided to discontinue operations on the Dniester and in north-eastern Romania; some of the troops deployed there were needed to strengthen the Baltic and Belorussian fronts, in order to exploit the collapse of the German forces in the centre of the eastern front and finally destroy Army Groups Centre and South Ukraine. Since priority was given to the transfer of operational armoured forces, the combat strength of both army fronts was reduced substantially. Army Group South Ukraine was aware of the enemy troop reductions, despite all attempts to conceal them, and the transfers of 5th Guards Armoured Army and 8th Guards Army were recorded explicitly.<sup>52</sup> Altogether, by the beginning of August, 2nd and 3rd Ukrainian Fronts' troop strength had been reduced by around two armoured armies, three infantry armies, eight to ten mobile corps, and 28 rifle divisions.<sup>53</sup> It was surprising that, despite this reduction in their own strength, the two Soviet HQs barely reacted to the transfer of German forces from the southern wing of the eastern front to the Galician combat area. This situation changed radically in the first few days of August.

<sup>53</sup> Study T-8, xix, annex E, 7, BA-MA ZA 1/2335, fo. 208; Kissel, *Die Katastrophe in Rumänien*, 179.

On 2 August Stalin issued his directive on the Iași–Chișinău operation, ordering 2nd and 3rd Ukrainian Fronts to prepare and conduct an offensive in the Moldavia–northern Bessarabia area. The directive specified that 2nd Ukrainian Front, under the command of General Rodion Yakovlevich Malinovsky, was to break through the enemy positions in the area west of Iași and push south, while 3rd Ukrainian Front, under General Fedor Ivanovich Tolbukhin, was to launch an attack to the west from the Tiraspol bridgehead and, in cooperation with Malinovsky's troops, enclose and destroy the enemy forces in the Chișinău area. The mobile units played a special part in the operational plan, as they were to break through to the Prut river crossings south of Iași as quickly as possible after the enemy defence lines had been opened up, and take possession of the city.<sup>54</sup>

The two command headquarters used the period from 2 to 19 August to reorganize their units so that they were able to open decisive gaps in the German–Romanian front at the first assault. According to the plans, the attacks in the Iași–Chișinău area were to be supported by a Black Sea fleet landing at Akkerman and action by the Danube flotilla, whose main task was to carry 2nd Ukrainian Front infantry forces across the Dniester estuary to attack the Romanian 3rd Army. The aim of the Black Sea operation was to enclose and eliminate the Romanian 3rd Army in southern Bessarabia.<sup>55</sup> For the Soviet operational plan to be executed as efficiently as possible, both 2nd and 3rd Ukrainian Fronts had to be reorganized so that the focal points of the attack lay in the Iași area and the section of the front at the Tiraspol bridgehead. Thus, the main effort of the offensive was directed at what was assumed to be the weak points in the German–Romanian defence front, since the two sections in question were manned primarily by Romanian units, whose combat strength was considered inferior to that of German troops.

It was only on 2 August that the Soviet supreme military authority decided to reopen the offensive in the Romanian theatre of operations. On that day the Stavka accordingly instructed 2nd and 3rd Ukrainian Fronts to prepare and conduct an offensive operation aimed at destroying the German–Romanian Army Group South Ukraine and conquering the kingdoms of Romania and Bulgaria. In the first two weeks of August, the human and material resources of both army fronts were increased considerably for the Iași–Chișinău operation. 2nd Ukrainian Front was standing in northern Moldavia and northern Bessarabia with six armies, an armoured army, and an independent armoured corps. Altogether, Malinovsky had 56 divisions, five mobile corps, an armoured brigade, and a self-propelled-gun (SPG) brigade at his disposal for the attack on the German–Romanian defensive front between Târgu Frumos and Chișinău. On the Dniester front, where 3rd Ukrainian Front was preparing its attack, four armies and two independent mobile corps were ready for a thrust into the rear of German Sixth Army. Tolbukhin had 35 divisions, a mechanized corps, and a mobile brigade at his disposal for the advance to the Prut. The two army fronts had a combined strength of around

<sup>55</sup> Ibid. 7 ff.; Mazulenko, *Die Zerschlagung der Heeresgruppe Südukraine*, 23–30.

930,000 men. Such manpower and the number of heavy weapons—around 1,400 tanks and assault guns, approximately 16,000 artillery cannon and grenade launchers, and almost 1,800 aircraft—testified to a marked superiority of the Soviet enemy in the southern section of the eastern front.<sup>56</sup>

The German–Romanian adversary was not unaware of activities in the area covered by 2nd and 3rd Ukrainian Fronts, and realized that they did not preclude the possibility of a new offensive. However, the two Soviet army front HQs managed to disguise their intentions so effectively that, a few days before the Soviet attack was launched, Army Group South Ukraine, and even the OKH, still did not realize that the Moldavian–Bessarabian theatre of operations was under any exceptional threat.<sup>57</sup>

After more than three relatively quiet months in the Romanian theatre of war, there were signs in the middle of August that the pause was about to end. From April to the end of June 1944, the hard-hit Army Group South Ukraine had had an opportunity to consolidate its human and material resources, so that by the summer of 1944 its combat strength was again at a reasonable level and there was reason to hope that it would be able to hold its ground successfully against a Soviet offensive. However, this period was marked by friction and differences with the Romanian Axis partner. In particular, a great deal of energy was wasted in constant disputes over food supplies and the provision of local currency to the German military agencies. The army group was also deeply concerned about the dwindling reliability of the Romanian troops and about political developments in the kingdom, which seemed to be coming to a head. With the opening of the Soviet summer offensive in the central section of the eastern front, the German forces in Romania also lost a substantial proportion of their combat strength, since they were obliged to part with large numbers of troops. By the time the Soviet forces began preparing for their operation at the beginning of August, the German–Romanian Army Group was already so depleted that its military capability was hardly sufficient to hold the entire southern section of the eastern front.

## 2. THE FIGHTING IN ROMANIA AND TRANSYLVANIA (LATE SUMMER TO AUTUMN 1944)

Since the beginning of April, Army Group South Ukraine had managed to perform its task of holding Romania and covering access to the strategically important Ploieşti oilfields and the Danube plain. The German Reich had, so far, fulfilled its obligations to protect Romania's borders—apart from the loss of northern Moldavia. However, the situation changed seriously after the Allied invasion of France and, above all, with the launch of the Soviet summer offensive against Army Group Centre at the end of June and the extension of enemy operations to the neighbouring sections of the front covered by Army Groups North and North Ukraine. The situation in the German–Romanian section of the front had even

<sup>56</sup> *Grif sekretnosti sniat*, 205 ff.; Kissel, *Die Katastrophe in Rumänien*, 49, 60 ff., 65 ff.

<sup>57</sup> Kissel, *Die Katastrophe in Rumänien*, 180.

become much worse. Unlike Hitler and the OKH, who described the military situation to their Romanian ally in extremely optimistic terms, the Conducător regarded the Soviet troop movements, which pointed to a large-scale massing of forces in the Romanian theatre, as a very serious threat.

Although Hitler stressed, in his conversation with Antonescu on 5 August, that he was intent on holding the section of the front on the Dniester and in Moldavia, the Romanian head of state took a much more realistic view of the military situation. In his response, he said he had 'absolutely no doubt that the Führer still had every intention of holding the present course of the front in Moldavia and Bessarabia. However, as an experienced military man, I added that we should not only see what we want to do. Everything also depends on the possibilities and, in particular, on the enemy's intentions.'<sup>58</sup> And it was precisely 2nd and 3rd Ukrainian Fronts' intentions that were to determine what happened to Army Group South Ukraine in the coming days and weeks. In this situation, the decisive factor was whether a major Soviet attack would be repelled and the Moldavian–Bessarabian defence line successfully held, because, otherwise, there was a danger that Romania would leave the alliance, as the Conducător had explained in his conversation with Hitler at the beginning of August.<sup>59</sup>

### (a) The Fighting in Moldavia and Bessarabia (20 to 23 August 1944)

'It appears certain, from his behaviour in the past few days and the attacks this afternoon, that the enemy is preparing to launch the expected major attack west of the Prut tomorrow, with the point of concentration between Rediu Metropoliei<sup>60</sup> and Belceşti.<sup>61</sup> There may also be holding attacks on other sections of the front.'<sup>62</sup> Friessner came to this conclusion on the evening of 19 August 1944, after discussing the situation in the morning with the chiefs of staff of Army Group South Ukraine, the German Sixth and Eighth Armies, and Air Fleet 4, and studying the latest reports from the areas under his command. It now remained to be seen whether the 650-kilometre-long front, which had been built up since April into a defence zone with deeply staggered defensive lines, would withstand a major Soviet offensive or collapse in the opening phase of the Soviet operation, as had been happening for the last two months in the central and northern sections of the eastern front. The chances of mounting an effective defence had decreased steadily since the end of June, mainly as a result of the transfer of eleven divisions,<sup>63</sup>

<sup>58</sup> Arh.M.A.E., fond Germania, vol. 94/1944, fo. 435, 10.

<sup>59</sup> At Führer headquarters on 5 August, Marshal Antonescu had stressed that 'should it become impossible for the German troops to hold this section of the front, Romania would not be in a position to stand at Germany's side to the point of complete destruction'; Arh.M.A.E., fond Germania, vol. 94/1944, fo. 434, 9.

<sup>60</sup> On the Jijia river, about 17 km north of Iaşi.

<sup>61</sup> In the Bahlui valley, about 11 km north of Târgu Frumos.

<sup>62</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 3, xi (1–19 Aug. 1944), 92, BA-MA RH 19 V/30, fo. 94; similar entry in Rom. 4th Army war diary, 3. Abt., 1–31 Aug. 1944, on 19 Aug. 1944, 2, Arh.M.Ap. N., fond Armata 4, dosar 221, fo. 110.

<sup>63</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 3, xi. 62, BA-MA RH 19 V/30, 64. Between 29 June and 19 August 1944, Army Group South Ukraine had to transfer the following units to Army Group

including almost all the mobile armoured units that were essential to the successful defence of the section of the front between the Carpathians and the Dniester. But, quite apart from the reduction in German combat strength, the ambivalent attitude of the Romanian Axis partner also constituted a considerable risk. Even so, Friessner, his operations division, and the OKH were still convinced on 17 August that there were sufficient forces deployed on the Romanian front to halt the expected 2nd and 3rd Ukrainian Front offensive.<sup>64</sup>

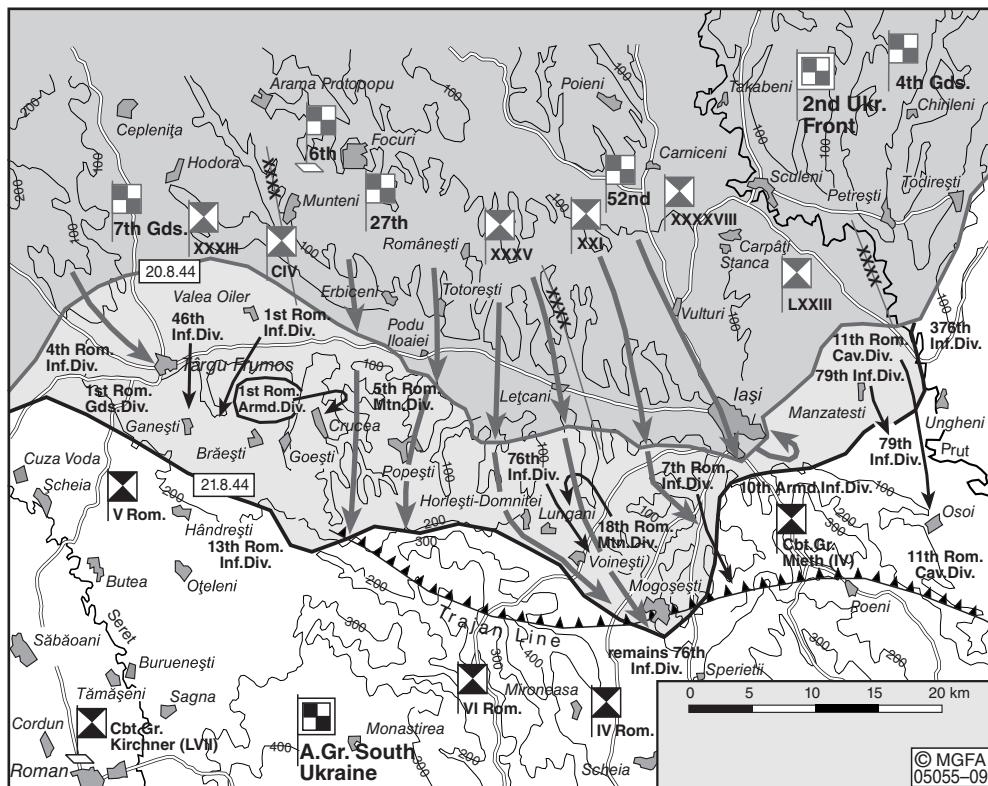

The enemy's intensive preparations for the Iași–Chișinău operation were completed towards the end of the third week of August, and 2nd Ukrainian Front under Malinovsky launched its offensive against the German–Romanian defensive positions north-west of Iași in the early hours of 20 August. At almost the same time hostilities began to the south of Tiraspol, where the Soviet 37th Army, belonging to 3rd Ukrainian Front, attacked the southern wing of the German Sixth Army in the central section of the bridgehead west of Slobodseja. Simultaneously, the Soviet 46th Army broke into the Romanian 3rd Army's nearby defensive system. The major offensive on the southern wing of the eastern front was now under way, an offensive which had been feared for days and turned out to be far more intense than the Germans had anticipated. The point of concentration of the attack in the German–Romanian theatre of operations was in the section of the front, only 35 kilometres wide, between Munteni, 15 kilometres north-east of Târgu Frumos, and Carpați, some 10 kilometres north of Iași, where two Soviet armies attacked with six army corps. This made it clear that the enemy's intention was to break as quickly as possible through the Dealu Mare section of the front, which was favourable for defensive purposes, advance southwards along the conveniently placed Iași–Vaslui railway line into the Bârlad valley, and take possession of the Prut river crossings south-east of Iași. If 2nd Ukrainian Front managed to achieve its aims, it would have a chance to cut the German Sixth Army off in the rear, making it impossible for it to withdraw westwards to the edge of the Carpathians.

After one-and-a-half to two hours of heavy artillery fire, starting at about 05.15 and supported by ground-attack aircraft, 2nd Ukrainian Front launched its attack, aimed primarily against the Romanian units' positions in the area of the Romanian VI and IV Army Corps. The Soviet artillery barrage caught the Romanian VI Corps at the worst possible time, because it had just embarked on a counter-attack at 04.30, having spent the whole night under heavy fire.<sup>65</sup> With no communications equipment, and with telephone lines damaged in the Soviet artillery bombardment,

<sup>65</sup> Rom. 4th Army war diary, August 1944, 10 (20 Aug. 1944), Arh.M.Ap.N., fond Armata 4, dosar 221, fo. 131. It was claimed in the Army Group South Ukraine war diary, and in the accounts by Kissel (*Die Katastrophe in Rumänien*), Friessner (*Verratene Schlachten*), and Hinze (*Mit dem Mut der Verzweiflung*), that the Romanian 5th Inf.Div., which was deployed in the centre of the section covered by the corps, had already withdrawn during the Soviet artillery bombardment, abandoning its positions without a fight. According to the entries in the Rom. 4th Army war diary, the event relates to the Romanian 5th Inf.Div. section of the defence front.

Map V.vi.1. The Soviet breakthrough between Târgu Frumos and Iași (20 to 21 August 1944)

Sources: OKH situation maps, 20 and 21 Aug. 1944, BA-MA, Kart RH2, Ost/1126 and 1127; Kissel, *Die Katastrophe in Rumänien*.

Army Detachment Wöhler was not able to form a picture of the situation in the area under its command until early in the morning. By then, it was clear that two Soviet 52nd Army attacking wedges had broken through the Romanian VI Army Corps line, and that the eastern spearhead had reached the north-western outskirts of Iași, while the other already occupied the south bank of the Bahlui river on the far side of the Târgu Frumos–Iași road. On the Romanian VI Army Corps' left flank, the Soviet 27th Army had broken through the defensive positions on either side of Erbiceni and was advancing rapidly southwards. And there were already indications that the Romanian 5th Infantry Division, which was deployed in the centre of the corps and had suffered badly in the early-morning counter-attack, would scarcely be able to withstand the enemy pressure. In 2nd Ukrainian Front's area of operations between Munteni and Carpați, only the two German infantry divisions managed to hold their security line, as their part of the front was hardly attacked at all. The German units had lost contact with their Romanian neighbours

during the Soviet artillery barrage, so, on the morning of the first day, the Germans had no indication of how dangerous the situation had become.

Despite the precarious situation, the army group's commander-in-chief did not deviate from the task set by the OKH, namely to hold the main battle line at all costs, and he accordingly decided to deploy the available reserves at once. Friessner's intention in taking this measure was to intercept the advancing enemy forces before they reached the Bahlui valley, and to close the gaps in the front. While the Romanian IV and German IV Army Corps reserves, attached to Combat Group (Gen. Friedrich) Mieth, managed to secure the right flank of the German IV Army Corps west of its interface with the neighbouring Romanian IV Army Corps, it was now impossible to close the gap caused by the breakthrough in the centre of the area south of Totoeşti, which was defended by the Romanian VI Army Corps. Regardless of the desperate situation between Erbiceni and Carpaţi, the army group firmly maintained its intention to recapture and hold the Bahlui section of the front. So, in the course of the same morning, the high command in Slănic deployed the Romanian 3rd Infantry Division, which was occupying a section of the Trajan line, and the Romanian 18th Mountain Division, which had been held in reserve, in a counter-attack. In addition, the army group launched an eastward attack by armoured units on the enemy flank, after the commander-in-chief of the Romanian 4th Army, General Avramescu, had released Armoured Division 'Greater Romania' for the purpose. The aim of the attack, carried out by the Romanian armoured division together with the Kessel blocking unit (the 20th Armoured Division combat group named after its commander, Lt.-Gen. Mortimer von Kessel) and an assault-gun brigade, was to recapture the Bahlui valley from the west.<sup>66</sup> In addition to the counter-attacks in the west and south of the breakthrough area, the army group HQ also attempted to clear up the situation north of Iaşi by moving 10th Armoured Infantry Division from its preparation zone to the area south-west of the city. It was hoped, in this way, to prevent the Soviet 52nd Army from capturing Iaşi.

Marshal Antonescu, his chief of staff řteflea, Wöhler, and Avramescu were already discussing the possible step of moving the German–Romanian units in the Soviet breakthrough area back to the Trajan line, in order to intercept 2nd Ukrainian Front in this favourable defensive position and bring it to a standstill.<sup>67</sup> It was only now—when the German and, above all, the Romanian military leaders responsible for the conduct of operations in Moldavia were already considering moving the front back to the Trajan line—that the army group HQ informed the OKH operations division about the start of the Soviet offensive and the situation in the Romanian area of operations. It was clear from the routine situation report, submitted early in the morning of 20 August, that the army group HQ considered that the military situation in the German–Romanian area of operations was not

<sup>66</sup> See 'Befehl Nr. 304922 des rum. AOK 4, 20 Aug. 1944, 10.50 Uhr', Rom. 4th Army war diary, August 1944, 5 (20 Aug. 1944), Arh.M.Ap.N., fond Armata 4, dosar 221, fo. 126.

<sup>67</sup> Rom. 4th Army war diary, August 1944, 5 ff., 8 (20 Aug. 1944), Arh.M.Ap.N., fond Armata 4, dosar 221, fos. 126 ff. and 129.

particularly dangerous, and therefore assumed that the available forces would suffice to withstand the Soviet attack.<sup>68</sup>

While the high command in Slănic at least took the military situation in Moldavia fairly seriously, it regarded the hostilities in the area of Army Detachment Dumitrescu as holding attacks, to which no particular operational importance was to be attached. The 3rd Ukrainian Front offensive in the Dniester section was deliberately aimed at the interface between the German Sixth Army and the Romanian 3rd Army. The Soviet forces broke fairly easily through the positions on the German XXIX Corps' northern wing, which were defended by the Romanian 4th Mountain Division<sup>69</sup> and the Romanian 21st Infantry Division. Both those units had suffered heavy losses during the preliminary artillery barrage and targeted bombardment, and were thus unable to put up any effective resistance against the Soviet 46th Army's massive attack with armoured support.<sup>70</sup> The events on the German XXX Army Corps' right wing, in particular, must have given the commander-in-chief of the German Sixth Army, General Maximilian Fretter-Pico, considerable cause for concern. 306th Infantry Division's defensive positions in that section of the front were under attack from six Soviet rifle divisions with massive armoured support. And, in the area west of Slobodseja and the neighbouring area covered by the German 15th Infantry Division, the German–Romanian positions south of Bender were under attack from the Soviet 57th Army with two rifle corps. The two divisions were unable to hold out against the superior strength of the Soviet forces, resulting primarily from the deployment of more than 50 tanks, and were obliged to withdraw south-west to the Bender–Căușani road in the course of the day. Sixth Army HQ deployed 13th Armoured Division in a relief attack on the enemy forces that had broken through the front on the left wing of its area. The armoured unit's counter-thrust was successful up to a point in partially halting the Soviet advance. In order to unify the command structure in the contested section of the front west of the Bender–Tiraspol bridgehead, the army group proposed to transfer the German XXIX Corps from the command of Romanian 3rd Army and place it under Sixth Army HQ. Dumitrescu finally acquiesced, under considerable pressure from the high command in Slănic, and agreed to issue an order to that effect.<sup>71</sup> Despite all the efforts of 13th Armoured Division and other specialized anti-tank units, it proved impossible to repel the units of the Soviet 37th Army and IV Mechanized Guards Corps and regain the former positions in the course of the day. The Soviet advance was nevertheless slowed down and, by the evening, a weak security line had been established from

<sup>68</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 5 ff., BA-MA RH 19 V/36, fos. 7 ff.; Kissel, *Die Katastrophe in Rumänien*, 68–76, 82.

<sup>69</sup> Contrary to Kissel, who described the unit on the left wing of the German XXIX Army Corps as the 4th Romanian Mountain Brigade, the unit in question was actually only a division. See 4th Mtn. Div. report for the period 20 to 24 August 1944, Arh.M.Ap.N., fond Armata 3, dosar 2903, fos. 192–4.

<sup>71</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 6, BA-MA RH 19 V/36, fo. 8.

Rascati on the Dniester, along the road running west from Căușani, to Olănești, some 50 km south of Tiraspol on the Dniester, and turning off there east of the Căușani–Bender road to Hagimus.<sup>72</sup> The commander-in-chief of the German Sixth Army therefore hoped to be able to halt the Soviet attack for the time being with the means at his disposal. Although the situation in the central section of the Dniester was developing less favourably than Sixth Army HQ had been led to expect, Fretter-Pico did not think Sixth Army was heading for a military disaster.

In Army Detachment Wöhler's area, the Mieth Combat Group was obliged to accept the fact that, by the early afternoon, the first Soviet units were already entering Iași from the north-west. Parts of the Soviet XXI Guards Rifle Corps had reached the Bahlui river crossings, thereby trapping the German military commander in the north of the city.<sup>73</sup> A drama had been unfolding to the north-west of the Moldavian metropolis since early in the morning. When the two enemy spearheads west and east of 76th Infantry Division's section of the defence line pushed southwards, the division was obliged to stay where it was, because the army group at first absolutely refused to allow any withdrawal. The Romanian 18th Mountain Division's attempt to establish a link with 76th Infantry Division,<sup>74</sup> in order to block the breakthrough area at least between Iași and Lețcani, failed even before it reached the south bank of the Bahlui.<sup>75</sup> Once Army Detachment Wöhler had formed a complete picture of the scale of the Soviet attack during the morning, and it was clear that it would now be virtually impossible to recapture the original positions, the army HQ in Bârlad allowed 76th Infantry Division to withdraw to the south bank of the Bahlui. The unit reached the Bahlui section of the front at 18.30, and went over to the defensive on both sides of Lețcani. While the Army Detachment Wöhler troops in the Soviet breakthrough area were obliged to withdraw steadily in the face of the superior enemy forces, the situation in Iași made it necessary for 10th Armoured Infantry Division to mount a counter-attack in order to liberate the military commander in the north of the city. The high command in Bârlad hoped that this would close the gap separating 76th Infantry Division.<sup>76</sup>

Whereas Friessner and the army group HQ considered the situation on the evening of 20 August to be serious—at least at Iași in the northern section of the front—but not extremely dangerous, Antonescu judged the situation in the areas covered by the Romanian 4th Army and Army Detachment Wöhler to be far more critical. That same day, he and his chief of staff made their way to the Romanian army headquarters in Bacău, and shortly after his arrival at about 19.00 he held a situation conference attended by the commander-in-chief of the Romanian 4th

<sup>72</sup> Ibid. 1, 3, 10 ff., BA-MA RH 19 V/36, 3, 5, 12 ff.

<sup>74</sup> The Romanian 18th Mtn.Div. had already received the Romanian 4th Army HQ's deployment order (No. 304901) at 08.00; Rom. 4th Army war diary, August 1944, 2, Arh.M.Ap.N., fond Armata 4, dosar 221, fo. 123.

<sup>75</sup> Situation report No. 305007, 21 Aug. 1944, 10.00, Rom. 4th Army war diary, August 1944, 11 (21 Aug. 1944), Arh.M.Ap.N., fond Armata 4, dosar 221, fo. 149.

<sup>76</sup> Schmidt, *Geschichte der 10. Division*, 232–4; Löser, *Bittere Pflicht*, 372–82.

Army, General Avramescu, and also by Wöhler.<sup>77</sup> The military leadership in Slănic apparently paid no attention to the presence, in the German–Romanian theatre of operations, of the Romanian prime minister and commander-in-chief of the armed forces. But it can nevertheless be assumed that the army group HQ was aware of the Conducător's visit to 4th Romanian Army headquarters, especially as the commander-in-chief of Army Detachment Wöhler, who was at the meeting, had a long telephone conversation with Friessner at about 19.20.<sup>78</sup> In the course of this conversation, General Wöhler said that 'the impression the Romanian troops made was catastrophic'. In his view, it was impossible to retake Iași or to win back the former defensive line. He therefore proposed that the front in the breakthrough area—especially in the Iași area—be moved back to the south bank of the Bahlui, and that the German 79th and Romanian 11th Infantry Divisions be deployed to stabilize the flank east of the city, so as not to lose the connection with the German Sixth Army east of the Prut. The army group commander accepted Wöhler's proposals but insisted that 'this line must then be held, come what may'. The commander-in-chief of the German Eighth Army then explained that he intended to replace 10th Armoured Infantry Division with 258th Infantry Division, which was already in the process of moving to the west bank of the Prut. The mobile unit was to be moved further west in a tactical measure designed to halt the Soviet spearheads before they reached the Trajan line. The efforts of the German–Romanian forces to hold out against the attacks by the superior forces of 2nd and 3rd Ukrainian Fronts were seriously hampered, above all, by the Soviet superiority in the air.<sup>79</sup>

In contrast to the operational assessments and measures which Wöhler had put to his Army Group commander in the above-mentioned telephone conversation, his position in the talks with Antonescu, which lasted more than four hours, was that Soviet pressure must be fiercely resisted and counter-attacks launched against the enemy forces on all sides. Although the Conducător and Șteflea both shared the German commander's view, the other Romanian commanders thought it would be better for the troops to withdraw from northern Moldavia.<sup>80</sup>

Contrary to all expectations at the army group HQ, the situation in the section of the front between Târgu Frumos and Iași did not become less tense, even though all the available reserves had been deployed. By late evening there were signs that

<sup>77</sup> In addition to the above-mentioned, the meeting was also attended, as far as can be ascertained, by the following: the chief of staff of the Romanian 4th Army HQ, Colonel Dragomir; the air minister, General Ionescu; the 4th Army HQ Ic, Colonel Tomescu; and the quartermaster-general of the Romanian 4th Army HQ, Colonel Munteanu. Rom. 4th Army war diary, August 1944, 8 (21 Aug. 1944), Arh.M.Ap.N., fond Armata 4, dosar 221, fo. 129.

<sup>78</sup> It is claimed in Hillgruber, *Hitler*, 213, that the marshal was in the Moldavian theatre of operations on 20/1 August 1944. This assertion of Hillgruber's is based on a statement made by Friessner in 1953 (p. 345, n. 30). However, there is nothing either in the Army Group South Ukraine war diary or in Friessner, *Verratene Schlachten* about the Romanian head of state visiting the front in Moldavia on that day.

<sup>79</sup> Rom. 4th Army war diary, August 1944, 8 (20 Aug. 1944), Arh.M.Ap.N., fond Armata 4, dosar 221, fo. 129.

<sup>80</sup> Ibid.

the Romanian armoured attack was about to collapse. The Romanian division had been attacked in the rear by Soviet forces as it advanced in the Bahlui valley and cut to pieces. The Mieth Group was equally unsuccessful in its attempt to close the gap north-west of Iași and connect with 76th Infantry Division. The army group HQ categorically refused to allow the unit to withdraw to the area between Bahlui and the Trajan line, as it was feared in Slănic that this would give 2nd Ukrainian Front the opportunity to advance to the Trajan line with virtually no resistance. The situation only appeared to ease up a little in Iași, when it became possible to free the local commander's forces in the northern part of the city.<sup>81</sup>

The army group's plan for the following day was to hold the Bahlui section of the front and strengthen the German VI Army Corps' left wing so as to preserve the connection with Sixth Army HQ east of the Prut. The first day of the major Soviet offensive had clearly shown that the Romanian units were unable to cope with strong enemy pressure, and the front in northern Moldavia and at Tiraspol on the Dniester was looking shaky. Friessner and his staff nevertheless still believed at this point that the army group was capable of meeting the Soviet offensive with the means available and, if necessary, withdrawing to the west bank of the Prut while fighting delaying engagements. Only if the worst came to the worst were the authorities in Slănic prepared to give up north-eastern Romania altogether and move to the Danube–Carpathian Fringe position. On the basis of the army group commander's optimistic assessment of the situation, the OKH too saw no need to intervene on the southern wing of the eastern front, especially as, despite the critical situation, the high command in Slănic did not keep the Army General Staff fully informed. Although the operational situation changed radically on 20 August, and all the available forces were needed to stabilize the front in Moldavia and on the Dniester, the army group did not think this was a reason to halt the departure of 97th Light Infantry Division, which had started two days before.

Regardless of the massive and extremely successful attacks launched by both Soviet army groups on 20 August, all the high command in Slănic did that day was hold the positions, employing all the available reserves. In this critical situation, Army Group South Ukraine calmly continued to perform its task, allowing the defence line to be moved back only when the situation was such that there was no longer any alternative. 'But the situation could not be mastered by means of these purely tactical measures.'<sup>82</sup>

During the night, Grolman, together with Reinhardt and Col. Fritz Estor from Army Detachment Wöhler, the Ia in Eighth Army HQ, examined the operational situation in the breakthrough area in Moldavia. The army group chief of staff declared his intention of continuing the attack on the Soviet offensive forces in the Bahlui section of the front on 21 August. In this, Grolman was at odds with the army detachment, which doubted whether the Bahlui section of the front could

<sup>81</sup> KTB H.Gr. Südkraine, Abt. Ia, No. 4, i. 9 ff., BA-MA RH 19 V/36, fos. 10 ff.; *Die geheimen Tagesberichte*, x. 458; Study P-114c, pt. 7, i. 91–4, BA-MA ZA 1/2077, fos. 143–6; Kissel, *Die Katastrophe in Rumänien*, 68–83.

<sup>82</sup> Study P-114c, i. 93, BA-MA ZA 1/2077, fo. 145.

continue to be held. Grolman still believed, at this point, that the combined forces of the Romanian armoured division and the Kessel blocking unit would suffice to clear up and stabilize the situation in the breakthrough area. Apart from these operational intentions on the part of the army group, the two chiefs of staff also discussed the problem of the course of the front in the Târgu Frumos area, where there were two options. Either the army group HQ could maintain the existing defensive line, or it could shorten the front and establish the connection with the Trajan line by means of a salient west or east of the city. If it was decided to shorten the front, urgently needed forces could be freed up, either to strengthen the counter-attacks north of the prepared rear position or to take over the task of securing the Prut river crossings. Although it was already clear, in the early hours of the morning, that the army group HQ's intention to hold the Bahlui section of the front was no longer feasible, at this point no decision had yet been taken in Slănic as to what operational measures were to be adopted in the Târgu Frumos area. The situation in Iași too had deteriorated considerably by the morning of 21 August, because the counter-attack by the German 10th Armoured Infantry Division in the west of the city had been brought to a standstill by strong Soviet armoured forces. At the same time, the army group received news of Armoured Division 'Greater Romania', which had been almost completely wiped out and had lost the bulk of its armoured vehicles.<sup>83</sup>

When Antonescu arrived in Slănic for a two-hour discussion with Friessner on the morning of 21 August, there were already signs that the Soviet offensive, like the offensive a few weeks earlier in the central and northern sections of the eastern front, could turn into a military disaster for the Axis powers. During this exchange of views, the army group commander-in-chief nevertheless presented a highly positive picture of conditions in the German–Romanian theatre of operations, which in his opinion gave little reason to dramatize the situation. He explained that he considered the situation on Army Detachment Wöhler's left wing, adjoining the Carpathians, to be quiet and normal. In the combat area of the Kirchner Group (Gen. Friedrich Kirchner), he intended to move the salient north of Târgu Frumos back to an intermediate position during the evening, in order to 'gain time for a sufficiently well-organized occupation of the Trajan line'.<sup>84</sup> By taking this measure, the commander-in-chief hoped to save forces at Târgu Frumos, which would then be deployed in the extremely vulnerable section of the interception line at Voinești. Friessner also intended to withdraw more Wehrmacht units from the Dniester front and use them to strengthen the Trajan line. Despite the failure of the previous day, the commander-in-chief believed that the defensive front on the Iași ridge in the Dealu Mare region, over 400 metres high, could be strengthened by regrouping, so as at least to delay the Soviet advance. He told the marshal that, in his view, the planned actions would succeed only if all troops withstood the enemy attacks. Friessner therefore called on the Conducător to insist that the Romanian units conduct the defensive battle resolutely. This was the only way to prevent the

<sup>83</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 18 ff., BA-MA RH 19 V/36, fos. 20 ff.

<sup>84</sup> Kissel, *Die Katastrophe in Rumänien*, 240.

German–Romanian troops east of the Prut from being cut off. In summarizing the course of the Soviet offensive so far, he concluded ‘that the Russians had not planned to conduct an operation on a grand scale. Otherwise, they would have brought up their reserve divisions at once. They had clearly been concerned with an ostentatious success at Iaşi. That being so, it was to be assumed that they would first need to regroup before advancing any further.’<sup>85</sup>

During his discussion with Antonescu, the army group commander-in-chief also spoke about developments in the situation in Bessarabia. He drew particular attention to Dumitrescu’s helpful response to the enemy attack on the German XXIX and XXX Army Corps south-west of Tiraspol. By agreeing to transfer XXIX Army Corps immediately from the command of Romanian 3rd Army to that of Sixth Army HQ, and to release 13th Armoured Division for the counter-attack, he had helped to ensure that Sixth Army HQ was better able to respond to 3rd Ukrainian Front’s offensive. Friessner was consequently convinced ‘that all possible reserves would be brought in to guard against the breakthrough which the Russians had been aiming at yesterday. He had pointed out to Col.-Gen. Dumitrescu that the greatest danger was that the enemy would continue to advance southwards.’<sup>86</sup> In order to prevent this, the army group ordered the Romanian 3rd Army to secure the southern flank of the breakthrough area and deploy strong defensive forces on the line. In addition to these operational measures, Friessner had instructed the army detachment HQ in Bolgrad to close the breakthrough point in the Căuşani–Feştelei–Cioburciu area, so that a new defence line could be established to the east of the Căuşani–Olăneşti road. Convinced that the main effort of the Soviet attack lay in the Moldavian section of the front, Friessner stressed the importance of establishing ‘stable conditions in the area of Army Detachment Dumitrescu, so that Army Detachment Wöhler could be strengthened’.<sup>87</sup> Finally, he returned to the subject of withdrawing the German–Romanian troops from the Dniester to the Prut if the defensive positions could no longer be held in view of Soviet superiority. In discussing this item, however, the army group commander-in-chief gave the impression that the relevant plans had already been made.<sup>88</sup> In his talk with the Conducător, Friessner also mentioned that the army group would have to withdraw to the Danube–Carpathian Fringe position if Soviet pressure became too strong. On the basis of his positive assessment of the situation, he stressed that any such action should certainly not be taken in haste. Above all, strong leadership would be needed in order to ensure that the withdrawal took place according to plan and without friction.

After Friessner had made these points, Antonescu stressed Romania’s demand that, for political reasons, Bessarabia, and in particular Moldavia and Iaşi, must not be lost. For, if the German–Romanian front were to collapse, not only the kingdom

<sup>85</sup> Ibid. 241.

<sup>86</sup> Ibid.

<sup>87</sup> Ibid. 242.

<sup>88</sup> All that existed was the army group’s preliminary reflections on this eventuality. On 19 August 1944 the plans for withdrawal from the positions in Moldavia and Bessarabia—the ‘Bär study’—existed only in the form of a sketch of operations. Apart from a map drawn by the army group, there were no other documents, drafts, etc. See KTB H.Gr. Südukraine, Abt. Ia, No. 3, xi. 95, BA-MA RH 19 V/30, fo. 97; Kissel, *Die Katastrophe in Rumänien*, 45; Friessner, *Verratene Schlachten*, 65.

but the whole of the Balkan peninsula would be open to military occupation by the Soviet forces. To ensure effective cooperation between the Romanian and German command authorities, and the least possible conflict in the conduct of operations, the marshal decreed that Șteflea was to remain in the theatre of operations, principally at Romanian 4th Army HQ, in order to coordinate these tasks. The Conducător was critical of the army group's commander-in-chief Friessner's contention that 'a troop previously beaten in the Dniester position would be able to hold the next line, which was in open country with no natural obstacles'.<sup>89</sup> He accordingly argued for rapid withdrawal of the front directly to the well-consolidated Danube–Carpathian Fringe position.<sup>90</sup>

The picture painted by Friessner in his discussion with Antonescu in no way reflected the real situation in the Romanian theatre of operations, which was more than critical. Friessner's statements tied in seamlessly with the analysis of the Red Army's operational intentions made by the army group and by the OKH, in both cases before the start of the Iași–Chișinău operation. As a result, he did not even mention in his analysis the possibility that the enemy might be planning a pincer movement to encircle the German Sixth Army in the balcony position at Chișinău. Friessner's observations on the military situation in Moldavia and Bessarabia show that the high command in Slănic seriously underestimated the danger looming in the southern section of the eastern front. This impression is confirmed by the fact that the army group hardly contacted the OKH at all during the first two days of the operation. The colonel-general appeared to be convinced that he could resolve the critical situation with his few reserves, by dint of regrouping. Furthermore, he based his planning for any withdrawal movements that might prove necessary on amounts of time that were no longer available. By the morning of 21 August, there was no longer any connection between the commander-in-chief's wishful thinking and the actual facts. Romanian 4th Army HQ had a much more realistic grasp of the military situation in northern Moldavia than its German Axis partner. On the previous evening, it had already stated its view that Moldavia could no longer be defended, and that the front should therefore be moved back.<sup>91</sup>

But the military situation in Bessarabia and Moldavia, and Army Group South Ukraine's operational plans, were not the only subjects discussed in Slănic. The discussion of the military situation was followed by confidential talks on political matters. Friessner drew attention to the politically unstable conditions in Romania, which were causing some concern on the German side, especially as the Romanian General Staff had recalled a number of high-ranking commanders from their posts on the German–Romanian front in the past few weeks, without the army group's knowledge or consent.<sup>92</sup> This, Friessner believed, was the reason for 'the failure of the Romanian units'.<sup>93</sup> The Conducător responded with a lengthy summary of

German–Romanian political relations. He repeated that the kingdom had always been a reliable ally, even though the German Reich had played a decisive part in the territorial dismemberment of Romania. In this respect, he blamed the German foreign minister, in particular, for tearing Transylvania, ‘the cradle of the Romanian people’, from the country and handing it over to Hungary, ‘which had absolutely no legal claim to it’.<sup>94</sup> The Conducător stressed that Romania had stood firmly by its ally throughout the war, despite Germany’s mistaken policy.<sup>95</sup> Antonescu’s statement to Friessner corresponded in every respect to the political position taken by the government in Bucharest since the middle of 1943.<sup>96</sup>

Even as the discussion was taking place in Slănic, the Soviet units resumed their offensive, mainly in the area of the Iași ridge. General Malinovsky had assembled the bulk of his armoured forces there, with massive support on the flanks, in order to force a breakthrough through the Trajan line towards the Danube plain. The plan of the high command in Slănic to smash the Soviet 53rd Army and 6th Armoured Army in the south of the Bahlui section proved an illusion. In the early hours of 21 August, the army group HQ was obliged to recognize that five Romanian divisions, namely 3rd, 5th, and 7th Infantry Divisions, 5th Cavalry Division, and 18th Mountain Division, had suffered such heavy human and material losses that they could take no further part in the action, and that the two counter-attacks by the armoured reserves had failed. On 21 August it also proved impossible to carry out the army group’s plan to reinforce the defensive front south-west of Iași with German units transferred from the quiet section of Sixth Army HQ’s front at Răut and others released by shortening the defensive line at Târgu Frumos. In those circumstances, it was hardly possible to close the gap in the front south of the Bahlui valley at Iași with the few forces still fighting in the area. Friessner’s hopes of bringing the Soviet offensive to a standstill at the Trajan line at the latest were dashed at midday when what was left of the Romanian VI Army Corps was crushed at Lungani by some 30 Soviet tanks with infantry on board. The first enemy forces, with the Soviet XXXV Guards Rifle Corps, had now taken hold on the Trajan line, depriving it of much of its value for the defenders.

The army group now paid the price for its conduct of operations the previous day, when it had put off moving 76th Infantry Division back for so long that the unit was finally forced to withdraw under enemy pressure in order to avoid being encircled and destroyed. As a result of that decision, the division’s regiments had been reduced to company strength, and it had lost practically all its combat strength.<sup>97</sup> Since the Romanian VI Army Corps could no longer put up any effective resistance against the massive Soviet attack, it had to let the enemy take

<sup>94</sup> Ibid. 77.      <sup>95</sup> Ibid. 74–81.

<sup>96</sup> Although Antonescu’s policy statements in Slănic on 21 August 1944 were made to Friessner only because, as a result of the political coup, the marshal had had no opportunity to prepare notes for the discussion, his statements can be accepted as authentic since they conform to a number of Romanian government memoranda on foreign policy. See Arh.M.A.E., fond Germania, dosar 92/1943, fos. 249–55; dosar 93/1943, fos. 181–200; dosar 94/1944, fos. 426–30; dosar 103/1943–4, fos. 158–63.

<sup>97</sup> Löser, *Bittere Pflicht*, 383.

advantage of this weakness to widen the gap in the defensive system on the Iași ridge and pour as many troops as possible through the opening to speed up the attack to the south. This precarious situation became even more acute a few hours later, when a second Soviet 6th Armoured Army attacking wedge also succeeded in breaching the Trajan line at Voinești. Here too, the enemy forces proceeded to widen the breach, and the German–Romanian defenders were unable to prevent them from doing so. Army Detachment Wöhler had already deployed all its reserves the previous day, and the expected reinforcements had not yet arrived, so it had no way of halting the advance. Only in the course of the day had the remnants of 76th Infantry Division, which were among the few German fighting forces in the breakthrough area, fought their way back to Ciurbești, south-west of Iași, where they were placed under the command of 10th Armoured Infantry Division.<sup>98</sup> Here, the two units attempted to establish a defensive line on the Iași–Vaslui road, where they faced some 100 to 150 tanks of the Soviet 52nd Army. By midday on 21 August it was clear that Malinovsky had shifted the point of concentration of his offensive to the eastern flank of the breakthrough area. This raised the danger that the enemy would not only break through to the south, but might also occupy the west bank of the Prut between Ungheni and Huși. The remnants of the Romanian VI and IV Army Corps fighting to the east of Iași were forced to withdraw towards the Prut several times in the course of the day.<sup>99</sup>

While there was heavy fighting throughout the day in the eastern part of the breakthrough area, things remained relatively quiet on the front at Târgu Frumos. After the counter-attack by Armoured Division ‘Greater Romania’ failed in the face of enemy resistance, there were no more military operations to speak of until the afternoon of 21 August, when the Soviet CIV Rifle Corps tried to attack westwards along the Iași–Târgu Frumos road. The attack was beaten off by the reinforced Kessel combat group, and the Soviet 7th Guards Army’s efforts to penetrate the area defended by the Romanian V and I Army Corps were also unsuccessful on that day.<sup>100</sup>

Although the 2nd Ukrainian Front offensive was successful from the Red Army’s point of view, enabling the bridgehead in Moldavia to be extended very quickly, the population now began to flee from the fought-over areas *en masse*. The military operations caused an enormous amount of damage in Iași and, above all, in the intensively farmed Bahlui valley, where the harvest was almost completely ruined and the cattle were either killed in the fields during the fighting or requisitioned by the Soviet troops. In order to protect the population from the effects of the heavy fighting, the prefectures received orders at about 15.00 to evacuate the area north of the Piatra Neamț–Roman–Băcești–Vaslui–Huși line immediately.<sup>101</sup> Although this

<sup>100</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 14 ff., BA-MA RH 19 V/36, fo. 17 ff.; Hinze, *Hitz*, 307 ff.

<sup>101</sup> Rom. 4th Army war diary, August 1944, 9 (21 Aug. 1944), Arh.M.Ap.N., fond Armata 4, dosar 221, fo. 147. The evacuation was completed in accordance with orders from Section I of the Romanian Great General Staff, based on special directives from Section IV. The ‘General Mosiu Organization’

measure seriously changed the situation in Moldavia, neither the Great General Staff in Bucharest nor Antonescu or his chief of staff, Șteflea, felt moved to inform the army group leadership or the German general in the Romanian armed forces high command that this step was to be taken. While the political authorities in Bucharest were extremely realistic in their assessment of the situation on the basis of the Romanian 4th Army's situation reports, and accordingly decided to evacuate the civilian population from the rear theatre of operations, this decision came altogether too late. From the optimistic impression which its German Axis partner had given of the military situation in the southern section of the eastern front,<sup>102</sup> the Romanian government was not bound to conclude that the front in Moldavia would collapse so quickly and end in debacle.

At about the same time as the evacuation order was issued and after his talks in Slănic, Antonescu arrived at Romanian 4th Army HQ in Bacău, where he discussed the operational situation with General Wöhler, General Șteflea, General Avramescu, and Colonel Nicolae Dragomir. They concluded that 'the enemy forces were making significant progress, and were beginning to pose a serious threat to the troops stationed in northern Moldavia'.<sup>103</sup> In the discussion, the marshal took a different position from that of the commander of the army detachment, who was against moving the defensive front in Moldavia back until an armoured unit<sup>104</sup> was deployed in the Bârlad area. With the planned deployment of armoured forces, the commander-in-chief of the German Eighth Army believed that the operational situation south-west of Iași could be restabilized. Despite the German plan to bring an armoured unit in to strengthen the defence, both Avramescu and the chief of the Great General Staff took the view that it would be better for the troops to begin disengaging from the enemy and withdrawing southwards immediately.<sup>105</sup>

From all appearances, it seems that Eighth Army HQ did not inform the army group HQ in Slănic about this almost four-hour-long discussion in Bacău, in which it became clear that the German and Romanian commanders-in-chief had very different operational intentions. It would have been important for the army group HQ to know that the operational views and intentions of the commander-in-chief of the Romanian 4th Army and the chief of the Romanian Great General Staff were completely different from the objectives of the German army group and army detachment. Friessner in particular needed any information that would enable him to assess the

was responsible for coordinating and conducting the evacuation, which went under the name 'Operation 1111'. The Great General Staff's order was binding both on military agencies and on civilian authorities. See M.St.M., sect. I. Akte 4352, 2. I am indebted to Elena Matei. Pitești Military Archives, for this information.

<sup>102</sup> Attention is drawn here, in particular, to Marshal Antonescu's talks with Hitler on 5/6 August 1944, and in Army Group South HQ on the morning of 21 August 1944.

<sup>104</sup> This armoured unit was to consist of 905th Assault Gun Brigade, parts of 20th Armoured Division, Eighth Army HQ Army Weapons School (AOK 8 Aslt.Btl.), and 30 tanks from the Romanian 2nd Armoured Division that was being assembled in Tecuci. Kissel, *Die Katastrophe in Rumänien*, 97.

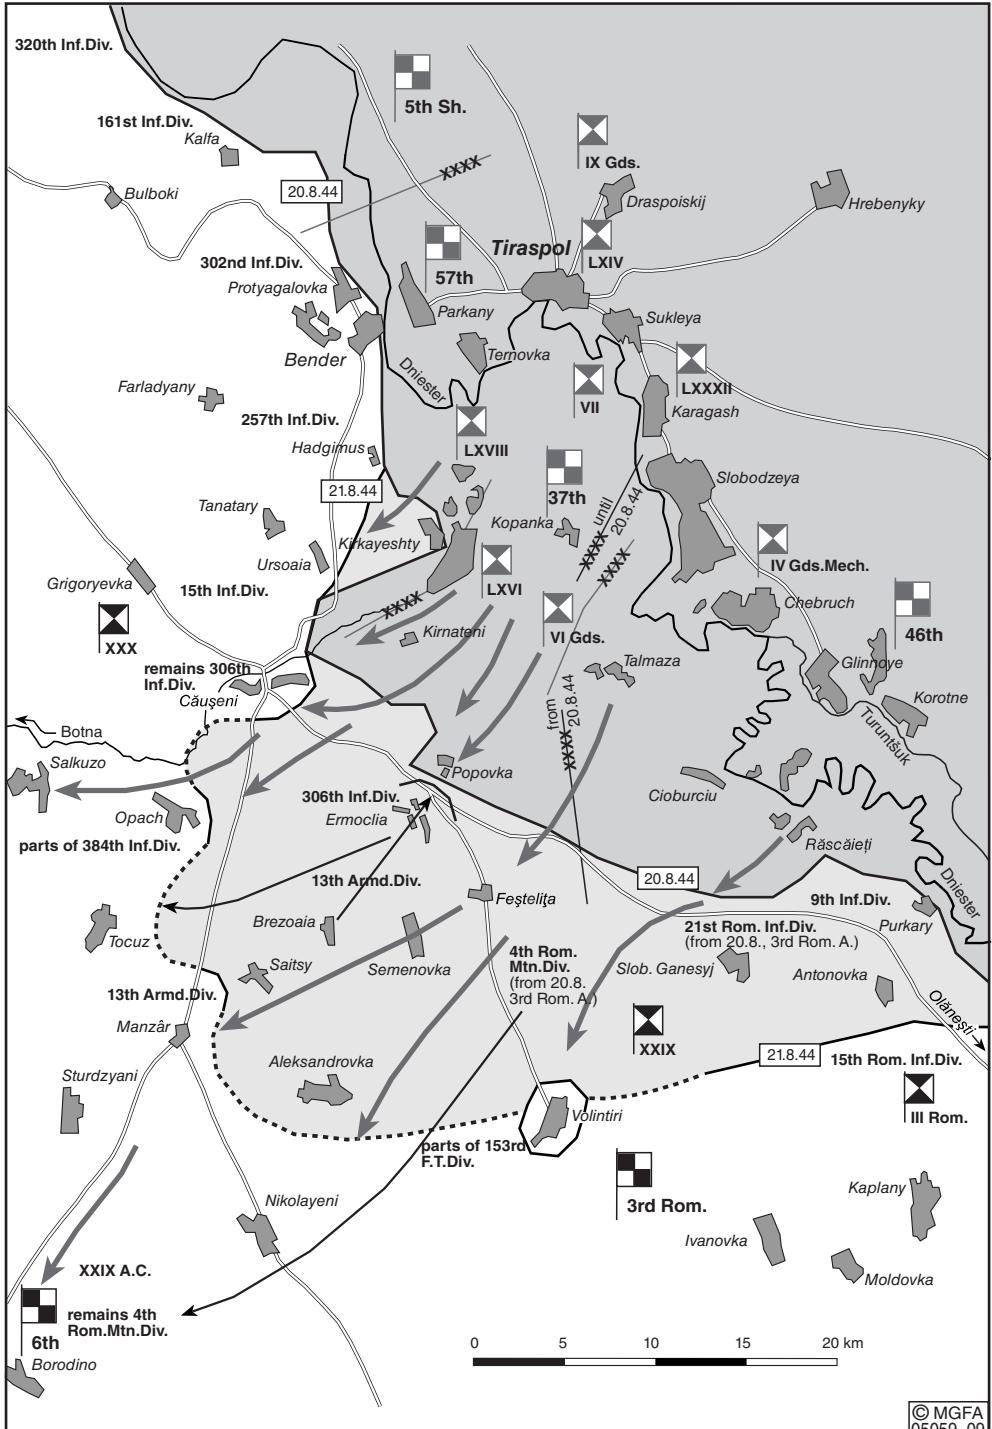

<sup>105</sup> Arh.M.Ap.N., fond Armata 4, dosar 221, fos. 146 ff.

fighting capability of the Romanian units. In forming their operational views, Avramescu and Șteflea had been reacting to the condition and motivation of the Romanian forces, which were affected by the general war-weariness and showed little readiness to resist the Soviet attacks. Since the Romanian ally had also lost confidence in the fighting strength of the German forces, some Romanian commanders now had operational aims which, in their view, were more appropriate to the military situation in the southern section of the eastern front, and were therefore necessary.

Unlike the situation in the area south-west of Iași, where the fighting continued as fiercely as ever on the second day of the attack, things were extremely quiet in the Tiraspol bridgehead, at least on the morning of 21 August. This appeared to confirm the army group's prediction that the Soviet forces would launch only a weak local attack on the Dniester front, as a diversion. In the course of the night, 3rd Ukrainian Front again reduced its military activities, which it had resumed with greater intensity only at around midday on 21 August. The Soviet 46th Army, with strong air support and armoured forces, now launched a massive attack on the weak German security line west of the Căușani–Olănești road. 13th Armoured Division, with reinforcements from what was left of 306th Infantry Division, was unable to stop the enemy advance. It had lost too much of its combat strength in the defensive battles on the previous day, with the result that it now had only 20 operational tanks, not enough to hold the security line for long.<sup>106</sup> Although the German unit destroyed almost 100 Soviet tanks, it was unable to prevent a breakthrough at Feștelîța, which opened up a considerable gap between the German XXX Army Corps' right wing and XXIX Army Corps. This unfavourable situation resulted not only from the insufficient strength of the German defence forces at Feștelîța, but also from the scant readiness of the neighbouring Romanian units to put up any resistance. Faced with superior Soviet forces, Army Detachment Dumitrescu was obliged to deploy its most important reserve, 13th Armoured Division, on the very first day of the attack. In the disturbing situation on the afternoon of 21 August, the only reserve at the German Sixth Army's disposal was the weak 153rd Field Training Division. In order to prevent a debacle to the west of Feștelîța, Sixth Army HQ attempted to halt the Soviet breakthrough with parts of this training unit. Despite all its efforts, the unit was not strong enough to close the gap in the front and destroy the enemy forces. Army Group South Ukraine had deployed all its reserves in the Dniester section of the front, so it was now impossible to protect southern Bessarabia against the Soviet offensive. As a result, units of the Soviet 46th Army were able to advance almost unimpeded south-westwards towards Tarutino. By the evening, the Soviet spearheads were already in the Nicolaeni–Volontiri–Menzăr area, only 20 kilometres from the German Sixth Army HQ in Tarutino. While fierce defensive battles were taking place south-west of the Tiraspol bridgehead, the situation on Sixth Army's left wing remained extremely quiet.<sup>107</sup>

Map V.vi.2. The Soviet breakout from the Tiraspol bridgehead (20 to 21 August 1944)

Sources: OKH situation maps, 20 and 21 Aug. 1944, BA-MA, Kart RH2, Ost/1126 and 1127; Kissel, *Die Katastrophe in Rumänenien*.

On only the second day of the Soviet offensive, the army group HQ was obliged to conclude that, despite having deployed its few reserves, it no longer had any operational room for manoeuvre. The German–Romanian units now had hardly any chance of holding the front in Moldavia and on the Dniester. It was only in this critical situation that the high command in Slănic began to think about a staged withdrawal of the defence front. The army group HQ's idea was that the units in Moldavia should withdraw to the Trajan line, and that Army Detachment Dumitrescu should establish a new defensive line on the west bank of the Prut. The commander-in-chief and his chief of staff were nevertheless aware that, in this situation, the proposed measures could only provide an interim solution. Their long-term intention was therefore to move the southern section of the eastern front back to the Danube–Carpathian Fringe position.<sup>108</sup> Although the Soviet offensive had proved from the start to be stronger than the army group HQ had expected, the high command in Slănic began intensive contacts with the OKH only at the point when, given the disastrous state of affairs in the German–Romanian theatre of operations, withdrawal to the Prut and to the Trajan line was no longer avoidable.

Early in the evening, Grolman informed the head of the OKH operations division, Lt.-Gen. Wenck, of the tense situation in the Iași–Târgu Frumos area and in the Tiraspol bridgehead on the Dniester. In response to the army group chief of staff's request for permission to move the defensive positions back, Wenck proposed that the army group withdraw directly to the Danube–Carpathian Fringe position in a single operation. Grolman agreed with this proposal in principle, but insisted on the interim solution for reasons to do with clearance and evacuation. At the end of the discussion, Wenck took the view that Hitler would most probably grant the army group's request.<sup>109</sup> Friessner discussed the same problem a few hours later with Col.-Gen. Guderian. In this discussion, the commander-in-chief argued that the failure of the Romanian troops was primarily responsible for the critical situation in the army group's theatre of operations. Friessner, like his chief of staff, explained that it was necessary to move Army Detachment Dumitrescu back to the Prut. He also asked for immediate evacuation of the salient occupied by Sixth Army at the confluence of the Răut and the Dniester north-east of Chișinău. He was able to assure Guderian, in the course of the telephone conversation, that Antonescu had already approved withdrawal to the Prut. At the same time, Friessner asked the OKH for permission to move Army Detachment Wöhler to the Trajan line. Guderian, like Wenck, was convinced that Hitler would grant the operational requests submitted by the high command in Slănic, especially as the Conducător had given his consent. Hitler approved the army group's requests, without undue objections, the very same night. The OKH's approval of the withdrawal was accompanied with the demand that both the Trajan line and the defensive line on the Prut be held definitively. However, as a result of inadequate information, the OKH was unaware of the situation in Moldavia, where spearheads of the Soviet 6th Armoured Army and 52nd Army had already succeeded in

<sup>108</sup> Kissel, *Die Katastrophe in Rumänien*, 93.

<sup>109</sup> KTB H.Gr. Südkraine, Abt. Ia, No. 4, i. 22, BA-MA RH 19 V/36, fo. 24.

breaking through the defensive system in the Dealu Mare at Voineşti and were advancing southwards into the Bârlad valley.<sup>110</sup>

In the early morning, after Hitler had agreed to the withdrawal, Army Detachment Dumitrescu received detailed orders from Slănic for the withdrawal to the Prut. The instructions specified that the army detachment, 'when moving its units to this position, must at all costs avoid weakening the units to the east of the position and ensure that their combat strength is maintained. It must prevent rapid enemy pursuit and take all necessary measures to ensure that withdrawal proceeds according to plan. Withdrawal is scheduled to begin this evening.'<sup>111</sup> In addition to withdrawal from Bessarabia, the army group's order also specified that Army Detachment Wöhler was to transfer its defence to the Trajan line as soon as the operation east of the Prut had been completed. In this connection, the army group HQ attached particular importance to the deployment of mobile reserves on the eastern wing of the Romanian 4th Army, in order to prevent enemy forces from breaking through to Roman.<sup>112</sup>

The army group's idea was that 376th Infantry Division should fold back at Ungheni so as to maintain the connection between Army Detachment Wöhler and Sixth Army HQ. The VII, XXXIX, and LII Army Corps units were to prepare for the withdrawal on 21 August so as to be able to move back quickly to the prepared positions on both sides of Chişinău in the course of the night. The army group's order came as something of a surprise, especially to the units in the Răut–Dniester salient, as they were hardly affected at all by the enemy offensive and, with no communication links, they knew very little about the critical developments in the German–Romanian theatre of operations. Despite all the proposed measures, the army group's operational plans could succeed only if Army Detachment Wöhler managed to halt the 2nd Ukrainian Front offensive at the Trajan line. And Army Detachment Dumitrescu would also have to bring the enemy breakthrough at Feşteşti–Volintiri to a standstill before it reached the Cogîlnic valley.

As the Iaşi–Chişinău operation had gone extremely well for the Red Army in the first two days, Marshal Semyon Konstantinovich Timoshenko decided at Soviet high command that the 2nd and 3rd Ukrainian Front spearheads should join up in the Huşi area, on 22 August if possible, in a pincer movement designed to encircle and destroy the enemy units fighting in the Răut–Dniester salient.<sup>113</sup> This Soviet operational plan posed an enormous threat to the defence front in Bessarabia and Moldavia. For, if the Soviet plan were to succeed, the German–Romanian front might well collapse, leaving the eastern part of the Balkan peninsula exposed, with almost no protection against the advancing Red Army.

Until the evening of 21 August, the army group HQ had been confident that the combat strength of the units under its command, together with the few reserves,

<sup>110</sup> Ibid. 22 ff., BA-MA RH 19 V/36, fos. 24 ff.; Study P-114c, pt. 7, i. 94 ff., BA-MA ZA 1/2077, fos. 146 ff.; Friessner, *Verratene Schlachten*, 81–3; Kissel, *Die Katastrophe in Rumänien*, 93 ff.

would suffice to withstand the major Soviet offensive, and it had consequently made no preparations in case it proved to be mistaken. The high command in Slănic hoped to resolve the crisis at Iași by purely tactical moves, such as withdrawing 282nd Infantry Division from the quiet section of the front on the lower Răut to support the counter-attack by 10th Armoured Infantry Division. But while the German–Romanian defence in the area south-west of Iași, and especially west of the Tiraspol bridgehead, very soon collapsed under the heavy and rapid Soviet attacks, the units of three German army corps were left almost idle on the front to the north of Chișinău. By the time Friessner realized the danger, especially the threat to the German Sixth Army, it was—as subsequent events showed—already too late to take effective counter-measures to prevent a debacle in the southern section of the eastern front. In the first two days of the offensive, both Malinovsky's troops in Moldavia and Tolbukhin's units on the Dniester had fought their way into excellent positions for executing the planned operation. By this time, Army Group South Ukraine had almost no means of warding off the danger to the German Sixth Army. For months, the high command in Slănic had pushed ahead on the consolidation of its section of the front by building a deeply staggered defensive system, in the conviction that these military measures would suffice. But while Army Group South Ukraine was busy consolidating its position in respect of manpower and materials, it missed the opportunity to plan and prepare for the eventuality that the main battle line might have to be withdrawn to the Prut, or even to the Danube–Carpathian Fringe position.<sup>114</sup> And the price for this serious omission was paid on only the third day of the enemy operation.

Tolbukhin's 3rd Ukrainian Front used the almost 40-kilometre-wide gap in the front between the German Sixth Army and the Romanian 3rd Army on the Dniester south of Bender to press forward with three armies into the heart of the Bessarabian area. The Russian 46th Army west of Feștelita turned south-west towards Tarutino–Bolgrad, where the German Sixth Army and Army Detachment Dumitrescu HQs were located, while 57th and 37th Armies endeavoured to reach and block the Prut river crossings at Mingir and Leușeni. The aim was to stop the German–Romanian troops withdrawing from the balcony position on the Răut and the Dniester to the west bank of the Prut and joining up with Army Detachment Wöhler. 2nd Ukrainian Front's advance during the first two days of the operation had concentrated primarily on capturing Iași and breaking through the Trajan line south of the city, but Malinovsky changed his modus operandi on 22 August, intensifying the offensive and widening the attack sector. He deployed 4th Guards Army at Ungheni on the east bank of the Prut, with instructions to take the bridges at Ungheni and especially at Costuleni, 15 kilometres south of Ungheni, on the Prut. 52nd Army, which had overcome the territorial obstacle of the Iași ridge, changed its direction of attack at Scânteia, 30 kilometres south of Iași, advancing south-east towards Solești, 20 kilometres north of Vaslui, to join up with XVIII

<sup>114</sup> Not until August did the high command in Slănic adopt plans to move the army group back to the Danube–Carpathian Fringe line, under the cover name 'Bär study', the line having by then been more or less completely established by the Romanian army. Kissel, *Die Katastrophe in Rumänien*, 45.

Armoured Corps, which had pressed forward through the Vaslui valley in the second wave. The purpose of this attacking wedge was to prevent the German–Romanian units at Huşi from moving south, and to establish a link with the 3rd Ukrainian Front spearheads. 27th Army, which had been fighting on the left wing in the first phase of the operation, continued to advance south towards the Roman–Bârlad road with the intention of cutting this important north–south connection. 7th Guards Army took no part in the action until 22 August, when it broke through the Romanian V Army Corps' defensive positions on both sides of Târgu Frumos—occupied at this point mainly by the remnants of the Kessel combat group—and advanced on the major traffic node of Roman.<sup>115</sup>

On 22 August, as Sixth Army under Fretter-Pico prepared to move its units north of Chişinău back while attempting to ward off and contain the enemy breakthrough on its right wing, the army group held firmly to its plan to conduct the defensive battle mainly from the Trajan line in the Iaşi ridge area, in order to prevent an enemy breakthrough in southern Moldavia and the loss of the Prut river crossings north-east of Huşi. Although the army group had suffered substantial material losses in the first two days' fighting, it still had 45 tanks and 78 assault guns at its disposal<sup>116</sup> for the heavy defensive battles between Târgu Frumos and the west bank of the Prut at Costuleni and Zbroiaia, 20 kilometres north-east of Leuşeni on the Prut. That gave it the possibility of engaging in mobile combat, but this glimmer of hope vanished unexpectedly soon, because the Soviet 27th Army spearheads, with about 30 tanks, managed to advance during the night to Negreşti, 30 kilometres south of Iaşi, in the Bârlad valley. This advance might still have been stopped by the armoured unit brought in from Tecuci, and the gap in the Trajan line defence system might also have been closed, if the vanguards of 7th Guards Army and 52nd Army had not also broken through the German–Romanian defensive positions on the Iaşi ridge at Topoliţa, west of Târgu Frumos, and between Voineşti and Schită-Duca, south of Iaşi. In these circumstances, Army Detachment Wöhler lacked the necessary strength to clear up the situation in the Trajan line area, so, by the morning of 22 August, the tactical plans of the high command in Slănic were no more than scrap paper. In view of these developments, Grolman ordered Army Detachment Wöhler to deploy all available forces to forestall an enemy advance south-eastwards to the Prut and prevent the loss of the river crossings. He also instructed his troops to hold as many sections of the Trajan line as possible, in order to preserve the chance of closing the gaps by means of counter-attacks.

At the very moment when the army group high command and Army Detachment Wöhler HQ were striving to control the precarious situation so as to prevent the few

Prut river crossings from falling into Soviet hands, a decision was taken at Romanian 4th Army HQ that was fraught with consequences and catered solely to the needs of the Romanian units. On the morning of 22 August, when parts of 2nd Ukrainian Front had overcome the territorial obstacle of the Iași ridge and the vanguard was approaching the Bârlad valley, Antonescu decided, before leaving for Bucharest, to withdraw the Romanian 4th Army from northern Moldavia to the Adjud–Oancea–Cahul–Bolgrad line.<sup>117</sup> Half an hour later, Col. Dragomir had already drafted the necessary operational order and issued it to the units under his command.<sup>118</sup> The Conducător's decision was based exclusively on the demands and needs of the Romanian forces. Since the start of the major Soviet offensive there had been a serious increase in the latent war-weariness already affecting the Romanian troops as a result of the superior strength of the Soviet forces and the conspicuous weakness of their German ally. Their motivation, always poor, was now almost non-existent. In taking his decision, the marshal seemingly no longer had any regard for the joint conduct of operations. By going it alone, Antonescu clearly indicated his wish to release the kingdom from the tie with its German partner-in-arms. With this step, he drew the final line under a process that had begun with the military debacle at Stalingrad.<sup>119</sup> The decision, which radically changed the basis for planning and conducting operations, especially in Moldavia, was not communicated to Romania's Axis partner either by Avramescu and his chief of staff or by Antonescu, who spent the afternoon at Army Group South Ukraine HQ. On the contrary, as the German commander-in-chief reported, both sides agreed to establish 'a common defence front on the Galați–Focșani line, using the fortifications which the Romanians had already prepared there some time ago'. 'The marshal also assured me, in this connection, that all the Romanian reserves still available in Bucharest would be assigned to the army group immediately, to support the front.'<sup>120</sup>

Meanwhile, Army Detachment Wöhler was unable to prevent the Soviet 27th Army from pushing forward into the Vaslui area in the course of the day. The new armoured unit, the first parts of which arrived in Bârlad in the evening, was to be deployed against this attacking wedge. While the Soviet forces had advanced into central Moldavia in the middle of the breakthrough area, there were still some battleworthy sections of the German IV Army Corps in the area to the south and south-east of Iași endeavouring to keep the Prut river crossings in the north open for the units of the German VII Army Corps and to prevent the connection with the German Sixth Army's left wing from being severed. In this, 376th Infantry Division had a particularly important part to play: it had to protect the threatened army's west flank against Soviet flanking attacks during the withdrawal movement from the balcony position on the Răut and the Dniester that was planned to take place that evening. To strengthen the defence forces on the west bank of the Prut

<sup>117</sup> The Romanian 4th Army war diary gives 09.00 as the time when this decision was taken; Rom. 4th Army war diary, August 1944, 2 (22 Aug. 1944), Arh.M.Ap.N., fond Armata 4, dosar 221, fo. 158.

<sup>120</sup> Friessner, *Verratene Schlachten*, 80.

south of Iași, which were to keep the river crossings open for the German Sixth Army, Army Detachment Wöhler moved armoured units of the Mieth Group into the area between Iași and Huși. In the Târgu Frumos area, on the western edge of the Soviet breakthrough area, the Kirchner Group carried out its task by recapturing the salient north of the city and establishing the link between the former main battle line and the Trajan line. In order to minimize the danger of the Soviet 7th Guards Army breaking through to Roman, 46th Infantry Division was assigned to the Kirchner Group as a mobile reserve force. With these measures, the army detachment HQ hoped to restabilize the situation in northern Moldavia and fulfil the task assigned to it by the army group.

General Wöhler and his staff must therefore have been all the more dismayed to learn late that night from the German liaison officer attached to the Romanian 4th Army that, in the course of the afternoon, 'the Romanian 4th Army had received a direct order from the marshal to withdraw the front immediately to a position behind the Moldova'.<sup>121</sup> The army group responded at once with a counter-order, permitting the Romanian 4th Army HQ to move the front back only to the other side of the Seret. Faced with this dilemma, the chief of staff, Col. Dragomir, applied to the Great General Staff in Bucharest for a decision as to which of the two orders the 4th Army was required to obey. Even before the response of the military leadership in Bucharest arrived, Avramescu resigned from his post as the army's commander-in-chief.<sup>122</sup> The former chief of staff, General Șteflea, took over command of the Romanian 4th Army as from 23 August.<sup>123</sup>

While Army Detachment Wöhler endeavoured to hold up 2nd Ukrainian Front's advance in order to prevent the entire southern section of the eastern front from collapsing, Army Detachment Dumitrescu began the withdrawal to the Prut. In this tense situation, the position on the Dniester front took an extremely unfavourable turn. On 22 August Tolbukhin's armies succeeded in cutting all connection between the German Sixth Army and the Romanian 3rd Army. Army Detachment Dumitrescu had lost contact with Sixth Army HQ in the morning, so Dumitrescu asked the army group to take over command of Sixth Army.<sup>124</sup>

The Romanian 3rd Army, with the remnants of the German XXIX Army Corps and the weak forces of the Romanian III Corps, now had to defend southern Bessarabia on its own. This objective could hardly be achieved, as the Soviet 46th Army had already extended its offensive to the south in the night of 21 to 22 August, attacking the Romanian defensive positions in the Dniester estuary. The Romanian units could not withstand the pressure, so parts of the Soviet XXXX

<sup>121</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 37, BA-MA RH 19 V/36, fo. 39.

<sup>122</sup> Avramescu resigned because he could not reconcile it with his conscience to withdraw the Romanian troops from the Iași–Chișinău area and abandon it to the Soviet forces without a fight; Buzatu, *România și Războiul*, 284 ff.

<sup>123</sup> Rom. 4th Army war diary, August 1944, 10 ff. (22 Aug. 1944), Arh.M.Ap.N., fond Armata 4, dosar 221, fos. 166 ff. The confused situation in the Romanian 4th Army high command on 22 August 1944 is also covered in Duțu, 'A Command Crisis'; Duțu, *Între Wehrmacht și Armata Roșie*, 167.

<sup>124</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 27 and 30, BA-MA RH 19 V/36, fos. 29 and 32.

Guards Corps were able to break through the defence front at Burgas in the mouth of the Dniester estuary and on both sides of Cetatea Albă.<sup>125</sup> Soon afterwards, the left wing of the Romanian III Corps was also obliged to abandon the west bank of the Dniester. As a result of the operational situation on the Dniester front south of Tiraspol, the German 9th Infantry Division had lost the connection with XXIX Army Corps. The army group therefore decided to place the only German unit in the area of Romanian 3rd Army under the command of the Romanian III Corps. In accordance with an order from Hitler, the Romanian III Corps was to withdraw westwards within the army's ambit that same day, pulling back in a series of stages from the Dniester to the Danube delta–Prut line at Cahul.<sup>126</sup> In support, the army group deployed LXXII Army Corps, stationed in Ismail, on a special mission to occupy the prepared rear positions in the Sărata and Cogîlnic valley, together with the German 153rd Field Training Division and the Romanian 1st Cavalry Division, in order to receive the retreating units of the Romanian III Corps. However, the army group's plan was already at risk late that evening, when Soviet units attacked the LXXII Corps defence forces at Cogîlnic. In these circumstances, the high command in Slănic decided in the night of 22 to 23 August to change the task assigned to the Romanian 3rd Army, which was now to take over the defence of the Danube from the mouth of the river to Brăila, with bridgeheads at Chilian, Ismail, and Cartal.<sup>127</sup>

There were particularly dramatic developments in the right-hand section of the area defended by the German Sixth Army, where the 3rd Ukrainian Front spearheads had pressed forward to Taraclia, 25 kilometres north of Bolgrad, and Tarutino, forcing the army to move its command post to Bereşti, 20 kilometres south of Bârlad. And in the left-hand section of the army's defence area, the Soviet 4th Guards Army was exerting pressure with tanks and infantry on the front northeast of Ungheni, where 376th Infantry Division was unable to prevent the Soviet forces from breaking through the defence system by the evening and taking the city, together with the important Prut river crossing. In the eastern section of the German VII Army Corps' front, however, and in the whole of the area defended by XXXXIV Corps and LII Corps, things remained extremely quiet, so that the units deployed in the area were able to prepare for withdrawal to the Prut without being disturbed.<sup>128</sup> Nevertheless, in view of the time factor and the inadequate infrastructure in Bessarabia, such a large withdrawal movement could be successfully completed only if there was no serious friction to contend with. In those circumstances, the army group's insistence that Sixth Army HQ move back to the Prut without delay was questionable, even at the preparatory stage, since the various

<sup>128</sup> Kissel, *Die Katastrophe in Rumänien*, 98; *Die geheimen Tagesberichte*, x. 465.

units and formations lacked the haulage resources and transport space necessary for a rapid withdrawal.<sup>129</sup>

As the army HQ was unable to assign a specific road to each individual unit because the infrastructure was lacking, it contented itself with allocating a 'corridor' to each army corps.<sup>130</sup> In addition to this problem, the five Prut river crossings at Sixth Army HQ's were a critical factor in the operation, since the withdrawal of the four corps would be concentrated in just a few places, leading inevitably to huge congestion on the east bank of the river. The departure from the positions on the Răut and the Dniester began in the evening, according to plan, and proceeded without any major complications at first. Considerable difficulties began to arise only in the course of the night, when the units on the right wing, in particular, departed from their assigned corridors. The reason was that the Soviet 37th Army, shortly before reaching the Cogîlnic at Cimişlia in the course of its advance westwards, had turned north-west to the Prut river crossings at Leuşeni and Zberoiaia, thereby cutting off the retreat of the remnants of XXX Corps and LII Army Corps. At the same time, the Soviet 57th Army, operating to the north of 37th Army, attacked the flank of XXX Army Corps, forcing it to leave its assigned corridor and move into the sector of LII Army Corps. Since the German Sixth Army was unable to stop the Soviet 37th Army's advance, the withdrawal plan had already failed to all intents and purposes by the morning of 23 August. At this point, the withdrawal movement in the area south of Chişinău and on the upper reaches of the Cogîlnic had descended into chaos. There were also numerous attacks by enemy forces, which considerably increased the general confusion and contributed to the failure to reach the appointed destinations. These attacks forced the various German units to depart from their planned withdrawal routes, with the result that different troop components were mixed up and the few roads became overloaded. On the morning of 23 August, 257th Infantry Division found itself '[squeezed] between dense columns, four or five abreast, hopelessly blocking the roads',<sup>131</sup> with the result that this unit, like the bulk of Sixth Army, was able to move westwards at only a slow pace. In this chaotic situation, there was no firm command capable of restoring order in the withdrawal movement. In the circumstances, many units and formations took independent action and, left to their own devices, attempted to reach the 'safe bank' of the Prut.<sup>132</sup> Neither the army leadership, which was obliged to move its command post to Moldavia on Friessner's orders,<sup>133</sup> nor the army group HQ in Slănic was fully informed of the Sixth Army fiasco: communications between the units and the command authorities in northern Bessarabia were cut on the morning of 23 August.<sup>134</sup>

After it became clear, at the outset, that the army group was unable to cope with the Soviet Iași–Chișinău operation, the military situation in the southern section of the eastern front deteriorated once again on 23 August. In Bessarabia, the northern wing of the Soviet 46th Army reached Comrat, and the southern vanguard managed to capture most of the important Tarutino–Bolgrad road. The military developments on the right of the area defended by the Romanian 3rd Army were even more ominous. Here, the task of halting the 46th Army spearheads, which had pushed through to the south, proved too much for the Romanian III Corps. By midday the Soviet troops had taken Tatar Bucar and Furmanca, thereby enclosing the corps between the Dniester and Lake Cunduc.<sup>135</sup> The defence in the southern section of the German–Romanian theatre of operations had now collapsed almost entirely, and 3rd Ukrainian Front was able to continue its advance into the Dobrogea region unimpeded. In order to lessen the impact of the military catastrophe in southern Bessarabia to some extent, the army group HQ endeavoured to defend the neck of land at Bolgrad with weak German–Romanian forces under the command of LXXII Army Corps, and keep it open for its own stragglers. Although Dumitrescu had received orders that the Romanian 3rd Army was to establish a defensive front on the Danube, from the mouth of the delta to Brăila, starting on 23 August,<sup>136</sup> Romanian 3rd Army HQ was unable to perform this task as it now had almost no combat-fit troops at its disposal.

In northern Bessarabia, on the German Sixth Army's left wing, the Soviet 37th Army was able to continue its advance and block the Prut river crossing at Leușeni in the course of the day, but it failed to achieve the day's objective of completing the encirclement of Sixth Army. Both LII Corps in the south and the German VII Army Corps north-west of Chișinău put up such effective resistance that the Soviet forces were unable to fulfil their task. However, neither VII nor LII Army Corps could prevent the almost total loss of the Prut river crossings, which were so important for the withdrawal movement. In view of the developments, with the Soviet 6th Armoured Army in Moldavia reaching the northern outskirts of Bârlad on 23 August, the army group HQ found itself obliged to transfer the Mieth Group, which was still fighting north of Huși, from Army Detachment Wöhler and place it under the command of Sixth Army HQ. The Mieth Group, which had the remnants of four German divisions under its command, was securing the west bank of the Prut between Costuleni and Leușeni, and endeavouring to keep open the road along the Prut between Huși and Fălcu, 40 kilometres south of Huși, so that Sixth Army would still have a chance to escape encirclement by the enemy. There was little hope of this, however, since, for the withdrawal of the four German corps, with 13 divisions in all, the Prut river crossing at Zbroaia was now the only one left in German hands. At this precise juncture it became clear that the telecommunication lines had been cut. But another major reason for the chaotic state of affairs

<sup>135</sup> Rom. 3rd Army war diary, April to September 1944, 23 Aug. 1944, Arh.M.Ap.N., fond Corpul 3 Armata, dosar 111, 103; KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 39 and 43, BA-MA RH 19 V/36, 41 and 45.

<sup>136</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 41, BA-MA RH 19 V/36, fo. 43.

east of the Prut was the fact that Sixth Army HQ was located far away in Moldavia, and was therefore barely able to influence the course of the operation.<sup>137</sup>

On 23 August the army group had hardly any operational forces left at its disposal in northern Moldavia, since the Romanian 4th Army had already begun its withdrawal to the Adjud–Tecuci–Bolgrad line. Germany's ally could not be dissuaded from this measure, despite a counter-order from the commander-in-chief of Army Detachment Wöhler.<sup>138</sup> While the weak LVII Armoured Corps attempted both to hold the Seret line at Roman and to prevent the enemy forces from pressing forward to the Carpathian passes, the Mieth Group was engaged in desperate battles north of Huși against the overwhelming power of the advancing Soviet 4th Guards Army and 52nd Army. There was a yawning gap, almost 100 kilometres wide, between LVI Armoured Corps and the Mieth Group, the German IV Army Corps, through which 2nd Ukrainian Front was able to advance southwards unimpeded.<sup>139</sup> In view of this precarious situation, Friessner had no alternative but to move the defence front to the Brăila–Focșani line, which, in Guderian's view, had to be held at all costs.<sup>140</sup> With regard to the Romanian Axis partner, the high command in Slănic considered that 'the Romanians were effectively unfit for further combat'.<sup>141</sup> In the early evening Grolman still thought that the German troops would have to be pulled back to the passes in order to establish a connection there with the Hungarians.

On the evening of 23 August the army group HQ came to the realization that—as the four days of fighting had shown<sup>142</sup>—Army Group South Ukraine did not have the necessary resources to oppose the superior Soviet forces effectively. That being so, it could only attempt to reduce the length of the defence front and bring the Russian attack to a standstill at the defensive line between the Danube delta and the Carpathians. Friessner was too late in taking tactical measures to address the implications of the military situation, so that the operations begun on 22 and 23 August could no longer be effective. One thing is particularly striking in this connection: neither the commander-in-chief of Army Group South Ukraine nor his staff had recognized the threat to the German Sixth Army in its balcony position on the Răut and the Dniester resulting from the points of concentration of the Soviet attacks. Although Friessner claims to have identified this weak point in the German–Romanian front and to have drawn Hitler's attention to it,<sup>143</sup> no forward

<sup>137</sup> Ibid., fo. 46.

<sup>138</sup> The Romanian 4th Army chief of staff had applied to the Romanian Great General Staff on the evening of 22 August for a decision as to what the army should do in this situation, but no such decision had yet been taken by the morning of 23 August. At 04.45 on 23 August 1944, Romanian 4th Army HQ issued Operational Order No. 305069, the order for withdrawal to the Tîrgu Ocna–Adjud–Ghigheni line; Rom. 4th Army war diary, August 1944, 1–3 (23 Aug. 1944), Arh.M.Ap.N., fond Armata 4, dosar 221, fos. 175–8.

<sup>143</sup> Friessner makes this claim in his memoirs, published after the war, but provides no evidence to support it; Friessner, *Verratene Schlachten*, 33–5.

planning was made, after Friessner took over as commander-in-chief at the end of July, to withdraw Sixth Army from this endangered position if necessary, nor were appropriate measures taken after the enemy attack was launched, when the point of concentration of the enemy operation became clear. Moreover, Friessner did not broach this eventuality in his contacts with the OKH or in the memorandum he addressed to Hitler on 2 August.<sup>144</sup>

In addition to the problems in the southern section of the eastern front, Schörner's concept for the defence of the German–Romanian theatre of operations had already proved a failure by the beginning of July, after the army group had been obliged to transfer its mobile and armoured reserves in a series of moves to other critical points. Neither Schörner nor his successor amended the concept to enable operations to be conducted successfully under the new framework conditions. Their failure to do so, as well as the war-weariness of the Romanian forces and their lack of determination to resist, contributed to the fact that the Russian offensive led to a debacle for Army Group South Ukraine. The military disaster cannot be blamed solely on Germany's south-east European ally: it was also the result of wrong situation assessments by the army group HQ and the OKH.

### (b) The Events in Bucharest on 23 August 1944

If the army group leadership had believed that the tactical measures taken on 22 and 23 August would suffice to avert a catastrophe in the southern section of the eastern front, events occurred in Bucharest on 23 August that were to change the military situation completely and hasten the collapse of the front in Romania to an extraordinary extent. Before these events, there had long been rumours that the kingdom of Romania wanted to end the war. Those rumours, which gathered momentum at the beginning of August, had begun early in 1944, when the fighting moved to historic Romanian territory. Since then, a process had been under way aimed at breaking with the German ally without major political, economic, or territorial damage and withdrawing from the war.<sup>145</sup>

The change in the political mood in the kingdom, which was increasingly against continuing to fight on the German side, was no secret to the German embassy or to the military command in the southern section of the eastern front, although powerful political forces in Bucharest endeavoured to keep German officials in the dark about internal Romanian developments. Friessner was aware of the political mood in the country, and had drawn it to the attention of the OKH and Hitler, but the army group HQ, the OKH, Hitler, and the representatives of the German Reich in Romania were nevertheless surprised when the German military mission informed them, early in the evening of 23 August, 'that there was something wrong with Marshal Antonescu and the deputy prime minister'.<sup>146</sup>

The political leaders in Bucharest had been endeavouring to conclude an armistice with the anti-Hitler coalition since the summer of 1943 but, as a result of the Romanian plan to conclude a separate peace with the Anglo-American Allies and of political pressure from the government in Berlin, that had not come about. The political and military situation in the spring of 1944 had also prompted opposition groups to contact the western Allies. However, by the summer of 1944 all diplomatic efforts had failed, because the kingdom did not accept the Allies' conditions.<sup>147</sup> Bucharest's freedom of action was also restricted by the fact that almost 750,000 German troops had been stationed in the Moldavian-Bessarabian theatre of operations and Wallachia since March 1944.<sup>148</sup> The Romanians' reservations about an armistice with the Soviet Union were essentially the result of their experience in the summer of 1940,<sup>149</sup> when the Soviet Union had issued an ultimatum (on 26 June) demanding the cession of Bessarabia.

The Romanian government's attitude had testified to a certain lack of realism, at least since the spring of 1944. In view of the circumstances and the outcome of Allied conferences, the authorities in Bucharest could hardly suppose that the western Allies would be willing to conclude a unilateral armistice with the kingdom without coming to an agreement with the USSR.<sup>150</sup> In April 1944, however, the anti-Hitler coalition submitted terms for an armistice to the kingdom through the Soviet partner.<sup>151</sup> Those terms were rejected by the Antonescu government, 'on the grounds that there were too many German divisions in Romania, which could prevent Romania withdrawing from the Axis and place the country under military occupation'.<sup>152</sup> The negotiations continued during the summer, but no agreements were reached. The Romanian leadership harboured the illusion that it could negotiate more favourable terms despite the bad military situation.<sup>153</sup>

From June onwards, with the Conducător hesitating to take the decisive step of signing an armistice, the opposition gathered around Iuliu Maniu and Constantin

<sup>150</sup> Rhode, 'Rumänien', 1158.

<sup>151</sup> On 12 April 1944 the Soviet representative in Cairo, Nikolai V. Novikov, delivered to the Romanian negotiator, Barbu Şirbey, the minimum terms for an armistice approved by all the Allies: 'To break with the Germans, and Romanian troops to fight side by side with the Allied forces, including the Red Army, with the aim of restoring Romania's sovereignty and independence; restoration of the Soviet Russian border pursuant to the treaty of 28 June 1940; Romania to pay compensation to the Soviet Union for damage resulting from the military action and the occupation of Soviet territory by Romanian troops, and all goods removed or purloined from Soviet territory to be returned to the Soviet Union; all Soviet prisoners of war held in Romanian custody to be returned immediately after the armistice is signed; complete freedom for all Soviet and Allied troops to move in any direction within the Romanian state, should the military situation so require.' Quoted in Beer, 'Vorbereitung und Durchführung des Umsturzes', 121.

<sup>152</sup> Beer, 'Vorbereitung und Durchführung des Umsturzes', 121.

<sup>153</sup> Hillgruber, *Hitler*, 194 ff.; Constantiniu, 'Cairo and Stockholm'; Constantiniu, 'The Last Days'; Coposu, 'Preludii politico-diplomatice ale loviturii de stat de la 23 august 1944' [Political-diplomatic prelude to the *coup d'état* of 23 August 1944], in Buzatu, *România cu și fără Antonescu*, 202–9.

Brătianu began to take matters into its own hands. In August, in view of the desperate military situation, the opposition, namely the National Democratic Bloc (Blocul Național Democratic), formed on 20 June 1944 and comprising all the opposition parties, including the Romanian Communist Party (Partidul Comunist Român), the Military Committee (a band of officers loyal to the king, formed in June with the approval of Michael I), and the king's confidential advisers, was finally ready to accept the Allied terms for an armistice, as agreed, and to overthrow the Antonescu government. It was the Military Committee that succeeded in persuading leading officers to support its plans in the summer of 1944, and to prepare to suspend all military operations when the king instructed them to do so. As things were relatively quiet on the front in Moldavia and Bessarabia, the actions of the royalist military leaders had very little impact on conditions in that theatre of operations. The opposition leaders and commanders were also at pains to conceal their preparations from the German ally. Once the opposition had established the basis for assuming political and military responsibility, and the arrangements for halting all military operations were in place, the party leaders, the Military Committee, and the king's representatives agreed, at a secret meeting on 21 August, to overthrow the marshal and his government five days later.<sup>154</sup>

The plan to carry out the '*coup d'état*'<sup>155</sup> on 26 August had to be changed, for two reasons. First, it was overtaken by military developments in eastern Romania, where Tolbukhin's and Malinovsky's forces pressed forward into the centre of the kingdom faster than expected, and second, Antonescu had decided in the meantime to conclude an armistice with the Soviet enemy. When the Conducător and his foreign minister sought an audience with the king on the morning of 23 August, the opposition groups found themselves in a quandary, because the situation in the theatre of operations and the political developments in the country both called for swift action. The monarch was also prompted to act, because the previous day the foreign minister, Mihai Antonescu, on behalf of the marshal, had urgently demanded the conclusion of an armistice with the Allies. The opposition now feared that the government would act faster than they did, and thereby remove the basis for a *coup d'état*.<sup>156</sup> At the audience on the afternoon of 23 August, Ion Antonescu proposed to the king that the country should unilaterally lay down its arms, insisting, however, that Hitler's approval of this action should be obtained first. The monarch categorically rejected Antonescu's proposal, because he was wholeheartedly in favour of the opposition group's plan. He had the Conducător and the foreign minister, Mihai Antonescu, arrested immediately after the meeting.

<sup>154</sup> Beer, 'Vorbereitung und Durchführung des Umsturzes', 123.

<sup>155</sup> The dismissal of Marshal Ion Antonescu and his government by King Michael I on 23 August 1944 was not a *coup d'état* in the legal sense of the term, because the monarch was entitled under the law of 6 September 1940 to dismiss the government in office and appoint a new one. This applies at least to the formal act of dismissing the Antonescu government. The monarch exceeded his powers in arresting the marshal and the members of the cabinet. The term '*coup d'état*' is nevertheless used by German historians to describe these events in Romania, on the one hand because the circumstances surrounding the change of government suggested that that was what it was, and on the other because the term was widely used in contemporary statements and in the German post-war literature.

<sup>156</sup> Beer, 'Vorbereitung und Durchführung des Umsturzes', 122–5.

After almost all the members of the Antonescu government had also been arrested, King Michael I appointed his chamberlain, Col.-Gen. Constantin Sănătescu, as the new prime minister, who then formed an all-party government in accordance with the agreements reached on 21 August. The *coup d'état* went smoothly, both because it had been well prepared and because the army and the largely royalist officer corps approved the action taken by the king.<sup>157</sup>

Rumours of the events in the royal palace reached the German embassy late in the afternoon of 23 August, as the marshal's and the foreign minister's audience with the king lasted an unusually long time. At around 17.00, with increasing rumours that the head of government had been arrested, the highest-ranking German diplomat in Bucharest, Dr Hans Stelzer, called General Erik Hansen and the head of the German agencies in the Romanian capital to the embassy for urgent talks. In the course of the meeting, which was also attended on the military side by the commander of the German Luftwaffe mission in Romania, Lt.-Gen. Alfred Gerstenberg, the head of the German naval mission, Admiral Werner Tillessen, and the military attaché, Maj.-Gen. Karl Spalcke, it was decided to inform the German government of the rumours and to recall the German ambassador, who was then in Snagov,<sup>158</sup> to the capital. Killinger reached the embassy at about 19.00. The officers attending the meeting asked him to go to the palace immediately in order to obtain reliable information on the political situation in Romania. However, the Romanian monarch did not grant him an audience there until 21.00, with the new head of government, Sănătescu, and his foreign minister, Grigore Niculescu-Buzeşti, also present.<sup>159</sup> During the audience, the king informed the German ambassador that Antonescu and his government had been deposed and arrested. He also stated that the new government intended to suspend hostilities against the Red Army immediately, and to conclude an armistice with the Allies. In conclusion, King Michael requested that 'the Reich government arrange for the German troops to withdraw from Romania without delay'.<sup>160</sup> That evening, Stelzer was received by the new foreign minister, who informed him officially that the kingdom of Romania had broken off diplomatic relations with the German Reich. Niculescu-Buzeşti volunteered, in this connection, that the new Romanian

<sup>157</sup> 278th 'Wochenbericht Südosteuropa' (hereinafter WoBSOE), 20–7 Aug. 1944, Vienna office of the Foreign Ministry, 37–42, BA R 63/349, fos. 135–7; Hillgruber, 'Die letzten Monate', 389–92; Constantiniu, 'Marshal's Arresting'; Constantiniu, 'August 23'; Buzatu, *România și Războiul*, 145–54; Roman, *Rumänien im Spannungsfeld der Großmächte*, 166; Bulei, *Kurze Geschichte Rumäniens*, 130–2; Völk, *Rumänien*, 157–60; Schönher, 'Relații româno-germane', 14. Sănătescu was prime minister of Romania from 23 August to 2 December 1944, and chief of staff from 11 December 1944 to 20 June 1945.

<sup>158</sup> Most Romanian ministers had left Bucharest and moved to the Snagov area when the Allies started bombing the city in the late summer of 1943. As a result, part of the German embassy, including the German radio station, was also located in Snagov, where Baron von Killinger had a country house. However, it is not altogether clear whether Killinger was in Snagov on 23 August, as stated in Hillgruber, *Hitler*, 216 ff., and Kissel, *Die Katastrophe in Rumänien*, 108, or at the spa in Sfaticia (Beer, 'Vorbereitung und Durchführung des Umssturzes', 131).

<sup>159</sup> Notes from the record of audiences at the royal palace in connection with the arrest of Marshal Antonescu and his staff, 23 August 1944, in *Procesul Mareșalului Antonescu*, i, doc. 1, 47.

<sup>160</sup> Hillgruber, *Hitler*, 217.

government was prepared to guarantee the Wehrmacht units a safe passage if they refrained from engaging in any hostilities.<sup>161</sup>

In spite of everything, the efforts of the government in Bucharest to resolve the problematic situation by mutual agreement were already obsolete by the late evening of 23 August. After Stelzer returned from his audience at the foreign ministry, the German ambassador and Gerstenberg had both managed to contact Berlin, even though the Romanians had cut the telephone and telegraph connections of the embassy and all German agencies in the capital earlier in the evening.<sup>162</sup> Gerstenberg had been able to get through to the Luftwaffe high command (OKL) on a Wehrmacht line and inform it of the events in Bucharest. Not knowing how matters actually stood, he proposed that the putsch be suppressed with the help of the German troops currently in the Bucharest and Ploiești area. Gerstenberg had not discussed this proposal, which the OKL passed on to Führer headquarters in Rastenburg, either with Killinger or with the head of the German Wehrmacht mission, or with the commander-in-chief of Army Group South Ukraine. At about 22.00 on 23 August the king addressed the Romanian people on the radio, informing them of the political and military changes and of the new government's intention to halt military operations and conclude an armistice.<sup>163</sup>

### (c) The Battles in the Bucharest–Ploiești Area

The question now was: how would Germany react to such serious changes in the political and military situation in Romania? The subject was also taken up by the *Nationalzeitung*, published in Basel. It concluded that Hitler now faced a serious dilemma:

If he attempts to turn Romania into another Italy, this new front will swallow up yet more of the already alarmingly scarce German divisions, and they too could easily be caught up and wiped out in a general Romanian pandemonium between the invading troops and Tito's forces. If Germany lets things run their course, not only will it lose its oil suppliers; it will also make it easier for Bulgaria to get out, and it will have to be

<sup>161</sup> Ibid.

<sup>162</sup> Contrary to Kissel, *Die Katastrophe in Rumänien*, 109, who claims that Gerstenberg passed the news of Marshal Antonescu's dismissal and arrest to the Luftwaffe high command's chief of staff at about 20.00, the conversation in question can only have taken place after 21.00, because the German ambassador was received by the king and informed of the events only at 21.00. Army Group South Ukraine too did not receive the first indications from Bucharest that there was 'something wrong with Marshal Antonescu and the deputy prime minister' until 20.30. This information was not available at 19.45, when the Army Group South Ukraine chief of staff spoke to the head of the OKH operations department. Not until 22.25 was the army group HQ in Slănic informed by the ambassador himself that the Conducător had been arrested and that Romania would cease military operations. At that point, the army group had not yet received any information or instructions from Berlin; KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 48–51, BA-MA RH 19 V/36, fos. 50–3.

<sup>163</sup> A comprehensive and detailed account of the events in Bucharest on 23 August 1944, from the Romanian point of view, is contained in Buzatu's work, *România și războiul mondial*, with extensive additional information on pp. 155–71. For the text of King Michael I's radio address, see Arh.M.Ap. N., fond 5418, dosar 2845, fo. 2.

prepared for Hungary too to acquire a new government overnight, with further surprises in store.<sup>164</sup>

Given the change of power in Romania, which threw the south-eastern flank of the area under German rule into military and political disarray, Gerstenberg's optimistic assessment of the situation must have struck Hitler as 'glad tidings'. It gave the impression that the *coup d'état* had been carried out, with King Michael's approval, only by a small clique of senior officers and opposition politicians. According to Gerstenberg, the new rulers had no support among the Romanian people, and the German troops stationed in the Bucharest area would therefore suffice to take possession of the capital, depose the monarch, and remove the government now in office. Gerstenberg also recommended that the political and military command centres in the Romanian capital should be bombed and eliminated. On the basis of Gerstenberg's military analysis, the OKW believed that the forces of 5th Anti-Aircraft Division would suffice to secure Germany's dominance of the strategically important Ploieşti oilfields.<sup>165</sup>

In the light of this situation assessment, Hitler decided to take military action against the new government and have King Michael I arrested. Thereupon, Gerstenberg was ordered by the OKW to suppress the 'putsch' with the German forces stationed in the Bucharest–Ploieşti area, so as to reinstate Antonescu or, alternatively, charge a pro-German general with the formation of a new government. While the most important political objective for the Third Reich was undoubtedly to establish a pro-German government in the kingdom in view of the threat to its dominant position in south-eastern Europe, it was also essential to the conduct of the war that Germany use all the means at its disposal to retain control of the Ploieşti oilfields. The OKW accordingly ordered all German armed forces to give priority to guaranteeing and protecting oil production and transportation.<sup>166</sup> To achieve this objective set by Hitler, the Wehrmacht operations staff, without regard to the actual balance of forces, proposed to withdraw Army Group South Ukraine to the Danube–Carpathian Fringe position in order to stop the Soviet advance before it reached Wallachia, and to dispatch 5th Anti-Aircraft Division to disarm the Romanian forces in the Bucharest–Ploieşti–Prahova valley area<sup>167</sup> and occupy central Romania.<sup>168</sup>

For Gerstenberg, the OKW's orders, which he received early on the morning of 24 August, meant that, if he was to take central Wallachia, he would have to assemble all the German troops, some of which were stationed in widely scattered locations in the Bucharest area and as far north as the Prahova valley, for the battle against the territorial units of the Romanian army. At the beginning of August there

<sup>164</sup> *Nationalzeitung*, 26 August 1944, quoted in 278th WoBSOE (20–7 Aug. 1944), 41 ff., BA R 63/349, fo. 137.

<sup>166</sup> KTB Skl, pt. A, lx/II. 608.

<sup>167</sup> The Prahova valley, to the north of Ploieşti, is the most important traffic route from Bucharest to Braşov and Transylvania.

<sup>168</sup> KTB OKW, iv/1, 805.

were about 35,000 members of the armed forces and the police in the two districts of Prahova and Ilfov, where German interests were primarily concentrated,<sup>169</sup> but on account of their military training, their age, and their official duties, only a fraction of them could be deployed in the 'liberation operation'. Consequently, of the 11,000 or so members of the armed forces in Bucharest and the Ilfov district, only 2,000 to 3,000 were available to Gerstenberg for the operation against the Romanian capital.<sup>170</sup> The arms-bearers, most of whom were billeted near the Otopeni and Băneasa airports in the north of the capital, had had very little infantry training and almost no combat experience. In addition to these shortcomings, the almost total lack of heavy weaponry posed a serious problem, implying that the whole project was doomed to failure from the outset. Despite the scant combat strength, and in a situation where there was still a chance that a great many German troops would be able to leave Romanian territory unmolested, the Luftwaffe general proved absolutely determined to take military action against the new state authorities. It is not at all clear what moved the initiator of the action to take this enormous risk. If the operation were to fail, the kingdom would undoubtedly open hostilities immediately against its former ally.

Despite Gerstenberg's favourable situation assessment, the OKW still doubted that there were enough forces in the Bucharest–Ploieşti area to conduct the proposed counter-strike successfully. On 23 August the Wehrmacht operations staff instructed C-in-C South-East to make preparations to muster the strongest possible forces in the Niš area for deployment in Romania. Only a few hours later the OKW gave specific instructions to assemble a combat group in the Belgrade–Niš area for intervention, if necessary, in the fighting in the Bucharest–Ploieşti area.<sup>171</sup>

At this point in time, when the Wehrmacht operations staff were issuing the order to suppress the 'putsch' and working on detailed plans for military action, Stelzer, Hansen, and Gerstenberg were endeavouring, at a meeting with the prime minister, Sănătescu, and the foreign minister, Niculescu-Buzău, to define and negotiate arrangements for a free passage out for the German forces. The Romanian government allowed the German delegation to use the blocked telephone lines at the embassy again for a short time in order to inform the relevant political and military authorities in the Reich of the results of the talks. As well as the outcome of the negotiations, Hansen tried to communicate to Führer headquarters what he

<sup>169</sup> The Great General Staff had fairly accurate data on the human and material strength of the German forces in Romania on 23 August 1944, having ordered all military and civilian agencies to record and report all German troop units in Romanian territory, with the exact names of the units and accurate information as to their location and strength ('Operation Cosma'). On the basis of that survey, the Great General Staff was in a position to form a precise picture of the combat strength of the German troops in Romania. See *inter alia* Arh.M.Ap.N., fond M.St.M.—sect. 7, dosar 380, fos. 28, 30; dosar 381, 19–25, fos. 33–41.

<sup>170</sup> The German agencies and barracks in Bucharest were already surrounded by Romanian units and the Revolutionary Guard on the evening of 24 August 1944. The process of disarming German troops, officials, and citizens, and taking them into custody, started in the course of the night. *România în Războiul Antihitlerist*, 61–70.

<sup>171</sup> KTB OB Südost/H.Gr. F, Abt. Ia, No. 3, 225, 227–9, BA-MA RH 19 XI/14, fos. 223, 225–7. C-in-C South-East placed 4th Regiment 'Brandenburg', an armoured reconnaissance company, and a battalion of 201st Assault Gun Brigade at the combat group's disposal.

knew about the actual situation in the kingdom. At the same time, Gerstenberg, in a deceptive manoeuvre, managed to evade Romanian surveillance and join the German troops in the Băneasa–Otopeni area. While he was in Otopeni, making the final preparations for action against the Romanian capital, which he decided to start at 06.30 without waiting for reinforcements, the head of the German military mission got through to the OKW and Army Group South Ukraine HQ. At about 03.30 Hansen managed to inform Col.-Gen. Jodl at Führer headquarters of the actual situation in the kingdom and in Bucharest. He explained to the head of the Wehrmacht operations staff that the events in Bucharest were ‘not a putsch by a court cabal, but a well-prepared *coup d'état* from the top, with the full agreement of the army and the nation as a whole’. The message continued:

People and troops informed by radio. Step has widespread support. Not a single general to be found to lead a counter-government against the king and the new government, since they are all, to the last man, loyal to the king. Comprehensive preventive measures taken against all German agencies and troops in Bucharest. No longer possible to transmit orders. Current balance of forces allows no prospect of military and political success.<sup>172</sup>

In subsequent talks with Friessner, the head of the German military mission again expressly emphasized that, in his view, ‘our forces are wholly insufficient to take possession of Bucharest and remove the new government, and the operation is certain to fail. He therefore strongly advises against taking the measures that have been ordered.’<sup>173</sup> Despite the serious reservations expressed by Hansen, who probably knew more than anyone else about the political and military conditions in Romania and in Bucharest, Hitler stuck to his decision, and the OKW accordingly ordered Gerstenberg to begin the attack on Bucharest immediately with his forces. As the Luftwaffe general too still thought at this point ‘that the Romanian government was just a little clique that was “shit-scared”, and that there was only a very thin screen of troops round Bucharest’,<sup>174</sup> he ordered the available troops on the Bucharest–Ploieşti road in the vicinity of the Otopeni airport and on the northern outskirts of the capital on the Pipera–Băneasa–Giuleşti line to take up initial positions.

To achieve Hitler’s objective, Gerstenberg’s main task was to conquer the greater Bucharest area and take over political power there. At the same time, Germany’s domination of the Ploieşti oilfields and the Prahova valley had to be secured, to ensure German control of the oil needed for the war effort and the indispensable route over the Carpathians, which for transport purposes was the only effective way of getting from the Greater Bucharest–Ploieşti area to the territory of the Reich. It was therefore incumbent upon Gerstenberg, before embarking on the armed operation, to assess the situation by means of a precise comparison of the human and material strength of the opposing forces, in order to determine the prospects of

<sup>172</sup> KTB Skl, pt. A., lx/II. 610.

<sup>173</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 56, BA-MA RH 19 V/36, fo.58.

<sup>174</sup> Ibid. 57, BA-MA RH 19 V/36, fo. 59.

success. That being so, the general must have realized at a very early stage that six divisions of the Romanian Territorial and Replacement Army, with 45,000 to 50,000 men, were stationed in the Giurgiu/Danube–Bucharest–Ploieşti–Braşov sector alone.<sup>175</sup> Even if the Germans were not necessarily aware that this territorial and replacement army was a highly trained and well-equipped fighting force,<sup>176</sup> which had been formed in view of the possibility of armed conflict with neighbouring Hungary and the recapture of central and northern Transylvania,<sup>177</sup> the massive concentration of troops in the Greater Bucharest–Braşov area, of which the German military authorities must have been informed, ought to have stopped the Germans from embarking on an armed operation in Wallachia.

The Wehrmacht operations staff confirmed Hitler's order at about 05.00, and Gerstenberg launched the attack on the Romanian capital at 08.30. The operation began in a highly amateurish fashion, without methodical assembly of all the available forces, and it met with substantial resistance from the outset. The combat group nevertheless managed to gain some ground, because on the morning of 24 August the Romanians had not yet sufficiently reinforced their troops in the northern section of the capital. The disarmament and internment of German agencies in Bucharest had not yet been completed, so substantial sections of the forces were not available to the military authorities in the capital (Comandamentul al Capitale) and their commander, General Iosif Teodorescu, for defence against the German attack. The Romanian units nevertheless succeeded in bringing the German advance to a standstill quite quickly. So Gerstenberg was already obliged, in the initial phase, to report that his mission had failed. He had to admit that the forces at his disposal were not sufficient to achieve the desired objective. At 11.30 the chief of staff at Army Group South Ukraine received news that 'the resistance is very strong and it is impossible to get into the city'.<sup>178</sup> The information prompted the army group to ask the OKW for more infantry. Grolman suggested bringing 'infantry reinforcements to Bucharest by air, particularly from the area of C-in-C South-East'.<sup>179</sup> Despite its own disastrous situation, the army group also endeavoured to strengthen Combat Group Gerstenberg by flying in two companies of local defence conscripts from Focşani to the area of operations on the northern outskirts of Bucharest. To support the battle on the ground, the Luftwaffe carried out massive air strikes on the morning of 24 August, designed primarily to destroy

<sup>175</sup> Data compiled from contributions in Duțu, Dobre, and Loghin, *Armata Română*, 147, 150 ff., 158, 166, 179, and 192 ff.

<sup>176</sup> On 15 August 1944 the Territorial and Replacement Army stationed in the 'Regiunea Interioară' numbered around 410,000 men (army alone). *Ibid.* 96.

<sup>177</sup> The demands for revision addressed to Romania by Bulgaria, Hungary, and the USSR led to considerable differences between Bucharest and Budapest regarding settlement of the territorial question. In the Axis arbitration proceedings brought by both sides, Hitler compelled the south-east European kingdom to cede large parts of Transylvania to Hungary. This decision was enshrined in an agreement signed in Vienna on 30 August 1940. The Second Vienna Award, as it was called, was regarded in Bucharest from the outset as a *diktat* that must be reversed by all possible means. See *Germany and the Second World War*, iv. 386–408.

<sup>178</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 57, BA-MA RH 19 V/36, fo. 59.

<sup>179</sup> *Ibid.* 58, BA-MA RH 19 V/36, fo. 60.

the political and military power centres in the Romanian capital. The bombing caused considerable damage but failed to bring the relief for which Gerstenberg had hoped. Nor did infantry reinforcements and a relief attack in the south of the city<sup>180</sup> improve the situation in the Otopeni–Băneasa area by the evening of the first day of the operation.<sup>181</sup> In addition, the personnel of the German military agencies were unable to support the efforts to occupy Romania's political and military power centres. The areas in which the German institutions were located had already been surrounded and cut off by military units under Teodorescu's command on the evening of 23 August. Teodorescu had all the personnel of the German military authorities and the embassy disarmed and interned in the course of the next two days, with the result that some 5,450 soldiers, more than 1,000 Luftwaffe female auxiliary staff, and almost 200 civilian employees ended up in Romanian prisoner-of-war camps.<sup>182</sup>

By the early evening Gerstenberg found himself facing a serious deterioration in the operational situation. Owing to inadequate reconnaissance, the combat group was unaware that an armoured battalion under the command of General Gheorghe Rozin, with some 50 tanks and a strong infantry component, had been on the way from Târgovişte to the area of operations north of the capital since the night of 23 to 24 August. By the morning of 24 August the battalion already had spearheads threatening the left flank of Combat Group Gerstenberg at Crevedia and Buftea, about 20 kilometres west of Otopeni. And by the evening the Romanian armoured battalion had taken up positions at Mogoşoaia with a view to cutting the important transport connections from Bucharest to Ploieşti and separating the German forces at Otopeni from the combat troops in the Ploieşti–Prahova valley area.<sup>183</sup> Although the armoured unit had not yet taken an active part in the operations, Gerstenberg realized that 'an attack to recapture the city and carry out the Führer order [...] is not feasible at present'. He was now obliged to admit that the operation could not be carried out successfully without bringing in heavy weapons and experienced fighting troops.<sup>184</sup>

It had become clear on the first day of the operation that Combat Group Gerstenberg's forces were not strong enough to break through the defensive positions on the outskirts of Bucharest, but the general nevertheless gave orders

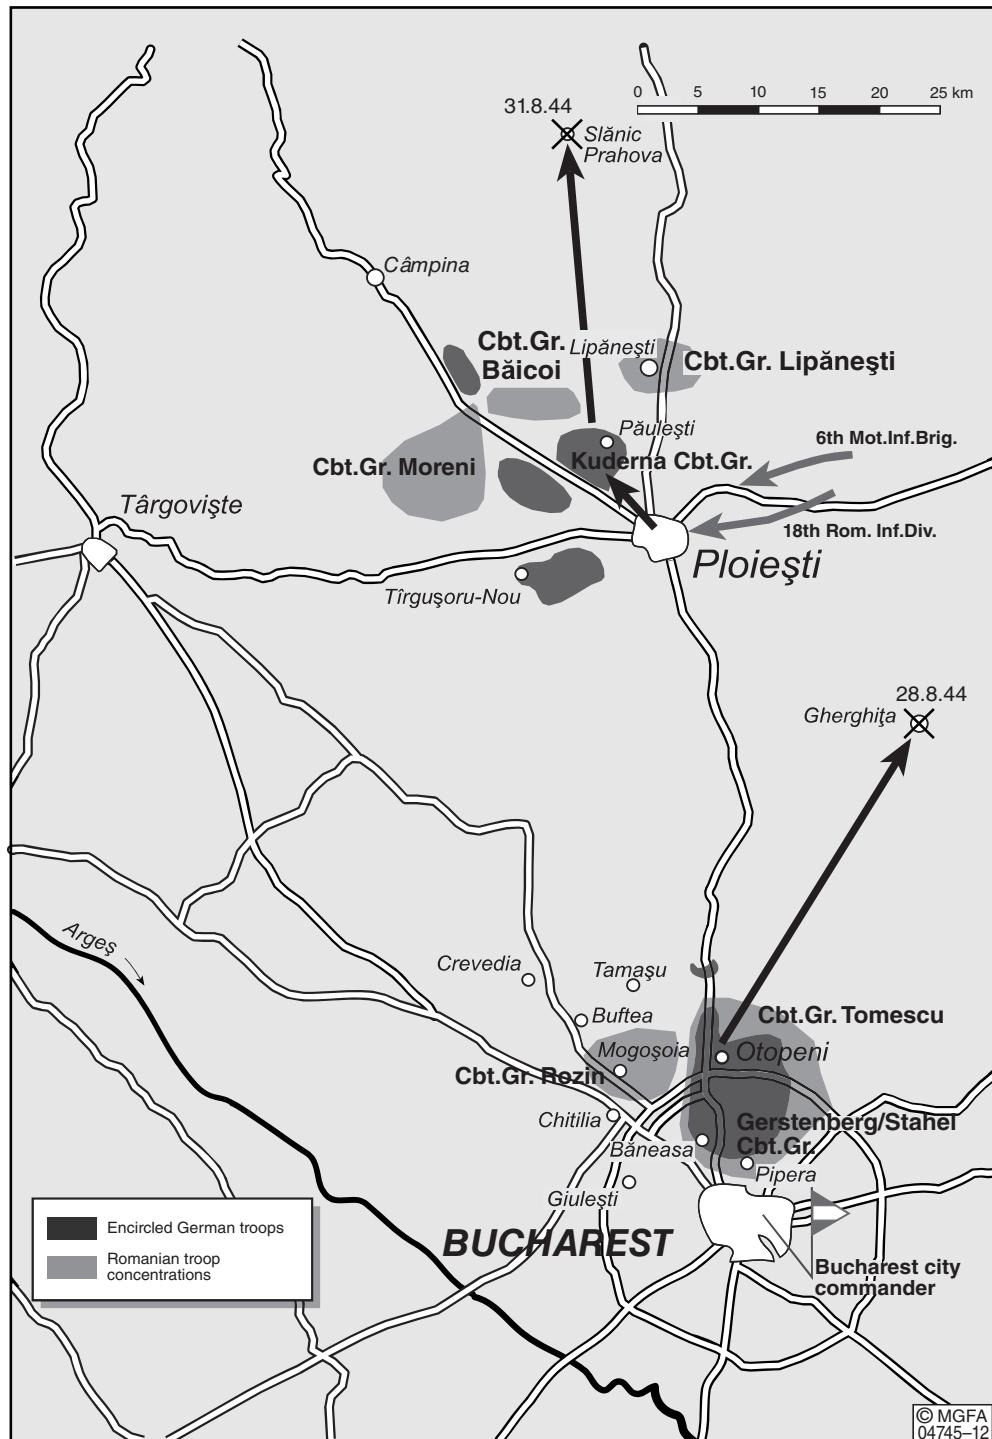

<sup>180</sup> Two German anti-aircraft batteries stationed at Măgurele and Progresu on the southern edge of Bucharest attempted to press forward into the city centre on 24 August 1944. The attack was stopped at the city limits just as it was getting under way. *România în Războiul Antihitlerist*, 73.

for the offensive to be resumed the following day, although he could not expect to have received any reinforcements by then. Even so, the German attackers gained some ground in the first assault on 25 August, because this time the thrust was more effective and better planned. Parts of Combat Group Gerstenberg managed to break into the Romanian defence lines in the course of the morning, before the offensive was brought to a halt north of the triumphal arch by strong enemy resistance. While Gerstenberg concentrated the main effort of the attack in the southern part of the area of operations, the Romanians opened hostilities at Chitilia. Towards midday General Rozin shifted the point of concentration of his operation to the north, as planned.<sup>185</sup> As the fighting on the northern outskirts of the Romanian capital intensified, C-in-C South-East HQ made supreme efforts to muster 1st Parachute Battalion, in order to get the urgently needed reinforcements to Romania as quickly as possible. By the following morning two companies had been successfully assembled at Kovin airport near Belgrade, but the flight to Otopeni was delayed by technical problems. However, even these experienced troop units, the first of which reached the combat zone in the early afternoon,<sup>186</sup> were unable to prevent the failure of the German operation.<sup>187</sup>

Towards noon, when the Bucharest military commander's units went over to the counter-attack and Rozin's armoured units launched an eastward attack from the Mogoșoaia–Tamașu line at almost the same time, Combat Group Gerstenberg was forced to abandon the positions it had won only a few hours earlier. The airports at Băneasa and Pipera were also lost during the withdrawal, leaving Otopeni as the only place where supplies for the combat group could be landed. In the early evening, when Rozin's units succeeded in cutting the crucial road link between the capital and the oilfields, the connection between the German forces in the Bucharest–Ploiești–Prahova valley area of operations was lost.<sup>188</sup> It was impossible for Gerstenberg to penetrate into the Romanian capital again, nor was there any chance of re-establishing contact with the units in Ploiești. The reinforcements of 400 paratroops urgently awaited for the past two days did not reach Otopeni until the morning of 26 August. They were in any case insufficient to avert the debacle. At almost the same time, Lt.-Gen. Rainer Stahel landed in Otopeni to take over from the Luftwaffe general unsuccessfully commanding operations in the north Bucharest area. However, given the human and material inferiority of the combat group, the army general too had no chance of performing his task and achieving Hitler's objective. The situation in the Otopeni area of operations became much worse in the second half of the day, when British and American bombers massively attacked Otopeni and Băneasa airports and the Stahel Group's positions in the

Băneasa forest.<sup>189</sup> The last contingents from 4th Regiment ‘Brandenburg’ and the close-combat school at Niš, which were being flown to Romania from Zemun and Niš, had to land at the airfield in Mizil, 35 kilometres east of Ploieşti, and could therefore not be deployed as reinforcements for the Stahel Group.

After Teodorescu’s and Rozin’s units had closed the ring round the German units on the afternoon of 26 August, they proceeded to attack the encircled combat group on all sides. The largely inexperienced German troops had the greatest difficulty in repelling the massive attacks by the Romanian forces, and the incipient shortage of ammunition made the situation even worse. Responsibility for Combat Group Stahel had been transferred while the heavy fighting was still going on at Otopeni, and the group was now under the command of Army Group South Ukraine because the chief of the OKW, in response to the Romanian declaration of war, had declared that the whole of Romania was now within the army group’s area of operations, with Friessner in charge.<sup>190</sup>

Stahel continued the battle on 27 August, regardless of the enemy’s superiority and the lack of any prospect of achieving the original operational objective. It was only late in the afternoon, when a great many more men had been lost and the ammunition situation had deteriorated dramatically, that the general decided to break out of the encirclement during the night in the direction of Mizil–Buzău, where it was thought the German lines were located. Stahel took this decision only after he had asked the army group whether the combat group could count on any reinforcements, and had failed to receive a positive reply.<sup>191</sup> The army group responded to Stahel’s radio message of the afternoon shortly before midnight, after consulting the OKH, and gave its approval for the general’s intention to break out of the encirclement. However, it ordered him to withdraw to Ploieşti, where he was to take over command and reinforce the combat action of 5th Anti-Aircraft Division. At the same time, the army group demanded that ‘the Ploieşti area be held at all costs’.<sup>192</sup> This stipulation, which was certainly necessary with regard to the overall military situation of the Third Reich on account of the oil deposits in the area, nevertheless showed how unrealistic both the OKH and—and this is particularly hard to understand—the army group itself were in their assessment of the situation in the Romanian theatre of operations. Combat Group Stahel probably did not receive the order from the high command in Slănic. The breakout into the Buzău area to the north-east took place in the evening and was highly

<sup>189</sup> According to Kissel, (*Die Katastrophe in Rumänien*, 144) Gerstenberg claimed after the war that ‘the success of the Romanian uprising was due not least to the heavy bombing of German bases by powerful American air-force units’. That claim, however, distorts the facts. The ‘Romanian uprising’ was approved and supported by the majority of the Romanian people and the Romanian army, and defended in the face of massive German intervention. So the attacks by British and American bombers, which only took part in the operations in the Bucharest–Otopeni area on 26 August 1944, had very little effect on the outcome of the German military intervention. The Stahel Group was defeated primarily because the Romanian forces were superior, and the Allied air raids merely hastened the process to some extent.

<sup>192</sup> Ibid.

successful at first, thanks to the element of surprise,<sup>193</sup> but it was brought to a standstill on the following day at Gherghita, about 20 kilometres south-east of Ploieşti, by the superior forces of the Romanian VI Army Corps.<sup>194</sup> And so, after four days of fighting, that was the end of the military adventure to capture Bucharest.<sup>195</sup> The operation initiated by Gerstenberg, ill-prepared and poorly executed, led to a further great sacrifice of men and material—a sacrifice that was pointless, if only because the operation did almost nothing to relieve the situation of Army Group South Ukraine.

The Ploieşti area was of the utmost importance for German conduct of the war, above all because of its oil production and processing installations,<sup>196</sup> but also as the gateway to the two northern passes over the Carpathians at Predeal and the Ciuc Massif crossing. The leadership in Berlin had consequently paid particular attention to this region of Romania since the beginning of the war. Even before the kingdom joined the Tripartite Pact, the Wehrmacht command had taken precautionary measures to preserve the possibility of intervening militarily in crisis situations to secure German access to the Ploieşti oilfields.<sup>197</sup> Whereas, especially at the beginning of the war, German interests were subject to possible Soviet claims to the oilfields, the situation changed radically from the summer of 1943, when British and American bombers succeeded in attacking and destroying production and processing plants, as well as storage tanks. This threat was an increasingly decisive factor in the deployment of troops in the Greater Ploieşti–Prahova valley area. In addition to a substantial anti-aircraft component, comprising about one-and-a-half anti-aircraft divisions, there was also an air-raid brigade and a range of construction, maintenance, transport, and special units in the area of the industrial city.

The OKW had transferred military responsibility for protecting and securing the oil-producing region to Lt.-Gen. Gerstenberg, as ‘oil-region commander’. In this capacity, he had some 26,000 German troops, stationed in the Romanian administrative district of Prahova, under his command at the beginning of August 1944. The largest force in terms of numbers was the anti-aircraft contingent, which alone comprised eight anti-aircraft battalions with a total of 45 gun batteries, plus support units.<sup>198</sup> Despite this relatively strong contingent, Gerstenberg had only a limited combat force at his disposal to execute his operational plans, although the 45 gun batteries were an important combat asset that could also be put to effective use in ground operations. However, most of the anti-aircraft guns were firmly embedded, so they could not be used for mobile ground combat. Furthermore, because of the Wehrmacht’s large manpower requirements, about half of the guns were manned

<sup>193</sup> In the night of 27 August 1944, the 2,000-strong Combat Group Stahel got as far as Balta Doamnei, about 30 km from Otopeni, where it encountered strong Romanian resistance; Duțu, Dobre, and Loghin, *Armata Română*, 46.

by Romanians, which further reduced the combat value of the anti-aircraft artillery units. The precarious military situation in Ploieşti was aggravated by the fact that the Romanian anti-aircraft gun emplacements were located within the German firing positions, so they cancelled each other out. Some of the German anti-aircraft batteries would therefore be of no use in the battle for the oilfields. Gerstenberg nevertheless hoped to make up for this deficiency with infantry units composed of stragglers from Sixth and Eighth Armies. However, those makeshift units lacked cohesion, and their combat strength was consequently limited.<sup>199</sup>

With regard to 'Oil Fortress Ploieşti', as Kissel calls it,<sup>200</sup> it should be pointed out that the German military authorities were frighteningly ill-informed about the relative strength of the Romanian forces in this region. Neither the oil-region commander nor the commander of 5th Anti-Aircraft Division had reliable information about the disposition and strength of the Romanian Territorial Army in the administrative district of Prahova. They did not know that the Romanian V Territorial Army Corps, with two replacement infantry divisions and a battalion of frontier troops, was in command there. This meant that, together with the anti-aircraft units, there were 23,000 members of the Romanian armed forces facing the 26,000 German troops deployed in the area. Despite their marginally smaller numbers, the Romanian forces' greater infantry combat strength gave them a considerable advantage. Gerstenberg conducted the operations in the north of Bucharest, and the commander of 5th Anti-Aircraft Division, Maj.-Gen. Julius Kuderna, took over the local command of 'Fortress Ploieşti'. The forces available were not strong enough to gain and exercise military control of the oilfield area, so in the night of 23 to 24 August Kuderna assembled most of his units north-west of the city to take part in the offensive. In addition to this mustering area, defended on all sides, there were several smaller strongpoints in the centre of the city and on the outskirts, mostly consisting of anti-aircraft batteries.<sup>201</sup>

Although the Romanian V Territorial Army Corps had already been alerted and dispatched to operationally important positions on 23 August, the Great General Staff ordered the corps to avoid all conflict with the German troops so long as they left the country without armed resistance. It was only when, following the Romanian radio declaration of war on 25 August, orders were issued to fight the German troops,<sup>202</sup> that V Territorial Army Corps too went into action against the Wehrmacht units.<sup>203</sup> As the German forces were not concentrated in an enclosed occupied district but were deployed at various points in the greater Ploieşti area, the Romanians had surrounded those bases during the two days before the fighting began. They were now well placed to attack the new enemy concentrically.<sup>204</sup>

As well as ground troops, a number of flying units were also stationed in the Bucharest–Ploieşti area. On 24 August they had already assembled at the Tîrguşoru-Nou airbase on the orders of Air Fleet 4 HQ, in view of the growing tension. The next day, Romanian units opened fire on the airfield with tanks and artillery, and the air commodore in charge, after consulting the air fleet HQ, ordered the breakout. Without informing 5th Anti-Aircraft Division, which had been in command of the flying units since the previous day, about 2,000 soldiers and 300 Luftwaffe female support staff left Tîrguşoru in the evening in the direction of Mizil-Buzău, in an attempt to reach the German front on the edge of the Carpathians. The group managed to break through the surrounding circle of Romanian forces and, under constant enemy attack, crossed the Carpathian ridge in the area of the Buzău pass and reached the German–Hungarian area of operations in south-eastern Transylvania.<sup>205</sup>

The commander of 5th Anti-Aircraft Division, who had holed up with about 6,000 men in a wooded area at Păuleşti, northwest of Ploieşti, had avoided any confrontation with the Romanian units until 25 August. As the authorities on the German side still thought they could once again change the military and political situation in the kingdom, Kuderna was preparing his troops to take possession of the oilfields and provide military support for a new ‘national government’.<sup>206</sup> Two days after the Romanians ceased hostilities against the Allies, the attack on the German positions was launched, with German and Romanian guns in the areas of the anti-aircraft batteries firing directly at each other. The small bases on the outskirts of the city were unable to hold out for long, but the Kuderna Group initially stood its ground against the assault at Păuleşti. Nevertheless, by midday on 27 August the town centre and all the refineries had been lost.<sup>207</sup> 5th Anti-Aircraft Division’s position had deteriorated steadily up to 27 August, and the unit was no longer in touch with Combat Group Stahel. In this critical situation, Kuderna applied to the air fleet HQ for instructions on the further conduct of operations. The air fleet responded by passing on the information it had received from the army group, namely that further forces were on the way to relieve the division, but referred insistently to the Führer’s order ‘to hold out to the last man’.<sup>208</sup>

The reinforcements announced by the army group consisted of the weak and decimated Combat Group Stahel, which was to break out of the encirclement north of Bucharest and make for Ploieşti. The army group’s order to continue to perform the allotted task gave Kuderna no room for manoeuvre, so 5th Anti-Aircraft Division was unable to leave the Ploieşti area and fight its way through to the safety of the German lines. The motley division therefore remained in Păuleşti, hoping

<sup>205</sup> Kissel, *Die Katastrophe in Rumänien*, 146 ff.

<sup>206</sup> On learning of the political events in Bucharest, the commander of 5th Anti-Aircraft Division contacted Gerstenberg on the evening of 23 August 1944, and asked the German oil-region commander for instructions. Gerstenberg told General Kuderna that ‘a national government was in the process of being formed and any conflict with Romanians was to be avoided’. See *ibid.* 145, 199 ff.

that the urgently needed reinforcements would soon arrive. On 29 August, a Red Army armoured unit launched an attack on the oilfields from Buzău.<sup>209</sup>

The situation of Combat Group Kuderna, which was also short of mobile anti-tank weapons and, above all, of food, was deteriorating to an alarming extent. That same evening the division received the army group's order to hold its present positions until Combat Group Stahel arrived in the defence zone at Păuleşti, when overall command would be transferred to Stahel. He, in turn, was ordered to 'fight through to the north after destroying all vital installations and weapons'. The order contained the statement by General von Grolman—downright absurd in the circumstances—that 'it is important not to incur unnecessary human and material losses by holding on too long'.<sup>210</sup>

On 30 August, as Combat Group Stahel had still not yet reached the area defended by 5th Anti-Aircraft Division and Kuderna's troops could now barely hold their own against the Soviet and Romanian attacks, the commander of the division decided to break out of the enemy encirclement that night and move north through the Teleajen valley to the Buzău pass. On the following day Combat Group Kuderna was surrounded once again at Slănic Prahova and summoned to surrender. Kuderna refused, and heavy fighting ensued, in the course of which the combat group broke up. While some 2,000 of the men managed to make their way through the passes south-east of Braşov to Army Group South Ukraine's front in Transylvania, large parts of the combat group—including Kuderna himself and Maj.-Gen. Georg Teschner—were taken prisoner by the Romanians at Slănic Prahova.<sup>211</sup> In addition to members of Combat Group Kuderna, the Romanian V Territorial Corps took more than 9,000 Wehrmacht troops prisoner in the area under its command.<sup>212</sup> Stahel had already been obliged to give up the struggle at Gherghiţa three days earlier. The Third Reich's plan to restore a pro-German government in Romania, and gain control of the strategically vital oil, had finally failed.<sup>213</sup>

The wrong assessment of the situation by the German commanders in Romania, and also by the top German political and military authorities, following the Romanian change of front, led to illusions about the actual political and military conditions in the kingdom. The measures ordered and executed on that basis, such as the bombardment of Bucharest and the armed attempt to take over the capital

<sup>209</sup> On 28 August 1944 Russian armoured forces broke through the German defence lines on the Focşani–Buzău road, in the south-eastern approaches to the Carpathians, and pressed forward into the Buzău area. A motorized infantry brigade managed to reach Ploieşti and join in the operations on the following day. KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 86, 88, 93, BA-MA RH 19 V/36, fos. 88, 90, 95.

<sup>210</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 97, BA-MA RH 19 V/36, fo. 99. Given the course operations had taken since 20 August, Army Group South Ukraine HQ was extremely slow to reach this conclusion.

<sup>211</sup> See Kissel, *Die Katastrophe in Rumänien*, 148.

<sup>212</sup> V Territorial Army Corps report, 7, Arh.M.Ap.N., fond Corpul 5 Teritorial, dosar 246, fo. 13; Duşa, Dobre, and Loghin, *Armata Română*, 368. It has been impossible to determine how many Germans were captured by Soviet units in the battles in the oil region.

<sup>213</sup> *România în Războiul Antihitlerist*, 90–101; Kissel, *Die Katastrophe in Rumänien*, 143–8; Hillgruber, 'Die letzten Monate', 396 ff.

and the strategically important oilfields, gave the Sănătescu government reason to declare war on the Third Reich and open hostilities against its former ally. Instead of availing themselves of what was at least a verbal promise of free passage out of the country, the Germans embarked on a military adventure that had no prospect of success and was of no operational use. The men and materials sacrificed in this all-or-nothing game were sorely missed when it came to establishing a reception and defensive line on the other side of the Carpathian ridge in Transylvania.

#### (d) The Army Group's Reaction to the Political Changes in Romania

The high command in Slănic did not receive, either from the German agencies in Bucharest or from the Reich government in Berlin, any information in connection with the major Soviet offensive indicating that there was a serious threat to the political position of the Conducător. Above all, Friessner's talks with Antonescu about the military situation in the Romanian theatre of operations, and the joint intention to move the forces of the two Axis partners back in stages to the Danube–Carpathian Fringe position, gave the army group the impression that the military alliance would hold for the foreseeable future. The army group HQ accordingly planned its military measures for the coming days on that basis.

In the course of 23 August it became clear that the Romanian 4th Army was going it alone and withdrawing from northern Moldavia, and around 20.30 the first rumours reached Slănic from Budapest that the political situation in Romania was now far from transparent. About half an hour after the high command in Slănic received this unconfirmed news from the German military mission, General von Grolman endeavoured to get an accurate picture of the situation in Bucharest. All that Gerstenberg could tell him, on the telephone, was that Antonescu 'has gone to see the king in the afternoon, and has not yet returned'.<sup>214</sup> In the course of the conversation, Gerstenberg said he hoped to know more about the political circumstances in Bucharest in about half an hour.<sup>215</sup> It was not until 22.15 that the army group HQ learned of this from Air Fleet 4. Apparently, King Michael had also received Baron von Killinger. In the course of this audience, the Romanian monarch had reportedly explained that he intended to make peace as soon as possible, and that he did not wish to wage war against the Germans. On the basis of these unconfirmed items of information, Grolman tried to get into direct touch with the German ambassador, and managed to do so around 22.25. In the course of the telephone call, Killinger said that:

he [had] heard during the afternoon that Antonescu had been arrested. He had immediately gone to see the king. The king had explained that the marshal had

<sup>214</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 49, BA-MA RH 19 V/36, fo. 51.

<sup>215</sup> The entries in the Army Group South Ukraine war diary contradict Kissel's claim (*Die Katastrophe in Rumänien*, 109) that Gerstenberg had already spoken to the chief of staff in the OKL, Gen. Werner Kreipe, at 20.00, and informed him of the *coup d'état* in Bucharest. Nor is it true that King Michael I made his proclamation on the political and military changes in Romania at 20.00. The radio address did not take place until 22.30. See *Procesul Mareșalului Antonescu*, i. 47.

resigned, and he had then formed a new government. The new government intended to seek an armistice. There was no question of military action against the German army. Any Russian demand to that effect would be rejected. The king had delivered a radio address that evening, announcing that Romania had accepted the Allies' terms for an armistice and was laying down its arms.<sup>216</sup>

Once the high command in Slănic had reliable information at its disposal, Friessner ordered the army group to take overall command of all Wehrmacht units and agencies in Romania with immediate effect. In issuing this order, Friessner was reacting spontaneously to the political changes and, in view of the catastrophic situation in the southern section of the eastern front, took a decision that had been approved neither by Hitler nor by the OKH or OKW. Only at about 23.00 did the army group inform the subordinate military authorities of the events in the kingdom, which radically altered the political and military situation in the southern section of the eastern front. The commander-in-chief ordered all military agencies in Romania to prepare fully to defend themselves, albeit with express instructions that no active measures were to be taken against the former Axis partner.<sup>217</sup>

The two Romanian armies had already been informed of the new situation at about 22.30. General Șteflea's successor as chief of the Great General Staff, General Gheorghe Mihail,<sup>218</sup> notified both army HQs that Antonescu had been deposed by the king, and that a new government had been appointed, headed by Sănătescu. In his telephone call, Mihail informed the army HQs that Romanian units were no longer under the orders of the German high command, and ordered the immediate cessation of all military action against the Soviet forces.<sup>219</sup>

It was only when there was unambiguous information confirming the new situation that Friessner personally notified Hitler of the events and of 'the assumption of overall command of all German military agencies in Romania'.<sup>220</sup> He also explained to Hitler that all German units must be moved back to the Carpathian fringe as quickly as possible in order to exploit the geographical advantage of the mountain barrier for the establishment of a defence line. Hitler said he agreed unreservedly with the army group's proposals and measures, and would confirm those measures in a written directive.<sup>221</sup>

At this point, the bulk of Sixth Army was engaged in a desperate defensive battle south-west of Chișinău to prevent its virtually inevitable encirclement by Soviet troops. The high command in Slănic had very little information about this, as the lines of communication with units east of the Prut had broken down. However, it

<sup>216</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 49, BA-MA RH 19 V/36, fo. 51.

<sup>217</sup> Ibid. 50, BA-MA RH 19 V/36, fo. 52.

<sup>218</sup> General Gheorghe Mihail was chief of the Romanian Great General Staff from 23 August to 12 October 1944. See Ardeleanu, *Sefii*, 175–82.

<sup>219</sup> General Mihail's verbal instructions were confirmed in writing by Order No. 678563 of the Great General Staff, which reached the Romanian 3rd and 4th Armies HQs at about 24.00 on 23 August; Rom. 4th Army war diary, August 1944, 6 (23 Aug. 1944), Arh.M.Ap.N., fond Armata 4, dosar 221, 180.

<sup>220</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 50 ff., BA-MA RH 19 V/36, fos. 52 ff.

<sup>221</sup> Friessner, *Verratene Schlachten*, 87 ff.

soon became clear to the army group that the three German army corps fighting in the area between the Dniester and the Prut had very little chance of making their way to the German lines in western Moldavia. The Mieth Group too was in danger of being encircled and destroyed in the Huși area. In these new circumstances, the army group ought to have taken immediate steps to establish an interception and defence line for the few remaining units in southern Moldavia, between the Danube delta and the Carpathians or on the Carpathian fringe. The high command in Slănic could not be sure that the battle-worn Wehrmacht units in the army group rear area (*zona de etape*) and in the area west of the demarcation line (*regiunea interioară*) would manage to withdraw to the Carpathian region and thereby avoid capture by Soviet and even possibly by Romanian forces. There was likewise no question of disarming and neutralizing the Romanian units in the army group's area of command, because the necessary forces were lacking. The only forces available to the army group for the establishment of an interception and security line at the foot of the Carpathians were the few units of Eighth Army HQ fighting a defensive battle west of the Seret. In these disastrous circumstances, it was essential to occupy all the approaches to the Carpathian passes as quickly as possible so as to avoid losing the link with the territory of the Reich.

In the hope that not all Romanian commanders would accept King Michael's action, Friessner contacted the commanders-in-chief of the Romanian 3rd and 4th Armies during the night of 23 to 24 August, asking them, in view of the changed circumstances, where they stood on the political issue in Romania. Dumitrescu replied that he had only heard about the radical events in Bucharest on the radio, and the armies had not received any new orders so far. He himself would continue to perform his present task until he received new instructions from the Great General Staff. Dumitrescu also stressed that he personally regretted the political changes but was not in a position to oppose his king.<sup>222</sup> Șteflea said much the same, although at this stage both commanders-in-chief were aware of the orders issued by the new chief of staff, General Mihail. The two army commanders were probably playing for time, because they could not rule out the possibility that the Wehrmacht intended to disarm the Romanian forces and occupy the country. Their concern was not unfounded: the army group was engaged in serious discussions with the OKH operations division about disarming the Romanian units. In the end, the idea was abandoned because there were evidently not enough troops available to perform the task.<sup>223</sup> From these conversations, it was clear to the Germans in Slănic that none of the Romanian commanders was prepared to take a stand against the king.

In view of the changes in the configuration of forces on the southern wing of the eastern front, all that the army group could do was try to organize a stable line of resistance with the few units remaining at its disposal. In order to do so, Friessner

<sup>222</sup> Report from Col.-Gen. Dumitrescu to the Romanian war minister, 10 September 1944, Arh. M.Ap.N., fond Armata 3, dosar 3065, fos. 284 ff.; KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 59 ff., BA-MA RH 19 V/36, fos. 61 ff.

<sup>223</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 60 ff., BA-MA RH 19 V/36, fos. 62 ff.

had to restrain Hitler and the Wehrmacht operations staff from taking armed action against the kingdom. Only if the Romanian forces remained neutral was there a small chance of rescuing substantial sections of the encircled Sixth Army, which could then be employed in establishing a new and stable defence front. Conversely, Hitler's plan to reverse the political situation in Romania by force would make armed conflict with the former Axis partner inevitable. Hitler nevertheless gave orders to take Bucharest, imprison the Romanian monarch and the members of the new government, and install a pro-German regime. On the German side, it was believed in all seriousness that this heavy-handed intervention in Romania's internal affairs—despite the royalist attitude of the officer corps—would not affect relations with the Romanian armed forces,<sup>224</sup> even though both Germany's leading diplomatic representatives in Bucharest, Killinger and Clodius, and the head of the German military mission, General Hansen, urgently warned against taking any such military steps and advised against armed intervention.<sup>225</sup> In these circumstances, important operational measures needed in order to stabilize the southern section of the eastern front were neglected. The commander-in-chief of the army group and his operations department were mainly to blame for these omissions because, although they were perfectly well aware of all the relevant political, military, geographical, and infrastructural factors, they were unwilling, and apparently also unable, to take the operational and tactical decisions that would have minimized the catastrophe in the Romanian theatre of operations.

### (e) The Withdrawal to the Carpathian Ridge

From an operational point of view, Army Group South Ukraine's only remaining option was to establish a new resistance and interception line at the foot of the eastern Carpathians and, if possible, on the eastern border of Wallachia. The high command in Slănic therefore had to endeavour, first and foremost, to protect the approaches to the Carpathian passes. Only if that was done would the beleaguered army group still have some prospect of bringing the front to a halt. However, this called for rapid and innovative action as the situation in western Moldavia and Wallachia was constantly changing. Visibly surprised by the news that the kingdom of Romania had ceased combat operations and broken off bilateral relations with the German Reich, Hitler had agreed unreservedly to Friessner's proposal 'to withdraw the German troops to the Carpathian Fringe position immediately, by the fastest route'.<sup>226</sup> Although, as already mentioned, Hitler had spontaneously announced that he would issue a directive fulfilling all the army

<sup>224</sup> In a telex from Abt. Ia, No. 3240/44, g.Kdos, sent at 01.00 on 24 August 1944, C-in-C Army Group South Ukraine instructed Sixth and Eighth Armies, the German general at the Romanian high command, the admiral of the Black Sea fleet, Air Fleet 4, and other German military agencies that the action against the Romanian king and the new Romanian government was not to affect their relations with the Romanian armed forces; KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 58, BA-MA RH 19 V/36, fo. 60.

<sup>225</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 56, BA-MA RH 19 V/36, fo. 58.

<sup>226</sup> Ibid. 51, BA-MA RH 19 V/36, fo. 53.

group's demands, he did not do so. Consequently, the army group did not know what operational objectives Hitler was pursuing with regard to the precarious situation in the southern section of the eastern front. As a result of the hesitant attitude adopted by both Hitler and the OKH, Friessner's proposals were soon overtaken by events. The army group nevertheless stuck to its operational plan, regardless of the overwhelming events. At the height of the military crisis, the high command in Slănic firmly maintained its position, despite the fact that the changed constellation of forces in the Moldavian–Bessarabian theatre called for further directives. Even when Wenck asked the army group for information on 24 and 25 August, Friessner's operations command was not prompted to take any new initiatives.

At this point, General Wöhler's Eighth Army was the only force that could be called upon for defensive tasks in the Carpathian foothills west of the Seret. This weak army, which had had only the Mieth Group under its command when the Iași–Chișinău operation began,<sup>227</sup> had been obliged to withdraw to the south of the Iași area at a very early stage under pressure from superior Soviet forces. Thus, on 23 August Wöhler still intended to withdraw the army detachment's northern wing to the other side of the Moldova and to hold the positions on the Seret with a bridgehead at Bacău. The commander-in-chief proposed to protect southern Moldavia on an Adjud–Bârlad defensive line, while the Mieth Group, fighting in the Huși area, continued to defend the area between the Bârlad valley and the Prut.<sup>228</sup>

The Romanian 4th Army's withdrawal from the operational command of Army Detachment Wöhler in the night of 23 to 24 August meant that Eighth Army now had to establish a resistance and interception line between Kuty and Adjud with its remaining resources. For this task, the army had at its disposal XVII Army Corps, which was occupying a front line on the left wing in an area outside the Soviet area of operations, the severely depleted LVII Armoured Corps west of Bacău,<sup>229</sup> and the remnants of various troop units operating as the Abraham Group (Lt.-Gen. Erich Abraham), which was defending the section between Bacău and Adjud. Sixth Army, with the remnants of XXIX Army Corps, deployed in the Greater Tecuci–Focșani–Galați area south of Adjud, was attempting to prevent Soviet forces from advancing into Wallachia. Given the relatively small forces at its disposal, Eighth Army HQ could only establish a defensive front in the form of a series of strongpoints on the Moldova and west of the Seret between Fălticeni (on the Moldova, 35 kilometres north of Târgu Neamț) and Adjud, taking advantage of the hilly terrain in the Carpathian foothills.

When the Romanian 4th Army ceased joint operations, Eighth Army was obliged to regroup itself from the remnants of Army Detachment Wöhler in order to establish a stable and, as far as possible, gap-free front with the remaining

<sup>227</sup> On 20 August 1944 Eighth Army had three Romanian and two German divisions in the main battle line, and three divisions of the Romanian army on the Trajan line. The total strength was approximately 70,000, of which about 17,000 members of the Wehrmacht.

<sup>228</sup> Kissel, *Die Katastrophe in Rumänien*, 103.

<sup>229</sup> On 24 August 1944, LVII Armd.A.C. had under its command the remnants of 46th Inf.Div. and the 20th Armd.Div.Cbt.Gr.

forces. While this task caused very few problems on the left wing between Kuty and Târgu Neamț, LVII Armoured Corps had no alternative but to withdraw to the heights west of the Moldova and the Bistrița on 24 August, abandoning the strategically important traffic node of Bacău. Next to LVII Corps, the Abraham Group, with newly formed units made up of stragglers and rear support personnel, endeavoured to prevent the Soviet 7th Guards Army from penetrating into the eastern Carpathians in the Bacău–Adjud area. The battles for the important Carpathian crossings, especially in the southern area of command area, determined Eighth Army's conduct of operations in the last days of August. The Abraham Group now bore the greatest burden, attempting to hold the Trotus valley at Adjud to prevent the loss of the Oituz, Uz, and Ghimeș passes, which were of vital importance for the German forces' withdrawal from Romania. The Abraham Group was holding the advancing Soviet forces back only with great difficulty. The Soviet 7th Guards Army, in particular, was trying to get through the passes to the Brașov area, so as to block the Kuderna and Stahel Combat Groups' withdrawal to Transylvania and bring about the collapse of the Carpathian front. Although the strategically important town of Onești near Târgu Ocna had already fallen into enemy hands on 25 August, the German units initially managed to prevent the Soviet forces from advancing into the Carpathian valleys.<sup>230</sup>

The Abraham Group was in a critical situation from 25 August, when the German units were also attacked by sections of the Romanian 4th Army redeployed in the Greater Bucharest–Ploiești area. In response to the German assault on the Romanian capital, the Greater General Staff had ordered that all German troops, who were now to be regarded as enemies, were to be disarmed and 'driven' out of the kingdom.<sup>231</sup>

In its withdrawal battles in western Moldavia, Eighth Army profited mainly from the fact that the terrain in the eastern Carpathians was favourable to defence. Nevertheless, LVII Armoured Corps and the Abraham Group had no alternative but to withdraw gradually to the mountain ridge by the end of August. XVII Army Corps, on the other hand, essentially succeeded in holding its section of the front in Bukovina. It was only obliged to withdraw to the west at Târgu Neamț, in the southern section of its combat area, in order to avoid losing contact with the neighbouring corps. In the last few days of August the first Hungarian units joined in the hostilities, supporting the army's left wing. In view of the desperate situation on the whole of the eastern front, the OKH could let Army Group South Ukraine have only one more division, which Eighth Army deployed at several crucial defence points.<sup>232</sup>

<sup>230</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 52–54, 63–6, 68, BA-MA RH 19 V/36, fos. 54–6, 65–8, 70.

<sup>231</sup> Romanian Greater General Staff, Order Nos. 648603, 678586, 678601, 25 August 1944, Rom. 4th Army war diary, August 1944, 2–5 (25 Aug. 1944), Arh.M.Ap.N., fond Armata 4, dosar 221, fos. 237–40.

<sup>232</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 69 ff., 72 ff., 75–7, 81–4, 86–91, 93–5, 97 ff., 100 ff., BA-MA RH 19 V/36, fos. 71 ff., 74 ff., 77–9, 83–6, 88–93, 95–7, 99 ff., 102 ff.; *Die geheimen Tagesberichte*, x. 472, 475, 478, 482, 485, 488, 491, 493.

Even the serious changes in Romania did not appear to the OKH to constitute grounds for intervening in the army group's conduct of operations. It only changed its mind three days after the coup in Bucharest, when it sent the high command in Slănic a directive on the future conduct of operations on the southern wing of the eastern front. The army group was instructed 'to establish a new defence front on the Galați–Focșani–Carpathian Fringe line, and to win back the Danube line between the mouth of the river and Galați'.<sup>233</sup> To carry out this task, the only force left in the area between the Danube and Focșani, apart from remnants of Eighth Army, was XXIX Army Corps, which was withdrawing to the Seret at the time. Since there were no strong Wehrmacht troop units either in northern Dobrogea or in the Galați–Brăila area, the directive was wholly illusory: the OKH completely ignored the military realities in the Romanian theatre of operations. By the following day, XXIX Army Corps had already abandoned the positions on the Seret and was struggling to escape encirclement by the enemy. Only a few units managed to get through to Transylvania, where Army Group South Ukraine HQ intended to establish a new front in the Carpathians to protect Transylvania, using the remnants of Sixth and Eighth Armies, as well as the 4th Mountain Division and Hungarian forces which had been brought in.

Despite all the difficulties, Army Group South Ukraine established a defence front in the eastern Carpathians at the end of August with the few units that managed to escape from the inferno in the Moldavian–Bessarabian area of operations. In this, the army group mainly profited from the fact that the terrain was favourable to defence, an essential requirement if the depleted German troops were to withstand the attacks by Soviet and Romanian forces. In particular, the fact that the main effort of the Red Army operations was directed at capturing the Ploiești oil region and taking possession of the Romanian capital and the Wallachian lowland plain proved to be a stroke of luck for Army Group South Ukraine. It was only owing to these factors that Eighth Army had the opportunity to consolidate its forces and continue the defensive battle.

#### (f) **The Destruction of Sixth Army**

At the time of the political and military rupture in Romania, the German Sixth Army had very little chance left of preventing disaster in the Bessarabian–Moldavian theatre of war. Large German units appeared to be on the brink of destruction, not only in the Chișinău area, where the remnants of four corps comprising 13 divisions in all were desperately trying to reach the Prut, but also in the region to the north and west of Huși, where IV Army Corps—the Mieth Group—was engaged in a desperate defensive battle against the far superior forces of 2nd Ukrainian Front. The Mieth Group, which had been placed under Sixth Army HQ on the afternoon of 23 August, was struggling to halt the Soviet attack north of Huși, between the Bârlad valley and the Prut, so as to enable the four corps

<sup>233</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 71, BA-MA RH 19 V/36, fo. 73.

in Bessarabia to cross the river and give them a chance to reach the Danube–Carpathian Fringe defence line. In case the Soviet 52nd Army and 6th Armoured Army succeeded in getting past the Mieth Group and pushing southwards, Sixth Army HQ had deployed the remnants of XXIX Corps on the Bârlad–Falciu line to shield southern Moldavia. To protect the eastern flank, LXXII Army Corps had been specially deployed on the lower Prut between Cahul and Galați, together with the remnants of 13th Armoured Division and weak units from Galați, Brăila, and Focșani.<sup>234</sup>

The German Sixth Army, which still had the remains of seven army corps at its disposal, was affected only indirectly by Romania's withdrawal from the joint conduct of operations. The only Romanian unit under its command since the start of the Soviet Iași–Chișinău operation was the Romanian 14th Infantry Division, which was deployed with VII Corps and, on the evening of 23 August, was withdrawing with that corps from the Răut to the Prut. So, from 24 August on, Sixth Army HQ could rely exclusively on Wehrmacht units for the conduct of operations. Nevertheless, the lack of resistance of the Romanian units, which were hopelessly inferior to the attacking Soviet forces in every respect, had contributed significantly to the inferno in the area of Sixth Army. On the fifth day of the major Soviet offensive, VII, XXXXIV, LII, and XXX Corps were engaged in a defensive battle against four full-strength Soviet armies in the region west of Chișinău. Not only in Bessarabia but in Moldavia too, the Mieth Group was attempting north of Huși to prevent three Soviet armies from advancing into southern Moldavia. Altogether, Sixth Army faced six Soviet armies of 2nd and 3rd Ukrainian Front, whose task on 24 August was to continue the offensive with all speed, complete the encirclement of the German forces, take the section of the German defence line on the Seret, and press on without delay to Galați, Ismail, and the lower reaches of the Prut in southern Bessarabia.<sup>235</sup>

In the face of this onslaught, the commander-in-chief, General Fretter-Pico, had no alternative but to withdraw the units under his command from Bessarabia to the west bank of the Prut as quickly as possible. An attempt had to be made to keep a corridor open between Bârlad and the Prut, to enable any encircled forces to get back to the Danube–Carpathian Fringe position. For these tasks, Sixth Army HQ had only three weak, battle-worn corps at its disposal in central and southern Moldavia. Of the four army corps in Bessarabia that were withdrawing to the Prut, VII Army Corps, deployed on the left wing, had the best prospect of reaching Moldavia, as its four divisions were already close to the two bridges over the Prut at Scopoșeni and Leușeni on the evening of 23 August. 370th Infantry Division, fighting on the left flank, managed to cross the river that same night. On entering Moldavia, the unit came under the command of the Mieth Group, which assigned it the task of clearing the enemy forces out of Huși to reopen the way for the corps to withdraw to the Danube–Carpathian Fringe position. In the course of 24 August, 376th Infantry Division also managed to pass through the eye of the

<sup>234</sup> Kissel, *Die Katastrophe in Rumänien*, 117–19.

<sup>235</sup> Mazulenko, *Die Zerschlagung der Heeresgruppe Südukraine*, 72.

needle at Scopoşeni. This division, now also under the command of the German IV Corps, was ordered to establish a defence line north of Huşi in order to halt the enemy advance and prevent the loss of the Prut river crossings at Scopoşeni and Leuşeni.<sup>236</sup> The Romanian 14th Infantry Division, whose spearheads had reached the eastern bank of the river border between Moldavia and Bessarabia at the time of Romania's withdrawal from the Axis Pact, crossed the river in two groups the following day. In Moldavia the division remained divided. The eastern group was taken in by Soviet forces north-east of Huşi, while the western group, after crossing the Prut, made for Arsura–Huşi, disarming German units at Duda, north of Huşi, on the way.<sup>237</sup> Only the corps staff and 106th Infantry Division, which were supposed to cross the river at Leuşeni, failed to make it, because the Soviet VII Motorized Corps had captured the bridge in the meantime. The unit's attempt to withdraw northwards to the emergency bridge at Scopoşeni also came to nothing. So this division too was exposed to the inferno in Bessarabia.<sup>238</sup>

While VII Army Corps' situation on Sixth Army's left wing was still, to all appearances, relatively favourable on 23 and 24 August, XXX Corps, which had managed to fight its way back to the Ciberna area on the right wing of the area of operations and had been under constant attack by the Soviet 57th Army, was already in a disastrous situation at this point. The constant attacks of the advancing enemy forces, combined with the Soviet 37th Army's ongoing attacks on the corps' southern flank, delayed XXX Army Corps' westward retreat and forced its northwards, causing it to encroach increasingly on the neighbouring LII Corps' withdrawal sector.<sup>239</sup> The pace of 37th Army's advance had even more serious consequences for the situation in the Bessarabian theatre of war as a whole. This large Soviet formation was able to push west unimpeded into central Bessarabia, and not only outflank the retreating Sixth Army but also veer north-west into the Taraclia–Satu Nou area, 20 kilometres east of Cimişlia. It then stood facing XXX, LII, and XXXXIV Corps, reducing their room for manoeuvre and cutting off the way to the river border between Moldavia and Bessarabia.<sup>240</sup> Although 2nd and 3rd Ukrainian Fronts were unable to close the circle round Sixth Army on the eastern bank of the Prut on 24 August, the bulk of the army was nevertheless hemmed in. This success was attributable partly to the Soviet 52nd Army south of Huşi, which had broken through to the Prut and cut the Mieth Group's narrow corridor on the west bank of the river. As a result, on the evening of 24 August there were five army corps with 17 divisions enclosed in the Huşi–Gura Galbenă–Nisporeni area.

At the time when the ordered withdrawal from the Răut and the Dniester to the Prut was descending into chaos, neither the Sixth Army commander-in-chief,

<sup>239</sup> Ibid. 119 ff.; Benary, *Die Berliner Bären-Division*, 178–83; Willemer, *Die 15. Infanterie-Division*, 202–6.

<sup>240</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 52 ff., 61 ff., BA-MA RH 19 V/36, fos. 52 ff., 63 ff.; Kissel, *Die Katastrophe in Rumänien*, 119 ff.; Willemer, *Die 15. Infanterie-Division*, 202; Lang, *Die Geschichte der 384. Infanterie-Division*, 25–7.

General Fretter-Pico, nor his chief of staff was with the hard-pressed troops in the Bessarabian theatre of operations. As the Sixth Army HQ command post had been moved to the area south of Tecuci, the army command was now outside the enclosed area, some 300 kilometres away from the action,<sup>241</sup> and had very little information about the dramatic events east of the Prut. The radio and telephone connections in the area of operations had almost all broken down. What is more, those in charge at Sixth Army HQ had neglected to assign one of the commanding generals to take charge of the encircled forces if developments made it impossible to lead operations from the command post in Moldavia.<sup>242</sup> As a result of Sixth Army HQ's behaviour in this critical situation, the command authorities and the various units were left to their own devices. So each unit endeavoured, without any coordination or control, to reach the Prut as quickly as possible in order to escape destruction by the enemy forces. Instead of seeking a solution to the situation that could rescue the eastern section of Sixth Army from the chaos, the lack of action on the part of Sixth Army HQ suggests that the encircled units were simply left to their fated destruction without any clear leadership or any specific combat instructions.

After 3rd Ukrainian Front had failed to completely encircle the four Wehrmacht corps in Bessarabia on 24 August, the armies under its command were ordered to split the German forces and destroy them. The infantry units were to attack the enclosed German troops concentrically from the south-east, east, and north in the Sărata Galbenă–Gura Galbenă area, while the armoured units, in conjunction with the Soviet 52nd Army and 2nd Ukrainian Front's XVIII Armoured Corps, prevented an enemy breakthrough in the Dranceni–Leova section. Although the enclosed German forces proved to be in no state to take effective action against the superior enemy forces, the four corps nevertheless attempted to beat off the strong Soviet attacks and break through the enclosing ring southwards to the Prut river crossings, believing that the west bank of the river was still in German hands.

On 25 August, while the German troops in the Bessarabian area of operations were engaged in a hopeless battle for survival, Army Group South Ukraine simply recorded that 'the position of Sixth Army, which was virtually encircled', was serious.<sup>243</sup> In his evening briefing with Guderian, the army group's commander-in-chief, wholly misjudging the real situation, expressed the hope that parts of the

<sup>241</sup> Fretter-Pico claims in his memoirs (*... verlassen von des Sieges Göttern*, 154) that he 'received an explicit order not to allow himself to be caught in the encirclement forming around the main body of Sixth Army'. Kissel gives a similar version, based on a statement by Fretter-Pico: 'The army group's Ia [...] arrived in Comrat [...] in the morning [of 22 August 1944]. He passed on the "Führer order" that the army staff must not allow themselves to be encircled'; Kissel, *Die Katastrophe in Rumänien*, 100 and 166, n. 100. Nothing was found in Army Group South Ukraine's records to indicate that the army group HQ received such a 'Führer order' or that Sixth Army HQ was given any such instructions.

<sup>242</sup> Mazulenko (*Die Zerschlagung der Heeresgruppe Südukraine*, 77) claims that the general commanding XXX A.C., Lt.-Gen. Georg Postel, 'had assumed overall command of the breakout attempt'. That is also Kissel's version (*Die Katastrophe in Rumänien*, 125). While no evidence has been found that another of the four commanding generals (Gen. Ernst-Eberhard Hell, VII A.C.; Gen. Ludwig Müller, XXXXIV A.C.; or Gen. Erich Buschenhagen, LII A.C.) took command of the forces encircled in Bessarabia, it is highly unlikely that Postel was chosen for the job, since he was the lowest of the four in respect of rank, age, and military seniority.

<sup>243</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 68, BA-MA RH 19 V/36, fo. 70.

enclosed Sixth Army would make their way through to the German lines.<sup>244</sup> But this withdrawal too was chaotic. Of the four corps comprising Sixth Army's eastern group, only a few remnants withstood the enemy attacks until 28 August. All communication lines between the army HQ and the eastern group had been cut since 26 August. Air reconnaissance provided the army group with the last information it was to receive from the Bessarabian theatre of operations, where 'the remnants of XXX, LII, and XXXIV A.C.' were 'crammed together in an extremely small area on the east bank of the Prut, 20 km east of Huşi, under attack on all sides by enemy armoured forces', and engaged 'in extremely heavy combat'.<sup>245</sup> It was only in the course of the day that the army group HQ also understood that it was unlikely, 'in view of the increasingly strong encircling front and the growing supply problems [ . . . ], that battle-worthy sections of these divisions will be extricated'.<sup>246</sup> Only a few groups eventually managed to cross the Prut, where some of them came upon troops of IV Corps, who were also enclosed.<sup>247</sup>

On the other hand, the fate of the only German division fighting in southern Bessarabia under the command of the Romanian 3rd Army was already sealed. The German 9th Infantry Division, placed under the command of the Romanian III Corps on 22 August as a result of developments south of the Tiraspol bridgehead, was driven south-west in the course of the Soviet 46th Army offensive and encircled on 23/4 August in the Sărata area. Attempts to break through the encircling ring failed. On the evening of 24 August the remnants of the division decided to lay down their arms and surrender. From that time on, there were no German troops left in central and southern Bessarabia.<sup>248</sup>

The bulk of IV Army Corps was engaged in operations to the north and west of Huşi, with the task of keeping the Prut river crossings in that region open for Sixth Army's eastern group. The Mieth Group was obliged to hold firm on the defence front north of Huşi on account of the dramatic developments on the other side of the Prut. As a result of the Soviet 37th and 57th Armies' operation south-west of Carbuna, situated 25 kilometres north-east of Cimişlia, which had blocked XXXXIV, LII, and XXX Army Corps' way back to the river crossings at Leuşeni, Stanileşti, and Leova, the only available bridge for the German troops withdrawing westwards was now the bridge at Scobeşeni. IV Army Corps' operations kept substantial forces tied down in the northern section of its combat area, so those forces were lacking for defence against the Soviet attacks south and south-west of the town of Huşi. That was the main reason why the Soviet 18th Armoured Corps was able to capture that important traffic node at the entrance to the lower Prut valley on 24 August. At this decisive juncture XXIX Army Corps was not strong enough to establish a defensive line in the northern Bârlad valley and strengthen the connection with the Mieth Group, so IV Corps was also encircled from then on.<sup>249</sup>

<sup>249</sup> Kissel, *Die Katastrophe in Rumänien*, 118, 128 ff.; Rehm, *Jassy*, 78–85.

In the worrying situation in which the Mieth Group now found itself, there were three possibilities for the further course of operations. The most obvious was to recapture Huşi and open up the Prut valley to the south without delay. Alternatively, it might have been feasible for the corps, with its five hard-hit divisions, to break through westwards to the Carpathians. The commanding general finally decided to stick to the task in hand. The area north of Huşi was held accordingly, at least until 25 August, and an attempt was made to retake the town and the river valley at Stanileşti and Leova, in order to enable Sixth Army's eastern group to cross to the west bank. The Mieth Group had no accurate information about the operational situation in the Bessarabian theatre of war, so it was also unaware that the river crossings at Stanileşti and Leova were already blocked on the east bank by units of the Soviet 37th Army. Since the bridges at Stanileşti and Leova had to be reopened, IV Corps had to liberate both Huşi and the Prut valley south of the town. The commanding general decided on this option. On 25 August he gave orders for the town to be taken, but the units deployed were not strong enough. The corps HQ was obliged to move the attack to the west, in order to bypass the town, and to press on southwards to Urlaţi and Hoceni. The breakthrough west of the city was completed successfully on 26 August, but the limited local offensive came to a standstill in the Urlaţi–Hoceni area, because the Soviet 52nd Army had established a strong defence line west of the Stanileşti and Leova bridges.

On 27 August, after the battle-worn IV Corps units had spent two days endeavouring in vain to break through the Soviet lines, Mieth decided to break out of the encirclement in a westerly direction with what was left of the corps. Although the commanding general of IV Corps had changed his operational intentions in view of the developments and because his troops were completely exhausted, and had abandoned the battle for the Prut river crossings, the army group still thought that at least some units of the eastern group would be able to get out of Bessarabia and reach the German lines. For that reason, Sixth Army HQ now put IV Army Corps in command of all enclosed units on both sides of the Prut.<sup>250</sup> This would have been a sensible move at an earlier point but, as matters now stood in the greater Huşi area, it came too late. It is probable that neither the Mieth Group nor the corps and divisions in Bessarabia received the Sixth Army directive, as there were no telecommunication connections. This assumption is supported, in particular, by the fact that Mieth stopped the attack on Hoceni and ordered the breakout from the encirclement. By his decision to place the remnants of the four corps on the east bank of the Prut under the command of IV Army Corps, the Sixth Army commander-in-chief, Fretter-Pico, avoided direct responsibility for the fate of the troops fighting for their lives in Bessarabia.

Friessner still nurtured the groundless hope that some battle-worthy units could be rescued from the inferno in Bessarabia. During his visit to the Sixth Army command post on 27 August, he ordered 'the divisions east of the Prut to turn back, cross the Prut further to the north, and then attempt to break through westwards to the Carpathians with the divisions that were already located further

<sup>250</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 75, BA-MA RH 19 V/36, fo. 77.

to the west'.<sup>251</sup> The army group's directive was sent blind the same evening, by radio, to the encircled command and units of Sixth Army.

In the first phase of its attempted breakout on the morning of 28 August, the Mieth Group concentrated on taking Vutcani and the Bârlad section to the west. In the next phase, it planned to cross the Bârlad in close order, then split up and press forward to the Carpathian passes in separate combat groups. The plan was essentially successful up to the capture of the high ground west of Vutcani. After that, the attack collapsed in the course of 29 August, not only because the enemy forces were superior but also because the German troops were completely exhausted. A few small groups fought their way through to the German lines in Transylvania in the course of the next few weeks, but the rest of the Mieth Group was destroyed by the end of August in the area round Vutcani.<sup>252</sup>

By 25 August XXIX Corps, which had been assigned the task of protecting the section of the line between the Bârlad and the Prut south of Huşi against Soviet assaults, and keeping the bridgeheads at Leova and Falcu open, was already unable to hold its own any longer against the superior strength of the Soviet 52nd Army. The northward counter-attack with the remnants of the armoured and mobile units, aimed at restoring the connection with the Mieth Group and retaking the Leova bridgehead, also had to be abandoned on 26 August as a result of enemy superiority. The attack, which was extremely important for the conduct of the forthcoming operation in the Buzău–Galaţi area, failed largely because of a lack of coordination between IV and XXIX Corps. Mieth, who had not been informed of the proposed counter-offensive south of Huşi, stuck to his task of taking the area north of the city. So the chance of breaking through the encircling ring with a coordinated attack from north and south, and opening it up at least to some extent, was lost. When XXIX Corps' operation failed in the course of 26 August, it was ordered by Sixth Army HQ to withdraw to the south bank of the Seret between Galaţi and Naneşti.<sup>253</sup> In the course of that withdrawal, it managed to retake the Seret river crossing at Naneşti, which was already in Soviet hands, and hold it until all the units of the corps that were still engaged in defensive battles against the pursuing enemy forces north of the river had crossed the Seret. While XXIX Army Corps was establishing a temporary defensive line between Naneşti and Galaţi, 2nd Ukrainian Front, with the Soviet 27th and 6th Armoured Armies, was able to move south along the Adjud–Focşani–Rîmnicul Sărat–Buzău road without impediment, outflank XXIX Corps to the west in the course of 27 August, and cut off the way back to the Carpathian passes. As a result, the defensive line on the Seret lost its operational significance, especially since, as the army group had already realized on the morning of 27 August, it could no longer be held with the forces available.<sup>254</sup>

<sup>254</sup> Report by Major General von Grolmann to Lt.-Col. von dem Knesebeck, 1st General Staff Officer, OKH Operations Division, in a telephone conversation at 12.45 on 27 August 1944, KTB H. Gr. Südukraine, Abt. Ia, No. 4, i. 79, BA-MA RH 19 V/36, fo. 81.

As 2nd Ukrainian Front intended, after its breakthrough at Focşani, to roll up the Seret line from the rear, Friessner instructed XXIX Corps to withdraw towards Buzău and block the Carpathian spurs between Ploieşti and Focşani.<sup>255</sup> This decision by the commander-in-chief also came too late for XXIX Army Corps to act on it, as the spearheads of two Soviet armies had already advanced past Buzău to Ploieşti. When the corps reached the area south of Buzău on the following day, it was obliged to recognize that it no longer had the necessary combat strength to break through the massive Soviet defence block on the edge of the Carpathians. In the circumstances, the commanding general gave the armoured units permission to withdraw southwards to Bulgaria. Some units attempted to do so, while others, led by the commanding general, tried to break through the enemy lines and reach the Carpathian passes. In the case of XXIX Corps too, only small groups were able to avoid capture by the Red Army or internment in Bulgaria.<sup>256</sup>

The battles in Bessarabia and Moldavia, which resulted in the almost complete destruction of six corps and 20 divisions, and the loss of some 150,000 German troops,<sup>257</sup> show the extent of the errors committed in the command of Sixth Army. During the months when the army was in the Romanian theatre of operations, both the army itself and the army group failed to plan or prepare for a possible withdrawal to the Prut line or the Danube–Carpathian Fringe position. Moreover, the army group stuck firmly to an operational concept based on the deployment of mobile and armoured reserves at a time when the armoured units had already been moved to other sections of the front. The army command was also too late in recognizing how dangerous its situation was in the defensive positions north and east of Chişinău. It is therefore no surprise that the withdrawal to the Prut, necessitated by the operational situation, ended in chaos. For this, and for Sixth Army's downfall in Romania, several factors were decisive. In the first place, Sixth Army HQ wholly underestimated the impact of the Soviet offensive on 20 August, and it accordingly made no preparations to react immediately and effectively to an encirclement by the enemy. The high command in Tarutino failed to pass on information about the start of the large-scale enemy offensive or to take emergency measures, so the command authorities and units subordinate to it were unaware of the serious changes on the southern wing of the eastern front. As a result, the troops on the Răut–Dniester front were unable to adjust to the new situation. In addition, the army command post was a long way from the area of operations, and the available means of communication were extremely limited, so when it became clear that there was a danger of encirclement, Sixth Army HQ had almost no means of

<sup>255</sup> Telephone conversation between C-in-C Army Group South Ukraine and the chief of the Army General Staff at 23.15 on 27 August 1944; KTB H.Gr. Südukraine, Abt. Ia, KTB No. 4, i. 80, BA-MA RH 19 V/36, fo. 82.

exercising effective central control over the course of operations in the Chişinău–Huşi area as a whole. When things had reached the stage where the hostilities in Bessarabia and on the west bank of the Prut were coming to an end, and the almost complete destruction of Sixth Army could no longer be prevented, the Sixth Army commander-in-chief, Fretter-Pico, abandoned the encircled units to their fate. This tragic outcome finally dispelled the illusion that the Soviet offensive in northern Bessarabia could be halted with the resources of a single army.

### (g) The Withdrawal to Bulgaria

While most German troops in the Romanian theatre of operations tried to reach the Carpathians, the only way out for the units deployed in Dobrogea was to withdraw to Bulgarian territory. The units in question comprised some 50,000 German troops, mainly belonging to the navy, stationed in the Constanţa area under the command of Admiral Black Sea. They were taken by surprise both by the political developments in Romania and by the Soviet 57th Army's rapid advance in southern Bessarabia. As a result, the German units east of the Danube were soon left to fend for themselves.

When the Romanian 3rd Army ceased hostilities on 24 August and withdrew to the area south of the Danube, 3rd Ukrainian Front was able to advance westwards into the Bessarabian coastal region unimpeded. On 25 August, spearheads of the Soviet 57th Army aiming to take control of the Dobrogea region had already reached the Danube estuary and were crossing the river at Ismail and Tulcea. Only a short time before, the remnants of the Romanian 3rd Army had left Bessarabia at Chilia and were moving into rearward positions in the Bucharest–Ploieşti area.<sup>258</sup> Col.-Gen. Petre Dumitrescu's army had also moved out of northern Dobrogea, so as not to get in the way of the Soviet 57th Army's offensive operations. By the evening of 25 August the Soviet spearheads had already reached Babadag in their advance to the Bulgarian border. So the Soviet forces were now within 50 kilometres of Constanţa, where the naval units were still busy making defensive preparations and evacuating the port and the city.<sup>259</sup> In so doing, the Admiral Black Sea, Vice-Admiral Helmuth Brinkmann, was endeavouring to comply to some extent with Hitler's order of the previous day that the port at Constanţa and the surrounding area were to be occupied immediately.<sup>260</sup> However, there were not enough troops with ground combat experience to perform this task, and by 24 August it was far too late for such measures. The German naval units were unable to overcome the resistance of the numerically superior Romanian troops, especially as they had no support from Luftwaffe or army units, which had already been withdrawn by that time. In these circumstances, Brinkmann decided on the afternoon of 25 August to conduct the ground operations from the Tirpitz battery under Naval Commander Romania, and

<sup>258</sup> Rom. III Army Corps war diary, April–September 1944, 25–9 Aug. 1944, Arh.M.Ap.N., fond Corpul 3 Armata, dosar 111, fos. 209–22; Duşa, Dobre, and Loghin, *Armata Română*, 35, 112, 162, 182; KTB Skl, pt. A, lx/II. 641.

<sup>259</sup> Kissel, *Die Katastrophe in Rumänien*, 139 ff.

<sup>260</sup> KTB Skl, pt. A, lx/II. 611.

ordered the seaborne units to leave the port of Constanța and move to Mangalia. All troops unfit for combat were to be taken to Bulgaria. This measure was contrary to an order issued by Naval Group South in Sofia early in the afternoon, forbidding any encroachment on Bulgarian territory because of the potentially unfavourable repercussions on Bulgaria's political position.<sup>261</sup>

That order from Naval Group South was prompted by the huge shift in political opinion in Bulgaria against Germany in the last few days of August, as a result of the disastrous situation in the Romanian theatre of operations and the *coup d'état* in the neighbouring country. A political development aimed at withdrawing from the war with as little friction as possible was reaching its climax. That process, which had started in the summer of 1943 as a result of German military failures, gathered strength as the Axis powers suffered increasing setbacks in all theatres of war. As to making peace, Bulgaria's foreign-policy arrangements had the clear advantage that all the government needed to do was to approach the western powers through diplomatic channels to agree on the necessary terms. According to the state authorities in Sofia, there was no need to conduct negotiations with the Soviet government since the country was not at war with the USSR and had always taken care not to be drawn into the armed conflict between the USSR and Germany. Although Bulgaria had taken a number of steps since the middle of 1943 to loosen its economic ties with Germany, to improve bilateral relations with the Soviet Union, and to close the Black Sea ports to German warships, all attempts to make peace with the western powers had failed. Sofia's efforts came to nothing primarily because of the western Allies' dilatory response, but also because Great Britain and the United States insisted on unconditional surrender without at the same time guaranteeing to protect the kingdom against military attacks by the Third Reich.

After the Soviet Iași–Chișinău operation had led to the collapse of the German-Romanian front, the Romanian forces had ceased military operations, and the kingdom had broken off diplomatic relations with National Socialist Germany, the Bulgarian leadership fell into turmoil under the pressure of German and Soviet demands. At the last moment, they strove to avoid becoming a victim of the armed conflict.<sup>262</sup> Bulgaria withdrew its armed forces from the occupied territories in Thrace and Macedonia, and demanded of Germany that the Wehrmacht units leave the country immediately. On 6 September the Bulgarian government broke off diplomatic relations with Germany, but even a cabinet reshuffle on 1–2 September was ultimately to no avail. The foreign-policy concept of the Bulgarian leadership fell to pieces on 5 September, when the USSR broke off bilateral contacts and declared war on the kingdom. Three days later, Soviet armed forces marched into Bulgaria unopposed.<sup>263</sup>

The consequences of the political volte-face in Bulgaria were felt particularly sharply by the Wehrmacht units fleeing from Romania to the neighbouring country. The government in Sofia was naturally afraid that an over-accommodating

<sup>261</sup> Ibid. 649. <sup>262</sup> KTB OKW, iv/1, 809.

<sup>263</sup> Hoppe, *Bulgarien*, 148–85; Gosztony, 'Der Krieg zwischen Bulgarien und Deutschland', 23–8; Rhode, 'Bulgarien', 1256.

treatment of German troops could be ‘interpreted as an attitude of hostility to the Allies’.<sup>264</sup> On 25 August it changed its policy and began disarming all members of German units who fled into Bulgaria from the neighbouring country. At the same time, the Bulgarian minister of war, General Rusi Rusev, asked the German military mission to instruct Wehrmacht troops entering the country from Romania to deposit their weapons at collection points set up by the Bulgarian 3rd Army. The German military attaché, General Heinrich Gädé, objected to this request as contrary to the principles of the Tripartite Pact, but Rusev issued the order to disarm despite the German objection.<sup>265</sup> The Bulgarians did refrain from interning Wehrmacht troops but, after the Soviet government expressed its displeasure, a start was eventually made on this too.<sup>266</sup> Hitler categorically refused to accept it,<sup>267</sup> but agreed to the honourable disarmament of members of the Wehrmacht on condition that officers were allowed to keep all their weapons, and NCOs and other ranks their bayonets.<sup>268</sup> A further condition was that ‘the rest of the weapons that are confiscated [...] are to be transported in a special railway carriage with our troops, under Bulgarian guard, and returned after the Wehrmacht units in question have crossed through Bulgaria’.<sup>269</sup> The measures taken by the Bulgarian army after 24 August caused a considerable amount of tension, leading to local armed clashes in some cases.<sup>270</sup>

Despite the changed political relations, the government in Sofia applied the above measures only to German troops fleeing from the Romanian theatre of war. Wehrmacht units stationed in Bulgaria, as well as Wehrmacht agencies in the country, were not affected, and the state authorities endeavoured to have the German forces leave the country immediately.<sup>271</sup> Nevertheless, by the beginning of September almost 20,000 members of the Wehrmacht, most of them from the area under the command of Admiral Black Sea, had been disarmed and detained. As well as naval units, a few units from Army Group South Ukraine and the German military mission in Romania managed to withdraw to the territory of the Bulgarian Axis partner. Some local command posts were very lax in implementing the internment measures, so a good many German troops had escaped Bulgarian custody by the time diplomatic relations were broken off on 6 September.<sup>272</sup> Internment was also lifted in many cases following negotiations with Naval Group South, and several hundred marines were able to leave the country as

<sup>264</sup> Hoppe, *Bulgarien*, 168. After the Bulgarian prime minister, Ivan Bagryanov, had declared in the Sobranie (Bulgarian parliament) on 17 August 1944 that the country was returning to a policy of neutrality, had confirmed that intention on 23 August, and had announced the kingdom’s withdrawal from the war, Bulgaria was obliged under international law to disarm and intern all combatants then on Bulgarian soil who had taken part in the hostilities between the Axis powers and the Allies.

a result.<sup>273</sup> For many, however, the hope that in reaching Bulgarian territory they had escaped being taken prisoner of war by the Soviets proved a delusion, because after 8 September the former Axis partner handed over to the Red Army all the German troops it had in custody.

In less than two weeks the southern section of the eastern front had collapsed and the vitally important Ploieşti oil region had been lost. In the Romanian theatre of war Germany had lost 286,000 men, dead or captured. In addition to the human losses, the material damage was huge: almost all the heavy weaponry and telecommunications equipment, most of the motor vehicles, and large quantities of supplies and munitions had fallen into enemy hands.<sup>274</sup> With the *coup d'état* in Bucharest and the kingdom of Romania's withdrawal from the Tripartite Pact, German hegemony in south-east Europe collapsed in very short order, like a house of cards.

### 3. THE BATTLES IN TRANSYLVANIA (AUTUMN 1944)

In the last few days of August, the remnants of Eighth Army and a great many straggler units were engaged in massive battles for the road passes in the eastern Carpathians. On the one hand, the barrier of the Carpathian mountains was a lucky advantage for the shattered army group, because the terrain gave it the chance to establish a new interception and defensive line with the few units that had escaped the inferno in eastern Romania. On the other hand, the central and southern sections of the eastern Carpathians posed a risk to the weak and decimated German units, because the region's numerous mountain passes enabled 2nd Ukrainian Front, whose troops were superior in all respects, to overcome the territorial obstacle with all speed and push into central Transylvania. For, in spite of the advantages afforded by the terrain, the few German units, with little experience of infantry operations, had great difficulty in covering access to all the passes, and in blocking them effectively and durably against the advancing enemy forces.

#### (a) The Establishment of a Defensive Front in the Carpathians

As 2nd Ukrainian Front's advance was initially confined to the Wallachian lowland plain, the situation on Army Group South Ukraine's left wing was slightly less tense. The Axis powers were nevertheless facing an extremely critical situation in the Danube–Carpathian area since, on the one hand, there was now an enormous gap in the front in the Transylvanian Alps as a result of the collapse of Army Group South Ukraine, and, on the other, there were no battle-worthy troops available in Serbia east of the Morava river to stop the westward advance of the Soviet troops. If 2nd Ukrainian Front reached central Serbia, Malinovsky's troops would threaten Army Group E's rear communications in Greece. A further possibility that could not be ruled out was that the enemy forces might turn north and advance unimpeded

<sup>273</sup> KTB Skl, pt. A, Ix/II, 805, 838.

<sup>274</sup> Kissel, *Die Katastrophe in Rumänien*, 153.

to the Tisza plain in Hungary. If that happened, the German–Hungarian troops on the southern tip of Székely Land, in particular, would be threatened.

In view of the possibilities open to the enemy, the first concern of the army group HQ in Szováta had to be to use all available units which could be taken from the eastern and south-western sections of the army group front despite the tense situation, and those sent in by the OKH, to establish at least a security line in the form of a series of strongpoints between Marosvásárhely and the Danube at Orşova. In addition to securing western Transylvania, the army group was forced to consolidate the central and northern part of its almost 1,000-kilometre-long defence line. The army group did not have much trouble in carrying out this task on its northern wing, since XVII Corps, which was deployed south of Kuty, had been relatively untouched by the Soviet Iaşi–Chişinău operation. Adjoining XVII Army Corps, which had been reinforced by two Hungarian divisions, Eighth Army HQ had been obliged to move the front back over the east Carpathian ridge, where, between the Ghimeş and Oituz passes, Combat Group Kirchner (LVII Armoured Corps command), with the lightly hit 46th Infantry Division, 4th Mountain Division, which had been brought back again,<sup>275</sup> emergency units made up of stragglers, and weak Hungarian frontier troops, was endeavouring to prevent Soviet units from penetrating into central Transylvania. The southern section of the front in the Braşov area, adjoining the Romanian–Hungarian border established by the Second Vienna Award, was to be defended by Sixth Army. The only forces available for this task were emergency units, consisting mainly of Sixth Army stragglers<sup>276</sup> who had managed to escape from the inferno in Bessarabia. Adjoining the German units, the Baraolt–Marosvásárhely line was held by parts of the Hungarian 9th Replacement Division. At Marosvásárhely the front turned west to the area of Kolozsvár, where the Hungarian 2nd Army<sup>277</sup> was deployed<sup>278</sup> to prevent the Romanian 4th Army<sup>279</sup> from gaining access to the crossing over the

<sup>275</sup> 4th Mtn.Div. had been moved out of the area of command of Army Group South Ukraine only at the beginning of August. KTB H.Gr. Südukraine, Abt. Ia, No. 3, x. 115, 120, 126, 131, 136, 142, 146; xi. 1, 7, 11, 15, 20, BA-MA RH 19 V/29, fos. 115, 120, 126, 131, 136, 142, 146, and RH 19 V/30, fos. 3, 9, 13, 17, 22.

<sup>276</sup> On 31 August 1944, Sixth Army HQ had under its command LXXII A.C. HQ, on special duties without troops, and XXIX A.C. with the remnants of 13th Armd.Div., 10th Armd.Inf.Div., 306th Inf.Div., and 153rd F.T.D; Order of Battle, status at 31 Aug. 1944, from *Die geheimen Tagesberichte*, xi. 337.

<sup>277</sup> The Hungarian 2nd Army consisted of the Hungarian 25th Inf.Div., the Hungarian 2nd Armd.Div., and the Hungarian 7th and 9th Replacement Divisions. This gave it only limited combat strength, which was further reduced by the deployment of parts of the Hungarian 9th Replacement Division to secure the border north of Baraolt; Ravasz, 'Az Erdély hadniveletek 1944', 395–406.

<sup>278</sup> In response to the events in Romania, Hungary mobilized its replacement army on 26 August 1944 in order to strengthen the protection of the border in Transylvania. This developed into the plan to occupy the Romanian part of Transylvania. The mustering of troops for that purpose began on 28 August, after Hitler had given his approval the previous day; KTB OKW, iv/1, 835 ff.

<sup>279</sup> After the cessation of hostilities in eastern Romania, most of the Romanian forces were assembled in the Greater Bucharest–Ploieşti area and in southern Transylvania. In southern Transylvania, the Romanian 1st and 4th Armies, now under Romanian command, were engaged at the end of August in preparations to recapture Transylvania. As from 7 September 1944, both armies were placed under the command of 2nd Ukrainian Front.

Table V.vi.2. Army Group South Ukraine: order of battle (status: 31 August 1944)

Division	Corps	Army	Army Group
13th Armd.Div. (remnants)

3rd Mtn.Div.	XVII A.C.		
8th Lt.Inf.Div.			

The following Sixth and Eighth Army units were still fighting in Bessarabia and Moldavia: IV A.C.: 79th, 258th Inf. Div.; VII A.C.: 106th, 370th, 376th Inf.Div.; XXX A.C.: 15th, 257th, 302nd, 320th, 384th Inf.Div.; XXXXIV Armd.C.: 62nd, 282nd, 335th Inf.Div.; LII A.C.: 161st, 294th, Inf.Div.

Mureş. The barely 400-kilometre-long section between Aiud and the Danube at Orşova could not be secured because neither C-in-C South-East nor Army Group South Ukraine had the forces to establish a defensive line in southwest Transylvania.

At this point, when the army group command was looking to rebuild and consolidate its forces after the catastrophe in eastern Romania, Hitler issued a directive on 29 August on the future conduct of operations in the Hungarian–Romanian theatre. In accordance with the directive, the OKH assigned the high command in Szováta the task of ‘gaining and holding a continuous defensive line from the Bulgarian–Romanian border on the Carpathian ridge to the point of connection with the right wing of XVII A.C.’.<sup>280</sup> To enable it to perform this task, the OKH reinforced the army group with 4th Mountain Division and indicated that 75th Infantry Division might be brought in. The additional forces were to take possession of Braşov and the Predeal pass. At the same time, ‘Hungarian 2nd Army, currently being reformed, and Cdr. Operational Zone Hungary East’<sup>281</sup> were placed under the command of the army group HQ. As well as the Wehrmacht, Reich Leader SS Heinrich Himmler also intervened in the defensive measures taken in Transylvania in this precarious military situation. On Hitler’s orders, he sent SS Obergruppenführer and Waffen SS General Artur Phleps to Transylvania with a twofold task: on the one hand, as senior SS and police leader, to expedite the recruitment of Romanian ethnic Germans into the Waffen SS and, on the other, to organize military defence in the greater Marosvásárhely area.<sup>282</sup>

The army group command acted on the OKH’s instructions only two days later, in an order addressed to the subordinate command authorities. Its assessment of the situation was based on the assumption that, after a short initial operation in

<sup>280</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 99, BA-MA RH 19 V/36, fo. 101.

<sup>281</sup> Ibid.

<sup>282</sup> Ibid. 91, 99, 105, BA-MA RH 19 V/36, fos. 93, 101, 107.

the Bucharest area, the Soviet forces intended to take possession of the Carpathians and, by conquering Romanian Transylvania, advance deep into the army group's southern flank. On that assumption, the army group stuck to its mission to defend south-eastern Europe, exploiting the strong natural barrier of the Carpathians, so as to maintain the connection with C-in-C South-East (Army Group F) at the Iron Gate. To that end, the army group proposed to advance southwards through Romanian Transylvania, and to take and block the high pass in the southern Carpathians (the Red Tower pass).<sup>283</sup> Under the operational plan, Eighth Army was to continue to defend the army group's eastern front with the help of reinforcements on its southern wing, and to maintain the connection with Army Group North Ukraine. Sixth Army, in close conjunction with Eighth Army, was to take over the task of protecting the army group's southern flank, so as to prevent the Soviet–Romanian forces from crossing the Carpathians and continuing their offensive in a northerly direction. The central task assigned to Sixth Army by the high command in Szováta was 'in the course of reorganization [ . . . ], to extend steadily westwards along the frontier to the point of connection with the Hungarian 2nd Army and, on completion of the Hungarian 2nd Army and Transylvania Group offensive operation,<sup>284</sup> to proceed with its west wing to take possession of the wooded heights north-west of Braşov and block the passes there'.<sup>285</sup>

In order to close the gap between Aiud and the Iron Gate and establish a defensive line on the northern edge of the Transylvanian Alps, the army group now had no alternative but to advance the front southwards from Mureş to the Red Tower pass, and to take and block the mountain crossing. As the army group did not have the necessary troops of its own, the proposed offensive had to be conducted by the Hungarian 2nd Army, which had assembled in the Kolozsvár area at the beginning of September. The attack was to be supported from the Marosvásárhely area by the Transylvania Group. Although the German–Hungarian forces assembled at Kolozsvár were not yet at full combat strength at this point, the OKH's operational objectives had some prospect of success because the Romanian 4th Army, which was still in the process of refreshment, was only just preparing to attack on the Târnăvelor plateau (between the Mureş and the Făgăraş mountains). Friessner did not want to carry out the OKH's more extensive order to take Braşov and the Predeal pass until the attack on the Red Tower pass had been successfully concluded. That task was to be undertaken by the Transylvania Group.

In addition to taking the Red Tower pass, Army Group South Ukraine and Army Group F also had to strive to occupy and block the Vulcan pass further to the

<sup>283</sup> H.Gr. Südukraine, Abt. Ia, No. 3361/44 g.Kdos, 2 Sept. 1944, quoted in Study P-114c, pt. 7, annexes, 162, app. 86, BA-MA ZA 1/2078, fo. 165; KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 120 ff., BA-MA RH 19 V/36, fos. 122 ff.

<sup>284</sup> SS Obergruppenführer Phleps had been given the task of organizing the 'Transylvania' Group, with 8th SS Cav.Div. and 75th Inf.Div., in the Marosvásárhely area. LXXII A.C. was to be placed at his disposal as operations staff on special mission. KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 91, BA-MA RH 19 V/36, fos. 93, 123.

<sup>285</sup> H.Gr. Südukraine, Abt. Ia, No. 3361/44 g.Kdos, 2 Sept. 1944, quoted in Study P-114c, pt. 7, annexes, 162, app. 86, BA-MA ZA 1/2078, fo. 165.

west, which 2nd Ukrainian Front would aim for if it advanced into the Hungarian lowland plain. This was essential if the gap between the area of command of C-in-C South-East and Army Group South Ukraine's area of operations in Romanian territory was to be closed. After a short halt in the Greater Bucharest–Ploieşti area to make preparations for its next push forward, 2nd Ukrainian Front resumed its advance with two armies side by side, with the point of concentration in western Wallachia, and reached Craiova on 4 September. The spearheads of 6th Armoured Guards Army were now only a day's march from the Danube gorge at Turnu Severin. The high command in Szováta also had to assume that some units of the armoured army might turn north on reaching the greater Craiova area and make for the Vulcan pass. The Soviet 27th Army, operating in the north, covered the offensive in that quarter and, after taking Ploieşti, advanced on the Predeal and Red Tower passes, with a view to bypassing the Făgărăş mountains and attacking the German–Hungarian defensive front in Székely Land from the rear.<sup>286</sup>

Despite the fact that the army group was now in an extremely critical situation north of the Tîrnavelor plateau and in the western Mureş valley, Friessner decided to launch the attack to the south without waiting for reinforcements. The commander-in-chief proceeded on the principle that he could risk a counter-attack with the weak German–Hungarian forces at his disposal so long as the only enemy force operating in the area between the Mureş valley west of Marosvásárhely and the Făgărăş mountains was the Romanian 4th Army, which was re-forming after its withdrawal from Moldavia. Rapid action against a weak adversary offered the only chance of taking the mountain ridge and the Red Tower pass before Malinovsky's troops arrived, and so gaining a favourable starting position for the further hostilities in Transylvania.

In early September, while 2nd Ukrainian Front continued to advance towards central Transylvania and Serbia, the Romanian 4th Army was mustered under Avramescu's command at Făgărăş on the upper reaches of the Olt. Its task was to defend the pass against a German–Hungarian offensive and prepare the operation to recapture northern Transylvania. Avramescu's formations adopted a defensive stance during this refreshment period, but Romanian units were nevertheless feeling their way towards the border fortifications in the Baraolt area.<sup>287</sup> It was not until 2 September that the Romanian troops advanced against the weak security line on the Olt at Sepsiszentgyörgy, after expiry of the deadline for the evacuation of northern Transylvania set in a Romanian ultimatum to the Hungarian government.<sup>288</sup> Hungary's defence forces were unable to withstand the Romanian attack,

<sup>286</sup> Boltin, 'Die Zerschlagung', 474 ff.

<sup>287</sup> Ottu, 'The Defensive Operation of 4th Romanian Army'; Duțu, Dobre, and Loghin, *Armata Română*, 36.

<sup>288</sup> King Michael I had already announced, in his proclamation on 23 August 1944, that 'Romania would mobilize all its forces to cross the borders established in the unjust Vienna agreement [the Second Vienna Award], and liberate Transylvania from foreign rule'. Arh.N.R., fond Ministerul Propagandiei Nationale, dosar 245/1944, fo. 213. On this basis, the Sănătescu government broke off diplomatic relations with Hungary on 30 August 1944 and issued an ultimatum demanding that Hungary evacuate northern Transylvania within 48 hours. Should Budapest fail to comply with the ultimatum, Bucharest threatened to declare war on its neighbour; Gosztony, *Hitlers Fremde Heere*, 426.

with the result that enemy units managed to break through the border fortifications at some points and were soon established on the east bank of the river.<sup>289</sup> Although Friessner had intended to launch the attack to the south, with the Hungarian 2nd Army, as quickly as possible, in order to take the Red Tower pass and the southern Carpathians, the Romanian 4th Army was nevertheless able to refresh its forces and prepare for the forthcoming offensive without any impediment, because owing to delays in mustering the Hungarian forces, the attack had to be postponed for two days, until 5 September. The Transylvania Group had not completed its preparations by 3 September either, especially as the 75th Infantry Division had not been transferred to it as promised.<sup>290</sup>

In view of these factors, and the unstable situation in Transylvania and the Carpathians as a whole, the OKH took a shortening of the front into consideration in its further reflections on the conduct of operations in Transylvania. On 2 September it instructed the high command in Szováta to make provisional preparations to evacuate Székely Land and, in close contact with Army Group North Ukraine, to make plans for a defensive front between Kolozsvár and the mountain ridge south-west of Kuty (the Mackensen pass<sup>291</sup>). In so doing, the OKH took the view that withdrawal to the line in question should be considered only if the forces were no longer strong enough to hold the defensive positions in the eastern Carpathians in the long term. Withdrawal to the shortened front was also foreseen if the offensive to capture the southern Carpathians was unsuccessful. The army high command emphasized that ‘it is essential, in the conduct of any such evacuation, to avoid substantial human and material losses’.<sup>292</sup> The army operations staff also asked the commanding general in Hungary to set about establishing an interception line on the Tisza. With this catalogue of requests, Guderian took on board the consequences of the delays and lack of foresight two weeks earlier in the planning and conduct of operations in the German–Romanian theatre of war.

There had been very little change in the situation in Transylvania by 5 September, so the events on that day had considerable repercussions on future military developments in the area between Orşova and Kuty. On 5 September the Hungarian 2nd Army launched its offensive at Kolozsvár and drove the Romanian 4th Army back to Luduş in the Mureş section of the front. In this action it benefited from support by the Transylvania Group, which made a very promising start in its advance to the south-west. In its southward attacks, however, the Transylvania Group encountered bitter resistance by the Romanian units and only got as far as the north bank of the Mureş.<sup>293</sup> By the end of the first day’s operations Romanian resistance had already

<sup>289</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 121–3, BA-MA RH 19 V/36, fos. 123–5.

<sup>290</sup> Contrary to the original intention, the OKH left 75th Inf.Div. with Army Group North Ukraine, where it was deployed as an army group reserve at the Beskids pass; KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 124, BA-MA RH 19 V/36, fo. 126.

<sup>291</sup> This name dates from the First World War. It is a mountain pass from the Ruscova valley to the upper reaches of the Ceremus on the southern slopes of Mt. Stogu, some 60 km south-west of Kuty. The road through the pass was also named the Mackensen Road.

<sup>292</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 124, BA-MA RH 19 V/36, fo. 126.

<sup>293</sup> Ibid. 144, BA-MA RH 19 V/36, fo. 146.

solidified, so the aim of the operation—to capture the southern Carpathians—was not achieved. That same day, Soviet 27th Army spearheads penetrated both into the Sibiu area and into the area round Brașov, having taken the two important Carpathian crossings, the Predeal pass and the Red Tower pass. The vanguard of 6th Guards Army, advancing into the southern Carpathian salient, reached the Danube at Turnu Severin.<sup>294</sup> The strength of the German troops in the Brașov area and south of Kolozsvár would have sufficed to stop a Soviet–Romanian offensive, at least for a time. But there were no troops on the Danube at Turnu Severin–Orșova able to prevent 2nd Ukrainian Front from pushing into Serbia. Although C-in-C South-East had already dispatched 92nd Motorized Infantry Brigade to the Belgrade area on 31 August,<sup>295</sup> after Romanian frontier troops had attacked German units three days earlier on the banks of the Danube in the area between Orșova and the Iron Gate,<sup>296</sup> the brigade's foremost units reached the threatened section of the Danube only on 6 September. So C-in-C South-East had little chance of holding up the Red Army's advance by occupying the Serbian section of the riverbank between Gradište and the tripoint east of Negotin before the Soviet spearheads got there.<sup>297</sup>

### (b) The Battles in Central Transylvania

In the central section of the front held by Army Group South Ukraine, where the Hungarian 2nd Army was successfully taking possession of the area south of the Mureş as far as the Transylvanian Alps, the high command in Szováta had to include in its calculations the possibility that the attack would fail as a result of enemy resistance before achieving its aim. For that eventuality, a plan was needed that would secure the line at the position it had reached without requiring any additional troops. The right wing posed the greatest problem, because it was necessary to make the connection with Army Group F (C-in-C South-East) there as quickly as possible and at least establish a provisional security line. The army group HQ was intent on closing the almost 400-kilometre-wide gap before Malinovsky's troops advanced into the Danube–Tisza plain, which was virtually unprotected.

The army group was in an extremely critical situation, especially on its two wings. At the beginning of September, the situation in the eastern area of command still appeared relatively stable, and the security line between Kuty and Marosvásárhely, close to the Hungarian–Romanian border, was probably not particularly threatened either. For Friessner, the question was how this front could be held in the face of increasing enemy pressure with the means available to him. The salient on the left wing of Székely Land, in particular, required a level of deployment of human and material resources which the commander-in-chief of the army group

<sup>294</sup> *Geschichte des zweiten Weltkrieges*, ix. 144; KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 149 ff., BA-MA RH 19 V/36, fos. 151 ff.

<sup>295</sup> KTB OB Südost/H.Gr. F, Abt. Ia, No. 3, 277, BA-MA RH 19 XI/14.

<sup>296</sup> Ibid. 259.

<sup>297</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 4, i. 138 ff., 150, BA-MA RH 19 V/36, 140 ff., 152.

could simply not afford. There the weak Sixth Army was in danger of enclosure by Soviet troops on both sides if 27th Army succeeded in advancing into the greater Brașov area. The army group would therefore need to have this section of the front at its disposal at the very latest by the time that the troops fighting in the Carpathian salient were threatened with encirclement. Consequently, the high command in Szováta included the evacuation of Székely Land in its operational options at an early stage, in order to avoid another disaster like the one in Bessarabia.

As early as 1 September, the former commander of Operational Zone Hungary East, Lt.-Gen. Emil Zellner, was assigned the task of seeking and establishing an interception position on the Mureş along the Marosvásárhely–Kelemen mountains (Munții Călimani) line.<sup>298</sup> The OKH adopted the army group's plan in its directive on the conduct of future operations, which contained the order that 'preparations were to be made to evacuate Székely Land and establish a defensive front on the general line from the Hungarian–Romanian border east of Cluj to the Mackensen pass'.<sup>299</sup> The army group had started to take the relevant measures some time ago, so it was only on 4 September that it ordered the two armies under its command to ensure that they were able to 'withdraw with the bulk of their units to the Maros line in a single movement at short notice and in the shortest possible time'.<sup>300</sup> The authorities in Szováta were prompted to issue this order after Soviet 27th Army spearheads crossed the Carpathian ridge south-east of Brașov, with the result that the pressure on Sixth Army's left wing increased substantially. Two days later, contrary to the assumption that the makeshift Sixth Army units at Brașov would very soon be forced to give way before the Soviet assault, LVII Armoured Corps HQ, which was responsible for the section of the front at the Oituz pass, requested permission to withdraw, because the situation in its area of command had deteriorated seriously. The Soviet operational thrust made it clear that Malinovsky was intending to cut off and destroy the German troops fighting in Székely Land.<sup>301</sup> Despite the critical situation in the south-eastern Carpathian salient, the army group, under the impression that the Hungarian 2nd Army attack at Luduș on the Mureş was proceeding very successfully, rejected LVII Armoured Corps' withdrawal request on Axis policy grounds. Friessner was unable to maintain this position for long, however, because the Soviet 7th Guards Army and 27th Army were stepping up their offensives. The withdrawal which the army group eventually authorized, while specifying that it was to take place only if enemy pressure increased to a substantial extent, was to be a three-stage operation.<sup>302</sup> As the Soviet forces were continuously being strengthened, especially in the Brașov area, Sixth Army HQ pressed for the withdrawal operation to be started immediately because the

troops under its command were barely able to hold out against the ever-increasing enemy pressure.

The army group HQ gave the order for withdrawal to the Maros line on 7 September, but without specifying when the operation was to start. With 2nd Ukrainian Front mustering more and more troops in the Brașov area, and also at the Oituz pass, Sixth Army pressed for permission to withdraw to the Maros line. In view of the deteriorating situation, intermediate lines favourable to defence were laid down for a withdrawal in stages. In the night of 7 to 8 September, Friessner gave Sixth Army HQ permission to withdraw to the A Line. Despite the operational necessities, Hitler forbade withdrawal from Székely Land but, in the event, Sixth Army left its positions in the southern section of the salient and withdrew to the A line because Hitler's decision came too late to prevent it from doing so. Faced with the facts, the dictator was of necessity obliged to accept the move, but he forbade any further withdrawal without his personal permission. Friessner objected to this condition, arguing 'that the withdrawal must proceed continuously and not be halted at one of the intermediate lines',<sup>303</sup> since those lines were not suitable for successful defence against massive attacks. Despite Hitler's unambiguous order, the army group stood firm on the matter of Sixth Army's withdrawal, and on 8 September it authorized Sixth Army HQ to withdraw to the B line during the coming night. The army group was compelled to take this step not only because it feared enclosure in Székely Land, but also because it was absolutely essential to shorten the front in order to release forces for deployment elsewhere. Those forces were urgently needed on the southern front at Luduș–Marosvásárhely, where a Soviet–Romanian counter-attack was in the offing. Once again, lengthy negotiations were needed before Hitler agreed to the army group's tactics. Here too, he was obliged to yield to operational necessities because, by now, it would have been extremely difficult to stop the withdrawal. The Soviet XXXIII Corps had meanwhile succeeded in breaking through the A line south of Sepsiszentgyörgy, so this intermediate line had necessarily to be evacuated.<sup>304</sup> In an extremely clever propaganda move, the Soviets had deployed in that operation Infantry Division 'Tudor Vladimirescu', made up of Romanian prisoners of war, which thus became the first Romanian unit to capture territory which the kingdom had been obliged, under strong political and military pressure from Germany, Italy, and Hungary, to cede to its neighbour in 1940 under the terms of the Second Vienna Award.<sup>305</sup>

Hitler made the army group's conduct of operations in the precarious situation north-east of Brașov more difficult by insisting that the Hungarian government's

<sup>303</sup> Ibid. 18, BA-MA RH 19 V/37, fo. 20.

<sup>304</sup> Ibid. 25–9, BA-MA RH 19 V/37, fos. 27–31.

<sup>305</sup> Duțu, Dobre, and Loghin, *Armata Română*, 198 ff. After the Antonescu government, despite its almost unreserved commitment to the war against the Soviet Union, and its extensive economic and political efforts on behalf of National Socialist Germany, had failed to achieve the nation's most important aim, i.e. the recovery of northern Transylvania, a Romanian unit established under USSR rule laid the first foundations for the achievement of this Romanian objective. See Ancel, 'Stalingrad und Rumänien', 189–200; Rhode, 'Rumänen', 1156–18; Schönher, 'Die Auswirkungen', 157 ff., 176 ff.; Schönher, 'The Relations', 235–8; Memorandum (from the Royal Romanian Ministry for Foreign Affairs), 12 Apr. 1943, Arh.M.A.E., fond Germania, dosar 92/1943, fos. 249–54.

written consent be obtained before permission was given to withdraw to the Maros line. He also demanded that the manganese-ore fields in the Vatra Dornei area be held at all costs, although the ore, which was important for German arms production, had not been extracted or exported for some weeks.<sup>306</sup> This measure upset the army group's plans, because establishing a bridgehead at Vatra Dornei meant that it could not now save any of the urgently needed forces, so the benefit of withdrawing to a shorter defensive front was largely lost. Despite the personal intervention of the commander-in-chief, who was at Führer headquarters from 11 to 13 September, Hitler stuck to his decision. Friessner was nevertheless able to get permission to withdraw to the Maros line, the Hungarian government having given its consent to the measure. After Hitler had given conditional permission to withdraw from the Székely Land salient on 10 September, and confirmed it in a written directive three days later, the army group was able to leave south-eastern Transylvania according to plan.<sup>307</sup> The army group HQ was obliged to establish more intermediate lines because the battle-worn makeshift units could not keep up the rapid pace, owing to constant enemy pressure and the bad autumn weather. The withdrawal operation was effectively completed on 16 September, when the last units reached the Maros line. Hitler then made another unrealistic demand, namely that Eighth Army must hold the defensive line that had been reached as its winter position. However, it soon became clear that the XVII Army Corps forces at Vatra Dornei would not suffice to defend the manganese-ore fields successfully against the Soviet 40th Army's massive attacks.<sup>308</sup> The corps held out for some time but eventually abandoned the bridgehead on 26 September.<sup>309</sup> Thus, the evacuation of Székely Land was completed by the end of September, and the army group's eastern wing was able to take up favourable defensive positions in a salient in the eastern Carpathians extending from the Mackensen pass, over the Radna pass on the eastern edge of the Kelemen mountains, to the upper reaches of the Mureş east of Reghin.<sup>310</sup>

Although the operation by the Hungarian 2nd Army and the Transylvania Group got off to an excellent start on 5 September, it became clear only a day later that the opposing Romanian forces were putting up increasingly strong resistance. The German–Hungarian attack had taken the Romanian 4th Army by

<sup>306</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 4, ii. 70, BA-MA RH 19 V/37, fo. 72; Friessner, *Verratene Schlachten*, 122. Approximately 950 more tonnes of manganese ore were shipped out by 19 September 1944, after the situation in the Vatra Dornei bridgehead had been stabilized; BA-MA RH 19 V/37, fo. 127.

<sup>307</sup> Friessner informed the Army Group South Ukraine chief of staff on 11 September 1944, in a telephone call from Führer headquarters, that 'it was extremely difficult to get the Führer to agree to withdrawal, but he is now suddenly [pressing] for withdrawal as quickly as possible'. KTB H.Gr. Südukraine, Abt. Ia, No. 4, ii. 55, BA-MA RH 19 V/37, fo. 57.

<sup>308</sup> Even though the Vatra Dornei area is not part of Székely Land, Friessner and the army group HQ nevertheless regarded evacuation of the Vatra Dornei area as part of the 'overall operation' of evacuating Székely Land. Friessner, *Verratene Schlachten*, 113–19.

<sup>309</sup> Die Geschichte der 8. (oberlausisch-sudetendeutschen) Infanterie/Jäger-Division, 267–70.

<sup>310</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 4, ii. 1–95, BA-MA RH 19 V/37, fos. 3–97; Friessner, *Verratene Schlachten*, 114–19; România în Războiul Antihitlerist, 210–22; Duțu, Între Wehrmacht și Armata Roșie, 280–4.

surprise, and it had needed a few days to regroup for a counter-offensive, because it had only recently arrived at Sibiu in the area north of the Olt after its withdrawal from Moldavia and was still in the process of refreshment when the Hungarians attacked.<sup>311</sup> In the circumstances, the attack by the Hungarian and German troops might have been very successful if the Soviet 6th Armoured Guards Army and 27th Army had not managed to get through the Predeal and Red Tower passes on 5 and 6 September, thereby providing the Romanian army with massive reinforcements on both flanks. After the spearheads of Malinovsky's 2nd Ukrainian Front reached central Transylvania on 5 September, the front took overall command in the Romanian–Transylvanian theatre of operations, in keeping with the actual balance of forces.<sup>312</sup> The Romanian 1st and 4th Armies were thus integrated in Soviet-controlled operations, and were henceforth only nominally under Romanian national command. When, on orders from Soviet headquarters, 2nd Ukrainian Front turned north and north-west on 5 September and crossed the Transylvanian Alps, Malinovsky had two options, with regard to the point of concentration, for continuing the operation in central Transylvania. One possibility was to move the attack to the extreme left wing, where 53rd Army and the Romanian 1st Army could advance through the Timișoara–Arad area into the Hungarian Danube–Tisza plain and then on to Budapest.<sup>313</sup> However, the more obvious course of action appeared to be for 6th Armoured Army and 27th Army to support the Romanian 4th Army and advance from the Brașov–Sibiu line in the rear of the German Carpathian front to the upper reaches of the Tisza and into eastern Slovakia. An offensive west of the eastern Carpathians and the Wooded Carpathians would give 2nd Ukrainian Front a unique opportunity to connect with the Slovakian rebels and with 1st Ukrainian Front, which had been engaged since 7 September in the Krosno–Sanok area in an offensive on the Dukla pass and the Beskids. Both Army Group South Ukraine and Army Detachment Heinrici (Lt.-Gen. Gotthard Heinrici) would then be threatened with enclosure in the eastern Carpathians.<sup>314</sup>

The Hungarian 2nd Army offensive reached the Mureș within two days, but it was only strong enough to overcome the river barrier in a few places. By the second day of the attack it was clear that the Hungarian operation would not achieve its intended aim of blocking the Red Tower pass. In view of the threat to the salient, Army Group South Ukraine proposed to have the Hungarian 2nd Army go over to the defensive, in a favourable position, as from 8 September. The army group HQ in Szatmárnémeti, to which it had withdrawn in the meantime, was obliged to take this step also because the Soviet 6th Armoured Guards Army had turned

<sup>311</sup> At the beginning of September 1944 the Romanian 4th Army comprised one infantry division, two mountain divisions, two cavalry divisions, and seven infantry replacement divisions, the bulk of which had of necessity been assembled in the marshalling area only at the end of August/beginning of September. *România în Războiul Antihitlerist*, 621–9.

<sup>312</sup> The Romanian 1st and 4th Armies were placed under the command of 2nd Ukrainian Front on 7 September 1944; Arh.M.Ap.N., fond M.St.M., Sectia Operațiilor, dosar 2756, fo. 14; Duțu, Dobre, and Loghin, *Armata Română*, 29.

northwards and taken the Red Tower pass.<sup>315</sup> In order to avoid the loss of the important stretch of the Mureş at Luduş, the army group put together a group of sapper units and anti-tank forces, the Kessel Blocking Unit, to support the Hungarian security line.

The growing Romanian resistance and 2nd Ukrainian Front's advance to southern Transylvania generated political activities in Budapest which led to considerable friction with the Reich government. On 8 September, in view of the military situation, the Crown Council in Budapest demanded that the German Reich dispatch five armoured divisions to the Transylvanian zone of operations within 24 hours. Should the German Axis partner fail to comply with the ultimatum, the Crown Council threatened to enter into armistice negotiations with the Allies.<sup>316</sup> Before the deadline expired, the Plenipotentiary General for the Wehrmacht in Hungary informed the government in Budapest that the OKH had dispatched four divisions for deployment in the Transylvanian theatre of war. However, he failed to mention that only one high command, III Armoured Army Corps, and one armoured division were to be deployed immediately with Army Group South Ukraine, whereas three infantry divisions were to be posted in the Budapest area on the OKH's orders, in order to prevent—as Hitler put it—‘a repetition of what happened in Romania’.<sup>317</sup> In the end, apart from the high command, the OKH moved only two extra divisions to the front in Hungary, while the two armoured brigades that were being formed in the Budapest area remained close to the Hungarian capital.<sup>318</sup> In addition to the reinforcements approved by the OKH on Axis policy grounds, the high command in Szováta ordered rear defensive positions to be sought on the Varazdin–Lake Balaton–Budapest–Dobšiná (Slovakia) line east of Kežmarok, connecting with Army Group North Ukraine's A line,<sup>319</sup> since in mid-September there was still a danger that the Soviet operations at the Dukla pass and in south-eastern Transylvania, as well as the national uprising in Slovakia, might achieve their aims.

After the Hungarian 2nd Army and the Transylvania Group went over to the defensive between Marosvásárhely and Turda on 8 September, the fighting in the Luduş area abated for a while, because the newly formed Romanian 4th Army had not yet finished mustering its forces for a counter-offensive.<sup>320</sup> Hostilities resumed only when the Soviet 6th Armoured Guards Army and 27th Army crossed the southern Carpathians and formed up for the attack. The point of concentration of the Soviet–Romanian operation was south of Kolozsvár, where General A.G. Kravchenko's armoured army, in particular, opened its offensive on both sides

of Turda in the Hungarian defence sector. But defence against the Soviet 27th Army, which attacked together with the Romanian army at the interface between the Hungarian 2nd Army and the Transylvania Group west of Marosvásárhely, also made demands in respect of combat strength that the Hungarian units, given their training and equipment, could not fully meet. In particular, the enemy thrusts at Luduş in the Mureş section of the front led to several breaches in the defensive positions which even the 8th SS Cavalry Division was unable to repair, and by 14 September the Luduş bridgehead was already lost.<sup>321</sup>

In this situation, with the Hungarian units able to withstand the Soviet–Romanian pressure only to a limited extent and often being forced to abandon their positions, the army group HQ asked, as a matter of urgency, to be given greater control of the Axis partner's operations. Friessner therefore considered placing the Hungarian 2nd Army under Sixth Army HQ and combining the two armies as Army Detachment Fretter-Pico. For Friessner, the decisive factor was the inferior quality of the Hungarian replacement divisions. The army detachment was formed by 15 September, and was assigned the task of 'defending the positions that had been reached and driving the enemy forces that had advanced from the south back to the passes'.<sup>322</sup> In the following days, that assignment proved wholly unrealistic, as the Soviet forces constantly stepped up their attacks on the Mureş front. By 20 September the Hungarian 2nd Army's situation had deteriorated to such an extent that there were signs of an impending disaster in the Turda area. The enemy breakthroughs in several sections of the front, and the almost complete enclosure of the strategically important city of Turda, were contained only by the rapid deployment of German armoured forces. From mid-September on, Army Group South Ukraine managed to repel most of the Soviet–Romanian assaults, so that 'the enemy's attempt to break into Hungarian territory in a rapid advance over the Carpathians'<sup>323</sup> failed for the time being. As the fighting abated, the front in the area of Army Detachment Fretter-Pico stabilized in the second half of the month and the battered units were granted a short respite.<sup>324</sup> At this stage, the deployment of 23rd Armoured Division, which took part in the heavy fighting at Turda on 23 September, and the shortening of the front resulting from the evacuation of Székely Land had a very positive effect on the situation in the central section of the army group's front. The command structure also became simpler after 20 September 1944 as, the previous day, SS Obergruppenführer Phleps had asked to be released from the command of Transylvania Group HQ, and the army group had accordingly withdrawn its command headquarters from deployment. 8th SS Cavalry Division was placed under the command of Army Detachment Fretter-Pico.<sup>325</sup>

2nd Ukrainian Front itself was instrumental in decreasing the tension on the front south of Kolozsvár: from mid-September it shifted its operational main effort to the west and consequently withdrew substantial forces from the Mureş section. While the unsatisfactory results of the offensive on the Mureş must have been a factor in Malinovsky's decision to move the point of concentration, the failure to achieve the Soviet operational aims in the Beskids and the Carpathians must also have played a considerable part. It became apparent, in the second half of September, that the 1st Ukrainian Front offensive at the Dukla pass and in the Beskid mountains could well fail as a result of the strong resistance put up by Army Detachment Heinrici. This reduced 1st and 2nd Ukrainian Fronts' chances of enclosing the German-Hungarian troops west of the Beskids and the Wooded Carpathians.<sup>326</sup> For Army Group South, as Army Group South Ukraine was to be called after 24 September, it became necessary to move the point of concentration of its defence westwards so as to be able to halt the offensives launched by the Soviet 46th and 53rd Armies and the Romanian 1st Army into the Banat and the Crişana region in the area between Arad and Nagyvárad.

It proved extremely difficult to establish a continuous front in the Hungarian-Romanian border area, especially in western Transylvania, as neither the OKH and Army Group South Ukraine nor the OKW and C-in-C South-East (Army Group F) were in a position to release forces in the short term so as to close the gap between the army group border at Bela Crkva and the greater Aiud-Turda area, where the Hungarian 2nd Army was assembling. At this point, the only forces along the 1940 frontier with the kingdom of Romania were weak Hungarian frontier troops on the Szeged-Nagyvárad line. The general staff in Budapest intended to dispatch additional units to strengthen the military presence in western Transylvania and the Banat, in order to establish an autonomous command authority, the Hungarian 3rd Army, in the border area. Meanwhile, C-in-C South-East was endeavouring to move 4th SS Police Armoured Infantry Division into the seriously threatened Timișoara-Arad region as quickly as possible. However, the military situation in western Transylvania and the Banat at the beginning of September did not appear to pose a major threat to the Axis powers, as 2nd Ukrainian Front had not advanced across the Transylvanian Alps, and the two Romanian armies stationed in southern Transylvania were still regrouping and had not yet formed up for an offensive against the opposing Hungarian forces. Even so, the army group HQ in Szatmárnémeti had to assume that this was only a brief respite until Malinovsky's troops opened operations north of the southern Carpathians.

For the time being, the only forces standing between Szeged and Nagyvárad were the Hungarian IV Army Corps, which was under the direct command of the general staff in Budapest, and the Hungarian VII Corps, which belonged to the Hungarian 2nd Army. With the human and material resources at their disposal, those formations could do no more than secure the country's border. After the

<sup>326</sup> Philippi and Heim, *Der Feldzug gegen Sowjetrussland*, 260 ff.

Hungarian IV Army Corps, in particular, was replenished and reinforced in the first half of September, the chief of staff, General János Vörös, planned to launch an offensive in the direction of Arad in order to establish a defensive line on the Mureş between Szeged and Lipova, 35 kilometres east of Arad on the Mureş, extending to the foothills of the Zarunda mountains. The operation, which would have strengthened Army Group South Ukraine's west wing and protected C-in-C South-East's eastern flank, which at this point still stretched from Szeged to the Danube at Bela Crkva, was due to start on 8 September according to the plans of the Hungarian high command.<sup>327</sup> Although time was of the essence in these operational circumstances, it proved impossible to meet the mustering deadline and, to the army group's displeasure, the start of the attack was delayed considerably. When the offensive was finally launched on 13 September, the Hungarian IV Army Corps established a bridgehead south of Arad at the first assault. At the same time, the Hungarian VII Army Corps also crossed the Hungarian–Romanian border and advanced to the western edge of the Bihor mountains, south of Nagyvárad.<sup>328</sup>

While the Hungarian forces were advancing, the first parts of the SS division reached the Serbian border area in the Banat and proceeded cautiously towards Timișoara. The unit encountered only little resistance and was able to establish a weak security line east of the Hungarian–Romanian border.<sup>329</sup> The encouraging developments in western Transylvania prompted Hitler, on 13 September, to order 4th SS Police Armoured Infantry Division and the Hungarian IV Army Corps to take Timișoara and Arad at once, and then to press on to Caransebeş and Deva with a view to blocking the mountain exits in the southern Transylvanian Alps and preventing the Soviet forces from advancing any further into Transylvania.<sup>330</sup>

Only a day after the promising start of the offensive, the question of who was to be responsible for conducting operations in Hungary's south-western border area led to serious differences of opinion between the two Axis partners. While Vörös wished to establish his own army high command in the Szeged–Arad area with sole responsibility, within the framework of Army Group South Ukraine, for the conduct of operations in north-western Romania,<sup>331</sup> the OKH and the army group HQ categorically rejected the chief of the Hungarian general staff's proposals. All the same, in mid-September the German side too had no clear idea of what the command structure on the army group's right wing should look like.<sup>332</sup> Friessner was convinced that firm and unified German command was needed in north-western Romania, and he was initially unwilling to give way on this contentious issue. He nevertheless changed his mind a few days later on Axis policy grounds, and proposed that the Hungarian 2nd Army be put in command on the west wing. Although Hitler agreed with this solution, the Hungarian Axis partner

<sup>327</sup> KTB H.Gr. Südukraine, Abt. Ia, No. 4, ii. 25, BA-MA RH 19 V/37, fo. 27.

was not prepared to accept the German proposals, so the painful problem remained unsolved.<sup>333</sup> When the chief of the Hungarian general staff had not submitted any new proposals by 20 September, Hitler put pressure on Hungary by threatening that ‘further refusal to address this question would force a review of the terms of the Axis alliance’.<sup>334</sup>

Until 20 September the Hungarian general staff had been in a relatively strong bargaining position on the question of command structure, because the offensive in the Szeged–Arad region had been going very well. This changed abruptly when the Soviet spearheads arrived and the units of the Hungarian IV Army Corps, offering some weak resistance in places, withdrew from the territory they had taken and evacuated the city of Arad once again. The German Axis partner saw this as an opportunity to dictate the conditions for the command structure in the area of Army Group South Ukraine. During talks with Vörös in Budapest on 20 September, Wenck and Grolman agreed that an additional Hungarian army should be formed on the army group’s west wing. The new Hungarian 3rd Army was to conduct operations in the Arad–Timișoara area within the framework of Army Group South Ukraine.<sup>335</sup> The Hungarian 2nd Army, remaining under the command of Army Detachment Fretter-Pico, would continue to defend the section of the front south of Kolozsvár.<sup>336</sup> The German participants in the talks nevertheless categorically refused the chief of the Hungarian general staff’s demand to form an army group of his own.<sup>337</sup> On the basis of the new organizational structure, the high command in Szatmárnémeti assigned the Hungarian 3rd Army the task of ‘halting and defeating the enemy forces advancing westwards from western Romania’.<sup>338</sup> Thus, after more than a week of disputes over remits, the command issue was finally settled.

While 2nd Ukrainian Front’s westward move relieved the pressure on the eastern and central sections of the army group’s front, it made the situation on its vulnerable western flank more acute. The army group was obliged to move the point of concentration of its defensive efforts away from the area south of Kolozsvár, where it had been until 25 September. The army group HQ’s task, and its initial intention, was to advance southwards over the section of the Mureş at Turda and Luduş to the northern edge of the Transylvanian Alps, in order to prevent the enemy from penetrating into central Transylvania. However, by the end of the

<sup>333</sup> Ibid. 106 ff., BA-MA RH 19 V/37, fos. 108 ff.

<sup>338</sup> Ibid.

month it was forced to conclude that this objective was no longer achievable.<sup>339</sup> The German–Hungarian forces nevertheless still appeared capable of establishing an effective defensive front in the central section of the Mureş, so as to hold back the Soviet–Romanian offensive aimed at penetrating deep into eastern Hungary.

In the Crişana region and the Romanian Banat, where the Soviet 46th and 53rd Armies were preparing to attack at the end of September, the newly formed Hungarian 3rd Army had successfully occupied Romanian territory in the middle of the month and established a new front on the Timișoara–Arad–Nagyvárad line. The army group HQ and the OKH had intended to block the mountain exits in the north-western part of the southern Carpathians, but the forces of the Axis partner were overstretched. As the Soviet 46th and 53rd Armies crossed the Transylvanian Alps and moved into north-western Romania practically unimpeded, the Hungarian 3rd Army found itself in an increasingly tricky situation. Arad was lost again on 21 September. The vanguard of the Soviet 6th Armoured Guards Army penetrated into Nagyvárad together with the Romanian Division ‘Tudor Vladimirescu’, so the army group had to take measures to preclude an enemy breakthrough into the Pannonian Plain. Army Detachment Fretter-Pico was able to relieve the tense situation in Nagyvárad the following day, when 23rd Armoured Division began a thrust towards the city centre.<sup>340</sup>

The new configuration in the combat zone prompted the high command in Zajta, where it had now moved, to draw up a situation assessment analysing the Soviet operational plans. In a telex to Hitler on 27 September, Friessner informed him that ‘the objective which the Russian leadership has set itself is to take possession of the Hungarian Carpathians and the surrounding area and thereby put the German and Hungarian forces in eastern Hungary out of commission’.<sup>341</sup> According to the army group’s intelligence, the Hungarian 3rd Army faced two Soviet mobile corps and ten or eleven divisions, while four mobile corps and 46th Army, with eleven rifle divisions, were on their way. ‘The intention is either a thrust on Budapest, aimed at crushing Hungary’s powers of resistance at a single blow or’, Friessner argued, ‘a northward thrust along the Tisza with the objective, in conjunction with the operation against the Beskid front, of cutting off and destroying all the forces of Army Group South and Army Group A stationed in eastern Hungary’.<sup>342</sup> Since the Hungarian 3rd Army and Army Detachment Fretter-Pico had at their disposal only three armoured divisions, one armoured infantry division, two Hungarian infantry divisions, seven Hungarian reserve and replacement divisions, two Hungarian replacement brigades, and a cavalry division combat group, and were facing overwhelming enemy superiority, the commander-in-chief requested manpower and material replacements amounting to approximately one armoured corps. Friessner’s assessment of the situation was at odds with Hitler’s, as the latter still believed on

24 September that 'the Russians will not deploy the bulk of their forces against the army group but against the Balkans, to solve the Balkan problem to their taste'.<sup>343</sup> This idea of Hitler's was probably the reason why the army group had not received any reinforcements in recent weeks and had, on the contrary, been obliged to part with three armoured combat group units.<sup>344</sup>

The OKH finally accepted Friessner's situation assessment on 28 September and ordered an attack group to be assembled in the Debrecen area. The group was to consist of four armoured divisions and an armoured infantry division.<sup>345</sup> On 30 September, before the corps unit was even deployable, the OKH assigned

<sup>343</sup> Ibid. 162, BA-MA RH 19 V/37, fo. 164.

<sup>344</sup> Ibid. 158, BA-MA RH 19 V/37, fo. 160; Study P-114c, pt. 7, ch. 1, 125, BA-MA ZA 1/2077, fo. 177.

<sup>345</sup> The plan was to assemble an attack group consisting of 1st, 13th, 23rd, and 24th Armoured Divisions, plus Armoured Infantry Division 'Feldherrnhalle'. Of these, two armoured divisions and the armoured infantry division had yet to be brought in. KTB H.Gr. Süd, Abt. Ia, No. 4, ii. 158, BA-MA RH 19 V/37, fo. 160.

the following task to the attack group: ‘to conduct an operation from the Debrecen area, aimed at striking the enemy west of the Carpathian exits and then turning sharply south-east into the Carpathian valleys.’<sup>346</sup> This part of the OKH’s operational plans must be seen in the context of the operational concept for Transylvania as a whole, according to which the army group was to hold the Carpathian salient on the line that had been reached and prepare an offensive against the southern Carpathians to halt and drive back the enemy forces which had advanced to the west and north-west.<sup>347</sup> The OKH order prompted the high command in Zajta to prepare a plan for the forthcoming operation and reorganize the areas under its command. The army group’s first concern was to assemble the armoured attack group as quickly as possible in the Debrecen area, in order to launch the offensive. At the same time, the Hungarian 2nd Army was released from its ties with the German Sixth Army and placed under the command of the German Eighth Army (Army Detachment Wöhler). Its main task was to defend and hold the eastern section of the army group’s area. The German Sixth Army, to which the new attack group was assigned, remained in the section of the front south of Nagyvárad. On 1 October 1944 it received a special order to prepare to launch the planned attack (Operation GYPSY BARON) by 10 October at the latest.<sup>348</sup> The Hungarian 3rd Army was responsible for the section of the army group’s front extending back to the west, and its task was to hold that section with all the means at its disposal.<sup>349</sup>

### (c) The Final Loss of Transylvania (October 1944)

The threatening situation in the Kolozsvár area eased towards the end of September, when 2nd Ukrainian Front moved its point of concentration to the west in order to launch a new attack aimed at breaking through the German–Hungarian front at Nagyvárad. The offensive planned by Malinovsky, who had been appointed marshal of the Soviet Union on 13 September, was directed primarily against the Hungarian 3rd Army, which was defending both the section of the front south of Nagyvárad and the army group’s southernmost wing. The Hungarian 3rd Army, which the general staff in Budapest had assembled from reserve and replacement units only in the last ten days of September, had the task of defending a 300-kilometre-long section of the front west of Nagyvárad, reaching as far as the army group’s border at Deta-Petrovgrad. However, the Hungarian army did not connect with Army Group F, since C-in-C South-East’s troops in the northern area under his command were insufficient to extend his coverage to the section of the front in the area west of the Iron Gate. The existing gap was an enormous security risk, as there was nothing to

stop enemy forces pouring into the northern part of the Balkan peninsula. However, neither Malinovsky nor the 3rd Ukrainian Front forces still fighting in the south recognized this favourable opportunity.

At the end of September the Hungarian 3rd Army, then occupying defensive positions east of the 1940 Hungarian–Romanian border, was facing the Soviet 46th and 53rd Armies. By the end of the month the enemy had driven the Hungarian divisions at Mako-Szalonta back to the state border at the first assault and had entered the city of Nagyvárad. Despite this success, the fighting in this section of the defensive front abated considerably after 27 September, while 2nd Ukrainian Front was engaged in bringing up four armoured corps southeast of Békéscsaba to protect the front line which it had reached. The large-scale Soviet offensive was launched on 6 October north of Arad along the Hungarian–Romanian border between Kikinda and Nagyvárad and destabilized the Hungarian 3rd Army front. The critical situation in the southern section of the Hungarian area of operations prompted the army group HQ to tighten up the command structure on its right wing so as to ensure unified conduct of operations throughout the breakthrough area. On 6 October it placed the Hungarian 3rd Army under Sixth Army HQ and formed Army Detachment Fretter-Pico, which was thus made fully responsible for the defensive battle between Nagyvárad and the army group's right-hand border.<sup>350</sup> However, owing to inadequate telecommunication links, Sixth Army HQ was unable to coordinate operations on the right wing, so the high command in Gyöngyös had to continue conducting operations between Kikinda and Gyula. As a result, the army group rescinded its order two days later, and the Hungarian 3rd Army came once again under the army group's direct command.<sup>351</sup> At this stage, the Hungarian high command could only attempt to bring some order into the military chaos in the area under its command. Its first task, if it was to prevent the collapse of its front, was to stop its divisions retreating. By 10 October the Hungarian Axis partner had managed, with the greatest difficulty, to establish a security line on the west bank of the Tisza between Szeged and Szolnok.<sup>352</sup> Now the Hungarian 3rd Army was already fighting deep in its own home territory, while the neighbouring German Sixth Army was still involved in a fierce armoured battle with the Soviet 6th Armoured Guards Army in the Hungarian–Romanian border area.

While Sixth Army was still preparing for Operation GYPSY BARON, the large-scale Soviet offensive was launched along the Hungarian–Romanian border between Kikinda and Nagyvárad. Since the main effort of the attack was directed against the Hungarian defensive positions in the Kevermes–Gyula area, Army Detachment Fretter-Pico HQ thought the Soviet high command was out to capture the Tisza river crossings at Szolnok. However, the aim of the operation was not entirely clear because, in addition to the advance at Gyula, a second point of concentration could be detected south-west of Nagyvárad, where the Soviet 6th Armoured Guards

<sup>352</sup> Kissel, *Die Panzerschlacht in der Pusztai*, 38–43.

Army, with four mobile corps, was attacking northwards on both sides of Nagyszalonta. The Hungarian 7th Corps divisions deployed there could not hold out against the massive assault on the German Sixth Army's west wing, so the Soviet forces achieved their aim of penetrating into Hungarian territory west of the Nagyvárad–Debrecen line. Sixth Army HQ's only chance of stopping the enemy invasion was to launch a counter-attack by Armoured Group Breith.<sup>353</sup> Since III Armoured Corps was still engaged in preparations for Operation GYPSY BARON, it did not yet have the necessary forces to stop the Soviet attack and close the gap in the front, but German units nevertheless managed to delay the advance of the Soviet 6th Armoured Guards Army. The offensive at Nagyvárad–Debrecen suggested that the Soviets planned to capture the river crossings in the central section of the Tisza as quickly as possible and then, in conjunction with 1st and 4th Ukrainian Fronts, which were currently engaged in a heavy attack on Army Group A's positions in the Dukla pass and Beskids area,<sup>354</sup> encircle the bulk of Army Group South and Army Detachment Heinrici in the Beskid mountains and the northern Wooded Carpathians.<sup>355</sup>

The army had, of course, anticipated massive 2nd Ukrainian Front attacks west of Kolozsvár at the beginning of October, but the intensity of the offensive on Sixth Army's west wing was even greater than it had expected. The Soviet advance reached Armoured Group Breith when it was in the middle of preparations for Operation GYPSY BARON, making it impossible for the armoured group to carry out the action as planned. Since III Armoured Corps had only limited forces at its disposal at this point, because parts of the divisions assigned to it were still on their way to the mustering areas, the army group HQ was obliged to try to secure the Nagyvárad–Debrecen line against an enemy thrust to the east with the units available. This tactically decisive task was undertaken by 23rd Armoured Division, which was protecting Nagyvárad and the section west of the city, and by 1st Armoured Division, which was then south-west of Debrecen, fighting the flanks of the enemy spearheads that were advancing northwards. By that means, Sixth Army was able to limit the advance of the Soviet VI Guards Cavalry Corps and IX Mechanized Corps, and prevent a thrust to the east.

Despite the critical situation at Nagyvárad–Debrecen, it was almost four days before the units of Armoured Group Breith had taken up their positions sufficiently to create the possibility of enclosing the Soviet corps. Although 1st and 23rd Armoured Divisions had fewer armoured vehicles at their disposal,<sup>356</sup> on 10 October

<sup>353</sup> Armoured Group (Corps Group) Breith, named after General Hermann Breith, consisted of the German III Armd.A.C. and the Hungarian VII A.C. It existed from September to December 1944. The German III Armd.A.C. is often referred to as Armoured Group Breith in the records and in the secondary literature.

<sup>356</sup> On 10 October 1944 Sixth Army HQ had 59 tanks and 66 assault guns in the area of operations south-west of Debrecen. They faced approximately 130 tanks belonging to the three enclosed Soviet corps. The Soviet 6th Armoured Guards Army also had about 280 tanks available for deployment outside the enclosure. Study P-114c, pt. 7, ch. 2, annex, 375, Tab. XXVI. BA-MA ZA 1/2078, fo. 376.

they managed to join up behind the two corps and another Soviet unit, IV Guards Cavalry Corps, and cut their rear communication lines.<sup>357</sup> In order to exploit this operational success and destroy the encircled enemy units completely, Friessner transferred as many forces from the army group's left wing as was feasible in view of the enemy threat. In taking this step, the high command in Györgyös consciously accepted the risk that Army Detachment Wöhler might now scarcely be able to withstand massive enemy attacks. As well as concentrating all the forces that the army group could spare in the Nagyvárad–Debrecen area, Friessner also applied to have the SS units that were in Hungary at the beginning of October released for this important battle.<sup>358</sup> Although this was the only chance there had been for a long time to achieve a notable success against Soviet troops once again, the Reich Leader SS categorically rejected Friessner's request.<sup>359</sup>

Between 10 and 14 October, the configuration at Nagyvárad developed into the first phase of a remorseless tank battle in which Sixth Army deployed all available forces from every possible source in the attempt to prevent a break in the encirclement. Although Eighth Army HQ sent in further infantry reinforcements, there were still not enough forces to achieve complete success. By 12 October the Soviet 6th Armoured Guards Army had already re-established a connection with the enclosed corps by means of combined attacks from the south and the north, which achieved a deep and wide breakthrough on both sides of Nagyvárad and opened the pocket.<sup>360</sup> It became clear that, despite the support from 76th Infantry Division, the two armoured divisions were not strong enough to withstand the enemy assault.<sup>361</sup> Sixth Army was now in a precarious situation, unable to determine whether the Soviet army would move its armoured units out of the pocket or increase the concentration of troops south of Debrecen. Despite their temporary setback, the Soviet forces continued the offensive against Army Group South as before. The breakthrough by 13th Armoured Division west of Debrecen, in particular, allowed the Soviet 6th Armoured Guards Army to restore the supply routes to the encircled troop units and thus enable the Soviet army corps to maintain their freedom of movement. The Soviet armoured army took the opportunity to attack 23rd and 1st Armoured Divisions and 76th Infantry Division in the rear, shattering Sixth Army HQ's right wing at Nagyvárad. This opened up a large gap between III Armoured Corps and LXXII Corps, into which strong enemy forces continued to pour.<sup>362</sup> No longer capable of closing the gap, the army group reported on 14 October that 'unless the situation in the Szolnok–Debrecen area and between the Danube and the Tisza can be thoroughly cleared up, a decision on

a large-scale withdrawal, initially to the other side of the Tisza, will probably be needed very shortly'.<sup>363</sup> The call for an improvement in the military situation on Army Group South's west wing appeared wholly unrealistic, since the Soviet pressure on the German–Hungarian defensive front showed no sign of letting up. On the contrary, the Red Army command firmly maintained its intention to deliver a destructive blow to the bulk of the army group forces by means of concentric attacks from the south and south-west and across the ridge of the Wooded Carpathians.<sup>364</sup>

When it became clear that the fighting would soon spread into Hungarian territory, the regent of Hungary, Miklós Horthy de Nagybánya, approached the Allies through diplomatic channels. The western Allies refused to negotiate an armistice with the Hungarian government, having passed responsibility for this to their Soviet ally, so a Hungarian delegation embarked on the relevant negotiations with the government in Moscow in early October. On 9 October the Soviet foreign minister, Vyacheslav Molotov, submitted preliminary terms for an armistice to the Hungarian delegation. Horthy accepted them, and his plenipotentiaries signed the treaty the following day. Although the critical situation in the Transylvanian area of operations called for rapid action by the government in Budapest, the regent thought he himself could decide when the agreement was to enter into force, after all the necessary preparations had been completed. Horthy had been intending to extricate Hungary from the armed conflict for some time, but measures to disarm the German agencies and troops in Budapest by surprise had not been taken in time, nor had the commander-in-chief of the Honvéd been instructed to make the necessary preparations for such action. The German authorities in Budapest were fully informed of the internal political developments affecting their Hungarian Axis partner, so the German agencies had prepared counter-measures at an early stage. As Horthy did not ratify and announce the armistice agreement immediately, the Soviet government issued an ultimatum requiring Hungary to cease hostilities and withdraw from the Tripartite Pact by 15 October. The regent then informed the German ambassador in Hungary, SS Brigadeführer Edmund Veesenmayer, of the action which the Hungarian government was taking, and news of the armistice was officially announced in a radio address. This came as no surprise to the German side, and the representatives of the National Socialist regime in Budapest reacted immediately by helping Ferenc Szálasi and his fascist Arrow Cross party (Nyilaskeresztes Párt) to take power. The 'Leader of the Nation' then issued a counter-proclamation, calling on the Hungarian people to continue the war on the side of the Axis powers. Horthy, isolated in the castle at Budapest by the SS and the Security Service (SD), was forced, under German pressure, to withdraw his appeal and transfer governmental power to Szálasi. Hitler had now lost all confidence in the regent, and he accordingly forced Horthy to resign as head of state. But that was

<sup>363</sup> FS H.Gr. Süd, Abt. Ia, No. 4009/44, g.Kdos, 14 Oct. 1944, to Op.Abt./GenStdH, KTB No. 4, iii a, 14 October 1944, 7, BA-MA RH 19 V/39, fo. 143.

not enough for the German dictator, and he had Horthy and his family taken into custody and interned in Germany. The regent's attempt to get his country out of the war and save it from disaster failed from the outset.<sup>365</sup>

Unlike the Romanian theatre of war, where King Michael's political decision a few weeks earlier had led to military disaster, the events in Hungary did not have an equally lasting effect on the situation in the Transylvanian area of operations. Whereas the pro-German commander of the Hungarian 3rd Army, Lt. Field Marshal József Vitéz Heszlényi, who had not been informed of Horthy's action in advance, had no hesitation in continuing hostilities on Germany's side, the commander of the Hungarian 1st Army, General Béla Miklós Dálnoki, went over to the Soviets. Col.-Gen. Lajos Veress Dálnoki, the commander of the Hungarian 2nd Army, was extremely ambivalent. Following the regent's proclamation, he did not make it clear whether he intended to respond to Horthy's appeal or to continue executing the operational orders of Army Group South. When rumours began to circulate that Veress 'had only declared his loyalty under pressure',<sup>366</sup> and that he intended to order the Hungarian 2nd Army units to withdraw to the Tisza line, Wöhler had the Hungarian commander arrested.<sup>367</sup>

Although some units of the Honvéd responded to Horthy's appeal and ceased operations, the bulk of the Hungarian forces remained in position, so there was no fiasco on Army Group South's defensive front.<sup>368</sup> In the course of the political overthrow, the new rulers also had the chief of the general staff, General Vörös, arrested, leaving the Honvéd command authorities temporarily without any leadership by their own general staff. As, in his opinion, instructions on the subject were unlikely to be issued in the near future, the Plenipotentiary General for the Wehrmacht in Hungary, Gen. Hans von Greiffenberg, took on this task himself.<sup>369</sup>

While the German agencies in the Hungarian capital and the newly appointed Szálasi government were endeavouring to calm the political situation in the country, Hitler issued an order on the future conduct of operations in the area of Army Group South. The army's primary task was to 'thwart the enemy's intention to destroy the army group by means of a concentric attack from the south, the south-east, and through the Wooded Carpathians; to that end, it [the army] must strain all its forces to prosecute the battle in the area south of Debrecen'.<sup>370</sup> The Führer order gave Army Detachment Wöhler permission to withdraw to the Marghita–Szatmárnémeti–Huszt line, while Eighth Army HQ was to prepare for

withdrawal to the Tisza–Bodrog line. And, as its most important task, Hitler ordered Army Group South to use all its resources to prevent enemy thrusts against Budapest.<sup>371</sup>

Even Sixth Army's brief and locally limited success did not noticeably reduce the tension on the defence front in the Hungarian–Romanian border area. After a short period of regrouping, Malinovsky used his 'newly recovered operational freedom of action for a strong combined assault by mobile forces'.<sup>372</sup> On 18 October he launched the newly assembled 7th Armoured Guards Army on an attack to the north of Nagyvárad, in the direction of Nyíregyháza. Sixth Army HQ only had weak forces of its own to meet this attack, so Sixth Army's situation deteriorated once again. It had no alternative but to withdraw to the north, where it became involved at Debrecen in heavy defensive fighting against much stronger enemy forces attacking on all sides. In the attempt to hold the strategically important city of Debrecen, Fretter-Pico mustered the units of III Armoured Corps south of the city, but this tactical measure could not prevent parts of 4th and 5th Guards Cavalry Corps from availing themselves of the existing gaps in the front to thrust forward on both sides of Debrecen. The aim of Malinovsky's operation, of which 7th Armoured Guards Army bore the main effort, was to take possession of the Tisza river crossings in the Tokaj region so as to block the retreat of Army Detachment Wöhler and the Hungarian 1st Army. At this point the army group was still in the process of withdrawing to the Marghita–Szatmárnémeti–Huszt line, and the main effect of the attack by the Soviet armoured army was to threaten its supply lines. This unfavourable development meant that Army Group South had to make organizational changes on its left wing. As the attack by the Soviet 7th Armoured Guards Army threatened not only Army Detachment Wöhler but also the Hungarian 1st Army, which, as part of Army Group Heinrici, belonged to Army Group A, the OKH dissolved the Hungarian army's link with General Heinrici's First Armoured Army on 21 October and placed it under the command of Army Detachment Wöhler. This was the only way for Army Group South to conduct a coordinated campaign in its eastern area of command and prevent a military disaster south-east of the Tokaj–Huszt line.<sup>373</sup>

The concentration of Soviet troops between Nagyvárad and Debrecen at the beginning of the third week in October, by means of which Malinovsky hoped to force a decision in eastern Hungary, developed into another tank battle in the Debrecen–Nyíregyháza area. While 6th Armoured Guards Army outside Debrecen turned west to attack the German–Hungarian positions at Szolnok, 53rd Army south of the Tisza advanced towards the Polgár–Debrecen line so as to move along the river from the west and get to the rear of Army Detachment Wöhler. A far more dangerous development for the German–Hungarian defenders was the offensive by

<sup>371</sup> Ibid., fos. 169 ff.; Friessner, *Verratene Schlachten*, 146 ff.

<sup>372</sup> OKH enemy situation assessment, 20 Oct. 1944, quoted in Study P-114c, pt. 7, ch. 2, annex 99, BA-MA ZA 1/2078, fo. 202.

<sup>373</sup> *Die geheimen Tagesberichte*, xi. 11, 130, 136, 142, 145; Kissel, *Die Panzerschlacht in der Puszt*, 96–126.

three Soviet mobile corps—XXIII Armoured Corps and IV and V Guards Corps—under the command of Lt.-Gen. I. A. Pliyev. This strong 7th Guards Army formation pressed forward to the east of the city with the intention of seizing the river crossings between Tokaj and Csap. The attack was clearly aimed Kassa, where Malinovsky's troops were to join up with the forces of 1st Ukrainian Front. In case the offensive stalled, the Russian commander-in-chief had 27th Army ready in reserve north of Nagyvárad.

The strong pressure from 2nd Ukrainian Front took its toll of the German Sixth Army, which was forced to evacuate Debrecen on 19 October. The area was defended by III Armoured Corps, which persisted in its task for another two days, struggling to stop the enemy advancing northwards. But the forces available to Sixth Army HQ were simply not enough to withstand the assault of the Pliyev Group. On 21 October the enemy spearheads reached the area of Nyíregyháza, earlier than expected, and were steadily approaching the Tisza river crossings at Tokaj.

With the Soviet 7th Guards Army's breakthrough in the German defence lines north of Debrecen, the enemy now stood far to the rear of Army Detachment Wöhler, exposing it to the risk of enclosure in the area of Szatmárnémeti and in the Maramureş region on the Ukrainian border to the east of Szatmárnémeti. In this precarious situation, Friessner decided that Army Detachment Wöhler should launch an attack to the west, with its right wing, instead of withdrawing far to the north behind the Tisza. III Armoured Corps' strongest units were to move north at the same time to support Wöhler's attack and, if the army group's operational objectives were achieved, cut the rear communication lines of the strong Soviet group of forces north of Debrecen, and encircle them in the Nyíregyháza area. If the operation were to fail, the entire section of the front between the southern Beskids and Szolnok would be threatened with collapse. Friessner nevertheless saw coordinated attacks by the two German armies as the only chance to bring 2nd Ukrainian Front's offensive to a standstill and to prevent it from joining up with 1st Ukrainian Front in the Kassa area.<sup>374</sup>

So, on 21 October, 23rd and 1st Armoured Divisions launched an attack to the north-east from the area north of Debrecen, to close the gap in the front separating them from the Hungarian 2nd Army. While III Armoured Corps' offensive was highly successful at first and the important township of Nagykálló was captured the very next day, Army Detachment Wöhler made much slower progress, as it had only infantry forces available for this relief attack. Sixth Army Group HQ's offensive was highly successful right from the start, when 23rd Armoured Division succeeded in cutting, in the Nagykálló area, the main supply lines of the three Soviet mobile corps whose spearheads had reached the Tisza at Tokaj and Csap. However, the situation in that area remained extremely tense because—despite III Armoured Corps' strenuous efforts—the connection with Army Detachment Wöhler had not yet been achieved. It took another two days for the vanguard of

<sup>374</sup> Friessner, *Verratene Schlachten*, 151 ff.; Kissel, *Die Panzerschlacht in der Pusta*, 128 ff.

3rd Mountain Division to reach the foremost positions of 23rd Armoured Division. Once that was done, three mobile corps of 2nd Ukrainian Front were not only cut off from their rear communications but were now encircled at Nyíregyháza. Army Group South owed this success primarily to 1st and 23rd Armoured Divisions, which had withstood the heavy attacks of the almost entirely encircled enemy units, thereby tying down strong forces and facilitating the offensive operations on Army Detachment Wöhler's southern wing.

Once the ring had closed round the Soviet XXIII Armoured Corps and IV and V Guards Corps, Army Group South's main task was to ensure that the units deployed to the south of the ring withstood the assaults both by the surrounded enemy troops and by the Soviet 27th Army. The besieging German–Hungarian forces also had to be strong and steadfast enough to prevent a breakout and effectively combat the enclosed enemy troops. Nyíregyháza was retaken on 26 October, and a day later the battle was almost over. Despite all their efforts, Malinovsky's units did not manage to break out of the German–Hungarian enclosure, and mere remnants of the three corps were obliged to fight their way south, leaving all their equipment behind.<sup>375</sup>

On 26 October, under the impact of the imminent success, Guderian issued a directive on the future conduct of operations in the area of Army Group South. That same day, the OKH withdrew the Hungarian 2nd Army from the command of Army Detachment Wöhler and assigned it to new defensive tasks on the banks of the Danube at Mohács. In accordance with Guderian's directive, Army Group South had to move its defensive positions to the Tisza line and make sure that front could be held, even against strong enemy attacks. Despite the success at Debrecen–Nyíregyháza, Guderian also intended to move the main battle line in the Tokaj–Csap area to the north bank of the river in the medium term, above all in order to release armoured forces for deployment at other OKH critical points. At the end of October 1944, with this in mind, he already gave the order for III Armoured Corps to be transferred from Sixth Army to the Hungarian 3rd Army as soon as possible, 'in order to strike the enemy between the Danube and the Tisza and establish a firm connection with Army Group F'.<sup>376</sup> With the end of the battle at Nyíregyháza, most of the fighting moved west to the Pannonian Plain, posing a massive threat to the Hungarian capital. The Soviet breakthrough to the Tisza north of Debrecen, which had occasioned the rapid withdrawal of Army Detachment Wöhler, was also the reason why the last German units had left Transylvania by the end of October 1944, in the course of Eighth Army HQ's withdrawal.

After the fighting moved to Transylvania in September 1944, 2nd Ukrainian Front had two possibilities at the end of the month: either to advance north-west

<sup>375</sup> Study P-114c, pt. 7, ch. 1, 125–34, BA-MA ZA 1/2077, fos. 177–86; *Die geheimen Tagesberichte*, xi. 139, 142, 145, 148, 151, 154, 157, 160, 163, 166; *Deutschland im zweiten Weltkrieg*, vi. 100 ff.; Philippi and Heim, *Der Feldzug gegen Sowjetrussland*, 262–4; Kissel, *Die Panzerschlacht in der Pusztai*, 130–40; Amitrow, 'Die Zerschlagung des Südfügels', 502–6; Hinze, *Mit dem Mut der Verzweiflung*, 328–42; Klatt, *Die 3. <sup>376</sup> KTB H.Gr. Süd, No. 4, iii b, 27 Oct. 1944, 6 ff., BA-MA RH 19 V/40, fos. 39 ff.

from the Timișoara–Arad–Nagyvárad line to take the Hungarian capital, or to attack northwards in order, in coordination with 4th Ukrainian Front, to enclose and destroy the bulk of Army Group South and parts of Army Detachment Heinrici east of the Nagyvárad–Kassa–Prešov–Dukla pass line and the edge of the Beskids and the Wooded Carpathians. The military authorities in Moscow finally decided in favour of what was thought to be the simpler option, that is, an offensive in the direction of Kassa. Malinovsky accordingly massed his armoured units at Nagyvárad and launched the attack from there, in a northerly direction.<sup>377</sup> Since Army Detachment Wöhler, in particular, was threatened with encirclement, Friessner moved all the forces he could muster from whatever source to ward off the danger in the Nagyvárad–Debrecen area. Army Group South's response, and the course of the battle in the Nagyvárad–Debrecen–Nyíregyháza area, showed that, despite all the setbacks in recent weeks and months, the Axis powers still had the necessary combat strength to repel massive locally circumscribed attacks by the Soviet enemy. The army group managed not only to rescue Army Detachment Wöhler from impending encirclement, but also to stabilize the situation on its left wing for a time. The conclusion that must be drawn from the military events in central Transylvania is that, in the fighting in the Nagyvárad–Debrecen–Nyíregyháza area, Army Group South achieved an operational success that completely upset the plans of the Soviet enemy. Despite this partial success, the Wehrmacht and its Hungarian partner were obliged to withdraw the last of their troops from the area south and east of the Tisza, so that, by the end of October, the Axis powers had finally lost Transylvania.

#### 4. THE SITUATION OF ARMY GROUP SOUTH AFTER THE LOSS OF TRANSYLVANIA (END OF OCTOBER 1944)

Since the beginning of September 1944, three Soviet army fronts had been attempting to execute the Stavka's plan to encircle the Axis army groups deployed in the southern section of the eastern front by means of a pincer movement extending from the Beskids to the Transylvanian Alps, and destroy them on the western edge of the mountains. However, despite the serious defeat which Army Group North Ukraine (Army Group A) had suffered in Galicia in July, and the military disasters sustained by Army Group South Ukraine (Army Group South) in Bessarabia and Moldavia at the end of August, and despite the succession

<sup>377</sup> According to the Stavka's operational planning in September/October 1944, 1st and 2nd Ukrainian Fronts were to enclose Army Detachment Heinrici and the bulk of Army Group South in an encircling operation east of the Dukla pass–Prešov–Košice–Nagyvárad line and the western edge of the Beskids and the Wooded Carpathians. The operational plan was based on three factors: 1. an offensive by 1st Ukrainian Front from the Sanok–Krásno line through the Dukla pass into the Prešov area, where it would connect with the Slovakian rebels; 2. the success of the Slovakian national uprising; 3. an offensive by 2nd Ukrainian Front from the Hungarian–Romanian border in Transylvania into the Kassa area, where it would connect with the Slovakian rebels. See Part V, Chapter V of the present volume; Schönherr, 'Die Niederschlagung', 54–60; Schönherr, 'Obranné operácie armádnej skupiny Heinrici'.

of territorial losses they had incurred, both army groups still proved to have enough combat strength, and above all the necessary morale, to hold the Soviet offensives up for a long period and so prevent the enemy forces, superior in human and material resources, from achieving their overall operational objective in the north-east of the Balkan peninsula. As the Soviet concept of a pincer operation had come to nothing despite numerous attempts, and since the failure of the Slovakian national uprising had removed another factor which had, from time to time, offered the possibility of successful support in the rear of the German–Hungarian front for the Soviet large-scale offensives, the Soviet military authorities were obliged to launch another attack on a different section of the front. That was the only way Malinovsky could see to speed up his troops' advance, which had been extremely slow in recent weeks as a result of the fierce resistance by the German–Hungarian forces, and thereby achieve the operational objective of conquering Hungary as quickly as possible.

After the fighting in the Debrecen–Nyíregyháza area had come to an end, and Army Detachment Wöhler had withdrawn to the north bank of the Tisza, Army Group South had to defend a front that was 600 kilometres long. The defensive line, with a left wing starting north-west of Ungvár, ran from Csap to the east of Kecskemét on the north bank of the Tisza, then departed from the Tisza section near Kecskemét to run south-west across the Danube–Tisza plain and reach the Danube at Baja. From that position the army group carried out its defensive tasks in the area on the western river-bank, up to the point on the Danube–Drava estuary where the front came within the area of C-in-C South-East. To ward off enemy offensives, the high command in Mátraháza had only eleven Wehrmacht and Waffen SS divisions,<sup>378</sup> and thirteen divisions and four brigades of the Hungarian army, all of which bore the marks of the past few weeks' heavy fighting and were only partially fit for deployment. The German Axis partner alone had lost more than 19,000 men in the fighting in Transylvania since the beginning of September, and the OKH had allocated only 8,500 to the army group in replacement.<sup>379</sup> In the light of the heavy losses, Army Group South urgently requested the OKH to refresh both the human and the material resources of the hard-hit German divisions and to strengthen the infantry component, failing which successful combat against an enemy attacking *en masse* would be virtually impossible. Guderian rejected this request, pointing out that 'refreshment was impossible at present, since all available resources were going in a different direction'.<sup>380</sup>

Combat strength, greatly undermined in recent weeks, was not the only thing that presented the army group with a very difficult problem at the end of October. The defensive line ran across the completely flat plains of southern and eastern Hungary, which afforded no cover whatsoever, and would be very difficult to

<sup>378</sup> Five of the eleven German divisions in the area of Army Group South were armoured divisions; Study P-114c, pt. 7, ch. 1, 137, BA-MA ZA 1/2077, fo. 189.

<sup>379</sup> KTB H.Gr. Süd, Abt. Ia, No. 4, iii b, 28 Oct. 1944, 5, BA-MA RH 19 V/40, fo. 52.

<sup>380</sup> KTB H.Gr. Süd, Abt. Ia, No. 4, iii b, 27 Oct. 1944, 9, fo. BA-MA RH 19 V/40, 41. The 'different direction' in question was preparation for the Ardennes offensive. For details, see *Germany and the Second World War*, vii. 678–97.

defend with the existing human and material resources against attacks by armoured units. The meandering and highly erratic course of the Tisza between Csap and the Kecskemét region also required the deployment of considerable human and material resources which the army group did not have at its disposal. In these circumstances, Friessner was obliged to improvise to a large extent, occupying the front with only a series of strongpoints and endeavouring to repel enemy offensives successfully by means of mobile combat. The commander-in-chief was particularly concerned about 'the condition and morale of all the Hungarian units',<sup>381</sup> which in his opinion were virtually useless for any serious fighting. In this situation, the army group HQ again resorted to a concept that essentially failed a few weeks earlier in the battles in eastern Romania. Once again, Friessner thought he could increase the steadfastness of the Axis partner's units by integrating the Hungarian forces in German units or assigning Wehrmacht units to the Hungarian partner's sections of the front. Not content with these measures, the high command in Mátraháza placed the Hungarian 3rd Army under the command of Sixth Army HQ on 29 October and included both formations in Army Detachment Fretter-Pico.<sup>382</sup> By means of all these preparations, arrangements, and restructuring, Friessner hoped to be able to hold the Tisza–Danube front, at least for a time. In response to the shift of 2nd Ukrainian Front's point of concentration to the section of the German–Hungarian defensive line between Kecskemét and Baja, the high command in Mátraháza formed an armoured combat group under the command of the German IV Armoured Corps, which was stationed east of Budapest as a reserve force to deal with any Russian breakthroughs. The army group also intended to withdraw strong armoured forces of Eighth Army HQ from the Nyíregyháza area and transfer them to Army Detachment Fretter-Pico, which was to 'assemble all suitable forces for the attack, strike the enemy between the Danube and the Tisza, and establish a firm connection with C-in-C South-East'.<sup>383</sup> In the circumstances, Army Group South could only hope that the resumption of 2nd Ukrainian Front's offensive would be confined to a limited area, giving the army group a chance to strengthen the forces on the relevant section of the front with armoured units capable of opposing Malinovsky's troops. Despite the successful combat operations in the central reaches of the Tisza in the second half of October, the precarious situation in south-eastern Hungary had scarcely improved by the end of the month.

# VII. The Hungarian Theatre of War

*Krisztián Ungváry*

## 1. THE HUNGARIAN GOVERNMENT'S FOREIGN POLICY AFTER THE GERMAN DEFEAT AT STALINGRAD

After the 2nd Hungarian Army's lack of success in the Don salient, the Kállay government, with the support of the regent, Miklós Horthy, endeavoured to keep Hungary's contribution to the hostilities to a minimum. Horthy had been convinced, ever since the United States' entry into the war in December 1941, that the German side could not win. He considered that the Bárdossy government's declaration of war on the Allies, a decision taken under pressure from the Reich, was a mistake, and it led to a loss of confidence in Lázlo von Bárdossy, who was obliged to step down in the spring of 1942. The first attempts to negotiate a separate peace with the western Allies were initiated by the new Kállay government in the same year. Its efforts in this connection were encouraged by events in 1943. The Hungarian government had been putting out feelers to the western powers again since the spring. And on 9 September 1943 it reached an agreement with the western Allies on the reduction of its military commitment. The Hungarian air force was to make no further attacks on Allied aircraft from now on, and the occupying troops were ordered to avoid any action against regular troops. Even fighter pilots retrained by the Luftwaffe in France were forbidden to take part in the hostilities. The Hungarian government was not prepared to hand over to Germany Allied prisoners of war who had fled to Hungary. Polish military internees and their relatives were allowed to attend schools and to have newspapers. The government even encouraged members of the Polish forces to leave the country, as long as it was possible to do so, thus contributing to the formation of an Allied army. The German authorities were particularly incensed by the fact that the Hungarian minister of the interior, Ferenc Keresztes-Fischer, had German press reports censored and banned the showing of the film *Jud Süß* in Hungary.<sup>1</sup> A speech by Winston Churchill, on the other hand, was printed in a number of newspapers in the autumn of 1943. One reason for Hungary's disengagement was the balance of trade between Germany and Hungary, which had been deteriorating since 1942, with Hungary increasingly having to grant credits for

<sup>1</sup> Czettler, *A mi kis élethalál-kérdéseink*, 203–24, 319–72; Gosztony, *A magyar honvédség*, 110–13.

unpaid goods. These credits accounted for 60 per cent of the national debt. The deficit amounted to 1 billion pengő in 1943, 1.5 billion in 1944, and a record 4.8 billion at the end of the war.<sup>2</sup> The Hungarian state was not prepared to put itself on a 'total war' footing. German economic experts, on the contrary, saw considerable untapped resources in Hungarian industry and agriculture, particularly with respect to mobilization of the labour force.<sup>3</sup>

Prime Minister Miklós Kállay's government refused to introduce any radical social redistribution of assets at the expense of the Jews in 1944, even though the political elite and large sections of the population were prepared to do so. Even the anti-Semite Miklós Horthy and his close advisers had doubts about the 'Final Solution', on ethical grounds and for reasons of conservative policy. Nevertheless, dozens of anti-Semitic laws had been passed and hundreds of orders issued between 1938 and 1941, with the aim of establishing a social 'balance' by discriminating against those who could be shown to be of Jewish descent:<sup>4</sup> Jews made up 5 per cent of the Hungarian population, but they owned 25 per cent of the national assets.<sup>5</sup> A law on the expropriation of Jewish land and lease hold property was passed in 1942, in an attempt to solve the 'burning land issue'—a problem child in Hungarian politics.<sup>6</sup> This law contributed significantly to the fact that dealing with inquiries about the distribution of Jewish property became a daily routine for tens of thousands of civil servants. Moral scruples concerning Jewish property had already disappeared before 1944.

During Horthy's visit to Klessheim on 16 April 1943, Hitler had already complained that his Axis partner was too soft, and had insisted that Hungary be completely committed to the war. Horthy must have found Hitler's explicit praise of Marshal Ion Antonescu and the 'fantastic' performance of some Romanian divisions particularly unpalatable. Hitler complained about the failure to solve the Jewish question, about Hungary's 'incomprehensible' attitude in this connection, and, in particular, about the fact that two 'racial Jews' had recently taken seats in the upper house. He must have been particularly irritated by Horthy's objection that it would have been impossible, on constitutional grounds, for him to prevent this, and that there were, after all, some 'valuable' baptized Jews.<sup>7</sup> In order to show that he knew all about Hungary's duplicitous foreign policy, Hitler got Joachim von Ribbentrop to list a whole series of secret Hungarian activities of which the Germans were aware. Clearly, Hitler lost confidence in the Kállay government from the spring of 1943. Horthy was unable to placate the German complaints. On the

<sup>6</sup> About 340,000 hectares of land had been distributed by the end of 1944. *Magyar Országos Levéltár (MOL)* (*National Archives of Hungary, Budapest*), Z12, 104/522.

<sup>7</sup> Horthy, a selective anti-Semite, had indeed supported the choice of the two new members of the upper house, even though the step was not uncontested in domestic political circles.

contrary, his statements about Kállay and about the Jewish question ('after all, he couldn't just strike the Jews dead') only increased Hitler's distrust.<sup>8</sup>

### (a) Equipment and Organization of the Honvéd Army between 1944 and 1945

After the battle for Stalingrad was lost in January 1943, Horthy and Kállay were increasingly taken up with the idea of making peace with the Allies. The regent and his prime minister were willing to lay down arms against the British and American forces, but they could not yet imagine capitulating to the Soviet army. They pinned their hopes on an Allied landing in Dalmatia and on the Stavka deciding not to attempt the difficult breakthrough in the Carpathians, but to continue its westward advance further north, across the Polish plains. In order to prevent a Soviet breakthrough in the Carpathian basin before the western Allies reached Hungarian territory, they set about rearming the battered Hungarian army.

At the beginning of 1944 the reorganization of the Hungarian army had not yet been completed. According to the 'Szabolcs Plan', adopted in August 1943 and scheduled to be fully implemented by October 1944, eight triangular divisions were to be formed, each with 12 artillery battalions. Although the firepower and target strength of the new divisions were 30 per cent higher than those of the previous formations, they were still inferior to the equivalent Soviet and German divisions.

The gap was particularly wide with regard to light sub-machine guns and heavy machine guns. The German divisions had more weapons—even in absolute terms—than the corresponding Hungarian units, which were 60 per cent stronger in respect of manpower. Following the catastrophic defeat of the Hungarian 2nd Army in January–February 1943, the Hungarian authorities were not even able to provide the armed forces with a minimum of equipment. The Hungarian 2nd Army itself was an improvisation in terms of weaponry, since it was allocated 50 per cent of the total stock of weapons, resulting in partial disarmament of the homeland troops. Hungarian industry was fully occupied in making these losses good until the end of 1943.<sup>9</sup>

As a result of the 'Szabolcs Plan', there was a significant increase in the number of army units. After the end of 1943 the Hungarian armed forces (the Honvéd) comprised eight infantry divisions (each with four artillery battalions), eight reserve divisions (each with three artillery battalions), two armoured divisions, one cavalry division, one river patrol brigade, two mountain brigades, three anti-aircraft brigades, and two division-strength infantry units. The Hungarian air force comprised three brigades. Given the poor figures for Hungarian arms production, these units could not count on having the necessary weapons until the autumn of 1944 at the earliest. Germany delivered only minimal amounts of military equipment to Hungary, even though Hungarian industry had been dealing with more German

<sup>8</sup> On the regent's first visit to Klessheim, see *Staatsmänner und Diplomaten*, ii. 245 ff., and Aly and Gerlach, *Das letzte Kapitel*, 85 ff.

<sup>9</sup> MGFA, M2/1-2, study by Pál Darnóy, 'Organisation und Gliederung der kgl. ungarischen Honvéd-Armee', pt. E, 1.

than Hungarian arms orders since 1942. Orders placed in Hungary were worth 412 million Reichsmarks in June 1943, and 825 million Reichsmarks in March 1944.<sup>10</sup> The decision to move aircraft production worth 500 million Reichsmarks to Hungary in the framework of the so-called Fighter Programme was particularly important. The German orders took up production capacity and raw materials, making it even more difficult to supply the Honvéd army with adequate armaments. To provide the Hungarian 1st Army with the necessary mobility, transport columns had to be commandeered from other units. The 2nd Armoured Division could be brought up to full target strength only by the 1st Armoured Division handing over all its vehicles. And three reserve divisions had to be removed from the order of battle owing to shortage of equipment.

The 15th US Air Fleet raids, which started on 2 April 1944, seriously damaged the Hungarian arms industry, which was in no way prepared for such attacks, and from July 1944 the declining production capacity and the escalating losses of weapons and equipment among the fighting troops put an abrupt end to normal supplies. The shortage of equipment could be made good only by disbanding battered units. Another major problem was that the weaponry itself was out of date. The Hungarian infantry was still using machine guns dating from the First World War, and the anti-tank weapons were 37-mm and 50-mm guns. There were almost no heavy grenade launchers or sub-machine guns. The Hungarian 'heavy' Turán 40 and 41 tanks had practically no chance against the T-34s.<sup>11</sup> In any case, ammunition for the heavy weapons was strictly rationed. These circumstances contributed greatly to the fact that the men serving in the Honvéd had less confidence in their commanders and were less steadfast than the German troops.

Of the 2 million or so men eligible for military service, only 500,000 had been called up by the spring of 1944, and even those could not be properly equipped.<sup>12</sup> Furthermore, the number of officers and NCOs was not nearly sufficient to form the proposed units.<sup>13</sup>

In view of the fact that 50 to 60 per cent of the production capacity of Hungarian industry was taken up by the Wehrmacht under several arms programmes, the Hungarian political and military leadership expected, not without reason, to receive something in return.<sup>14</sup> However, the German authorities did not really trust the Hungarians, and they delivered only small amounts of military material, although the German clearing debt was very high and the Hungarian government was pressing for arms deliveries. Even Bulgaria had received more military material than the Hungarian army up to the summer of 1944. This is yet further evidence of Hitler's distrust of Hungary.

<sup>10</sup> On equipment, see Darnóy's study and Dombrády, *A magyar gazdaság és hadfelszerelés*, also BA-MA RW29/14.

<sup>11</sup> On the armament of the Hungarian Honvéd, see MGFA, M2/1-2, study by Pál Darnóy, 'Organisation und Gliederung der kgl. ungarischen Honvéd-Armee', pt. D with annexes.

<sup>12</sup> Telex, 22 Mar. 1944, BA-MA RH2/721, 39.

<sup>13</sup> See study by Pál Darnóy, pt. E, 36.

<sup>14</sup> For the Wehrmacht, Hungarian industry produced aircraft engines and parts, 40-mm light anti-aircraft guns, and infantry and artillery munitions.

### (b) The Hungarian Occupation Force

After the collapse of the Hungarian 2nd Army, Hungary's contribution over the next year was confined to providing the occupation force, which was stationed in two groups, round the Bryansk forest and west of Kiev. And it was precisely the Hungarian occupation force that was deployed at the key points in the fight against the partisans.

The total strength of the nine Hungarian divisions deployed as Occupation Groups 'East' and 'West' was 90,000 men. They operated in the rearward areas of Army Group B and Army Group Centre.<sup>15</sup> At the same time, less than a quarter of a million Wehrmacht and SS troops were stationed as security forces in the hinterland on the whole of the eastern front.<sup>16</sup> Hungarian Occupation Group East covered the 300 square kilometres of the Kiev–Gomel–Seredina Buda–Priluki area, while Hungarian Occupation Group West was primarily responsible for protecting the Brest–Litovsk–Kolomyia–Berdichev–Gomel railway lines. They were constantly reinforced. The four original divisions were joined by four motorized divisions between 5 January and 15 May 1943, partly to 'replace' 2nd Army, which had been moved back to Hungary because of its losses.

The first Hungarian troops were deployed on the eastern front as early as November 1941. Their task was to control the area round the Bryansk forest, which was already a focal point in the war against the partisans. Remnants of encircled Soviet armies were putting up bitter resistance in the impenetrable forest, and constantly received reinforcements by air from the winter of 1941 on. The Hungarian occupation force operated under the command of various German HQs, but the Hungarian commanders were free to decide on tactics and on the punitive measures to be taken. Since the Hungarians were very short of equipment, had very little training, and possessed no heavy weapons, their commanders saw the creation of 'dead zones' and the use of brutal reprisals as the only way to fight the partisans. The German commanders often had to restrain the Hungarian occupation force. The ratio of own losses to the number of partisans killed or captured varied from 1 to 7 to 1 to 18, whereas the ratio in the area covered by German occupation troops in the zones of Army Group B or Army Group Centre, and in the area covered by the Wehrmacht commander in Ukraine, was much lower. It was higher (1 to 24) only in the area of the senior SS and police leader in Russia.<sup>17</sup> The Hungarian force was second only to the SS in its harsh treatment of civilians.<sup>18</sup> More partisans were killed by three Hungarian divisions in the spring of 1942 than in the whole area covered by Army Group Centre. The occupation forces could not

<sup>15</sup> On the Hungarian figures, see BA-MA WIIF2/17, and on the strength of the German occupation troops in the area of Army Group Centre, see Gerlach, *Kalkulierte Morde*, 859–959.

<sup>16</sup> See Germany and the Second World War, vi. 1020; Cooper, *The Phantom War*, 146.

<sup>17</sup> See Ungváry, 'Die ungarische Besatzungstruppe', 125–63, and id., 'Das Beispiel der ungarischen Armee', 98–106. Cf. Anderson, 'A Hungarian Vernichtungskrieg?', 339–66.

<sup>18</sup> This somewhat qualifies the claims made in publications that appeared in the wake of the 1995–2000 Wehrmacht exhibition (Bartov, *Hitlers Wehrmacht*, may be cited as representative), according to which the main reason for the inhuman conduct of the war was the ideological blindness of the troops.

do much in the actual fighting against the partisans. At the end of 1941 the partisans already had their own airfields, and even a tank-repair workshop, in the Bryansk forest. They were equipped with grenade launchers and cannon, whereas the divisions of the Hungarian occupation force had no anti-tank guns or artillery. An entire division had only 42 machine guns at its disposal. Despite repeated requests from the Hungarian side, the OKW and the OKH had not assigned the Hungarians a specific area in which to deploy their troops. Units were snatched from the command of the Hungarian occupation force and placed under various German command staffs.

As to collaboration, the Hungarian occupation forces were organized on the same pattern as the Wehrmacht units in the German occupation apparatus. Each Hungarian division had a GFP (Secret Field Police) group attached to it, and the Hungarians were instructed to cooperate with the stationary *Einsatzgruppen*. This arrangement disciplined the Hungarian troops to some extent, but their conduct was far from unobjectionable. The complaints made against them by the supervisory German command authorities included high-handedness, mass reprisals, unauthorized participation in executions, or even random shooting of Jews and 'suspects'. Significantly, Hungarian commanders were not prepared to discuss excesses on the part of their troops.<sup>19</sup> General Erich Schneider, the commander of 4th Armoured Division, who occasionally came into contact with Hungarian troops during the 1942/3 winter battles, was so appalled by the excesses committed against the civilian population that he sent a top secret report to Second Armoured Army, in which he referred to his own experiences, to reports from Ic, and to observations by his troop commanders, and called for immediate action to end the abuses.<sup>20</sup>

The Hungarians had felt from the start that the war they were engaged in was not 'their war'. Hungary had no territorial claims against the Soviet Union, and the idea of a crusade against Bolshevism appealed to the very few. The divisions of the occupation force were used by Hungarian diplomacy to satisfy the German demands for armed assistance. Every man in those units must have felt from the outset that the occupation force was an economy measure designed to save human and material resources, especially as 60 per cent of the men were Slavic- and Romanian-speaking conscripts to whom the Holy Crown of St Stephen meant nothing. Only the officer corps consisted entirely of Hungarians. But here too, most of them were reservists.<sup>21</sup> The Hungarians did not need to consider the economic consequences of their excesses, as they themselves would derive no benefit from a properly functioning agricultural sector. This simply added to the feeling of being a 'guest' in a theatre of war. Another decisive reason for the increasingly radical conduct of the occupation

<sup>19</sup> 'Bericht des Verbindungsoffiziers zum kgl. Ung. I.R. 46', 268 (7Apr.1942), BA-MA RH23/173.

<sup>20</sup> '4.Panzerdivision an das Panzerkommando 2, 28.3.1943', BA-MA RH21-2/v.562.

<sup>21</sup> This fact too contradicts the repeatedly advanced 'ideologically motivated perpetrators' thesis, whose most representative advocates are Omer Bartov, Walter Manoschek, and Hannes Heer. In comparison, see Gerlach, *Kalkulierte Morde*, 618, 777, 882, 889, 916 ff., 968, 1146, 1154 ff.; Hartmann, 'Massensterben', 97–158; Lieb, 'Täter aus Überzeugung?', 523–53; Ungváry, 'Das Beispiel der ungarischen Armee', and id., 'Die ungarische Besatzungstruppe'.

201st Lt.Div.		Ukraine	

*Note:* The subordination arrangements changed several times between 1942 and 1944. For details, see MGFA, M2/1-2, ed. Pál Darnóy, 'Organisation und Gliederung der kgl. ungarischen Honvéd-Armee', Part D VII. The 201st Division was an improvised unit. The 1st, 18th, 19th, and 201st Divisions were disbanded in May and summer 1944.

force was the fact that, in the given situation, the fight against the partisans could be conducted only by brutal methods.

From 1943 the fight against the partisans entered a new phase. The behaviour of the Hungarian occupying forces changed, and the methods employed by the German side in dealing with the partisans were also increasingly transformed. The steadily rising losses and the lack of modern equipment forced the Hungarian units to remain passive, and the Germans contented themselves with deploying them only in the defence of fixed installations. As those units were poorly armed, the Germans mostly refrained from deploying them in active operations against the partisans. In March 1943 two Hungarian divisions in the area of Army Group Centre were deployed against Soviet units which had broken through around Seredina Buda, and within a few days they had lost 40 per cent of their weapons and men.<sup>22</sup> Some Hungarian units also took part in German large-scale operations, though without any conspicuous success. The troops of Occupation Group West also encountered a Polish population in the Pripet marshes and in Galicia, against whom they were unwilling to take reprisals on account of the historical friendship between Poland and Hungary. The commander of the occupation force concluded local armistice agreements with the Ukrainian anti-Communist partisans of the UPA (*Ukrainska Povstanska Armiya*, Ukrainian Insurgent Army), and Hungarian officers often made private contact with Polish landowners.<sup>23</sup> In the late summer of 1943 the Hungarian VIII Army Corps, formed out of Occupation Group East, was regrouped further to the west, and its connection with the Hungarian VII Army Corps (previously Occupation Group West) was lost.

<sup>22</sup> These losses were by no means due to errors of command: the Hungarian units were so poorly armed and trained that they were always bound to lose. For details, see *Magyarország a második világháborúban*, 283.

<sup>23</sup> The signs of Polish–Hungarian friendship were regarded with deep suspicion by the local German command authorities; 'Meldung des deutschen Verbindungsoffiziers bei der 1. Kavalleriedivision, 9.8.1944', BA-MA RH 19II/229, 36.

In parallel with the armistice negotiations, the Hungarian General Staff endeavoured, from the summer of 1943, to keep the divisions of its occupation force out of the fighting, or at least to obtain their withdrawal to the forefield of the Carpathians. In return, the chief of staff, Col.-Gen. Ferenc Szombathelyi, without prior agreement with his head of government, offered three divisions as an occupation force in the Balkans. The idea of a Hungarian occupation force in Serbia or Bosnia had already been put forward by the German side in 1941, but the Hungarian government had not been prepared to accept the idea, for political reasons, and it consistently rejected the German proposals presented on three occasions in the course of 1943. The fact that the Hungarian General Staff would willingly take on an occupation task in Serbia caused serious tension between the politicians and the military. Hungarian participation in the fighting in Yugoslavia would have been against the interests of the Yugoslav government-in-exile and of Britain, and thus completely at odds with Prime Minister Kállay's peace initiative. The German authorities therefore used the Hungarian occupation forces as a bargaining counter to put pressure on Kállay, and were not prepared to give them up. Given the shortage of German troops, the Hungarians were indispensable, despite constant complaints about their lack of discipline and unwillingness to fight. A telegram from the military attaché in Budapest, Friedrich Carl Rabe von Pappenheim, in which he bluntly referred to the divisions of the Hungarian occupation force as a 'bargaining counter', went astray, causing a diplomatic scandal which ultimately led to his dismissal. Hitler and the OKH were not even prepared to comply with the Hungarians' repeated requests for the occupation force to be moved back, at least to eastern Galicia.<sup>24</sup>

The Soviet winter offensive in January 1944 drove Occupation Groups East and West even further apart. VII Army Corps withdrew to Galicia to take over defence of the Dniester line, where it was destroyed at the end of March. VIII Army Corps (renamed II Reserve Corps on 1 May 1944) was split into a number of parts, all of which were forced to withdraw westwards. Parts of the corps ended up being posted to the front, although the whole corps possessed only eight artillery batteries and the OKH had agreed with the Hungarian General Staff that it should not be deployed against front-line forces. The Hungarian side therefore issued an order that divisions too were to be kept out of battles with regular troops. This order was repealed under pressure from the OKH.<sup>25</sup>

The Hungarian security divisions are mentioned only in passing, both in the German military records and in the specialist literature. And when they are, their performance is always described in negative terms: the Hungarian units 'stream back', 'lack combat strength', 'collapse', 'put up hardly any resistance'.<sup>26</sup> Of course,

<sup>24</sup> MGFA, M2/1-2, study by Pál Darnóy, 'Organisation und Gliederung der kgl. ungarischen Honvéd-Armee', pt. D/VII, 9.

<sup>25</sup> On the occupation group, see *ibid.* and BA-MA RW4/84, 6 ff., as well as the German liaison officer's reports BA-MA RH 19II/228, and the corps reports BA-MA RH 20-2/905.

<sup>26</sup> For examples, see 'Stimmungsbericht, Deutscher Verbindungsstab beim Oberkommando der Kgl. Ung. Besatzungskräfte'. Telex, ObKdo H.Gr. Mitte to OKH, BA-MA RH2/721, 28 Mar. 1944, BA-MA RH19II/229, 20; see also Niepold, *Mittlere Ostfront*.

these accusations also served to shift their own responsibility onto the shoulders of their Axis partner. However, an analysis of the losses gives a different picture. Thus, 38th Infantry Regiment lost 80 per cent of its officers and half its men in the fighting between 17 and 26 July 1944. The regiment carried out a number of counter-attacks during that period, when not even food could be given out for days on end. ‘The men were so tired that they hardly responded to infantry fire any longer; only shellfire prompted them to summon up their strength and fight as best they could.’<sup>27</sup> Despite this, XXII Army Corps HQ threatened to have the regiment’s commander court-martialled for cowardice, even though he had constantly been in the main battle line.

From the summer of 1944 some Hungarian divisions were also deployed in securing Warsaw. In view of their strikingly friendly contacts with the Polish population, the OKH planned to disarm the Hungarian occupation divisions after the Warsaw uprising, but that was not done, because the Hungarians troops remained passive and were sent back to Hungary.

## 2. THE OCCUPATION OF HUNGARY AND THE IMPACT ON ARMAMENTS

At the beginning of 1944 the military situation on Hungary’s eastern borders was becoming increasingly acute. The Soviet winter offensive was going well. By the end of February there was already a gap of 150 to 200 kilometres in the front before Lvov. Hitler could no longer accept Hungary’s ambivalent attitude, and on 28 February he gave orders for preparations to occupy the country. Hungary was important, and indeed indispensable, to Hitler’s strategy. From his viewpoint, the wavering Axis partner and the critical situation at the front represented an intolerable risk.

Hungary’s lack of determination on the one hand, and the secret negotiations discovered by German counter-intelligence on the other, were the motives for preparing to occupy the country. The fact that there was a parliamentary system in Hungary, that the Social Democrats were relatively free to go about their business, and that war and peace could be openly discussed in the parliament’s foreign affairs committee, appeared intolerable. In this connection, there is a telling entry in Joseph Goebbels’ diary in which Kállay is described as ‘an absolute swine’.<sup>28</sup> Significantly, Hitler ordered the occupation of Hungary only when the Soviet troops had already reached the Carpathians. The decision on the occupation was thus determined by economic and military considerations. The ‘unresolved Jewish question’, on the contrary, was seen not as an end in itself but as a means to achieve those economic and military objectives.<sup>29</sup>

<sup>27</sup> HL, 38th Infantry Regiment combat report, 5.

<sup>28</sup> Goebbels, *Die Tagebücher*, pt. 2, ix. 602.

<sup>29</sup> On the reasons for the occupation, see Aly and Gerlach, *Das letzte Kapitel*, 107.

After the shock caused by the overthrow of Mussolini in Italy in the summer of 1943, Hitler decided in September 1943 to have plans drawn up for the occupation of Hungary (Operation MARGARETHE I). The OKW produced the plans on 30 September and, in the original version, it was still expected that the Romanian and Slovakian armies would take part in the operation. However, the plan was changed several times. The idea of Slovakian and Romanian participation was dropped in February 1944, because the arguments of Walter Schellenberg<sup>30</sup> and Wilhelm Höttl<sup>31</sup> about the Hungarian resistance to be expected in that event had caused Hitler to change his mind. Accordingly, Hitler also gave orders in January 1944 for plans to be made for the occupation of Romania (Operation MARGARETHE II). Since the Soviet army was approaching the Hungarian border at an alarming rate in February 1944, the occupation was now a matter of the greatest urgency for Hitler. On 11 March he gave the order to proceed with Operation MARGARETHE I. Although the German planners assumed that the Hungarian army would remain loyal to the Wehrmacht during the occupation operation, an order was issued to 'crush any resistance ruthlessly'. Everything indicates that the Wehrmacht would have dealt with any resistance in the same way as it had with the Italian army. Orders were given that officers who defended themselves when being disarmed were to be shot 'in action'.<sup>32</sup> The plans also included a propaganda flight to drop leaflets on Budapest and a special mission, code-named 'Trojan Horse', against important targets in the capital.<sup>33</sup>

The German special envoy, Edmund Veesenmayer, visited Budapest in the spring and autumn of 1943, ostensibly in a private capacity. He engaged in numerous negotiations with the right-wing opposition, in the course of which he gained the impression that most leading politicians were probably prepared to collaborate or cooperate with the Reich. A change of political leadership (which he referred to disparagingly as the 'Burg clique') would, in his view, suffice. Veesenmayer therefore proposed an 'evolution' scenario rather than an 'exclusively German takeover'. The occupation operation should be 'cooperative', Horthy should remain in place, and a coalition government of the ruling party and the right-wing opposition should be formed.<sup>34</sup> Veesenmayer's viewpoint was shared by senior military figures such as Field Marshal Maximilian von Weichs, the German envoy in Budapest, Dietrich von Jagow, and the head of the foreign security service, Walter Schellenberg.<sup>35</sup> All in all, most of the German decision-makers were convinced that the Hungarians were prepared to collaborate.

<sup>30</sup> Walther Schellenberg (1910–52), SS Gruppenführer and Lt.-Gen. in the Waffen SS; in 1944 head of Section VI (Intelligence) of the RSHA.

<sup>31</sup> Wilhelm Höttl (1915–2002), Sturmbannführer in the Waffen SS; in 1944 specialist on Hungary in Section VI of the RSHA, active in Budapest after the German occupation.

<sup>33</sup> On the planning and execution, see BA-MA RW 4/v. 585 and RW 4/84 ('Fall Margarethe'), KTB OKW, iv/1, section 3, 179–246, and Ránki, *Unternehmen Margarethe*.

<sup>34</sup> See Veesenmayer's reports in Braham, *Destruction*, 229–42 and 254–95.

<sup>35</sup> Aly and Gerlach, *Das letzte Kapitel*, 110.

For the ‘evolution’ approach to work, Horthy would first have to be persuaded to accept it. On 15 March 1944 he received the Führer’s invitation to visit Klessheim on 18 March. Although Horthy had already been faced with the German demands a year earlier, he was not expecting the country to be occupied, and he hoped to save it from worse inroads by making further material concessions.<sup>36</sup> Although Hungarian intelligence was constantly receiving reports of preparations for occupation, the military and political leadership did not want to believe them. Resistance was hardly thinkable, for military reasons. The following sentence in a radio message from the commander of the West Hungarian III Corps, Lt.-Gen. Szilárd Bakay, perfectly describes the predicament of the few officers loyal to Horthy: ‘Russians in front of us, Germans behind us, English overhead, I request orders.’<sup>37</sup>

The regent was not prepared for Hitler’s reproaches at Klessheim, and they came as a shock. After the first discussion session, in which the occupation was presented as a fait accompli, Horthy threatened to break off the negotiations immediately. However, following mediation by the chief of the general staff, Ferenc Szombathelyi, he abandoned his resistance.<sup>38</sup> Two further discussion sessions took place. In the end, Horthy gave his agreement to the occupation of the country and the dismissal of the Kállay government. There was no written agreement. On the train back to Budapest, Horthy was introduced to ‘envoy and Reich plenipotentiary’ Veesenmayer, who endeavoured to persuade him to reinstate the former prime minister, Béla Imrédy, who had been forced to resign in 1939 because he was 12.5 per cent ‘Jew-related’. However, Horthy was not prepared to appoint either Imrédy or the other German favourite, Col.-Gen. Jenő Ruszkay. On 20 March he proposed a compromise candidate, Döme Sztójay, who had been in the diplomatic service since 1925, most recently as ambassador in Berlin. This was agreed, as Veesenmayer also found Sztójay acceptable.

The occupation of the country proceeded without any problems. Only in a few cases was there any resistance. The propaganda flight over Budapest was stopped, and it was decided not to disarm the Hungarians. The Honvéd units were to remain in their barracks. Several divisions originally designated as occupation forces were not called upon, so only eight divisions took part in the occupation operation.<sup>39</sup> *Einsatzgruppe G*, and the *Sonderkommando Eichmann* (Eichman’s special unit) under its command, also moved into Hungary with these divisions.

<sup>36</sup> Hitler had already reproached Horthy on 17 April 1943 for the Kállay government’s contact with the western Allies, and had called for measures to be taken against the Jews and, indirectly, for Kállay to be dismissed because he no longer had any ‘confidence’ in him.

From the north (Slovakia): a regiment from Division ‘Grossdeutschland’, an emergency regiment from the Division ‘Brandenburg’, and 21st Armd.Div.

The *Einsatzgruppe* was not to encroach on the powers of the Hungarian police and gendarmerie—on the contrary, the intention was for them to work together. Since the whole *Sonderkommando* consisted of 60 to 80 people in all, including specialist staff, secretaries, and drivers, cooperation was considered essential if their mission was to succeed. Working side by side, the German and Hungarian security forces arrested several thousand political opponents and Jews in the first hours of the occupation.

Only with the direct military occupation of Hungary by the Wehrmacht on 19 March 1944 could the redistribution measures that had been propagated for years be implemented in full. It is noteworthy that those measures in no way damaged the reputation of the German occupation in Hungarian domestic politics. On the contrary, they appeared to be a stabilizing factor.<sup>40</sup> For many Hungarians, the deportations of Jews which now began helped to make it tolerable or even meaningful to stay on the German side. The Jewish assets that were acquired made it possible to balance the state budget for a time and meet Germany's economic demands.<sup>41</sup>

Despite many dismissals at high level (including two-thirds of all mayors), many civil servants were prepared to exclude their fellow citizens and make inventories of their possessions. Others were also prepared to appropriate for themselves property whose owners had been deported.

On 22 March 1944 a coalition government was formed, consisting of the ruling party, Imrédy's radical right-wing party, and Hungarian National Socialists. Several ministers who had served in the Kállay government, including the finance minister, Lajos Reményi-Schneller, and the minister of agriculture, Béla Jurcsék, were co-opted. Szálasi's Arrow Cross party kept its distance from the government, which it denounced as 'sham National Socialists'. Szálasi repeatedly ordered party members not to cooperate in any way in the Aryanization of Jewish assets for their own benefit.<sup>42</sup> In his view, the deportation of this 'valuable workforce' was simply 'giving valuable man-hours away' to the Germans, and it would be better for the Jews to 'work or die' in Hungary.<sup>43</sup> Thus, the most radical political forces actually played no part in the deportation and plunder of the Jews.

Most German historians hold that the deportation of the Hungarian Jews was ideologically motivated. Less frequently, they attribute a supplementary economic motivation to it, but it is always seen exclusively from the German perspective. They blot out the fact that the German occupying forces actually had no other option. Since Hungarian involvement was considered an essential condition for the occupation from the outset, measures had to be taken that would strengthen the

<sup>40</sup> Although this fact is clear from the monthly police reports already published, which have been accessible to researchers for decades, it has been overlooked by Hungarian and western historians (with the exception of Aly and Gerlach). See Schmidt, 'Provincial Police Reports', 233–67.

<sup>41</sup> On this, see Ungváry, 'Nagy jelentőségű szociálpolitikai akció'; Aly and Gerlach, *Das letzte Kapitel*, 212–39.

<sup>42</sup> Report, 24 Apr. 1944, IfZ, MA1541/1, 417 and IfZ Fb.102/1-2, 'Szálasi-Tagebuch', 33–5, BA, NS19/2063.

<sup>43</sup> Report, 24 Apr. 1944, IfZ, MA1541/1, 419.

readiness of the Hungarian elites and the Hungarian population to collaborate. All the political parties that were prepared to collaborate had been calling for the total 'solution of the Jewish question' since 1939. In this respect, there was very little difference between the Arrow Cross, the National Socialists, Imrédy's party, and most of the governing parties. Of the major political figures, only a small circle round Horthy, Bethlen, and Kállay opposed these trends. Until March 1944, Kállay had been able to forestall such demands only by adjourning parliament. The distribution of Jewish property to the Hungarians thus served both to ensure the population's readiness to collaborate and to stabilize a state budget undermined by war expenditure. The financial circumstances of many ordinary men and women improved after the country was occupied, and acceptance of the alliance with the Third Reich was strengthened as a result.<sup>44</sup>

The government authorities were worried about the side effects of the state robbery. They were afraid that people might feel some 'misplaced sympathy' for the Jews. On 10 June 1944 Prime Minister Sztójay expressed his concern in the council of ministers: 'Cruelty can unfortunately lead to philo-Semitism. The deportation must therefore be conducted "humanely".'<sup>45</sup>

There were no public protests in Hungary like the Rosenstrasse protest in Berlin. By the beginning of July more than 437,000 men and women had been deported, at a horrifying speed, to Auschwitz, where those fit for work were selected and the rest (some 70 to 75 per cent of all deportees) immediately put to death. The harshness and self-initiative of the Hungarian authorities is typified, *inter alia*, by the fact that even Jewish partners in mixed marriages were often deported and stripped of all their possessions. In many cases, the non-Jewish spouse's shoes and wedding ring were also removed, 'for safety's sake' (since Hungarian property was not supposed to fall into German hands).<sup>46</sup>

Moreover, the conscription of Hungarian Jews for labour service increased after the country was occupied by the Wehrmacht. The purpose of this measure was not so much to save human lives as to secure the Jews' economically valuable labour for the Hungarian state.

After the country was occupied, the Wehrmacht authorities were able to make extensive use of Hungary's economic resources and reserves of raw materials. Up to 60 per cent of Hungarian crude-oil production was delivered to Germany in the summer, and as much as 80 per cent in October. 85,000 tonnes of mineral oil were already shipped out of Hungary in May.<sup>47</sup> In return for the Hungarian output, the 'Buhle agreement' of June 1944 guaranteed monthly deliveries of military equipment. However, these deliveries (the 'Elch programme') were not maintained by the German side, or were subject to long delays. The Wehrmacht was not prepared to grant licences for modern weapons on favourable terms: for example, 120 million Reichsmarks were demanded for a licence to build Panthers for Hungarian

use.<sup>48</sup> As in all occupied countries, heavy burdens were imposed on the Hungarian budget. Hungary was initially obliged to pay Germany 200 million pengő in ‘occupation costs’, and 300 million from October 1944 on. These sums bore no relation to the actual costs of the occupation and were used to replenish the German war budget. Even after the first nine weeks, the real costs of the occupation amounted to only 136 million pengő, and they fell further as a result of the Wehrmacht troop withdrawals.<sup>49</sup> The fact that the Hungarian budget was able to bear these burdens without immediate inflationary pressure, although they were more or less equivalent to the state’s total current expenditure, can be explained only by the influx of Jewish assets.<sup>50</sup>

One of the most important consequences of the occupation was the integration of the Hungarian army in Germany’s military operations. The chief of the Hungarian General Staff, Col.-Gen. Szombathelyi, was dismissed and replaced by Lt.-Gen. János Vörös, whom the military attaché in Budapest described as pro-German but ‘no luminary’.<sup>51</sup> The key positions on the general staff had to be reallocated in only a few cases, since most senior officers were convinced supporters of the German–Hungarian alliance. The OKH judged the Hungarian officer corps to be ‘not very pleased with the way we have treated Hungary, but still, as ever, prepared to cooperate loyally, being convinced that Hungary and Germany stand or fall together. Almost oriental in their fatalism’.<sup>52</sup>

The mobilization of the Hungarian 1st Army was speeded up, and it took over the front east of the Carpathians. On 24 April the OKH also demanded the mobilization of 1st Cavalry Division. By Hungarian standards, this unit was expensively equipped with modern weaponry. It was, so to speak, the regent’s ‘favourite child’, and only after a prolonged diplomatic tug-of-war did he finally agree on 9 June to allow it to be transferred to the Pripet marshes.<sup>53</sup> By the middle of August all active Hungarian divisions had been mobilized and deployed at the front.

Under German pressure, a number of staffs which the Wehrmacht considered superfluous (those of I Armd.C., I, III, IV, V, and VIII A.C., 2nd and 3rd Armies) were temporarily disbanded or assigned to administrative duties. On 14 April 1944 the OKW ‘requested’, through the German military attaché, that the Honvéd ministry and the general staff be ‘reduced to the absolutely essential minimum strength’—clearly, the Hungarian military command authorities were to be put out of action as far as possible.<sup>54</sup> Owing to resistance on the part of the Hungarian

authorities, however, these measures were not fully implemented until October 1944. It was also some time before the Wehrmacht was able to make direct use of the country's manpower. In May 1944 there were 34,000 workers in German labour squads.<sup>55</sup> However, the removal and robbery of the Jewish labour force, and the direct deployment of an entire Hungarian army, were much more significant. The Sztójay government was able to oppose the demand for Hungarian labour successfully on the grounds that hundreds of thousands of Jewish 'workers' had already been handed over.<sup>56</sup>

On 30 April 1944 Germany forced Hungary to enter into a bilateral agreement on the compulsory recruitment of all male Hungarian citizens aged 17 to 55 who described themselves as Germans or who 'could be so described by reason of their way of life and ethnic characteristics'.<sup>57</sup> This deliberately vague wording enabled the SS recruiting squads, supported by the Hungarian gendarmerie, to carry out what was tantamount to a kidnapping operation in the Hungarian German villages. The 'voluntary' nature of the exercise had already been called into question in earlier recruitment operations. A total of 122,860 Hungarian Germans served in the Waffen SS, of whom 80,000 were forcibly recruited under the above-mentioned agreement.<sup>58</sup> Those unfit for military service served in SS police regiments. Such men, as well as men from other units who were recovering after being wounded in action, even had to reckon with the possibility that they might be employed as concentration-camp guards. Since Horthy and many sections of the Hungarian leadership would have greatly preferred to be rid of all of Hungary's ethnic Germans, the Hungarian government by no means opposed the German demand for Hungarian German conscripts.<sup>59</sup>

After Romania's withdrawal, a further eight replacement divisions, two replacement mountain brigades, and two replacement armoured divisions were to be formed from the replacement army. According to the plans, these units were to have only 60 per cent of the personnel and arms of a normal division: only two regiments instead of three, with each regiment comprising two battalions, and each battalion only two companies. Artillery, anti-tank units, and other units under direct divisional command were reduced even more severely.

Three of the divisions in question could not be formed at all because of the lack of equipment, and the rest had at most the combat capability of the German home guard. The German and Hungarian authorities were well aware of the fact. The OKW had already observed, when a similarly equipped German division was crushed in the spring of 1944, that 'such experiments in forming units are

<sup>55</sup> The Hungarian state had provided the workforce in the copper mines in Bor (Yugoslavia) since the middle of 1943, under a bilateral agreement. Jewish military labour service battalions were used for the purpose. In return, Germany handed over part of the copper that was produced. See Braham, *The Wartime System of Labor Service*.

irresponsible'.<sup>60</sup> However, this observation did not prevent the authorities in Hungary or Germany from deploying units of this kind against Soviet armoured armies. As a result, the Wehrmacht's and the Hungarian Honvéd's bloody losses in the final year of the war exceeded all the worst fears. By mid-October all the Hungarian replacement units, with the exception of one division, had been crushed and destroyed.

On the basis of developments on the eastern front, Lajos Nádas, head of the operations division of the Hungarian General Staff, calculated, in his situation assessment of 10 January 1944, that the Red Army could reach the Hungarian border within weeks.

However, he was less worried about the progress of the Red Army in itself than about the fact that a Soviet advance might cause Romania to change sides. He accordingly suggest that the Hungarian forces be concentrated in the Debrecen–Nagyvárad area, so that they could advance equally well in two directions (against Romania in southern Transylvania or to defensive positions in the Carpathians). The Árpád line had been established on the Carpathian ridge since 1939/40, and the Hungarian authorities hoped to be able to halt the Soviet offensive in that area, which was particularly favourable to defence.

During his visit to Führer headquarters from 23 to 27 January 1944, Szombathelyi tried to persuade Hitler to leave the defence of the Carpathians to the Hungarian army alone. Hitler rejected this request, observing that 'there is no question of a Carpathian front'.

Army Group South Ukraine and Army Group A suffered heavy defeats between January and March. In this strategic situation, it was essential that the Hungarian 1st Army be deployed in the forefield of the Carpathians. Even the OKW war diary admitted in retrospect that the situation could not have been saved without the aid of the Hungarians.<sup>61</sup> Géza Lakatos had approximately 136,000 men at his disposal at the time. On 12 April 1944 his army was placed under the command of Army Group North Ukraine, of which Field Marshal Walter Model had been appointed commander-in-chief on 30 March. On 2 April Hitler issued Operational Order No. 7, stipulating, *inter alia*, that the access routes to the Carpathian passes were to be secured and the Kolomyia–Tarnopol–Kovel line was to be held or recaptured. The army was still being mustered on 17 April when the German high command gave the order for the counter-offensive. To strengthen the Hungarian troops, the German XI Army Corps was placed under their command. However, only the corps staff were available when the attack was launched. Its three divisions did not arrive in full until the beginning of May.

Between 17 and 30 April the Hungarian 1st Army managed to straighten the front line and move it forward 25 to 30 kilometres. The lost connection between Army Group North Ukraine and Army Group South Ukraine was restored. Nadvornaya was recaptured, but the front came to a standstill 12 kilometres before Kolomyia. The Hungarian 2nd Armoured Division lost all its outdated tanks in the course of the offensive,<sup>62</sup> and the Hungarian losses amounted to 15,571 killed,

<sup>60</sup> KTB OKW WFst, study of 'Bewährung von Verbänden', BA-MA RW 4/v.79.

<sup>61</sup> KTB OKW, iv/1, 210.

<sup>62</sup> Report, 5 May 1944, BA-MA RH24-11/101.

wounded, or missing.<sup>63</sup> Lakatos was awarded the Knight's Cross of the Iron Cross. The Hungarian success was also attributable to the fact that 1st and 2nd Ukrainian Fronts had lost about half their complement in the previous offensive and were consequently much weaker.<sup>64</sup>

The Hungarian 1st Army received regular reinforcements from Hungary and was responsible for defending a 150-kilometre front line. At the beginning of May 1944 the ration strength of the Hungarian troops under German command on the eastern front was 210,000, and by July 297,000, including the occupation force.<sup>65</sup>

A double pincer attack on Kolomyia, in conjunction with First Armoured Army, was planned for May, under the code-name Operation SHIELD AND SWORD. In fact, the situation on the front at this point was particularly favourable for the proposed offensive, but it had to be cancelled because the necessary attacking forces were not available.<sup>66</sup> 20th Infantry Division was placed under the command of First Armoured Army in May, and 1st Cavalry Division under Army Group Centre in June. Shortly afterwards, on 22 June, the Soviets launched their summer offensive, Operation BAGRATION. Exactly a month later, on 22 July, the Hungarian army front was attacked. The defence collapsed in two days. The army was able to regroup its forces in the Hunyadi position, established in the forefield of the Carpathians, but it lost important strongpoints round the Tatar pass. It was fortunate for the Hungarians that the main thrust of the Soviet offensive was directed west to the oilfields around Borislav and Drohobych, rather than south-west.

The issue of withdrawal was a source of serious conflict between the Hungarian army high command and the German high command. The former wanted to start withdrawing southwards to the Carpathian positions in accordance with the regent's instructions, but the OKH and the army group insisted on a westward withdrawal towards Drohobych.<sup>67</sup> The Hungarian 1st Army had already lost some 30,000 men, killed, wounded, or missing, in the course of a few weeks.<sup>68</sup> The Soviet units took up the pursuit between 27 July and 10 August, launching four major attacks with a view to taking the Carpathian passes.<sup>69</sup> The defence was strengthened at the beginning of August with the allocation of four Hungarian divisions and one German division. This meant that all active Hungarian units were now at the front. In addition, XLIX Mountain Corps arrived with two more German divisions at the end of the month. By 10 August the Hungarian units, together with 4th Mountain Division, had managed to recapture the lost strongpoints in the Hunyadi position in the forefront of the mountain ridge.<sup>70</sup>

On 5 August 1944 the Stavka formed 4th Ukrainian Front, comprising 23 divisions, with the task of forcing a breakthrough through the Carpathians. However, the attacks remained stuck in the staggered defences, which were 50 kilometres deep and geographically favoured. The Red Army could not even reach the Carpathian ridge and the most important passes.

After Romania withdrew from the coalition on 23 August 1944, the Hungarian 1st Army was obliged to transfer four divisions to the Hungarian 2nd Army formed in Transylvania. Petrov's army front resumed its attacks on 8 September. The aim of the operation was to break through the Dukla pass, which was defended by the German First Armoured Army, and through the positions held by the Hungarian 1st Army. The Stavka hoped, in this way, to prepare a second 'Cannae' for the whole of Army Group South, and to come to the assistance of the uprising that had broken out in Slovakia on 29 August. Although Petrov had 38 divisions/brigades and an armoured corps at his disposal, with a total of 378,000 troops, the breakthrough failed, and he lost 131,000 men. The forces deployed in the attack on the Dukla pass lost as much as 70 per cent of their equipment.<sup>71</sup> The Hungarian 1st Army was obliged to shorten its front on 23 September because of the developments in Transylvania and First Armoured Army's withdrawal before the Dukla pass. As part of a movement code-named 'Winter Sports', the Hungarian divisions moved back to the Árpád line, some 30 kilometres south-west of the Hunyadi position. The Hungarian 1st Army managed to hold its positions there until 15 October, when the 2nd Ukrainian Front troops reached Debrecen and threatened to encircle it.

### 3. THE HUNGARIAN THEATRE OF OPERATIONS

After Romania's withdrawal from the coalition, Hitler concentrated his attention on the operations of Army Group South.<sup>72</sup> With Romania gone, Germany depended entirely on the Zala and Zistersdorf oilfields for fuel. In these circumstances, and in view of the imperative need to defend the Vienna area, the Hungarian theatre of war became much more important. Hitler made every effort to regain the initiative in Hungary. To that end, the OKH planned a whole series of new offensives (GYPSY BARON, LATE VINTAGE, KONRAD I-II-III, SPRING AWAKENING) from September 1944 to March 1945. Those offensives failed, however, or in some cases could not even be launched because they were pre-empted by Soviet offensives. General Walter Wenck was temporarily attached to the army group from the end of December 1944 as 'OKH special plenipotentiary', and Heinz Guderian also went to Hungary

<sup>71</sup> *Grif sekretnosti sniat*, 207.

<sup>72</sup> Most of the Hungarian units' war diaries were destroyed, so I have had to rely largely on secondary sources and the recollections of participants. The Soviet Russian publications are of only limited use with respect to the German-Hungarian side. And, unfortunately, the third volume of *Velikaya Otechestvennaya Voina 1941–1945*, published in 1999, also contains no new information.

to keep an eye on the situation. In March 1945 events in Hungary were usually the first entries in Joseph Goebbels' diary.

The German command moved a large part of its mobile reserves to Hungary in this phase of the war. By February 1945 almost half of all the German armoured divisions deployed on the eastern front were located in the Hungarian section of the front. No fewer than 15 armoured divisions, four armoured infantry divisions, four cavalry divisions, and six infantry divisions were dispatched to Hungary during this period, and only burnt-out units were brought back. With more Wehrmacht reinforcements in Hungary than in any other eastern theatre of war, it became a matter of prestige for Hitler to show at least some success in the area where most of his armoured divisions were operating.

Hitler had never had any particular feelings for Hungary, but he became almost obsessed with the idea of a victory on Hungarian territory. When Guderian warned him on 24 December that he expected a Soviet offensive to be launched from the Baranów bridgehead on 12 January, Hitler retorted: 'This is the biggest bluff since Genghis Khan. Who came up with this nonsense?' And he was seconded by Himmler, who was 'firmly convinced that there's nothing going on in the east'.<sup>73</sup>

As a result, IV SS Armoured Corps, the only reserve force on the Vistula front, was transferred to Hungary. The Soviet offensive was duly launched from the Baranów bridgehead on 12 January. Army Group Vistula, commandeered by Himmler, was torn to shreds in a matter of few days, and the first Soviet tanks reached the Oder two weeks later. Hitler had decided to 'go for broke' and place the point of concentration in Hungary. Holding western Hungary had become an *idée fixe*, whereas losing Upper Silesia in the east and the Saarland, with their vitally important coalfields, seemed of no particular interest to him, because he could hope to continue waging war offensively only if he had the Hungarian oil wells.

The Stavka too was well aware of the importance of the Hungarian theatre of war. As well as numerous units under direct army command, it dispatched five mobile corps and 27 rifle divisions to Hungary. And in addition to these reinforcements, the losses incurred by the units already deployed there were regularly replaced. According to German intelligence, eight of the Red Army's 38 armoured and mechanized corps and three of its seven cavalry corps were deployed in Hungary at the turn of 1944/5.<sup>74</sup> Given that the Hungarian section of the front was relatively short, this clearly indicated the formation of a Red Army point of concentration in Hungary. On a front with a total length of approximately 1,500 kilometres, no less than 27 per cent of all mobile troops were located in the 250-kilometre-long Hungarian section, where there would have been only 16 per cent if the troops had been evenly distributed.

### (a) The General Situation in the Carpathian Basin in the Autumn of 1944

Army Group South Ukraine was almost completely destroyed after Romania changed sides on 23 August 1944. The Soviet troops met with practically no resistance as they advanced through Romania, and they reached the Hungarian border in northern Transylvania on 25 August.

The Hungarian General Staff had been anticipating a possible Soviet–Romanian attack in Transylvania since the beginning of the year. Several divisions were made ready to defend it or take possession of the Carpathian ridge. However, the collapse of the Hungarian 1st Army in June 1944 and the subsequent reconstitution of the defence forces in the Carpathians required the deployment of the whole Hungarian army. The German command did not allow any divisions or military equipment to be kept back in the hinterland. As a result, when the Romanian coup took place, there was not a single Hungarian army unit available in reserve. A Hungarian 2nd Army was cobbled together on 28 August by taking troops from 1st Army and mobilizing the Hungarian replacement army. Consisting of three replacement and frontier brigades, two infantry divisions, one reserve division, one motorized division, two armoured divisions, and six replacement divisions, it secured the front line along the Romanian–Hungarian border in Transylvania and the Puszta region, as far as Szeged. These forces totalled approximately 190,000 men on a front 350 kilometres long.<sup>75</sup> In the Marosvásárhely area, Sixth Army, which at first consisted only of returning stragglers from organized German combat groups, took over the front line as far as the eastern Carpathians, to which Eighth Army had withdrawn.<sup>76</sup> The Sixth Army combat groups had only a few thousand men and few heavy weapons.<sup>77</sup>

The German command had very little confidence in the Hungarian armies, and its repeated attempts to have Hungarian units placed under the command of German corps and armies led to constant friction between the OKH and the Hungarian General Staff.<sup>78</sup> The OKH had a predilection for making corps commands available as ‘reinforcements’, but without any troops of their own. LVII Armoured Corps and LXXII Army Corps, which had no divisions of their own at the time, were used in this way to incapacitate Hungarian corps and army commands, and so keep all tactical decisions in German hands. On 19 September, in order to forestall further German moves of this kind, the Hungarian General Staff transformed the Hungarian IV Army Corps, which was fighting between

<sup>75</sup> Reszneki Zákó, *Őszi harcok*, 28–30; Ravasz, *Erdély mint hadszíntér*, 32–48.

<sup>76</sup> Troops from the rearguard of the Sixth Army units destroyed in Moldavia were still reaching the German lines at the beginning of October!

<sup>77</sup> The Winkler Group was 2,800 strong on 16 September 1944, the Pfeil Group had 239 men, the Kessel Blocking Unit had 1,650, and the Transylvania Group (8th SS Cavalry Division) had 3,660; BA-MA RH20-6/410. At the end of August the army group was also reinforced by 8th SS Cavalry Division, 4th Mountain Division, and parts of Division ‘Brandenburg’.

<sup>78</sup> On this, see the correspondence between the Hungarian chief of staff, János Vörös, and Guderian in HL, 304. ‘doboz (Schachtel), Honvéd Vezérkar 1. osztály napi intézkedései’, partly documented in Ravasz, *Erdély mint hadszíntér*, 42–8.

Nagyvárad and Szeged, into the Hungarian 3rd Army, and placed the Hungarian VII Army Corps under its command. The new army had only one active infantry division, two replacement divisions, one armoured division, and two reserve divisions at its disposal. With such forces, the idea of defending a section of the front approximately 200 kilometres long against Soviet armoured units was an illusion, especially as that section was particularly favourable to armoured breakthroughs.<sup>79</sup> The Hungarian government was aware of this, and on 7 September Horthy convened the Crown Council and informed it that he would shortly be obliged to seek an armistice. The Honvéd minister, Lajos Csatay, suggested as a compromise that Hitler be informed in an ultimatum that the Hungarian government would be ‘forced’ to seek an armistice with the Soviet army ‘unless five German armoured divisions are dispatched to southern Transylvania within 24 hours’.<sup>80</sup> This unrealistic and politically completely inept demand proved to be an ‘own goal’: Hitler promised to provide the five divisions, but they arrived late and were given the task of keeping the Hungarian government in check.

Despite the weakness of the Hungarian units, the main concern of the Hungarian command was to remain on the offensive. There was no chance of successful defence against the Soviet army along the Hungarian border, given the nature of the terrain. The only possible hope of relief was to move the defence lines forward to the Carpathian ridge, or at least to the Maros line. While Vörös and Csatay considered that their troops were not adequately equipped to capture southern Transylvania, Horthy and his circle still hoped to avoid capitulation to the Soviet Union. With the German assistance that had been promised, it might also be possible to hold on until the eagerly awaited Allied troops reached the Hungarian border from the Mediterranean.

The Hungarian demand that the Hungarian occupation troops, last deployed around Warsaw, be returned to Hungary was granted at the end of August. Three divisions were back in Hungary by 10 October. Only 5th Reserve Division remained with Army Group Centre or the German 1st Armoured Army until the end of the war.

Fighting in Transylvania started just two days after 23 August. King Michael and his new government declared the Second Vienna Award invalid and demanded the immediate evacuation of northern Transylvania. Romanian units of company and battalion strength attacked the Hungarian border but were successfully repelled. The first Soviet tanks reached the eastern Carpathians on 25 August, but a further offensive was successfully halted at the fortified Árpád line.<sup>81</sup>

On 5 September the reorganized Hungarian 2nd Army, under the command of Col.-Gen. Lajos Dálnoki Veress, launched an attack with the aim of moving the defensive positions forward to the Maros line. The Romanian 4th Army, which had been brought in from Moldavia, was 113,759 strong,<sup>82</sup> outnumbering the

<sup>79</sup> Jakus, *A magyar királyi honvédség IV. önálló hadteste*, 80–3.

<sup>80</sup> On the Crown Council meeting, see Vigh, *Ugrás*, 72.

<sup>81</sup> Ravasz, *Erdély mint hadszíntér*, 73–85.

<sup>82</sup> Ibid. 53; *România în Războiul Antihitlerist*, 621.

attackers, who only had 90,000 men at their disposal.<sup>83</sup> The offensive nevertheless started well for the Hungarians, and by 8 September the army had penetrated some 50 kilometres into Transylvania south of Kolozsvár, and had even crossed the Maros in part. The attack was helped by the fact that the Romanian command was no longer expecting a Hungarian offensive. Moreover, the Romanian divisions were very short of artillery and anti-tank weapons. And, on the Hungarian side, motivation and readiness to fight the ‘arch-enemy’, Romania,<sup>84</sup> were still particularly strong.

When these Hungarian successes were taking place, the mechanized units of 2nd Ukrainian Front were dangerously near, only 80 to 90 kilometres away. The Hungarian General Staff therefore decided to halt further offensives and prepare for defence on the line already reached. For political reasons,<sup>85</sup> the attack by the Hungarian IV Army Corps<sup>86</sup> (the future 3rd Army) was not launched until 13 September. Arad was taken, but the advance came to a standstill before the Bihar mountains,<sup>87</sup> so possession was taken of only part of the Maros line, and the Hungarians failed to block access to the Transylvanian ore mountains south of the Bihar range.<sup>88</sup> On 21 September the Soviet XVIII Armoured Corps and 53rd Army attack rapidly forced the Hungarian units back to the Hungarian border.<sup>89</sup> The Hungarians held out there for two weeks, although with great difficulty, and even launched a few counter-attacks, until the arrival of 2nd Ukrainian Front’s main forces.<sup>90</sup>

One threat to the army group, which was not noticed at the time but subsequently proved fatal, was the absence of a connection from the Hungarian 3rd Army to 4th SS Police Division, fighting in isolation in the south-west, or to Army Group F. Thus, the weak point in the front was in the Banat area, where Soviet units were able to cross the lower Tisza unobtrusively at the beginning of October, after 4th SS Police Division had withdrawn to Debrecen, and the lower Danube two weeks later, completely disrupting the defence of the Carpathian basin. The army group’s commander-in-chief, Johannes Friessner, asked for 92nd Motorized Infantry Brigade to be transferred from Army Group F, but his request was turned

<sup>83</sup> Col.-Gen. Veress could not deploy all his troops against the Romanian 4th Army. The only forces at his disposal were II and IX Army Corps, a few small combat groups, and 8th SS Cavalry Division.

<sup>84</sup> The Second Vienna Award on the partition of Transylvania, concluded by Germany and Italy in September 1940, was regarded by both Romania and Hungary as a transitional arrangement.

<sup>85</sup> Having regard to the Allies, and since negotiations were already under way, the political leadership wanted to avoid a further offensive against Romania. On this, see Lakatos, *Ahogyan én láttam*, 136 ff.

<sup>86</sup> 1st Armd.Div. with about 120 old Hungarian tanks, 6th and 8th Replacement Training Divisions, 20th Inf.Div., a hussars regiment, and a few unattached units were placed under the command of IV Army Corps. They contained about 50,000 men in all. For further details and references, see Számvéber, *Páncélosok a Tiszántúlon*, 28–31.

<sup>87</sup> Dálnoki Veress, *Magyarország honvédelme*, iii. 177–80.

<sup>88</sup> For the Romanian side, see Ciobanu, ‘The Defensive Operation’.

<sup>89</sup> Reszneki, *Őszi harcok*, 23.

<sup>90</sup> According to Hungarian sources, the Red Army had lost 128 tanks and assault guns in these battles by the beginning of October. Számvéber, *Páncélosok*, 65.

down because there was also a shortage of German troops south-west of Belgrade. In any case, a single brigade would hardly have sufficed to block the gap in the front, which was more than 80 kilometres wide. Owing to the shortage of reserves, the Hungarian border south of Szeged was defended only by frontier guards. 4th SS Police Division, deployed there from the beginning of September, could not even keep the Banat entirely under control. The German and Hungarian command, who could deploy their troops only sporadically and at certain points, closed their eyes to this danger.

At first, however, the Hungarian 2nd Army's situation in Transylvania proved more dangerous, because the Soviet 6th Guards Armoured Army had already reached that section of the front on 14 September. In its directive of 5 September, the Stavka had ordered the troops that had reached southern Transylvania to turn northwards. On 12 September 6th Guards Armoured Army had 344 tanks and assault guns at its disposal<sup>91</sup> and, together with 27th Army, it was assigned the task of taking Kolozsvár by 15 September. The second objective laid down in the directive was that 2nd Ukrainian Front and 4th Ukrainian Front should join up at Nyíregyháza,<sup>92</sup> and the shortest way to Nyíregyháza and Kolozsvár was through Turda. Between 13 September and 4 October strong Soviet and Romanian units attacked the front at this point, with the Hungarian divisions (25th Infantry Division and 2nd Armoured Division<sup>93</sup>) bearing the main burden of the fighting. The terrain round Turda was favourable to defence, so the Hungarian 2nd Army was able to operate successfully, despite its numerical inferiority. The fighting was hard, and the Hungarian 25th Infantry Division deployed in the area lost 1,000 men (including wounded) in a single day.<sup>94</sup> A Soviet breakthrough would have put the Hungarian 2nd Army and the German Eighth Army, which was fighting further to the east, in a catastrophic situation. Despite repeated counter-attacks by 2nd Army, the fierce armour-supported Soviet attacks increasingly constricted the front round Turda. The city was almost completely encircled when the German 23rd Armoured Division, deployed for one day only, prevented the impending breakthrough and stabilized the situation. At all events, the battle for Turda was the last to be conducted independently and successfully by a Hungarian army HQ. The German command was increasingly shutting out the Hungarian command authorities.

By this time it was clear to the Hungarian command that the available forces would not even suffice to protect the capital. On 25 September Vörös, the Hungarian chief of staff, sent the following telegram to Guderian: 'If the Hungarian 3rd Army does not receive substantial reinforcements as a matter of urgency, it will soon be completely worn down. The way will then be open for the enemy to advance into the heart of the country, to Budapest.'<sup>95</sup> The Hungarian replacement

*Note:* As from 12.00 hrs. on 3 October 1944, Eighth Army, as A.Gr. Wöhler, took over the Hungarian 2nd Army's section from A.Gr. Fretter-Pico. It was renamed Sixth Army from this point on. At the same time, the Hungarian 2nd Army was subordinated to A.Gr. Wöhler.

*Sources:* Map RH 2 Ost/5060 (H.Gr. Süd, 5 Oct. 1944, Annex Situation map 1:300 000); Map RH 2 Ost/1182 (Situation map OKW 5 Oct. 1944).

divisions were still holding their ground at this point. However, 23rd Armoured Division had to be transferred at once from Turda to Nagyvárad, in order to 'put the fire out' and secure the front by means of a counter-attack. Heavy fighting for Nagyvárad broke out after 25 September, with Soviet and Romanian troops penetrating into the city at times, but the counter-attack launched by 23rd Armoured Division on 28 September stabilized the situation.<sup>96</sup> Army Group South moved numerous reserves to Nagyvárad to strengthen the defence of this important city, the loss of which would seriously endanger Army Detachment Wöhler.<sup>97</sup>

### *The Tank Battle at Debrecen–Nyíregyháza*

The resistance at Turda, which the Soviets had not expected, forced the commander of 2nd Ukrainian Front, Marshal Rodion Y. Malinovsky, to abandon his original plan. He withdrew 6th Guards Armoured Army and Col.-Gen. Issa Pliyev's mechanized cavalry group from Turda after 24 September, and regrouped them at Arad-Nagyvárad, where there was more prospect of a successful breakthrough, if only because the terrain—open country with no major river obstacles—was highly favourable. However, the resistance at Turda delayed the mustering of Malinovsky's motorized forces for at least a week, and by 5 October 6th Guards Armoured Army had lost a great many tanks at Turda and Nagyvárad, so its striking power was already reduced.<sup>98</sup> The main forces deployed in the attack were the Pliyev Group (IV and VI Guards Cavalry Corps and VII Mechanized Corps, with a total of 389 tanks and assault guns) and Lt.-Gen. Sergei I. Gorskov's mechanized cavalry group (V Guards Cavalry Corps and XXIII Armoured Corps, with 146 tanks and assault guns).<sup>99</sup> In addition, 3rd Ukrainian Front, under Fedor I. Tolbukhin, had to let Malinovsky have the 46th Army and an artillery division for this highly promising operation.

Guderian took advantage of the Soviet weakness to launch a counter-offensive to recapture the Carpathian passes. From 30 September 1944 strong armoured forces were massed in eastern Hungary under the code-name GYPSY BARON. The reconstituted III Armoured Corps was to have launched its attack on 12 October, with the initial task of destroying the Soviet forces in the Arad–Timișoara area. But only some of the units had arrived, and they could not be deployed in an offensive while the political situation in Hungary remained unclear. The OKH kept two powerful armoured brigades near Budapest as a precaution, on the pretext that they were

<sup>96</sup> Rebentisch, *Zum Kaukasus*, 404 ff.

<sup>97</sup> KTB H.Gr. Süd, 'Zuführung von Artillerie und panzerbrechenden Waffen aus dem Raum Klausenburg in den Raum Grosswardein, 28.9.1944', HL microfilm 631.

<sup>98</sup> On 6th Guards Armoured Army, see Varakin, '6-va gvardiiskaya tankovaya armia'. At the end of September the army, already weakened in the fighting round Turda, had 494 men, 188 tanks and assault guns, 982 cannon, and 1,832 vehicles. By 6 October it had lost another 50 or so tanks and assault guns.

<sup>99</sup> The Pliyev Group was formed at the beginning of September from Stavka reserves. Zakharov, *Délkelet—és Közép-Európa felszabadítása*, 414.

simply undergoing ‘rehabilitation’, but further reinforcements, such as 503rd Heavy Armoured Battalion, were on their way to Hungary.

The Soviets soon put an end to these plans. The mustering of the Soviet armies at the south-western foot of the Bihar mountains and along the lower reaches of the Maros was completed at the beginning of October. On 6 October two armoured corps and five mechanized corps positioned along the 160-kilometre-long front between Makó and Nagyvárad, comprising 627 tanks and 22 cavalry and infantry divisions, moved northwards against the Hungarian 3rd Army, with its 70 tanks and eight divisions. Within 24 hours the Hungarian front, with no anti-tank weapons to defend it, had been torn to shreds, and a breakthrough 40 kilometres deep and 100 kilometres wide had been achieved. By 8 October the Soviet VI Guards Cavalry Corps was standing on the south-western outskirts of Debrecen. Malinovsky’s tanks had broken through the Debrecen–Szolnok road at a number of points. Only the attack by 6th Guards Armoured Army at Nagyvárad failed to gain much ground at first. That same day Malinovsky decided to continue the attack in the direction of Debrecen–Nyíregyháza.

The plan was to exploit the operational breakthrough by having the Soviet XVIII Armoured Corps cross the Tisza at Szentes and continue the attack in the direction of Budapest–Kecskemét. 7th Guards Army, moving up from Transylvania, would attack Nagyvárad from the south, while the Pliyev Group continued its attack to the north. However, the Stavka amended the plan by ordering Pliyev first to attack Nagyvárad from the north with two army corps, so as to help 6th Guards Armoured Army break through. That left only IV Guards Cavalry Corps to attack in the direction of Debrecen–Nyíregyháza.<sup>100</sup> The loss of Debrecen alone would have made it extraordinarily difficult for the Hungarian 1st and 8th Armies to withdraw from Transylvania, but the loss of Nyíregyháza would have been a death blow. On that day the Hungarian 27th Motorized Division was still at the Borgó pass, 240 kilometres east of Debrecen! Friessner gave orders to speed up the withdrawal from Transylvania. The rapid Soviet advance and the concentration of German troops in the great plain gave rise to the tank battle of Debrecen, in which the forces of both parties were engaged from 9 to 20 October.<sup>101</sup> The German–Hungarian forces took up their positions with 11 divisions or brigades and 227 tanks and assault guns, against the mechanized Pliyev and Gorskov Groups and the Soviet 53rd Army and 6th Guards Armoured Army, which were markedly superior, with a total of 39 divisions or brigades and 773 tanks and assault guns.<sup>102</sup> Malinovsky’s units were vulnerable, however, in that they were split into a number of groups attacking in different directions.

Friessner attempted to take the offensive with his modest forces, and there ensued one of the most versatile tank battles of the Second World War.<sup>103</sup> On

<sup>100</sup> Ölvedi, *A Budai Vár és a debreceni csata*, 140.

<sup>101</sup> The tank battle at Debrecen–Nyíregyháza is referred to retrospectively in German memoirs, and to some extent also in the war diaries, as ‘the tank battle in the Puszta’ (Hun. *puszta* = bare, treeless plain). This is misleading, however, because other areas in Hungary are also called ‘puszta’.

<sup>102</sup> Ölvedi, *A Budai Vár és a debreceni csata*, 121–4.

<sup>103</sup> For the German point of view, see Kissel, *Die Panzerschlacht in der Pussta*. A study of the Soviet documents is to be found in Ölvedi, *A Budai Vár és a debreceni csata*.

Table V.vii.3. Relative strength of forces in Hungary at the beginning of October 1944

	Divisions/ Brigades	Tanks and assault guns	Cannon and grenade launchers*	Aircraft*	Ration strength
Army Group South	31	293	approx. 3,500	741	430,000
2nd Ukrainian Front (with Rom. 1st and 4th Armies under its command)	84	825	10,238	1,216	860,000

\* According to Számvéber, *Páncélosok*, 31.

Sources: On the forces of Army Group South, see BA-MA RH 19 V/51b Annexes, 'Iststärke Heeresgruppe Süd am 2.10.1944', which, however, gives only the number of German troops, namely 240,952 men. On the 2nd Ukrainian Front ration strength (698,200 men), see: *Grif sekretnosti sniat*, 227, which however does not give the strength of the Romanian units under its command. According to *România în Războiul Antihitlerist*, 635,648, a total of 167,306 Romanian troops took part in the battles in Hungary.

10 October the German 1st, 13th, and 23rd Armoured Divisions managed to split the Pliyev Group in two and encircle it. This tactical success could not be exploited, however, owing to the lack of infantry. The Soviet VI Guards Cavalry Corps was now isolated south of Debrecen, but the IV Guards Cavalry Corps and the VII Mechanized Corps continued the attack, advancing in a kind of 'mobile pocket' towards Nagyvárad. On 12 October they even managed to take that strategically important city, but by then Pliyev had lost more than 200 of his 389 tanks.<sup>104</sup>

Malinovsky was obliged to order some units of 46th Army and XVIII Armoured Corps, which had already crossed the Tisza, to turn back and go to Pliyev's assistance. These units had already reached Kecskemét on 10 October, and were only 70 kilometres away from Budapest. Had the attack continued in the same direction, the consequences for the whole army group would have been catastrophic. However, Malinovsky was unable to take advantage of these favourable developments because his armoured forces were so dispersed. On 11 October the German 133rd Anti-Aircraft Regiment and the Hungarian 1st Hussars Division even managed to destroy the Soviet spearhead that had reached Kecskemét, and to advance to the Tisza.<sup>105</sup> The Soviet 7th Army nevertheless continued to hold several bridgeheads on the left bank, and so threaten Budapest.

Although the Soviet troops had taken Debrecen on 20 October, they had failed to achieve their aim of encircling the German Eighth Army and the Hungarian 1st and 2nd Armies deployed in Transylvania and in the Carpathians. Moreover, Petrov's 4th Ukrainian Front, which was attacking through the Carpathians (the northern arm of the pincer movement), had made very little progress, thus leaving the defenders with a considerable positional advantage. On 15 October, after the attempt to conclude an armistice had failed, the front was further strengthened by

<sup>104</sup> Ölvedi, *A Budai Vár és a debreceni csata*, 152.

<sup>105</sup> Reszneki, *Őszi harrok*, 39.

the arrival of the German armoured units that had previously been tied up in the Budapest area. The Pliyev Group was making very slow progress in its attempt to break through from Nagyvárad and resume its advance to the north-west. It did however manage, on 16 October, to establish a connection with the Soviet VI Guards Cavalry Corps, which for several days had been supplied only by air. A number of German-Hungarian units were encircled in the process, but the necessary infantry were not available to destroy them and, like the Soviet divisions that were encircled earlier, they were able to reconnect with their own lines. On 19 October the German IV Armoured Corps, which had just been brought in with reinforcements from the Budapest area, launched a counter-attack from the Szolnok bridgehead in the direction of Debrecen. The Romanian 1st Army was hit by the full force of the attack, and its defences collapsed immediately. The Romanian 4th Infantry Division was almost completely destroyed, losing 4,680 men that same day.<sup>106</sup> The breakthrough was extended by a further 40 kilometres on the following day and, at the same time, the Pliyev Group managed to take Debrecen. Overestimating his possibilities, Malinovsky gave orders on 19 October to continue the offensive immediately northwards from Debrecen in order to complete the encirclement, and to launch a counter-attack towards Szolnok in order to drive the German IV Armoured Corps back and establish bridgeheads on the other side of the Tisza. By that time, however, the Soviet forces were exhausted. By 16 October Army Group South had lost only 115 tanks and assault guns, whereas 2nd Ukrainian Front had lost 400 tanks and assault guns, amounting to more than 60 per cent of its target strength.<sup>107</sup>

On 21 October the Pliyev Group succeeded in taking Nyíregyháza. All Army Group Wöhler's efficient escape routes were now blocked. Defeat loomed. The only remaining way out via Csap would have involved a considerable delay for Wöhler. There was also the danger that 4th Ukrainian Front, which was attacking at the same time, would get there first. Disaster was averted only by means of a simultaneous attack by IV Armoured Corps, reinforced by 24th Armoured Division, and Wöhler's retreating forces. This operation was facilitated by the inability of the Soviet infantry in the Pliyev Group to keep up with the German forces, so that a 20-to-30-kilometre gap was opened in the front between Debrecen and Nyíregyháza.

The German spearheads met to the south of Nyíregyháza on 23 October, cutting off three mechanized (cavalry) corps of 2nd Ukrainian Front. The relief attack launched by the Soviet 27th Army from the Debrecen area failed to get through. Pliyev was obliged to break out from Nyíregyháza with his decimated troops on 26 October. They lost almost all their heavy weapons and transport in the process. And Malinovsky lost his most important spearheads, with serious repercussions for the offensive against the Hungarian capital that began two days later.

<sup>106</sup> Duțu, 'Szolnok', 261.

<sup>107</sup> The losses on the Soviet side were calculated on the basis of the following works: Ölvedi, *A Budai Vár és a debreceni csata*, 196; KTB H.Gr. Süd, daily reports 6 to 17 Dec. 1944, HL microfilm 876/b.

Table V.vii.4. Losses in the tank battle for Debrecen–Nyíregyháza

	Men (dead, wounded, missing)	Men captured	Tanks	Cannon
German and Hungarian	15,000 + 20,000	approx. 18,000	approx. 200	490
Soviet and Romanian	117,360*	5,073	approx. 500	1,656

\* *Grif sekretnosti sniat*, 227, gives only the Soviet losses, namely 84,010.

Source: On the figures cited, see Ungváry, *A magyar honvédség*, 336–7.

As a result of the tank battle for Debrecen, the bulk of the German–Hungarian forces were able to withdraw in good order. However, the very armoured divisions that were most battle-worthy moved away from the forefield of Budapest. Between Baja and Szolnok, there were only exhausted and depleted divisions of the Hungarian 3rd Army, and no more than 20 tanks belonging to the German 24th Armoured Division, holding the line against the Soviet 46th Army. The Soviet lines were now only 100 kilometres from Budapest. The offensive nevertheless represented a considerable risk for Malinovsky, especially as the German divisions were able to regroup for the defence of Budapest without difficulty, whereas the Soviet forces did not have enough motorized troops available to pursue the offensive successfully.

#### *The Horthy Government's Attempts to Negotiate an Armistice, and the Arrow Cross Putsch*

Horthy had withdrawn to his residence in the Budapest Castle after the German occupation. He avoided standing up for the Sztójay government but, on the other hand, he was long unwilling to take action against it. His passivity was shaken on several occasions in June by the alarming reports of successive deportations of Jews. Horthy had been informed at an early stage of the fate that awaited the deported Jews. Hitler and Ribbentrop had told him bluntly, during his first visit to Klessheim in the spring of 1943, that the Jews were to be treated as ‘bacilli’: they had to work or be destroyed. And there are other indications that Horthy understood exactly what those words meant.<sup>108</sup>

The Allied landings in Normandy and the protests of various neutral states finally persuaded Horthy to act. The regent had long been convinced that Germany could no longer win the war. But he was anxious, at all costs, to avoid negotiations with the Soviet Union, which he thoroughly detested. On 28 August he attempted to contact the western Allies through the former emissary in Berne and take advantage of the favourable foreign-policy situation (Germany was tied up with Romania’s change of sides). The next day he dismissed Sztójay and appointed his own close associate, Géza Lakatos, as prime minister. But, on 5 September, he

<sup>108</sup> See Horthy’s letter to Hitler in Szinai and Szűcs, *Horthy Miklós titkos iratai*, 398.

received the unequivocal answer that all negotiations must be conducted together with the Soviet Union. Horthy therefore summoned the Crown Council (which was identical with the Council of Ministers) on 7 September and announced that he had decided to conclude an armistice with the Allies. On the following day, however, the ministers distanced themselves from Horthy's decision and declared in favour of remaining loyal to the Axis coalition. The regent was obliged to recognize that he could not trust his own government.

It is indicative of Horthy's naivety that he apparently hoped in all seriousness to negotiate a similar solution to the one that had been reached in Finland a few months earlier. The organization of the negotiations was predictably chaotic. On 18 September Horthy asked the Swedish ambassador to inform the Allied governments that he wished to negotiate an armistice. On 22 September he sent his personal representative, Col.-Gen. István Náday, to Italy with a British colonel who had escaped from a German prisoner-of-war camp—but unfortunately forgot to give Náday written confirmation of his powers. And the radio code he had been given could not be deciphered in Budapest.

The realities of the situation finally forced Horthy to contact the Soviet authorities directly, and on 24 September he sent a delegation to Moscow. It arrived there on 26 September and returned on 3 October. Another delegation was dispatched on 28 September, this time containing notable politicians (a special envoy, a colonel-general, and a relative of former prime minister Pál Teleki). Horthy also gave the delegation a personal letter to Stalin, asking that his country be treated leniently. He also succeeded in making radio contact with this delegation. On 11 October Horthy agreed to the Soviet demand for an immediate declaration of war on Germany. Horthy took this to mean that he would still have time to negotiate with the Reich, but the Soviet authorities intended the agreement to be taken literally.

The Germans knew all the details of the negotiations.<sup>109</sup> Col.-Gen. Friessner had flown to Berlin on 10 September and briefed Hitler on the impressions he had formed in Budapest. The Waffen SS units currently being established in Hungary, as well as 109th and 110th Armoured Brigades, were put on alert around Budapest. A team led by Otto Skorzeny drew up plans for a pre-emptive strike code-named Operation ARMoured FIST, and the proclamation on the takeover of power was agreed with Szálasi.<sup>110</sup> Szálasi, the leader of the Arrow Cross party, had been seen by Veesenmayer since 13 September as the only 'person of consequence'. As a first step, Lt.-Gen. Szilárd Bakay, who was reputed to be absolutely loyal to Horthy and had therefore recently been put in command of I (Budapest) Army Corps, was abducted on 8 October. Bakay had got wind of Operation ARMoured FIST and had arrested some of the officers involved, so he had to be got out of the way quickly. On 15 October the regent's son was lured into a trap and kidnapped. That finally prompted Horthy to act: around noon the same day, he announced that an armistice was being sought—an announcement which he had originally intended

<sup>109</sup> The facts that the OKH had discovered are summarized in file BA-MA RH 2/2599.

<sup>110</sup> For the German perspective, see Lehmann, 'Unternehmen Panzerfaust', 215–31.

to make on 20 October. But the announcement was badly worded. Instead of giving instructions and orders, Horthy simply said that the war was lost and that he would ask the Soviet authorities for an armistice. Lakatos had changed the tense of the verb in the sentence from the past to the future. The military authorities must therefore have thought that there were more negotiations to come, so they awaited further orders. In the meantime, Skorzeny and the Hungarian conspirators had managed to cut the Budapest Castle off from the outside world. The 'king's man', Lajos Veress (2nd Army), was betrayed by his own adjutant. Béla Miklós Dálnoki (1st Army) went over to the Soviet side with his chief of staff, leaving his army in the lurch. Josef Vitez Heszényi (3rd Army) was reputed to be an Arrow Cross supporter, so nothing could be expected of him from the outset. Some 20,000 to 30,000 Hungarian troops surrendered to the Soviet army over the next few days, but the collapse of the Hungarian army was prevented. Most of the commanders were not prepared to turn their weapons against their former coalition partner. Bakay's successor, Lt.-Gen. Béla Agteleki, and a few other officers who tried to act upon Horthy's announcement were arrested by their own officers. In the early hours of 16 October Skorzeny launched an attack on the castle. Horthy realized that his attempt at capitulation had failed, and he was anxious to avoid bloodshed, so he ordered his bodyguard almost at once to cease resistance. After a short exchange of fire, Skorzeny's men took the castle. The regent at first refused to appoint Szálasi prime minister. He also refused to step down or retract his announcement. He finally agreed to resign only after Veesenmayer, in a third attempt to persuade him to change his mind, gave him to understand that his son's life depended on it.<sup>111</sup> On the afternoon of 16 October, waiting in his bathroom while the bare necessities were being packed for him, he signed his letter of resignation and the announcement of Szálasi's appointment as prime minister. So ended not only the Horthy era, but also the very much longer period of bourgeois-feudal rule in Hungary. A party now came to power that was in no way less radical than the Bolsheviks in 1917 or the social revolutionaries in the Strasser wing of the NSDAP.<sup>112</sup>

### *The Hungarian Army under Arrow Cross Rule*

The Arrow Cross government proclaimed total mobilization of the country. Theoretically, there were still a million men fit to bear arms, but mostly untrained, available in Hungary at the time and eligible for military service. The German government was also determined to exploit these reserves of manpower, and on 23 October 1944 the two governments agreed to form four Hungarian 'Hungarist' divisions and four Hungarian Waffen SS divisions. However, the material resources needed to carry out these plans were scarcely forthcoming, and only a few small

<sup>111</sup> For a detailed account of the Arrow Cross putsch, see Macartney, *October Fifteenth*, ii. 319. A good summary, with references, is provided in Szöllösi-Janze, *Die Pfeilkreuzerbewegung in Ungarn*, 311–20.

<sup>112</sup> On the Arrow Cross in general, see Szöllösi-Janze, *Die Pfeilkreuzerbewegung in Ungarn*.

Table V.vii.5. Proportion of German and Hungarian troops in Army Group South

Date	German/Hungarian infantry battalions	German/Hungarian tanks (operational)	German/Hungarian heavy anti-tank cannon	German/Hungarian artillery batteries

emergency and anti-tank units, one SS ski brigade, one SS infantry assault regiment, and Combat Group Ney were eventually deployed. Of the four SS divisions that had been planned, only two armed infantry divisions (25th ‘Hunyadi’ and 26th ‘Hungária’) were formed in Neuhammer and Schieratz and partly equipped.

The combat value of the Hungarian army declined more and more after 15 October. While only a few complete units deserted, desertion by small groups and individuals increased to an extent that the Wehrmacht command found appalling. Col.-Gen. Wöhler complained in his diary about ‘the bad influence of the rural population, and especially the Calvinist clergy, on Hungarian soldiers recuperating or regrouping in the countryside’, adding that it was ‘impossible, even now, to ascertain the number shot for cowardice, etc.’.<sup>113</sup> Wöhler was also obliged to recognize that only ‘about 5 per cent’ of the officers could be described as supporters of the new government, although the attitude of the officer corps was 70 to 80 per cent ‘pro-German’.<sup>114</sup> As a counter-measure, the commanders of Hungarian divisions were relieved of their units, which were then incorporated in mixed German–Hungarian ‘regimental groups’. The 2nd Army staff was dissolved and the 1st Army staff downgraded to administrative duties. Only the 3rd Army remained intact as a command body within the framework of Army Detachment Balck. A special role was played by the Hungarian artillery, which had not seen much action during the withdrawal movements, and whose troops had fewer opportunities to change sides. In mid-November 1944 six Hungarian artillery battalions were still deployed as divisional artillery, and five as GHQ artillery, in the area of Sixth Army alone.<sup>115</sup> Given the absence of source material, it is impossible to determine exactly how many Hungarian artillerymen served in the German forces, but they were of considerable importance. The ration strength of the Hungarian field forces was 318,000 on 14 December 1944, and 283,000 on

<sup>113</sup> Entry for 29 Nov. 1944, BA-MA RH 19 V/59, fos. 41 ff.

<sup>114</sup> Ibid., fo. 44.

<sup>115</sup> BA-MA RH 19 V/63, 96. The number of artillery battalions so deployed probably continued to grow. Hungarian artillery battalions are mentioned repeatedly in weekly status reports until April 1945.

15 January 1945. There were also about 500,000 men deployed in rearward areas.<sup>116</sup> However, these figures bore no relation to the combat strength of the Hungarian divisions.

Hungary was indispensable for Hitler on account of its raw materials (bauxite, manganese, oil) and its strategic position. He paid even less heed to the Szálasi government than he had to previous governments. Hitler and Guderian ordered the destruction of industrial plant, transport facilities, and electricity and water works. Guderian added that, ‘unfortunately’, Hungarian interests could not be taken into account and, if the Hungarian government did not find that ‘acceptable’, he could only recommend that it contribute more to the common cause.<sup>117</sup> At the same time, the German command did not hesitate to throw to the front Hungarian units that were already bled dry. Things went so far that, on 30 December 1944, the commander of the ‘Szent László’ Division, Zoltán Szügyi, ‘vetoed’ [sic] an order from LXXII Army Corps in a sharply worded letter, stating that he could not accept ‘sending untrained Hungarian troops to be slaughtered *en masse*’. Szügyi also asked to be relieved of his post and brought before a Hungarian court-martial—a cry of despair that saved the remnants of his division.<sup>118</sup> Although his determined protest had no adverse consequences for him, no other Hungarian generals followed his example.

In the final months the Hungarian army formed eight more volunteer assault battalions, eight fortress machine-gun battalions, nine bicycle anti-tank battalions, two infantry regiments, and several ‘Hungarist’ assault battalions.<sup>119</sup> On the German side, only minimum consignments of weapons were supplied: 2,707 carbines, 300 assault rifles, 33 cannon, 29 Panzer IVs, 75 Hetzer anti-tank guns, 64 grenade launchers, and some light weapons.<sup>120</sup> The remaining Hungarian army institutions and the eleven Honvéd training regiments (some 200,000 men in all) were moved to various locations in the Reich and Denmark. Sixteen thousand youngsters between 15 and 21 years of age were sent to man German anti-aircraft artillery.<sup>121</sup> A few Hungarian battalions and companies fought in the strongholds at Breslau, Kolberg, Toruń, and Poznań, or at Stettin, Schwerin, and finally in Berlin. About 110,000 Hungarian troops were still to be found in various areas of the front at the end of the war, the vast majority deployed with Army Group South.

For their part, the Germans tried to make as much use as possible of the Hungarian economy and Hungarian conscripts for their own conduct of the war.<sup>122</sup> Some 10,000 recruits and anti-aircraft auxiliaries were extracted in three ‘Hungary operations’. Although Col.-Gen. Károly Beregfy, the Honvéd minister in

the Arrow Cross government, promised to let the Wehrmacht have 190,000 auxiliaries, by March 1945, only 5,000 had been handed over.<sup>123</sup> Even more important was the incorporation of existing Hungarian units in German divisions. The significance of these dispersed combat groups should not be underestimated. In November 1944 they still made up more than 50 per cent of the artillery and 30 per cent of the heavy anti-tank units of Army Group South. This is all the more significant since, for Hitler, Hungary was now the most important theatre of war and was receiving regular reinforcements. The region could not have been held without the participation of the Hungarian army.

The German measures were extremely unpopular. During a discussion between the Hungarian Honvéd minister and the German plenipotentiary general in Hungary, Hans von Greiffenberg, it was noted that:

the subordinate authorities, and above all the Hungarian people [...] [are] extremely angry about the drastic step of ‘selling Hungarians to serve as paramilitary auxiliaries’ for the Germans, and it is doubtful whether the Hungarian state authorities, who are not yet firmly established, will be able to implement it in the face of this popular opposition [...]. Lastly, it must be said that the general impression in Hungary is that people think they could not be worse off under the Bolsheviks than in Germany.<sup>124</sup>

The military events allowed the Szálasi government hardly any possibility of actively shaping its own domestic and foreign policy. After Christmas 1944 Hungarian officials were able to function properly only in the country’s three western counties. Szálasi himself was also restricted by German ‘recommendations’ which forced him to form a coalition government with members of the previous ruling party, the Imrédy party, and the Hungarian National Socialists, whom he had disparagingly described as ‘sham National Socialists’. He aimed to take sole power with the Arrow Cross party after the war ended. As an interim measure, the Arrow Cross party appointed representatives empowered to issue instructions in all state agencies. A ‘National Development Planning Office’ worked until April 1945 on all kinds of unrealistic plans for the transformation of the country after the war, and parts of the party’s revolutionary social programme were actually implemented in this short space of time. The revolutionary nature of the Arrow Cross party was also shown by that fact that, shortly after taking power, Szálasi sent a congratulatory and conciliatory telegram to the head of the Romanian government-in-exile, as a sign that old differences had been overcome. No other Hungarian politician could have made such a gesture.

The governmental measures were not seen as effective, either by the general population or by the army. Even those who were pro-German experienced life under Arrow Cross rule as organized chaos. The party militia was busy stealing and selling Jewish property, and the party organizations prevented the administration

<sup>123</sup> ‘Besprechungspunkte für den Besuch des Honvédministers bei OKW/OKH’, BA-MA RH 2/1426, 77 ff. (17 Mar. 1945).

<sup>124</sup> ‘Besprechung beim Bev.Gen. der Dt. Wehrmacht am 16.11.1944’, BA-MA WF10/13700, 25 ff.

from getting on with its work. Arrow Cross prestige in the army fell to a very low level because the few military formations composed of party militiamen hardly proved their worth at the front. Szálasi himself withdrew in December and devoted himself to his ideological writings on 'Hungarism'.

The Szálasi government's policy on the Jews was even more radical than that of its predecessors.<sup>125</sup> Szálasi openly announced that, pending their planned expulsion after the war, the Jews must 'work or die'. When he took over in October 1944, the only Jews not yet deported to Germany were the 200,000 or so in Budapest and those in military labour service companies. The Szálasi government concluded an agreement with Adolf Eichmann under which 50,000 Jews were to be sent to the German border to build the 'Reich Defence Line' (South-East Wall). The Jews in question were forced to make their way west on foot, in a series of deadly marches under Hungarian guard. Even SS officers were shocked by the scenes played out on the Vienna–Budapest highway. Waffen SS General Hans Jüttner, who witnessed these death marches during a tour of inspection, protested to the senior SS and police leader in Hungary, SS Obergruppenführer and Police General Otto Winkelmann.<sup>126</sup> Many Nazi officials considered the Hungarian measures counter-productive, and the Jews arriving at the Reich border, the vast majority of whom were unfit for work as a result of the long march, were seen as an 'extremely heavy burden' even by Rudolf Höss, the former Auschwitz camp commandant now in charge of the deployment of Jews in the Lower Danube region. The marches on foot were therefore stopped at the end of November, and the deportations continued by rail. Most of the Budapest Jews remained in the city, where Europe's last ghetto was established for them.<sup>127</sup>

Szálasi's lack of realism is shown by the fact that he regarded himself as Germany's equal partner. He repeatedly protested against the Waffen SS enlisting Hungarian recruits. When he saw that his wishes were ignored by the Wehrmacht command, he discharged Honvéd officers who had accepted command posts in Hungarian Waffen SS units, and deprived them of their rank and citizenship. On 9 February he even sent Hitler a letter demanding the symbolic transfer of supreme command of the German (!) and Hungarian troops in the Carpathian region.

The Hungarian army disintegrated. By February 1945, 18 out of a total of 27 army units (divisions and brigades) had already been disbanded. The commanders of the remaining units simply administered their troops but had no influence on the conduct of operations. The only remaining independent divisions with their own troops under their command were 2nd Armoured Division, the Hussars Division, and the 'Szent László' Division. Morale was correspondingly low. While defection to the Soviet side slowed to some extent after November 1944, it nevertheless remained a constant problem for the Hungarian army. Six officers and 924 men in

<sup>125</sup> On the Szálasi government's policy on the Jews, see the above-mentioned works by Szöllösi-Janze (*Die Pfeilkreuzerbewegung in Ungarn*), Aly and Gerlach (*Das letzte Kapitel*), and Braham (*The Politics of Genocide*).

<sup>126</sup> Braham, *The Politics of Genocide*, 838.

<sup>127</sup> There are a number of works on the Budapest ghetto. For a summary, see Ungváry, *Die Schlacht*, 344–69, and Aly and Gerlach, *Das letzte Kapitel*, 367–75.

the area of Army Group South went over to the enemy between 1 and 17 January 1945 alone.<sup>128</sup> Thousands of deserters hid in the rearward area. The majority of 24th Infantry Division capitulated on 3 April 1945, and more than 45,000 men (including the reconstituted 1st Mountain Division) surrendered in western Transdanubia between 28 and 30 March.<sup>129</sup>

Economically too, the country was being bled white. Direct and systematic plunder by the Wehrmacht began after the Arrow Cross party took power, particularly during the withdrawals in March 1945. Many arbitrary actions were taken in the process.<sup>130</sup> Seventy per cent of the rolling stock of the Hungarian railways and large quantities of industrial stock and machinery were transported to the Reich. The Soviet army paid even less regard to the Hungarian owners than did the Wehrmacht. From the statistics, it is almost impossible to distinguish between the destructive measures taken by the German and Soviet troops. It is clear, however, that Hungary lost 44 per cent of its cattle, 56 per cent of its horses, and 80 per cent of its sheep in the last six months of the war. And 40 per cent of its entire national assets were destroyed.<sup>131</sup> Altogether more than 100,000 people, German and Hungarian, were deported to forced labour from the area of the Trianon state.<sup>132</sup>

The Red Army's behaviour in Hungary contributed in no small measure to the fact that, in some circles, readiness to collaborate with the Wehrmacht rose despite the hopeless situation and the unpopularity of the Arrow Cross. Many of the Nazi propaganda horror stories proved to be true: mass executions of prisoners of war, plunder, and mass rape were the order of the day. The town of Székesfehérvár, a focal point in the fighting, is a prime example. It was occupied by 2nd Ukrainian Front on 22 December, then retaken for two months on 22 January 1945. After the brief Soviet occupation, more than 1,500 women, out of a total population of 40,000, sought medical treatment for rape. Although the Soviet authorities took many steps, from December 1944 onwards, to curb their troops' excesses, the measures they introduced were insufficient. The situation was alleviated to some extent after 20 December, when a Hungarian opposition government was formed. Hungarian officials and Hungarian police appeared on the scene soon afterwards, which helped considerably to restore normality. As a result, conditions like those in areas of Germany occupied by the Red Army were imposed in Hungary only for a short time. Nevertheless, suspected political opponents, such as Communists disloyal to Moscow and diplomats from neutral states—including Raoul Wallenberg, who rescued Hungarian Jews—immediately became victims of a new form of persecution and disappeared in Soviet prisons.<sup>133</sup>

## (b) The Soviet Offensives against Budapest

### *Plans and Abortive Attacks*

Once the tank battle in the Debrecen area was over, Stalin immediately gave the order for a further advance. 2nd Ukrainian Front units were to take Budapest on their way and press on towards Vienna. In the autumn of 1944 Stalin was already thinking about the forthcoming division of territory with the western Allies, and wanted to secure his supremacy in central Europe. In the course of negotiations in Moscow from 8 to 18 October, Churchill had invoked his plan for British and American forces to push through Ljubljana into the Carpathian basin. This made Stalin distrustful and prompted him to act quickly. At Churchill's suggestion, the two leaders signed a cynical pro forma agreement on the division of spheres of interest between the Soviet Union and 'the Others' (Churchill's words). A note was drawn up, dividing the states of south-eastern Europe, including Hungary and Yugoslavia, between the two parties.<sup>134</sup> Although he had had a great deal to drink, the British prime minister had some reservations about this, and he asked Stalin whether it might not be better to burn the note, since it was, after all, a rather frivolous way of settling the fate of millions of people. Stalin answered in his usual relaxed fashion: 'Just hang on to it.' His self-assurance was a mask concealing a deep, almost pathological distrust. In his opinion, Churchill was 'the kind of man who will pick your pocket of a kopeck if you don't watch him'.<sup>135</sup> That probably explains why the Soviet delegation began to haggle energetically the very next day. Specifically, Stalin did not want British troops to appear on the scene in south-eastern Europe. He hoped to forestall this by mounting an offensive in Hungary that would present the British with a fait accompli. His decision was influenced to a large extent by reports from Col.-Gen. Lev Z. Mekhlis on the battle-weariness of the Hungarian troops.<sup>136</sup> Stalin ordered an immediate attack, disregarding the reservations expressed by the Red Army's chief of staff, General Aleksei I. Antonov, who argued that Mekhlis' comments applied not to the situation as a whole but only to conditions in the Hungarian 1st Army.<sup>137</sup> Stalin phoned the commander of 2nd Ukrainian Front at 22.00 on 28 October and, despite Malinovsky's reluctance, ordered him to begin the offensive in 24 hours, 'for political reasons'. Paying no attention to Malinovsky's objections, he hung up immediately.<sup>138</sup>

The reinforcements that had been promised, IV Guards Mechanized Corps and XXIII Rifle Corps, had not yet arrived when the order to attack was given. And II

<sup>134</sup> On the negotiations in Moscow in October 1944, see Kogelfranz, *Das Erbe von Jalta*. The respective spheres of interest of the Soviet Union and the other Allies, expressed in percentage terms, amounted to 10% and 90% in Greece, 90% and 10% in Romania, and 75% and 25% in Bulgaria.

<sup>137</sup> Although the Hungarian 1st Army suffered substantial losses after 15 October and some 15,000 men laid down their arms, events showed that not only did the army not collapse, but it was even able to delay the advance of Petrov's 4th Ukrainian Front by means of counter-attacks. In December 1944 Petrov's troops were still stuck in the north-eastern Carpathians, owing in no small measure to resistance by 1st Army.

<sup>138</sup> Zakharov, *Délkelet- és Közép-Európa felszabadítása*, 217.

Guards Mechanized Corps was also reached by Malinovsky only the following day. The other 2nd Ukrainian Front units were so exhausted by previous battles that they could not take part in the offensive at first. Thus, the Pliyev and Gorskov Groups had to be assigned to the high command's reserves on account of the heavy losses they had suffered.

For its part, the German command was aware of the danger of an attack on Budapest and had already started to reposition its troops accordingly on 26 October.<sup>139</sup> By 1 November, 23rd and 24th Armoured Divisions had been moved to the Kecskemét region, while 13th Armoured Division, Armoured Infantry Division 'Feldherrnhalle', and 8th SS Cavalry Division 'Florian Geyer' began to move back at the same time. Friessner's plan was to retake the Hungarian lowland plain with these forces and establish a durable defensive position along the Tisza line.

According to Malinovsky's operational plan, IV Guards Mechanized Corps and 46th Army, reinforced by XXIII Rifle Corps, were to take Budapest by 3 November and advance to the Isaszeg–Újpest–Budakeszi–Érd section of the front.<sup>140</sup> These aims were unrealistic, however, since IV Guards Mechanized Corps did not arrive until 1 November. While the Soviet forces outnumbered the Hungarian 3rd Army by about 3 to 1, that was not enough for them to take Budapest quickly, because the city was partly fortified and the hilly terrain on the other side of the Danube made its western half particularly favourable to defence. German reinforcements were arriving continuously, so Malinovsky's situation would not have been any better even if Stalin had given him the five days to regroup which he had requested, since the Germans would also have used the time to bring in their armoured divisions to strengthen Budapest's defences.

After brief preparations, the Soviet offensive began with an artillery bombardment at 14.00 on 29 October. The point of concentration lay south of Kecskemét, where XXXVII Rifle Corps and II Guards Mechanized Corps were attacking. The attack continued through the night, clashing with the counter-attack by 24th Armoured Division that was developing south of Kecskemét. 7th Guards Army started to cross the Tisza on 30 October, but made only slow progress. One day later, the Soviet troops took the city.

Friessner had already started building up the rearward defensive lines in Hungarian territory on 21 September, in accordance with a forward-looking order from the OKH.<sup>141</sup> The German defensive system now consisted of three main battle lines: the Margit Line, running from Lake Balaton past Lake Velence to Budapest, the 'Attila Line', flanking Budapest on the east, and the contiguous Karola Line, running between the Cserhát, Mátra, and Zemplén hills. The Hungarian General Staff had started to build up the Pest bridgehead in September,<sup>142</sup> and the work continued even as the Soviet troops approached. On 11 November, for example,

<sup>140</sup> Tóth, *Budapest felszabadítása*, 30.

<sup>141</sup> Dombrády and Tóth, *A magyar királyi honvédség*, 382.

<sup>142</sup> HL manuscript archives, memoirs of Maj.-Gen. Géza Vidos, TGY535-89.

28,000 people were employed on the earthworks (including a large number of Budapest Jews on forced labour duty).<sup>143</sup> The fortifications consisted of anti-tank ditches, dug-outs, occasional barbed-wire obstacles, and minefields.

The Hungarian General Staff had already drawn attention in September to the fact that Budapest could become a front-line city within a few days, because the Hungarian 3rd Army was not a strong enough defence force and the first major attack would sweep it aside.<sup>144</sup> The Germans, however, wanted to keep Hungarian troops out of the capital: too many of them could be dangerous in the event of a putsch. Hungarian troop transports to Budapest were allowed only after the Arrow Cross party took power on 15 October 1944.

According to the Army Group South war diary, on 25 October there were approximately 25,000 German and Hungarian troops and 146 heavy anti-aircraft guns available in the capital to defend the city. Although more units arrived in Budapest by way of reinforcements, they were so small, and so poorly trained and equipped, that they did not provide any real relief. It was clear to Friessner that Budapest was the next target of the Soviet offensive, and he wrote a letter to Guderian explaining the problem. In view of the disastrous situation, he repeated his request several times in the following weeks, but Guderian was unable to send him any troops.<sup>145</sup>

On 2 November the tanks of the Soviet II Guards Mechanized Corps were already within 15 kilometres of Budapest. IV Guards Mechanized Corps had broken through the 22nd SS Cavalry Division defences from the east and was only 6 kilometres from Soroksár. And on 3 November II Guards Mechanized Corps took the suburbs of Monor, Üllő, Vecsés, Gyál, and Pestszentimre.<sup>146</sup> The first circle of defences round the capital had now been pierced, but the attacking troops lacked accompanying infantry. The Soviet army had no armoured infantry units at its disposal, so the armoured spearheads could be only weakly secured by infantry. The mechanized troops' transport capacities had been severely depleted by their losses in the tank battle at Debrecen, so most of the men of IV Guards Mechanized Corps had to be carried on requisitioned vehicles.

The German army units that had been spared in the Debrecen tank battle also came in useful at this point. The OKH was able to prepare three armoured corps to block access to the Budapest area at the beginning of November. III Armoured Corps, commanded by General Hermann Breith, was assigned to defend the capital, while IV Armoured Corps and LVII Armoured Corps prepared to launch counter-attacks in the Jászberény region and the Cegléd-Szolnok area respectively.

Malinovsky's attack came to a standstill on 5 November. Many of his tanks had been destroyed,<sup>147</sup> and the increasingly serious shortage of munitions and fuel was

also taking its toll.<sup>148</sup> At the same time, the impact of the German troop concentration in the Cegléd area east of Budapest was beginning to be felt, where a German counter-attack was threatening the flank of the Soviet spearheads.<sup>149</sup> By 8 November, with the aid of constant reinforcements, the defenders of Budapest had retaken the whole of the Attila line.

### *The Beginning of the Encirclement of Budapest from the West*

It is clear from the memoirs of the first deputy chief of the Red Army general staff, Col.-Gen. Sergei M. Shtemenko, how embarrassing it was for the general staff that the 46th Army offensive had come to a standstill. No one had dared to postpone or alter Stalin's plan. 'Nevertheless, the situation had to be saved,' as Shtemenko aptly put it.<sup>150</sup> The only solution was to extend the line of attack. Rather than by a frontal assault, the capture of Budapest had to be attempted by encircling it from the north and south. 6th Guards Armoured Army and 7th Guards Army were given the task of breaking through the defences in the area of Hatvan and advancing to the Danube at Vác, while 46th Army was to cross to the right arm of the Danube and, after taking Csepel Island, to the Old Danube, and encircle the capital from the south-west.

Stalin finally realized that the forces available to 2nd Ukrainian Front were not strong enough to take Budapest, and on 14 November he issued a directive placing at its disposal 200 tanks and 40,000 men from the high command reserves and from the 4th Ukrainian Front troops stuck in the Carpathians.<sup>151</sup> Malinovsky used the incoming tanks (which outnumbered the opposing German tanks from the outset) to strengthen 6th Guards Armoured Army so that, together with 7th Guards Army, it could encircle Budapest from the north as he had originally proposed. However, the Soviet forces made only slow progress and failed to achieve a deep operational breakthrough from that direction too.

The Soviet 46th Army fighting south of the city had more success. On 21 November it managed to cross to Csepel Island, between Taksony and Dömsöd. The battle-worn German and Hungarian units were able to hold their ground only in the northern part of the island, south of Csepel town.

Both Stalin and the Stavka were annoyed by 2nd Ukrainian Front's lack of success, because Malinovsky's was one of the strongest of all the Soviet army fronts and, even so, it was only advancing slowly.<sup>152</sup> Further to the north, the troops of 4th Ukrainian Front were doing even worse. They had advanced only 200 kilometres since August 1944 and lagged well behind on the Csap–Nagymihály–Humenné–Carpathian line. In mid-November the Soviet high command sent Marshal Semyon K. Timoshenko as a special envoy to the army fronts in question,

<sup>148</sup> This is confirmed not only by Soviet sources but also by contemporary radio messages decoded by Army Group South; daily report 5 Nov. 1944, HL microfilm 896/b.

<sup>149</sup> KTB H.Gr. Süd, situation reports for 25 Oct. and 3 Nov. 1944, BA-MA RH19V/54. The data relating to 503rd Heavy Armoured Battalion is our own estimates.

<sup>150</sup> Stemenko, *A vezérkar a háború éveiben*, 282.

<sup>151</sup> Tóth, *Budapest felszabadítása*, 53. <sup>152</sup> Ibid. 62.

to investigate the reasons for their poor performance. Tolbukhin, the commander-in-chief of 3rd Ukrainian Front, was also brought into the proceedings. Up till then, his troops had been deployed in Serbia, Slovenia, and the Bachka region, and had not been involved in the plans for the attack on Budapest. Now 2nd Ukrainian Front's failure boosted Tolbukhin's importance. Given that a breakthrough offensive was impossible in Serbia and Croatia, if only because of the nature of the terrain, his forces could be deployed to good effect only in the Carpathian basin. This suited Stalin, whose policy was to make his subordinates compete with one another.

Timoshenko's findings did not do Malinovsky any favours. His report opened with the statement that the lack of success was remarkable, since 2nd Ukrainian Front was one of the strongest army fronts. His diagnosis read as follows:

Efforts to attack the enemy from all directions are splintering our forces, making it impossible for our troops to bring the necessary superiority to bear [...] Pliyev's group and the mechanized corps are exhausted after long-drawn-out battles against superior forces [...] The commanders of the higher-ranking units and their staffs are somewhat spoilt as a result of events in Romania and Transylvania, so they are not taking the necessary care in organizing cooperation between the various arms of the service.<sup>153</sup>

On the basis of these findings, Timoshenko recommended that an attack be organized in the direction of Hatvan–Balassagyarmat, supported by an accompanying advance on Miskolc.

Following this, Tolbukhin too was assigned a role in the fighting on Hungarian soil. In mid-October the high command had already instructed him not to advance any further west after Belgrade had been taken, but to proceed north-west at full speed. 3rd Ukrainian Front was to join in the operations on Hungarian soil with attacks to the north or north-west. These offensives were to aim at the Transdanubian aluminium industry and oilfields, and might also be directed against Vienna and, if necessary, against Budapest at a later point. On 18 October 3rd Ukrainian Front was further strengthened by 4th Guards Army, which had previously been stationed in Galicia. On 9 November Tolbukhin's troops took possession of an important bridgehead position, which they proceeded to consolidate, at Kiskőszeg in the hills above the city of Pécs in southern Transdanubia. So Soviet troops were now also approaching Budapest from the south-west. Tolbukhin's successes continued, and Malinovsky was consequently obliged to let him have XXXI Guards Rifle Corps on 12 November, as well as V Cavalry Corps and XXIII Armoured Corps on 27 November.

The high command adopted Timoshenko's proposals concerning Malinovsky, and ordered 6th Guards Armoured Army, 7th Guards Army, two mechanized corps, one armoured corps, and two cavalry corps (the Pliyev Group), as well as two newly formed artillery divisions to be moved to the Hatvan–Kartal sector. An attack was launched on a breakthrough section 8 kilometres wide, with six divisions in the

first wave, and two divisions, two artillery divisions, and 6th Guards Armoured Army in the second wave, deploying a total of 510 tanks and 2,074 cannon and grenade launchers.<sup>154</sup> The reinforcements that had been sent largely compensated for 6th Guards Armoured Army's earlier losses.<sup>155</sup> 53rd Army brought up four divisions next to 7th Army, with 700 guns and mortars, on a 7-kilometre section of the front, and strong forces took up positions in the direction of Miskolc. Malinovsky had every reason to hope that, this time, he would be able to press forward within three or four days into the Ipoly valley or to Vác, and from there it would be possible to take Budapest and advance into the Little Hungarian Plain.

By the end of November it was already clear that Tolbukhin's troops were in a position to conquer the south-eastern part of Transdanubia from their bridgeheads within a few weeks or even days and thus threaten Budapest from the south. But Malinovsky, who was attacking the city from the east, did not want to share the laurels for the conquest of Budapest with anyone else. That is the only possible explanation for the fact that he ordered II Guards Mechanized Corps and 46th Army to cross the Danube—a move that was extremely risky in itself and militarily impossible in the given situation—so that his units would be able to encircle Budapest from the south and west before Tolbukhin got there. At the end of November the German–Hungarian defences to the south of the point where the perilous crossing to the other bank was to be made had already collapsed. On 4 December Malinovsky nevertheless gave the order for 46th Army to proceed with the operation immediately south of Budapest. The German–Hungarian units in the Százhalombatta–Ercsi area had been preparing for some days to repel the crossing, which began at 23.00 without any preparatory artillery fire, and they had extended their defence system accordingly. The first wave of Soviet assault troops suffered heavy losses. Most of them survived only by turning back in the middle of the river, which was partly frozen over. It is significant that 43 per cent of the 'Hero of the Soviet Union' medals awarded in connection with battles on Hungarian soil were awarded for this completely senseless river crossing in the

<sup>154</sup> Ungváry, *Die Schlacht*, 36.

<sup>155</sup> Zavzion and Kornjusin, *I na Tihom okeane*, 141. 6th Guards Armoured Army's two mobile corps had more than 350 tanks and assault guns at their disposal on 5 December.

Ercsi area.<sup>156</sup> Malinovsky obviously hoped, by means of these awards, to conceal the fact that he had needlessly sacrificed his men. According to his battle plan, the troops that had landed were supposed to reach the area to the west of Budapest by the end of the following day. That would have meant marching 20 to 30 kilometres a day, a distance that infantry units can cover only if they meet no resistance. However, there was no chance of that, because after landing they had then to break through the Margit Line. The idea of taking that line on their way through was an illusion, as later events were to show. Malinovsky was probably well aware of this, but he presumably hoped that objective would make the whole undertaking more meaningful.

The plan was also contradicted by the fact that the situation of 46th Army, after it had reached the other bank, only began to stabilize on 8 December, and then only because the troops of 3rd Ukrainian Front, commanded by Malinovsky's rival Tolbukhin, had advanced northwards on the west bank of the Danube and had arrived downstream of Ercsi. The overwhelmingly superior Soviet forces,<sup>157</sup> namely six rifle divisions and II Guards Mechanized Corps, finally wore down the three opposing divisions, which had already been bled white. However, it proved to be a pyrrhic victory, since 2nd Ukrainian Front came to a standstill at the Margit Line, 10 to 20 kilometres west of the landing site. Malinovsky was then obliged to hand his units over to 3rd Ukrainian Front, which had also reached that position.

Malinovsky's attack in the north went much better, because Tolbukhin's successes forced the German command to withdraw 1st and 23rd Armoured Divisions from the Hatvan area and move them to Transdanubia, thus further weakening Army Group South's defence in this critical section of the front. Soviet superiority in the breakthrough sector was 9 to 1 in infantry and 10 to 1 in artillery. At 10.15 on 5 December, after a heavy artillery barrage lasting three-quarters of an hour, eight Soviet divisions stormed the battle line north-east of Budapest. Within two hours they had achieved a 12-kilometre-wide and 3-kilometre-deep breakthrough in Army Group South's defences in the direction of Vác. By 13.30 6th Guards Armoured Army was already deployed at the breakthrough point.

The situation had become increasingly critical for the German command, because the army group had no reserves at all in the north, and it was doubtful whether Tolbukhin's troops could be successfully halted in Transdanubia. General Friessner asked Guderian for immediate reinforcements. The crucial task was to block the Ipoly valley, because from there the Soviet tanks could get into the Little Hungarian Plain and threaten not only Budapest but also Bratislava. Parts of 24th Armoured Division withdrawn from the Eger area, and an SS brigade under the command of SS Brigadeführer Oskar Dirlewanger, were the only forces that could be dispatched to the Ipoly valley by way of immediate assistance. The army group was unable to halt the Soviet advance north of the Danube, and 2nd Ukrainian Front mobile troops continued to advance westwards in this area until 12 January 1945. Balassagyarmat fell on 9 December, and 6th Guards Armoured Army's left

<sup>156</sup> *Hősök*, 203–310.

<sup>157</sup> About 40,000 Soviet troops faced about 8,000 Hungarian and German troops.

flank reached the Danube at Vác. Budapest was now threatened with encirclement from the north as well. For days the capital remained almost unprotected against attack from that quarter, but Malinovsky failed to seize the opportunity, and turned his units south after a reasonably effective German defence had been established on the Attila line. Instead, he continued the westward attack by 6th Guards Armoured Army and the Pliyev Group, presumably because there was little resistance in that direction until the end of December. The wish to ensure encirclement from the north also played a part in this. Malinovsky was probably unwilling to risk a direct attack on Budapest after his experiences in November.

*The Soviet and German Strategic Plans and Preparations  
and the Breakthrough in December 1944*

In its strategic directive issued on 12 December, which was based on Timoshenko's recommendations, the Soviet general staff ordered preparations to be made for a new attack with the aim of taking Budapest. As the attempts made so far had been unsuccessful, it now planned an offensive by four armies on two fronts. Under this plan, two army corps of 3rd Ukrainian Front were to attack from the south towards Székesfehérvár, while XVIII Armoured Corps advanced northwards to the Danube. II Guards Mechanized Corps was to turn east and close in on Buda, while 2nd Ukrainian Front advanced on Esztergom to close the circle north of the Danube. Once the capital had been encircled in this way, its conquest would be undertaken jointly by the two army fronts.<sup>158</sup> It was expected to take five or six days to close the outer ring, by means of the attack by the troops on 3rd Ukrainian Front's left wing. The right wing was to take Buda on the eighth and ninth days, while 2nd Ukrainian Front conquered Pest. To simplify the conduct of operations, all Malinovsky's units in Transdanubia had already been placed under Tolbukhin's command. The Soviet general staff had chosen the right place for the attack, since there were now only a few battle-worn units defending the Margit Line south-west of Budapest.<sup>159</sup>

The German authorities had learned of the Soviet intentions in time. Foreign Armies East was examining the Soviet plan for the offensive on the same day, 12 December. Two days later, General Maximilian Fretter-Pico pointed out to the army group that there were only 2,250 German and Hungarian troops (combat strength) defending the 36-kilometre-long section of the front between Lake Velence and Budapest, and that section would collapse in the event of a major Soviet offensive.<sup>160</sup>

The OKH had already sent substantial reinforcements to Transdanubia in the first half of December with a view to recapturing the areas that had been lost there. A strong battle line was to be established along the Danube, such as could be held

<sup>158</sup> 2nd Ukrainian Front could, if necessary, have attacked Army Detachment Fretter-Pico in the rear by crossing the river at Esztergom, if 3rd Ukrainian Front had failed to close the circle.

<sup>159</sup> KTB H.Gr. Süd, 1 Dec. 1944, annexes, HL microfilm 897/a.

<sup>160</sup> KTB H.Gr. Süd, daily report 14 Dec. 1944, HL microfilm 897/a.

even with fairly small forces. (Guderian was trying to save troops because, in his overall perspective, Hungary was only a secondary theatre of war.) In theory, there was some chance that it could be done, especially as the Soviet mechanized troops' exposed thrust at Hatvan and in southern Transdanubia called for such a response. Three complete armoured battalions, 3rd and 4th Cavalry Brigades, and 3rd, 6th, and 8th Armoured Divisions, with some 400 tanks and 40,000 men in all, were moved to Transdanubia. The 'Szent László' Division was also to be deployed in this area. Several different plans of attack were discussed but, in accordance with Hitler's instructions, the OKH decided on the version code-named Operation LATE VINTAGE, between Lake Balaton and Lake Velence. The alternative, namely an attack towards the north-east, was dropped in view of the situation of the Pest bridgehead, which was already regarded as uncertain. However, the attack had to be postponed more than once, first to 20 December and then to 22 December, owing to the shortage of fuel and munitions and the very bad weather.

The gains by 2nd Ukrainian Front in the Ipoly-ság area reduced the chances of a successful attack. They prompted Guderian to send the following forces north on 18 December: 8th Armoured Division, those parts of the 'Szent László' Division that had already arrived, and the armoured infantry of the remaining armoured divisions. It is strange that Guderian, of all people, ordered the armoured divisions to be split up. In addition, 4th Cavalry Brigade had to act as a 'fire brigade' on the battle line, which stretched to the south-western tip of Lake Balaton. The result of all this was that, in mid-December, the formation for the planned attack contained no infantry at all.

Guderian's measures were frequently condemned in the subsequent memoir literature.<sup>161</sup> Their effect was disastrous for both the infantry and the tank crews, since both were uprooted from their usual environment and obliged to fight under unfamiliar commanders in circumstances that were favourable neither to armoured infantry nor to armour. The advantages of both types of forces lay in movement and attack, and Guderian's measures left no scope for either. The only explanation for Guderian's decisions is that he was faced with an impossible task. With the inadequate forces at his disposal, he had to hold Budapest and, at the same time, halt the 2nd and 3rd Ukrainian Front breakthrough towards Vienna, that is, hold the Ipoly river and the Margit Line. The OKH must have been well aware that this was a hopeless task, because the reports from Army Group South accurately predicted the forthcoming Soviet offensive and the effects it would have. Guderian could only hope for a miracle, or hope to gain time and go over to the offensive himself.

The Soviet generals left him no time to do so. Exploiting the greater cross-country mobility of the T-34s as compared with the German tanks, they got under way on 20 December, despite the bad weather. Malinovsky's attack north of the Danube went very well at first. 6th Guards Armoured Army, under Col.-Gen. Andrei G. Kravchenko, advanced 32 kilometres and took Léva that same day. He

<sup>161</sup> See, e.g., Friessner, *Verratene Schlachten*, 198.

even managed to cross the Garam with some of his troops and establish a bridgehead. The Soviet thrust was all the more dangerous since there was now a direct military threat to Bratislava and Vienna.

Kravchenko's operation also resulted in the loss of the link between Sixth and Eighth Armies. To the south of 6th Guards Armoured Army, 7th Guards Army opened up the way to the Ipoly. The group comprising 3rd, 6th, and 8th Armoured Divisions, which had been brought in from Transdanubia, was nevertheless able to press forward from Ipolyszakálas to Ipolyság on 22 December, almost cutting off 6th Armoured Guards Army's rear communication lines. Malinovsky planned to encircle the opposing forces, and he accordingly ordered Kravchenko to turn south with his main forces in order to enclose the German and Hungarian troops between the Garam and the Ipoly. On 21 December the tanks moving south on the Ipoly were only 15 kilometres from the Danube when they had to be ordered back as a result of the German counter-attack at Ipolyság. After the German advance to the bend in the Ipoly had been halted, Kravchenko resumed his southward attack on 25 December and reached the Danube at Párkány on 27 December. LVII Armoured Corps managed to avoid enclosure, but the Hungarian 'Szent László' Division, which had been holding the front on the Ipoly towards the east, was almost completely wiped out.<sup>162</sup> However, Kravchenko's bold thrust proved a failure for the Soviets too. 6th Guards Armoured Army, already severely decimated, lost half its remaining tanks in a few days in the changing fortunes of its fight with LVII Armoured Corps. This blood-letting put a stop to the offensive north of the Danube. In the course of four weeks the army had lost 85 per cent of its armoured vehicles. As a result, it had to be withdrawn from the front for six weeks.

South of the Danube, Tolbukhin's offensive against the Margit Line opened on 20 December after a preparatory 40-minute artillery barrage. In the main direction of thrust, Soviet superiority was 5 to 1 in troops and artillery, and 3.5 to 1 in tanks and assault guns.<sup>163</sup> Although the offensive did not take Army Detachment Fretter-Pico by surprise, the lack of infantry left very limited possibilities of preparing for it.

Every kilometre of the line under attack came under fire from 99 to 160 cannon and grenade launchers. Contrary to plans, the Soviet infantry achieved 'only' a 5-to-6-kilometre-wide breakthrough, as counter-thrusts by German tanks held up the Soviet advance. In the end, the assault by Soviet rifle corps swept away the armoured defence, because without any infantry the German tanks were unable to hold the territory they had taken. On 23 December Tolbukhin deployed his mobile troops as well, to speed up the breakthrough. The following day, the 310 tanks of II Guards Mechanized Corps and XVIII Armoured Corps achieved a breakthrough 60 kilometres wide and 30 kilometres deep in the front between

<sup>162</sup> The Hungarian 2nd Armoured Division suffered the same fate. On the fighting, see Martin and Ugron, *Fejezetek*; also BA-MA RH24-72/47.

<sup>163</sup> The figures given by Sándor Tóth in *Budapest felszabadítása*, 131 are inaccurate, since he could not have known the actual strength of the German and Hungarian divisions. For details, see Ungváry, *Die Schlacht*, 96–103.

Érd and Lake Velence.<sup>164</sup> An equally critical situation had arisen at Székesfehérvár, which was attacked by 4th Guards Army's XX and XXXI Guards Corps and VII Mechanized Corps. The Germans brought in various commando units which had originally been intended for use in their own offensive and were equipped with Soviet uniforms and T-34 tanks. But even that move held up the enemy advance for only a few hours.<sup>165</sup>

Although the breakthrough was slower than planned because of the lack of reserves and infantry, Army Detachment Fretter-Pico was unable to take advantage of the fact. The Soviet breakthrough was stopped, with difficulty, only in the Székesfehérvár area. From the course of events on 21 December, Tolbukhin concluded that it would be worth pursuing the offensive on the right wing. He accordingly ordered II Guards Mechanized Corps to withdraw from its present position and move north at full speed, so as to be 10 to 15 kilometres west of the Budapest city limits by the evening of 22 December.

### *The Dilemma of the German and Hungarian Command regarding Budapest*

On 30 October the defence of Budapest was taken over by the German III Armoured Corps, commanded by General Breith. The Hungarian divisions that had moved back into the city were also placed under his command. Corps Group Budapest, comprising the staff of the Hungarian VI Army Corps<sup>166</sup> and the German police forces and emergency units stationed in Budapest, was formed on the same day and placed under the command of Obergruppenführer and Waffen SS and Police General Karl Pfeffer-Wildenbruch.<sup>167</sup>

To prepare for all eventualities, the German 153rd Field Training Division was also moved to Buda in the western part of the city on 4 November. This division could not have been deployed against regular Soviet troops, but it seemed suitable for dealing with a possible uprising. In addition, IX SS Mountain Corps HQ was transferred from Zagreb to Budapest on 10 November, to further reduce Hungarian participation in command functions (almost all the command staff of Corps Group Budapest were Hungarian).

Unlike the general staffs, neither the German nor the Hungarian political authorities had prepared for the possibility that Budapest might become a front-line city. Szálasi's considered view, shortly after he took power, was: 'It is necessary to hold Budapest only if offensives are to be launched from that area. If that is not intended, it is essential to evacuate Budapest and withdraw to the Transdanubian hills, which are still militarily advantageous.'<sup>168</sup> Army Group South took the same

view and, on 26 November, it asked the OKH what was to be done in the event of public unrest. The answer was that the ‘metropolitan mob’ should either be evacuated in good time or kept under control by force. Friessner thought nothing of this idea, because he did not have enough troops to do the job. He asked for an SS general to be appointed instead of Otto Winkelmann, who was an SS officer but had never commanded combat troops in the Second World War. Significantly, he also asked for ‘combat engineer battalions, like in Warsaw’,<sup>169</sup> which suggests plans for house-to-house fighting and the associated demolition of residential districts. Should the inner circle be breached, Friessner planned to withdraw to the west bank. He also asked the OKH for permission to do so, but it was refused.

The Hungarian military command agreed that the capital could be defended only on the inner and outer defence ring of the Attila line, and it ruled out street fighting. Hitler alone insisted on the defence of Budapest itself. He issued his first directive on 23 November, ordering that the city was to be defended even in house-to-house fighting, regardless of civilian losses and the damage caused.<sup>170</sup> Hitler’s Order No. 11, in which he declared Budapest a ‘fortified place’, arrived on 1 December. It put Winkelmann in charge and placed Pfeffer-Wildenbruch’s IX Mountain Corps under his command. The group was under Sixth Army HQ for tactical purposes only, which effectively meant that—after consultation—it could operate with its forces independently. Its task was to prepare the defence of the city’s squares and buildings, and to repel any break-ins. To prevent unrest, it was to keep the German and Hungarian gendarmerie and police forces on the alert and establish a communication system. The order also mentioned the future dispatch of special units to the city.<sup>171</sup> Szálasi accepted Hitler’s decision during his visit to Berlin on 4 December, although Guderian was still saying he wanted to keep the enemy out of the city. On this occasion, Szálasi was also told that the bridges and public utilities must be destroyed in any districts about to be abandoned. The comment that the Soviet forces would do the same if the city was retaken was cold comfort for the population of Budapest.<sup>172</sup> German diplomacy rejected the idea of declaring Budapest an open city, on the grounds that in Germany too every town would be defended to the last brick.<sup>173</sup> Veesemayer, the special envoy and Reich plenipotentiary in Hungary, had made it perfectly clear that it would not matter if Budapest was destroyed twice over, if it meant that Vienna could be defended.<sup>174</sup>

Army Group South had no illusions about the chances of holding Budapest. Friessner had already given orders on 1 December for all German military and civilian agencies to be evacuated, so that ‘in any battle for the city, there would be no unfortunate instances of German agencies fleeing that would damage the reputation of Germany and the German armed forces’.<sup>175</sup> On 6 December, fearing

a Soviet breakthrough, Fretter-Pico requested permission to withdraw to the inner defensive ring of the Attila line. Hitler refused, on the grounds that the defence would no longer have any strategic depth. The situation became still worse with the breakthrough at Hatvan, north-west of Budapest, because the defenders now had to cover a battle line 20 kilometres wide in the northern part of the capital, which stretched their forces even further. On 9 December the Soviet heavy artillery opened fire on the north-eastern section of the city. The first sign of the death throes was the formation, that same day, of emergency companies composed of cooks, clerks, and mechanics.

### *The Encirclement*

Neither the German nor the Hungarian command authorities made any preparations to defend Budapest against attack from the west. This is all the more interesting given that Army Group South discovered for certain in mid-December that the Soviet military command was planning an encirclement from the west. Following the Soviet breakthrough in the Lake Velence area on 20 December, Army Group South asked Guderian for permission to withdraw 8th SS Cavalry Division from Pest and deploy it south-west of Buda. Guderian refused to allow such an operation, explaining that it would weaken the city's defences in the east. The army group's command staff attempted to withdraw Armoured Infantry Division 'Feldherrnhalle' from the city on 21 December, but the general staff continued to refuse any reduction of the defence forces. Meanwhile, 3rd Ukrainian Front troops were pushing northwards through the gaps opened up between Lake Velence and Martonvásár. By the evening of 22 December they were already threatening Bicske and Bia.

Friessner again requested the withdrawal of 8th SS Cavalry Division and the abandonment of the Pest bridgehead, but Guderian refused, invoking Hitler's orders. When Friessner told him that Budapest would be encircled within the next few days, he retorted angrily that he could not understand 'how an armada of tanks, the like of which has not been assembled anywhere on the eastern front, can fail to stop the enemy'.<sup>176</sup> Guderian was right, in that the German concentration of armoured vehicles certainly was a powerful force, but he forgot the lack of infantry units with which to successfully oppose the Soviet forces.

That same morning, the Soviet troops took Székesfehérvár and reached the main rail connection between Vienna and Budapest, so that supplies for the capital could now be brought in only on the Esztergom–Budapest line. The Soviet armoured spearheads were advancing at a speed of 20 to 40 kilometres a day, leaving the troops following them to deal with any places still putting up resistance.

On 23 December too, Army Group South and Pfeffer-Wildenbruch were only able to decide on a half-hearted counter-measure. According to an entry in the army group's war diary, the plan was for an armoured regiment from Armoured

<sup>176</sup> Friessner, *Verratene Schlachten*, 205.

Infantry Division 'Feldherrnhalle' to conduct mobile combat in the Bia area to prevent the enemy from advancing to the east and north.<sup>177</sup> It is instructive that, even at this point, the German command did not dare to withdraw a full division from the Pest front line, preferring to take the risk that the capital might be encircled. And Hitler still refused IX SS Mountain Corps' request to withdraw 8th SS Cavalry Division from the Pest bridgehead.

Hitler had no substantial combat forces at his disposal, so all he could do was change his commanders. He was, in any case, on edge, as there was every indication that the Ardennes offensive was about to fail. On 23 December he dismissed Friessner and Fretter-Pico, and appointed General Otto Wöhler (Eighth Army) and General Hermann Balck (Army Group G) in their place. The replacement of the generals naturally had absolutely no effect on the situation. They had done everything that was humanly possible, even predicting the course of events, in the hope that it would give the dictator a better insight and persuade him to send more troops to the region. But Hitler was clearly looking for scapegoats to blame for the succession of defeats. When it was already too late, he decided to send IV SS Armoured Corps and numerous other units to Budapest, but it would take them a week to get to Hungary.

At 13.10 on 24 December, the army group's chief of staff, Lt.-Gen. Helmuth von Grolman, telephoned Guderian and pressed for an immediate decision with regard to Budapest. Guderian thereupon decided, on his own responsibility, to regroup and move 8th SS Cavalry Division to Buda. He was under heavy pressure at the time. The German attack in the Ardennes had been launched only a few days earlier but it seemed to have already come to a standstill. It was also to be assumed that the Soviet troops in their bridgeheads on the Vistula were preparing to advance on Berlin. Guderian therefore wanted to stop the western offensive at all costs, so as to release combat forces for transfer to the eastern front—but not to the Carpathian basin. He presumed that a Soviet attack on Berlin would take place shortly and, as it soon turned out, he was not mistaken. But Hitler was convinced that the defence of Budapest must take priority.

At 16.50 on 24 December, when the Soviet tanks were already 5 kilometres from the castle, Hitler finally gave permission for 8th SS Cavalry Division to withdraw. However, according to the Führer's order, this did not mean that the Pest bridgehead was to be abandoned, even though both Guderian and Balck considered that to be the most sensible step.<sup>178</sup> For both Hitler and Stalin, Budapest was a political issue that went far beyond 'central European concerns'. For the Soviet dictator, it was a matter of securing and extending his spheres of interest. Taking possession of Budapest was essential for the attack on Vienna, and it could also be expected to have a positive political impact. For Hitler, it was a downfall scenario,

<sup>177</sup> KTB H.Gr. Süd, daily reports 23 Dec. 1944, HL microfilm 897/b.

<sup>178</sup> On the back and forth over the question of withdrawal, see KTB H.Gr. Süd, BA-MA RH19V/43 and 44, excerpts reproduced in Bayer, *Kavalleriedivisionen der Waffen-SS*, 329–32. In fact, Balck considered even defence of the capital superfluous, because the forces withdrawn from it could alone have sufficed to stabilize the situation in Transdanubia. There would then have been no need to deploy IV SS Armoured Corps in Hungary.

because he was well aware that the war could not be waged without Hungarian oil. That was why he transferred two infantry divisions to Hungary and promised to relieve Budapest.<sup>179</sup>

The German military command in Budapest did nothing to prevent the impending catastrophe.<sup>180</sup> The situation could have been saved only through self-initiative, but Pfeffer-Wildenbruch, whom the generals in Army Group South referred to scornfully as a ‘civilian’ or ‘political general’, lacked the necessary leadership qualities for such action.

It was thoroughly typical of the situation that no agreement was made between the two command authorities—the general staffs of Pfeffer-Wildenbruch and Iván Hindy—on measures to counteract the coming encirclement. This was not because there were no deployable units available yet. The reasons are to be found, rather, in bureaucratic mindsets, mutual distrust, and Hindy’s growing apathy since the end of October. Pfeffer-Wildenbruch did not provide his Hungarian partner with the most necessary information, and even treated him with open contempt.

### *Besiegers and Besieged*

The dispute as to the exact numbers defending Budapest became a political issue after 1945. According to an internal report by Corps Group Budapest, based on Soviet intelligence reports dated 31 December 1944, the combined combat strength of the German–Hungarian forces in the Pest bridgehead was 37,300. But Malinovsky, in a report written a few weeks later, referred to 188,000 defenders (in Pest and Buda), and gave the total number of prisoners as 138,000. His figure was taken over without checking in subsequent works by Soviet and Hungarian historians.<sup>181</sup> In its report of 31 December, Army Group South gave the numbers of encircled forces as 50,000 Hungarians and 45,000 Germans.<sup>182</sup> The Hungarian corps HQ made several attempts to calculate the number of its troops, but in the prevailing chaotic conditions it could obtain only incomplete figures. Even the chief of staff of I Army Corps, Sándor Horváth, admitted that he was at a loss: ‘During the seven weeks of the siege, I was never able to establish reliable figures for the strength, weapons, and munitions of the troops deployed and included, or not, in the official combat plans. The general staff Ic, Captain Dezső Németh, was able to determine, after repeated attempts, that the ration strength wavered around 40,000.’<sup>183</sup>

Defenders	approx. 79,000	approx. 489	approx. 125	approx. 117
of which Hungarian troops	46%	53%	30%	47%
of which German troops	54%	47%	70%	53%

Source: Ungváry, *Die Schlacht*, 103.

The reports ought to have been checked. In the case of the reported combat strengths it is also necessary to consider what percentage of the Hungarian fighting forces played any part at all in the defence of Budapest. This is a perfectly reasonable question, in that a significant number of the encircled Hungarians were not originally in any of the combat units. The combat strength of 10th Infantry Division and 12th Reserve Division on 14 January 1945 was 300 men.<sup>184</sup> As to ration strength, only indirect information remains, but we know that there were at least 3,500 men of 10th Infantry Division in uniform inside the besieging ring.<sup>185</sup>

The fact that the combat strength of the divisions was less than that of some battalions is very telling. The fighting spirit in the independent battalions was considerably stronger than in the regular infantry, because they were under German command during the fighting and were not supplied separately.

If we deduct from the number of defenders those who existed only on paper, we are left with a ration strength of 38,000, of which the combat strength was 14,000 men. The Hungarian troops thus constituted about 30 per cent of the defenders in terms of combat strength. The proportional contribution of Hungarian units to the

<sup>184</sup> HL, 13th Armoured Division documents, report of 14 Jan. 1945.

<sup>185</sup> See 'The Defenders of Budapest' in HL TGY3251, Biró collection, as well as the records of 10th Division, from which it is clear that almost 1,000 combatants remained on Rose Hill or were taken prisoner between 28 January and 1 February. Since it is reckoned that several thousand more were taken prisoner on 11 February, this figure is obviously not unreasonable.

artillery was considerably greater. Over 60 per cent of the cannon belonged to Hungarian units.

It follows from these figures that the main burden of the fighting was borne by the Wehrmacht and the Waffen SS. Together, they had 41,000 troops (ration strength). The ratio of defenders to attackers is even more to the latter's advantage if account is taken only of combat strength, which is the decisive factor in the actual balance of forces. On that criterion, according to the author's calculations, 35,000 men faced approximately 95,000 Soviet troops. Budapest was attacked by 15 Soviet divisions and three Romanian divisions, plus two artillery divisions and a naval infantry brigade. Apart from these units, many others under direct corps or divisional command also played a part in the siege of Budapest, so the besieging forces can be estimated at 150,000 in all. The defenders' performance is all the more remarkable in view of the fact that 79,000 men managed to hold Budapest for 52 days against forces that were not only twice as strong, but much better equipped and better supplied.

The German and Hungarian commanders in the capital also had great difficulty in supplying their troops. The city was a fortified place only on paper. Not even a start had been made on laying in the prescribed food supplies, which would have had to last for several months. Much of the existing stock was stored in outlying districts of Buda and taken as booty by the Soviet troops between 24 and 26 December. At the point when the city was encircled, there were 450 tonnes of munitions, 120 cubic metres of fuel, and 300,000 food rations in store—enough for about five days of fighting.<sup>186</sup>

Stocks were so low that the German–Hungarian command could not think of supplying the civilian population. Minimum supplies of 80 tonnes a day were prescribed for the troops after the city was encircled. Of these, 20 tonnes were to be dropped by parachute because there were not enough airfields, and the remainder was to be flown in by Ju 52 transport aircraft or gliders. Two emergency landing-strips and four dropping points were designated in Budapest, but the city's usable airfields were lost in the first few days of the encirclement, so the supplies came to a halt.

The first air transport took place on 29 December 1944. The 'Budapest air supply group' flew 61 sorties a day on average, though only 49 were successful. The air-supply system worked quite well until the racecourse, which the Ju 52s had also been able to use, was lost. There were even some days, at the beginning of January, when 93 planes managed to land. The gliders suffered the worst losses. Of the 73 DFS 230s that were used, 32 did not even reach Budapest, and the rest either crashed (they were designed for crash-landing) or landed in the wrong place. The pilots were 16- to 18-year-old volunteers in the NSFK (National Socialist Flying Corps), full of naive enthusiasm, who had taken on the task without any idea of what awaited them.<sup>187</sup>

<sup>186</sup> KTB H.Gr. Süd, report from General Balck, 30 Jan. 1945, HL microfilm 629, No. 7213339.

<sup>187</sup> Ungváry, *Die Schlacht*, 105.

In the end, 1,975 tonnes in all were flown into the capital, of which 417 tonnes were carried on Hungarian planes. Several thousand air drops were made to Budapest in the closing stages of the siege, although the supplies rarely reached those for whom they were intended. And the supplies that were actually collected could not be distributed because there was not enough fuel and the constant artillery fire made the streets impassable.

However, the attackers too had their problems. The Soviet and Romanian troops deployed in the siege of Budapest were a mixed bunch. The recruits assigned to the armoured corps, guards cavalry corps, and guards mechanized corps were well-trained men of excellent morale, whereas the other units included children and old men who had been recruited without any medical examination. The male inhabitants in the parts of the Soviet Union that had already been liberated were called up immediately, as were the men released *en masse* from German prisoner-of-war camps in Romania, who were promptly deployed without having any time to recover. According to German counter-intelligence, there were 15 divisions of this kind among the forces deployed against Army Group South, and 40 to 70 per cent of the men in those divisions came from the liberated areas.<sup>188</sup> In some units it was the practice to shoot men accused of cowardice in front of the assembled troops before an attack. Even minor offences were punishable by ten years' forced labour in the Gulag, but the sentence could be served by doing three months in a penal company. In those circumstances, the chances of survival in such units are all too clear.<sup>189</sup> It is characteristic of the Soviet authorities' ruthlessness that 214th Guards Cavalry Regiment with all its men was classified as a penal unit, and its commander demoted, because it lost its flag in the tank battle at Debrecen.<sup>190</sup>

Two artillery divisions, a complete flying corps, and numerous special units were brought in to strengthen the attacking forces, while several Soviet divisions had to be withdrawn after 3 January on account of the relief attacks. The nominal superiority in artillery, with 70 light batteries, 32 heavy batteries, and 10 heavy batteries on self-propelled carriages, was not overwhelming, since the defenders had 45 light batteries and 15 heavy batteries. But the defenders ran out of ammunition for heavy grenade launchers in the first few weeks, and many of their cannon rapidly became unusable, whereas the Soviet forces were always able to repair their weapons quickly.

In parallel with the military siege, another siege was conducted inside Budapest itself—against the ‘enemy within’. On 21 November the Jews in the city were ordered to move, within three days, into the ghetto to be established in District 6—the last ghetto in Europe at the time. The Budapest Jews had already been forced to move into buildings designated as ‘Jew houses’ when the Germans occupied the city, although those buildings were located in various parts of the city. Jews who were in possession of a *Schutzbrief* (letter of protection) or were

<sup>188</sup> Report, Nov. 1944, BA-MA RH2/2468.

<sup>189</sup> On this, see BA-MA RH2/2458.

<sup>190</sup> Report, 18 Jan. 1945, BA-MA RH 2/1996.

foreign nationals had to move into the ‘international ghetto’. At this time there were still about 120,000 Jews in the Hungarian capital.

The organizers and driving force in the persecution of the Jews were the Hungarian Arrow Cross. Wehrmacht and SS troops took part in these operations only on a few isolated occasions.<sup>191</sup> From the beginning of December 1944 more than 60,000 people were tightly crammed together in the District 6 ghetto. Hunger reigned from the outset: the daily ration was only 790 calories a head.

The papal nuncio, Raoul Wallenberg, and the diplomatic representations of neutral countries performed numerous acts of rescue. Their activities saved thousands of lives. The commanders of the besieged city, Pfeffer-Wildenbruch and Iván Hindy, took no interest whatever in this ‘problem’.<sup>192</sup> When it became clear that the Pest bridgehead would be evacuated in a few days’ time, the Arrow Cross party and some SD officials from Eichmann’s staff who had remained in the Hungarian capital tried to organize a pogrom to destroy the ghetto. Wallenberg got to hear of the plan and informed the commander of the Pest bridgehead, Maj.-Gen. Gerhard Schmidhuber, pointing out that world opinion would hold the Wehrmacht responsible for the pogrom if it were to take place. Schmidhuber immediately ordered German troops to guard all access points to the ghetto, thus foiling the Hungarian Arrow Cross plan for mass murder.<sup>193</sup> There were other occasions too when Arrow Cross mass executions were stopped by the SS or the Wehrmacht.<sup>194</sup> This suggests that military professionalism was sometimes a mitigating factor in German policy on the Jews, especially as there is no evidence of anti-Semitic activities on the part of Schmidhuber or Pfeffer-Wildenbruch.

### (c) The Fighting in Budapest

Army Group South and Pfeffer-Wildenbruch agreed from the start that it was impossible to hold the bridgehead in Budapest. Almost half their forces had to be regrouped in any case, on account of the new defence system that was to be established on the Buda side, so it was absolutely necessary to move the front back. The withdrawal could reasonably be expected to stabilize the situation, especially as fewer forces would be needed to hold the shorter concentric line. The defenders on the Pest side accordingly withdrew to the third defensive line by 28 December.

Although Hitler’s order of 24 December had forbidden even a reduction in the perimeter of the Pest bridgehead, let alone complete abandonment or breakout, IX SS Mountain Corps nevertheless began to make the necessary preparations. There

<sup>191</sup> This is confirmed by the numerous accounts of surviving victims. On this, see Ronén, *Harc az életért*.

<sup>192</sup> On the Jewish ghetto, see Ungváry, *Die Schlacht*, 344–69.

<sup>193</sup> Lévai, *Zsidósors Magyarországon*, 135; partly inaccurate account in Aly and Gerlach, *Das letzte Kapitel*, 368.

<sup>194</sup> Ungváry, *Die Schlacht*, 346. See also testimony of Emil Kovarcz to the Budapest People’s Court, BFL V-56031, and statements of survivors from the ghetto in the possession of János F. Varga, whom the author takes this opportunity to thank for his kind assistance.

was no other choice. Hitler's order that both Buda and Pest were to be held at all costs until relief arrived was impossible to carry out: only one or the other could be defended. By his own account, Pfeffer-Wildenbruch decided on 27 December to disobey the Führer's order, but according to his recollections, another order from Hitler categorically forbidding a breakout arrived the next day.<sup>195</sup>

The question remains as to why the commander of IX SS Mountain Corps began preparations for a breakout at all, since Hitler had already given specific orders on three occasions—on 23 November and again on 1 and 24 December—that Budapest was to be defended house by house. The likely explanation is that IX SS Mountain Corps command hoped that, in view of the dramatically deteriorating situation, Hitler would approve the breakout retroactively or at the last minute. In the end, however, given the repeated categorical prohibition and their trust in the promised relief, IX SS Mountain Corps command did not dare disobey the Führer's order.

For the Soviet authorities, capturing the city as quickly as possible was of vital importance for all future operations. Malinovsky and Tolbukhin both knew from their experience in the battle for Stalingrad that the siege would last a long time and that house-to-house fighting entailed extremely heavy losses. Moreover, it was the first time that the Red Army had laid siege to a European city with a million inhabitants. The main problem for the Soviet forces was that most of the buildings were of stone, which made artillery and ground-attack aircraft less effective. On 29 December the Soviet command, with Stalin's permission, sent negotiators under a flag of truce to call on the German–Hungarian garrison to surrender. However, the attempt ended in fiasco. One of the negotiators did not even reach the German positions, the other died on the way back from shots fired in error by unknown soldiers.<sup>196</sup>

The Soviet offensive began the following day. Almost a thousand cannon fired on the city, seven to ten hours a day, for three days. In the intervals, ground-attack aircraft dropped their bombs. A million people had to get used to living in overcrowded cellars. The main attack, directed at the centre of the Pest front in the Romanian VII Army Corps' combat zone, was immediately successful, and the last good airfield—the one on the racecourse—was captured under fire from grenade launchers on 2 January. There was more to follow. After three days the defenders had run out of certain kinds of ammunition, and the wounded could no longer be flown out. On 8 January the Soviet troops were only 4 kilometres from the Danube, while the bridgehead still measured 15 kilometres, north to south. On the Buda side, large-scale attacks had to be temporarily suspended on 3 January 1945 because of the increasingly threatening relief operations. II Guards Mechanized Corps and two rifle divisions were pulled out and assigned to defence.

The Soviet commanders took various special measures for street fighting. Their experience of battles of encirclement had shown that the best course was to split up

<sup>195</sup> Gosztony, *A magyar honvédség*, 230.

<sup>196</sup> This event was exploited by Soviet and Hungarian propaganda for 45 years as evidence of the criminal nature of German conduct of the war. For details, see Ungváry, *Die Schlacht*, 153–63.

the pocket and destroy the small sections one by one, as had been done at Stalingrad. On the basis of the experience gained there, each division organized specific assault groups to attack the enemy targets.<sup>197</sup>

The operations were hampered by the fact that the attackers did not coordinate their actions. While the Soviet XXX Army Corps and the Romanian VII Army Corps took their orders from 7th Guards Army, the independent XVIII Rifle Corps attacking in the south was under the direct command of Malinovsky. At the recommendation of the Soviet general staff, Malinovsky combined the attacking forces on 11 January under the title 'Group Budapest', and placed them under the command of the independent XVIII Rifle Corps.

The defenders also had communication difficulties. The telephones were still working at the beginning of January, but most means of communication had been destroyed by the middle of the month. Contact with the forces at the front could be maintained only by means of messengers. News of Soviet advances took some time to get through in the vast sea of houses. As a result, the conduct of operations was increasingly left to the combat groups, which often recaptured the most important buildings and streets in counter-attacks. There was no longer a recognizable battle line among the tightly packed buildings, and there were attacks by scattered Soviet troops in the rear areas.

IX SS Mountain Corps asked Army Group South for permission to break out. Pfeffer-Wildenbruch had already reported on 14 January that the situation of the wounded was 'catastrophic'. The fighting had moved to the city sewers, and the incessant air raids made it impossible to put out the fires or retrieve supplies. On 15 January 1945, with the army group's support and against Hitler's orders, IX SS Mountain Corps started to evacuate the Pest bridgehead. It was little short of a miracle that most of the German vehicles managed—through burning streets and across two bridges under heavy artillery fire—to get over to the Buda side, where they established the new centre of defence.

#### (d) The Relief Attempts

In the specialist literature, the Battle of the Bulge is often described as the 'last' German offensive, or even as 'the final attempt [...] to turn the tide'.<sup>198</sup> Many works do not even mention the fact that the Wehrmacht was still able to plan and to some extent carry out offensives in March 1945.<sup>199</sup> In fact, the Wehrmacht launched at least five offensives in Hungary in the spring of 1945. The forces deployed, the territorial gains, and the losses sustained by the Allies were certainly comparable to, or even greater than, those in the Ardennes offensive.<sup>200</sup>

<sup>197</sup> Tóth, *Budapest felszabadítása*, 227 ff.

<sup>198</sup> Germany and the Second World War, vii. 697; Weinberg, *A World at Arms*, 769; Jung, *Die Ardennen-Offensive*, 196.

<sup>199</sup> See, e.g., Magenheimer, *Die Militärstrategie Deutschlands*.

<sup>200</sup> The attacking forces had 600 armoured vehicles at their disposal in the battle for the Ardennes; cf. Germany and the Second World War, vii. 681, compared with 494 tanks and assault guns, and almost as many armoured personnel carriers, made available for the KONRAD operations. A total of 1,796

And as far intentions are concerned, the offensives in Hungary must also be regarded as Germany's last attempts to exert a positive influence on the outcome of the war.

After Budapest was encircled, three offensives were undertaken under the code-name KONRAD, aimed at relieving the capital and retaking the eastern section of the Margit Line. The German authorities transported all their mobile reserves to Hungary for the purpose, with the result that in February 1945 almost half of all German armoured divisions deployed on the eastern front were to be found in Hungary. Contrary to the widely held view, the purpose of the relief attacks was not to get the forces defending Budapest out through the gaps thus created, but to get more forces into the capital.<sup>201</sup>

Since the destruction of its hydrogenation plants in May and June 1944, the Third Reich's only source of fuel had been the oilfields at Zala and at Zistersdorf on the German–Slovakian border. Hence the concern with the Hungarian theatre of war, and the increasing importance attached to it.

The German operations had serious consequences for the Soviet side. Under the Stavka plans drawn up in the autumn of 1944, the Soviet forces were to have reached Budapest by the middle of November, and the Graz–Vienna–Brno–Olomouc line by the middle of December.<sup>202</sup> The purpose of this advance was to secure the attack on Berlin from the south, and safeguard the Soviet 'sphere of interest' in south-eastern Europe. However, Malinovsky failed to take Budapest in November, and the attack by his 6th Guards Armoured Army at the end of December, aimed at capturing Komárom and Bratislava, also failed. These setbacks, and the losses they involved, meant that the major operations that had been planned to defend Vienna, Olomouc, or even southern Germany for a few weeks were now impossible. The German relief attacks forced the Red Army onto the defensive and prevented the Stavka from carrying out any offensive of its own for a further ten weeks.<sup>203</sup>

Hitler had been adamant from the start that Budapest must be held, so he forbade any attempt to break out. On 24 December 1944, before the city was completely encircled, he had already ordered IV SS Armoured Corps, 96th and 711th Infantry Divisions, and a large number of army units (403rd People's Artillery Corps,<sup>204</sup> 17th People's Rocket Launcher Brigade, 219th Assault Tank Battalion) to Hungary—a total force of some 260 tanks and 70,000 men. Army Group South had 1,102 tanks in all (total complement, including those under

armoured vehicles (not including APCs) were deployed in Operation SPRING AWAKENING. For details, see the descriptions of the operations.

<sup>201</sup> Ungváry, *Die Schlacht*, 238; BA-MA N647, Balck papers, 'Bericht Helmut Wolff über den Ausbruch 15.2.1945'.

<sup>202</sup> Shtemenko, 'Kak planirovalas poslednaya kampaniya', 56–72, particularly the map on 66–7.

<sup>203</sup> Soviet historiography admitted this failure only between the lines, as it were. The *Geschichte des Grossen Vaterländischen Krieges*, v. 211, merely states laconically, in this connection, that 'a complicated military and political situation had arisen' in Hungary.

<sup>204</sup> The people's artillery corps had 87 barrelled weapons, i.e. the artillery strength of two divisions, at its disposal. KTB H.Gr. Süd, Jan. 1945 (second half), annexes, HL microfilm 629, No. 7212231.

repair). So about 18 per cent of all German armoured forces were deployed in Hungary.<sup>205</sup> The proportion of modern weapons employed in the Hungarian theatre of war was even higher. The use of Tiger I and II (King Tiger) tanks was typical of this development. On 1 January the Wehrmacht had 471 tanks of this type, and 44 of them were deployed in Hungary. On 15 January there were 199 Tiger tanks on the eastern front, 78 of them in Hungary, and on 15 March, out of a total complement of 276, 102 were in Hungary.<sup>206</sup> At the end of the war, almost half of these most costly German weapons were to be found in Hungary.<sup>207</sup>

Hitler entrusted command to SS Obergruppenführer Herbert Otto Gille, who had been awarded the Knight's Cross with Oak Leaves and Swords for the breakout from the Cherkassy pocket in the spring of 1944. Himmler sent Gille a telegram informing him that the Führer had chosen him and his army corps to lead the relief expedition to Budapest because he already had experience of battles of encirclement and had the greatest understanding for the fate of the encircled troops, and because his corps had the best record on the eastern front.<sup>208</sup> On the same day, Guderian called on Hitler to persuade him not to continue the Ardennes offensive, but the Führer remained adamant. He wanted to keep two irons in the fire. However, he soon had to pay the price for the Budapest relief attempts: there were hardly any reserves left to replace IV SS Armoured Corps when it moved to Transdanubia from its position south of Warsaw, and two weeks later the Soviet offensive swept away the front on the Vistula. The enemy tanks were only brought to a stop at the Oder.

Guderian, fearing the threat to Berlin,<sup>209</sup> thought Hitler's decision to regroup the German forces was wrong, and in January and February he made numerous attempts to dissuade Hitler from undertaking the Hungarian offensives. Hitler's decision was nevertheless correct from the overall perspective of the conduct of the war. IV SS Armoured Corps could not have stopped the superior forces of the Soviet armoured armies at the Vistula in any case, but if the corps had not been moved to Hungary, the Red Army might well have taken the last Hungarian oilfields and oil refineries within a few weeks, thereby preventing Germany from carrying out any further military offensives.<sup>210</sup> The relief operations must therefore have contributed significantly to enabling the hopeless war to be waged for a few more months. To that extent, Hitler's decision was, paradoxically, in accordance with both his and Guderian's aims.

<sup>205</sup> The army had 6,053 tanks and assault guns on 15 Jan. 1945. See Jentz, *Die deutsche Panzertruppe*, ii.

<sup>206</sup> Ibid. 230, 247 ff., 275 ff. According to other sources, the Wehrmacht had 404 Tigers in all on 1 March. Hahn, *Waffen und Geheimwaffen des deutschen Heeres*, ii. 298 ff.

<sup>207</sup> Even on 15 April, Army Group South had 37 Tigers, while all other army groups together had 121. On the deployment of Tiger tanks, see Schneider, *Tiger im Kampf*, and Jentz, *Die deutsche Panzertruppe*.

<sup>208</sup> See *Magyarország felszabadítása*, 224.

<sup>209</sup> Guderian, *Erinnerungen eines Soldaten*, 349.

<sup>210</sup> On the oil issue, see this chapter, 3 (f), section on Operation SPRING AWAKENING.

Army Group South and Guderian were in dispute from the outset about the right way to deploy the regrouped units. But everyone except Hitler agreed at least that Budapest must be surrendered as soon as possible and that a breakout must be approved. Hitler's permission was requested almost every day, but he would not even agree to surrender Pest. Army Group South accordingly defined the purpose of the operation—after the attack was launched—as the capture of the Margit Line between Lake Balaton and the Danube, and also envisaged elimination of the Soviet bridgehead over the Garam, north of the Danube.<sup>211</sup> A serious dilemma arose as to which of the two solutions proposed for the relief of Budapest should be chosen: Operation KONRAD (in the north) or Operation PAULA (in the south). In the case of the southern offensive, to be launched from the Székesfehérvár area, 900 cubic metres more fuel would be needed because of the greater distance involved, and it would also take five days longer to assemble the troops.<sup>212</sup> The alternative offensive in the north would require less fuel, the regrouping could get under way more quickly, and the distance was shorter, but the nature of the terrain posed a significantly higher risk. The success of the offensive depended primarily on the element of surprise, and that was a good reason to opt for the northern offensive, which could be conducted faster. Guderian would have preferred an offensive from the south, but his representative, General Wenck, was won over by the army group's arguments at the conference held in Eszterháza at the end of December. In view of the threatening situation in Budapest, the German military authorities finally decided to attack from the north.<sup>213</sup> They gave the order for the attack before all their troops were assembled, in the hope that the Soviet forces had not yet built up strong defensive positions. At the start of the offensive only 32 per cent of 5th SS Armoured Division 'Viking', 66 per cent of 3rd SS Armoured Division 'Totenkopf', and 43 per cent of 96th Infantry Division were ready, and none of 711th Infantry Division had arrived yet.<sup>214</sup> Assembly of the units was not completed until 8 January 1945. Guderian, who had been in Hungary for the previous two days, arrived in Tata on 7 January to oversee the conduct of the operation in person. The minister of defence in the Szálasi government, Col.-Gen. Károly Beregfy, was also keen to contribute to the success of the operation, and suggested that Hungarian troops take part. However, the forces he offered were so battle-worn that there could be no question of using them. Some of the Hungarian authorities got carried away with various plans. The inspector of the Honvéd, Lt.-Gen. Gyula Kovács, for example, felt it was more important at this point to discuss the marching-in parade with General Balck, but he left the meeting disappointed—the German general had no time to consider the matter.

### *Operation KONRAD I*

On the evening of 1 January the German IV SS Armoured Corps, only half of which had reached the Komárom area, launched a surprise offensive in the Tata-Almásfüzitő region, while 96th Infantry Division crossed the Danube from the north in assault boats and established two bridgeheads in the rear of the Soviet troops. The two battalions of the Hungarian SS Combat Group Ney (later Brigade Ney) were deployed for the first time in this operation, as infantry accompanying SS Armoured Divisions 'Viking' and 'Totenkopf'.<sup>215</sup> The attacking troops captured the Gerecse mountain range, but by 6 January the Soviet troops had brought them to a halt in the Bicske and Zsámbék area. Two factors had had an adverse effect on the offensive:

- The terrain was extremely unfavourable for armoured vehicles. In the Gerecse and Pilis mountains the Soviet troops had established anti-tank defensive lines which were very difficult to overcome. And even where the Germans managed to break through, the Soviet troops were easily able to cut off the long and narrow corridor forming along the Danube.
- Tolbukhin and Malinovsky had taken the precaution of placing their most important units in reserve between 26 and 31 December. So the commanders at the front had one armoured corps, four mechanized corps, and three cavalry corps at their disposal to ward off the German relief attempts.<sup>216</sup> Those forces alone possessed at least 500 to 600 tanks.

Tolbukhin had overestimated the strength of the German forces, so he kept a substantial proportion of his troops in reserve and only deployed them later, when the situation became critical. By so doing, he split up the group of attacking forces at his disposal, which suffered heavy losses as a result. On the other hand, thanks to

<sup>215</sup> Hungarian 1st Lt. and SS-Obersturmbannführer Károly Ney recruited his combat group, which numbered 5,000 by the end of the war, from members of an association of veterans who had served together on the eastern front. Ferenc Szálasi had demoted him and discharged him from the Honvéd for disobeying his, Szálasi's, orders. After the war, Károly Ney operated as a CIA agent in charge of organizing secret Austrian arms depots and sabotage groups.

<sup>216</sup> I, II, IV, IX Guards Mech. Corps, VII Mech. Corps, V, XVIII, XXIII Armoured Corps, IV, VI Guards Cavalry Corps, V Cavalry Corps.

his numerical superiority, Tolbukhin retained the advantage of manoeuvrability right to the end—unlike the Germans, who had no reserves at their disposal. On 2 January the Soviet XVIII Armoured Corps joined in the fighting, and on 3 January it was followed by three more fast-moving units.<sup>217</sup> That same day in the Bicske region, which was the main target of the German offensive, the 'Viking' Division was already faced by one heavy armoured regiment, four assault-gun regiments, three rifle divisions, one mechanized brigade, and six sapper battalions.<sup>218</sup> These forces prevented any further German advance. The same thing happened across the entire line of attack. By the next day the Soviet I Guards Mechanized Corps had also arrived from the Adony region. So no fewer than five mechanized, armoured, and cavalry corps and four rifle corps were now assembled in the main direction of attack, preventing the Germans from getting any closer to the capital. From 3 January 1945, the Soviet 46th Army moved II Guards Mechanized Corps and X Guards Rifle Corps from the inner ring surrounding Budapest, employing these units to strengthen the outer ring, which had originally been manned, north of Mór, by 4th Guards Army.

The enemy superiority placed the German troops, who already had difficulty in holding the ground they had won, in a critical situation. Only the group operating in the north achieved any success, capturing Esztergom on 6 January and Pilisszentlélek on 8 January. The attacking units suffered heavy losses: a total of 3,500 killed, wounded, or missing (almost 10 per cent of the complement of IV SS Armoured Corps) from 1 to 7 January. They also lost 39 tanks and assault guns in the same period.<sup>219</sup> The losses incurred by the Soviet 4th Guards Army are not known, but 46th Army lost 4,865 men, 87 anti-tank guns, and 38 cannon at that time.<sup>220</sup>

The attack by III Armoured Corps (the southern offensive in Operation KONRAD I) lost momentum on 9 January. The Soviet resistance was so great that the Germans were obliged to mount twelve attacks on a few reinforced positions on the very first day of the offensive.<sup>221</sup> On 9 January the Soviet II Mechanized Corps launched a counter-attack to prevent the threatening breakthrough, but 57 of its 80 tanks were put out of action that same day.<sup>222</sup> After three days of fighting, the fields of Zámoly had become a veritable tank graveyard, and the Soviet forces had been unable to prevent III Armoured Corps from gaining ground. However, Breith had been prevented from extending his attack.

Marshal Tolbukhin nevertheless considered the situation critical, and accordingly made preparations to prevent a breakout from the city. He ordered the army operating against the relief forces to consolidate its rearward defences too and establish defensive lines reinforced with anti-tank cannon. On 3 January he also gave orders to end the attack on Buda, thereby releasing further forces for

<sup>217</sup> VII Mech.Corps, V Cavalry Corps, and II Guards Mech.Corps.

defence.<sup>223</sup> As a result of these measures, on 6 January there was a force equivalent to seven divisions standing ready north-west of Budapest to prevent a possible breakout, approximately as much again as the entire force defending the city.

On the German side, a number of tactical options were considered. In the case of a breakout, the defenders would first have to break through the circle surrounding the city and then, after a long march, join up with the other group of German forces, whose numbers were at least as great as those which could be deployed in the breakout itself. That being so, there was some doubt as to the success of an organized breakout, unless it were to be directed northwards rather than north-west and the attacks by the relief troops did not come to a standstill in the Pilis mountains.

Guderian was so unaware of the actual situation that he wanted to involve the defenders of Budapest in the stalled offensive. In addition to 'holding the bridge-head', they were to support the operations of the relief army by launching an attack to the north-west.<sup>224</sup> The army group, for its part, had a much more realistic grasp of the situation, and it recommended that the defenders abandon the eastern bridgehead on the following day, break out to the north-west on 9 January, and, should this attempt fail, split up and fight their way out of the pocket separately in small combat groups. However, this solution was rejected by Hitler.<sup>225</sup>

### *Operation KONRAD II*

The relief plan now had to be changed. As the attack had slowed down, the German army command was obliged to fall back on the alternative plan for an attack from the south. It decided to break through the front between Székesfehérvár and Mór with new forces (Breith's III Armoured Corps), in the hope that IV SS Armoured Corps would not finally come to a halt. The Army Group South general staff hoped not only to recapture the Margit Line but, together with IV SS Armoured Corps, to encircle the Soviet troops defending the western slopes of the Vértes mountains. Tolbukhin got wind of the preparations and was able to reinforce XX Guards Rifle Corps, which was positioned in the area. The defending forces were also exceptionally favoured by the fact that on 6 January, the day before the German offensive began, Malinovsky's 7th Guards Army and 6th Guards Armoured Army launched a general attack along the Garam, north of the Danube. It is a curious fact of military history that two opposing armoured units were now advancing in opposite directions, with only the Danube between them, in a move akin to 'castling' in chess. By 8 January the Soviet forces were already within a kilometre of Komárom, raising the threat of another large-scale entrapment of forces between 2nd and 3rd Ukrainian Fronts. On 6 January Army Group South HQ had toyed with the idea of halting or reducing the offensive south of the Danube, but it finally decided to take the risk, in the hope that the newly arrived 20th Armoured Division would be able to hold the front.

<sup>223</sup> Tóth, *Budapest felszabadítása*, 156. The forces in question were 49th and 109th Guards Rifle Divisions, and parts of II Guards Mech.Corps.

*Source:* KTB H.Gr. Süd, January (first half), annexes, report of 9 Jan. 1945, HL, microfilm 628, No. 7212268. The figures for Soviet units are the author's own estimates.

By 15 January IV SS Armoured Corps had been obliged to move to the region north-west of Lake Balaton after the attempt to break through between Bicske and Esztergom had failed. The army group command and Gille himself, hoping that the relief operation could be conducted without any major regrouping, still planned to break through the Soviet defences in the Esztergom area. The increasingly desperate reports from Budapest also continued to favour the northern option. After the failed breakthrough attempt by III Armoured Corps, IV SS Armoured Corps endeavoured to relieve Budapest by means of an attack from the north across the Pilis mountains.

The new offensive was launched from Esztergom on 9 January.<sup>226</sup> Two hundred tonnes of supplies had been assembled there, to be transported to Budapest if the operation was successful. General Balck also ordered Major Ernst Philipp's battalion to conduct an additional attack, code-named HUSARENSTREICH, to break through the Soviet spearheads near the riverbank between Dömös and Szentendre and take Szentendre, so that the defenders could be rescued once the connection had been established. This shows that, at this point, the military command already considered it no longer possible to obey Hitler's order that the capital must be held. As the 1st general staff officer of the 'Viking' Division put it: Gille 'and Philipp himself consider task impossible. Russians hardly likely to open riverside road to leisure traffic.'<sup>227</sup> It is impossible to see how Balck expected the army of defenders to withdraw along the road between Esztergom und Szentendre, which was completely under fire. In practice, however, the question did not arise, because the group advancing along the Danube soon came to a standstill, while 711th

<sup>226</sup> KTB H.Gr. Süd, Jan. (first half), daily report 9 Jan. 1945, HL microfilm 629, No. 7212940.

<sup>227</sup> Quoted in Maier, *Drama zwischen Budapest und Wien*, 53.

Infantry Division, attacking in the south-east, managed to capture Dobogókő. The next day, 5th SS Armoured Division 'Viking' was also deployed in the gap. And the above-mentioned general staff officer noted: 'Enemy weak, completely surprised. Difficult hilly terrain. Like Alp foothills. Midnight first reports of success, prisoners mainly retinue of divisions encircling Budapest. Fire from anti-tank cannon and rocket launchers. No own losses. Westland making good progress.'<sup>228</sup> At this point, Balck too still thought the attack could be continued with some prospect of success. However, it was already clear that the defenders of Budapest would not be able to move out and connect with the attacking forces. To do so, the Pest bridgehead would have had to be evacuated and the units regrouped, and that would have taken several days. The commander of the encircled anti-aircraft artillery, Colonel Janza, therefore informed Balck by radio that it was impossible for the defenders to break out, both on logistic grounds and out of consideration for their Hungarian ally.<sup>229</sup>

By 11 January Armoured Regiment 'Westland' of the 'Viking' Division had fought its way over the Pilis saddle and entered the village of Pilisszentkereszt, so it was now only 21 kilometres from Budapest. There had been many German vehicles and wounded in the village for two weeks, but it had been the scene of brutal excesses, with prisoners and wounded on both sides put to death.<sup>230</sup> Despite the fire and smoke, the troops could already make out the church steeples of the encircled capital.<sup>231</sup> The army group again requested permission for a breakout, because it hoped to capture the Pomáz airfield and thus be able to transport the non-walking wounded and supply the troops who broke out.<sup>232</sup>

The advance battalions of SS Division 'Viking' had already reached the branch road to Pomáz when, on the evening of 12 January, they were ordered to withdraw. At that point they were only 17 kilometres from the capital. For Gille, the fact that there were Soviet forces at Dorog, in the rear of the forces advancing in the Pilis mountains, was a risk worth taking, because the terrain precluded any possibility of a major armoured attack. The 'only' problem was that the Soviet V Cavalry Corps, which had been ordered to launch a counter-attack between Szentendre and Pilisvörösvár, 15 kilometres from Budapest, might prevent any further advance. However, even in that case a coordinated breakout by the defenders might succeed, especially as the Soviet forces' scope for defence was severely limited, given the short distance to be covered and the nature of the terrain. The offensive was nevertheless broken off, despite the prospects of success.

The Soviets themselves hoped that the defenders would break out. Malinovsky was now extremely nervous, because the siege had lasted so long. He wanted the defending German army to leave the capital as soon as possible, so he did everything he could to enable the expected breakout to run smoothly, even opening up a kilometre-wide corridor in the front line of the Buda pocket.<sup>233</sup> The Soviet general's

<sup>228</sup> Quoted ibid., and in Bayer, *Kavalleriedivisionen der Waffen-SS*, 350.

overriding concern was to take Budapest; everything else was secondary. With the long-drawn-out fighting he risked incurring Stalin's wrath, which is probably why he abandoned the aim of destroying the defenders. Strangely enough, it was Pfeffer-Wildenbruch's order to halt that actually prevented a successful breakout.

Hitler and Guderian had thought from the start that Operation KONRAD II had no chance, and had given priority to the offensive to be launched in the Székesférhévár region. Army Group South had received further reinforcements accordingly.<sup>234</sup> The army group had already been informed on 10 January that, unless there was a radical change in the next few hours, Gille's troops were to be regrouped. On 11 January, at the army group's request, Wenck spent two hours trying to persuade Hitler to approve a breakout. 'All he achieved was the award of the Knight's Cross to SS Obergruppenführer Pfeffer-Wildenbruch,'<sup>235</sup> as if that made even the slightest difference to the defenders' situation. The general staff doubted whether there would be anyone or anything left to relieve at the end of what would be an extremely time-consuming operation, but the Führer stuck stubbornly to his original plan. On 11 January, even before the offensive by the forces newly deployed in the Pilis mountains had time to develop, Hitler's order for immediate regrouping arrived. There ensued a 24-hour tug of war between Gille and the OKH about continuation of the offensive. Another order to regroup immediately was issued at 20.20 on the same day. Instead of carrying out the order for the offensive, Gille explained in a telegram that the difficult terrain was a major obstacle.<sup>236</sup> Lacking the courage to endorse Gille's action, his superiors passed the telegram on to Hitler without comment. Gille tried, through Himmler, to get the order changed, but in vain. With his troops' failure to achieve any spectacular success in the Pilisszentkereszt area, he lost his last trump card. At 20.00 on 12 January he had no alternative but to issue the order to withdraw. And in the evening of 14 January the Soviet forces retook possession of Pilisszentkereszt and Dobogókő.

The decision to halt the offensive was the subject of heated debate in the post-war memoir and specialist literature.<sup>237</sup> In the unanimous opinion of those who took part in the fighting, the order to withdraw robbed them of the fruits of assured success. The widely differing interpretations of Hitler's aims were a particular source of contention. Gille and his officers were convinced that the purpose of the relief attempts was to rescue the defenders. The sole aim of the offensive was to open up a corridor for the defenders (with the assistance of the Soviets, for once), but not to maintain the link for a longer period. Hitler and many of his generals hoped, with these limited forces, to restore the pre-Christmas status quo. So for them, there was never any question of abandoning Budapest.

<sup>234</sup> 'Zusätze der Heeresgruppe Süd zum Führerbefehl für den Neuansatz der Operation am 12.1.1945', BA-MA RH 19 V/58. The reinforcements consisted of three armoured battalions or brigades, each with about 30 tanks or assault guns, one rocket-launcher brigade with 108 barrelled weapons, and some other smaller units.

<sup>235</sup> Maier, *Drama zwischen Budapest und Wien*, 55.

<sup>236</sup> Strassner, *Europäische Freiwillige*, 329; Bayer, *Kavalleriedivisionen der Waffen-SS*, 352.

<sup>237</sup> Maier, *Drama zwischen Budapest und Wien*, 56–60, 432.

In 1944 to 1945 there were fewer and fewer people in the command structure of the Third Reich who could have persuaded Hitler to face reality, so the military objectives that were set became increasingly absurd. This is reflected in the fighting in Hungary, where fresh armoured divisions were constantly deployed in the offensives between January and March 1945, while the military objective remained unchanged.

The Soviet forces clearly had time on their side. On 8 January their tanks had reached the edge of the Little Hungarian Plain and were already threatening Bratislava and Vienna. Army Group South would therefore have preferred to stop the relief attempts at that point and regroup its forces in areas north of the Danube. In that case, however, a breakout would have had to be approved. The absence of any such permission meant that the defenders were being left to their fate. Hitler nevertheless chose the all-or-nothing option, in the hope that the Soviet attack launched on the northern bank of the Danube would come to a standstill at some point before it reached Komárom. Strangely enough, events were to prove him right: 20th Armoured Division stopped the Soviet attack, and even drove the 6th Guards Armoured Army back some 50 kilometres. It was able to achieve this success because the Soviet attack did not have enough infantry support. The Soviet forces had also suffered substantial losses between 6 and 10 January, as a result of the resistance put up by LVII Armoured Corps and the Hungarian 'Szent László' Division. In a short space of time, the Soviet 6th Guards Armoured Army again lost more than half its tanks.<sup>238</sup>

The situation in Hungary was stable, but the situation in Poland was much more serious for the Germans. On 12 January the Soviet divisions launched an offensive with several army groups north of Cracow, and opened a breach in the front several hundred kilometres wide. There were no forces worth mentioning between these armoured armies and Berlin. Hitler nevertheless stubbornly insisted on continuing the relief attempts, even though the Army General Staff advised him that the only possible way of avoiding the impending catastrophe was to halt the offensive and regroup immediately. Instead of which, only 20th Armoured Division was recalled.

### *Operation KONRAD III*

In Hitler's view, the aim of the operation at this point was not only to relieve Budapest but to recapture the whole of Transdanubia.<sup>239</sup> By 17 January the units of IV SS Armoured Corps had been moved, in the utmost secrecy, to the area between Lake Balaton and Székesfehérvár, and they were deployed in battle on the following day. 44th Infantry Division (the 'Hoch- und Deutschmeister' Division) and 356th Infantry Division were promised as reinforcements, but the operations were over before they arrived.

Although 2nd and 3rd Ukrainian Fronts discovered that IV SS Armoured Corps had been moved, they assumed that it was leaving the Hungarian theatre of war altogether. The Soviet 4th Guards Army even supposed that Army Detachment Balck was withdrawing to western Hungary—an option that was indeed considered in Berlin on 14 and 15 January but subsequently dropped. The only units assigned to Army Group A were 8th and 20th Armoured Divisions, which were fighting north of the Danube. In return, however, 44th Infantry Division was removed from the list of forces to be deployed in KONRAD III. It was intended as a replacement for troops north of the Danube, which had been moved away, so the group of forces assembled for the attack, already short of infantry, was weakened substantially. A further cause for concern was the disastrous fuel situation, as a result of which even the group assembled for the attack was subjected to severe restrictions.

According to Soviet authors, '4th Guards Army's intelligence section was not up to the situation.'<sup>240</sup> In their view, the Soviet generals were wholly unprepared for the German offensive. That day, Gille's tanks swept away the counter-attack by the Soviet VII Mechanized Corps, and the rear communication lines of CXXXIII Rifle Corps and XVIII Armoured Corps lines were cut.<sup>241</sup> IV SS Armoured Corps broke through the Soviet front on the first day of the offensive, creating a breach 60 kilometres deep and 30 kilometres wide. The encircled Soviet units were able to break out only because of the lack of German infantry. A few units attempting to escape in the Dunapentele area were scattered by the German tanks, which reached the Danube on 19 January, thereby cutting the Transdanubian battle line in two. The ground that had been gained, some 400 square kilometres in less than four days, marked a major success for the German side, wholly comparable to the initial results of the Ardennes offensive.

The balance-sheet on the Soviet side was very negative. The situation at the Danube crossing points was chaotic. In the course of a few days the Soviets moved more than 40,000 men and large quantities of equipment to the east bank, although they were under constant bombardment by the Luftwaffe.<sup>242</sup> Székesfehérvár fell on 22 January, after heavy street fighting. The Hungarian SS Combat

<sup>239</sup> KTB H.Gr. Süd, daily report 22 Jan. 1945, HL microfilm 628, Nos. 7212454–61.

<sup>240</sup> Zakharov, *Délkelet- és Közép-Európa felszabadítása*, 245.

<sup>242</sup> Magyarország felszabadítása, 242; Markin, *Na beregah Dunaja*, 465.

Group Ney, which had grown to regimental strength, was the first unit to enter the town, but it lost a quarter of its complement in the process. The capture of Székesfehérvár, with its 40,000 inhabitants, was essential for the purposes of any further operations, because almost every supply route passed through it. If the town had remained in Soviet hands, IV SS Armoured Corps, which had pushed forward to the Danube, would have been in constant danger of encirclement.

3rd Ukrainian Front now seemed under very serious threat, as there were no Soviet troops between the advancing German tanks and Budapest on 19 and 20 January. V Cavalry Corps was therefore moved quickly from the Pilis mountains to a position north of Adony, and was reinforced by three anti-tank regiments and six assorted artillery regiments. The corps now had some 360 cannon and 100 tanks at its disposal. As a result of this move, a defence front was established on the evening of 20 January on the Váli-viz river between Lake Velence and the Danube. If the SS armoured divisions had reached this line before the Cossacks, the Soviet V Cavalry Corps would have had no chance of stopping them before Budapest, because there was no time to establish another defensive line. However, after a 60-kilometre march along the Váli-viz river, the cavalry corps reached the defence zone on the evening of 20 January without contact with the enemy. It was only able to do so because IV SS Armoured Corps encountered a number of problems during its advance. For one thing, it had taken a great many troops to overpower the Soviet strongpoints. For another, after two days most of the tanks were almost out of fuel and munitions. And, as the Soviet forces still held Székesfehérvár, the German supplies had to be brought in by circuitous routes.

The tide turned on 21 January, when the German spearheads reached the Váli-viz river and the brigades of the Soviet I Mechanized Corps appeared in the area. The balance of forces was now tipped very much against IV SS Armoured Corps. As an emergency solution, Balck sought to attack towards the north-east rather than the north-west and, instead of relieving Budapest, to at least cut off the Soviet 4th Guards Army's line of retreat and encircle it between Székesfehérvár–Lake Velence and the Vértes mountains. By 26 January this change of plan had resulted in a breach about 10 kilometres long in the Soviet defences at the northern end of Lake Velence, causing serious supply problems for 4th Guards Army. For the time being, fortune seemed to be favouring the Germans.

The attack towards the north-east also had some minor successes. On 24 January SS Division 'Totenkopf' captured the southern part of the village of Baracska. It was now only 30 kilometres from Budapest, but the German tanks had difficulty in getting over the steep and icy banks of the Váli-viz. By 26 January the offensive was within 25 kilometres of the Budapest pocket. Surprisingly, the 1st Armoured Division attack group succeeded in establishing a bridgehead over the Váli-viz north of Kajászószentpéter. It also managed to advance 5 kilometres west of the bridgehead, where it was even able to make radio contact with the forces defending Budapest.<sup>243</sup> At this point, however, it received an order from Army Detachment

<sup>243</sup> Stoves, *1. Panzerdivision*, 730.

Balck requiring it to turn back immediately and abandon the bridgehead. The commander of the attack group, Gille, and his officers were aghast at this decision, because they felt they were being robbed of their success. The tension already existing between Balck and Gille became increasingly strong. Wöhler too was not pleased with IV SS Armoured Corps' performance, repeatedly criticizing the SS divisions for 'poor' reporting. Gille, he said, was not fit to command a corps, but he called only for the dismissal of his chief of staff.

The shortage of infantry was a serious general problem for the Germans. It meant that combat groups with real striking power could be deployed only in the main thrust of an offensive. 3rd Armoured Division's security line south-east of Lake Balaton was 45 kilometres long, and it was clear that these forces would not be sufficient to secure the attack group in the longer term.

The fact that it did not originally involve Second Armoured Army in the offensive proved to have been a fatal mistake on the part of Army Group South. A more ambitious Second Armoured Army operation was envisaged only when it became clear that Tolbukhin was withdrawing his troops facing the army's front in order to strengthen his lines between Lake Balaton and Lake Velence. Had the new plan, codenamed Operation ICEBREAKER, been implemented at the right time and combined with a simultaneous Army Group F attack across the Drava, it would have been fatally damaging for Tolbukhin, because his troops would have lost all their supply lines. However, there were not enough forces available to carry it out. Second Armoured Army would not have been ready until 25 January, and Army Group F had not yet completed its preparations. Hitler had stood firm despite all the objections, refusing to allow the operation because he preferred to 'let sleeping dogs lie' in the vicinity of the Nagykanizsa oilfields.<sup>244</sup> In fact, a Soviet thrust could have taken the oilfields quickly, as they were only 30 kilometres behind the front, but Tolbukhin had no troops available at that point. The Soviet command was more concerned about how a German offensive in this area could be repelled.<sup>245</sup>

The Stavka had not been prepared for the German successes. Towards the end of the war Stalin was no longer inclined to take risks. In a matter of months his troops would be face-to-face with the British and American forces. At the beginning of the war the Soviet dictator's obstinate orders to hold on had condemned millions of his own men to capture or destruction. Now, in this critical situation, he even considered evacuating southern Transdanubia entirely, and he gave Tolbukhin a free hand.<sup>246</sup> Evacuation would have meant losing the weapons, material, and equipment of two armies, since time was so short that it could only be a question of getting the men out. It is a mark of how nervous the Soviet command had become that, on 21 January, it ordered its own pontoon bridges at Dunapenele and Dunaföldvár to be blown up, cutting the supply lines of the Soviet troops that were still in action.<sup>247</sup>

<sup>244</sup> Maier, *Drama zwischen Budapest und Wien*, 95.

<sup>245</sup> Ibid.

<sup>246</sup> Veress, *A Dunántúl felszabadítása*, 169.

<sup>247</sup> See Gosztony, *Légivésszély Budapest*, 55.

The Stavka now took important measures concerning the command hierarchy. On 21 January Timoshenko was again entrusted with coordinating the operations of the two army fronts. Parts of 5th Air Army, which had previously been deployed with 2nd Ukrainian Front, were transferred to the hard-pressed 3rd Ukrainian Front. XVIII Armoured Corps was re-equipped, and sections of 27th Army were assembled south-west of Budapest.

Tolbukhin chose the riskier option, taking it upon himself to hold the bridge-head in southern Transdanubia. In his opinion, it made no sense to abandon the areas that had been captured and hope to cross the Danube again without problems. On 27 January, having assembled his forces, he launched a counter-attack. The German attacking wedge that reached the Danube was extremely vulnerable, especially as the Soviet divisions advancing from Lake Velence and the Simontornya area could cut its rear communication lines at any time. Tolbukhin had recognized this favourable opportunity and was preparing a counter-offensive from both north and south. Two rifle corps and one armoured corps were placed under his command.<sup>248</sup> Tolbukhin saw the first aim of the offensive as the destruction of IV SS Armoured Corps' northern attack group at Lake Velence, which formed a wedge some 6 kilometres wide and 10 kilometres long in the Soviet defences. It was to be attacked by three Soviet mechanized corps and one rifle corps. The second aim was to take Székesfehérvár, which would have created serious supply problems for the whole army corps. And to complete the encirclement, a parallel attack was to be launched from southern Transdanubia.

In relation to the forces deployed, 2nd Ukrainian Front had scant success. The situation of the German front called for a major encirclement operation, but that operation failed, even though, on 25 January, IV SS Armoured Corps reported that only 16 per cent of its tanks (50 out of 306) were still operational and the rest under repair following the heavy fighting. The Soviet failure was due to operational errors. Malinovsky sent XXIII Armoured Corps into the heart of the battle on his own initiative and without prior agreement with the Stavka, believing it was the only way to prevent a breakthrough to Budapest. However, the German attacking forces were so small and so worn-out that a breakthrough was more likely to have disastrous consequences for the attackers, so Malinovsky's hasty action was not justified. The armoured corps was thrown into the battle without reconnaissance or air support, and was almost completely destroyed as a result of this wrong-headed deployment.<sup>249</sup> On the first day of the Soviet counter-offensive, the defending German forces, with very few losses on their side, shot down 122 Soviet tanks, about 100 of them belonging to the XXIII Armoured Corps.<sup>250</sup> However, that was not enough to halt the Soviet counter-attack, as the CIV Rifle Corps offensive was launched at the same time against the flank of the German front, and the Soviet

<sup>248</sup> Veress, *A Dunántúl felszabadítása*, 169. The units in question were XXX and CIV Rifle Corps, and XXIII Armoured Corps.

<sup>249</sup> Tarasov, *Boi u uzera Balaton*, 74.

<sup>250</sup> KTB H.Gr. Süd, Feb. (first half), 'Anlagen, Aufschlüsselung der am 27.1.45 vom IV. SS-Pz. Korps abgeschossenen Panzer vom 1.2.1945', HL microfilm 628, No. 7213104.

57th Army also attacked from the south. XXVIII Rifle Corps and other units from the Soviet high command reserve were assigned to 3rd Ukrainian Front, and they too took part in the counter-offensive.<sup>251</sup>

The situation was now favourable, but the Germans were unable to take advantage of it. The plan to revive the stalled offensive by regrouping III Armoured Corps and advancing southwards had to be dropped because there were not even enough German troops to defend the section that had been captured. Since the III Armoured Corps attack could not be carried out, Operation ICEBREAKER, the planned thrust by Second Armoured Army to threaten the Soviet 57th Army's rear communication lines, did not materialize either.<sup>252</sup> As a result, all the areas that had been taken had to be abandoned, with the exception of Székesfehérvár, and 3rd Armoured Division was encircled at Dunapentele for a time.<sup>253</sup> The intensity of the fighting is shown by the fact that 70 destroyed tanks and 35 wrecked cannon remained on the edge of the village of Vereb alone, as a memorial to the battles that were fought there. The attack conducted south of Lake Velence, in an attempt to encircle the whole of IV SS Armoured Corps, proved particularly dangerous,<sup>254</sup> and the constantly counter-attacking Soviet units also penetrated into the northern part of Székesfehérvár.

On 22 January Hitler, the all-or-nothing gambler, doubled his stakes and ordered his last reserves—Sixth Armoured Army,<sup>255</sup> which was in the process of replenishment following the Ardennes offensive—to move to Hungary. By this time, however, it was already clear that these forces would not be able to save Budapest. Hitler's decision to send Sixth Armoured Army to Hungary, at a time when the IV SS Armoured Corps attack was still making very good progress, shows that the aims he was pursuing in the Hungarian theatre of war went far beyond the liberation of Budapest. As already mentioned (and as will be discussed in detail later on), it is his determination to continue the war for as long as possible that explains the great importance he attached to the Hungarian theatre.

### (e) The Final Battle in Budapest and the Breakout

As a result of the relief attacks, there was a pause in the fighting on the Buda from 18 to 25 January. The defenders hoped, in vain, that Hitler would allow a breakout.

<sup>251</sup> Zakharov, *Délkelet- és Közép-Európa felszabadítása*, 417.

<sup>252</sup> KTB H.Gr. Süd, Feb. (first half), daily reports, HL microfilm 628, Nos. 7212559–68.

<sup>253</sup> KTB H.Gr. Süd, Feb. (first half), daily reports, HL microfilm 628, Nos. 7213127, 7213134; Stoves, *1. Panzerdivision*, 735 ff.

<sup>254</sup> *Ot volzkyh stepej do austriih alp*, 174–5.

<sup>255</sup> The term 'Sixth SS Armoured Army' is frequently encountered in the historical literature, although that army was never designated as an 'SS' army in official documents, despite the fact that all its divisions and corps staff belonged to the Waffen SS. In *KTB OKW*, iv/1, 438, it is described as an 'SS' army, with the comment, 'as from January 1945', and this description also crops up occasionally in the records of Army Group South. Hitler himself spoke only of Sixth Armoured Army. Another reason why it should not be referred to as Sixth SS Armoured Army is that doing so implies the existence of five other SS armoured armies. (All major Waffen SS units were numbered in sequence.) For details, see Maier, *Drama zwischen Budapest und Wien*, 13 ff., 425. (Maier was Sixth Armoured Army's 1st general staff officer.)

Pfeffer-Wildenbruch used the last reserves to form a mobile combat group, but it soon had to be deployed to support the shaky defence force. The brief respite ended on 25 January, when the Soviets launched a new offensive with substantial forces in the central section of the Buda defence line. The bridgehead was only 3 kilometres deep at this point, and the Soviet attack almost directly threatened the last emergency landing strip on Blood Meadow and the command authorities' headquarters on Castle Hill. This is all the more remarkable (and is an indication of the massive Soviet reserves) since, as a result of Operation KONRAD III, the troops engaged in the attack were still cut off from the southern and south-western half of Transdanubia, and Tolbukhin was just beginning a counter-attack on the German wedge that had pressed forward to the Danube.

The attack by the besieging forces steadily gained ground between 26 and 28 January. Rose Hill, the northern cornerstone of the defence, was threatened with encirclement and had to be abandoned, and the main battle line was fast approaching Castle Hill. Pfeffer-Wildenbruch, who had not left his secure position in the castle tunnel once in all these weeks, reported by radio: 'Supply situation appalling. Fate of wounded dreadful.'<sup>256</sup> On 27 January Hitler nevertheless gave orders that Budapest was to be held until the relief attacks got through, although he was on the point of having to stop them. Army Group South command had already given the Budapest 'fortified place' up for lost and considered that a breakout no longer had any chance of success.<sup>257</sup>

On 30 January the Soviet spearheads reached the northern edge of Blood Meadow at the western foot of Castle Hill, and the landing strip for gliders came directly under fire. Even so, gliders went on attempting to land. Special Soviet flamethrower units captured the streets round Eagle Hill and the 8th SS Cavalry Division positions in the Farkasréti cemetery about a kilometre to the west, in fierce house-to-house fighting. By 6 February the front was heavily constricted and Eagle Hill was surrounded.

The food situation was catastrophic: each soldier received only a slice of bread and a small portion of horsemeat per day. In any case, most of the troops had been living on the local population's food stocks for weeks. There was absolutely no question of sharing the supplies, which were anyway inadequate. There was very little fuel, and it was only possible to go out at night, and only on foot, because the streets were full of rubble and shell craters, making them impassable for motor vehicles. The starving population attempted to loot supplies dropped by air, at the risk of incurring the death penalty if they were caught. Hungarian and German troops and Arrow Cross members fought each other over the air drops. In the hospitals, dressings taken off the dead were used to bandage subsequent casualties. And in this situation, the defenders repeatedly launched desperate counter-attacks.

However, the Soviet 'Group Budapest' too had lost so many men that, from the end of January, it began to enlist Hungarian prisoners of war, promising them that they would not be sent to Siberia. By 13 February, 20 independent companies had

<sup>256</sup> Maier, *Drama zwischen Budapest und Wien*, 89.

<sup>257</sup> Ibid. 90.

been formed from more than 3,100 Hungarian volunteers, most of them during the last three days of the siege. The losses among these volunteers were appallingly high, the survival rate of those who had joined 'too soon' being less than 30 per cent. 600 of them were killed in action.<sup>258</sup>

Between 6 and 9 February a battle raged for the southern railway station on the edge of Blood Meadow. An unmistakable sign that everything was about to end was that the Germans started handing out medals. The Soviet attacks collapsed only in the southern section of the defences, where the 3-kilometre-long railway embankment between the Danube and Eagle Hill remained in the defenders' hands until the very last day.

During the siege, the German command in the Budapest pocket frequently considered plans to break out and abandon the city. That would still have been possible at the beginning of January, or in parallel with the subsequent relief attempts. The best chance would have been during the second relief operation, when Gille almost succeeded in crossing the Pilis mountains. After 13 January, however, an organized breakout was no longer feasible. Several thousand combatants might still have managed to filter through before the end of January. Yet Hitler continued to refuse permission. After the eastern bridgehead was abandoned on 18 January, the Buda 'fortified place' was, at best, significant only in tying down Soviet forces, but Hitler nevertheless insisted that it must be defended. Pfeffer-Wildenbruch pursued that policy up to the last minute, rejecting all Soviet attempts to negotiate, and conducted the defence for seven long weeks, until 11 February 1945. He decided on a breakout when it was already clear that the rest of Buda (the Castle and Gellért Hill) would fall very shortly.

Pfeffer-Wildenbruch informed Army Group South of his intention by radio only at the very last minute, at 17.50 on 11 February, when a breakout was no longer militarily feasible. With that, the fate of more than 40,000 men was sealed. 'Food all gone, nearly out of cartridges. Surrender or be massacred without a fight, that is the choice for the garrison in Budapest. I shall therefore take the offensive, with the last German, Honvéd, and Arrow Cross units fit for action (to win through to a new battle and supply base).'<sup>259</sup>

Of the heavy weapons, only some 27 tanks and assault guns, 10 to 15 armoured personnel carriers, and perhaps 50 to 60 cannon were operational on 11 February 1945, but almost all of them were systematically blown up in the hours before the breakout started.<sup>260</sup>

On the morning of 11 February Pfeffer-Wildenbruch held a situation conference at which it was eventually decided to attempt the breakout, in small groups without heavy weapons, through the wooded area. Most of the tanks were not positioned at the breakout point, since there was no fuel and the streets were for the most part

<sup>258</sup> On the question of the Hungarian volunteers, see Ungváry, *Die Schlacht*, 389–95.

<sup>259</sup> BA-MA RH 10 V/60, quoted in Maier, *Drama zwischen Budapest und Wien*, 518. It is characteristic that, even at the last minute, Pfeffer-Wildenbruch sought to avoid any argument with Hitler's 'stand firm' order. For that reason, he did not use the word 'breakout', although it must have been clear from the start that this operation would involve heavy losses.

<sup>260</sup> See Ungváry, *Die Schlacht*, 258 ff.

impassable, largely on account of the anti-tank obstacles which the defenders themselves had put in place.

The breakout was planned to start at about 20.00 that same day.<sup>261</sup> Several groups were to overrun the northern main battle line over a width of about a kilometre, along the Margit ring-road to the Margit bridge, and roll back the Soviet positions. The bulk of the breakout forces formed the point of concentration in Széna Square. The first wave consisted of the combat troops of 13th Armoured Division (on the left) and 8th SS Cavalry Division (on the right). They were to be followed by a second wave comprising Armoured Infantry Division 'Feldherrnhalle', 22nd SS Cavalry Division, and the Hungarian troops. The third wave was to consist of the walking wounded and the baggage train. Some 10,000 civilians were also expected to join the breakout. Pfeffer-Wildenbruch and his staff were to get round the main battle line through an underground passage and reach the rear of the Soviet positions.

The critical point was the stretch, about 10 kilometres wide, between the western edge of the woods (some 15 to 18 kilometres from the breakout point) and the German main battle line in the east (about 25 kilometres from the breakout point). Most of this area was flat, open, arable land, with meadows and with vineyards round the edge. To conquer this difficult stretch, another force was to be assembled in the forest to the east of Tinnye (18 kilometres from the breakout point). From this vantage point, it was supposed to overrun the enemy's main battle line in an attack from the rear. This breakthrough was supposed to take place at noon the following day, just 18 hours after the breakout began! It was an impossible task, given that the German main battle line was at least 25 kilometres away and the troops would have to conquer this stretch with only small arms and minimal stocks of ammunition.

It was probably hoped that Army Group South would launch a relief attack to get the 'returning stragglers' out. But the Army Group South troops had not been briefed in time, so they did nothing. Although the divisional commanders had been informed on the evening of 10 February that a breakout was planned for the following day, the information was confined to the fact that the operation was to take place. The details were to be released later, and in the meantime the whole thing was to be kept secret. Generally speaking, the orders to keep the operation secret do not seem to have been very effective, as some well-informed people already knew about it on the morning of 11 February, and some even on 10 February.<sup>262</sup> This was hardly surprising, as the breakout had been in the air for weeks, and it was unlikely that the Germans would simply give themselves up.

The wildest rumours about the breakout itself were circulating among the troops. Many expected to reach their own lines after a short 'stroll', just a few

<sup>261</sup> On the planning and course of the breakout, see *ibid.* 255–315, and Ungváry, 'Der Ausbruch der deutsch-ungarischen Verteidiger'. Partly incorrect account in Gosztony, *Der Kampf um Budapest*, 68–70.

<sup>262</sup> Werner Hübner (staff medical officer in Division 'Feldherrnhalle'), BA-MA, Msg 2/238; Ludwig Mückl (private), BA-MA, Msg 2/5407; Róbert Garád, 'Aufzeichnungen', 5.

kilometres. Some insisted they would only have to cover 15 to 20 kilometres, because the only thing in the way of the breakout was the Soviet rearward area, and the vanguard of the liberating forces was already at Pilisszentkereszt. What can possibly have prompted the garrison to undertake this desperate and irresponsible step? Such a thing would hardly have been possible on the western front.

The siege and the consequent idea of a breakout can be understood only in the light of the psychosis of total war. The hopeless breakout did not seem to most of the German troops so very hopeless, given their dread of captivity. The German military command in Budapest was incapable of taking the right decision; their whole way of thinking was dominated by fear of the Soviets and of Soviet captivity. Instead of surrendering *en bloc*, even at the last minute, they led their men to their ruin like lemmings. It was already clear, when the operation began, that the Soviet command had made the necessary preparations. The first breakout wave was greeted by murderous fire, which rapidly gave rise to panic and chaos. Unexpectedly, the Soviet troops evacuated their positions in the inner city and left the way free for the breakout troops after midnight, when those still fit for combat were able to reach the Buda woods. However, only a few managed to get across the 15-kilometre-wide stretch of land between the woods and the main battle line, where they encountered the Soviet II Guards Mechanized Corps, undergoing rehabilitation, and V Cavalry Corps. Of the 43,900 or so men, not even 700 reached their own lines. Almost half of the breakout troops fell in action, many of them within the first six hours in the confined space of the city centre. The main roads out of the city were covered with mountains of corpses and bodies crushed by the Red Army tanks—a truly apocalyptic scene. Thousands more died later, from physical exhaustion and ill-treatment by the Soviet guards, while marching on foot to the prisoner-of-war assembly points. Most of these sacrifices would have been avoided by timely and orderly capitulation.

For too long, Pfeffer-Wildenbruch refused to permit either capitulation or a breakout. He kept referring to the ‘Führer order’. Only after all relief attempts had already failed and the chances of an organized breakout succeeding were down to almost zero did he risk a breakout, even though Hitler still strictly forbade it. In so doing, he disobeyed the order to fight to the last bullet. Like many of his men, he considered—probably from his experience of the ideological war waged on the eastern front—that prisoners of war were in mortal danger. He hoped to break out through a rearward area where the Soviet forces were thin on the ground, because that seemed to offer the only possibility of survival. He was also careful to consider his own safety, choosing a safe underground passage which he hoped would enable him to avoid the fighting. His conduct was irresponsible, because as soon as it became clear that his assessment of the situation was completely unrealistic and that the failure of the breakout was imminent, he was prepared to capitulate at once in order to save his own life. Earlier, he had hardly hesitated to lead 43,000 men to their ruin and leave them to their fate.

The German command endorsed Pfeffer-Wildenbruch’s conduct. Despite the fact that Hitler had forbidden the breakout, the German war reports nevertheless spoke of ‘breakout by the defenders according to orders’. The tributes and

obituaries in the press took the same line.<sup>263</sup> Once again, German propaganda lied to its own troops.

### *The Battles for Budapest: A Tentative Evaluation*

The siege of Budapest has gone down in history as one of the bloodiest city sieges in the European theatre of war. The Red Army's losses in the course of the siege and connected operations (including losses incurred during the German relief attempts) amounted to some 240,056 wounded and 80,026 dead.<sup>264</sup> These figures represent half of all Soviet losses in Hungarian territory.<sup>265</sup> Thus, one of every two Soviet soldiers who fell in Hungary lost his life at Budapest. The material losses were of a similar order of magnitude. In the 108 days of the Budapest operations (Soviet records of the siege of Budapest count the number of days starting with 29 October 1944), Malinovsky's 2nd Ukrainian Front and Tolbukhin's 3rd Ukrainian Front lost altogether 135,100 small arms, 1,766 tanks and assault guns, 4,127 cannon, and 293 aircraft.<sup>266</sup> It is difficult to compare the losses on the two sides, as the Soviet statistics on losses in Hungary are based on different criteria and include losses incurred in the region in the course of the encirclement and the relief attempts, and especially as only approximate figures are known for the losses incurred on the German–Hungarian side during the defence of Budapest and the relief attempts.<sup>267</sup> It is assumed that about 26,000 of the German and Hungarian troops were wounded, 48,000 killed, and 51,000 taken prisoner.<sup>268</sup>

Senseless as the sacrifice of so many men was, the political objective was nevertheless clear. The battles raging round the capital enabled the German command to hold its shaky positions in the rest of the country. In this respect, the operations conducted before the city was encircled must be regarded as successful. Budapest tied down significant Soviet forces, which the German command, in the absence of reinforcements, could not have countered by any other means. Once German reinforcements arrived, however, Budapest became much less important. The forces deployed there were lost entirely, ultimately weakening the German position at the end of a murderous war.

From the Soviet point of view, the siege of Budapest was a series of defeats. Despite repeated orders from the Stavka, Malinovsky's troops failed to take Budapest on 7 November, in the third week of November, or in the first and fourth weeks of

<sup>263</sup> BA-MA N 370, Pfeffer-Wildenbruch's papers contain many similar extracts from newspapers at the time, e.g. an article published in *Das Reich* on 20 Feb. 1945. See also *Die Wehrmachtberichte*, iii. 446.

December. Malinovsky, as he himself admitted, was furious because the fighting had lasted so long. When Pfeffer-Wildenbruch was brought to him for interrogation, Malinovsky shouted at him: ‘If I didn’t have to answer for your head in Moscow, I’d have you hanged in the main square in Buda’<sup>269</sup> It took so long to capture the capital that the forces which eventually became available there were of no further use against the Germans. Shtemenko, chief of the Red Army’s general staff in 1945, admitted in his memoirs that the resistance of Budapest had upset the Soviet war plans: ‘The plans of our general staff, according to which our forces were to reach Vienna at the end of December and southern Germany in March, were completely upset, mainly by the long siege of the Hungarian capital.’<sup>270</sup> It is clear from this, too, that the Soviet Union was pursuing more ambitious aims and was keen to extend its sphere of power even further.

Battles for cities and settlements differ from traditional battles in a number of ways. In many cases there is no longer any central command, and the battles disintegrate into dozens of small-scale actions. Heavy weapons become much less effective, and the enemy generally has to be defeated in close combat, eye to eye. This means that the fighting lasts much longer in a siege. The insurgents in the Warsaw ghetto uprising held out for more than 30 days, even though they only had small arms at their disposal while the attackers were equipped with flamethrowers, bombers, and tanks. Another factor that contributes to the intensity of these battles is that the relative strength of the defenders increases as they withdraw and the besieging forces advance. In the Budapest pocket, the length of the front to be defended decreased by 94 per cent in seven weeks. The rate at which it decreased became steadily slower between December 1944 and the breakout: the front was still 87 kilometres long on 24 December, 21 kilometres on 15 January 1945, and only 5 kilometres on 11 February. On the other hand, the number of defenders

<sup>269</sup> Gosztony, *A magyar honvédség*, 239.

<sup>270</sup> Gosztony, ‘Ungarns militärische Rolle’, 160.

decreased much more slowly, so the resistance became steadily stronger. Bloody collapse comes relatively quickly in open battles, but the death throes may last for weeks or months in battles for cities. Another factor is that the civilized amenities typical of cities are slow to collapse, and the sufferings of the inhabitants and the troops last longer as a result. In Leningrad, for example, hundreds of thousands died of starvation or froze to death in the course of the siege, but this had no effect on the military strategy of the defenders.

The numerous battles for cities fought on the eastern front during the last year of the war (Poznań, Piła, Grudziądz, Elbing, Küstrin, Kolberg, Heiligenbeil, Königsberg, Glogau, Danzig, Toruń) did not compare with the siege of Budapest, in that they were relatively short and the garrisons were much smaller. Only in Breslau did the defence last for a comparable length of time. But Breslau, too, did not compare with Budapest in respect of strategic importance, and there, too, the number of defenders was very much smaller.

Almost 30 per cent of the battles in the Second World War were fought in urban areas. A substantial proportion of them were city sieges, and they proved to be the bloodiest confrontations of all.

The Germans lost 400 men a week on average between 1943 and 1945 on the whole of the Italian front, and no more than 1,000 a week on average on the entire western front. But the suppression of the Warsaw uprising alone cost the German military command 1,250 men a week.<sup>271</sup> And in Budapest the combat strength of the German defenders fell from 45,000 to 24,000, that is, losses of almost 3,000 a week, and that does not even include the Hungarian losses. For the Soviet side too, this city siege was one of the costliest operations of the Second World War in terms of losses.

From the Soviet point of view, only the defence of Stalingrad (125 days) and the Caucasus (160 days), and the liberation of the Ukraine, lasted longer than the siege of Budapest (116 days). In the case of Stalingrad, the actual siege did not last as long as the siege of Budapest, and there were not nearly as many civilian casualties. It is clear from the incredible scale of the losses that, for the Soviet supreme command, no sacrifice was too high a price to pay to achieve its objectives.

### (f) The Last Offensives

At the beginning of January Hitler was already thinking of withdrawing Sixth Armoured Army from the Ardennes and moving it to the eastern front after brief refreshment. The defeat of the Ardennes offensive had not yet been officially conceded, but it must have been clear to everyone that the operation had failed. It was therefore felt to be imperative to concentrate the remaining forces for further action so as not to lose the initiative entirely.<sup>272</sup>

<sup>271</sup> *Az 1944. év története*, 99.

<sup>272</sup> Discussion at FHQ on 7 Jan. 1945, cited by Irving, *Hitler's War*, 823. See also KTB OKW, iv/2, 1635, for the discussion on 23 Jan. 1945.

When a Soviet offensive was launched on 12 January, Guderian wanted to deploy Sixth Armoured Army on the Oder, along with other divisions brought in from the west, in order to attack the Soviet attacking wedge on the flanks. But Hitler insisted on dividing his forces and clearing up the situation in Hungary first. In his view, the remaining divisions would suffice to reinforce the Oder front. And his response to Guderian's objections was the ironic comment: 'You want to attack without oil? Right, let's see how far that gets you.'<sup>273</sup> His generals, it seemed to him, had no idea how to conduct a war.

It was a fact that the Reich's last oil reserves were located in Hungary. And at this point, when rail traffic had collapsed, it would have been very difficult to transport fuel to other theatres of war. The Wehrmacht was therefore obliged to live 'from hand to mouth' and use its oil as near as possible to the point of production. The Hungarian oil reserves made a special contribution to the war effort, since all of Army Group South's fuel requirements, and some of Army Group Centre's, could be met by the Hungarian oil refineries in Komárom. This meant that Army Group South was at that time the only army group still capable of conducting major offensive operations. It was not until 14 March that the Komárom refinery was rendered 70 per cent inoperative by an American air raid. The refinery at Pét was also destroyed in an air raid two days later.<sup>274</sup> The German hydrogenation plants had been bombed repeatedly since May 1944. Production had fallen to such an extent that 'one day the Wehrmacht was bound to come to a standstill by itself'.<sup>275</sup> Mineral-oil production as a whole was down to about a third of its original capacity by December 1944, and as little as a fifth by March 1945. Stocks of aviation fuel at the beginning of April 1945 amounted to only 11,000 tonnes, compared with the 195,000 tonnes—that is, 16 times as much—consumed in May 1944.<sup>276</sup> The Wehrmacht command staff were considering the 'extensive demotorization' of armoured infantry regiments. Although Hungarian oil production, which had grown to 838,000 tonnes of crude in 1943, was not nearly enough to keep the whole of the Wehrmacht moving, it was nevertheless the only means of continuing to conduct the war at all. The German high command was fully aware of this by January 1945 at the latest, when a new Allied bombing offensive put almost all the hydrogenation plants out of action.<sup>277</sup> In March 1945 Hungarian refining capacity was equal to that of the Reich.<sup>278</sup> In January 1945 the Zala and Zistersdorf oilfields already delivered 80 per cent of total fuel production.<sup>279</sup> Hungarian production of (Otto) fuel<sup>280</sup> amounted to 925 cubic metres a day in the first ten days of February, 751 cubic metres a day in the second ten days of February, and 322 cubic metres a

<sup>280</sup> In comparing fuel statistics, it should be noted that the army calculated in cubic metres and the Luftwaffe in tonnes; 1 tonne of Otto carburettor fuel = 1.33 cubic metres; 1 tonne of diesel fuel = 1.16 cubic metres.

day in March.<sup>281</sup> However, Army Group South consumed only 609 cubic metres altogether in its offensive operations between 6 and 13 March 1945, so other army groups and the Luftwaffe could also be supplied from Hungary.<sup>282</sup> These were the reasons which Hitler gave Jodl and Dönitz to justify the offensive in Hungary.<sup>283</sup> And these were the reasons why Guderian's objection that it was better not to tap gently on the door in two theatres of war, but to bang hard on one, was valid only insofar as it would have been better, for the conduct of the war as a whole, to concentrate exclusively on Hungary and not, as Guderian proposed, on the Oder front.<sup>284</sup> Hitler was right in theory, since the war could no longer be fought without Hungarian oil. However, all these considerations were relevant only if the war could be prolonged by local successes—which, at this point, was no longer the case. It is true that a decision to concentrate the military effort in Hungary might possibly have helped to achieve a temporary tactical success. By 20 March, however, Hungarian fuel production had come to a complete standstill as a result of the Allied air raids, and it would have been inconceivable, for political reasons, to leave the defence of Berlin entirely bare. Other raw materials, as well as fuel, were also in short supply. After February, total collapse was only a matter of weeks away. A successful military operation would not have changed that in any way.

Hitler already had 'small' and 'big' solutions in mind before the relief attacks on Budapest began. The 'small solution' was to relieve the capital; the 'big solution' was to reconquer the whole of Transdanubia. During the third relief attempt, Second Armoured Army was instructed to prepare a large-scale offensive against the Kaposvár area, under the code-name ICEBREAKER. On 23 January Guderian informed Army Group South that the Führer intended 'to clear up the situation west of the Danube completely'.<sup>285</sup> To that end, C-in-C South-East, with four divisions from Army Group F, was to attack 3rd Ukrainian Front's southern flank between Osijek and Donji Mihojlac in collaboration with Second Armoured Army. Army Detachment Balck was to attack southwards from the Székesfehérvár area. If this double pincer movement succeeded, two Soviet armies would be encircled. The operation was originally to have been launched on 6 February. However, the failure of the relief attacks meant that it had to be put off. On the basis of the above-mentioned considerations, Army Group South then developed the new operation SOUTH, later code-named SPRING AWAKENING. Hitler summoned General Maximilian de Angelis (Second Armoured Army) and Col.-Gen. Wöhler (Army Group South) to Berlin on 2 February and 8 and 9 February respectively, and informed them in person of his plans. 16th SS Armoured Infantry Division was to be assigned to Second Armoured Army and the whole of Sixth Armoured Army

to Wöhler, by way of reinforcements. Hitler issued a number of 'Führer orders' on concealment and secrecy in connection with the movements of the two SS armoured corps. All shoulder-strap insignia and cuff titles were to be removed, and vehicle number plates were to be concealed. Any breach of the rules on secrecy was subject to the death penalty. I SS Armoured Corps divisions were disguised as IV SS Armoured Corps 'replacement squadrons', II SS Armoured Corps divisions as a 'training group', and Sixth Armoured Army HQ as 'Senior Engineer Commander Hungary'.

German strategy had to be revised after the fall of Budapest. Deliberately deceptive radio messages were sent, giving the impression that Sixth Armoured Army was moving to the Frankfurt an der Oder–Fürstenwalde area. The commander-in-chief, SS Oberstgruppenführer Josef 'Sepp' Dietrich, made conspicuous appearances at all bases in and around Berlin. Meanwhile, the trains to Vienna were diverted, travelling via Dresden–Prague–Brno. I SS Armoured Corps (1st and 12th SS Armoured Divisions) was the first to reach the Győr–Komárom area, but the arrival of the army was considerably delayed by the breakdown of the rail-transport network caused by the ongoing Allied air raids.

### *Operation SOUTH WIND*

Before embarking on any further offensive operations, Hitler was anxious to preclude the possibility of a Soviet attack from the Garam bridgehead, from which the Pliyev Group could threaten the oil refineries at Komárom and Bratislava, and the gateway to Vienna, at any time. Two armoured corps were therefore to attack and destroy the bridgehead, and establish German bridgeheads across the Garam. I SS Armoured Corps and Armoured Corps 'Feldherrnhalle' were to attack from the north and north-east. The operation, code-named SOUTH WIND, was favoured by the fact that, for once, sufficient infantry (three divisions)<sup>286</sup> was available.<sup>287</sup> Army Group South had 260 operational tanks ready for the attack.<sup>288</sup> A few weeks earlier Malinovsky had withdrawn the Pliyev Group and 6th Guards Armoured Army from the bridgehead to the east for refreshment, so the Soviet defence consisted only of XXIV and XXV Rifle Corps, with a total of six divisions and two armoured brigades.<sup>289</sup>

The attack could not be launched until the morning of 17 February, on account of the weather. Within 24 hours, in spite of the thaw, it broke through the front and reduced the bridgehead by 30 per cent.<sup>290</sup> However, the Soviet forces rapidly

<sup>286</sup> On the Hungarian side, only the 23rd Reserve Division combat group took part in this operation, its units being allocated to the 46th Infantry Division.

<sup>287</sup> Soviet historians sought to attribute the German successes to the fact that the German tanks had night-vision equipment (Zakharov, *Délkelet- és Közép-Európa felszabadítása*, 366). However, that was not the case: only one armoured company deployed in the Hungarian theatre of war had this equipment.

<sup>288</sup> According to figures in KTB H.Gr. Süd, Feb. (second half), annexes, 'Panzerverluste zwischen den 17.–24.2.1945', HL microfilm 630, Nos. 7213824 ff.

<sup>289</sup> See KTB H.Gr. Süd, Feb. (second half), daily report 17 Feb. 1945, HL microfilm 630, Nos. 7213566–72.

<sup>290</sup> KTB H.Gr. Süd, Feb. (second half), daily report 22 Feb. 1945, HL microfilm 630, Nos. 7213813 ff.

established deeply staggered defences. To facilitate the offensive, 96th Infantry Division embarked on a landing operation, crossing the Danube from south to north, and established a bridgehead in the defenders' rear. The division knew exactly what to expect because it had already had experience from the other direction a few weeks earlier. Despite the high water-level (the Danube rose 3.3 metres in a single day), the combat group soon managed to get 20 assault guns over to the other bank. Soviet air superiority caused numerous losses. The Soviet defence stiffened after the first three days, although 7th Guards Army evacuated its southern wing, at considerable loss.<sup>291</sup> The troops of two divisions had to make their way to safety on the other bank of the Garam by jumping from one ice floe to another.<sup>292</sup> Nevertheless, the Soviet artillery still held its ground in the central section of the bridgehead, and the last defended positions were finally taken only on 24 February.

Several Soviet divisions were destroyed in the course of the operation, and both rifle corps lost almost all their heavy weapons. The Wehrmacht reported that it had taken 700 prisoners, counted 4,000 enemy dead, shot down 90 tanks, and captured 334 cannon. The German losses were also high: 6,471 dead, wounded, or missing, and 156 tanks and assault guns out of action for a shorter or longer period.<sup>293</sup> Even more seriously, the concealment of Sixth Armoured Army's advance had been largely sacrificed, and its deployment had been delayed for several days as a result of the tough Soviet resistance. The success of Operation SOUTH WIND was nevertheless an almost essential precondition for any counter-offensives in the Transdanubian area, because a lasting Soviet bridgehead could threaten Komárom, Bratislava, and Vienna at any time and hold the group attacking south of the Danube in check, as had already happened at the beginning of January.

Regardless of these events, the Stavka gave orders on 17 February (the day before Operation SOUTH WIND began) that 2nd and 3rd Ukrainian Fronts were to prepare for a new offensive against Vienna and Bratislava. Three days later, when the Stavka had definite information about the German offensive to be launched in March, Tolbukhin was ordered to go over to the defensive.<sup>294</sup> For the purposes of the planned Soviet offensive, 9th Guards Army (nine replenished rifle divisions, some of them from Finland, and numerous other units) were transferred from the high command's reserves and placed under the command of 3rd Ukrainian Front. The Soviet 26th Army was established, as from 28 January, from the reinforcements brought in. And 2nd Ukrainian Front also assigned 27th Army and other army units to Tolbukhin. The offensive was set to begin on 15 March. Until then, Tolbukhin and his troops had to defend the territory between the Drava and Lake Velence, without deploying 9th Guards Army.

<sup>291</sup> Zakharov, *Délkelet- és Közép-Európa felszabadítása*, 274.

<sup>292</sup> On this, see the critical account in Zamercev, *Emlékek, gondolatok*, Budapest, 5 ff.

<sup>293</sup> KTB H.Gr. Süd, 'Tagesmeldungen und Fernschreiben AOK8 an H.Gr. Süd am 21.2.1945', HL 630, Nos. 7213824 ff.

<sup>294</sup> Zakharov, *Délkelet- és Közép-Európa felszabadítása*, 274–6; Gosztony, 'Planung, Stellenwert und Ablauf der Wiener Angriffsoperation', 136.

*Operation SPRING AWAKENING*

The staffs of Army Group South, Army Detachment Balck, and Sixth Armoured Army drew up several plans of attack based on Hitler's instructions.<sup>295</sup> The planning was made more difficult by the fact that, with Soviet reserves massing to the west and south of Budapest, there was no question of repeating the successes achieved in KONRAD III. Those reserves—9th Guards Army, II Guards Mechanized Corps, and V Cavalry Corps—posed a serious threat to the flank of the attacking group. Sixth Armoured Army accordingly demanded that the concentration of forces round Budapest be destroyed first. However, the army group rejected this solution on the grounds that there were not enough forces or enough time. Furthermore, that option would effectively leave the Second Armoured Army attack over the Drava to itself, whereas a double pincer attack from the south and the north was likely to be much more productive.

On 25 February Weichs, the C-in-C South-East, and Wöhler were summoned to Berlin for private talks with Hitler. That same evening Hitler decided that Army Detachment Balck's improved plan was to be implemented.<sup>296</sup> Under this revised plan, southern Transdanubia was to be attacked first, in the double pincer movement described above, after which the forces round Budapest were to be attacked and destroyed. The plan also provided for I Cavalry Corps to be moved to Second Army so as to form a western attack group before Nagykanizsa. This last measure, however, seemed no longer feasible, because there was not enough time and it would unacceptably weaken the attack group, which was already short of infantry. Hitler did not take into account the risk of a Soviet counter-attack from the Vértes mountains. It is a telling example of his lack of realism that he told Wöhler that, if the offensive was successful, 'substantial bridgeheads were to be established across the Danube, at Dunaföldvár and Dunapentele, with a view to an eastward thrust on Budapest'.<sup>297</sup> A further example of Hitler's illusions is his observation that, if the offensive was successful, 'a rich booty of German weapons' would be recovered from the Bulgarians.<sup>298</sup>

The offensive was ill-starred from the outset. The thaw set in at the end of February, and it poured with rain. The few approach roads were choked with vehicles, which Soviet reconnaissance planes could not fail to spot. In any case, the Soviet general staff had been reliably informed about the forthcoming German operation since the end of February. Huge stretches of land were under water. This seemed to be a particularly bad omen, since German offensives in Transdanubia had already been prevented or strongly hampered by thaw and melting snow on three occasions: the first time in December 1944, when Operation LATE VINTAGE could not be launched; the second time during Operation SOUTH WIND, when the

<sup>298</sup> Ibid.

Table V.vii.13. Relative strength of forces at the beginning of the offensive in Transdanubia on 6 March 1945

	Divisions	Tanks and assault guns	Troops (ration strength)
Army Group South*	25	595	297,903
3rd Ukrainian Front (excl. 9th Guards Army)**	55	407	465,000

\*Most works (e.g. *Geschichte des Großen Vaterländischen Krieges*, v. 226) give the figures for the whole army group, despite the fact that 13 of the 18 divisions in the group faced a different Soviet army front. On the figures for Army Group South, see Ungváry, *A magyar honvédség*, 452 and 568; \*\**Grif sekretnosti sniat*, 228.

effectiveness of German armour was severely reduced by flooding; and the third time when flooding forced C-in-C South-East to move Operation FOREST DEVIL away from the Osijek area to Donji Miholjac.<sup>299</sup> The German staffs already had a great deal of experience of the Hungarian territory and weather in the precise area where it was planned to launch the offensive. However, it was decided to go ahead with the plan, despite previous experience and warnings from a number of Hungarian officers, who pointed out that the banks of the Sárvíz were unsuitable for an attack by armoured forces at this time of year. As an alternative measure, Army Detachment Balck introduced 'road court-martials', which were to 'deliver summary judgement on anyone responsible for repairing the roads who failed to do his duty'.<sup>300</sup>

Apart from tanks and assault guns, the attacking forces were weaker in every respect. The enemy superiority in artillery appeared particularly overwhelming. Sixth Armoured Army only had about 400 cannon to deploy in its 40-kilometre attack sector, whereas the Soviet defenders had up to 65 cannon and grenade launchers at their disposal for every kilometre of the front, that is, 6½ times as many. The only Hungarian units deployed were 25th Infantry Division, a 20th Infantry Division regimental unit, and the Hungarian artillery units already incorporated.

The Soviet side also had problems to contend with. The defensive positions were only 25 to 40 kilometres deep. The terrain was split up by two water barriers, Lake Balaton and Lake Velence, which greatly reduced the room for manoeuvre. The difficulty of getting supplies to 3rd Ukrainian Front across the Danube was another weak point, which had already had an adverse effect during KONRAD III. A decisive remedy was needed, since the four existing military bridges were not enough, so the Soviet forces constructed a rope-bridge over the Danube as well. The supply infrastructure was supplemented by a pipeline and a ferry, and large depots were established on both sides of the Danube. In this way, Tolbukhin managed to ensure supplies of ammunition and fuel throughout the defensive battle, whereas two

<sup>299</sup> KTB H.Gr. Süd, 'Fernschreiben OB Südost an H.Gr. Süd', annexes 22 Feb. 1945, HL microfilm 630, Nos. 7213780–1.

<sup>300</sup> KTB H.Gr. Süd, Mar. 1945 (first half), HL microfilm 631, No. 7214135, daily report 3 Mar. 1945; Maier, *Drama zwischen Budapest und Wien*, 185–91.

months earlier the lack of supplies had been fatal for his troops. The defensive system was built up to a particularly dense concentration of 2,500 to 3,000 anti-tank mines and 65 cannon and grenade launchers per kilometre in the sectors of main effort. Independent anti-tank regiments from the Stavka reserves were brought in, raising the level of anti-tank defence to 28 anti-tank cannon per kilometre.<sup>301</sup>

The Soviet forces established three defence lines and a number of intermediate positions between Lake Balaton and Lake Velence, moving 27th Army and four mobile corps into the second line.<sup>302</sup> Soviet reconnaissance had followed the German advance, so Tolbukhin was able to position his forces without risk of error. He massed 64 per cent of his artillery between the two lakes in the path of Sixth Armoured Army's main thrust. On 3 March, that is, three days before the beginning of the German offensive, 3rd Ukrainian Front was already able to report that the necessary regrouping had been completed.<sup>303</sup> The model for the defensive measures was the tank battle in the Kursk salient, where the Soviet command had already dealt successfully with a qualitatively superior enemy.<sup>304</sup>

The only weak point in the Soviet defence was the front between the Drava and Lake Balaton. Here too, the terrain was not much more favourable. If the entire Sixth Armoured Army was deployed, this was the most likely point for a breakthrough, especially as Tolbukhin's reserves were not positioned behind this section of the front. However, oddly enough, the idea was not mooted in the plans for SPRING AWAKENING. The planners contented themselves with the limited attack by Second Armoured Army.

The attack by C-in-C South-East started first, at 01.00 on 6 March 1945. Second Armoured Army launched its attack soon afterwards at Nagybajom, with relatively limited forces, but it was initially unable to make any headway. The main force struck between Lake Balaton and Lake Velence at 04.00. However, I Cavalry Corps gained no ground, and I SS Armoured Corps too was only able, with difficulty, to advance 2 kilometres. II SS Armoured Corps did not join in the operation at first, because it was not yet fully prepared. Tanks and heavy vehicles remained stuck in the mud. As Dietrich observed in his daily report: 'The roads are catastrophic.'<sup>305</sup> An additional operation by assault troops had no result, apart from heavy losses among the troops themselves. III Armoured Corps too gained little ground. The operation was clearly a failure.

The nervous mood of the army group was heightened on the first day of the operation by misleading reports from II SS Armoured Corps.<sup>306</sup> The corps

repeatedly reported the start of its attack, but there was no sign of it. It finally went into action in the evening. The reason for the delay was most probably that assembly was not yet complete. A substantial part of Sixth Armoured Army, around 290 tanks and assault guns, did not arrive until 13 March.<sup>307</sup> However, this did not have particularly serious consequences, because the weather conditions made it almost impossible to deploy the available tanks in any case.

Further breaches were made in the Soviet defence system on 7 March, but progress was so slow that there could clearly be no question of an operational breakthrough. Army Group South still hoped that 'the attack will [...] gradually eat through the defences, as it did yesterday'.<sup>308</sup> Wöhler was nevertheless obliged to note that the enemy had not yet deployed his operational reserves 'at the front', but was holding them back. By 10 March the German attack in the south had managed to gain some ground, reaching the Sió canal in two places, at Simontornya and Mezőkomárom. But the attacks in the direction of the Danube were unsuccessful. There the Soviet defence held firmly to its positions on the Sárvíz canal. By 11 March the sappers had removed 20,917 mines, but the attackers were still unable to exploit their greatest advantage, their modern armour, on account of the weather. Hitler was getting very nervous, and Sixth Armoured Army was required to produce additional 'Führer reports' for him, every day, on the losses of men, tanks, and assault guns.

Meanwhile, the situation was becoming serious for Tolbukhin too. Sixth Armoured Army's slow but steady advance led him to overestimate the enemy. On 9 March he sought the Stavka's permission to deploy the 9th Guards Army in the defences. He also suggested that it might be necessary for him to move to the other side of the Danube with his staff, or perhaps even with the entire army front. This suggestion is all the more difficult to understand as Tolbukhin still had reserves at his disposal,<sup>309</sup> and Sixth Armoured Army had not even reached the rear defence lines. Stalin replied to this request in person, in his own distinctive style, slowly but raising his voice: 'Comrade Tolbukhin, if you are thinking of prolonging the war for another five or six months, then by all means order your troops to move back. It will undoubtedly be quieter there. But I don't think that is what you want. The defence must therefore be conducted on the left bank of the Danube, and you too should remain there with your staff.'<sup>310</sup>

<sup>307</sup> KTB H.Gr. Süd, BA-MA RH19V/62, 'Führermeldung über Verluste und Panzerlage', according to which Sixth Armoured Army had altogether 979 tanks and assault guns on 13 March 1945, a further 43 having been lost since the attack was launched. On 8 March 1945 the 'Führermeldung' had reported 687 tanks and assault guns.

<sup>308</sup> KTB H.Gr. Süd, March 1945 (first half), daily report 6 Mar. 1945, HL microfilm 630, Nos. 7214159–61; Maier, *Drama zwischen Budapest und Wien*, 217.

<sup>309</sup> By 11 March Sixth Armoured Army had reported the destruction of 34 Soviet tanks, which means that Tolbukhin still had at least 373 tanks and assault guns available. As of 10 March Tolbukhin had not deployed V Cavalry Corps, VII Mechanized Corps, or XVIII and XXIII Armoured Corps at all, or only partially.

<sup>310</sup> Stemenko, *A vezérkar a háború éveiben*, 303 ff.

Stalin was right. Although conditions on the roads began to improve after 12 March, by then the German offensive had already ground to a halt.<sup>311</sup> The German forces had advanced 40 kilometres at most, over a width of 25 to 30 kilometres, and were still more than 20 kilometres from the Danube. Even if they managed to reach the river, they would not be much nearer to achieving the aim of the offensive. Tolbukhin's troops stood to the south and north of the breakthrough area, in some places still in the second defensive line. And between Siófok and Pincehely in the south and Lake Velence, the German forces had not reached the third defensive line at all.

The balance-sheet of the latest German operation was therefore extremely negative. In the first week Army Group South lost 12,358 dead, wounded, or missing (German troops alone). Tank losses were small in comparison (31 out of a total of 1,796, of which 722 were operational),<sup>312</sup> but that merely shows that armour could not be deployed. The offensive cost Tolbukhin 32,899 men altogether, that is, more than twice as many,<sup>313</sup> and 3rd Ukrainian Front lost 152 tanks and 415 anti-tank cannon.<sup>314</sup> This reflects badly on 3rd Ukrainian Front, as the defender always has the advantage in a deeply staggered defensive system.

The fortunes of war had finally turned in favour of the Red Army. On 14 March disturbing news began to arrive from the area of operations of IV SS Armoured Corps and the Hungarian 3rd Army. They reported heavy enemy motorized traffic of up to 1,000 vehicles. German air reconnaissance confirmed these findings.<sup>315</sup> Army Group South and Sixth Armoured Army would have preferred to cease their attack and regroup at Székesfehérvár, in order to meet the impending Soviet counter-attack and to make better use of their own troops' offensive capabilities. Also, the terrain east of the Sárvíz canal was likely to be in a better state. However, everyone seems to have known that Hitler would not approve this regrouping. As expected, he refused to grant the army group's request and insisted that the attack continue. This decision suited the Soviet command, as the attacking units were taking more and more risks and getting further and further away from their Lake Balaton–Lake Velence starting position.<sup>316</sup> Sixth Armoured Army secretly began preparations to regroup I SS Armoured Corps south of Székesfehérvár. Hitler finally approved the regrouping at 21.30 on 15 March. But, by then, it was already too late.

Balck did not take the danger of the Soviet offensive seriously. Apart from a few splinter units, he had not positioned any German reserves in the Vértes mountain passages.<sup>317</sup> The mountains were defended only by the Hungarian 1st Cavalry

Division and the Hungarian 2nd Armoured Division. The terrain was not suitable for an armoured breakthrough. However, once its forces got through the mountains the Soviet command was able to break through on both sides, through the passages between the Vértes mountains and the Bakony mountains at Mór, and between the Vértes mountains and the Gerecse mountains at Tatabánya, and deploy its armour *en masse* without endangering its rear communications.

Considering the successes that a single German armoured division could achieve in good weather and on well-chosen terrain (20th Armoured Division alone had sufficed to stop an attack by the entire 6th Guards Armoured Army in January 1945, and IV SS Armoured Corps had destroyed nearly all of Tolbukhin's mobile forces in Operation KONRAD III), the decision to deploy a vast armada of tanks seems highly irresponsible on the part of the German command. Army Group South had 1,796 tanks in all on 15 March, but 1,024 of them were under repair—further proof that it was a bad plan to deploy them.<sup>318</sup> The three battalions of King Tiger tanks deployed on this occasion were hardly used at all in the attacks.<sup>319</sup> Sixth Armoured Army had only 957 armoured personnel carriers at its disposal on 13 March (a further 205 were under short-term repair, and 123 under long-term repair). It is telling that only one such vehicle had been written off up to that date, which means that this effective offensive weapon was not used at all.<sup>320</sup> The amount of force expended in the operation is shown strikingly by the fact that some 30 per cent of all German armoured vehicles were deployed in SPRING AWAKENING. In normal circumstances this massive force could have achieved successes similar to those of the Red Army's offensive at Iași–Chișinău in August 1944 or its offensive from the Baranów bridgehead in January 1945. But, fortunately for all involved, this wrong-headed deployment of forces by the German command helped to hasten the end of the war itself.

### *The Soviet Counter-Strike: The Offensive against Vienna and Bratislava*

On 16 March the area north of Székesfehérvár was covered in thick mist. It started to clear only around midday, thus delaying the Soviet attack for a few hours. The Soviet plan for the operation had originally foreseen a two-pronged attack, with 2nd Ukrainian Front attacking at the point of concentration in the direction of Bratislava, while Tolbukhin's 3rd Ukrainian Front advanced on Vienna. Stalin changed these plans on 9 March by assigning 9th Guards Army to Tolbukhin's army front.<sup>321</sup> As an incentive to further resistance during the defence against SPRING AWAKENING, Stalin had already held out to Tolbukhin the prospect of winning the laurels for the conquest of Vienna. Now 4th and 9th Guards Armies were to attack between Zámoly and Székesfehérvár along a 31-kilometre-wide line,

<sup>318</sup> BA-MA, Map RH-2 Ost, 15 Mar. 1945.

<sup>319</sup> As well as 501st SS Heavy Armoured Battalion and 503rd and 509th Heavy Armoured Battalions, 1st and 3rd SS Armoured Divisions also had a Tiger company.

<sup>320</sup> Maier, *Drama zwischen Budapest und Wien*, 105–91.

<sup>321</sup> Gosztony, 'Planung, Stellenwert und Ablauf der Wiener Angriffsoperation', 137; Zakharov, *Délkelet- és Közép-Európa felszabadítása*, 310.

in order to cut off the German Sixth Armoured Army's advance between Lake Balaton and Lake Velence.

The attackers' superiority in artillery was overwhelming, with 5,425 cannon and grenade launchers deployed along the 31-kilometre line. All that the defenders could muster in response to this mass of artillery were 14 cannon and grenade launchers per kilometre. The Soviet superiority was 12½ to 1.<sup>322</sup> The plan was for Malinovsky's 2nd Ukrainian Front to break through the front with 46th Army and 6th Guards Armoured Army at Csákvár, between the Vértes and Gerecse mountains, and extend the attack towards Komárom–Győr. The attacking armies were almost at full strength, with 80 men on average in the 4th Guards Army rifle companies, and 140 in the 9th Guards Army rifle companies<sup>323</sup>—equivalent to the battalion strength of many German and Hungarian divisions at the time. The 3rd Ukrainian Front units deployed in the attack comprised more than 745,600 men in all, and 2nd Ukrainian Front, which was to attack north of the Danube, had 272,200 men at its disposal.<sup>324</sup> This fighting force was supported by close on 1,600 tanks and assault guns, though most of them belonged to the reserve or were deployed against Sixth Armoured Army.<sup>325</sup> More armoured forces were brought in during the offensive, but it is impossible to give exact figures as the records are missing. In carrying out his earlier defensive mission, Tolbukhin had been obliged to position all his mobile corps between Lake Balaton and Lake Velence, so they could not take part immediately in the extension of the attack.

The Soviet attack on 16 March made rapid progress north of Zámoly, where there were only weak Hungarian units holding the front, but IV SS Armoured Corps managed at first to hold its positions to the south. On the German side, it was claimed that the reason for the breakthrough was that the Hungarian hussars 'ran away'. There is no basis for that claim. The hussars division and the Hungarian 2nd Armoured Army launched several counter-attacks that same day, even though they were hopelessly outnumbered.<sup>326</sup> By the evening, the centre of Army

<sup>325</sup> For detailed figures, see Kolomietz and Moshchansky, *Tank lend-liza*, and Svirin et al., *Boi u ozera Balaton*.

<sup>326</sup> See, in this connection, KTB H.Gr. Süd, Mar. 1945 (second half), daily report 16 Mar. 1944, HL microfilm 631, Nos. 7214587–9, and Balck, *Ordnung im Chaos*. Against this, see HL, Tomka and 2nd Hussar Regiment war diary, TGY-3087, 27.

Detachment Balck's defence in the Vértes mountains had been smashed over a width of 30 kilometres and to a depth of 10 kilometres.<sup>327</sup> This breakthrough in the narrows at Mór was also secured from the north by the destruction of the Hungarian defensive front in the Vértes mountains, so the attack could now be extended. Stalin thereupon personally ordered Malinovsky, who could not conceal his bitter resentment at the decision,<sup>328</sup> to let Tolbukhin have 6th Guards Armoured Army so that he could extend the success in his sector. 6th Guards Armoured Army was to join 9th Guards Army and encircle Székesfehérvár from the north. However, this last-minute regrouping meant that 6th Guards Armoured Army could not be deployed until 19 March—a delay that was to have fateful repercussions for the Soviet operation.

The situation became even more acute in the course of 16 March. The attack by the Soviet 46th Army began and the first battalions were already breaking through the positions held by the Hungarian 23rd Reserve Division, Combat Group Ameiser, and 96th Infantry Division, at Tatabánya in the narrows between the Vértes and Gerecse mountains. By the evening they had penetrated the German-Hungarian positions to a depth of 10 kilometres.

The OKH was very slow to react. Guderian did not notice the impending danger until the next day, when he ordered 'a fundamental revision of all plans'.<sup>329</sup> At first Hitler could not be persuaded to change his mind, and would not allow 16th SS Armoured Infantry Division to be withdrawn from Second Armoured Army and assigned to Army Detachment Balck, as requested. He also insisted that the army group 'telex a situation report' on the latest use of I SS Armoured Corps north of Lake Velence.<sup>330</sup> While this protracted war of words between Führer headquarters and Army Group South was going on, the Soviet spearheads crossed the line on the Vértes mountain ridge. Army Detachment Balck again laid the blame on the Hungarians, who had allegedly withdrawn into the Vértes mountains 'without any enemy pressure'.<sup>331</sup> In fact, the Hungarian positions had been ploughed up by a hurricane of artillery fire and overrun by several army corps. Some units of 1st Hussars Division had been totally destroyed by the fury of the attack.

In this situation, Sixth Armoured Army planned to launch a northward counter-attack from the Székesfehérvár area with I and II Armoured Corps and 356th Infantry Division, so as to cut the Soviet spearheads' rear communications. Even at this point, Balck still did not really grasp the situation. He suggested that it would be better to launch the counter-attack from the Bicske area, north of the Vértes mountains, which would have meant losing two days. This risk was 'still worth taking [...]. If necessary, [...] the battle of annihilation [sic] would have to be fought to the west of the Vértes mountains.'<sup>332</sup> The battle of annihilation was

<sup>327</sup> KTB H.Gr. Süd, Mar. 1945 (second half), daily report 16 Mar. 1945, HL microfilm 631, Nos. 7214924–4.

<sup>332</sup> Maier, *Drama zwischen Budapest und Wien*, 272.

already being waged against Army Detachment Balck, and had been for the past two days! Balck's lack of realism is also shown by the report he sent on 17 March: 'Enemy breakthrough prevented so far.'<sup>333</sup> However, Wöhler had already noted on 15 March that, 'in assessing the situation, General Balck displays his usual optimism, even when misplaced'.<sup>334</sup>

On 18 March Hitler finally gave permission to withdraw II SS Armoured Corps and regroup in the direction of Székesfehérvár. The regrouping of 356th Infantry Division and 6th Armoured Division took place at the same time. The gap to the west of the Vértes mountains was to be secured for the time being by a blocking line manned by 325th Assault Gun Brigade, brought in from Eighth Army, and responsibility for the combat action of the reinforcements brought in there was to be taken over by the staff of XXXXIII Army Corps (also from Eighth Army). It was decided that Sixth Armoured Army should take over Army Detachment Balck's front line. In return, Balck was given command of Sixth Armoured Army's intact front between Lake Balaton and Lake Velence.<sup>335</sup>

This 'juggling' with command posts, and Balck's uncooperative attitude in particular, naturally had an adverse effect on the army group command.<sup>336</sup> Because of the regrouping, strong combat units were sometimes out of action at the very height of the crisis, and the Soviet forces advanced even faster as a result. The front collapsed like a house of cards. In the meantime, Tolbukhin's divisions had already outflanked Székesfehérvár, and were thrusting into the area where the regrouped Sixth Armoured Army units were being assembled. The attack launched by 6th Guards Armoured Army on 19 March was also immediately effective. The army thrust westwards, threatening Várpalota and tying the ring round Sixth Armoured Army and Army Detachment Balck over a stretch of 10 kilometres. Had the army been deployed on the first day of the offensive Tolbukhin's plan might have worked, given the Soviet material superiority. The terrain appeared to be eminently suitable for a 'battle of Cannae', in that Lake Balaton left very little room for withdrawal. If the plan succeeded, the front would collapse immediately, and Tolbukhin's troops would reach the Reich frontier even faster. The German command even helped things along at first, by leaving it until the next day to evacuate the pocket, which, as a result of serious errors on the part of the Soviet command, was not completely enclosed.<sup>337</sup> Meanwhile, the Soviet 46th Army was encircling the Hungarian 3rd Army, with two German divisions and a Hungarian division, in the Esztergom–Komárom area. This involved a landing operation by the Soviet fleet, in which parts of 83rd Marine Infantry landed behind the

<sup>333</sup> KTB H.Gr. Süd, Mar. 1945 (second half), 'Fernschreiben Armeegruppe Balck 17.3.1945', HL microfilm 631, Nos. 7214917 ff.

<sup>334</sup> 'Für das K.T.B.', KTB H.Gr. Süd, Mar. 1945 (second half), 19 Mar. 1945, annexes, HL microfilm 631, No. 7214959.

<sup>335</sup> This measure enabled Balck to pass off his own mistakes as failures on the part of Sixth Armoured Army. See Gosztony, *Endkampf*, 229; cf. Maier, *Drama zwischen Budapest und Wien*, 276.

<sup>336</sup> See Maier, *Drama zwischen Budapest und Wien*, 283.

<sup>337</sup> General Zakharov also directly acknowledges that this was the case. Zakharov, *Délkelet- és Közép-Európa felszabadságása*, 326 ff.

bridgehead, but this operation was successfully blocked. The German–Hungarian group managed to withdraw to the north bank, with over 20,000 men, in the course of the next few days, but it was a close-run thing.<sup>338</sup> This was the fourth time the troops of 96th Infantry Division had crossed the Danube in three months.

On 21 March Gruppenführer Karl Ullrich (5th SS Armoured Division) surrendered Székesfehrvár, despite the Führer order to the contrary. The city had lost its strategic significance long ago as a result of developments in the area round Várpalota, and the Soviet V Guards Armoured Corps tanks were already standing 30 kilometres to the west of Hajmáskér. With 1st SS Armoured Division ‘Leibstandarte’ now under attack from the rear, IV SS Armoured Corps was also threatened with encirclement. Neither Hitler nor the OKH were prepared to face facts. The head of the operations division noted that there was a danger ‘that things might begin to slip if the city was surrendered. Besides, nowhere on the whole of the eastern front was the balance of forces as favourable as in Army Group South’s sector [...]. The Führer was already annoyed that the Sixth Armoured Army attack had not produced better results.’<sup>339</sup> Guderian too was bitterly disappointed, and infuriated by the ponderous and negligent conduct of the command authorities. In his view, that—and that alone—was responsible for the lack of success. As he told the chief of staff of Army Group South: ‘The commanders need a plain talking-to.’ Hitler and Wöhler were still insisting that not an inch of ground was to be given up without a struggle. Despite these orders, the Sixth Armoured Army grouping south-west of Lake Balaton, which was the most threatened, took the appropriate military action of gradually withdrawing north-west. Strangely enough, the officer responsible for this action was not punished, even though he had disobeyed the ‘Führer order’.

By 22 March the connection with the seven German divisions caught in the trap had been reduced to a corridor only 2.5 to 3 kilometres wide. Disaster loomed.<sup>340</sup> 9th SS Armoured Division managed to keep the corridor open until the bulk of the German troops had got back to their own lines, although most of their heavy weapons were lost in the process. 44th Infantry Division ‘Hoch- und Deutschmeister’ and 1st Armoured Division were able to break out of the pocket on 23 March. The intensity of the fighting is shown by the fact that the SS Armoured Regiment deployed in the area shot down no fewer than 108 enemy tanks. The ‘Hoch- und Deutschmeister’ Division was almost completely wiped out during the breakout. Its commander, Lt.-Gen. Hans-Günther von Rost, also lost his life.

The Red Army had now broken through the front and smashed Sixth Armoured Army. Despite the failure of the encirclement, Tolbukhin was in a position, following the first success in the Vienna Offensive Operation, to embark immediately on the second phase, that is, to pursue the enemy into the Vienna area. Since

<sup>338</sup> The statement by Rauchensteiner in ‘Kriegsende’, 116, about the destruction of this group of forces by the Red Army is incorrect. Against this, see Gosztony, *A magyar honvédség*, 253, and *Geschichte der 96. Infanterie-Division*, 377.

<sup>339</sup> Maier, *Drama zwischen Budapest und Wien*, 297.

<sup>340</sup> Tieke, *Im Feuersturm letzter Kriegsjahre*, 506.

the Iași–Chișinău Operation, the plan for the two Soviet army fronts to continue their campaigns without a break had consistently failed, as shown by the battles for Debrecen and Budapest, and in the Ipoly valley. The present success had been achieved by sparing 9th Guards Army and 6th Guards Armoured Army earlier. As a result, the two Soviet fronts were able to conduct a classic operation in depth.<sup>341</sup> There was also a particular reason for moving quickly: Stalin was afraid that the Wehrmacht forces in Italy would surrender and the western Allies would frustrate his plans by advancing to Austria.<sup>342</sup>

Army Group South's armies were unable to establish a continuous defensive system, and the defensive positions that had been built up and partly completed since September 1944 ('Olga', 'Klara', and 'Susanne' in Transdanubia, and the 'Reich Defence Line' on the Hungarian border) were consequently of no use. The Reich Defence Line, also known as the South-East Wall, was one of the Nazi leadership's special projects. Prior to 5 November 1944 it had not even been decided what its course should be. Military considerations favoured the inclusion of Hungarian localities such as Kőszeg and Sopron, but the local Nazi leadership was absolutely opposed to the idea of 'ethnic comrades' building fortifications outside the borders of Greater Germany. It was finally decided that Bratislava and the Lesser Carpathians, as well as the above-mentioned Hungarian localities, should be included in the South-East Wall. Since the available German workforce was not nearly sufficient to complete the proposed fortifications, the Wehrmacht organized a 'Hungarian campaign' to recruit Hungarian sappers and construction troops. But the most important potential source of labour was Budapest Jews who had not been deported in the summer of 1944. From late November they were marched on foot to the Reich border under the control of Hungarian guards. On 24 November Eichmann reported that 38,000 'work Jews' had reached the Reich border. Special concentration camps for these slave-labourers were set up next to the building sites. As well as Jews, people of eleven nations worked on the fortifications.

The reinforcements which Hitler allocated to Army Group South at the end of March (297th Infantry Division, 117th Light Infantry Division, and 14th Waffen SS Infantry Division) were all intended for Second Armoured Army, to protect the Nagykanizsa oilfields. It is little short of a miracle that the German divisions were not completely encircled or wiped out during the withdrawal. Balck, Guderian, and Wöhler all claimed the others were responsible. The Waffen SS and their own men were abused as 'failures'. The SS commanders in turn blamed Balck. This led to the commander of 9th SS Armoured Division sending the following radio message to Sixth Armoured Army on 23 March: 'Division [is] completely shattered and

<sup>341</sup> Kuznetsov, *Marshal Tolbukhin*, 241.

<sup>342</sup> Rauchensteiner, 'Kriegsende', 124; *Geschichte des Grossen Vaterländischen Krieges*, iv. 425 ff., refers, in this connection, to Churchill's plans to steal a march on the Soviet Union by forming a new front in the Balkans in October 1944.

exploited to the last man. Request immediate release from Balck unit and reassignment to Sixth SS Armoured Army.<sup>343</sup>

Those least able to defend themselves against their commanders' failed strategy were the rank and file. By 3 April, orders on the 'maintenance of discipline' and the summary shooting of 'shirkers' had led to the execution, without court martial, of more than 500 of their own men in the area of Sixth Armoured Army alone.<sup>344</sup> Any and every means of increasing the combat strength was now legitimate: specialists and tank crews were handed guns and sent to the foremost lines, regardless of the losses that were likely to ensue. Hitler was beside himself with rage over the allegedly defeatist attitude of the SS Armoured Divisions, and he ordered Himmler to investigate. Himmler accordingly went to Hungary, though he did not venture as far as the divisional command posts. On 26 March Hitler flew into a rage on receiving Sixth Armoured Army's request for permission for a further withdrawal. His response was to declare that the 'Leibstandarte' Division no longer had the right to bear his name. He accordingly issued, through Himmler, the 'cuff title order' requiring all the men in the division to remove the insignia from their sleeves and cuffs. The order was pointless, since the units in question had already removed their insignia before the offensive for camouflage purposes.<sup>345</sup> Hitler, looking for scapegoats as usual, dismissed Wöhler, his chief of staff, the commander-in-chief of 2nd Armoured Army, de Angelis, and Weichs. Wöhler, however, remained in office as deputy until 7 April. As Hitler and Guderian had refused to allow an organized withdrawal, it was quite impossible to build up a defensive position. And the meagre reinforcements that had been sent in to support the front did not change the situation. It was impossible to close the gap in the front between Sixth Army and Sixth Armoured Army until they reached the Alps. The army group command structure descended into chaos. The chain of command changed almost every day.<sup>346</sup> There was no longer any discernible German strategy.

The Army Group South divisions lost the bulk of their tanks in the course of their withdrawal—in most cases without any involvement by the enemy. Fuel was in such short supply that the costly weapons had to be blown up or left standing in the road. Whole columns of armoured vehicles were left behind on the northern shore of Lake Balaton and in the Bakony mountains.<sup>347</sup> 2nd and 3rd Ukrainian Fronts were even able to form armoured companies of their own with the undestroyed armoured vehicles they took as booty.<sup>348</sup> This was entirely due to

<sup>343</sup> KTB H.Gr. Süd, Mar. 1945 (second half), annexes, HL microfilm 631, No. 7215028; Maier, *Drama zwischen Budapest und Wien*, 618.

<sup>345</sup> For details, see Maier, *Drama zwischen Budapest und Wien*, 344–7.

<sup>346</sup> On 28 March 1945, for example, III Armoured Corps contained the following units: II/99th Mtn.Inf. from 1st P.Mtn.Div., seven Hun. Frt.Btlns., parts of SS Rgt.'Ney', Fld.Rep.Btlns. from 1st and 3rd Armd.Div., 509th Hvy.Armd.Btln., 303rd Aslt.Gun Brig., 17th and 19th People's Rocket Launcher Brig., and I/17th Army Art.Btln.

<sup>347</sup> Rebentisch, *Zum Kaukasus*, 500. The illustrated book *Boi u ozera Balaton* contains numerous photographs of such scenes.

<sup>348</sup> *Trofei v krasnoi armii*, 79. On 25 March 1945, 57 captured German tanks and assault guns were deployed in the area of 3rd Ukrainian Front.

Hitler's senseless 'stand firm' order, which inevitably resulted in chaotic withdrawal and the abandonment of military equipment.

On 25 March Malinovsky's 2nd Ukrainian Front launched the long-expected attack north of the Danube. The defence was particularly weak at this point. Malinovsky's divisions and the Pliyev Group broke through the German-Hungarian lines east of Nitra, and by the next day they were already threatening Nitra, Érsekújvár, and Komárom. The defence in this section of the front collapsed like a house of cards, and a new front line could only be formed on the German-Slovakian border. The fact that this operation was not launched until nine days after the start of the offensive in Transdanubia was a serious error on the part of the Soviet planners. For, if both operations had been launched at the same time, the Hungarian 3rd Army and the north wing of Army Detachment Balck would not have been able to avoid encirclement by Tolbukhin's troops by crossing to the north bank of the river, and would have been obliged to surrender earlier.

On 29 March the Soviet 57th Army too launched an attack, on Second Armoured Army. The front was already outflanked by XVII Armoured Corps in the north at this point. De Angelis withdrew his troops to the Reich Defence Line but lost the connection with Sixth Armoured Army, his neighbour to the north. 3rd Ukrainian Front's advance slowed as a result of the natural obstacles in its way. The Soviet spearheads had already reached the Reich Defence Line at Szombathely, south of Lake Neusiedl, where they veered north-west with the aim of taking Vienna en route. However, the Stavka did not want a second Budapest, and it therefore decided on a wide-ranging encirclement operation in which 46th Army, II Guards Mechanized Corps, and XXIII Armoured Corps were to advance to the Danube, west of Vienna, and establish a bridgehead at Stockerau on the north bank. This attack increased the chaos in Army Group South, as there was already a 50-kilometre gap between Sixth Army and Sixth Armoured Army in the first days of April.

As a result of the situation, the Honvéd's combativity was at an all-time low. On 30 March Col.-Gen. Balck was informed that the 'Szent László' Division had 'gone over to the Russians in its entirety', and had 'opened hostilities against the Germans'. In fact, only the chief of staff had deliberately let himself be captured by the Soviets and had then been forced to call on the Hungarian troops, by loudspeaker, to desert. He and another few soldiers were then made to pretend that the whole division had gone over, and Balck had clearly fallen for it.

However, the 'Szent László' Division was still fighting, with I Cavalry Corps, on the German side. It was not even under Balck's command at the time in question. He made no attempt to check the information, but issued an order on the same day that, in view of this 'appalling event', all Hungarian troops in the area covered by Sixth Army were to be disarmed and all Hungarian motor vehicles were to be handed over to the Wehrmacht. The Hungarian troops and their families were to make their way back to their accommodation areas on foot. As a result of this order, the departing Hungarians were attacked and robbed in many places. Not only weapons, but also food, horses, and personal possessions were requisitioned or stolen, with Szálasi government ministers and a number of Honvéd generals

among the victims. The Honvéd ministry protested in vain. Only Col.-Gen. Lothar Rendulic issued a circular warning his units to behave better towards the Hungarians. The OKW sent a delegation of four generals to the Honvéd minister, to apologize on behalf of the Wehrmacht for the attacks that had occurred as a result of Balck's order.<sup>349</sup> Meanwhile, the 'Szent László' Division, and numerous other units that were not under Balck's command, continued to fight on the German side.

But there was no stopping the Soviet advance. The first Soviet units crossed the Reich border at Klostermarienberg on 29 March. Only parts of the Reich Defence Line had been completed, and the forces manning it were weak or non-existent. At best, the line was manned by home-guard battalions which, with their training and equipment, and the weapons at their disposal, were capable of holding out for a few hours at most. For that reason, the home-guard battalions from the Vienna and Salzburg military districts had been withdrawn from the Reich Defence Line in mid-February, and the men had been put to work in factories or on the land, which was thought to make more sense. However, orders were issued on 26 March for the line to be manned again. The measure came too late, as the Soviet troops reached the Reich Defence Line much faster than the home-guard battalions, which were marching there on foot, and the Soviet forces broke through the lines between Kőszeg and Lake Neusiedl.<sup>350</sup> The hilly terrain in this area would have been particularly favourable to sustained defence. The fact that this never happened can be explained only by the almost total lack of combat-worthy German units. Even the Leitha and the other rivers behind it were no obstacle to the Soviet armies.

On 31 March the tanks of 6th Guards Armoured Army reached Wiener Neustadt. Clearly, the Red Army had now perfectly mastered the execution of deep operations, as the advancing 6th Guards Armoured Army units circumvented the defended strongpoints and exploited the absence of a continuous front to thrust forward repeatedly. The Soviet offensive was backed up by in-depth reserves, so the elimination of the few German hedgehog strongpoints was no problem. Wiener Neustadt was approached from three sides on the following day. The defenders did not allow themselves to be encircled, preferring to evacuate the town, which was already in ruins as a result of earlier Allied air raids.

On 1 April the Stavka ordered Tolbukhin to advance into Styria to the western border of the intended Soviet occupation zone. But the main attack was directed at Vienna, which was to be encircled from the west. Bratislava, a 'fortified place', was virtually undefended and fell on 4 April.<sup>351</sup> The front shifted to the Slovak–Czech border and the Lesser Carpathians. By 5 April the first Soviet armoured spearheads had reached Pressbaum, 20 kilometres west of Vienna, and the encirclement of the city had begun.

On 6 April the Soviet 6th Guards Armoured Army reached the Danube at Tulln, thus encircling Vienna from the north as well. The city was not declared a 'fortified place', despite the fact that Hitler had insisted it must be defended. Lt.-Gen. Rudolf

<sup>349</sup> Payer, *Armati Hungarorum*, 554.

<sup>351</sup> Rauchensteiner, 'Kriegsende', 141.

<sup>350</sup> Kissel, *Der deutsche Volkssturm*, 60 ff.

von Bünau had been appointed military commander of Vienna on 3 April.<sup>352</sup> There were hardly any troops in the city, the only forces at Bünau's disposal being two Sixth Armoured Army divisions that were in the process of withdrawing, and a few splinter units. Altogether, he only had about 40,000 men and 26 operational tanks and assault guns. Bünau later wrote that 'the idea of mounting a successful defence of the city at all, or even holding it for some time, had to be ruled out from the start'.<sup>353</sup> The other commanders were of the same opinion. Dietrich joked that his armoured army bore the number six because it had 'only six operational tanks'. He was exaggerating, of course, but the army was only a shadow of its former self.<sup>354</sup> Dietrich also told Bünau that he was not thinking of defending the city. The Reich leader and Reich defence commissar, Baldur von Schirach, on the other hand, planned to adopt the so-called ALRZ procedure (an acronym of *Auflockerung*, *Lähmung*, *Räumung*, *Zerstörung*, that is: break up, paralyse, clear out, destroy). All fire brigades were accordingly moved out of the burning city. And when the mayor, Hanns Blaschke, suggested to Schirach that it was time to stop fighting, since all of the city's water supplies were now in Russian hands and the people could not be expected to hold out without water, Schirach threatened to have him shot.

Pessimism as to the possibility of defending Vienna was not based solely on the weakness of the forces available, but on a realistic and responsible assessment of the situation. It was clear that the city would be completely encircled from the north-west and the east within a matter of days. The Soviet 46th Army, with 152 tanks and 70,000 troops, had crossed the Danube 20 kilometres west of Bratislava without any opposition worth mentioning, thereby increasing the pressure on the defending forces' northern flank after 7 April.<sup>355</sup> In crossing the Danube, 46th Army had also rolled up the favourable defensive position on the Morava from the south. The Soviet command was also well aware of the 'nightmare of Budapest'. On 6 April Tolbukhin had dropped leaflets containing an appeal to the people of Vienna which deliberately invoked the horrific events in the Hungarian capital: 'The retreating German troops want to turn Vienna into a battlefield, as they did in Budapest. Vienna and its inhabitants are thus threatened with the same destruction, the same horrors of war that the Germans inflicted on Budapest and its people.'<sup>356</sup> The German commanders in Vienna were also determined to avoid a second Budapest, as well as to avoid capitulation to the Red Army.

Unofficial attempts were also made to solve the dilemma and spare Vienna. A resistance group led by Bünau's quartermaster-general, Major Carl Szokoll, made plans, under the code-name Operation RADETZKY, to surrender the city to the Soviet

<sup>352</sup> Ibid. 153 ff., with further details about the background to this appointment.

<sup>353</sup> Ibid. 157.

<sup>354</sup> Gosztony, 'Planung, Stellenwert und Ablauf der Wiener Angriffsoperation', 141. Sixth Armoured Army had 52 tanks and assault guns at its disposal at the time in question, i.e. it had lost 90% of its complement in the course of three weeks (Rauchensteiner, 'Kriegsende', 160).

<sup>355</sup> Rauchensteiner, 'Kriegsende', 151; *Geschichte des Grossen Vaterländischen Krieges*, v. 248.

<sup>356</sup> Zakharov, *Délkelet- és Közép-Európa felszabadítása*, 341.

army without resistance.<sup>357</sup> For that purpose, Szokoll forged an order to evacuate the city immediately without a fight. The group contacted the Soviet army on 2 April, and on 4 April the conspirators' plan took off. In the night of 5 to 6 April Szokoll reached an agreement with Col.-Gen. Vasily V. Glagolev in Purkersdorf and then returned to the city. But three officers were arrested by the SS and, on 8 April, they were publicly hanged as 'traitors' at the Floridsdorf bridge in the presence of Skorzeny. However, the SS did not have time to discover the full extent of the conspiracy.

For the defence of the city, the problem was that it was not clear which emergency and home-guard units could still be trusted. Vienna could no longer be held.

On 7 April Tolbukhin's troops penetrated the inner city, captured the southern railway station, and fought for the arsenal. By this time, 50 per cent of the city had already been taken.<sup>358</sup> The defence force was strengthened by the arrival of the 'Führer' Infantry Division in Vienna, but on 10 April the section of the city up to the Danube canal was evacuated, because there were increasingly clear signs of an impending encirclement from the east, so this division too had to be taken out of the city again. Within three days all the districts up to the Danube canal were occupied by the Soviet army. The Nazi measures to destroy the city were prevented by the resistance. The Red Army managed to take the Reich bridge and other bridges over the Danube without any trouble. The home-guard and emergency units were no longer prepared to fight. Many allowed themselves to be persuaded by the population to remove their uniforms and go into hiding. The OKW was resigned, noting in its war diary that a part of the Viennese population had 'lost its grip'.<sup>359</sup> On 13 April I SS Armoured Corps evacuated the last buildings in Vienna. And on the same day the Stavka issued its new instructions for Malinovsky's and Tolbukhin's army fronts. 6th Guards Armoured Army was again placed under the command of 2nd Ukrainian Front, which was assigned the task of capturing Brno, while 3rd Ukrainian Front's mechanized units were to prepare the next strike, in the direction of St Pölten. 9th Guards Army was again held in reserve, as a precaution. To all appearances, the Soviet command's immediate concern was to secure military control of its allotted sphere of interest. That is the only explanation for the fact that the offensive was not continued westwards with full force after reaching St Pölten.

The losses sustained by Army Group South can only be estimated, as archival records are missing. Most of the armoured vehicles, probably over 1,000 tanks, fell into Soviet hands during the withdrawal. Only a fraction were destroyed in battle. Tens of thousands of Hungarian troops surrendered or were taken prisoner. According to their status reports, the divisions lost 20 to 50 per cent of their personnel strength in the fighting.

Meanwhile, fighting in the territory of the 'Ostmark' continued. The main points of concentration of the Soviet attacks, in addition to the Danube valley, were the valleys of the Raab and the Mur. In the first weeks of April, Hitler ordered

<sup>357</sup> For details, see Szokoll, *Die Rettung Wiens 1945*.

<sup>358</sup> Rauchensteiner, 'Kriegsende', 171.

<sup>359</sup> KTB OKW, iv/2, 1229.

Table V.vii.16. Losses in the Vienna Offensive Operation (16 March to 15 April 1945)

	Tanks and assault guns	Cannon and grenade launchers	Troops (killed, wounded, or missing)
2nd and 3rd Ukrainian Fronts and 1st Bulgarian Army*	603	764	177,745
Army Group South**	1,345	2,250	130,000 (prisoners only)

\**Grif sekretnosti sniat*, 217–18, 372. The figures for 2nd Ukrainian Front include only the losses of 6th Guards Armoured Army and 46th Army. Soviet historians do not regard the operations north of the Danube as part of the Vienna Offensive Operation, even though the Pliyev Group (1st Guards Mechanized Cavalry Group), the 7th Army, and parts of the 53rd Army had encircled Vienna from the north. Their losses are attributed to the Bratislava–Brno Offensive. In that operation 2nd Ukrainian Front reported 79,596 men killed, wounded, or missing between 25 April and 5 May 1945 (*Grif sekretnosti sniat*, 228); \*\**Geschichte des Großen Vaterländischen Krieges*, v. 254. The Soviet figures may also include some armoured personnel carriers.

more units to be brought up to Army Group South from Italy and from the reserves (710th Infantry Division, four assault artillery brigades, 2nd Army Armoured Infantry Brigade, 10th Paratroop Division), with the point of concentration on St Pölten. But even these reinforcements could not hold the front. 3rd Ukrainian Front took St Pölten on 16 April. It should be noted that the German divisions were still capable of launching counter-attacks, despite the losses they had suffered. Thus, for example, Combat Group Peiper and Bünaus corps managed to retake a number of towns and villages west of St Pölten.

Sixth Armoured Army's front line bulged far to the west in the Vienna woods between St Pölten and Mürzzuschlag, so Tolbukhin endeavoured to push south from the St Pölten area after 18 April, move in on Sixth Armoured Army's front from the rear, and bring about its collapse. However, the point of concentration of the hostilities shifted to the north. The Soviet 6th Guards Armoured Army and 4th Guards Army were preparing for the attack on the Protectorate of Bohemia and Moravia, with the result that the fighting south of the Danube died down from 20 April.

That same day the military command of the Wehrmacht was divided into two groups, North (A) and South (B). The staff of Command Group South, under Field Marshal Albert Kesselring, was moved to Berchtesgaden. Four days later, Kesselring was appointed commander-in-chief of Army Group South, which was renamed 'Army Group Ostmark'. According to a breakdown dated 9 May 1945, its estimated ration strength was 450,000, not counting the Hungarian troops,<sup>360</sup> of whom there must have been well over 100,000 at the time. With the Americans already approaching Passau, a western front needed to be established as well, and

<sup>360</sup> Maier, *Drama zwischen Budapest und Wien*, 419.

2nd SS Armoured Division was designated for the purpose. But this proved impossible, as the situation was hopeless.

The German and Hungarian commanders' most important task at this point was to ensure that their men did not fall into Soviet captivity. On 7 May, when the unconditional surrender of all German forces was signed at Reims, the Army Group South high command was taken prisoner by the Americans. Its last official act was to transfer command to Sixth Armoured Army and pass on the terms of surrender. The divisions were ordered to move west across the Enns by the morning of 9 May at the latest, and surrender to the American troops. Most of the men managed to do so, but the bulk of 3rd SS Armoured Division was quickly handed over to the Soviet army by the US command. Several of C-in-C South-East's units shared the same momentous fate, including, for example, XV (Cossack) Cavalry Corps, whose men laid down their arms in the Gail valley.

### *The End of the War and a Fresh Start*

In this section of the front, the end of the war had widely differing consequences for those involved. The hardest hit were probably the Soviet citizens who had fled their country, and who were now punished collectively by deportation to concentration camps. Many of them, in fear of reprisals, committed suicide before they were caught. Germans living in Yugoslavia, Czechoslovakia, and Hungary, and Hungarians resident in the first two countries and Romania, were the victims of revenge excesses. They were dispossessed and, in some cases, driven out or murdered.<sup>361</sup> Austria was occupied by the Allies and remained under Allied occupation for ten years.

Hungary lost 40 per cent of its national assets. In percentage terms, Hungary's human losses were highest after those of the Soviet Union, Poland, Germany, and Yugoslavia.<sup>362</sup> Of a total population of 14.6 million (post-1941 national borders), approximately 340,000 to 360,000 deaths were recorded for members of the armed forces, and 590,000 for civilians.<sup>363</sup> The latter included 450,000 to 490,000 persons persecuted and murdered as Jews. Some 20,000 civilians in Hungary were killed in Allied air raids, which lasted for only seven months. This relatively high figure shows that the measures taken to protect the civilian population were wholly inadequate, since the Allies did not conduct a total bombing campaign in Hungary as they did in Germany. About 30,000 civilians were killed during military operations. More than 690,000 members of the armed forces and 290,000

<sup>361</sup> It is impossible to determine the exact number of victims. On the number of German victims, see *Germany and the Second World War*, x. In Vojvodina some 20,000 Hungarians were the victims of Communist excesses. Close on 100,000 were expelled to Hungary from Romania, 120,000 from Slovakia, and 65,000 from Yugoslavia.

<sup>362</sup> Historians disagree about the exact number of Hungary's human losses, and it will probably never be possible to ascertain the precise figures, owing to changes in national borders and gaps in the surviving records. The following figures are taken from Stark, 'Magyarország háborús emberveszeté', 433–8.

<sup>363</sup> This includes civilian prisoners of war who died in Soviet prison camps. Some 120,000 to 155,000 soldiers lost their lives at the front from 1941 to 1945. For details, see Ungváry, *A magyar honvédség*, 478 ff.

civilians ended up as prisoners of war—56 per cent of the troops, and almost all the civilians—in the Soviet Union. By 1956 only 419,000 of these prisoners had returned to Hungary. Several tens of thousands were released in neighbouring states. Some 11,500 troops were handed over to the new Hungarian army in Hungary in 1945. It is still not clear what became of the remaining 105,000 to 155,000 prisoners.<sup>364</sup> The last prisoner of war, András Thoma, finally returned home only in 2001.<sup>365</sup>

Hungary was occupied for two generations. The occupying forces were exclusively Red Army troops. This had far-reaching and tragic consequences for the country. Although a pseudo-democracy was maintained in the early post-war years, Hungary's domestic and foreign policy was determined by Moscow from the outset. Large sections of industry, previously owned by Jews and subsequently commandeered by the SS, were seized and dismantled. Under the Paris peace treaty signed in February 1947, Hungary's national territory was again reduced to that of the Trianon state, and Czechoslovakia was allowed to annex three more Hungarian villages near Bratislava. Hungary was obliged to pay \$300 million in reparations: \$200 million to the Soviet Union, \$70 million to Yugoslavia, and \$30 million to Czechoslovakia. In relation to Hungary's part in the war, this sum was disproportionate, in that Romania, which had played a much more active part, had to pay the same amount, and Italy only \$60 million more. The fact that the calculations were based on 1938 prices raised the sum actually paid to some \$500 million.<sup>366</sup> The repressive measures taken by the newly established dictatorship affected those who had been victims of earlier crimes as well as the perpetrators. Many war criminals were brought before the newly established people's courts, but in many cases they were condemned for acts which they had not committed. It was to be 44 years before the first free elections were held, and 46 years after the end of the war before the last of the Soviet occupation troops left the country.

#### 4. HUNGARY'S PLACE IN HITLER'S CALCULATIONS: A FINAL RECKONING

In the specialist literature, relatively little attention has been paid to the events in the Hungarian theatre of war. In the public mind, Hungary's contribution to the war effort as an Axis partner ranks far behind that of Italy. The battles fought on Hungarian soil are largely unknown. And the events in Army Group South's area of

<sup>364</sup> According to *Grif sekretnosti sniat*, 392, there were only 513,700 prisoners, whereas an NKVD source cited by Stark ('Magyarország háborús embervesztesége', 438) gives the figure of 541,530 Hungarian prisoners, only 54,700 of whom died in captivity. However, a great many prisoners died before registration, which was carried out on arrival in the Soviet Union.

<sup>365</sup> It is indicative of conditions in the Soviet Union and Russia that Thoma, a Hungarian soldier serving in the Honvéd, was obliged to spend more than five decades of his life as a prisoner of war, and later as a compulsory patient in a psychiatric institution. Thoma, in amazingly good physical health despite years of hardship, died in Hungary, in the bosom of his family, in 2004.

<sup>366</sup> *Magyarország története*, 304.

operations are overshadowed by events in East Prussia and the Ardennes offensive. However, this view does not take enough account of the strategic importance of the Hungarian front or the significant contribution made by the Hungarian army. The Hungarian contribution to the conduct of the war as a whole, and the battles fought by Army Group South, both warrant closer examination.

It may well be that, prior to 1943, Italy was a much more important partner than Hungary from a geostrategic point of view. However, in terms of its military contribution, Hungary was by no means insignificant even then. Unlike Italy, which depended on substantial imports of food, oil, and coal from Germany, Hungary exported substantial amounts of these commodities to Germany. It also produced large quantities of aircraft parts, munitions, and anti-aircraft guns for Germany. The Italian army took almost no further part in operations after the summer of 1943, whereas Hungary, in addition to the occupation force, was able—and obliged—to contribute a quarter of a million troops from April 1944 and as many as 950,000 troops in September 1944. By then Hungary's contribution was of the same order of magnitude as Italy's in 1941/2. Italy, on the contrary, was nothing but a burden in military terms after 1942.

Hungary played an important part in Hitler's strategy. In the period from April to September 1944, the Hungarian army was able to keep possession of the forefield of the Carpathians and perform other important military tasks. And Hungary was still making an important contribution in March 1945, when the Honvéd army provided 30 per cent of the army group's artillery and 20 per cent of its infantry. The Hungarian army lost 340,000 to 360,000 troops in the course of the war, whereas Italy, three times the size of Hungary, lost 'only' 330,000.

Hitler was quick to recognize Hungary's political importance. But even more decisive, from his point of view, was the realization that Hungarian oil supplies were central to the continued conduct of the war. He therefore moved all the divisions that could be spared to the Hungarian theatre of war. From December 1944 on, his main concern was not Berlin but Transdanubia. Goebbels may have shared that same view, since his diary entries at that time more and more frequently begin with comments on the fighting in Hungary. Also, Hitler was fully aware of the conflicts of interest between the western Allies and the Soviet Union. His last hope, namely that the 'perverse coalition between plutocracy and Bolshevism' could not last and was bound to break down, was in a certain sense naive, but it was not wholly unjustified, as the events surrounding the capitulation in Italy were to show.<sup>367</sup>

Hitler's ideas about the importance of the Hungarian theatre were not widely shared. The Wehrmacht command, particularly Col.-Gen. Guderian, repeatedly insisted that the last reserves must be concentrated in the area between Berlin and Warsaw. Strategically, there were better possibilities for launching a counter-offensive from that area or from East Prussia.

An evaluation of Hitler's decision and his assignment of priority to the Hungarian theatre of war is made difficult by the fact that in 1944/5 the Wehrmacht no longer

<sup>367</sup> On this, see Lingen, *SS und Secret Service*.

had any chance whatever of victory. In that sense, all military measures were now pointless. However, if delaying final collapse can be considered a war aim, then Hitler's decision to shift the point of concentration to Hungary was right, but it was also criminal. Apart from the failure of the SPRING AWAKENING offensive, the deployment of the Wehrmacht forces in Hungary proved highly effective. Not only did they manage to hold the front for three months; they also dealt the enemy a number of severe blows. The three KONRAD offensives showed that, given good leadership, a strong armoured corps could destabilize an entire Soviet army front.

Yet the Hungarian theatre of war also reveals the fragility of Hitler's military calculations. If his decisions had been based on a sober analysis of the situation, then one of the Wehrmacht's largest offensives in 1945 would not have been so poorly planned. In view of the favourable tactical possibilities, the forces deployed in Operation SPRING AWAKENING could have caused serious crises in the enemy camp. But the military planning was clearly poor, since more than half of the costly armour was unusable because of the weather conditions.

The SPRING AWAKENING offensive was pointless not only because it was launched in bad weather. It came much too late to be of any strategic importance. Even if everything had gone according to Hitler's plan, it would have made no difference to the fact that in the heart of the Reich—in the Ruhr district and the approaches to Berlin—there was no longer any serious possibility of defence. Even a victorious Army Group South would have remained isolated in Hungary, since there could have been no question of moving the troops out, given the chaotic transport conditions at the time and the lack of fuel. Nor would the total defeat of 3rd Ukrainian Front have undermined the attacks being prepared by Georgii Konstantinovich Zhukov and Ivan Stepanovich Konev, or the major offensive already launched by the western Allies. There is therefore no point in speculating about the possible success of the SPRING AWAKENING offensive. It is probably also wrong to conclude that it would have been better to deploy 6th Armoured Army for defence purposes in the territory of the Reich: firstly, because the requisite local fuel supplies were not available; and secondly, because the superiority of Konev's and Zhukov's troops was so overwhelming that a counter-attack could no longer have had any prospect of success. In March Hitler had exhausted all the possibilities open to him. The course of the war was now dictated entirely by the Allies. From then on, wrong decisions by the Stavka and Eisenhower were a greater obstacle on the road to Allied victory than the desperate resistance of the Wehrmacht.

PART VI

THE WAR ON THE  
NEIGHBOURING FRONTS

# I. The End of the War in Scandinavia

*Bernd Wegner*

In the context of the spectacular political and military developments of the time, Scandinavia, although directly affected by the war, was largely overshadowed by events in the rest of the world. However, this impression, all too common on the part of the great powers, needs qualification in two respects. In the first place, although developments in northern Europe may have played a relatively minor part in the outcome of the world war, they were of existential importance for the continued national independence and political culture of the societies in question. And in the second place, northern Europe was time and again considered by the German leadership to be, *potentially*, a theatre of prime importance. As a possible target of Anglo-American invasion and Soviet expansion, the Nordic area, which was equally important in respect of the war economy<sup>1</sup> and naval strategy, was repeatedly at the focus of German attention—especially because of relatively inconspicuous developments in that area which Berlin could not afford to disregard. These included, in particular, as well as the formation of resistance movements in Denmark and above all in Norway,<sup>2</sup> the gradual readjustment of the Swedish policy of neutrality to suit Anglo-Saxon interests. Although, in the opening years of the war, in view of Germany's dominant position in the Baltic area and the widespread expectation of its 'final victory', Sweden had generally adapted its officially maintained policy of neutrality to meet Berlin's wishes,<sup>3</sup> and although, despite increasing diplomatic pressure from the western Allies, it had only hesitantly begun to depart from that line even in 1942,<sup>4</sup> the continual German reverses led to a gradual and ultimately fundamental change in Swedish policy from the spring of 1943.<sup>5</sup>

<sup>1</sup> For a summary, see Petrick, 'Die Bedeutung der Rohstoffe Nordeuropas'.

<sup>2</sup> See *Germany and the Second World War*, v/II, esp. 18–24.

<sup>3</sup> *Germany and the Second World War*, iv. 471–80.

<sup>4</sup> In particular, mention should be made here of the Swedish reduction of transit traffic to Norway in the summer of 1942, officially explained as due to technical rail-transport problems, the reintroduction a few months later of the order to shoot in the event of any breach of Swedish airspace, and Stockholm's restrictive attitude during the negotiations on a trade agreement with Germany in December 1942. For more details, see Carlgren, *Swedish Foreign Policy*, 133 ff., and Radowitz, *Schweden*, ch. 6.

<sup>5</sup> Carlgren concluded that, by the turn of 1944/5 when all trade with Germany came to an end, Sweden had 'by and large contributed more to the war effort of the western powers than it had helped

From the Swedish point of view, this change carried considerable risks. On the one hand, as the war was now expected to end soon, relations with the expected victors, especially the western Allies, had to be placed on a new footing. On the other, the dominant position that Germany still held in Scandinavia and the Baltic area could not be disregarded. In this connection, there were the profitable economic relations with the Reich to be considered,<sup>6</sup> as well as the danger that Germany might occupy the country, especially if the Allies actually invaded Norway.<sup>7</sup> Given the continuing and threatening German presence in the Nordic area, it was important to avoid the impression that Swedish policy was entirely aligned with the Allies. Moreover, the defeat of Germany, which was now generally expected,<sup>8</sup> was by no means associated only with hopes, but also with fears of the Soviet Union's growing influence in Scandinavia.<sup>9</sup> Sweden's security still seemed by no means guaranteed, and the country's room for manoeuvre in foreign policy was less than its interlocutors in London and Washington led it to believe.

In these circumstances, it is not surprising that Sweden should have proceeded cautiously in departing from its policy of appeasement towards Germany. Relatively speaking, the most spectacular step in this direction in 1943 was the termination on 29 July of the transit agreement concluded with the Reich two years earlier.<sup>10</sup> Apart from this measure, publicly justified by the need to placate Norway, the government under Prime Minister Per Albin Hansson continued to pursue its policy of a defensive change of direction in the following months. Its main aim was to enable the country to adapt to the changing situation in the war as a whole, without itself being drawn into the maelstrom of military conflicts. So, for example, while Stockholm came to an understanding with Britain and the United States in the autumn of 1943 to deliver only limited amounts of iron ore and ball bearings to Germany in future,<sup>11</sup> it subsequently managed to get round these arrangements to a large extent by a series of unobtrusive measures.<sup>12</sup>

The Swedish government's reluctance to take a stand on matters directly touching on the interests of German supremacy—a reluctance increasingly criticized by historians writing after the war—was likewise apparent in Stockholm's efforts to bring about a peace settlement between Finland and the Soviet Union. In addition to its continuing dependence on German deliveries of goods, security-policy considerations also played a prominent part in this connection. So long as the German navy was master of the Baltic, and German armies were stationed in Norway and Finland, the possibility that the war might spill over into Sweden

Germany' (Carlgren, 'The Emergence of Sweden's Policy', 29). A similar conclusion is reached in Setzen, *Neutralität im Zweiten Weltkrieg*, 90 ff.

<sup>6</sup> For a detailed account, see Wittmann, *Schwedens Wirtschaftsbeziehungen zum Dritten Reich*.

<sup>7</sup> On Germany's contingency plans for action against Sweden, see Ziemke, *The German Northern Theatre*, 252–64, and Grier, 'Hitler's Baltic Strategy', 468 ff.

<sup>8</sup> See Böhme, 'Stalingrad und Schweden', and Carlgren, 'Die Einschätzung der Lage Deutschlands'.

<sup>9</sup> See Böhme, 'Vermutete sowjetische Ambitionen'.

<sup>10</sup> See Carlgren, *Swedish Foreign Policy*, 149 ff., and Radowitz, *Schweden*, 501 ff.

<sup>11</sup> See Wittmann, *Schwedens Wirtschaftsbeziehungen zum Dritten Reich*, 343 ff.

<sup>12</sup> According to Fritz, 'A Question of Practical Politics'.

could not be precluded.<sup>13</sup> Finland's efforts to get out of the war, which were supported discreetly by Stockholm, were an even greater cause for concern. In the spring of 1944 there was still good reason to suppose that, if Finland withdrew from the war, Germany would respond by taking military action, as it had done in the case of Italy and Hungary. At the heart of Sweden's fears, which Berlin had no reason to dispel, was that Germany might occupy the Åland Islands. The islands were of very considerable strategic importance from the Swedish point of view, and their occupation would expose the Swedish mainland to direct military attack by Germany.<sup>14</sup> In the light of such dangers, it is not surprising that the Stockholm government was not prepared to take decisive measures against Germany until the summer of 1944,<sup>15</sup> when, following the Allied invasion of Normandy, the military threat from the Reich appeared to be at an end, Sweden's economic dependence lessened, and the end of the war was in sight.

## 1. THE PRICE OF PEACE: FINLAND'S SITUATION IN 1943/4

Finland was in an even more precarious situation than Sweden. Although peace on the Finnish–Soviet front, broken only by minor tactical skirmishes, had lasted until the early summer of 1944,<sup>16</sup> the young republic, which had only narrowly escaped falling victim to the earth-shattering political upheavals in the great European powers in 1939/40, was once again in danger of being crushed between the millstones of the continent's mightiest totalitarian dictatorships.

### (a) Relations between Berlin and Helsinki in the Aftermath of Stalingrad

Finland was the most important of Germany's European partners in its war against the Soviet Union and, at the same time, the most difficult to keep in line. The reason for this, apart from the peculiarities of the country's political culture and its policy regarding alliance with Germany,<sup>17</sup> lay in a number of favourable factors that

<sup>13</sup> The criticism, which is objectively justified to some extent, of the inconsistent application of the Swedish policy of neutrality sometimes underestimates and marginalizes the constraints of realpolitik on the Stockholm government, for which neutrality was not an end in itself but simply a means of avoiding any active involvement in the war. See also Setzen, *Neutralität im Zweiten Weltkrieg*, 58–93, Ekman, 'Schweden, Deutschland und der Holocaust', and Nordin, 'Das Verhältnis Schwedens zum nationalsozialistischen Deutschland'.

<sup>14</sup> See Grier, 'Hitler's Baltic Strategy', 480–1.

<sup>15</sup> See Carlgren, *Swedish Foreign Policy*, 199 ff., and for a summary, Wahlbäck, *The Roots of Swedish Neutrality*, 70 ff. However, Radowitz (*Schweden*, 587 ff.) stressed that the threat from Germany was overemphasized at the time—in other words, the Swedish government actually had more room for manoeuvre than was supposed.

<sup>16</sup> For a detailed operational and tactical account of the Finnish battles, see *Jatkosodan Historia*, esp. vol. 4.

<sup>17</sup> See *Germany and the Second World War*, vi. 916–23.

applied to Helsinki, unlike Italy, Hungary, and Romania. Thus, Germany had sympathizers in Finland but there was no 'fifth column' to serve its purposes there, as there was in those other countries.<sup>18</sup> Also, Finland had played absolutely no part in the Stalingrad debacle. On the contrary, it had maintained a stable front against the Soviet Union and was therefore comparatively self-confident and uninhibited in dealing with its German partner. And yet the signs of a rapid deterioration in Germany's situation on almost all fronts (except for the U-boat war in the Atlantic, which was of secondary importance from Finland's point of view), which had begun to appear in the late autumn of 1942, had radically altered the basis of Finnish-German relations. Not that the Finns—like the Italians or the Japanese—had been keen to see a rapid end to the German-Soviet conflict. North of the Baltic, few things were feared more than a renewed German-Soviet understanding, a game in which Finland could all too easily be the 'pawn' to be sacrificed once again, as in 1939. However, in common with Germany's other partners, the Finns were in a state of the greatest uncertainty about the possible consequences of Germany's diminishing military strength.

There were signs of this in August, when the German summer offensives on the Volga and in the Caucasus came to a standstill, then a few weeks later, when it became clear that the Germans had decided not to launch the offensive against Leningrad which the Finns had repeatedly been promised,<sup>19</sup> and at the beginning of November, when the Allies landed in North Africa.<sup>20</sup> Not only German but also foreign observers, such as the Swiss ambassador and the American chargé d'affaires, noted initial moves on the Finnish side towards revising the basic direction of the country's foreign policy.<sup>21</sup> Even so, the real change of course came only in January 1943, when the Red Army succeeded in breaking the Leningrad blockade and forcing a decision in the battle for Stalingrad.

On 3 February 1943, that is, one day after the last German resistance on the Volga was extinguished, the president, Risto Ryti, the finance minister and influential representative of the Social Democrats, Väinö Tanner, and other members of the small informal war cabinet which played a decisive role in determining the government's basic decisions met with the commander-in-chief of the Finnish armed forces, Field Marshal Carl Gustaf Mannerheim, at his headquarters in Mikkeli. Impressed by the thoroughly sobering situation briefing delivered by the head of the intelligence service, Colonel Aladár Paasonen, the circle decided that it was time for Finland to withdraw from the war and normalize relations with the Soviet Union.<sup>22</sup> Further military objectives were to be abandoned, notably the

<sup>18</sup> This was to prove a central factor in preserving Finland's independence when the country withdrew from the war in September 1944.

<sup>19</sup> See Wegner, 'Die Leningradfrage'.

<sup>20</sup> See, e.g., the reports from the head of the Security Police and the SD to the foreign ministry on the Finnish minister Väinö Tanner (4 Nov. 1942), and on the effects on Finland of the military situation in Africa (28 Nov. 1942), PA, Inland IIg 360, fos. 61 ff. See also Vehviläinen, 'Die Einschätzung der Lage', 152.

<sup>21</sup> See Polvinen, 'Finnland und die Westmächte', 67, and Berry, *American Foreign Policy*, 241 ff.

<sup>22</sup> Polvinen, *Barbarossasta Teheraniin*, 202–3, and, more recently, Jokisipilä, *Aseveljää vai liittolaisia?*, 60 ff.

annexation of eastern Karelia which had already started,<sup>23</sup> and the 1939 borders prior to the 'Winter War' were to be chosen as the starting point for the negotiations. Less than two weeks later the Social Democratic Party council adopted a similarly worded resolution, which not only invoked Finland's essential ties with the Nordic countries and the United States but also asserted that the country was free to withdraw from the war so long as its independence and freedom were ensured.<sup>24</sup>

Here, as in other largely left-wing circles and among the Swedish-speaking minority, the peace opposition was clearly growing and, with it, public debate, conducted partly in the press, in what was essentially an acid test of the theory that Finland was engaged in a 'separate war'. For, if Finland was indeed conducting its own war in the east, it was only logical that the government in Helsinki alone could decide independently whether to end that war.

Although the new line being taken by the Finnish government and some of the parties supporting it had been formulated by only a few politicians, it reflected a general swing in public opinion in the country.<sup>25</sup>

Of course, our picture would be incomplete if we failed to mention that, at the same time, many influential people, particularly among the military, were still by no means convinced that the tide of the war had turned against Germany. They included the Finnish general staff's liaison officer at German headquarters, General Paavo Talvela, who sent a telegram to Mannerheim on 4 February, immediately after the German defeat on the Volga, reporting that morale in Germany had certainly been shaken, but that it was out of the question that the German war machine would cease to operate in an orderly and disciplined fashion.<sup>26</sup> Talvela was clearly by no means alone in his optimism. General Waldemar Erfurth could report from Finnish headquarters in the middle of January that 'not one of the senior officers believes in a separate peace or thinks it is possible for the Finns to separate their military destiny from that of the Germans'.<sup>27</sup> Nevertheless, in accordance with Mannerheim's express wishes, the high command in Mikkeli now began to avoid using the term 'ally' when referring to the relationship with Germany.<sup>28</sup>

The dynamics of the turnaround in the military situation as a whole, and the shift in public opinion in Finland itself, led to changes in the Finnish government. The presidential election due to be held in February provided the stimulus. In the run-up to the election, a clear cross-party tendency emerged in favour of appointing Mannerheim to the post. As Goebbels confided to his diary at the time: 'That would not improve matters for us; it would make them worse.'<sup>29</sup> In fact, members

<sup>23</sup> On this, see Laine, *Suur-Suomen kahdet kasvot*.

<sup>27</sup> Blücher, *Tagebücher* 7, fo. 2318 (15 Jan. 1943), PA, Blücher papers. See also Erfurth, *Der Finnische Krieg*, 141. According to Erfurth, there was more pro-German optimism at the front than in the higher command staffs.

<sup>28</sup> Erfurth, *Tagebuch*, 607 (17 Jan. 1943), BA-MA N 257/v. 3.

<sup>29</sup> Goebbels, *Die Tagebücher*, pt. 2, vii. 257–8 (4 Feb. 1943) and 354–5 (16 Feb. 1943); Mannerheim, *Memoirs*, 462.

of the peace opposition were among the first to back the elderly marshal, who appeared to be the only person with the authority to get Finland out of the war in good time and without too much damage. However, Mannerheim decided at the last minute not to stand, partly for political reasons and partly on account of serious health problems in the months in question, so Ryti—much to the Germans' satisfaction—was eventually confirmed in office by a large majority. He immediately made changes in the cabinet. Hardly surprisingly, in view of the altered circumstances, the members of the far-right 'Patriotic People's Movement' (IKL) left the government, as did the foreign minister, Rolf Witting, supported to the last by the German ally.<sup>30</sup> Witting was replaced by Henrik Ramsay, a reputedly Anglophilic member of the Swedish People's Party of Finland. And the new prime minister was Edwin Linkomies of the conservative National Coalition Party.

The new government—'not expressly a peace cabinet, but a cabinet with a free hand', according to Erfurth<sup>31</sup>—was determined from the start to explore the possibilities and the conditions for an eventual separate peace. This did not mean a change of course as yet, but it did mean a new style of Finnish foreign policy. Rumours on the subject had long been rife in the diplomatic circles of the European capitals, and Moscow had repeatedly made discreet offers to Helsinki in this connection since 1941, but the Finnish government's response had always been to ignore them—most recently in the late autumn of 1942, and then only under strong German pressure.<sup>32</sup> In his Independence Day speech on 6 December 1942, President Ryti had still given no sign of yielding on the matter of peace, thereby finally prompting the Americans to recall their ambassador from Helsinki.<sup>33</sup>

The American threat implicit in this gesture, and the deterioration in Germany's military situation, had already prompted the Finnish government to intensify its contacts with the State Department in January. For example, the Finnish ambassador in Washington, Hjalmar Procopé, had tried to sound out American expectations with regard to the forthcoming presidential election in Finland, and Ryti received American representatives for talks in Helsinki with conspicuous frequency.<sup>34</sup> At the same time, efforts were made to step up dialogue with Swedish government circles, mainly through the Social Democrat ministers, Väinö Tanner and Karl-August Fagerholm, and the new Finnish ambassador in Stockholm, Georg Gripenberg.

<sup>30</sup> See telegram from Blücher, 11 Jan. 1943, PA R 29 583, fos. 26–7. On the other hand, Witting's departure suited the Americans very well; see Berry, *American Foreign Policy*, 231–2.

<sup>31</sup> Erfurth, *Der Finnische Krieg*, 208. See also the statement by the responsible head of department in the foreign ministry (Grundherr), 5 Mar. 1943, PA R 29 583, fos. 200 ff. Goebbels, who had clearly expected something worse, even thought the new government was 'a complete success for the Axis powers' (*Die Tagebücher*, pt. 2, vii. 482, 6 Mar. 1943).

<sup>32</sup> On this, see ADAP, Series E, iv, docs. 116, 243, 263 and 268; on the background, Polvinen, *Barbarossasta Teheranin*, 170 ff.

<sup>33</sup> Berry, *American Foreign Policy*, 236.

<sup>34</sup> Ibid. 245 ff. See also the documentation regarding these contacts in *Foreign Relations of the United States. Diplomatic Papers*, 1943, iii. 219, 222–6, 232–3, 236 ff.

While all these contacts already indicated a certain flexibility in Helsinki's attitude, a brief window of opportunity for concrete negotiations with the Soviet Union appeared to open up shortly after the new government came in. At all events, on 20 March 1943 the State Department, after consulting the governments in Moscow, London, and Stockholm, offered to make its 'good offices' available should the Finnish leaders wish to engage in peace talks with the Soviet Union.<sup>35</sup> The ball was now in Helsinki's court. That was where the decision had to be taken.

It was clear to the Finnish government from the start that its room for manoeuvre in the matter of peace depended primarily on the attitude of its supremely powerful German ally. Germany would have to be persuaded, if at all possible, to tolerate Finland's transatlantic contacts, as there appeared to be no prospect of concealing them any longer. That was the main objective of Helsinki's policy vis-à-vis Germany in the weeks following Stalingrad. To that end, every effort was made to play down the significance of those contacts to Berlin, and to give the impression that they were primarily domestic policy manoeuvres unrelated to foreign policy, that is, their purpose was not to seek a separate peace (of which there was absolutely no realistic prospect) but to allay the growing peace opposition in Finland itself. A break with Washington in the foreseeable future could hardly be avoided, but the Finnish people did not want war with the United States, so, for that very reason and for the sake of the unity within the country that Germany also wanted to see, the government had to be able to show that it had done everything to avoid an American declaration of war.<sup>36</sup>

Despite this official explanation, the government was anxious not to break the connection with Washington altogether in the event that Wilhelmstrasse reacted with hostility. It therefore decided to reply first of all to the above-mentioned American memorandum—regardless of possible German objections. It did so in a note delivered on 24 March 1943, which, unsurprisingly, was polite in tone but evasive in substance, endeavouring to gain time and keep the dialogue going by asking for further details of the basis of the American offer to mediate, without affronting any of the interested parties by making premature commitments.<sup>37</sup> It was a simple and transparent diplomatic manoeuvre, but probably the only realistic one in the circumstances.

What was less realistic, however, was the hope nourished in some government quarters that Berlin would be content to watch Finland's diplomatic games and do nothing about it. The new Finnish foreign minister was to learn that this was by no means the case, now that the situation on the eastern front was stable again, when, immediately after transmitting Finland's reply to Washington, he arrived in Berlin for an 'introductory visit', arranged at short notice.<sup>38</sup> This visit, significantly

<sup>35</sup> Telegram from Hull to the chargé d'affaires in Finland, 19 Mar. 1943, in *Foreign Relations of the United States. Diplomatic Papers, 1943*, iii. 250–1.

<sup>36</sup> Telegram from Blücher, 19 Mar. 1943, in *ADAP*, Series E, v, doc. 225, 430.

<sup>37</sup> *Foreign Relations of the United States. Diplomatic Papers, 1943*, iii. 255. See also Ryti's own (unpublished) memoirs, manuscript, 292–3, *State Archives, Helsinki*, Ryti papers, No. 9.

<sup>38</sup> See Weizsäcker's notes Nos. 178 and 180 of 23 Mar. 1943, PAR 29 583, fos. 237–8 and 241, as well as his diary note of 27 Mar. 1941, repr. in Weizsäcker, *Die Weizsäcker-Papiere*, 334. The public prosecutor's

conducted on the Finnish side as a quasi-private mission in the greatest secrecy, clearly shows how little of the comrades-in-arms spirit of the early phase of the war remained in the relations between the two governments. Not only did Joachim von Ribbentrop, in a deliberate diplomatic affront, keep his Finnish colleague Ramsay waiting for six hours after he arrived in Berlin on 25 March, not knowing whether or when he intended to receive him;<sup>39</sup> he made no effort to understand Helsinki's difficult situation, which Ramsay was attempting to discuss with him. On the contrary, the German foreign minister explained to his guest in no uncertain terms that Finland had to decide once and for all which side it was on, and that it was unacceptable to fight at Germany's side and at the same time 'seek assurances from our worst enemy, namely the USA'. Any move by Finland to make a separate peace would be regarded on the German side 'as a betrayal of the crusade against Bolshevism'. In that case, the Reich too would consider that it was no longer bound to Finland, but 'would have an absolutely free hand, and draw its own conclusions'.<sup>40</sup> That was not all. On the same evening, Ribbentrop, supposedly after discussing the matter with Hitler, presented Ramsay with a note containing two demands. First, Berlin expected to receive 'a precise statement' from the Finnish government—a confidential exchange of letters between the two heads of state was suggested—to the effect that it 'would not conclude an armistice or make peace with the USSR without Germany's consent'. And secondly, Helsinki was to make it absolutely clear to the United States without delay, in a note that had already been prepared in Berlin, that it was going to continue the 'defensive battle against Soviet Russia', and that it therefore definitively declined all American offers to mediate.<sup>41</sup>

This marked a change in German policy on Finland, not only in style but also in content, a change that also found expression in Berlin's attitude to its other allies now that the operational crisis in the east had been overcome. Not only was Wilhelmstrasse making it unmistakably clear for the first time that it would not tolerate any move on the part of its 'comrade-in-arms' to conduct an independent foreign policy. It was also attempting to redefine the basis of its relations with Helsinki. Thus, in view of their increasing differences, Berlin now wanted the informality of their mutual relations, which had been unproblematic in times when their interests were largely identical, to be replaced by a legally binding agreement in the nature of a treaty.

For its part, the Finnish government was now in danger of falling between two stools. To accede to the German demands seemed hardly feasible in the domestic

contention in the post-war trials of the Finnish wartime authorities for 'war responsibility', namely that Ramsay's purpose in going to Berlin had always been to disavow the American offer of mediation, is unsustainable in the light of the source material; see Procopé, *Sowjetjustiz über Finnland*, 100.

<sup>39</sup> 'Kronologinen yhteenveto Suomen ja Saksan välisen suhteiden kehittymisestä 1.6.1940–11.9.1944', 92–3 (No. 387), State Archives, Helsinki, Kivimäki papers, ii.

<sup>40</sup> Note on the conversation between Ribbentrop and Ramsay at midday on 26 Mar. 1943 in ADAP, Series E, v. 467–76, particularly 469 ff. See also the Finnish ambassador's report of 29 Mar. 1943 (Report No. 13), Foreign Ministry Archives, Helsinki, 5/C 5 (1943).

<sup>41</sup> ADAP, Series E, v. doc. 251, 480–1, and doc. 257, 493 ff.

political situation, and it would certainly close the door to Washington, that is, to the only real guarantor of a future peace accord. Conversely, an open snub to Germany, even if it led to peace negotiations, carried the intrinsic risk of leaving Finland defenceless against Soviet demands. The uncertainty was exacerbated by the fact that Helsinki was just as unsure about what Moscow actually envisaged in terms of a separate peace as it was about the possibility of backing from the powerful but distant Americans.

Such fears were by no means unfounded. In fact, Washington had no intention of seriously complicating the already difficult relations with Stalin by raising the question of Finland, which was a minor problem from the American point of view.<sup>42</sup> So the offer of mediation made on 20 March was certainly not an expression of any particular American commitment to the Finnish cause, but was primarily an attempt to get Finland out of the Axis coalition.

It is indicative, in this respect, that the United States omitted to inform the Finns of the Soviet demands which Vyacheslav M. Molotov conveyed to the American ambassador in Moscow on 26 March (that is, the day when Ramsay was engaged in negotiations in Berlin).<sup>43</sup> In fact, it was quite rightly assumed in Washington that the Ryti government would consider unacceptable the conditions laid down by Foreign Minister Molotov, which included re-establishment of the terms of the 1940 Moscow Peace Treaty and the payment by Finland of reparations amounting to at least half the war damage caused in the Soviet Union, and that it would only draw closer to Germany again as a result. It was therefore decided to keep the Finns in the dark for the time being, and eventually to inform them on 10 April that the offer made on 20 March had not actually implied the intention to act as an intermediary, but simply the willingness to establish a line of communication for the assumption of direct negotiations between Moscow and Helsinki.<sup>44</sup> The final Finnish reply to the 20 March offer had already been drafted when this information reached Helsinki. In the note handed to the American chargé d'affaires that same day, the government confirmed, in words chosen in no small measure for German ears, that as things stood the Finns had no alternative other 'than to continue their war of defence until the maintenance of the independence, freedom, and democratic institutions of Finland is safeguarded and the menace to Finland has been removed'.<sup>45</sup>

The failure of the Finnish peace-feelers at the beginning of April 1943 certainly did not mark the end of the crisis in the relationship with the German Reich, as Ryti still had to deal with Berlin's demand for a binding 'declaration not to seek a separate peace'. This involved a diplomatic tug of war that lasted a full three

<sup>42</sup> See Berry, *American Foreign Policy*, 272 ff.

<sup>43</sup> *Foreign Relations of the United States. Diplomatic Papers, 1943*, iii. 255–6.

<sup>44</sup> Directive to the chargé d'affaires in Finland, 9 Apr. 1943, *ibid.* 264. See also Berry, *American Foreign Policy*, 281 ff.

<sup>45</sup> As quoted in *Foreign Relations of the United States. Diplomatic Papers, 1943*, iii. 265. Ryti told the former Finnish ambassador in Moscow, Juko Kusti Paasikivi, at the time that, had he had satisfactory guarantees from the USA, he would have accepted an offer of a separate peace even if it meant a break with Germany; Paasikivi, *Jatkosodan pääväkirjat*, 279 (1 May 1943).

months—to the great annoyance of Wilhelmstrasse, which had called for a rapid settlement.<sup>46</sup> In order to avoid, if at all possible, making a declaration in the sense expected on the German side, but also to avoid rejecting it altogether and so reigniting the crisis, the Finnish government played for time, as it had already done on the peace issue. Such delaying tactics were particularly advisable, in that opinions about what to do, in the cabinet and in the parliamentary foreign-policy committee responsible for dealing with the matter, were completely at odds. Doubts were increasingly expressed as to whether the constitution even allowed the president to make such an extensive and binding declaration on ending or not ending the war without a decision to that effect being taken by parliament.<sup>47</sup>

In fact, it was precisely these considerations of constitutional law that pointed the way to a political solution of the conflict. Helsinki could quite reasonably proceed on the assumption that, on the German side too, there might be some reluctance to see a public debate in the Finnish parliament on the declaration of loyalty they had demanded, since it would give the peace opposition, which could not yet command a majority but which was increasingly strong, an opportunity to state its position for all the world to hear, thereby exposing the government's carefully cultivated appearance of national unanimity as a fiction. By drawing its attention to this danger, the Finnish government hoped to persuade Berlin to give way.<sup>48</sup>

Helsinki's calculation paid off on this occasion,<sup>49</sup> though not without a preliminary war of nerves. A draft declaration submitted by Ramsay on 29 April, evoking the two countries' mutual 'loyalty born of fighting for a common cause' and 'the Finnish government's firm resolve to continue Finland's defensive battle until the threat from the east had been removed', was rejected by Ribbentrop as inadequate.<sup>50</sup> A few days later, in a counter-proposal to be taken as a minimum demand, the German foreign ministry again attempted to obtain agreement to the main German requirement (that is, that any Finnish decision to withdraw from the war be subject to Berlin's consent) by using a hedged formulation that was, as it were, below the threshold requiring parliamentary approval. According to this proposal, Finland was to declare that it would 'continue to fight at Germany's side until the threat to both countries from the east had finally been removed'.<sup>51</sup> It

<sup>46</sup> Blücher, *Gesandter zwischen Diktatur und Demokratie*, 331.

<sup>47</sup> In fact, the Finnish constitution of 17 July 1919 provides, in paragraph 33(1): 'The President shall determine Finland's relations with foreign states [...] The President shall decide on matters of war and peace with the consent of parliament.' Thus there were definitely legal grounds for the doubts that were expressed, irrespective of their political motivation. See also the constitutional law opinion of 15 April 1943, delivered for the president by E. Castrén; State Archives, Helsinki, Ryti papers, No. 24.

<sup>48</sup> See Blücher's convincing arguments in his telegram of 29 May 1943, in *ADAP*, Series E, vi, doc. 65, 112–13.

<sup>49</sup> Similar conflict situations arose on several occasions in the course of the following year, leading on 26 April 1944 to the Finnish president giving the undertaking demanded by Berlin not to make a separate peace, an undertaking that was revoked soon after. See Menger, *Deutschland und Finnland*, 205–6, and Polvinen, *Teheranista Jaltaan*, 77.

<sup>50</sup> *ADAP*, Series E, doc. 359, 732–3. Alternative drafts in Foreign Ministry Archives, Helsinki, Fb 12 L (Saksa)/73 and Fb 110/10—vol. 1.

was all to no avail. The Finns, offended rather than intimidated by the aggressive style of German diplomacy—for example, the German ambassador, Wipert von Blücher, was periodically recalled to Berlin—insisted more than ever on their constitutional reservations. In taking this position, they were not misled by indications that Berlin was prepared to compromise when it came to the legal form of the declaration in question. Initially it had been a question of an undertaking by the president, then of an exchange of notes between foreign ministers, and finally just of a Finnish aide-memoire. In the end, it did not even come to that. On the contrary, the Reich government was eventually satisfied with an extract, submitted in June 1943, from a public address by the prime minister on Remembrance Day, 16 May,<sup>52</sup> which made no mention of Finnish decisions depending on Germany. Linkomies had simply repeated, in deliberately vague terms, that in view of the dubious nature of Soviet intentions the Finnish people would ‘certainly rather fight to the end than put themselves at the mercy of their eastern neighbours’.<sup>53</sup>

It is remarkable that Berlin should have progressively given way in a matter central to the German–Finnish relationship and to the prestige of both countries, and all the more so since the Reich government, perhaps wisely, refrained from exerting all the diplomatic pressure at its disposal. Thus President Rytí—unlike Antonescu, Horthy, and Mussolini for example—was not summoned to Klessheim Castle in the spring of 1943. On the contrary, it was decided not to do so after the government in Helsinki indicated that such an invitation would not be welcome.<sup>54</sup> The German authorities showed similar restraint in the use of economic sanctions to enforce their policy, even though the economic agreements on the exchange of goods, concluded in mid-March, would have provided a perfect opportunity to do so.<sup>55</sup> In fact, Blücher had already suggested in February that, for political reasons, German deliveries should no longer ‘be made far in advance, but should be confined to short-term needs’. However, Ribbentrop had firmly rejected such ideas, and had refused to allow any delaying tactics in the ongoing economic negotiations.<sup>56</sup>

Berlin clearly still preferred to use the ‘carrot’ rather than the ‘stick’ when it came to retaining this important ally in the battle against the Soviet Union—witness the largely undisturbed German food deliveries, some even exceeding the agreed quotas, in the summer of 1943.<sup>57</sup> As for the Finnish government, its victory on points in the diplomatic duel with Berlin in the spring of 1943 could not conceal the fact that its room for manoeuvre between the interests of the rival great powers was alarmingly narrow. The erstwhile comrades-in-arms relationship with

Germany had gradually but irreversibly developed into a kind of forced marriage and, to pursue the metaphor, the prospects of an amicable divorce and a new partnership had not really improved. In this situation, after the shocking course of the war in the summer of 1943 from the Finnish point of view, it was clear that, in order to safeguard national sovereignty, the Finnish authorities would sooner or later have to negotiate the narrow passage between the threat of German reprisals and the demands of Soviet aspirations to hegemony.

Far-sighted German observers took much the same view. As the German ambassador in Helsinki, Wipert von Blücher, explained in a summary analysis of the situation on 22 July 1943, although 'Anschluss with Russia' was still unthinkable on psychological grounds alone, Finland, faced with the choice between the western powers and Germany, had so far opted for the latter only because it trusted Germany rather than Britain and the United States to 'master the danger posed by Russia'.<sup>58</sup> This—together with Finland's economic dependence on the Reich—was the fundamental reason for their present relationship as comrades-in-arms, while other factors, 'such as traditional friendship, deep-rooted cultural relations, and manifold personal ties' on the one hand, and 'differences of opinion on matters of religion, race, and constitutional law' on the other, played only 'a secondary role'. Thus, according to Blücher, the future of the comrades-in-arms relationship depended first and foremost on whether Finland remained convinced that Germany alone was able and willing to provide it with the necessary protection. The recent growing uncertainty about the outcome of the war had therefore logically encouraged the Finns to adopt a 'flexible policy':

They are therefore endeavouring not to rely more on one side than they have done so far, and perhaps even to distance themselves from Germany to some extent. They are seeking a rapprochement with neutral Sweden. They mean to maintain and cultivate their ties with the United States. They have stopped inveighing against Britain and even, to a lesser extent, against the Soviet Union. They are reducing their contribution to the war to an absolute minimum. However, these attempts have been severely hampered by the fact that, so far, Britain and the United States have evidently been unwilling to do anything for Finland that might damage their own relations with Russia. Also, Finland's freedom of movement is limited by its economic dependence on Germany.<sup>59</sup>

### (b) First Peace-Feelers

Blücher's assessment of the situation was couched in cautious and, in places, (probably deliberately) euphemistic terms, but in substance it was absolutely correct. However quiet and stable the political and military situation in the Finnish area might have appeared in the months in question, the attentive observer could hardly fail to see that the ground was shaky and things were gradually beginning to slide. Confidential surveys carried out by the government revealed a change in public opinion that was barely noticeable in everyday life, but was nevertheless

<sup>58</sup> Tagebücher 8, 2545, PA, Blücher papers.

<sup>59</sup> Ibid. 2546 ff.

dramatic. In the autumn of 1942 the great majority of supporters of all political parties still believed the Axis powers would win, but within a year the picture had changed completely. Apart from a few radical right-wing voters, people of almost every political persuasion were now convinced that the Allies had the upper hand. Among the Social Democrats and supporters of the National Progressive Party, in particular, belief that Germany and its Axis partners would win had sunk almost to vanishing-point—4 per cent in each case. Even in the Conservative camp, where a year ago confidence in an Axis victory (95 per cent) had still been unshakeable, people were now clearly deeply uneasy, and only a minority (38 per cent) still counted on the Germans winning.<sup>60</sup>

The profound change in public opinion was visible in various ways. The national press, which was subject to wartime censorship but was certainly not forced into line,<sup>61</sup> now referred increasingly frequently to the possibility of a political change of direction and expressed the hope of a speedy peace. This was seen, for example, in the articles on the second anniversary of the beginning of the German–Soviet war. Although, in the German military attaché's opinion, 'positive and optimistic articles' still predominated, the arguments nevertheless seemed to him to vary greatly in the weight they carried, 'representing every shade of opinion, from uncompromising support for continuation of the war to a veritable paean of longing for peace, even disowning the war aims proclaimed by the Marshal [Mannerheim] in 1941'.<sup>62</sup>

More sensational was the public emergence of a group, the 'Peace Opposition', consisting of 33 public figures—mainly members of the Social Democrat and Swedish People's Party parliamentary fractions—who, in a letter addressed to the president on 20 August 1943 and published in the press, called for strong and speedy efforts to improve Finland's relations with the United States, 'to take us out of the current war between the great powers' and 'secure our country's freedom, independence, and peace' by way of negotiations.<sup>63</sup>

This step by members of parliament highlights the dilemma of the Finnish government, which had managed to keep its discreet peace-feelers hidden from its own people, its own parliament, and its parliamentary foreign policy committee, although not from its suspicious German comrade-in-arms. This discretion appeared to the government to be essential if it was to retain any freedom of action. Not without reason, it feared the uncontrollable dynamics of public debate and the practical constraints imposed by official announcements. Instead, it banked on an unobtrusive policy of symbolic gestures, as non-binding as possible, in the hope that it would thus be able to avoid serious disadvantages and keep various negotiating options open.

<sup>60</sup> See Jutikhalu, 'Mielialojen krijo jatkosodan ailana', 131 ff. and 145 ff.

<sup>61</sup> See Rusi, *Lehdistönsuuri jathosodassa*.

<sup>62</sup> German embassy/military attaché re 'Militärpolitische Gedankengänge in der finnischen Presse zum 2. Jahrestag des deutsch-russischen Krieges', 6 July 1943 (BA-MA RW 4/v. 325).

<sup>63</sup> Quoted from the German version of the text in Blücher's telegram No. 1768 of 27 Aug. 1943 (PA R 29584, fos. 134–5).

The most spectacular of these gestures, always made with both Berlin and Washington in mind, was the disbandment of the Finnish Waffen SS volunteer battalion in the summer of 1943.<sup>64</sup> In this connection, it was typical of Finnish policy that, as the country needed 'its own able-bodied men more than ever' in view of the tense situation regarding replacements for its own army, no more volunteers were to be recruited, but members of the battalion were to be allowed to continue to serve for a maximum of a further six months, so long as the German side agreed to deploy the volunteers on the eastern front only.<sup>65</sup> In this way, the decision on the future of the unit was formally shifted to the Germans, who promptly said they were prepared to give up the battalion altogether, 'in order to spare the Fin[nish] volunteers any conflict of conscience'.<sup>66</sup>

Apart from that, there was no shortage of issues liable to upset political relations between the comrades-in-arms in the summer and autumn of 1943. They included, above all, the establishment of a—formally private—Finnish-American Society, in which prominent figures of various political persuasions met under the chairmanship of a press magnate and former foreign minister.<sup>67</sup> Unsurprisingly, the German foreign ministry reacted to this with extreme annoyance.<sup>68</sup> Conversely, the increasingly harsh German occupation policy in Norway and Denmark, particularly the deportation of Danish Jews,<sup>69</sup> was openly criticized in Finland. The Finnish press, which published extra numbers in response to the imposition of a state of emergency in Denmark, 'made it absolutely clear that, in this case too, it sympathized with its Nordic brothers'.<sup>70</sup> The Finnish government, which depended on German deliveries of grain and weapons, nevertheless repeatedly took pains to avoid upsetting its partner too much. Thus, for example, the Social Democrat minister Fagerholm was removed from his post when he sharply criticized German occupation policy in Norway.<sup>71</sup> And Finnish policy continued on essentially the same lines. The German ambassador found it 'fluid', noting that the foreign minister, Henrik Ramsay, whom he saw almost every day, 'wasn't telling him everything'. The prime minister, Edwin Linkomies, seemed to him to be 'devious', and only the president, Risto Heikki Ryti, was 'still optimistic'.<sup>72</sup>

By October, the tensions between Helsinki and Berlin had grown to such an extent that Hitler was prompted to send Ryti a 16-page letter, apparently

<sup>64</sup> On the history of the battalion, see Stein and Crosby, 'Das finnische Freiwilligen-Bataillon', and esp. Jokipii, *Panttipataljoona*.

<sup>65</sup> Zechlin's telegram No. 1387 from Helsinki, 30 Jun. 1943 (PA R 29584). See also, in this connection, telegrams Nos. 1386 and 1417, sent on 30 June and 5 July 1943 respectively (*ibid.*) A good idea of the Finnish approach is also given by Erfurth's entries in his private diary on 27 June 1943, 3 July 1943, and 4 July 1943 (BA-MA N 257/v. 3, 704–9).

<sup>66</sup> Erfurth, private diary, 4 July 1943, BA-MA N 257/v. 3, 708. In fact, very few volunteers were prepared to continue to serve, and this must have had a decisive effect on the German decision.

<sup>67</sup> For details, see Berry, *American Foreign Policy*, 306 ff.

<sup>68</sup> See Zechlin's telegrams Nos. 1404 of 2 July and 1454 of 9 July 1943, and the file note by Sonnleithner (foreign minister's office) dated 11 July 1943 (all in PA R 29584).

<sup>72</sup> Blücher to Erfurth, 1 Sept. 1943, Erfurth, private diary, 751–2 (BA-MA N 257/v. 3).

self-composed, complaining—‘in polite but extremely cutting terms’—about Finland’s behaviour.<sup>73</sup> In the letter, delivered personally by Alfred Jodl, the dictator complained, in particular, about unfriendly comments in the Finnish press and about the Finnish government’s refusal to give diplomatic recognition to the puppet state recently established by Benito Mussolini in Salò. But the most threatening feature of Hitler’s letter was his open criticism of the Finnish concept of a ‘parallel war’, which had hitherto been passed over in silence.<sup>74</sup> This did not augur well for the future.

The news and signals reaching Finland from Washington also gave little cause for hope. On the contrary, they confirmed the conclusion, expected on the German side and feared on the Finnish side, that—as the US secretary of state, Cordell Hull, confided to the Swedish ambassador during the foreign ministers’ conference in Moscow—although many people in the United States felt ‘sympathy for this small, clean country’, Russia was much too important an ally ‘[to] risk damaging the main lines’ by hefty support for Finland.<sup>75</sup> So neither the Americans nor the British engaged in a serious conflict with their Soviet partner about the Finnish question during the conference. Although they called for Finland’s national sovereignty to be respected and for the country to be exempted from the demand for unconditional surrender directed at the Axis powers, it was clear that they were prepared to regard Finland’s future as primarily a matter for Moscow.<sup>76</sup> The talks which the Finnish foreign minister, Ramsay, had with the American chargé d’affaires in Helsinki at the beginning of November were shattering. The Finnish side came away with the impression that Finland would clearly be regarded by the Allies as an ‘Axis power’ and almost certainly face a demand for unconditional surrender, and that at least some parts of the country would probably then be occupied by the Red Army.<sup>77</sup>

With the painful realization that what the Finnish authorities had supposed to be the American trump card was no such thing, another mediator became more important, a country which had already used its good offices successfully during the 1939/40 Finnish–Soviet Winter War.<sup>78</sup> However, the conditions in which Sweden now came to act were a great deal more difficult than they had been on the previous occasion. Concerned to maintain its neutrality, Sweden had a strong self-interest in sparing its eastern neighbour the experience of Sovietization, but it naturally carried little political weight in the worldwide political conflict between the great powers. In particular, Stockholm had to bear in mind that any attempt to negotiate a separate Finnish peace would be interpreted by Germany, the dominant power in the Baltic region, as an unfriendly, if not downright hostile, act. So, proceeding with caution, Sweden made its first diplomatic moves to obtain peace

<sup>73</sup> Scherff, according to Erfurth, private diary, 15 Oct. 1943 (*ibid.* 788).

<sup>74</sup> See Erfurth, private diary, 23 Oct. 1943 (*ibid.* 790). See also Menger, *Deutschland und Finnland*, 166–7. Ryti’s reply to Hitler’s letter was restrained and vaguely worded, and Hitler found it a ‘downy-soft epistle’ (quoted in Menger, *Deutschland und Finnland*, 167).

<sup>75</sup> Quoted in Polvinen, ‘Die Alliierten und die finnische Friedensfrage’, 309–10.

<sup>76</sup> *Ibid.* 310 ff. <sup>77</sup> See Büttner, *Sowjetisierung oder Selbständigkeit*, 64.

<sup>78</sup> On the part Stockholm played at that time, see in particular Jakobson, *The Diplomacy of the Winter War*, and Carlgren, *Swedish Foreign Policy*, ch. 2.

only towards the end of 1943, when it was considered in Stockholm that Germany's defeat was now only a matter of time.<sup>79</sup> The reputedly pro-Finnish Soviet ambassador in Stockholm, Alexandra Kollontai, played a key part in the Swedish–Soviet dialogue once again, as she had done during the Winter War. After preparatory 'private' talks<sup>80</sup> with the Swedish cabinet secretary, Boheman, she was able to deliver her government's response on 20 November, namely that Finnish representatives were welcome to attend peace talks in Moscow, and that, in principle, the Soviet Union had no intention of restricting Finland's independence unless Finnish policy forced it to do so.<sup>81</sup>

The Soviet communication, which made no mention of unconditional surrender, seemed to the Finnish authorities to offer a ray of hope. They accordingly took pains to send a speedy and friendly reply, stressing above all their wish for good neighbourly relations and neutrality under international law. Helsinki declared its readiness to negotiate with Moscow on all issues relevant to the establishment of a lasting peace, including certain border corrections, and it suggested that the talks be based on the 1939 borders. From Stalin's point of view, precisely this reference to the pre-war borders—a similar attempt had already been made in the summer of 1943—proved that Finland was still not realistically aware of its situation, and that it was not really interested in making peace.<sup>82</sup> What followed was a war of nerves, rich in evasive tactical moves and lasting for months. The first backdrop was the Teheran Conference, at which Stalin set out his terms for peace with Finland more clearly than ever before. His main demands were implementation of the 1940 peace treaty, the cession of either Hanko or Petsamo, the payment of Finnish reparations amounting to 50 per cent of the damage that had been caused, the break-off of relations with Germany, the expulsion of German troops from Finland, and, lastly, the demobilization of the Finnish army. The British and Americans made half-hearted attempts to soften some of those demands. Thus, Franklin D. Roosevelt argued that Vyborg should remain in Finland, while Winston Churchill expressed doubts that Finland, poor as it was, could pay any reparations worth mentioning. None of this had any effect. The western powers were prepared to let the Soviets have their way at Teheran, just as they had done in the case of Poland and the Baltic States—all the more so as Stalin gave them a vague parting assurance that, in recognition of Finland's determined resistance, he would safeguard the country's independence. With this arrangement between the great powers, as the Finnish historian Tuomo Polvinen rightly observed, 'the fate of the northern republic was essentially already [...] decided. All that remained was to convince the Finns.'<sup>83</sup>

<sup>79</sup> On Swedish perceptions of the military situation after 1943, see Böhme, 'Stalingrad und Schweden', and Carlgren, 'Die Einschätzung der Lage Deutschlands'.

<sup>80</sup> Wary of Germany, the Swedish foreign ministry still did not venture to appear officially as mediator.

<sup>81</sup> See Polvinen, 'Die Alliierten und die finnische Friedensfrage', 313–14.

<sup>82</sup> On this and the following, see *ibid.* 314 ff., Carlgren, *Swedish Foreign Policy*, 181 ff., and more recently Büttner, *Sowjetisierung oder Selbständigkeit*, 65 ff.

<sup>83</sup> Polvinen, 'Die Alliierten und die finnische Friedensfrage', 318. See also Berry, *American Foreign Policy*, 356–63.

Convincing them, however, proved extremely difficult in the following weeks and months. When, at the beginning of 1944, the Finnish government—against Carl Gustav Mannerheim's advice—refused to enter into negotiations on the basis of the 1940 Moscow peace treaty, the Soviet authorities stepped up the military pressure on their refractory neighbour. In February there were repeated Soviet air raids on Helsinki and other cities in southern Finland, but the damage they caused was fortunately kept within bounds by a combination of bad weather and effective air defence.<sup>84</sup> In the same month, that is, a few weeks after the liberation of Leningrad, Marshal Meretskov was appointed as the new commander-in-chief of Karelian Front and entrusted with preparations for a land offensive.<sup>85</sup> At the same time, with the transfer of the American chargé d'affaires in Helsinki, Robert McClintock, in January, and the instruction given to his successor to keep all official and private contacts in the host country to a minimum, the US pressure on Finland increased sharply, and as the departing diplomat wrote in his last report, the impending and apparently inevitable catastrophe reminded him of a Greek tragedy.<sup>86</sup>

With the liberation of Leningrad after a siege lasting almost 900 days, it seemed to the Finns that the stage was set for the inevitable denouement of a classical tragedy. Leningrad, more than any other place, had been the geographical focus of the German–Finnish brotherhood of arms since 1941. The German Wehrmacht's ability to capture the Russian metropolis on the Baltic, an ability which Finland had initially taken for granted but had increasingly come to doubt, was regarded in Helsinki, more than military developments in other parts of Europe, as a yardstick by which to assess its own prospects for the future. Until 1943 the German authorities had constantly given their Scandinavian ally to understand that Leningrad would definitely be taken shortly.<sup>87</sup> Although such assurances found less and less credence in Helsinki as time went by, the Finnish authorities were deeply shocked by the force of the offensive launched by three Soviet army fronts in mid-January, especially as, within a few weeks, the Soviet forces had opened up a 300-kilometre-wide breach in the German (Eighteenth Army) defence front, cut Army Group North's connection with the Finnish army, and driven it back to Lake Peipus.<sup>88</sup> This was the worst-case scenario, and both Eduard Dietl's army high command and the Wehrmacht operations staff had for months been under no illusions about its consequences for Germany's alliance policy.<sup>89</sup> In fact, Mannerheim finally realized that Germany had lost its war against the Soviet Union,<sup>90</sup> and that

<sup>84</sup> See Pesonen, *Helsinki sodassa*, ch. 11.

<sup>85</sup> On this, see also the memoirs of Marshal Meretskov, *Serving the People*, 286 ff. On the preparations for the offensive, see Erickson, *Stalin's War*, ii. 272 ff., and more recently Manninen, *The Soviet Plans*, 127 ff.

<sup>86</sup> See Berry, *American Foreign Policy*, 382–6, here 385.

<sup>87</sup> See Wegner, 'Die Leningradfrage'.

<sup>88</sup> In a telex to Mannerheim sent on 31 Jan. 1944 (repr. in *Operationsgebiet östliche Ostsee*, 20–1), Field Marshal Keitel was obliged to acknowledge the heavy German setbacks, but he promised to hold the Lake Ilmen–Narva line and offered to provide further German help for the defence of Finland. On the situation at Leningrad, see also Part IV, Chapter I.2 of the present volume.

<sup>89</sup> On the corresponding warnings, see Menger, *Deutschland und Finnland*, 176–7.

<sup>90</sup> See Ryti, unpublished manuscript, 296, State Archives, Helsinki, Ryti papers No. 9.

Finland's very existence was under threat. As the Finnish high command's intelligence section warned in a 5 February situation assessment (not without some overestimation of Soviet possibilities), the Red Army would now be in a position to launch major attacks on the Finnish heartland within a few days, thanks to its secure supply lines. The so-called Aunus area (between Lake Ladoga and Lake Onega), and above all the Karelian Isthmus were particularly threatened, so a start was now made on fortifying them with all speed, and two divisions were transferred to the isthmus as a reserve intervention force.<sup>91</sup>

In this situation, increasingly desperate for Finland from a strategic point of view but still stable for the time being in tactical and operational terms, the Finnish-Soviet peace talks were resumed in February, once again at the instigation of Madame Kollontai and the Swedish government, who acted as mediators.<sup>92</sup> This time the negotiations were conducted on the Finnish side by the diplomat (and future president) Juho Kusti Paasikivi, who was unburdened by any government office and highly valued in Moscow as a conservative political realist. In the last week of March, after preparatory soundings in Stockholm and some diplomatic squabbles, Paasikivi left for Moscow in the company of the former Finnish foreign minister, Carl Enckell, and in fact on a secret mission to negotiate peace. It was a short trip. After only three rounds of talks, the negotiations were at an end. The Soviet demands, presented to the Finnish visitors in the form of an ultimatum, were unexpectedly harsh: not only was Helsinki to break off relations with Germany immediately and drive out or intern the German troops stationed in the country by the end of April, with Soviet assistance if necessary, but the Finnish army was also to withdraw behind the 1940 border, likewise in April, and be demobilized within three months. Furthermore, all Soviet and Allied prisoners of war were to be released immediately, the Petsamo area in the north-eastern part of the country, important for its nickel deposits, was to be ceded to the Soviet Union, and reparations amounting to 600 million dollars were to be paid within five years. If all these conditions were met, then and only then would Moscow be prepared to give up its lease on the Baltic port of Hanko, close to the Finnish capital.<sup>93</sup>

The government and parliament in Helsinki found Moscow's conditions unacceptable and informed the Soviet ambassador in Stockholm accordingly on 19 April 1944. Once again the Finns were playing for time, in the hope that time would not be entirely on the enemy's side. The imminent invasion by the western Allies could permanently alter the balance of power on the continent. In which case, the expected increase in the strength of the Anglo-Saxon powers, the further

<sup>91</sup> These were indeed the points of concentration of the major Soviet offensives launched in June. See Heiskanen, 'The Effect of Finnish Military Intelligence', 284–5.

<sup>92</sup> On this and the following, see Büttner, *Sowjetisierung oder Selbständigkeit*, 71 ff., which is the most detailed and critical account in German, and more recently, in Finnish, Jokisipilä, *Aseveljiä vai liittolaista?*, 240–60.

<sup>93</sup> See Büttner, *Sowjetisierung oder Selbständigkeit*, 74–5. A vivid impression of the content and atmosphere of the negotiations is given in the published record of the talks, Palm, *Finnish-Soviet Armistice Negotiations*, based on Finnish notes. Equally instructive are the later accounts in Passikivi's diaries, *Jatkosodan päiväkirjat*, 355–97, in Polvinen, Heikkilä, and Immonen, *J. K. Paasikivi*, iii. 345–85 and, more recently, in *Kallis toveri Stalin*.

weakening of Germany, and the diversion of the Red Army to the final battles in central Europe might perhaps create favourable framework conditions for Finland. Might the price of peace then be not quite so high for the little country on the edge of Europe that still had an intact army stationed deep in enemy territory?<sup>94</sup>

## 2. GERMAN REACTIONS AND PLANS IN THE EVENT OF FINLAND'S WITHDRAWAL FROM THE WAR

The scale of the reparations was certainly not the main reason why Helsinki found the Soviet peace terms unacceptable, although the government told the public that it was. The demands concerning the relationship with Germany were much trickier, but they were definitely not a suitable subject for public debate. Quite apart from the fact that the very idea of war against its long-standing comrade-in-arms was unthinkable (especially in the ranks of the Finnish army), it was not at all clear how the Soviet demands could be met without the country being occupied by the Red Army, in the guise of assistance, or by the Wehrmacht. However, the recent invasion of Hungary (and the occupation of Italy the year before) had made it clear how Germany proposed to deal with disloyal coalition comrades—a parallel to which the German military drew their Finnish interlocutors' attention more than once, by way of a warning, during the weeks in question.<sup>95</sup> In these circumstances, the German Twentieth Mountain Army, with 200,000 men stationed in the northern part of the country, must have seemed to the Finnish government, which still had about 350,000 men under arms, not only an indispensable protection against Soviet attacks but also a potential threat.

For their part, the Germans had no illusions about the intentions and objectives of Finnish policy, and the methods employed, but they had always felt confident that, despite its 'silly democratic games',<sup>96</sup> military setbacks, pressure from the Allies, and whispered encouragement by Sweden, the country was in no position to withdraw prematurely from the war unless it wanted to be 'gobbled up immediately by the rapacious Bolsheviks'.<sup>97</sup> The relative confidence felt at Führer headquarters and in the OKW was confirmed in September 1943 by the commander-in-chief of the Lapland Army, Col.-Gen. Eduard Dietl, who considered that there was 'nothing to fear [...] at present' in Finland:

The Finns do not take much part in the fighting, but they are good fighters and they do what they can. It is true that they no longer want to be too deeply involved in this war.

<sup>94</sup> See indications to that effect in Menger, *Deutschland und Finnland*, 186.

<sup>95</sup> See Erfurth, *Tagebuch*, 899–900 and 930 (BA-MA N 257/v. 4). The unusually critical Finnish press reaction to the events in Hungary is reported in Kitschmann, 'Als Militärattaché in Helsinki', 125–6 (BA-MA MSg 2/3317).

<sup>96</sup> Thus Goebbels, *Die Tagebücher*, pt. 2, ix. 577, 23 Sept. 1943. The propaganda minister noted, after a talk with Hitler, that it would be a good thing 'if Ryti sent the parties packing. Finland's military forces are perfectly capable of conducting an experiment of this kind painlessly [...] The Führer is afraid the silly democratic games will eventually reduce Finland to a state where, yes, the operation was a success, democracy is alive and well, but the patient, Finland itself, is dead.'

<sup>97</sup> Ibid., pt. 2, x. 179, 27 Oct. 1943.

But the main thing is that they are not backing out. They know perfectly well that our 15 divisions are the only military support they have. The Americans are not thinking of lending them a helping hand, because Stalin would not tolerate it and the United States certainly does not want to get into an argument with the Soviet Union over Finland. It follows that the Finns are entirely dependent on us for military support. They are exploiting it, like all our coalition partners, but in their case there can be no question of abandoning the fighting front in the east, at least not at present.<sup>98</sup>

The predominating confidence that most German observers continued to feel throughout 1943 was severely put to the test by the direct Finnish–Soviet feelers in early 1944. Goebbels noted, in connection with the Finnish special envoy Paasikivi's secret visit to Stockholm in the middle of February, that 'Finland is now the main sensation on the public's mind'. Accepting for the last time a favourable—and in his view, optimistic—interpretation of events, he wrote: 'If the Finnish government's feelers in Stockholm are simply a tactical move to provide itself, vis-à-vis its own people, with an alibi for continuing the war, there can be no objection to them.'<sup>99</sup> Just a few weeks later, he began to adopt a distinctly harsher tone. Goebbels now deplored the fact that the Finns '[enjoy] more sympathy among the German people than they actually deserve',<sup>100</sup> noting that the time had come for propaganda to prepare the German public for the possibility of a Finnish break with the Reich.<sup>101</sup> Then the process of laying blame started. For the first time, Mannerheim himself was the target of massive German criticism. He was, according to Dietl, 'an Anglophile at heart, and would naturally like to get out of the war sooner rather than later'.<sup>102</sup> Hitler too, when he received his minister of propaganda on 4 March 1944 to discuss foreign-policy matters ('Finland being naturally at the top of the agenda'), was quite convinced 'that it is mainly the generals who are giving up in Finland'. While Ryti had 'generally stood firm' in the diplomatic tussle over a possible separate peace for Finland, Mannerheim had 'clearly lost his nerve. Unfortunately, none of our men were there to tighten his stays at the critical moment'.<sup>103</sup> The opinion expressed shortly afterwards about Mannerheim's closest adviser, General Erik Heinrichs, was not much better. The chief of the Finnish general staff, 'of whom we had such high hopes', was now unfortunately 'among the quitters'.<sup>104</sup>

As these comments show, the perceptions and manner of expression of the German leadership changed as the crisis became more acute. So long as Germany's own victory seemed to some degree assured, and Helsinki's withdrawal from the war only a vague possibility, Finland was seen as a small country whose special interests and inherently limited capabilities were to be taken into account in some

<sup>98</sup> Ibid., pt. 2, ix. 472, 10 Sept. 1943.

<sup>99</sup> Ibid., pt. 2, xi. 295, 16 Feb. 1944.

<sup>100</sup> Ibid., pt. 2, xi. 374, 1 Mar. 1944.

<sup>101</sup> Ibid., pt. 2, xi. 389, 3 Mar. 1944. On the reassessment of Finland in the German press, see Peltovuori, *Sankarikansa ja havaltajat*, esp. 194–208.

<sup>102</sup> Goebbels, *Die Tagebücher*, pt. 2, ix. 473, 10 Sept. 1943.

<sup>103</sup> Ibid., pt. 2, xi. 396, 4 Mar. 1944.

<sup>104</sup> Ibid., pt. 2, xi. 581, 30 Mar. 1944.

form or other. However, as Germany found itself more and more on the military defensive and diplomatically isolated, its comrade-in-arms was viewed only instrumentally, in terms of its contribution to Germany's war effort. Faced with the real threat of a Finnish–Soviet understanding, Hitler, Goebbels, and others resorted to increasingly 'moral' judgements of their coalition partner. As in the case of Italy in the previous summer, Helsinki's policy considerations were no longer seen as calculated *realpolitik* but simply as 'failure', 'cowardice', and 'treachery' on the one hand, or 'loyalty' and 'strong nerves' on the other.

It was nevertheless decided at Führer headquarters not to simply leave things to take their course. As Goebbels noted, summing up the suggestions he submitted to Hitler on 4 March 1944: 'The sooner and harder we weigh in, the better it will be for us'.<sup>105</sup> What the minister had in mind, above all, was to let the Finns know by means of press commentaries, before they took a decision on Moscow's peace terms, 'what they were threatened with if they succumbed, both openly from the Bolsheviks and, in somewhat more veiled terms, from our side'.<sup>106</sup>

Diplomatic action followed the same lines as the propaganda. Ribbentrop hammered home to the German ambassador in Helsinki, who was considered far too soft and understanding,<sup>107</sup> that 'it must be made clear to the Finns, once and for all, that they had no choice and no alternative. Either they won through with Germany and survived or, if they separated from Germany, they would fall victim to Russia. And that would be the end of the Finnish intelligentsia and probably the rest of the Finnish population as well'.<sup>108</sup> Crass generalizations of this kind, combined with assurances 'that, after all, we shall regain the initiative in Russia very shortly', and that Germany was longing for the western powers to invade 'so that we can drive them into the sea',<sup>109</sup> naturally did little to dispel Helsinki's deep distrust of Berlin. However well informed the German ambassador might have been about the ins and outs of Finnish policy, and however much he 'lectured' his Finnish interlocutors,<sup>110</sup> his almost daily efforts led nowhere. Foreign Minister Ramsay, in particular, strove desperately to preserve his minuscule room for policy manoeuvre by all the means at his disposal. In most cases he would stall, deny, or mollify, and generally try to give the impression that his country's foreign policy

<sup>105</sup> Ibid., pt. 2, xi. 397, 4 Mar. 1944. This evidently also included an interview which Hitler personally granted to the Swedish paper *Stockholms-Tidningen* on 19 March 1944; see Peltovuori, *Sankarikansa ja havaltajat*, 204.

<sup>106</sup> Goebbels, *Die Tagebücher*, pt. 2, xi. 396; see also p. 427 (7 Mar. 1944). Thus, at the beginning of March 1944 Goebbels attempted to influence public opinion in Finland by deliberately publishing a letter from the rector of the University of Dorpat (Tartu) to the Swedish scholar Sven Hedin. According to Goebbels, the letter provided 'a deep insight into the methods which the Soviet Union planned to employ to destroy national traditions in the Baltic States'; ibid. 364, 29 Feb. 1944.

<sup>107</sup> On a previous occasion, Hitler had already described the German embassies in Helsinki and Stockholm as 'very poorly' manned but, to avoid arousing political resentment, he had refrained from making any changes; see Goebbels, *Die Tagebücher*, pt. 2, iv. 587–8, 23 June 1942.

<sup>108</sup> Blücher file note *re* telephone call from Reich foreign minister's office, 28 Feb. 1944, *Tagebücher* 8, 2866, PA, Blücher papers.

<sup>109</sup> Ibid.

<sup>110</sup> Blücher's words in a telegram, 29 Mar. 1944, *Tagebücher* 8, 2952, PA, Blücher papers.

was receptive and essentially passive. The cat-and-mouse game was only abandoned, temporarily, at the end of March, when the Moscow negotiations failed.<sup>111</sup>

In the light of this development, the Reich government stepped up the pressure on its recalcitrant partner. It stopped grain deliveries first, at the end of February, then exports of other industrial products at the beginning of April, and, finally, two weeks later, most arms deliveries.<sup>112</sup> The chief of the general staff, Heinrichs, visited Berchtesgaden at the end of the month, but even that did not lead to any relaxation of the ban on deliveries. On the contrary, Field Marshal Keitel's Finnish guest was informed in no uncertain terms—with a sharp reminder of Germany's bad experiences in 1918—that nothing was more poisonous for an army at war than the thought of peace. Never in the history of warfare had doubt served to make men stronger.<sup>113</sup> As though to confirm the message, Heinrichs was even told, during his ensuing courtesy visit to Reich Leader SS Heinrich Himmler, that Germany's final victory in the current international strife was as certain 'as the truths of arithmetic'. Only Col.-Gen. Jodl was more conciliatory, but he pointed out that it was not easy to argue Finland's case to the German leadership at this time. He had two main pieces of advice, in this connection, for his Finnish guest to take home with him. First, the Finnish government should control its national press and ensure that the comrades-in-arms were both fighting the same battle, with the pen as well as the sword. The Führer thought of himself as an artist, and as the guardian of European culture. He was very sensitive, and it was a mistake to denigrate him. Secondly, the head of the Wehrmacht operations staff suggested that the Finnish side might be prepared to give a binding assurance that any weapons delivered to Finland would in no circumstances fall into the hands of the Russians.<sup>114</sup>

If, as Jodl's last remarks suggest, the purpose of the German export ban was to prevent the Finnish government from having any further contact with the enemy, and force it instead to conclude a treaty with the Reich not to make a separate peace, it soon proved to be the very mistake that experienced observers (such as the ambassadors Karl Schnurre and Blücher, but also Generals Erfurth and Dietl) had always feared.<sup>115</sup> Helsinki did indeed take some spectacular measures to tighten

<sup>111</sup> See, e.g., Blücher's file notes on his talks with the foreign minister on 14 Feb., 4 Mar., and 1 Apr. 1944, *Tagebücher* 8, 2813–14, 2883, and 2971–2, PA, Blücher papers.

<sup>112</sup> See Seppinen, *Suomen ulkomaankaupan ehdot*, 202 ff. Only military equipment 'held to be essential for the further pursuit of military activities on the Finnish fronts' was exempt from the embargo on deliveries; telegram from the chief of the OKW, 19 Apr. 1944, PA R 29585, fo. 235. *Ibid.* also contains a list of the goods that were exempt.

<sup>113</sup> On this and the following, see Heinrichs' undated handwritten notes on his visit to the German HQ; Military Archives, Helsinki, Pk 1172/15 Heinrichs.

<sup>114</sup> *Ibid.* The new Finnish general at the OKW, General Österman, had already faced the same demands on 4 April, during his first visit to Führer headquarters following his appointment, and Dietl, acting on instructions from the OKW, raised the issue in a conversation with Mannerheim on 6 April. When Mannerheim subsequently wrote to Hitler in the middle of May, assuring him more or less in passing that weapons delivered by the German side would never fall into enemy hands, the assurance was regarded in Führer headquarters as by no means sufficiently binding. The Germans clearly wanted the matter enshrined in a formal agreement. See *KTB OKW*, iv. 871 ff., and Ritter, telegram No. 1036 of 17 May 1944, PA R 29585, fo. 319.

<sup>115</sup> See Seppinen, *Suomen ulkomaankaupan ehdot*, 206 ff., and Menger, *Deutschland und Finnland*, 191 ff.

censorship of the press, in order to appease the German side,<sup>116</sup> but it was not prepared to radically change its policy. On the contrary, from the Finnish point of view the German measures only underlined the need to get out of the war as quickly as possible.

Germany now had to adjust seriously to that eventuality. For Goebbels it was clear, when the Finnish crisis came to a head at the beginning of March, that 'firm measures would be needed' if Helsinki were to withdraw from the war, and he saw his Führer as 'naturally determined to take military action' in that case.<sup>117</sup> The minister of propaganda, completely under the impression of the measures which had been decided against Hungary, clearly failed to realize that conditions in the north were very much more complicated, and not only for geographical reasons. In fact, Hitler and the OKW had already decided in the early autumn of 1943 to adopt a defensive strategy—unlike the plans for Italy, Hungary, and Romania—in the event of Finland's military collapse or withdrawal from the war.

The central idea of the plan, based on Führer Directive No. 50 of 28 September 1943, was to withdraw the two corps of Twentieth Mountain Army (XVIII and XXXVI Mountain Corps) from southern to northern Finland to defend the northern cap of the Scandinavian mainland—and especially the Kolosjoki nickel deposits, which were considered essential to the defence economy—in a semicircular front with a radius of some 400 kilometres.<sup>118</sup> The feasibility and advisability of this operation did not go unchallenged. Dietl's HQ rightly pointed out that it would hardly be possible for this well-equipped army to transport its 180,000 tonnes of material rapidly over long distances. Apart from its own lack of transport facilities, there were no railways in northern Finland. The road network was completely inadequate and barely passable in winter, and no provision had been made for sufficient protection against the raids to be expected from the superior Soviet air force during the withdrawal. Nor could sea transport be regarded as a viable option, given the danger of Allied landings in northern Europe. Lastly, it should also be borne in mind that the lengthy preparations for the withdrawal could not be concealed, and would inevitably cause unrest on the Finnish side.<sup>119</sup> For all these reasons, as Dietl reported on 9 October 1943, his army 'would much rather fight honourably in southern Finland than end up starving in the Arctic Ocean'.<sup>120</sup>

Despite all the serious objections, the OKW adhered to the basic principles of Directive No. 50 in the coming months. This was primarily for reasons to do with

<sup>116</sup> See Menger, *Deutschland und Finnland*, and Rusi, *Lehdistönsuuri jatkosodassa*.

<sup>117</sup> Goebbels, *Die Tagebücher*, pt. 2, xi. 397 and 396, 4 Mar. 1944.

<sup>118</sup> See Directive No. 50 of 28 Sept. 1943 Concerning Preparations for the Withdrawal of Twentieth Mountain Army to Northern Finland and Northern Norway, repr. in Hubatsch, *Hitlers Weisungen*, doc. 50, 231–2. See also Menger, *Deutschland und Finnland*, 176 ff.

<sup>119</sup> According to Hitler's Directive No. 50 of 28 Sept. 1943, the measures ordered in the directive were to be taken as inconspicuously as possible, and were to be explained 'to our own troops, and to the Finns, as concerned exclusively with the development of communications between Norway and Finland'. The purpose was 'to enable divisions to be moved from the reserves of Wehrmacht Commander Norway to Finland, even in winter if necessary'; see *Hitlers Weisungen*, 232.

<sup>120</sup> Geb. AOK 20, 'Studie über Rückführung der 20. Gebirgsarmee', 9 Oct. 1943, BA-MA RH 20-20/73.

the war economy, notably the ‘essential need’ to protect north Finnish nickel production.<sup>121</sup> Also, the Wehrmacht operations staff were hardly attracted by the idea of moving the Lapland Army south, and so turning the whole of Finland into a battlefield from which they were not very likely to emerge as victors.

The preparations to implement Directive No. 50 had got off to a rather slow start in the autumn and winter, partly on account of the weather and partly because the political conditions seemed more stable. In mid-February the OKW insisted that the preparations be speeded up, ‘in view of the uncertain political situation in Finland’.<sup>122</sup> At the same time, in addition to the withdrawal movement now code-named Operation BIRCH, orders were given to occupy the Åland Islands (Operation FIR WEST) and the island of Suursaari (Operation FIR EAST).<sup>123</sup> The two FIR operations were offensive at operational level, but they both had a strategic defensive objective. Whereas the main purpose of taking Suursaari was to supervise the German mine barriers, the occupation of the Åland Islands was intended to ensure the necessary military protection for imports of Swedish ore to Germany. In the latter case, in which the navy was in charge, the plans were not without problems and had to be abandoned. Owing to the tricky status of this—officially demilitarized—group of islands in international law, there was, as Blücher warned, a ‘danger that Soviet Russia, Sweden, and even Finland might form [a] united front against us on this question’.<sup>124</sup>

### 3. FROM THE JUNE CRISIS TO FINLAND’S WITHDRAWAL FROM THE WAR

The framework conditions determining Finnish policy and conduct of the war changed dramatically on 9 June 1944. On that day—three days after the start of the Allied invasion of France, and just two weeks before the Soviet assault on the central section of Germany’s eastern front—the Red Army launched its long-planned major offensive on the Karelian Isthmus.<sup>125</sup> For the defenders, the attack itself was less of a surprise than the time when it took place<sup>126</sup> and the singular force with which it was conducted. They had very little to pit against the massive manpower

<sup>121</sup> Speer, in a letter to the foreign ministry, 15 Dec. 1943, quoted in *Expansionsrichtung Nordeuropa*, doc. 93, 168. On the importance of north Finnish nickel production for Germany, see also Vuorisjärvi, *Petsamon nikkeli kansaivalisessä poliitikassa*, 199 ff.

<sup>122</sup> Quoted in Menger, *Deutschland und Finnland*, 189.

<sup>123</sup> See also KTB OKW, iv, 874 ff.

<sup>124</sup> Blücher, telegram No. 569, 29 Mar. 1944, PA R 29585, fo. 156.

<sup>125</sup> For a detailed account of the military action, see *Jatkosodan Historia*, iv and v; also Glantz, *The Battle for Leningrad*, 415–58.

<sup>126</sup> Recent research based on Soviet records shows that the decision to launch the long-planned attack on Finland was taken only after Helsinki rejected the Soviet peace terms in April 1944. In fact, the Finns had expected an attack at that time, and its absence encouraged a false sense of security. The date of the attack, 9 June, was approved by Soviet headquarters only three days earlier, i.e. after the news of the Allied landings in Normandy had arrived. See Büttner, *Sowjetisierung oder Selbständigkeit*, 78–9, Heiskanen, ‘The Effect of Finnish Military Intelligence’, 284 ff., and more recently Manninen, *The Soviet Plans*, 129 ff.

and equipment assembled for the attack. Although the numerical strength of the attacking units,<sup>127</sup> with over 600,000 men, was less than at the height of the legendary 'Winter War' in January 1940, it was still more than twice that of the forces available on the Finnish side. Moreover, this time the Red Army understood, far better than it had three-and-a-half years earlier, that it must concentrate its forces in the breakthrough area, just a few kilometres wide, along the Vyborg–Leningrad railway line. The discrepancy in equipment was perhaps even more decisive, with Soviet superiority of about 5 to 1 in cannon and grenade launchers, and about 7 to 1 in tanks and aircraft.<sup>128</sup>

With such differences in strength, the Soviet troops very quickly achieved a breakthrough. Vyborg, one of the most historically and symbolically important cities in Finland, was lost on 20 June. Mannerheim had already asked Berlin, the day before, for six to eight divisions to be made ready, and for new weapons to be delivered, in order to halt the enemy forces, which had meanwhile advanced to a depth of more than 100 kilometres.<sup>129</sup> The initial German response was so disappointing that on 22 June, just a couple of days later, the Finnish government informed the Soviet Union—again via Stockholm—that it was prepared to break off relations with Germany and enter into peace negotiations. At the same time, the inner circle within the government was considering appointing Mannerheim as president, since the marshal of Finland was seen as the only person with the necessary authority to persuade the people and the army to accept, without resistance, the harsh peace terms that were to be expected.<sup>130</sup>

Events now began to escalate. That same day—the day on which Operation BAGRATION, the Soviet summer offensive against the German Army Group Centre, started<sup>131</sup>—the foreign minister, von Ribbentrop, paid a 'heavy-handed' visit<sup>132</sup> to Helsinki to inform the Finnish government, in the Führer's name, that Germany would stop all support immediately (including aid deliveries already on the way) unless the Finnish government was prepared to sign a formal undertaking not to

<sup>127</sup> The attack was carried out by Leningrad Front's 21st and 23rd Armies (under Gen. Govorov) and Karelian Front's 7th and 32nd Armies (Gen. Meretskov). Govorov's troops were to conduct the attack on Vyborg, while Karelian Front launched its attack a few days later in the direction of Petrozavodsk (Petroskoi). For an account from the Soviet viewpoint, see Stemenko, *Im Generalstab*, ii. 431–44.

<sup>128</sup> For more detailed figures, see Menger, *Deutschland und Finnland*, 195. See also the slightly different data in Stemenko, *Im Generalstab*, ii. 438.

<sup>129</sup> This was Mannerheim's second request for help in the space of a week. Berlin had already cancelled the spring embargo on arms and grain in response to his first request on 12 June. See Jokisipilä, *Aseveljä vai liittolaisia?*, 266 ff.

<sup>130</sup> This idea was based on arguments which Prime Minister Linkomies had put forward back in the spring of 1944. At that time, however, they had been contested in the cabinet and Mannerheim himself had rejected them. See Jokisipilä, 'Die Sonderkriegsthese', 55–6, and Büttner, *Sowjetisierung oder Selbständigkeit*, 81–2.

<sup>131</sup> On this, see Part V, Chapter II.3 of the present volume.

<sup>132</sup> Menger, 'Finnland', 293. The dramatic atmosphere of those days is clearly reflected in the memoirs of those involved. See Mannerheim, *Memoirs*, 481 ff., Blücher, *Gesandter zwischen Diktatur und Demokratie*, 365 ff., and Erfurth, *Der Finnische Krieg*, 241 ff.

seek a separate peace.<sup>133</sup> Only twenty-four hours later, on 23 June, Helsinki received another message, this time from Moscow, inviting it to submit a declaration, signed by the president or the foreign minister, 'that Finland is prepared to capitulate and sue the Soviet government for peace'. On that condition, and only then, was 'Moscow prepared to receive a Finnish delegation'.<sup>134</sup>

The government in Helsinki now had to decide whether to capitulate or, for the sake of some short-term aid, remain tied to a great power that was itself doomed. They were caught, it seemed, between a rock and a hard place, and a decision had to be taken at once, in view of the threat of military collapse. The Finnish war cabinet was wrestling with two main questions in this connection. The first was how the Soviet call for capitulation was to be understood. Was it a demand for *unconditional* surrender, or was it an invitation to enter into negotiations, as the express call to send a Finnish delegation to Moscow might indicate? The fact that the responsible authorities in Helsinki, notably Marshal Mannerheim and Prime Minister Linkomies, interpreted the Soviet note—probably correctly, according to the latest research<sup>135</sup>—as meaning 'unconditional surrender', was to be of decisive importance for the further course of events. The prospect of inevitable and unconditional surrender was the reason (both necessary and sufficient) why the Finnish government was prepared to consider Ribbentrop's final demands at all.

This raised a second problem, namely the question of the form which the agreement with Germany, recommended primarily by Mannerheim and Linkomies, should take. In the tough negotiations with Ribbentrop over the next few days, the Finnish side reiterated the position it had taken on an earlier occasion, namely that a formal treaty was out of the question because, under the terms of the constitution, it would require the consent of parliament,<sup>136</sup> and the result of a vote on the issue was more than doubtful. In the light of this argument, with which the German side could hardly find fault, it was decided instead—as in the spring of the previous year<sup>137</sup>—to seek some way of securing the desired binding assurance from Finland without involving the parliament. It was finally agreed that President Ryti should send Hitler a confidential letter giving the assurances requested by the Reich. In addition, there was to be an official communiqué on the negotiations between the two sides, and a radio address by the prime minister stressing 'Finland's

<sup>133</sup> The most thorough investigation of the subsequent events is Jokisipilä's dissertation, *Aseveljää vai liittolaisia?* His theory that Ribbentrop's demands were the result of a policy which had not been approved by Hitler in that form, and which the foreign minister was pursuing on his own initiative, intent on making his mark, is not accepted in the following, despite some arguments worthy of consideration.

<sup>134</sup> Message from Madame Kollontai, 23 June 1944, quoted in Büttner, *Sowjetisierung oder Selbständigkeit*, 80.

<sup>135</sup> See Büttner, *Sowjetisierung oder Selbständigkeit*, 80–1 and 83–4, based on Soviet sources, also Turtola, 'Finland's Path', 40–1. For a different interpretation, albeit without convincing empirical evidence, see Komarov, 'Finland's Withdrawal', 30.

<sup>136</sup> The Finnish version provided, in paragraph 33(1): 'Decisions on war and peace shall be taken by the president with the agreement of parliament.'

<sup>137</sup> On this, see the author's observations in Part I, Chapter II.2 of the present volume.

self-evident duty to lay down its arms only with the agreement of Germany'.<sup>138</sup> The text of the letter which Ryti addressed to Hitler on 26 June in the wording agreed by the negotiating parties, and which was delivered by Ribbentrop in person, opened with a reference to Germany's willingness to supply Finland with more weapons. This was followed by what, from the German government's viewpoint, was the decisive passage:

I must take this opportunity to assure you that Finland is determined to continue the war against Soviet Russia at Germany's side until the Soviet threat to Finland has been removed. In view of the assistance that Germany is giving to Finland, as its comrade-in-arms, in the difficult situation in which it now finds itself, I declare, in my capacity as President of the Finnish State, that I will make peace with the Soviet Union only with the consent of the government of the German Reich, and that I will not permit Finnish governments appointed by me, or any other persons, to engage in armistice or peace talks, or in negotiations to that end, without the consent of the government of the German Reich.<sup>139</sup>

The deal struck in the so-called midsummer negotiations, which had moreover been rejected by a minority of the Finnish cabinet,<sup>140</sup> did not last long. Paradoxically, this seems to have been mainly because, from the Finnish point of view, the Ryti–Ribbentrop agreement quickly fulfilled its purpose. Although historians still disagree as to whether Ryti's declaration of commitment was really necessary for the restabilization of the front just a few days after the fall of Vyborg,<sup>141</sup> there can be no doubt that the substantial German deliveries of munitions and armour-piercing weaponry, in particular,<sup>142</sup> as well as the promise of further grain deliveries, were such as to strengthen Finland's defences, both psychological and material, for some time to come.<sup>143</sup> Precisely for that reason, they also created what appeared to

<sup>138</sup> Quoted in a letter from Blücher to Grundherr, 28 June 1944 which contains a concise account of the negotiations outlined here from a German point of view (*Tagebücher* 9, fos. 3126–9, PA, Blücher papers). Linkomies gave his address on 2 July 1944, not without adding some remarks qualifying the agreed passage. See Jokisipilä, 'Die Sonderkriegsthese', 58.

<sup>139</sup> Reproduced in *Operationsgebiet östliche Ostsee*, 65 (Annex 3).

<sup>140</sup> The decisive vote in the government resulted in a majority of 10 to 6 in favour of Ryti making the required declaration. The Social Democrat ministers, in particular, voted against the written undertaking. On this, see also Linkomies' memoirs, *Vaikea aika*, 354 ff. In opposition circles, thought was even given to forming a committee-in-exile in Stockholm as a counterweight to the government. On this, see Paasikivi's diaries, *J. K. Paasikiven Päävirkirjat*, pt. 1, 2–3 (30 June 1944).

<sup>141</sup> This has been questioned in recent works, notably by Jokisipilä, *Aseveljä vai liittolaisia?*, 361–6.

<sup>142</sup> A list of the military equipment delivered by Germany in the period 23 June to 3 September 1944 is to be found in *Operationsgebiet östliche Ostsee*, 66 (Annex 4), and also in Jokisipilä, *Aseveljä vai liittolaisia?*, 364 ff.

<sup>143</sup> This circumstance nurtured the view, still held to some extent in Finland, that the country has the German dictator above all to thank for the preservation of its independence. This bizarre view of Hitler as the saviour of the only parliamentary democracy fighting at his side finds no support in the surviving German sources. Quite apart from Hitler's fundamental and unchanging distrust of Finland's democratic culture and institutions, it is clear, especially from Goebbels' since-published diary entries, that the aim of the dictator's Finland policy was never, at any point, to preserve that country's independence but simply to use it as an instrument in his own conduct of the war. See also, to this effect, Wegner, 'Ein "Weg ins Chaos"?'.

Mannerheim and others as the necessary conditions for getting Finland out of the war on more favourable terms than in June.

Developments on the various fronts fully confirmed the Finnish commander-in-chief's calculations. The successful defence mounted by the Finns in the battle of Tali-Ihantala was particularly important. With the help of good radio intelligence, the Finnish forces<sup>144</sup> held their own on a narrow strip of land between Vyborg Bay and the Vuoksi river for almost three weeks (from 25 June to 9 July 1944), in eventful engagements with the numerically superior Soviet 21st Army, which had massive artillery and air support. The heavy fighting all over the Karelian Isthmus came to an end in the middle of July, and shortly afterwards in eastern Karelia too, where the Finnish troops had been involved in heavy withdrawal battles since the end of June.<sup>145</sup> The Finnish army had been obliged to evacuate large stretches of land—approximately 55,000 square kilometres altogether—in both places (see Map vi.1.2), but it had still managed in the end to establish a front line almost identical to that in the 1939/40 Winter War. The Red Army, on the other hand, despite a series of major operational successes, had failed to achieve its strategic aim, namely the military collapse and capitulation of the enemy. Instead, it found itself obliged to withdraw most of its units from the Finnish front in the course of July, in order to deploy them in the decisive battle against Germany that had now begun.

Given these developments, it is not surprising that in mid-July the Kremlin let the Finnish government know, through the customary Swedish channels, that it by no means expected unconditional surrender from Helsinki.<sup>146</sup> This scarcely veiled invitation to renew peace-feelers was all the more welcome since, in reaction to the Ryti–Ribbentrop agreement, the United States—whose willingness to mediate had repeatedly been overestimated by the Finnish side—had meanwhile broken off diplomatic relations with Helsinki,<sup>147</sup> thereby clearly indicating that, in its view, Finnish requests for peace should be addressed exclusively to Moscow. There had also been a further deterioration in Germany's military situation. In particular, great concern had been caused by the news that Army Group North had been obliged to evacuate Narva as well in the closing weeks of July and was now cut off from the rest of the German eastern front.<sup>148</sup> In view of these developments, Mannerheim dropped his resistance to the long-planned reassignment of power in the country. On 1 August, Ryti, physically and mentally exhausted by past events, resigned from his post to make way for the marshal of Finland, on whom the presidency was conferred by special act. An almost entirely new government was appointed.<sup>149</sup>

<sup>144</sup> Consisting of the Finnish IV Corps (Lt.-Gen. Laatikainen) and the only Finnish armoured division (Maj.-Gen. Lagus), reinforced by some German units (Detachment Kuhlmeier and 303rd Assault Gun Brigade). For a detailed account of the fighting, see *Jatkosodan Historia*, v, ch. 4.

<sup>145</sup> See *Jatkosodan Historia*, ii and v.

<sup>146</sup> See Büttner, *Sowjetisierung oder Selbständigkeit*, 87.

<sup>147</sup> See Berry, *American Foreign Policy*, 412 ff.

<sup>148</sup> On this, see Part V, Chapter IV.2 (b) of the present volume.

<sup>149</sup> On this, see also the interpretation of events in Mannerheim, *Memoirs*, 481 ff. and 491 ff.

Both Moscow and Berlin were somewhat reserved at first in their attitude to the new Finnish authorities. As to Hitler, he appears to have initially been ‘not sure how the Finnish question will develop’, whereas Goebbels spontaneously qualified the change of power in Helsinki as ‘a regular *coup d'état*’ by Mannerheim, undertaken for the purpose of ‘starting armistice negotiations with the Soviet Union immediately’.<sup>150</sup> He—quite rightly—expected very little to come from the immediately arranged visit to Mannerheim’s headquarters by the new commander-in-chief of Army Group North, General Ferdinand Schörner. Like the minister of propaganda, Keitel too now thought that ‘Finland would go limp’. Just like Pietro Badoglio, Mannerheim clearly intended to ‘move slowly towards treachery’. It was ‘the same old story. When it comes down to it, it’s always the generals or marshals who surrender.’<sup>151</sup>

While the chronicler of the Reich’s downfall misinterpreted the circumstances surrounding the change of government in Finland in asserting that it was a *coup d'état*, he was nevertheless quite right about the underlying intentions. Couched in official diplomatic language, the justification given for Mannerheim’s assumption of the office of president was, for the time being, quite different. Repeated assurances were given in Helsinki that ‘these are such fateful times that all our forces have to be concentrated in one man’s hands. No further conclusions are to be drawn from this.’<sup>152</sup> That the explanation was threadbare became clear by 17 August at the latest, when the head of the OKW arrived in Finland to confer the Oak Leaves decoration on Mannerheim and the Knight’s Cross on Heinrichs, the chief of the general staff.<sup>153</sup> Immediately following this gesture, which was intended as a symbolic reconfirmation of the hosts’ duty of brotherhood in arms, Mannerheim deliberately informed his visitor that he did not feel bound by the assurances which Ryti had given the Reich. Those assurances had been given ‘only because of the very serious situation Finland had found itself in at the time’, and they were rejected by ‘the majority’ of the Finnish people. With the resignation of Ryti and the ministers who had been parties to the agreement, the Finnish government had ‘regained its freedom of action’.<sup>154</sup>

In making this statement, Mannerheim had officially announced the change of political direction. The foreign ministry may have attempted for a few days to make

<sup>150</sup> Goebbels, *Die Tagebücher*, pt. 2, xiii. 213 and 204, 30 Aug. 1944.

<sup>151</sup> Ibid. 204 and 212, 3 Aug. 1944, also 219 and 224, 4 Aug. 1944. All Goebbels had to say about the new Finnish government was that it consisted of ‘rather colourless characters’ (‘old friends of Russia’), and that ‘nothing particularly good is to be expected’ of it (ibid. 236, entry for 10 Aug. 1944). On Schörner’s fruitless visit, see also Erfurth, *Der Finnische Krieg*, 261 ff.

<sup>152</sup> Telegram from Blücher to the foreign ministry, 1 Aug. 1944, quoted in ADAP, Series E, viii, doc. 143, 269.

<sup>153</sup> Only two months earlier, the German command had urged that the chief of the general staff be dismissed, as he was now considered defeatist. See Erfurth, *Der Finnische Krieg*, 246.

<sup>154</sup> Telegram from Blücher to the foreign ministry, 18 Aug. 1944 (ADAP, Series E, viii, doc. 163). See also Erfurth, *Der Finnische Krieg*, 267 ff., and Mannerheim, *Memoirs*, 492–3. According to the unpublished memoirs of the German military attaché at the time, Colonel Kitschmann, there was ‘probably not a single experienced diplomat in the embassy who seriously thought that the assurances given in the president’s letter were to be trusted’. The circumstances surrounding them had been ‘too much like blackmail’. Kitschmann, ‘Als Militärattaché in Helsinki’, 141–2 (BA-MA, MSg 2/3317).

light of Mannerheim's words, by treating them as politically non-binding comments made in a conversation among military men,<sup>155</sup> but it was very soon clear to all observers that a definitive break between the long-standing comrades-in-arms was now imminent.

The German government was disappointed, and not without reason. There was, of course, a certain unintentional irony in Nazi politicians, of all people, complaining 'that it is unworthy of an honourable state to employ [...] legalistic interpretations to wriggle out of a solemn undertaking',<sup>156</sup> but the arguments advanced against the Finnish side were not easily dismissed. It was argued, in particular, that 'it [is] absolutely unthinkable, according to general legal principles, for one head of state to give another head of state an undertaking of this kind that is binding on himself alone, as suggested in this case'—especially as Ryti had expressly stated, in his letter to Hitler on 26 June, that he was making his declaration in his capacity 'as president of the Finnish state'. Furthermore, the validity of the midsummer agreements 'cannot be impugned by any arguments based on the Finnish constitution, to the effect that Ryti had exceeded his constitutional powers because he had acted without the approval of the Finnish parliament'. In the first place, the parliament's approval was not required in this case, and secondly, even if the opposite view is taken, it does not affect the validity of the agreement under international law, for the purposes of which 'all questions of domestic law are completely irrelevant'.<sup>157</sup>

There can be little doubt that the faltering great power, Germany, was properly duped by its smaller partner. This seems all the more certain in hindsight, since research has found convincing proof that Finland's renunciation of the June agreements was by no means a spontaneous reaction born of necessity, as was still willingly claimed long after the war. On the contrary, it was clearly a manoeuvre planned well in advance—since the spring of 1943, in fact<sup>158</sup>—and designed 'to protect Finland's interests, even in the most difficult crisis situations'.<sup>159</sup> What, then, was the status in international law of the agreements concluded between the comrades-in-arms? Is not the contractual nature of those agreements ascribed to them by the German side doubtful, if it was clear from the outset that the Finnish side had no intention of being legally bound by them? Moreover, the German foreign ministry was well aware that, in view of the aforementioned constitutional problems, Helsinki was seeking an arrangement below the level of a treaty, since that was precisely why the comparatively weaker solution of an assurance in letter form was chosen. Even if these arguments are disregarded, the form of *assensio mentium* adopted by the two states is held to be irrelevant,<sup>160</sup> and Ryti's letter is accorded the status of an international

<sup>155</sup> See telegram from Ribbentrop to Blücher, 23 Aug. 1944 (*ADAP*, Series E, viii, doc. 169).

<sup>156</sup> Quoted in Ribbentrop's telegram to Blücher, 10 Aug. 1944 (*ADAP*, Series E, viii, doc. 152).

<sup>157</sup> *Ibid.*

<sup>158</sup> By then, at least, the room for manoeuvre under constitutional law had already been thoroughly tested. See Jokisipilä, *Aseveljä vai liittolaisia?*, 140 ff.

<sup>159</sup> Jokisipilä, 'Die Sonderkriegsthese', 60.

<sup>160</sup> Thus in line with contemporary German doctrine on international law; see Ehrhardt, *Die Ratifikationsbedürftigkeit*, 75.

treaty, there are still doubts as to its validity. First and foremost, there is the fact that the Finnish government did not willingly enter into the agreement demanded by Germany, but did so only under the pressure of an existential predicament, for which the German side was not responsible but which, accompanied by massive threats, it exploited to its own advantage. Without going into the manifold problems of international law in this connection,<sup>161</sup> it nevertheless seems plausible from a historical perspective to regard the midsummer negotiations not as a formal treaty but as a kind of gentlemen's agreement—although, at the time of its conclusion, at least one of the parties had already decided not to behave like a gentleman.

The successful Finnish deceptive manoeuvre helped in no small measure to preserve the country's national independence and political culture in the war between the great powers. As already pointed out, it gave the Finnish government a further breathing space and, with it, an opportunity to make peace on comparatively more favourable terms. That opportunity presented itself on 29 August, when the Soviet government, with the agreement of the western Allies, indicated that it was willing to enter into negotiations, on condition that Helsinki first officially broke off relations with Germany and demanded the withdrawal, by 15 September at the latest, of the German troops remaining on Finnish territory. Regardless of the fact that any such withdrawal within the specified time limit was wholly illusory even under the most favourable circumstances, the Finnish government decided, after some initial hesitation, that it had no alternative but to agree to the Soviet conditions.<sup>162</sup> In what was considered to be a very friendly letter, Mannerheim informed Hitler on 2 September that 'our roads will probably soon part', because Finland, unlike the Reich, could not remain at war any longer 'without the whole future of the small Finnish nation being jeopardized'.<sup>163</sup> That same day, the German ambassador was informed of the Finnish government's decision, which was published two days later.<sup>164</sup> On 5 September the guns on the Finnish–Soviet front fell silent. On 7 September a Finnish delegation led by the new prime minister, Antti Hackzell, set off for Moscow to negotiate the armistice. It was finally concluded on 19 September, after nerve-racking delays and tough negotiations, and by then the German legation and the German liaison general and his staff had already left Finland, on 10 and 13 September 1944 respectively.<sup>165</sup>

<sup>161</sup> There is as yet no thorough assessment of the Ryti–Ribbentrop agreement in historical international law terms.

<sup>162</sup> For details, see Menger, *Deutschland und Finnland*, 222 ff., and Büttner, *Sowjetisierung oder Selbständigkeit*, 89 ff.

<sup>163</sup> Mannerheim's letter to Hitler, 2 Sept. 1944, quoted in Mannerheim, *Memoirs*, 494–5. (The original letter, together with handwritten drafts, is to be found in the National Archives, Helsinki, Mannerheim papers, 503.)

<sup>164</sup> See telegram from Blücher to the foreign ministry, 2 Sept. 1944 (ADAP, Series E, viii. 210).

#### 4. THE LAPLAND WAR

In losing Finland, Germany lost the last but one of its allies. Unlike Hungary, which was prevented from taking a similar step only by the force of German arms, and unlike Italy, which had long been a battlefield for the great powers,<sup>166</sup> or Romania, which had declared war on the Reich at the end of August under the pressure of Soviet occupation,<sup>167</sup> Finland had managed to keep its national sovereignty intact—at least for the time being. For Goebbels, however, it was clear that the country had ‘sold its national destiny’.<sup>168</sup> ‘The Finns’, he wrote in his diary on 5 September,<sup>169</sup> ‘have sold out to Bolshevism, lock, stock, and barrel, and they will pay for the short-sightedness of their statesmen with their political death as a nation. They are on the road to chaos.’ In Berlin, according to the same source, the reaction to this development was ‘naturally somewhat stunned’, although the break was ‘not taken too tragically’ at Führer headquarters. ‘Militarily, we were prepared for it, so there can’t be any serious repercussions in this case, or at least not as serious as they were when Romania defected. Politically, of course, Finland’s defection is very regrettable. It is a further blow to our chances in the war.’<sup>170</sup>

At German headquarters, they were not yet really prepared to sit by and watch events unfold, or to take purely defensive political and military measures. On 26 June—that is, at the height of the June crisis—the Wehrmacht command staff presented a ‘Study on continuation of the battle in southern and central Finland in the event of Finland’s collapse’, which was based on proposals Dietl had made during his latest visit to Berchtesgaden and was to be understood as an alternative to the primarily defensive plans for Operation BIRCH. The central idea of the study was that the western and southern coasts of the country—and particularly the ports of Helsinki and Hanko, which were important for controlling access to the Gulf of Finland—were to be kept ‘firmly in German hands’. To that end, the 40- to 60-kilometre-wide stretch of coast between the Gulf of Finland and the southern Finnish Lakeland, where the threat appeared to be most serious, was to be secured by some ten divisions and five or six frontier guard battalions, to prevent the Red Army from advancing against the southern Finnish coast and into ‘the heart of Finland in the Helsinki–Hämeenlinna–Tampere area’. The strategic objective of the operation, in addition to protecting the nickel deposits in the north, was to secure the continued transport of Swedish ore across the Baltic and the delivery of supplies to the Lapland Army through the ports in western Finland, and in general to stop the Russian Baltic fleet gaining access to the Baltic, ‘and thus being able to operate in the area of Army Group North and off the German coast’.<sup>171</sup>

<sup>166</sup> See Part VI, Chapter IV of the present volume.

<sup>167</sup> See Part V, Chapter VI of the present volume.

<sup>168</sup> Goebbels, *Die Tagebücher*, pt. 2, xiii. 410 (4 Sept. 1944).

<sup>169</sup> Ibid. 414 (5 Sept. 1944).

<sup>170</sup> Ibid. 411–12 (4 Sept. 1944).

<sup>171</sup> WFSt/Op (H)/Nord, ‘Studie über die Fortführung des Kampfes im süd- und mittelfinnischen Raum im Falle eines Zusammenbruches Finnlands’, 26 June 1944 (BA-MA RW 4/v. 639, fos. 136–40).

The fatal weakness in the Wehrmacht command staff plan was that it was based, in at least two respects, on premisses that were to prove unrealistic in the coming weeks and months. First, it was taken for granted ‘that substantial sections of the Finnish armed forces would voluntarily undertake to continue to fight under German command’.<sup>172</sup> And second, it was assumed that—‘depending on how political and military conditions within Finland developed’—either ‘a strongly pro-German national government’ would be installed or Mannerheim would take over as military dictator. Consideration was even given to the possibility that a German military administration or a Reich commissioner (as in Norway) might assume full powers if Finland were to collapse.<sup>173</sup>

The hope expressed by Ribbentrop at the same time, namely that there might be a thousand reliable men to be found in Finland who were resolved to seize power in the country, was not shared by Blücher or Erfurth,<sup>174</sup> although the idea continued to occupy the minds of German officials and commanders for several months. Thus, Ribbentrop and Himmler thought of unleashing a Finnish partisan war,<sup>175</sup> while the SS main office, under Obergruppenführer Gottlob Berger, planned to form a Finnish SS regiment, although there were only a few dozen volunteers to be found among Finnish deserters, political refugees, and prisoners of war.<sup>176</sup> The Army Group North general staff produced a proposal—promptly seized on by Hitler—to revive the 27th Light Infantry Battalion, which had become legendary in Finland.<sup>177</sup> There were, in fact, some calls for solidarity, mainly emanating from Finnish military circles, in the crucial weeks before and after the break between the comrades-in-arms.<sup>178</sup> And Blücher saw fit to inform the German foreign ministry, a few days before he left Helsinki, that ‘a few high-ranking Finnish officers’ were thinking of joining the German Lapland Army as volunteers, and that ‘some young Finnish military men’ had already ‘left Finland secretly on German ships’.<sup>179</sup> It was even hoped that, of the Finnish generals, Generals Talvela and Österman would

<sup>172</sup> Ibid., fos. 136.

<sup>173</sup> WFSt/Qu 1, speaking notes, 15 July 1944 (ibid., fos. 148–9).

<sup>174</sup> See Erfurth, diary entries, 8–9 Sept. 1944 (BA-MA N 257/v. 4, 1975 ff.).

<sup>175</sup> In a telegram to Blücher on 5 Sept. 1944, Ribbentrop suggested that he see ‘whether there were possibilities for already making preparations to help organize the partisan movement that was to be expected in the event of Finland’s occupation by Soviet Russia’ (PA, Inland II g, fo. 231).

<sup>176</sup> See also Menger, *Deutschland und Finnland*, 220–1.

<sup>177</sup> See KTB OKW, iv. 897 ff. The Finnish volunteer unit formed in Germany during the First World War was considered to be the original military embodiment of Finnish independence from Russia. In fact, most of the Finnish generals who served in the Second World War came from that battalion. On the history of the unit, see Kesselring’s recent work, *Des Kaisers finnische Legion*.

<sup>178</sup> See, e.g., a telex of 7 Aug. 1944 from former Finnish SS commanders to Himmler (PA, Inland II g, fo. 220).

<sup>179</sup> Telegram from Blücher, 8 Sept. 1944 (Tagebücher 9, fo. 3288, PA, Blücher papers). In this connection, the Twentieth Army chief of staff noted on 5 September 1944 that the Führer would welcome it, ‘if as many Finnish officers and men as possible join us in continuing the battle. Propaganda for that purpose should be spread by word of mouth, not officially by means of leaflets’ (Hermann Höltner, quoted in Menger, ‘Das militärische Verhältnis’, 301).

prove willing and able to organize Finland's continued resistance on the lines suggested by Berlin.<sup>180</sup>

From the German viewpoint, the prospects for such a resistance movement inevitably increased as the situation in Finland itself became more desperate. So, after 5 September, any bad news from Finland was good news, at least for the ideologues in Berlin. Following this twisted logic, by which the representatives of the foundering Nazi state turned evil tidings into hopes of victory, the occupation and 'Bolshevization' of Finland was not only expected but eagerly awaited, since it would, as Goebbels put it, open up 'a whole range of possibilities and opportunities for us'.<sup>181</sup> In mid-September the elated propaganda minister noted 'a kind of counter-movement in the Finnish armed forces'.<sup>182</sup> Now that 'Finland is a lost land with absolutely no hope for the future',<sup>183</sup> he thought the time had come 'for a more active intervention in the Finnish question. We are preparing an appeal to the Finnish people, and we would willingly install a Finnish national government in the part of Finland that we still hold. At all events, there is no question of our giving up Finland without a fight. The propaganda we direct at Finland must, of course, be very sophisticated.'<sup>184</sup>

There was no lack of efforts in that direction in the coming weeks and months. Representatives of the German foreign ministry, the SS, the propaganda ministry, and the OKW propaganda department met in a 'Finland Committee' to coordinate their activities. The main objective was, on the one hand, to strengthen the spirit of anti-Soviet resistance in the country by means of appropriate propaganda measures (including a secret 'Free Finland' radio transmitter), and, on the other, to create the organizational conditions needed in order to set up a Finnish 'freedom committee' and form a Finnish free corps within the framework of the Waffen SS.<sup>185</sup>

The German efforts were doomed to failure, for two main reasons. The first and most important was the fact that the Soviet Union decided not to occupy Finland—as the Finnish authorities too had feared<sup>186</sup>—but was content to insist that its terms for an armistice were correctly fulfilled. Those terms were harsh, but did not constitute a direct threat to the country's existence.<sup>187</sup> The second reason, which was more than merely inconvenient for Germany, was that Mannerheim's authority remained clearly intact, especially in the months when the danger was at

<sup>180</sup> On the key role assigned primarily to Talvela in this connection, see SS-Brigadeführer Schellenberg, telegram to the foreign ministry, 6 Sept. 1944, and a note from Ambassador Ritter, 17 Sept. 1944 (both in PA, Inland II g, fos. 237 and 254).

<sup>181</sup> Goebbels, *Die Tagebücher*, pt. 2, xiii. 500 (17 Sept. 1944).

<sup>182</sup> Ibid. 499.

<sup>183</sup> Ibid. 532 (21 Sept. 1944).

<sup>184</sup> Ibid. 567 (26 Sept. 1944). For more details, see also Wegner, 'Ein "Weg ins Chaos"?' 347 ff.

<sup>185</sup> On this, see Metzger telegram No. 3116, 18 Nov. 1944, and the minutes of various Finland Committee meetings held during that month (all in PA, Inland II g, fos. 263–77).

<sup>186</sup> Plans continued to be made for underground combat operations in the event of a Soviet occupation of the country, especially in the circle of the head of the intelligence service, Colonel Paasonen. For a summary account, see Jussila, Hentilä, and Nevakivi, *From Grand Duchy to Modern State*, 223 ff.

<sup>187</sup> For a detailed analysis of the Soviet attitude, see Büttner, *Sowjetisierung oder Selbständigkeit*, esp. 110–29; also Polvinen, *Between East and West*, Nevakivi, 'A Decisive Armistice', and Troebst, 'Warum wurde Finnland nicht sowjetisiert?'

its greatest. As a result, the ‘fool’ and ‘political dilettante’,<sup>188</sup> the man who was, from Berlin’s point of view, the key figure in the Finnish ‘betrayal’, he of all people had to be spared from attacks by German propaganda, leaving it with no bite at all. At the beginning of October, after the first Finnish attacks on the Lapland Army had been launched, even Goebbels was forced to admit that, in view of the Finnish president and commander-in-chief’s ‘completely undiminished’ authority, there was ‘at present no hope of bringing substantial sections of the Finnish armed forces over to our side’<sup>189</sup> or ‘of building an effective movement against the government or against Mannerheim’.<sup>190</sup> The statement issued in this connection, that the Finnish people ‘had too much respect for authority’,<sup>191</sup> was not without its comical side, coming as it did from the mouth of the Nazis’ chief propagandist.

Things appeared to go remarkably smoothly at first. As soon as the Finnish armistice and its terms were known, the OKW and Twentieth Army HQ launched Operation BIRCH. On both the German and the Finnish sides considerable importance was attached to ensuring that the necessary measures were taken by amicable agreement.<sup>192</sup> The first priority was to evacuate the few Wehrmacht agencies and bases, and other German Reich establishments, in southern Finland. To that end, the office of the German general at Finnish headquarters, which was no longer needed, was rapidly transformed into the ‘South Finland Evacuation Staff’. The Finns, with whose authorities Erfurth had been on extremely friendly terms to the last, obviously had every reason to help, and willingly did so, making transport facilities, particularly ships, available. The only remaining German army unit in southern Finland, 303rd Assault Gun Brigade, embarked on 6 September, and the German airfield at Pori was blown up. The last evacuation transport, with General Erfurth on board, put to sea on 13 September. And, with that, the situation in southern Finland appeared to have been resolved.<sup>193</sup>

However, cooperation between German and Finnish agencies, which had continued to work well, was painfully upset by a bloody incident that occurred just a few days later. The Naval War Staff, seriously concerned to protect the German position in the eastern Baltic for strategic reasons, obtained Hitler’s permission to conduct its long-planned Operation FIR EAST, that is, the occupation of the Finnish island of Suursaari, without delay.<sup>194</sup> The surprise attack, launched in the night of 14–15 September and involving some 3,000 troops, quickly ended in disaster as a result of fierce Finnish defence and Soviet air support. The price that was paid, over

<sup>188</sup> Goebbels, *Die Tagebücher*, pt. 2, xiv. 63 (9 Oct. 1944).

<sup>189</sup> Ibid. 45 (6 Oct. 1944).

<sup>190</sup> Ibid. 77 (11 Oct. 1944). The news in November, that the paramilitary security corps, which were to be disbanded, were rebelling against the prospect of disarmament, briefly rekindled hope in Goebbels and others, but it soon gave way to a sense of impotence in the face of developments in the far north. See Wegner, ‘Ein “Weg ins Chaos”’, 399–400.

<sup>191</sup> Goebbels, *Die Tagebücher*, pt. 2, xiii. 410 (4 Sept. 1944).

<sup>192</sup> See Erfurth, *Der Finnische Krieg*, 288.

<sup>193</sup> See ibid. 277 ff., and Menger, *Deutschland und Finnland*, 222 ff.

<sup>194</sup> On the other hand, the plan to occupy the Åland Islands, code-named FIR WEST, was abandoned, partly because the necessary forces were not available and partly because it was feared that Sweden would intervene. On the naval strategy background, see *Operationsgebiet östliche Ostsee*, 154 ff., and Norberg, ‘Die Ostsee’, esp. 235–6.

150 killed and more than 1,200 German prisoners of war, included a considerable hardening in relations between the former allies, this being the first occasion on which they had come face to face as enemies. The Finnish ships assigned to the transport of German military goods were now instructed by Helsinki to make for Swedish or Finnish ports.<sup>195</sup>

Meanwhile, although no blood had been shed there so far, the situation in northern Finland was proving to be much more complicated than in the south. Like the authorities in Berlin, Twentieth Mountain Army HQ's first thought, on learning of the political rift between the comrades-in-arms, had been to 'undermine the unity of the Finnish nation'<sup>196</sup> and recruit Finnish volunteers who were prepared to resist, but it very soon realized that it was much more important for the future fate of its own army to reach agreement with the responsible Finnish agencies and command authorities for the German units to withdraw with the least possible further fighting.<sup>197</sup> To this effect, Erfurth had already informed Mannerheim—to the latter's great relief—on 6 September, three days after the OKW had given the go-ahead for Operation BIRCH, that Twentieth Mountain Army's withdrawal was under way, though without mentioning the actual purpose of the move.<sup>198</sup> The withdrawal movements of the following weeks went more or less according to plan. XIX Mountain Corps, which was stationed in the far north, remained in its positions outside Murmansk in order to protect the strategically important nickel deposits in the Petsamo area, while the two corps stationed further south (XVIII and XXXVI Mountain Corps) were gradually withdrawn from the Soviet areas they still occupied to the middle of Lapland. At the same time, tens of thousands of tonnes of military equipment and supplies which the army had held for months were taken out, by sea where possible but also by rail and road. Stocks that could not be transported were either destroyed or (as in the case of some 20,000 tonnes of coal) sold to the Finnish authorities.<sup>199</sup>

The first German units had just started to withdraw during the night of 8–9 September when, at the request of Twentieth Army HQ, formal but unofficial consultations took place with authorized representatives of Finnish headquarters on the avoidance of serious military clashes with the Finnish troops that were advancing northwards. Basically, it was a matter of agreeing to engage in a phoney war, if possible with no losses on either side—appropriately described as 'autumn manoeuvres'—that would give the suspicious Soviet observers the impression that the Finns were actively 'driving' the German troops out of the country, and if possible prevent the Red Army from intervening. Agreement was reached, above all, on the timing of the German withdrawal and the Finnish advance, and on the use of Finnish communication networks, rail facilities, and rolling stock by the German high

<sup>195</sup> See *KTB OKW*, iv. 899 ff., and Menger, *Deutschland und Finnland*, 238.

<sup>196</sup> Rendulic, 4 Sept. 1944, quoted in Menger, 'Das militärische Verhältnis', 301.

<sup>197</sup> Twentieth Army HQ considered that the anti-Finnish propaganda put out by the foreign ministry, the ministry of propaganda, and the SS was counter-productive. See Menger, *Deutschland und Finnland*, 235–6.

<sup>198</sup> See Erfurth, *Der Finnische Krieg*, 278, and Mannerheim, *Memoirs*, 496–7.

<sup>199</sup> On this and the following, see Menger, *Deutschland und Finnland*, 228 ff.

command. An understanding was even reached on the destruction of items of transport infrastructure (especially bridges) by the German troops in order to provide a plausible explanation for the delays in the operations of the Finnish forces.<sup>200</sup>

Although, under the terms of the armistice, the deadline for the Finns to clear their country of German troops expired on 15 September, the 'autumn manoeuvres' continued, virtually unimpeded, until the end of the month. However, in the second half of September Mannerheim was obliged, under pressure from the Armistice Commission which had arrived in Helsinki in the meantime, to increase the strength of his forces operating in the north to 60,000, and to order their commander-in-chief, Lt.-Gen. Siilasvuo, to pursue the German troops actively, regardless of all the agreements that had been reached on their withdrawal. On 28 September an exchange of fire between the former comrades-in-arms at Pudasjärvi claimed the first casualties. And three days later Finnish troops arrived by sea at Tornio, taking the German forces by surprise, and engaged them in bitter fighting that soon extended to Kemi. Twentieth Army HQ attempted to retake the two coastal towns in a number of engagements, employing mobile forces from the withdrawal operation, while the Finns landed more troops and pressed forward from Oulu.<sup>201</sup>

Meanwhile, on 7 October the Soviet 14th Army launched its long-expected attack on the Murmansk front. In a series of encirclement operations it soon managed to drive XIX Mountain Corps (6th and 2nd Mountain Divisions) from its positions on and south of the Liza, and advance to the Arctic highway. Within a week, the painstakingly constructed Murmansk line had collapsed.<sup>202</sup> The entire northern Finnish area now had to be evacuated with all speed, on the basis of a decision taken by Hitler on 3 October. In the second half of September the dictator and the OKW had still been determined not to move the Lapland Army back beyond the final positions specified in the plans for Operation BIRCH, but they now thought better of it and ordered the army to withdraw to a long-established defence front in the Lyngenfjord–Narvik area (code-name NORTHERN LIGHT). The reasons behind this change of mind were, on the one hand, the fact that imports of Finnish nickel were becoming less important as German arms production slowed down,<sup>203</sup> and, on the other, the growing realization that it would soon be impossible to keep the Twentieth Mountain Army in its exposed position on the edge of Europe. It was not so much the half-hearted Finnish attacks that were feared in this connection, as massive Soviet offensives and landing operations, combined with British efforts to cut the sea connections that were essential to keep the army supplied.<sup>204</sup>

<sup>200</sup> For details, see Ahto, *Aseveljet vastakkain*, 107 ff., and Menger, *Deutschland und Finnland*, 232 ff.

<sup>201</sup> On the course of the fighting, see Ahto, *Aseveljet vastakkain*, 230 ff. For an account without scholarly pretensions, see Kaltenegger, *Krieg in der Arktis*, 281 ff.

<sup>202</sup> On this and the following, see KTB OKW, iv. 907 ff., and the accounts in Erfurth, *Der Finnische Krieg*, 304 ff., and Menger, *Deutschland und Finnland*, 243 ff. A short report on the combat operations in the Petsamo and Varanger area between 7 October and 27 October 1944 is also to be found in BA-MA RH 20-20/108.

<sup>203</sup> See Petrick, 'Die Bedeutung der Rohstoffe Nordeuropas', 285.

<sup>204</sup> See KTB OKW, iv. 902 ff.

After the Soviet breakthrough to the Arctic highway, which meant that the fighting for Tornio and Kemi had to be abandoned because of the resultant threat, the rest of the German withdrawal, over a distance of some 1,000 kilometres, was completed remarkably quickly. Petsamo was given up on 14 October, and withdrawal from the Rovaniemi area began just two days later. The Kolosjoki nickel mines were evacuated on 21 October, 'after thorough destruction'.<sup>205</sup> The town of Kirkenes, in the extreme north-eastern corner of Norway, which had been declared a 'fortified place' but was by now completely devastated, fell only a few days later (25 October 1944). Finally, after 18 November, all that remained was the last German units (7th Mountain Division) stationed at the extreme north-western tip of Finland, where they managed to hold on for a few months in a position no longer of any military significance.

The withdrawal from Finland of the Lapland Army, over 200,000 strong, with relatively few losses, was undoubtedly an outstanding logistical achievement, even if it was helped by good weather conditions. But for the province of Lapland, which was largely laid waste, it was also the greatest catastrophe in living memory, a catastrophe which is mostly mentioned only in passing in the German memoir literature,<sup>206</sup> but which cast a shadow over German–Finnish relations for decades to come.<sup>207</sup> The formal basis for the 'scorched earth' tactics employed by the German army was a directive from the Wehrmacht operations staff, issued at the time of the Finnish armistice and in agreement with Twentieth Army HQ, which not only provided for the destruction of all German military installations, equipment, and stores that could not be transported, but expressly permitted 'any kind of destruction and blocking measures' that seemed likely 'to be effective in delaying the enemy's advance'.<sup>208</sup>

The extent of the destruction was initially kept within bounds by the agreements between German and Finnish agencies on which the 'autumn manoeuvres' were based. As a result, cities like Oulu and Kajaani suffered no damage. But the situation became more acute when the Finns attacked Tornio, after which they were regarded 'as enemies from this moment on',<sup>209</sup> and when there was also reason to fear massive Soviet thrusts into northern Finland.<sup>210</sup> Up to that point the destruction had been largely confined to communications and transport facilities, and to buildings and stores used by the army, but now whole villages and towns were systematically reduced to ashes. Although the measures ordered were not

<sup>205</sup> Erfurth, *Der Finnische Krieg*, 313.

<sup>206</sup> See, e.g., the various works by Rendulic (including *Gekämpft*); also Hölder, *Armee in der Arktis*, and Thorban, *Der Abwehrkampf um Petsamo und Kirkenes*.

<sup>207</sup> The question of reparations for the damage caused by German troops in Finland in 1944 was again the subject of contentious negotiations prior to the resumption of diplomatic relations in the 1970s; see Putensen, *Im Konfliktfeld zwischen Ost und West*, 261 and 266–301 (ch. 8.3).

<sup>208</sup> WFSt/Qu, 2 (Nord), telex, 5 Sept. 1944, concerning destruction measures in Finland, and the relevant speaking notes, also 5 Sept. 1944 (BA-MA RW 4/v. 639, fos. 152–3).

<sup>209</sup> Hölder's order of 2 Oct. 1944, quoted in Menger, *Deutschland und Finnland*, 242.

<sup>210</sup> In fact, Soviet advances in northern Finland were confined almost exclusively to the capture of the Petsamo area, important for its raw materials. See Büttner, *Sowjetisierung oder Selbständigkeit*, 120 ff.

marked, in their motivation or execution, by the immeasurable brutality characteristic of the ‘scorched earth’ policy pursued in the Soviet theatre of war, their scale quite clearly exceeded what was required to ensure the secure operational withdrawal of the German forces. According to post-war Finnish estimates, a total of around 18,000 buildings in Lapland, that is, at least 40 per cent of all the buildings in the province, were destroyed during the weeks in question. About a third of them were residential buildings, and many hundreds were business premises or public establishments.<sup>211</sup> In addition to a series of smaller municipalities, Rovaniemi, the capital of the province, was particularly hard hit; some 90 per cent of its buildings were systematically destroyed in the days following 10 October. The inhabitants of the city—including some 25,000 refugees who had taken refuge there—had already been evacuated in September, along with their horses and cattle, most of them to northern Sweden and a smaller number to other parts of Finland.<sup>212</sup> About three-quarters of the inhabitants of Lapland suffered a similar fate. After more than three years of what had been, all in all, a remarkably trouble-free coexistence with the German troops posted in the area,<sup>213</sup> more than 100,000 Finnish civilians set out on the forced march south, and were able to return to their devastated home province only in the course of the following year.<sup>214</sup>

The successful ‘eviction’ of the German troops from the country marked the end of the Second World War for Finland.<sup>215</sup> With the ‘Winter War’ (1939/40), the ‘Continuation War’ (1941–4), and the ‘Lapland War’ in the autumn of 1944, it had involved the young republic in no fewer than three wars, at a cost to the Finnish people of more than 84,000 lives and well over twice as many wounded.<sup>216</sup> Under the terms of the 15 September 1944 armistice, the basic provisions of which were confirmed in 1947 in the Treaty of Paris,<sup>217</sup> the country lost about 12 per cent of its territory to the Soviet Union and more than a tenth of its industrial capacity. Over 400,000 refugees and settlers—more than a tenth of the total population—had to be integrated into post-war society. In addition, Finland had to pay the Soviet Union 300 million dollars in reparations.<sup>218</sup> Nevertheless, as has been rightly pointed out, Finland emerged from the war as ‘a heavily burdened but by no means ruined country’.<sup>219</sup> Unlike Germany, it was able to maintain to the last an army that was fit for action, although now about to be demobilized, and a structurally intact economy. Even more importantly, Finland was the only

<sup>211</sup> See Ursin, *Pohjois-Suomen tuhot*, 404.

<sup>212</sup> See Annanpalo, *Rovaniemi*, 51–2.

<sup>213</sup> On this, see the overview in Vehviläinen, ‘German Armed Forces’, and above all the study by Lähteenmäki, *Jänkäjääkäreitä ja parakkipiikoja*.

<sup>214</sup> See Ursin, *Pohjois-Suomen tuhot*, 400. Lähteenmäki, *Jänkäjääkäreitä ja parakkipiikoja*, chs. 11 and 12, and Rautio, *Pohjoisen pakolaiset*, are also instructive.

<sup>215</sup> Helsinki’s declaration of war on the German Reich on 3 March 1945, with retroactive effect from 15 September 1944, need not be considered here, as it was of purely formal significance.

<sup>216</sup> Of the total number of dead, just under a quarter were lost in the Winter War, three-quarters in the Continuation War, and over a thousand in the Lapland War (communication from the Institute of Military Science, Helsinki, 27 June 1978).

<sup>217</sup> For a detailed account of the Paris peace treaty, see Polvinen, *Between East and West*, chs. 17–19.

<sup>218</sup> In reality, the sum was much higher because the calculation was based on the 1938 gold dollar rate. See Menger, ‘Finnland’, 296–7.

<sup>219</sup> Ibid. 298.

European ally of the German Reich, and the only state adjoining the Soviet Union, that managed to avoid occupation of its territory. This fortunate circumstance, which was of course due partly to the country's geostrategically peripheral location, but no less to the government's flair for realpolitik and skilful tactics, is the underlying reason why the Finnish nation was the only one of the powers besieged in the Second World War that was able—despite some initial restrictions—to preserve its political culture and system of government.

## 5. THE END OF THE WAR IN NORWAY

As the war drew to an end in Finland, it seemed to be only just beginning in Norway, which had experienced hardship and terror but had seen no major fighting during the four years of the German occupation. In the autumn of 1944 neither friend nor foe expected the conflict to end in an almost miraculously mild way just over six months later. On the contrary, Reich commissioner Josef Terboven, the man at the head of the occupation administration, left no doubt, right until a few days before Germany surrendered, about his determination to fight for 'Fortress Norway' to the end. Moreover, with an occupation force of some 370,000 men, there were more German troops in the country in relation to the population than in any other area occupied by Germany. This was mainly because, ever since 1941, the German command had considered Norway to be the most likely target for Allied counter-attacks. Unaware of the actual British plans, in which Norway had not played an important part since the spring of 1942, Hitler and the OKW continued to reckon with the possibility of landings on the Norwegian coast even after the Allied invasion of Normandy.<sup>220</sup> 'Fortress Norway' had accordingly been built up over the past few years, at great cost in men and equipment.<sup>221</sup> That it was now to be evacuated without a shot being fired was all the more unexpected in that Twentieth Mountain Army had been moved to Norway in October 1944, bringing the number of German troops stationed in the country to more than half a million, that is, about a sixth of the total Norwegian population.<sup>222</sup> Army commander-in-chief Lothar Rendulic, appointed as the new 'Wehrmacht Commander Norway' in December, announced that in Norway 'everything will be exclusively at the service of the war, and will be arranged accordingly'.<sup>223</sup>

What this meant for the Norwegian people in the worst possible case had already been clear in the northernmost part of the country since October, where the danger of the Red Army pressing forward into Norwegian territory increased

<sup>220</sup> The area round Narvik and the Lofoten islands was thought to be particularly threatened. See Riste, 'German Coastal Defence', and Ludlow, 'Britain and Northern Europe'. On the landings expected by Germany, see also Part I, Chapter I.3 of the present volume, esp. Map I.I.1.

<sup>221</sup> On this, see the recent work by Bohn, *Reichskommissariat Norwegen*, 357–76.

<sup>222</sup> See Bohn, 'Der Rückzug am Eismeer', 115.

<sup>223</sup> KTB entry for 23 Nov. 1944, quoted ibid. 116. Rendulic took over from Col.-Gen. von Falkenhorst as Wehrmacht commander on 18 December 1944, but he was already obliged to hand over to General Franz Böhme in January 1945. See also Lang, 'Operation Nordlicht', 28.

when Twentieth Mountain Army withdrew to the Lyngen line. Not only would Soviet occupation of parts of northern Norway make the military situation of the German units operating on the outer edge of the continent more difficult; it would also, and above all, destabilize Norway's political position by providing the government-in-exile in London with a bridgehead on the Norwegian mainland. In order to prevent any such development, which would be equally disastrous for the German controlling authority and for the dependent collaborationist government of Vidkun Quisling,<sup>224</sup> Reich commissioner Terboven and the Norwegian agencies working for him argued for the evacuation—on a voluntary basis—of those areas of the country that were under threat. Their reasoning was that a depopulated region would afford the enemy difficult terrain for military operations and barren prospects for political propaganda. A government-in-exile could not hope to present itself as the nation's liberator there, as it had recently been able to do in France. However, the evacuation programme soon appeared likely to fail, for two quite different reasons, namely the pig-headedness of a population with traditional roots in the soil, and unwillingness on the part of the relevant Wehrmacht agencies, which regarded the proposed evacuation measures largely as an additional logistical burden on their own troops.<sup>225</sup>

Although the reservations expressed on the Wehrmacht side were shared by other officials (for example, the commander of the security police and SD in Norway) for various reasons, a Führer order addressed to Twentieth Mountain Army and signed by the chief of the Wehrmacht operations staff was issued on 28 October, at Terboven's insistence, according to which 'the entire Norwegian population east of the Lyngenfjord was to be *forcibly* evacuated for their own safety, and all residential buildings were to be burned down or demolished'. Sympathy with the civilian population would be 'misplaced'. On the contrary, it must be made clear to the troops who carried out the order 'that, in a few months' time, the Norwegians would be thankful that they had been saved from Bolshevism'. Whereas 'the barbarous methods employed in the air war against the German homeland and its cultural sites have inflicted a thousand times more suffering on our people', the 'humane methods of evacuation and demolition of residential buildings in northern Norway' were necessary for the purposes of the war, and the price would have to be paid 'with the blood of German troops' if these methods were not employed.<sup>226</sup>

The deportation and destruction measures which now began—measures for which the people were told that the Norwegian authorities were responsible—applied to an area of some 60,000 square kilometres (that is, about one-and-a-half times the size of Denmark). Comprising the Norwegian province of Finnmark and the northern part of the province of Troms, the area had been home to some 50,000 people before the war, rising to about 60,000 (according to German estimates) during the war years.<sup>227</sup> In the late autumn of 1944 the vast majority,

<sup>224</sup> On Quisling's role in the closing phase of the war, see Dahl, *Quisling*, chs. 9 and 10.

<sup>225</sup> See Lang, 'Operation Nordlicht', 28 ff., and Bohn, 'Der Rückzug am Eismeer', 116 ff.

<sup>226</sup> OKW/WFSt telex, 28 Oct. 1944, quoted in IMT, xxvi. 287 ff.

<sup>227</sup> See Lang, 'Operation Nordlicht', 30.

some 40,000 to 50,000, were forced to leave home and hearth, in most cases taking only what they could carry.<sup>228</sup> The subsequent destruction of houses and infrastructure was, as recorded in the Twentieth Mountain Army war diary, ‘as complete as only an efficient army can make it’.<sup>229</sup> According to Norwegian post-war surveys, altogether about 15,000 residential buildings and outhouses, around 1,000 business premises and farm buildings, and well over 300 public establishments (assembly halls and administrative buildings, schools, hospitals, and churches) were reduced to ashes. In the extreme north-east, in particular, where there had also been Soviet air raids and fighting between German, Finnish, and Soviet units, hardly a house had remained intact.<sup>230</sup> Even so, many of the exiles returned to their ancestral homeland in the summer of 1945, soon after the end of the war.

As in the case of Finnish Lapland, so too for the people of northern Norway, who had long been accustomed to living in hard but otherwise remarkably peaceable circumstances, the destructiveness of the ‘scorched earth’ policy was unlike anything they had experienced in the course of their history, and the political and psychological repercussions affected relations between Germany and Norway for decades to come. Another largely forgotten, but even more distressing aspect was the fate of many of the 120,000 or so mainly Russian and Serbian prisoners of war who had been moulderling in hundreds of labour camps, mainly in northern Norway,<sup>231</sup> and were now evacuated to the south in extremely difficult circumstances. About 2,500 of them alone died in what was, for Norway, probably the worst single disaster of the entire war, when the coastal freighter *Rigel* was sunk off Tjøtta by British aircraft.<sup>232</sup>

Meanwhile, the German position in Norway was becoming increasingly hopeless. On the one hand, the occupying power could not rule out the possibility of a further Red Army advance in the north, or of Allied landings along the long coastline, combined with an attack by Sweden. On the other, the increasing threat to Germany itself in the winter of 1944/5 meant that battle-worthy units had to be withdrawn from northern Europe. The withdrawal had to be conducted mainly by land, because of the Allied control of the air off the Norwegian coast and the increasing shortage of coal due to declining deliveries of supplies. However, the process was repeatedly and seriously hampered and delayed by a dramatic increase in acts of sabotage, carried out by the Norwegian resistance in coordination with Allied overall strategy, against railway lines, bridges, port installations, and other infrastructure.<sup>233</sup> In these circumstances, the increasingly urgent question was whether it now made any sense at all to maintain the occupation and engage in a

<sup>228</sup> On the differing German and Norwegian estimates, see the discussion of the figures in Lang, ‘Operation Nordlicht’, 35–6, and Bohn, ‘Der Rückzug am Eismeer’, 122–3. According to Norwegian findings, some 23,000 managed to avoid evacuation by fleeing.

<sup>229</sup> Quoted in Bohn, ‘Der Rückzug am Eismeer’, 123.

<sup>230</sup> See Lang, ‘Operation Nordlicht’, and Bohn, ‘Der Rückzug am Eismeer’.

<sup>231</sup> For more detailed information on the conditions there, see Ottosen, ‘Arbeits- und Konzentrationslager’.

<sup>232</sup> See Lang, ‘Operation Nordlicht’, 34.

<sup>233</sup> On this and the following, see Bohn, *Reichskommissariat Norwegen*, 232 ff.

'final battle' for Norway. A proposal to evacuate northern Norway to a point south of Narvik, submitted at the beginning of March by General Franz Böhme, who had been acting commander of the Wehrmacht since January, was accepted in principle by the Wehrmacht operations staff but rejected by Hitler himself, because the dictator feared that it would make German U-boat operations more difficult and encourage Sweden to enter the war. He was, however, prepared to allow a further reduction in the German occupation force, for the benefit of other theatres of war.<sup>234</sup>

Stockholm was ready and willing to deal with various eventualities, but it showed no interest in escalating the situation in its occupied neighbour, despite growing pressure from the Norwegian government-in-exile, which was intent on the speedy liberation of its country. On the contrary, the Swedish government, which was remarkably well informed about the frame of mind and intentions of the various German operations staffs,<sup>235</sup> proceeded on the assumption that provocations directed at the occupying power, whether by outside intervention or by unrest within the country, would most likely strengthen its spirit of resistance and conjure up a 'final battle' scenario that would be devastating for all sides. On the basis of this thoroughly realistic assessment of the situation, it devoted its efforts to bringing about exploratory talks with German representatives of the SS, the foreign ministry, and the Wehrmacht. Swedish mediators were even able to arrange informal contacts between representatives of the German occupying forces and the Norwegian resistance movement.<sup>236</sup>

In the last weeks of the war Reich commissioner Terboven, the strongest advocate of a German fight to the end in Norway, became increasingly isolated. 'Fortress Norway' had largely lost its strategic significance for the foundering Reich. The idea of withdrawing to Norway and continuing the war from there after the Reich itself had been lost, was—contrary to various rumours—clearly never seriously considered.<sup>237</sup> The Reich commissioner's attempts to influence the military command in the country had already failed in the course of the winter. And there were signs that support in the Nasjonal Samling party was beginning to crumble. The party leader, Quisling, had given orders in February that the members of his paramilitary 'Hird' movement—a movement similar to the German SA—were to mobilize in preparation for the expected final battle, but two months later only the radical, pro-German wing of the party, close to the minister of police Jonas Lie, was prepared to risk starting a civil war. In the end it never came to that, owing to prudence on the Norwegian home front and to the fact that Terboven's policy of radicalization was now increasingly being undermined by his own apparatus.<sup>238</sup> Finally, the fact that in April the Reich plenipotentiary in Denmark, Werner Best,

<sup>234</sup> See ibid. and *Lagevorträge*, 675–6 (16 Mar. 1945); also Warlimont, *Im Hauptquartier*, 536.

<sup>235</sup> See Carlgren, 'The Significance of the Intelligence Services', esp. 52.

<sup>236</sup> See Moll, 'Kapitulation oder heroischer Endkampf', 57–8, and Bohn, *Reichskommissariat Norwegen*, 234 ff.

<sup>237</sup> See Moll, 'Kapitulation oder heroischer Endkampf', 63.

<sup>238</sup> For examples, see Bohn, *Reichskommissariat Norwegen*, 235–6. See also Moll, 'Kapitulation oder heroischer Endkampf', 51 ff., and Paulsen, 'Reichskommissar vs. Wehrmachtbefehlshaber'.

had agreed with the regional leaders in Hamburg and Schleswig-Holstein, Gauleiters Karl Kaufmann and Hinrich Lohse, to give up the German–Danish area in the north to the advancing British troops without a fight<sup>239</sup> also contributed to Terboven's increasing isolation.

The final decision on the form which the end of the war would take in northern Europe fell on 3 May 1945. On that day, the civil and military leaders in charge of the German occupation in Norway and Denmark met with Hitler's successor as head of state, Grand Admiral Karl Dönitz, in Flensburg. Two factors proved decisive for the outcome of the discussion. The first was that Dönitz's authority as commander-in-chief was not called into question by any of the military men who were present. The second was that the Wehrmacht commanders concerned, General Böhme and Col.-Gen. Georg Lindemann, had made it quite clear, in the situation assessments they had submitted beforehand, that any further resistance in the areas under their command would be pointless. In these circumstances, Terboven's plea for one 'last honourable battle [...] to the last man and the last cartridge'<sup>240</sup> was decisively rejected, especially by Dönitz himself. The very next day, the new head of state reached an agreement with the British 21st Army Group (Bernard Montgomery) on an armistice covering the whole northern area of operations from Holland to Denmark. On 8 May General Böhme, acting on a telex he had received from Keitel the day before,<sup>241</sup> informed the Allied headquarters in Edinburgh responsible for dealing with Norway that his troops too would join in Germany's overall surrender. This opened the way for a bloodless and—as the following days and weeks were to show—remarkably smooth transfer of executive authority to the incoming British and Norwegian staffs and agencies.

Reich commissioner Terboven committed suicide on the evening of 8 May. The Senior SS and Police Leader North, Friedrich Wilhelm Rediess, and the commander of the security police and SD in Norway, Heinrich Fehlis, also chose to end their own lives, as did some radical members of the Nasjonal Samling party. A month later, after exactly five years in exile, King Haakon VII returned home from England. In the following months and years Norway underwent a rapid and lasting restoration of its political culture, whose continuity was embodied by the king. The general elections held no later than October 1945 marked the return to democratic normality and the determination for a change of personnel.<sup>242</sup>

Norway, which continued to be *de jure* at war with Germany and Japan until 1951,<sup>243</sup> remained a deeply divided country for years to come, despite all efforts to return to normal. Post-war Norwegian society was involved until the early fifties in a flood of mediation and legal proceedings to deal with the heritage of occupation and collaboration. Only a few hundred cases concerned members of the German occupation force, of whom 81 were eventually convicted, including 15 sentenced to

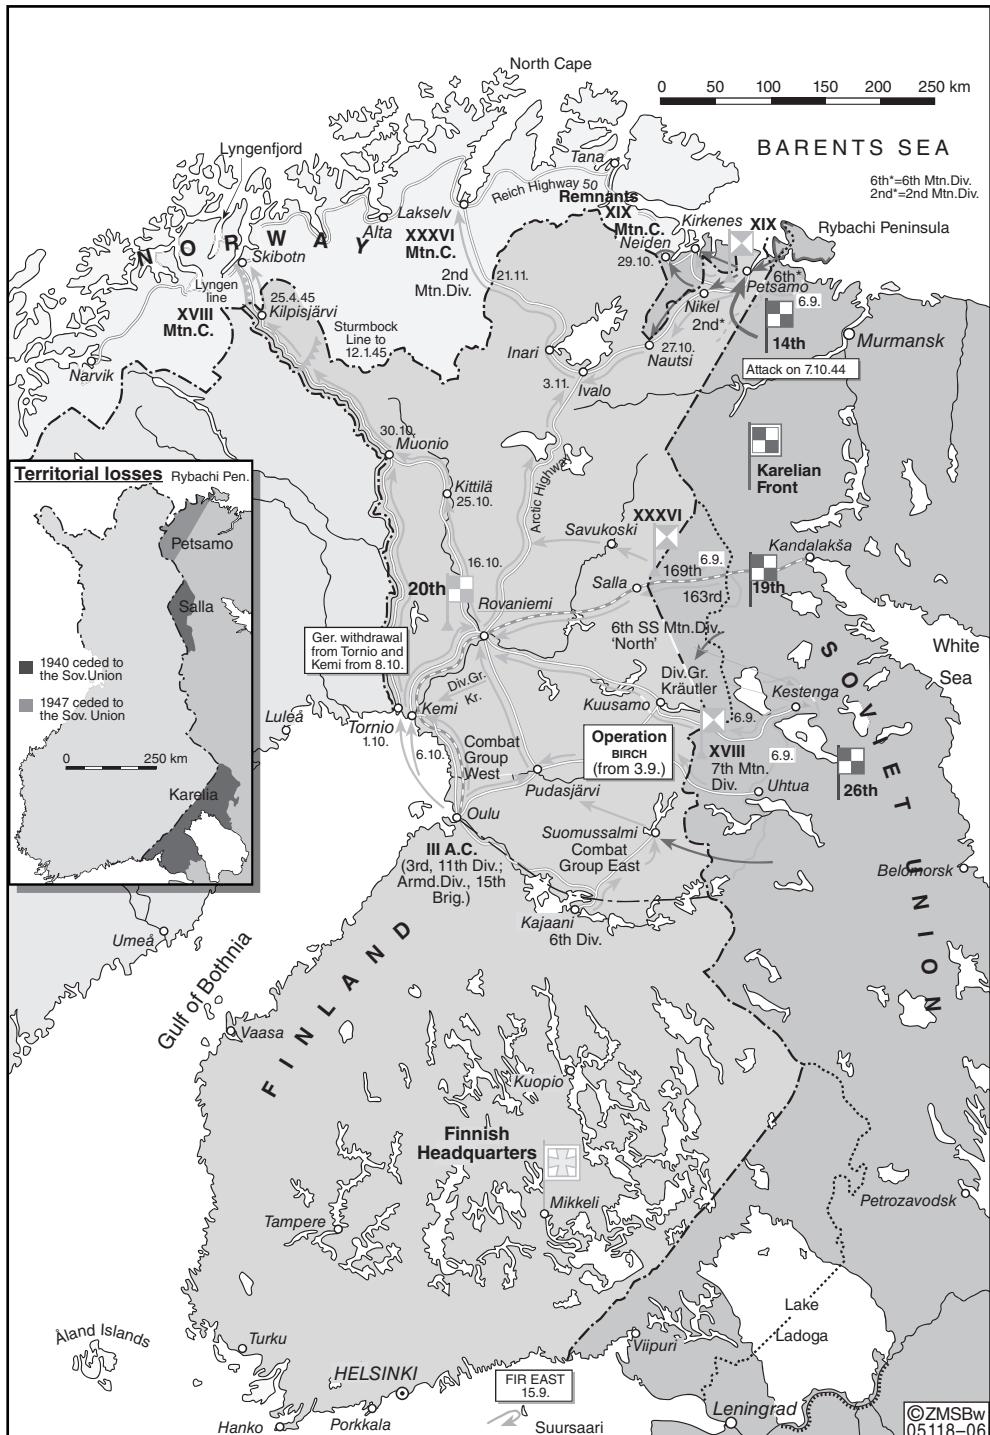

<sup>239</sup> See Herbert, *Best*, 398–9.

death. Far more decisive for social developments within the country was the fact that more than 90,000 Norwegians faced proceedings for actual or alleged treason. More than half of them, mostly members of the Nasjonal Samling party, were sentenced to terms of imprisonment, confiscation of property, fines, or disenfranchisement. In 26 cases—including the case against Quisling himself—the death sentence was carried out.<sup>244</sup> The judicial reckoning with the events of the occupation period ended in 1957, when the last of those who received a life sentence was pardoned, but the debate in society and among historians had only just begun.

## II. The Yugoslavian Theatre of War (January 1943 to May 1945)

*Klaus Schmider*

### 1. GEOGRAPHICAL, TOPOGRAPHICAL, CLIMATIC, AND TRANSPORT CONDITIONS

No other features of Yugoslavia's<sup>1</sup> geography<sup>2</sup> were to present such an obstacle to the military operations of the occupying forces and such a boon to those of the resistance guerrillas as the numerous massifs. They are to be found in the Dinaric Alps (a branch of the Julian Alps), running parallel to the Adriatic coast as far as Albania, and also in isolated rock formations further inland. Thickly wooded, they provided an important refuge and assembly area for the resistance guerrilla groups, and it was always difficult—and, for infantry divisions confined to the roads, often impossible—to comb them thoroughly within a reasonable space of time. This was particularly true of massifs which, like almost all the massifs in this area, were classified as low mountain ranges (less than 2,000 metres high) but are comparable to high mountain ranges in their fissuring and karst formation. The problems this caused were of course compounded by the onset of winter. In this respect, Bosnia-Herzegovina and Montenegro, in particular, afforded conditions for armed resistance the like of which were not to be found anywhere else in occupied Europe. These advantages must be qualified, however, by the fact that the limited areas of

<sup>1</sup> The situation as regards sources on the subject of the Yugoslavian theatre of war can generally be described as very good for the period between 1941 and 1943, the diary-style notes kept by the German plenipotentiary general in Croatia, Edmund Glaise von Horstenau, being particularly important in this connection. For 1944, the loss of 2nd Armoured Army's war diary (KTB) and annexes makes it very difficult to reach conclusions about the military decision-making processes, while for 1945—as far as Wehrmacht and foreign ministry records are concerned—only a few fragmentary documents have survived. For an account of the final months it was necessary to rely essentially on the OKW war diary, memoirs, private diaries, and accounts from the other side. Erika Eichmann (Essen), Sönke Neitzel (Mainz), Simon Trew (Sandhurst), Aleksandar Vecanski (Ingolstadt), Christian von Gyldenfeldt (Lingen), and Peter Lieb (Munich) were of considerable assistance in opening up new sources and suggesting corrections. And I owe a special debt of gratitude to my mother for her unfailing and selfless assistance and support in my work.

<sup>2</sup> A very useful introduction to the complex subject of Yugoslavia's geography in the war is *Militärgeographischer Überblick über Südosteuropa (Donauraum und Balkanhalbinsel)*, completed 15 March 1940, publ. Generalstab des Heeres, Berlin 1940, repr. in Piekalkiewicz, *Krieg auf dem Balkan*, 9–20. For a more detailed treatment, see Mennel, *Der Balkan*.

agricultural land available as a result of this topographical feature could lead to bottlenecks in food supplies for larger resistance formations.<sup>3</sup> The area north of the Sava (Slavonia and Syrmia) has a distinctly larger amount of flat country (except in central Slavonia), but even Syrmia, with its highly developed agriculture, contains at least one wooded mountain range, the Fruška Gora hills, which had been repeatedly 'combed' by the Croats and the occupying forces but had never been permanently 'pacified'. Only the Bačka and Banat regions (north of the Danube) have almost no uplands to speak of.

A topographical feature that was especially advantageous for the occupying forces, on the other hand, was the similarly rocky nature of the coast. In Yugoslavia, unlike Albania, the coast consists mainly of steep cliffs rather than flat, gently sloping sandy beaches. This, combined with the lack of any large harbours south of the Istrian peninsula, meant that an amphibious enemy landing was a relatively calculable risk.

As regards climate, Yugoslavia is divided by the Dinaric Alps into two separate zones. Weather conditions in the coastal strip and on the islands are distinctly Mediterranean in character, whereas the climate east of the Dinaric Alps is predominantly continental or central European. And the bora storms blowing in from the north-east in the winter and the spring can cause sudden drops in temperature.

In 1941 the country's transport infrastructure was very well developed by Balkan standards. The Bosnian road network was essentially a legacy from the period of Austro-Hungarian occupation (1878–1918). For the purposes of the German occupation forces, the Zagreb–Belgrade–Niš rail link was particularly important as the main logistic artery for the troops in the Greek area and the most important link with their Bulgarian ally. The railways in the area south of the Sava were predominantly narrow-gauge lines, which were less efficient and much more open to attack by the resistance, on account of the large number of engineering structures required to cope with the precipitous terrain.

Most of the river systems in Yugoslavia rise to the west or east of the Dinaric Alps and flow either into the Adriatic (for example, the Neretva) or into the Sava (for example, the Una, the Vrbas, and the Bosna). Only two of them played an important part in the partisan war against the occupying forces: the Drina, because the border between Serbia and Croatia established in April 1941 largely followed the course of the river, enabling the German military administration to protect Old Serbia, which was comparatively quiet after November 1941, from the escalating ethnic conflicts in Croatia; and the Danube, because, between 1941 and 1944, some 250 kilometres of the course of this most important waterway in German-occupied Europe touched on or ran through Yugoslavian territory, part of which was deemed to be 'pacified' (the Hungarian Bačka region), while part was considered highly 'problematical' (Croatian Syrmia and the north-eastern part of

<sup>3</sup> As, for example, in May/June 1942, when Tito gathered his remaining units together in the Montenegro–Herzegovina border area after his defeat in the civil war; see the author's interview as confirmed by with Dr Vladimir Velebit, former major-general in the National Liberation Army, during an interview with the author in Zagreb (9/10 May 1998).

Old Serbia). Although even temporary disruption of river traffic was beyond the military capabilities of the resistance, the latent threat to the transport route by which consignments of Romanian oil were delivered to Germany must undoubtedly have contributed to the attention which the Germans paid to this 'secondary theatre of war'.

## 2. A LOOK BACK (MAY 1941 TO DECEMBER 1942)

Some two months after the armed forces of the kingdom of Yugoslavia surrendered to the Wehrmacht on 17 April 1941,<sup>4</sup> the Serbian, Montenegrin, and Slovenian sections of the population began a widely supported insurgency of an intensity unparalleled in occupied Europe.<sup>5</sup> Without any decisive help from abroad, the Communist and—to a much lesser extent—the Serbian nationalist resistance movement gradually took control of more than half the country from the German and Italian occupation forces, inflicting on them losses of 31,000 to 32,000 dead or missing by the end of September 1944.<sup>6</sup>

The victorious Axis powers had themselves laid the foundation for this development in April/May 1941. On the one hand, the demobilization and disarmament of the Yugoslavian army had been extremely superficial. On the other, the country had been divided between the Axis powers in a way that was bound to cause unrest among the peoples of the defeated kingdom. In addition to the expulsions from areas directly annexed by the victorious powers (particularly the German-occupied part of Slovenia), it was above all the creation of the 'Independent State of Croatia' (*Nezavisna Država Hrvatska*, NDH) under Croatian-Herzegovinian lawyer Ante Pavelić's ultra-fascist Ustasha movement, that was to be a permanent source of unrest, not only because a state in this form, based on an Italian initiative, was the fulfilment of the most extreme fantasies of a greater Croatia (comprising Croatia, Syrmia, and the whole of Bosnia-Herzegovina), but also because the new government, despite its own modest power base, immediately set about reducing the 50 per cent 'minority presence' by a process of 'ethnic cleansing'. The Serbian minority (1.95 million), in particular, was able to resist this policy effectively because the areas of Serbian settlement were compact. Finally, the all-too-obvious way in which Italy assigned the role of a satellite state to the young state in the Treaties of Rome signed on 18 May—by annexing Dalmatian areas, appointing a king from the House of Savoy, establishing a demilitarized zone, and banning it

<sup>4</sup> For a detailed account of the history and course of the April campaign, see *Germany and the Second World War*, iii. 449–555.

<sup>5</sup> While the non-Slavic ethnic groups ('ethnic Germans', Albanians, and Hungarians) largely refused to join the resistance, active participation by Macedonians, Bosnians, and Croats prior to 1944 was much less than might have been expected, given their numbers. The differing degrees of commitment to the 'national liberation battle' by the various ethnic groups was a political issue that was kept under cover in Tito's Yugoslavia and became increasingly open after his death. See, most recently, Hoare, 'Whose is the Partisan Movement?'

<sup>6</sup> Half German and half Italian losses. Estimate taken from Schmider, *Partisanenkrieg in Jugoslawien*, 589–90.

from maintaining a navy of its own—ensured that the government would soon be accepted by only a minority, even among the Croat population. The relative numbers of German and Italian occupation forces (718th Infantry Division, still being assembled, on the one hand, and Col.-Gen. Vittorio Ambrosio's Italian 2nd Army, over 200,000 strong, on the other), stationed on either side of a demarcation line running through the new state on a north-west to south-east axis, was a further indication of the hegemony which Berlin willingly conceded to its Axis partner. From the Pavelić government's point of view, the insurgency in the summer and autumn of 1941, which at this point was still confined to the Serbian settlement areas south of the Sava, was less dangerous than the Italian reaction to it. An Italian withdrawal to the coast and Zone I (the territories annexed in Dalmatia), almost completed at the end of July, was stopped immediately, and full-scale occupation was reinstated, first in Zone II (the demilitarized zone) and then in Zone III. The decision to strip Croat bodies of their powers, and to expel almost all arms-bearing Croats (Ustasha and territorial army) into the German area of influence, was due at least as much to the Italian intention to extend the area of annexed territory<sup>7</sup> as it was to the need to combat the uprising. On the German side, this development was noted with concern only by the ambassador, Siegfried Kasche, and the 'German general in Zagreb', Maj.-Gen. Edmund Glaise von Horstenau (as from 1 November 1942 'German Plenipotentiary General in Croatia'). Kasche, in particular, developed into an unreserved advocate of the Pavelić regime in the process, deliberately suppressing the part which the Ustasha had played in starting the insurgency.<sup>8</sup>

Whereas in the NDH, from the end of June 1941, the rebellion embraced isolated geographical areas which had been subjected to Ustasha pogroms, the situation further east was quite different. In the former kingdom of Montenegro, which had been declared to be in personal union with Italy when Yugoslavia was split up and was occupied only by a relatively weak force consisting of a single infantry division, a national uprising broke out on 13 July of such elemental force that even the local Communist Party of Yugoslavia (CPY) was taken by surprise. A numerically overwhelming Italian counter-offensive in August, and the CPY's attempts to take over the leadership of the insurgency by force, led in December to a split in the resistance movement and a rapprochement between its anti-Communist elements and the Italian occupation forces. After they had managed between them to drive the Communists out in May 1942, Montenegro was spared any further major hostilities for almost a year.<sup>9</sup>

There were similar developments in the historic heartland of the Yugoslavian state in the summer and autumn of 1941. Apart from the genuine indignation over the treatment of ethnic Serbs in the NDH, it was, paradoxically, the tempo of German military operations during that year which prepared the ground for the

<sup>7</sup> The Italians were quite disarmingly open about this to their German allies. See 'Bericht der Deutschen Gesandtschaft in Zagreb an das Auswärtige Amt vom 3.12.1941', copy, BA-MA RH 31 III/8.

<sup>8</sup> For a more detailed account of Glaise von Horstenau's and Kasche's motives, see Schmider, *Partisanenkrieg in Jugoslawien*, 45–53.

<sup>9</sup> For more details on Montenegro during the period 1941/2, see ibid. 85–9; Karchmar, *Draža Mihailović*, 370–422; Scotti and Viazzi, *Le aquile delle montagne nere*, and Scotti, *L'inutile vittoria*.

rebellion in Old Serbia. This was firstly because the abrupt withdrawal of most of the original divisions occupying the country on the eve of the Russian campaign reminded many Serbs of similar troop movements in the early autumn of 1918 and the subsequent German collapse, and secondly because the Germans' war against the Soviet Union led to a surge of pan-Slavic solidarity and wildly exaggerated hopes of an imminent devastating counter-attack by their Russian brothers.<sup>10</sup> The insurgency nevertheless developed at a much slower pace than in Montenegro or the parts of the NDH that were affected. This gave the CPY, under its secretary-general, Josip Broz ('Tito'), a chance to intervene directly, aiming its military activities primarily against the bodies of the collaborationist Serbian government. Other armed *odredi* (detachments), formed spontaneously after the Yugoslavian state collapsed but undecided about what course to follow, were also—insofar as they appeared 'unwilling to cooperate'—in the CPY's firing line.

The three German occupation divisions (704th, 714th, and 717th Infantry Divisions), which were still in the process of forming battalions, were markedly restrained in this early phase of the insurrection (late June to early August), leaving things to the gendarmerie of the Serbian 'rump state'. Moreover, the formulation of a coherent strategy was also made considerably more difficult by differences of opinion between General Paul Bader, commander of the troops under LXV Corps HQ, which was responsible for operations in Serbia and northern Croatia, and General Heinrich Danckelmann, Military Commander in Serbia, as to the right way to proceed.<sup>11</sup> By the middle of October the occupation forces had suffered a whole series of setbacks and had been obliged to evacuate large parts of north-western Serbia, but they were to benefit in the next few weeks both from clarification of the command structure<sup>12</sup> and from a political change of heart in large sections of Serbian society. Although this was at least partly due to the deterrent effect of the reprisal executions of hostages since 10 October, in the ratio of 100 to 1, it was mainly attributable to the increasingly open tendency of the CPY to begin implementing its long-term social policy objectives in the areas under its control. The opposition which this aroused in large sections of Serbian society was seen at its strongest among those Serbs who were even prepared to collaborate with the occupiers as a result: the new prime minister, Milan Nedić,<sup>13</sup> appointed on 29 August; the armed wing (the 'volunteers') of the fascistic 'Zbor' party; and

<sup>10</sup> On this, see 'L'incaricato d'affari a Belgrado, Guidotti, al ministro degli esteri, Ciano' (28 Jun. 1941), *DDI*, 9th Series, vii. 309–10, and 'Bericht des Feldwebels Dr. Keidel über seine Gefangenschaft in Krupanj' (5 Sept. 1941), BA-MA RH24-65/9.

<sup>11</sup> Particularly instructive in this connection is a retrospective review by the head of military administration, Harald Turner, in 'Gesamtsituationsbericht an den Reichsführer SS' (16 Feb. 1942), BA, NS 19/1730.

<sup>12</sup> Bader and Danckelmann were placed under XVIII Army Corps HQ, commanded by General Franz Böhme, with effect from 16 September. An attempt by Danckelmann to question this subordination ended in his downfall on 10 October.

<sup>13</sup> Col.-Gen. Milan Nedić had been obliged to resign from his post as minister of war in November 1940 after proposing a rapprochement with the Axis on pragmatic grounds. He commanded 3rd Army in the April 1941 campaign. He had spent the months after Yugoslavia's capitulation not in a German prison camp but—probably on the basis of a recommendation from an unknown source—under house arrest. See also Vecanski, 'General Milan Dj. Nedić', 46–8.

the Chetniks, led by First World War veteran Kosta Pećanac, with traditions going back hundreds of years. Finally, on 2 November, open civil war broke out between the partisans and the most important resistance group loyal to the king, led by Colonel Draža Mihailović. As a result, most of the Communist *odredi* were concentrated in the Užice area, where they presented an exceptionally good target for Operation UZICE, a major operation launched by two German infantry divisions on 25 November. The remnants of the defeated partisan forces were obliged to flee to neighbouring Bosnia and Montenegro. Despite the difficulties which the Wehrmacht's C-in-C South-East, Field Marshal Wilhelm List, had had in accepting volunteers and Pećanac Chetniks as 'auxiliary gendarmerie', the practice became even more extensive at the turn of 1941/2. Whole *odredi* of Mihailović's clearly, if temporarily, anti-German organization found a second livelihood, with the full knowledge (and reservations) of the Germans, as Serbian government units.<sup>14</sup>

Things were much more muddled in the NDH than in Old Serbia, where the events of November/December 1941 led to a measure of uneasy peace that lasted for the next two years. Any lasting pacification of the NDH was prevented not only by the Ustasha's genocidal policy and the gradual deterioration of the NDH's armed forces, but also by Italian efforts to achieve hegemony and German indecision over the policy to be pursued in Croatia. The problems were aggravated after June 1942 by the steady decline in Italy's commitment, despite its strong numerical presence. This shortcoming had increasingly to be made good by a German contingent which, before January 1943, never consisted of more than two divisions.

General Bader initially attempted to reach a political solution to the problem in January/February 1942, when he had discussions with the east Bosnian Chetnik commander, Jezdimir Dangić, about the extensive dismantling of the NDH in the east Bosnian government districts under his control. A decisive factor behind this attempt may have been the realization that it was literally impossible to form a state with the Pavelić regime, as well as the fact that Dangić had just made a similar offer to the Italian 2nd Army's VI Army Corps, which was responsible for Herzegovina and south-eastern Bosnia. This personal initiative of Bader's failed owing to opposition from the OKW and the foreign ministry, and—despite receipt of the first negotiation feelers from the partisans<sup>15</sup>—the rest of the year was spent in military operations. Operation SOUTH-EAST CROATIA (15 to 23 January 1942) drove the bulk of the partisans out of the northern part of east Bosnia and inflicted substantial losses on them. Operations TRIO I and TRIO II/FOCA (22 April to 15 May 1942) were directed against the south-eastern part of Bosnia and, since the area of operations was located both south and north of the demarcation line, it was necessary to mount a joint action with the Italian 2nd Army. In the event, the

<sup>14</sup> For a detailed account of the different partisan and collaborationist groups involved in the conflict, see the Appendix: 'Yugoslavian Resistance and Collaboration Armed Formations', at the end of this chapter.

<sup>15</sup> In August and November 1942. For details, see Schmider, *Partisanenkrieg in Jugoslawien*, 158–60, 171–2.

action turned into an Italian attempt, under the pretext of the ongoing operations, to establish a permanent presence north of the demarcation line in the Sarajevo area. In the end, the repeated disputes between Germans, Croatians, and Italians in this connection led to the premature termination of the operations. The fact that the TRIO operations nevertheless resulted in the extensive collapse of the Communist position in south-eastern Bosnia was due in no small measure to the excessively radical policy pursued by the CPY, which had turned many of its supporters against it. When, in addition to Bosnia, Herzegovina and the party's own base in northern Montenegro were also lost, Tito's headquarters staff decided on 23 June 1942 to use their remaining forces to attempt a fresh start in western Bosnia.

At the same time, a fundamental change in Italy's policy on Croatia took place in Rome. The Italian 2nd Army had suffered its first serious setbacks during the winter, and annoyance at the failure to gain control of territory on the other side of the demarcation line now led to a reduction in Italy's commitment in the Bosnian theatre and a withdrawal in stages (late May/early June 1942, November 1942, April 1943, August 1943) from the interior of the country. Until Italy's exit from the war in September 1943, 2nd Army's operations in the NDH were increasingly devoted to presenting the smallest possible target for enemy attacks and to keeping its own losses to a minimum. The strain on the Axis coalition as a result of this policy was nowhere more apparent than in the attempt by Ambrosio's successor, Mario Roatta (Commander-in-Chief of 2nd Army from 20 January 1942 to 5 February 1943), to delegate his army's military tasks to the Serbian nationalist opponents of the partisans in the civil war by increasingly arming Croatian and Montenegrin Chetniks.<sup>16</sup>

Initially, Bader and his successor, Lt.-Gen. Rudolf Lüters, 'Commander of the German troops in Croatia' from 16 November 1942, did not have the Italians' permission or the necessary troop units to fill the vacuum which the Italian 2nd Army had left in western Bosnia, so the second half of the year was to prove of decisive importance for the further build-up of the partisan forces (from 19 November 1942, the 'National Liberation Army'). The force of barely 5,000 men which Tito had brought with him from Montenegro served as the cadre for a partisan army that increasingly possessed the characteristics of a regular army and experienced exponential growth from the late summer of 1942 on. That development was not prevented by the occupation forces and was, on the contrary, furthered in practice by the weapons captured as booty in every encounter with the demoralized Croatian territorial army. Occasional German successes, such as the destruction of the 2nd Krajina *Odred* in the Kozara Mountains in June/July 1942, or the successful defence of Jajce in central Bosnia in September and December 1942, only affected the edge of the new 'partisan state' (the 'Partisanreich', as Edmund Glaise von Horstenau called it). The surviving medium-term plans which Bader, Lüters, and their divisional commanders made at the time were concerned primarily with the need to prevent any further expansion of the area

<sup>16</sup> Ibid. 135–8, 168–70, 179–80.

under enemy control, or to cause disturbances there at regular intervals. The idea of a campaign to completely destroy the 'partisan state', which had reached the gates of Zagreb by the end of the year, was never considered, owing to the lack of resources.

The fact that such an undertaking would in any case have been left to the German Axis partner is clear from the extension, in November 1942, of the core area under Communist control to the areas of Serbian settlement in the Croatian regions of Lika, Kordun, and Banija. Although, with the capture of Bihać south of the demarcation line on 4 November, the largest city in the NDH fell into the hands of the partisans, the Italian 2nd Army HQ's only response was to inform the Wehrmacht Commander South-East on 18 November that the second phase of the withdrawal to the coast was to begin shortly. This double-edged gift, which lightened the political burden of the Italian occupation but abandoned more land to the partisans, cast the Pavelić government and its sympathizer, the German ambassador Kasche, into a state of veritable schizophrenia.<sup>17</sup>

### 3. CLIMAX AND FAILURE OF THE FIGHT AGAINST THE NATIONAL LIBERATION ARMY (JANUARY 1943 TO SEPTEMBER 1944)

Paradoxically, it was two German disasters that gave the Croats their only ray of hope in this situation. The withdrawal of Field Marshal Erwin Rommel's Armoured Army Africa from El Alamein on 4 November, and the Anglo-American landing in French North Africa on 8 November 1942, created a situation in which a major landing in Greece or Italy, the repeatedly threatened 'Second Front', was a real possibility in the medium term.<sup>18</sup> This radical change in the strategic picture was the main reason why Hitler and the OKW resolved—as they had already done in the case of Serbia in September 1941—to eliminate the trouble spot, at least for the time being, by means of an improvised concentration of forces. The biggest problem proved to be cooperation with their Axis partner, Italy, which had existed almost only on paper since termination of the TRIO operations in May.<sup>19</sup> However, Rome's well-known sensitivities had to be taken into account more than ever in the late autumn of 1942, since it had meanwhile become increasingly obvious that the Italian Axis partner had had enough of the war—a feeling that was shortly to be heightened even further by the impending loss of Libya and the downfall of 8th Army under Col.-Gen. Italo Gariboldi on the Don front (16 to 24 December 1942).

<sup>17</sup> Kasche found himself, once again, in the ludicrous position of having to both endorse and criticize the Italian withdrawal. See *ADAP*, Series E, iv. 433–4, 'Kasche an Auswärtiges Amt' (1 Dec. 1942).

<sup>18</sup> For details, see Part VI, Chapter IV of the present volume.

<sup>19</sup> Nevertheless, in view of the untenable situation in Zone III, 2nd Army and the German Commanding General in Belgrade had concluded an agreement in October 1942 setting out the conditions on which German troop units might cross the demarcation line. See KTB Komm.Gen. und Befh. in Serbien, Abt. Ia (entry for 2 Oct. 1942), BA-MA RW 40/34, and 'Komm.Gen. an die 714. und 718. ID' (18 Oct. 1942), BA-MA RW 40/34.

Furthermore, the Wehrmacht Commander South-East,<sup>20</sup> Col.-Gen. Alexander Löhr, and the new commander in the Croatian area, Lt.-Gen. Lüters,<sup>21</sup> had to deal with a coalition partner whose increasing unwillingness to make an unreserved military commitment was ever more patently at odds with its claim to hegemony in the western Balkans.

Whereas in May 1942 the barely concealed expansionism of the Comando Supremo and the Italian 2nd Army at the expense of the NDH had prevented execution of the TRIO operations without friction and had finally led to their premature termination, the situation eight months later was completely different. By giving up Zone III and largely ceasing his army's active involvement in the fight against the partisans, Mario Roatta had decisively favoured the emergence of the partisan state. Closely connected with this was the increasing delegation of the war against the National Liberation Army to Serbian nationalist guerrilla units, only a minority of which (the Milizia Volontaria Anti-Comunista, MVAC) were included in the Italian command and supply structures in a way that allowed the scale of their participation in the battle to be calculated. As to the rest, these were groups operating independently south of the demarcation line which—unlike the Chetnik groups in the area under German control—could properly be described as 'large formations', and their largely independent leaders made little secret of their readiness to join Draža Mihailović in the event of a large-scale Allied landing.<sup>22</sup> Even more troubling was the situation in the Montenegrin area, where the three most important Chetnik leaders had largely been left to run the country autonomously after the Communist formations were driven out in June 1942. Their right to maintain a certain number of heavily armed 'gendarmerie' units had been recognized, in a regular inter-state agreement, by the Italian military command in Montenegro under Col.-Gen. Alessandro Pirzio-Biroli. And the fact that the Serbian nationalists who signed the agreement actually had many times more men under arms than the stipulated number had not noticeably affected the good understanding between them and the military command in Montenegro.

As if, in this situation, any further proof were needed that the Italians intended to resign from their role as occupying power, Roatta, having discussed the matter with the Comando Supremo, informed the Wehrmacht Commander South-East on 23 November 1942 that the second phase of 2nd Army's withdrawal was planned to start in the course of the following month.<sup>23</sup> Starting in the area round Knin, a large part of Zone II, including two stretches of coast west and east of annexed Dalmatia, were to be given up by 15 January 1943. Once this regrouping had been

<sup>20</sup> As from 1 January 1943 'Commander-in-Chief South-East', his post having been changed into an army group high command.

<sup>21</sup> Rudolf Lüters had been appointed 'Commander of German troops in Croatia', with effect from 16 November 1942, a position equivalent to that of a commanding general. His promotion to the rank of general followed on 1 January 1943.

<sup>22</sup> According to a January 1943 estimate by Glaise von Horstenau, there were about 19,000 Chetniks living in the territory of the NDH at that point. See 'Privatbrief Glaise von Horstenaus an Löhr' (13 Jan. 1943), BA-MA RH31 III/12.

<sup>23</sup> Talpo, *Dalmazia*, ii. 1139.

completed, V Army Corps (north-west Croatia), XVIII Army Corps (Dalmatia), and VI Army Corps (Herzegovina) would no longer form a continuous line. The avowed aim was to release three infantry divisions for duties on the home front. Although the Wehrmacht High Command eventually managed, after weeks of persuasion, to get the Comando Supremo to put a (temporary) stop to this move,<sup>24</sup> there were various issues concerning the joint conduct of military operations in Yugoslavia that still remained to be clarified at the turn of 1942/3. In addition to the question of overall command in the planned major operation, and executive authority in Zone III, which was still to be retaken, there was above all the issue of the Italian alliance with the Serbian nationalist Chetniks. Basically, the first two points concerned residual elements of Italy's essentially abandoned hegemony in the NDH. Its transitory claims in this respect were mainly a matter of prestige.

The question of the Chetniks was a different matter. At the beginning of 1943, given the steady retreat before the partisans since June 1942 and the increasing demoralization of the Italian troops, the alliance with the National Liberation Army's Serbian nationalist opponents in the civil war was one of the last remaining bases of Italian power in the Croatian and Montenegrin area. For Roatta and his successor, Mario Robotti, the continuation of the alliance, at least in the medium term, had become a *sine qua non* for the Italian presence on the eastern shore of the Adriatic. The chief of the Comando Supremo, Ugo Cavallero, who leaned towards the German position on this issue, was replaced on 30 January 1943 by Vittorio Ambrosio, who had himself been commander-in-chief of the Italian 2nd Army in 1941, creating a situation in which the political leadership in Rome showed signs of yielding on the question of the Chetniks but the implementation of that policy was systematically thwarted by the responsible military authorities (the military command in Montenegro, the Italian 2nd Army, and the Comando Supremo). The German side encouraged this development by turning its attention to other questions relating to the coalition's conduct of the war. Given the obvious advantages of cooperation with the Serbian nationalists in the civil war, the Commander-in-Chief South-East could not always refuse to listen to the Italian arguments. However, even a firm reminder which Adolf Hitler sent to Benito Mussolini on 16 February 1943,<sup>25</sup> and a subsequent visit to Rome by the foreign minister, Joachim von Ribbentrop, and the Wehrmacht commander, Walter Warlimont, only served to raise the Italian evasive tactics to a pitch of absolute virtuosity.<sup>26</sup> And when, on 16 March, the German–Italian operations to destroy Tito's state in Zone III (Operations WHITE I and WHITE II) came to a temporary standstill on the Neretva in the area on the border between eastern Bosnia and Herzegovina,<sup>27</sup> it must have been clear to all concerned that the military situation

<sup>24</sup> AOK 12, Abt. Ia, KTB entry for 29 Dec. 1942, BA-MA RH 20-12/139.

<sup>25</sup> ADAP, Series E, v. 227–32, 'Hitler an Mussolini' (16 Feb. 1943).

<sup>26</sup> For a more detailed account of the German–Italian negotiations at this point, see Schmider, *Partisanenkrieg in Jugoslawien*, 219–26.

<sup>27</sup> The German spearheads did not stop at the river but pressed on for several kilometres into the heart of the country without, however, continuing their pursuit of the partisan forces. See 'Befehlshaber der deutschen Truppen in Kroatien an 718. ID' (22 Mar. 1943), BA-MA RH 26-118/34.

alone made it impossible to put off the Chetnik problem yet again. On the one hand, Ambrosio and Robotti had succeeded in temporarily ruling out any further military operations in the Mihailović Chetniks' main retreat (Montenegro and the adjoining area in eastern Herzegovina), and on the other, the bulk of the partisans, including Tito and his headquarters staff, had escaped the intended encirclement operations in western Bosnia (WHITE I) and south-eastern Bosnia (WHITE II), and were preparing to launch a whole series of strikes against the Chetniks' main forces on the other side of the Neretva that would be decisive for the outcome of the civil war. Although, superficially, this might have appeared to be entirely in the interests of the occupying powers, a rapid continuation of the operations which had already begun with Operation WHITE I was nevertheless unavoidable in the medium term, both because the defeats of the Chetniks in Herzegovina and (from 6 April 1943) in Montenegro had been accompanied by devastating setbacks for the Italian troops deployed there (VI and XIV Army Corps),<sup>28</sup> followed by immediate appeals to the Germans for help, and because the German command authorities believed they were acting in the certain knowledge that the Allies would shortly be landing on Crete and the Peloponnese,<sup>29</sup> and they were consequently not prepared to give the partisans and the Chetniks time to 'finish each other off'.<sup>30</sup>

The negotiations which took place in Zagreb from 11 March to 1 April 1943 between the National Liberation Army high command, the plenipotentiary-general, and the German ambassador on an exchange of prisoners, recognition of the partisans as a belligerent under international law, and a possible ceasefire<sup>31</sup> produced no results—apart from an arrangement on prisoner exchange. However, they may have had an unexpected side effect in that the suspension of operations on the German side continued until the middle of May.<sup>32</sup> Thus, there are some indications that Tito overestimated Germany's willingness simply to follow the latest development in the Serbian civil war as a spectator, and that this in turn contributed at least in some measure to the element of surprise in the next phase of the operations (Operation BLACK).<sup>33</sup>

<sup>28</sup> Even the language used in the final report by the commander-in-chief of the troops in Montenegro, concerned as he was to put a favourable gloss on the events, is very clear in this connection. See 'Relazione sul ciclo operativo primavera-estate 1943 contro le forze Partigiane in Montenegro' (n.d.), ASUSSME, M3/19.

<sup>29</sup> The OKW was misled by a faulty assessment, apparently confirmed by the British deception device, 'Operation Mincemeat', launched on 30 April. See Howard, *Strategic Deception*, 85–93, 245 ff., and the chapter by Schreiber in the present volume.

<sup>30</sup> Der Komm.Gen. und Befh. in Serbien, Abt. Ia, KTB entry for 29 Apr. 1943, BA-MA RW 40/44.

<sup>31</sup> The partisan command was concerned above all to avoid any interference on the German side in the decisive battle against its Serbian nationalist adversaries in the civil war. On this, see the recent accounts in Leković, *Martovski Pregovori*, and Schmider, *Partisanenkrieg in Jugoslawien*, 242–53.

<sup>32</sup> The idea that this pause was the result of an agreement between the Germans and the partisans can be ruled out; see Schmider, *Partisanenkrieg in Jugoslawien*, 242–53. Unfounded conjectures about an agreement of this kind nevertheless continue to appear in the literature. See Loi, *Le operazioni*, 218; West, *Tito*, 152; and Redžić, *Bosnia and Herzegovina*, 219.

<sup>33</sup> This, at least, is the view expressed by his close collaborator, Milovan Djilas, in Djilas, *Wartime*, 248. However, the principal negotiator on the partisan side in the March talks, Dr Vladimir Velebit, ruled this out in his conversation with the author, 'Befragung Dr. Vladimir Velebit, Zagreb' (9 and 10 May 1998).

Map VI.II.1. Extent of the Italian occupation zone in Croatia (October 1941 to September 1943)

Source: Schmider, *Partisanenkrieg in Jugoslawien*, 577 and 578.

The major operation with which the commander of the German troops in Croatia completed the cycle started in western Bosnia on 20 January had a twofold objective, namely to confront and defeat, in the same area, not only the main body of the National Liberation Army under Tito's command, which had broken into eastern Herzegovina in mid-March and into Montenegro from 6 April on, but also its Serbian nationalist opponents in the civil war. In the case of the Chetniks, it was expected that most of them would be disarmed without resistance, but it is impossible to determine with absolute certainty from the available sources whether priority was to be given to one or other of those objectives if the achievement of either of them was in doubt. The National Liberation Army undoubtedly presented a greater military threat, but to judge by the wording of their orders, Löhr and Lüters appear to have attached more importance to the need to take out Draža

Mihailović's headquarters at the start of the operation than to the simultaneous attack on Tito's high command.<sup>34</sup>

This starting position was similar, to some extent, to the situation on the eve of Operation UZICE, but in terms of coalition policy Operation BLACK was to be the only one of its kind in the Axis powers' joint conduct of the war. If the Italian policy of obstruction on the issue of the Chetniks had not prevented the Germans and Italians from cooperating up to the end of Operation WHITE II, it was only because the operation in question had come to a stop right on the border of Montenegro and eastern Herzegovina, the most important area controlled by the Serbian nationalist resistance. Resumption of the cycle of operations would make it hardly be possible to ignore that issue once again, even if the German side were willing to do so. Adolf Hitler therefore gave top priority to keeping the preparations for Operation BLACK hidden from his Italian ally. The march across the border into Montenegro and the disarming of Mihailović's Chetniks had to be carried out, if need be, even in the face of Italian resistance. The one thing that suggested that the operation could be carried out without friction was the series of defeats which the Italian 2nd Army (in the form of VI Army Corps) and the Montenegro military command (XIV Army Corps) had suffered at the hands of the main body of the National Liberation Army since crossing the Neretva. This alone was responsible for the fact that, at the start of Operation BLACK, German units had already taken up positions in Montenegro at the request of the Italians. 104th Light Infantry Division had occupied key positions in the Sandžak region of northern Montenegro, while the bulk of 1st Mountain Division, coming from Macedonia, joined with Col.-Gen. Alessandro Pirzio-Biroli's divisions as they were being assembled against the partisans. Consequently, the only actual border violation by German troops would be the crossing of the border between Herzegovina and Montenegro by 7th SS Volunteer Mountain Division 'Prinz Eugen'.

Despite this favourable starting position, the first eight days of Operation BLACK were mainly spent in a war of nerves about internal issues within the Axis coalition that had been constantly put off since 20 January 1943—particularly the status of the Chetniks and the question of overall command—rather than in fighting the National Liberation Army. On the German side, an agreement in principle to disarm the Chetniks, reached after the talks in Rome, was simply regarded as a given fact, and the Comando Supremo's decision to quietly ignore it<sup>35</sup> now put the commanders in the field, particularly the commanding generals of VI and XIV Army Corps, Alessandro Piazzoni and Ercole Roncaglia, in an impossible position. Their desperate efforts to protect their Serbian nationalist allies, to conceal their obvious loss of sovereignty, and to avoid armed incidents ended only when

<sup>34</sup> 'Operationsbefehl für die Operation "Schwarz"' (4 May 1943) and 'Operationsbefehl für den Fall "Schwarz"' (6 May 1943), BA-MA RW 40/53.

<sup>35</sup> On this, see the minutes of the talks between Vittorio Ambrosio (Comando Supremo), Mario Robotti (2nd Army C-in-C), and Alessandro Pirzio-Biroli (military command Montenegro); 'Verbale del colloquio fra i generali, Capo di Stato Maggiore Generale, Alessandro Pirzio Biroli, Governatore del Montenegro, e Mario Robotti, comandante di Supersloda, 2a Armata' (3 Mar. 1943) in Talpo, Dalmazia, i. 192–7.

Mussolini largely conceded on the vexed issue of the Chetniks, and the Germans agreed to spare the far south of Montenegro from the sweeping disarmament. As to the strong-arm tactics employed on the German side, the main point is that they had been planned at a time when it had been quite impossible to foresee the most important events that ultimately determined Italy's readiness to compromise (the invasion of Montenegro by the main body of the National Liberation Army and the subsequent series of defeats suffered by XIV Army Corps). Although the German command was prepared to make every possible concession at this stage in order to keep its war-weary ally on board,<sup>36</sup> the danger posed by Mihailović on the eve of an expected major landing was considered such a serious threat that it was even worth risking a military confrontation with the Axis partner.

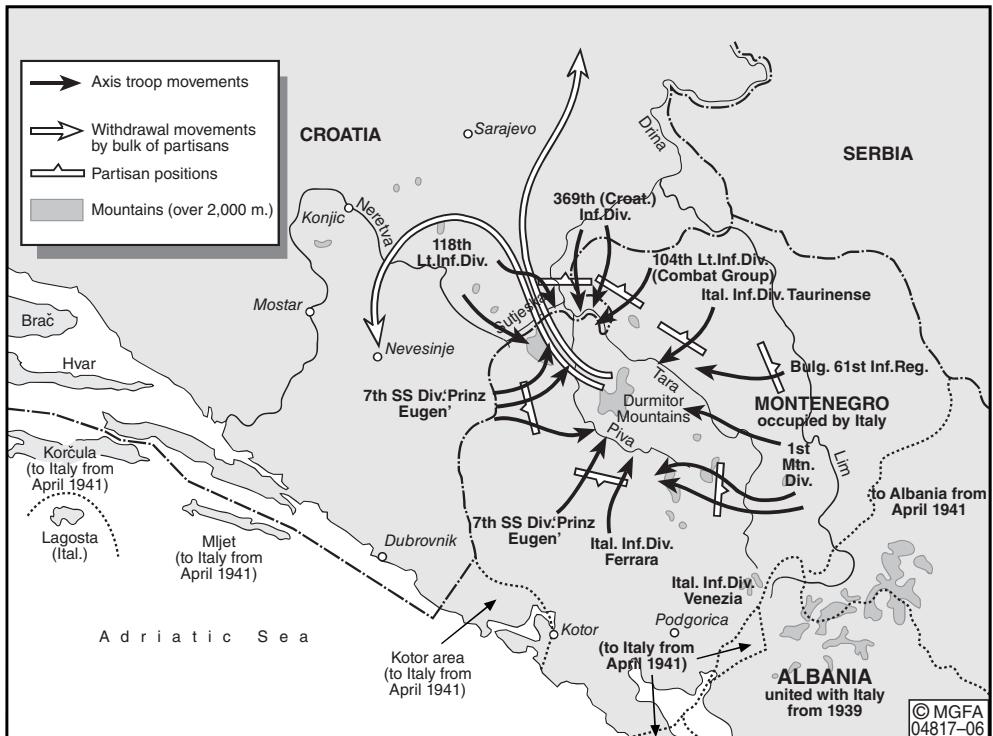

On 22 May, after the four divisions of the National Liberation Army in northern Montenegro had been encircled with the help of some Italian units, the battle began with the partisan brigades that had penetrated into Montenegro on 6 April 1943. This phase of Operation BLACK was to provide the occupation forces with their best opportunity since Operation UZICE to contain a large proportion (some 40 to 50 per cent) of the National Liberation Army's core units and its high command in a confined space and destroy them. However, the partisans benefited from a timely decision on the direction chosen for the breakthrough (back to southern Bosnia),<sup>37</sup> and they had the advantage of the inner line. Tito's men were repeatedly a few hours ahead of their pursuers in securing important river crossings and mountain passes. And in the decisive breakthrough battle during the night of 9 to 10 June 1943, just after they had crossed the Sujetska, the partisans managed to thrust into a gap that was only provisionally secured by a combat group of 369th (Croatian) Infantry Division and break through the ring surrounding them. The partisans' 3rd Division, which had originally been entrusted with defence of the field hospital and had received the order to break out somewhat late in the day, was the only one to be largely destroyed when it attempted to take the same route. Although Tito and most of his senior commanders had managed to escape in even more dramatic circumstances than in the WHITE operations, there was no disguising the fact that the National Liberation Army had suffered a painful defeat. According to concordant German and Yugoslav estimates, about half of the 22,000 partisans<sup>38</sup> originally deployed during Operation BLACK were either dead or missing<sup>39</sup> when the operation came to an end. Never again did the Germans' operational concept of

<sup>36</sup> Such as Hitler's completely senseless confirmation of Italian supremacy in the NDH during the talks with Mussolini at Klessheim a few weeks earlier. See Glaise von Horstenu, *Ein General im Zwielicht*, 209 (May 1943).

<sup>37</sup> Dedijer, *The War Diaries*, ii. 274 (28 May 1943).

<sup>38</sup> According to Kucan, *Borci Sutjeske*, 33, quoted in Hoare, *Whose is the Partisan Movement?*, 29. Earlier Yugoslavian accounts give a total strength of 18,000 to 19,000; see Djilas, *Der Krieg der Partisanen*, 259, and Strugar, *Der jugoslawische Volksbefreiungskrieg*, 136.

<sup>39</sup> 'Befh. der dt. Truppen in Kroatien, Abt. Ia, Verlust- und Beutemeldung Unternehmen "Schwarz"' (n.d.), BA-MA RH24-15/41, gives the figure of 7,489 enemy dead 'counted' and a further 4,000 to 6,000 'estimated'. The figure given in Djilas, *Der Krieg der Partisanen*, 301, is 7,000 dead or missing.

Map VI.II.2. Operation SCHWARTZ (15 May to 16 July 1943)

overcoming the insurgency in the territory of the NDH by means of a large-scale operation come so close to decisive success.

For a number of reasons, however, Operation BLACK gave Pavelić and his allies only a short breathing space. Thus, at the beginning of April, the Italian 2nd Army resumed its withdrawal to the Adriatic, which in December had only been suspended, thereby giving the National Liberation Army even more territory from which the partisan state, which had re-emerged in western and central Bosnia since Operation WHITE I, could draw more forces. On the question of German troops taking over in these areas, Ambrosio and Robotti appeared to be torn between the effort to reduce their own exposure to attack by giving up more Croatian territory on the one hand, and, on the other, the wish to maintain their long-since faltering claim to hegemony for as long as possible.<sup>40</sup> The transfer of these evacuated areas to Croatian units that had been banished to the other side of the demarcation line by

<sup>40</sup> ‘Il ministro a Zagrabia, Casertano, al capo del governo e ministro degli esteri, Mussolini’ (8 May 1943), annex: ‘Colloquio del generale Löhr con il generale Robotti’ (5 May 1943), DDI, 9th Series, x. 401–2.

the Italian 2nd Army in 1941<sup>41</sup> now ran into German objections. The insurgency had spread to northern Croatia in the meantime, and the military duties associated with that development, combined with the expectation that Italy would probably try to move the units in question to Zone III or Zone II and then place them under the overall command of 2nd Army, caused Löhr and Lüters to take a firm stand.

Furthermore, the OKW considered that sending combat-fit front-line mountain units like 1st Mountain Division on a long-term mission against the partisans was justifiable only if there was at least some prospect of encountering a 'modern' adversary, that is, a well-equipped opponent under regular command. So, after Operation BLACK, 1st Mountain Division was sent to Greece, where the danger of a major Allied landing appeared to be much greater than in Yugoslavia. 100th Light Infantry Division was moved from Syrmia to Albania at the end of July for the same reason. Compared with those formations, the divisions brought in at this time, namely the Croatian 373rd Division and 173rd Reserve Infantry Division, were second-class units, seriously deficient in respect of training and equipment.

Finally, a no less important factor was the failure of the NDH to undertake any military or political renewal during the almost five-month-long period of harassment by the main partisan units. Its armed forces continued to deteriorate steadily. As a result, in the second quarter of 1943 alone, the National Liberation Army was able to capture booty—counting only weapons taken from deserters and from troops disarmed without resistance—totalling 3,000 rifles and 118 machine guns.<sup>42</sup> That alone was almost equal to the 3,608 rifles and 220 machine guns lost in Operation BLACK.<sup>43</sup>

On 25 July 1943 an event occurred in Rome that caused the German commanders to regard the fight against the National Liberation Army as being of only secondary importance for the time being. Following a recommendation by the Grand Council of Fascism in the early hours of the morning to remove Mussolini from his post as commander-in-chief of the armed forces, he was dismissed by King Victor Emmanuel III in the late afternoon and subsequently arrested. It was clear to all observers that the purpose of this move could only be to break the 'Pact of Steel' with Germany sooner or later and conclude an armistice with the Allies. However, this did not happen at once, as Hitler feared it might during the first 48 hours after the Duce was deposed.<sup>44</sup> This gave the German command authorities an opportunity at least to keep the consequences of their most important Axis partner's exit from the war within manageable bounds. What could not be foreseen, however, was that their preparations would ultimately be crowned with success. This was due

<sup>41</sup> Roatta's decision to allow eight Croatian battalions to move into Zone II—under Italian command, of course—was still regarded in September 1942 as a considerable concession to Pavelić. See Talpo, *Dalmazia*, i. 737.

<sup>42</sup> 'Lagebeurteilung des Oberbefehlshabers Südost (ObKdo H.Gr. E) für den Monat Juni 1943' (n.d.), BA-MA RH 2/684.

<sup>43</sup> 'Befh. der dt. Truppen in Kroatien, Abt. Ia, Verlust- und Beutemeldung Unternehmen "Schwarz"' (n.d.), BA-MA RH 24-15/41.

<sup>44</sup> The notes made by an officer who was at Führer headquarters at the time are very instructive in this connection. See 'Tagebuch Wolfram von Richthofen', 258–66 (27, 28, and 29 Jul. 1943), BA-MA N 671/11.

in no small measure to the confused strategy pursued by Ambrosio, by the chief of the army general staff, Mario Roatta, and by the new head of government, Pietro Badoglio, whether in order to avoid arousing suspicion on the German side, or because the Italians did not rule out the possibility—depending on how the military situation developed—of continuing to fight on the German side for the time being.<sup>45</sup> Thus, various decisions were taken during the month of August that were bound to be serious obstacles to a change of sides by Italy in the shorter or longer term. Cooperation with the Axis partner continued, both at home and in the occupied territories, and not only was the influx of German troop units not prevented, but it was actually encouraged in some cases. In Italy, this meant that there was at least a chance of holding the southern and central sections of the peninsula, including Rome, when the armistice was announced. In occupied Yugoslavia, the continued withdrawal to the Adriatic,<sup>46</sup> and particularly the surrender of a number of airfields, gave the new Commander-in-Chief South-East (as of 25 August), Field Marshal Maximilian von Weichs, and the commander-in-chief of 2nd Armoured Army, Lothar Rendulic,<sup>47</sup> a chance, before Italy left the Axis coalition, to get their troops into positions that would enable them to disarm the Italian 2nd Army quickly (Operation AXIS). Even the wording of the orders that Badoglio issued to army commands and army groups immediately before 8 September, and the speech he made on the radio in the evening—a speech necessitated by General Eisenhower's prior announcement on Radio Algiers—were clear expressions of this ambivalent policy. There was no mention in either text of the need to cooperate with the Allies or to regard the Germans as enemies from now on.

The consequences for an already war-weary army could not have been more devastating. In the days following 8 September, the Italian 2nd Army and the units of Army Group East<sup>48</sup> that had not managed to escape across the Adriatic appeared to be essentially prepared to hand over their weapons and equipment to whichever party first appeared in some strength before their respective garrisons and recognized the overnight announcement of Italian 'neutrality',<sup>49</sup> and then to await further orders.<sup>50</sup>

<sup>45</sup> An hypothesis that is supported, not least, by Badoglio's conduct in the decisive hours of 8 September. See esp. Aga Rossi, *A Nation Collapses*, 50–102, and Rochat, *Le guerre italiane*, 421–33, in whose opinion the king, Badoglio, and Ambrosio were motivated not so much by rational calculations as by concern for their own (political and physical) survival.

<sup>46</sup> 'Der Bevollmächtigte General in Kroatien an OKW und OB Südost' (24 Aug. 1943), BA-MA RH 31 III/11.

<sup>47</sup> The area formerly under Lüters' command was transferred to 2nd Armoured Army (General Lothar Rendulic) with effect from 26 August 1943. Serbia and, with the entry into force of the Italian armistice, Montenegro and Albania were also placed under 2nd Armoured Army command for operational purposes on 28 August. On the placement of Serbia under its command, see KTB Militärbefehlshaber Südost Abt. Ia (26 and 28 Aug. 1943), BA-MA RW 40/80.

<sup>48</sup> Large unit formed on 15 May under Col.-Gen. Ezio Rosi, with all the separate Italian army units located in Herzegovina (VI AC), Albania (9th Army), and Greece (11th Army) under his command. Montenegro (XIV AC) was placed under his command with effect from 1 July.

<sup>49</sup> The new Italian government did not declare war on Germany until 13 October.

<sup>50</sup> For details of this process, which in most cases led to the deportation of these 'military internees', who had virtually no rights, to serve as forced labour in the Reich, see Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich*, 231–96.

The total collapse of the Italian units in the western Balkans, and the booty that Rendulic captured as a result, could not, of course, disguise the fact that, in late September and early October 1943, his army was still in an extremely critical situation. The Pelješac peninsula and all the Dalmatian islands, where the National Liberation Army and the Allies had meanwhile established various assembly points for supplies, prisoners, and wounded, still remained to be secured in the next few months. Furthermore, on 2 October 1943 the partisans had begun the systematic conquest of eastern Bosnia, which, as a result of the transfer of forces for Operation AXIS, had been largely abandoned by 2nd Armoured Army and left in the hands of the Croatian ally.<sup>51</sup> The prospect of performing this and other military tasks was made even more difficult by the following circumstances: (a) the National Liberation Army too had also captured so much booty after 8 September that it was now largely self-sufficient in arms and munitions; (b) the German occupation forces in Croatia and Montenegro now faced the problem of somehow compensating for the disappearance from their order of battle of almost 300,000<sup>52</sup>—admittedly badly led and poorly trained—Italian troops; and (c) Germany had lost command of the air in the Yugoslav theatre of war on 27 September, when the British Eighth Army captured the airfields at Foggia in southern Italy. Although handing Italian Dalmatia (the former Zone I) over to the NDH appeared to give the Pavelić regime a brief measure of stability, it had no effect to speak of on the willingness of its armed forces to engage in battle. Mass desertions and surrender after a pretence of combat were once again the order of the day during the battle for eastern Bosnia in October.<sup>53</sup>

Most of Montenegro had also fallen to the National Liberation Army since 8 September, so Rendulic now had to protect the last cornerstone of German power in the western Balkans—Serbia—against invasion from the south or west. This purely defensive task was increasingly the centre of attention from the early autumn of 1943 on, as shown by the lengthy discussions in 2nd Armoured Army and Commander-in-Chief South-East headquarters about a future cycle of operations in eastern Bosnia. The main objective had originally been to destroy the sections of the National Liberation Army operating in the area and reincorporate the whole of eastern Bosnia in the Croatian state entity, but soon the only concern was to stop an invasion force crossing the Drina into Old Serbia.<sup>54</sup>

To that end, the Commander-in-Chief South-East persuaded the OKW to let 2nd Armoured Army have temporary reinforcements for the winter months. Since there was unlikely to be a major landing on the Adriatic coast during that time on

<sup>51</sup> Befh. der dt. Truppen in Kroatien Abt. Ia, 'Lagebeurteilung für die Zeit vom 16.7. bis 15.8.1943' (17 Aug. 1943), BA-MA RH 21-2/609; Gen.Kdo. XV. Geb.AK, Abt. Ia, 'Lagebeurteilung für die Zeit vom 16.8. bis 15.9.1943' (19 Sept. 1943), BA-MA RH 24-15/10.

<sup>52</sup> The Italian 2nd Army and XIV Army Corps must still have had 280,000 to 290,000 men on the eve of 8 September (maximum strength about 350,000 in August 1942). For more detailed figures, see Schmider, *Partisanenkrieg in Jugoslawien*, 587–8.

<sup>53</sup> 'Anlage 1 zur Lagebeurteilung des Gen.Kdo. XV. Geb.AK vom 17.11.1943 ("Erfolg des Einsatzes kroatischer Truppenteile")', BA-MA RH 24-15/12.

<sup>54</sup> 'Pz.AOK 2 an OB Südost' (15 Oct. 1943), BA-MA RH 21-2/616, and *Die geheimen Tagesberichte*, viii. 351 (5 Nov. 1943) and 465 (26 Nov. 1943).

account of the weather, he even managed to get hold of 1st Mountain Division, which had been serving until then as operational reserve for the army in Macedonia. The following divisions were also assigned to 2nd Armoured Army on a temporary basis: 277th Infantry Division (early December 1943 to end January 1944), 371st Infantry Division (early December 1943 to end January 1944), and 367th Infantry Division (early December 1943 to end March 1944)—although it should be noted that all three divisions were new formations which had not yet completed their training. The permanent assignment of 1st Cossack Division at the end of October 1943 and the Croatian 392nd Infantry Division at the beginning of January 1944 was of dubious benefit for the same reasons, with the added difficulty involved in dealing with foreign troops.<sup>55</sup> That problem was reversed in mid-January 1944, when the long-serving 114th Light Infantry Division was transferred to Italy.<sup>56</sup>

From an operational point of view, this regrouping had some success in the short term. The winter campaign in eastern Bosnia (Operation KUGELBLITZ, 2 to 16 December 1943, followed by Operation SCHNEESTURM, 18 to 27 December 1943) dealt the National Liberation Army's III Corps a severe though not fatal blow, delaying the invasion of Serbia for three months. The conquest of the Dalmatian archipelago also went ahead, with some delay because landing craft and fighter units had to be brought in from the Aegean,<sup>57</sup> but distinctly faster than the arduous capture of the Pelješac peninsula, which took more than three weeks. All the southern Dalmatian islands were captured between 22 December 1943 and 19 January 1944, with the almost complete destruction in one case (Operation HERBSTGEWITTER II, 22 to 27 December 1943) of a partisan brigade that was on Korčula planning a fresh landing on Pelješac.

In view of the fact that, on the eve of the Italian armistice, 2nd Armoured Army's position could be described as virtually hopeless, especially given the possibility of a major Allied landing, Rendulic had every reason to be more than satisfied with developments in the past few months. Against all expectations, the disarming of the Italian army units in the area under his command (the Italian 2nd and 9th Armies) had been completed quickly and without friction, the coast and offshore islands had been secured, and the National Liberation Army had been prevented from entering Old Serbia, suffering heavy losses in the process. The Chetniks, greatly weakened by Operation BLACK and the defeats they had suffered in the civil war, appeared increasingly ready, both east and west of the Drina, to place themselves under German command and take part in the fight against the National Liberation Army.<sup>58</sup> The only problems now, although they did not yet pose a real threat,

<sup>55</sup> KTB 2. Pz.AOK 2, Abt. Ia, entry for 20 Oct. 1943, BA-MA RH 21-2/590; XV. Geb.AK, Abt. Ia, 'Lagebeurteilung vom 15.12.1943–15.1.1944' (14. Jan. 1944), RH 24-15/47.

<sup>56</sup> For detailed information on which troops were tied up in the Yugoslavian theatre of war and for what periods, see Schmidler, 'Wehrmacht's Yugoslav Quagmire'.

<sup>57</sup> Group IV of 27th Fighter Squadron was fully engaged until the end of November in recapturing the Italian Dodecanese islands (south-eastern Aegean). A study of this campaign, drawing on Italian and German sources (notably the Naval Group Command South war diary), is still a desideratum.

<sup>58</sup> Until Italy capitulated, German units in the NDH had only very occasionally worked with a few Chetnik groups that were reputed to be particularly reliable. Providing them with arms and ammunition was forbidden in principle but it nevertheless seems to have happened in some cases;

were the Allied command of the air and the exponential growth in numbers of the National Liberation Army (actual strength almost 250,000 at the turn of 1943/4).<sup>59</sup> However, in contrast to this predominantly positive military picture, the political position could not have been bleaker. The Croatian regime had gained nothing to speak of from the incorporation of Italian Dalmatia in the NDH, and it found itself facing an existential crisis once again in October, with the loss of east Bosnia and mass desertions in the regular forces. There were also disputes with the German Axis partner on a whole range of issues, some of them simply the unbroken continuation of friction between Italy and Croatia (over cooperation with Serbian nationalist Chetniks, and the economic exploitation of the country<sup>60</sup>), others the result of specifically German acts or omissions (the recruitment of Croatian citizens into the Wehrmacht and the Waffen SS, and the disputed status of the areas round Fiume and Zara<sup>61</sup>). This crisis had been preceded by a process of radicalization within the Ustasha which, as far as one can see, had several causes.<sup>62</sup> It led, on the one hand, to a renewal of pogrom-like attacks on the Serbian section of the population, but also to a targeted attempt at contact with the enemy<sup>63</sup>—a development which the German foreign minister had categorically ruled out just a few months earlier in view of ‘its [the Ustasha’s] character, and our enemies’ attitude towards it concerning troops that are absolutely reliant on us’.<sup>64</sup>

The depressed state of German–Croatian relations was exacerbated by the fact that the commander-in-chief of 2nd Armoured Army showed very little inclination to meet the Croatian state halfway in areas where he could have done so. His aversion to the Pavelić regime, inherited—as far as one can see—from his

see ‘Befehl an die Četnikführer Cvijeta Todić, Golub Mitrović, Savo Derikonja, Radivoj Kosorić, Bozo Plemić und Dušan Kovačević’ (12 Jan 1943), BA-MA RH 26-118/32; ‘Kdr.- und Stabsbesprechung 9.3.1943, Banja Luka’ (11 Mar. 1943), BA-MA RH 26-114/18; ‘369. (kroat.) ID an Befehlshaber der deutschen Truppen in Kroatien’ (17 Aug. 1943), BA-MA RH 24-15/2. After 8 September Rendulic was obliged, under pressure from his divisional and corps commanders, to legalize collaboration with the Serbian nationalist side in the civil war, including the delivery of munitions; see ‘Befehl des Pz.AOK 2 vom 29.9.1943’ (29 Sept. 1943), BA-MA RH 24-15/6.

<sup>59</sup> Estimate based on Djilas, *Wartime*, 375.

<sup>60</sup> By far the best investigation of this complex subject is to be found in Tomasevich, *War and Revolution*, ii. 611–717.

<sup>61</sup> This concerns towns on the Dalmatian coast and the Istrian–Slovenian border with a majority Italian population which were already part of Italian national territory before April 1941. On Croatian claims after 8 September 1943, see ADAP, Series E, vii. 90, ‘Aufzeichnung des Staatssekretärs des Auswärtigen Amtes Baron Steengracht’ (22 Oct. 1943).

<sup>62</sup> In the opinion of the plenipotentiary general in Croatia, Glaise von Horstenau, this radicalization was a reaction on the government’s part to the mass desertions in October 1943; see ‘Der Bevollmächtigte General an den Militärbefehlshaber Südost’ (20 Oct. 1943), BA-MA RH 19 XI/39. This view is contradicted by other sources, according to which the process of radicalization had already begun in July or August.

<sup>63</sup> ‘Notiz vom 7.3.1944’, ‘Der Bevollmächtigte General an die deutsche Gesandtschaft Agram’ (24 Mar. 1944), and ‘Bericht über Geheimkonferenz alter Ustasha-Kämpfer’ (13 Jun. 1944), PA, Gesandtschaftsakten Zagreb 66/4; ‘XV. Geb.AK, Lagebeurteilung, Stand vom 10.6.1944’ (19 Jun. 1944), BA-MA RH 24-15/52; ‘Gen.Kdo. V. SS-Geb.Korps, Der Kommandierende General an den Reichsführer SS’ (10 Jul. 1944), BA, NS 19/2154. On contacts between partisans and Ustasha before 8 September 1943, see Schmider, *Partisanenkrieg in Jugoslawien*, 124–5, 399–400.

<sup>64</sup> ADAP, Series E, vi, doc. 292, 503–7.

predecessor, Alexander Löhr,<sup>65</sup> was so extreme that he actually noted in his army's war diary that he intended to circumvent a Führer order of 7 September which had stressed the need to remain on good terms with all Croatian bodies.<sup>66</sup> Unlike Löhr, however, Rendulic made no attempt<sup>67</sup>—not even a half-hearted one—to call the NDH's right of existence as a state into question. He preferred instead to circumvent or frustrate the Croatian government and its bodies by all the means that the military circumstances brought to hand—a course of action which further increased the prevailing ill-feeling in the coming months.

In 1944 an issue that was for a time an even greater source of contention between Germany and Croatia than cooperation between Germans and Chetniks was the formation and deployment of 13th Waffen SS Mountain Division 'Handschar', which consisted of Bosnian Muslim recruits. SS recruitment practices had already caused some ill-feeling in the spring of 1943, but that was not all. When Division 'Handschar' returned to the Bosnian theatre of war in February 1944, a political issue of the first order arose over the establishment of a 'security zone' in north-eastern Bosnia which the division was to attempt to 'pacify' durably by means of its permanent presence there. As was only to be expected in the case of 'pacification' of parts of the NDH where the population was not 100 per cent Croat, one of the aims was to neutralize, or at least circumvent, the Ustasha and its organs, in accordance with the concept which Bader and Dangić had developed for the same geographical area in January 1942. In the case of north-eastern Bosnia, the occupation by 13th SS Division began with the outright conquest of the area in March/April 1944 and the initial assumption of executive power. This, together with previous SS contacts with several Bosnian Muslim politicians who had publicly espoused the cause of extensive autonomy for east Bosnia,<sup>68</sup> led the Croatian regime to fear secessionist intentions which in all probability did not exist.<sup>69</sup> In view of the power vacuum in most rural areas of the NDH in 1944, however, secession seemed a perfectly feasible alternative to the existing state of affairs.

From the German point of view, the formation of Division 'Handschar' was welcome, if only because—at a time when the plenipotentiary general could justify the formation of more Croatian units only by the need to deprive the partisans of recruits, at least in the medium term<sup>70</sup>—it appeared to represent by far the most

<sup>65</sup> However, the way Rendulic introduced himself to the ambassador, Kasche, has a bearing on this. See 'Kasche an Auswärtiges Amt' (19 Aug. 1943), PA, StS Kroatien, v. 696.

<sup>66</sup> KTB Pz.AOK 2, Abt. Ia (entry for 12 Sept. 1943), BA-MA RH 21-2/590.

<sup>67</sup> Löhr submitted a memorandum at the beginning of March 1943 in which he argued that the 'Poglavnik' should be put in a 'dummy position'. See 'Denkschrift: Vorschlag für notwendige politische, verwaltungsmäßige und wirtschaftliche Reformen in Kroatien nach Durchführung der militärischen Operationen' (27 Feb. 1943), BA-MA RW 4/667; for more details, see Schmider, *Partisanenkrieg in Jugoslawien*, 239–42.

<sup>68</sup> For more details on the position of the Muslim ethnic group in the NDH, see Tomasevich, *War and Revolution*, ii. 466–510. On contacts with the SS, see *ibid.* 494–501.

<sup>69</sup> It appears from George Lepre's research that the decision to publish the proclamation amounting to the assumption of executive power was taken mainly at the initiative of the commander of 13th SS Division. See Lepre, *Himmler's Bosnian Division*, 169–73.

<sup>70</sup> 'Der Deutsche Bevollmächtigte General in Kroatien an den Oberbefehlshaber Südost' (17 Jun. 1943), BA-MA RH 31 III/11.

sensible form in which to mobilize and deploy the Croatian defence potential.<sup>71</sup> In the case of 13th SS Division, it was also hoped to counteract the corrosive effect that constant exposure to the sight of a homeland torn apart by civil war and ‘ethnic cleansing’ was bound to have on the Croatian forces—and had already had on some of the legionnaire divisions—with the promise that the unit would in no circumstances be deployed outside the narrow bounds of home territory, that is, east Bosnia. So the highly equipped ‘Handschar’ Division was intended in advance to act as a kind of home guard providing local protection.

However, the tensions between Germany and Croatia came to a head in the spring of 1944 as a result of events in which the issues of executive power and German relations with the Chetniks in the NDH were of only secondary importance. The first differences arose in the second half of March 1944 regarding the evacuation of all men of arms-bearing age from the Dalmatian coast and offshore islands by V SS Mountain Army Corps, which the Croatian government—and not it alone—considered to have been conducted with undue ruthlessness.<sup>72</sup> The climax was a massacre of the inhabitants of several villages in the hinterland of Split—especially Otok, Gruda, and Dolac—carried out by sections of 7th SS Division on 28 March. The number of victims (as many as 2,000, according to some sources),<sup>73</sup> the fact that almost all of them were Croats, and the precise circumstances indicating that this was a completely arbitrary act resulted in a protest by the Croatian government that had the undivided support of Ambassador Kasche. Attempts by the Croatian foreign minister, in his protest note, to accuse Chetniks operating side by side with 7th SS Division of complicity may have been prompted by a desire to minimize Croatia’s loss of face. This loophole was promptly closed by the Reich foreign minister, who informed his Croatian opposite number on 20 April that he would have nothing further to do with him from now on, and that ‘the Croatian government must endeavour in future to frame its communications to the Reich government in a form befitting Croatia’s position vis-à-vis the Greater German Reich’.<sup>74</sup> Ambassador Kasche was first reprimanded in

<sup>71</sup> Even assuming that the situation in Croatia had allowed larger units to be deployed on the eastern front, this would probably have been rejected as too risky in view of the critical situation there and the pan-Slavic Soviet propaganda campaign. On this, see the negative experiences with the Croatian fighter squadron in 52nd Fighter Wing in Neulen, *Am Himmel Europas*, 178–83, and Savic and Siglic, *Croatian Aces*, 49–58. Things were different in the case of the small naval legion operating in the Black Sea since 1941. On the eve of this unit’s return home, a report from the naval liaison staff in Croatia read: ‘According to its officers, the legion feels it is a German force. Inherently, it has no desire to return to Croatia, but wishes to continue serving under German command in the Black Sea.’ See Naval Liaison Staff Croatia, ‘Lagebeurteilung und Maßnahmen zur Erfassung der kroatischen Wehrkraft bis Mitte März 1944’ (n.d.), BA-MA RM 35 III/173.

<sup>72</sup> Naval Liaison Staff Croatia, ‘Lagebeurteilung und Ausbildungsmäßignahmen für die Zeit Mitte März bis Anfang Mai 1944’ (7 May 1944), BA-MA RM 35 III/173: ‘In some places, it assumed forms which were difficult for the population to bear.’

<sup>73</sup> In the seventh Nuremberg trial of 1947, which concerned the conduct of German generals in south-eastern Europe, the prosecution gave the figure of 2,014 dead; see *Hostage Case*, 768. An initial estimate of 486 dead had been rejected by the ambassador, Kasche, as too low. See ‘Kasche an Auswärtiges Amt’ (16 Apr. 1944), PA, Inland IIg 401, 2824.

<sup>74</sup> ADAP, Series E, vii. 649–52, ‘Reichsaußenminister Ribbentrop an die Gesandtschaft in Agram’ (20 Apr. 1944).

writing for repeatedly siding with the Croats (13 April),<sup>75</sup> and then ordered back to Berlin to report (6 May), returning to his post only at the beginning of June. During that time the possibility of recalling him was probably discussed frequently and repeatedly deferred. The matter was finally settled in Kasche's favour by the events of 20 July 1944.<sup>76</sup> Although, with regard to the shootings in the Split hinterland, it was soon established unequivocally that German organs were responsible,<sup>77</sup> there are still differing interpretations of the motive for this, the most serious German war crime committed on Croatian soil.<sup>78</sup>

As regards the military aspect, after the end of the winter campaign (Operation WALDRAUSCH from 4 to 18 January 1944 and Operation EMIL from 29 January to 8 February 1944) and the further withdrawal of 1st Mountain Division, Rendulic changed his modus operandi. Major operations were ruled out for lack of strength, and the fight against the National Liberation Army was conducted mainly at battalion and (occasionally) regimental level. This gave the National Liberation Army an opportunity for a fresh attempt to invade Serbia. It began on 17 March, and although it failed in the end, it had the Military Commander South-East in Belgrade holding his breath for a good two months.<sup>79</sup> An attempt by the partisan high command to reinforce the relevant corps, 2nd Proletarian Division and 5th Assault Division, via east Bosnia at the end of April could be prevented only by the expedient of bringing in units of the 13th SS Division from the security zone (Operation MAIBAUM). This 'irregular use' of the division gave rise to a controversy between its commander, SS Brigadeführer Karl-Gustav Sauberzweig, and the commanding general of V SS Mountain Army Corps, Obergruppenführer Arthur Phleps, a controversy that eventually had to be settled by no less a figure than Heinrich Himmler.<sup>80</sup> The need to obtain help from every conceivable source in this situation may finally have prompted Rendulic to tackle the question of the deployment of Chetniks on the German side, as the OKW had already urged him

<sup>75</sup> ADAP, Series E, vii. 625–6, 'Reichsaufßenminister Ribbentrop an Kasche' (13 Apr. 1944).

<sup>76</sup> The most important source for deciphering this 'ambassadorial crisis' (Glaise von Horstenau) is the diary-style notes kept by the commander-in-chief. See Glaise von Horstenau, *Ein General im Zwielicht*, 400–1 (May 1944) and 441 (Oct. 1944). The crucial factor—Hitler's personal evaluation of the 'old campaigner', Kasche—is confirmed by the record of a situation conference in September 1944. See *Hitlers Lagebesprechungen*, 668 ('Abendlage vom 17.9.1944').

<sup>77</sup> On this, see the assessment by C-in-C South-East's chief of staff in 'Besprechung bei Heeresgruppe F' (21 Apr. 1944), BA-MA RH 31 III/9.

<sup>78</sup> Whereas the author of the history of 7th SS Division, Otto Kumm, who commanded the division at the time, presents the events as the result of reprisals ordered directly by 2nd Armoured Army, Glaise von Horstenau and Kasche thought it likely that the decisive motive was the bitterness felt by many members of the division at the recent partial evacuation of 'ethnic German' settlements in Slavonia. See Kumm, *Vorwärts, Prinz Eugen!*, 383, Glaise von Horstenau, *Ein General im Zwielicht*, 396–7 (May 1944), and 'Kasche an Auswärtiges Amt' (16 Apr. 1944), PA, Inland IIg 401, 2824. It should be borne in mind that the two proposed explanations are not necessarily mutually exclusive, especially as Otok shows every sign of having been an excess. The attempt in Casagrande, *Die volksdeutsche SS-Division Prinz Eugen*, 277–83, to see Otok primarily 'in the wider context of an ethnic conflict' is unconvincing, since it takes insufficient account of the operational context.

<sup>79</sup> See section 4 of the present chapter: 'Serbia after the Defeat of the 1941 Uprising'.

<sup>80</sup> 'Reichsführer SS an SS-Obergruppenführer Artur Phleps' (10 May 1944), BA, SSO-Akte Arthur Phleps.

to do.<sup>81</sup> They were 'to be incorporated in the German troops in very small units, or as volunteers'. It was clear from the results of his efforts that Rendulic—like Roatta and Ambrosio the previous year—had not the slightest intention of giving up his valuable Serbian nationalist auxiliaries. In an order issued on 11 May, he ruled that from now on only Serbs who were 'loyal to the Croatian State' were to serve in the Chetnik groups operating with the Germans, and they were to be referred to as the 'Kroatische Kampfgemeinschaft' (KKG) (the Croatian Combat Community) in all official correspondence. It must have been clear to all concerned that the ruling was a fig leaf. According to the surviving contemporary accounts of the troops' impressions, they were in no doubt that Rendulic's order was merely a temporary expedient to placate the ambassador, the Croats, and, if possible, the OKW. As for the Chetniks themselves, according to an NCO responsible for liaison with a unit of this kind, 'they don't know what it means, and they wouldn't like it if they did'.<sup>82</sup>

The incorporation in 2nd Armoured Army of 13th SS Division, with over 21,000 men, reduced the tension to some extent, but Rendulic's operational reserve was still confined to sections of 7th SS Division. So there was still no possibility of mounting a proper major operation on the lines of Operation BLACK that would wrest the initiative from the National Liberation Army, at least for some time. The 2nd Armoured Army commander-in-chief's options were also limited by the western Allies' increasing command of the sea and air. Thus, for example, after months of controversy, the plan to capture Viš, the outermost island of the southern Dalmatian archipelago, was abandoned at the end of April because the likelihood of encountering vastly superior Allied naval forces was simply too great. As a result, the British and partisan forces stationed on the island were able to continue a whole series of surprise landing operations, causing so much trouble in the area, which had been captured at considerable cost at the turn of the year, that the whole point of German operations in the area was called into question. There ensued a heated dispute between the navy and the army about the sense and purpose of occupying the Dalmatian archipelago.<sup>83</sup>

Allied command of the air also played an important part in the failure of Rendulic's next attempt to escape the inevitable impotence resulting from the inferior means at his disposal. Plans by him or his subordinates to decapitate the resistance movements by deploying paratroops or special operations units in 'full camouflage' (that is, disguised as partisans) against Tito's and Mihailović's headquarters can be traced back as far as May 1943.<sup>84</sup> At the beginning of May 1944 Tito's relatively lengthy stay in Drvar, in western Bosnia, finally provided an opportunity to put into action plans that had been repeatedly rejected or

<sup>81</sup> ADAP, Series E, vii. 519–20, 'OKW/WFSt an den Deutschen Bevollmächtigten General in Kroatien Glaise von Horstenu' (19 Mar. 1944).

<sup>82</sup> 'Erfahrungsbericht über Dienstreise Serbien-Kroatien in der Zeit vom 20.6. bis 4.7.1944' (5 July 1944), BA-MA RH 19 XI/15.

<sup>83</sup> The most exhaustive treatment of this subject, if somewhat confined to the British perspective, is McConville, *A Small War*. For a summary account, see Schmider, *Partisanenkrieg in Jugoslawien*, 391–4, 414–15.

<sup>84</sup> Schmider, *Partisanenkrieg in Jugoslawien*, 380–3.

postponed. The operation was kept secret to the last minute, but despite the element of surprise, the attack by a Waffen SS paratroop battalion failed owing to insufficient strength, and because, after the preceding German air raids, Tito had moved to a cave on the edge of the area.<sup>85</sup> The units of Air Commander Croatia were not seen again after the second day,<sup>86</sup> and the ground units sent to relieve the paratroops lost more vehicles as a result of Allied fighter-bomber attacks than ever before (at least in this theatre of war).<sup>87</sup> In the course of the next few days Tito managed to escape to the island of Viš, where he was safe from further German attacks for the foreseeable future.

With Operation RÖSSELSPRUNG, Rendulic had briefly regained the initiative, at least at tactical level. To avoid losing it again immediately, he allowed 7th SS Division to pursue over the next few weeks an idea that its former commander, SS Obergruppenführer Artur Phleps, now commanding general of V SS Mountain Army Corps, had developed in recent months. Phleps' main concern was to achieve greater flexibility in the conduct of operations against major units of the National Liberation Army. The usual practice of encirclement operations adopted so far seemed to him to be too rigid, tied as it was to specific target positions and time frames. Instead, he argued in favour of pursuit, in which the idea of encirclement would play only a secondary part.<sup>88</sup> Bringing in well-rested reinforcements at the right time would establish a tempo ('free hunt')<sup>89</sup> that no partisan brigade could keep up with. The end of the operation would thus be defined in advance as the destruction of the enemy or the complete exhaustion of the German forces, rather than the attainment of a specified target position. It is hard to say whether, or to what extent, the two operations conducted on these lines in June (Operation AMOR) and July (Operation FEUERWEHR) were more successful than conventional encirclement operations, given the absence of primary sources.<sup>90</sup>

The fact that 2nd Armoured Army's next major operation was launched just a few days after the end of Operation FEUERWEHR, and that, as in the case of Operation MAIBAUM, the aim was once again to repel the enemy invasion of Old Serbia, suggests that there were clear limits to the success of Phleps' 'free hunt'.

<sup>85</sup> The best work on Operation RÖSSELSPRUNG is still Wolff, 'Unternehmen Rösselsprung'.

<sup>86</sup> 7th SS Division's final report speaks, in this connection, of being forbidden to start owing to enemy superiority; see '7. SS-Freiw.Geb.Div., Ia-Erfahrungsbericht Unternehmen "Rösselsprung"' (3 Jul. 1944), repr. in Kumm, *Vorwärts, Prinz Eugen!*, 195–209.

<sup>87</sup> 'XV. Geb.AK an Pz.AOK 2' (7.6.1944), BA-MA RH 24-15/59.

<sup>88</sup> This idea appears for the first time in the wording of the order for the launch of Operation SCHNEESTURM. See 'Körps-Befehl für Unternehmen "Schneesturm"' (18 Dec. 1943), BA-MA RH 21-2/611.

<sup>89</sup> There is no factual basis at all for the thesis put forward in Casagrande, *Die volksdeutsche SS-Division Prinz Eugen*, 275–82, that 'free hunt' was a procedure directed primarily against the Yugoslav civilian population.

<sup>90</sup> The 2nd Armoured Army and V SS Mtn.A.C. war diaries for 1944 were both lost at the end of the war. 7th SS Division's occurrence report on RÖSSELSPRUNG ('KNIGHT'S MOVE') seems—although this cannot be stated with absolute certainty—to have already assimilated the occurrences in AMOR. On this, see '7. SS-Freiw.Geb.Div., Ia-Erfahrungsbericht Unternehmen "Rösselsprung"' (3 Jul. 1944), repr. in Kumm, *Vorwärts, Prinz Eugen!*, 195–209. Otto Kumm's account of 'free hunt' is purely descriptive and does not permit of any reliable assessment.

Two regiments of 7th SS Division and parts of 13th SS Division endeavoured (Operation HACKFLEISCH) to block the advance into south-eastern Bosnia of the National Liberation Army's XII Corps (6th, 16th, and 36th Divisions), while 1st Mountain Division, together with a regiment each from 7th and 181st SS Divisions, attempted to encircle and destroy the National Liberation Army's 1st, 3rd, and 37th Divisions in northern Montenegro (Operation RÜBEZAHL). These two operations were launched on 4 August 1944, at a time when the partisans' II Corps (2nd, 5th, and 17th Divisions) had already penetrated into Serbia and joined up with the insurgents in Old Serbia east of the Ibar, so they were clearly a bold and desperate all-or-nothing gamble.<sup>91</sup> In the course of events, the two operations were able to combine under Phleps' overall command on 16 August, but both groups of partisan forces nevertheless managed to escape destruction. The operations in Montenegro were halted prematurely on 26 August, following Romania's change of sides and the consequent destruction of 6th Army at the hands of 2nd and 3rd Ukrainian Fronts.<sup>92</sup> Operations HACKFLEISCH and RÜBEZAHL had delayed the high command's plans to invade Serbia by only a week or so.

In view of the foreseeable change of sides by Bulgaria<sup>93</sup> and the consequent need to establish an interception and defence line along the Bulgarian–Serbian border, the continued defence of Serbia's southern and western borders was left in September to Serbian government forces and the Chetnik units collaborating with them. The inevitable result was the penetration of Serbia by more National Liberation Army divisions, this time from north-eastern and south-eastern Bosnia, and the final decisive battles in the Serbian civil war.

In the NDH too, the partisans now embarked on what at first looked like being almost the last phase in the battle for control of the area west of the Drina. Banja Luka, taken on 20 September, was eventually recaptured, but Tuzla, taken on 17 September, became an assembly point for stronger National Liberation Army forces and a threat to German communication lines in the course of the next few months, despite the fact that it was still located 'behind' the front on the situation map. The series of landings by VIII Corps on the southern Dalmatian islands and the Pelješac peninsula, which began on 12 September, encountered an occupation force seriously weakened by transfers to other hot spots. On 5 October 1944 the Commander-in-Chief South-East, who was seeking reinforcements for his collaborating eastern front,<sup>94</sup> managed to persuade the OKW to agree to evacuate not only the Dalmatian archipelago but the whole of the Dalmatian coastal area as far as Senj in northern Croatia (on a level with the south-eastern tip of the island of Krk).

<sup>91</sup> 'OB Südost an OKW/WFSt' (7 Aug. 1944), BA-MA RH 19 XI/17.

<sup>92</sup> For a detailed account of the Soviet conquest of Romania, see Part V, Chapter VI of the present volume.

<sup>93</sup> The Bulgarian prime minister had already delivered a policy speech with indications to that effect on 17 August. See 'Beitrag zur Vortragsnotiz für die Chefbesprechung am 21.8.1944. Stand: 19.8.', BA-MA RH 19 XI/18.

<sup>94</sup> 'Oberbefehlshaber Südost an OKW/WFSt' (5 Oct. 1944), BA-MA RH 19 XI/28.

The Adriatic front would then be held only by the forces occupying the passes in the Dinaric Alps.<sup>95</sup>

A source of even deeper concern was the continuing decline of the Croatian units, a process which, in September and October, for the first time also affected the legionnaire divisions and 13th SS Division to an unprecedented extent. The collapse of the German position in the south-east was partly responsible for this, as was Tito's offer of amnesty, which guaranteed defectors freedom from punishment up to 15 September but promised heavy penalties after that date. The result was that 3,107 rifles and 148 machine guns were listed as lost through desertions from Croatian-manned units in the first eighteen days of September alone.<sup>96</sup> The hope that the expiry of Tito's ultimatum would put at least a temporary stop to the decline of the Croatian formations proved illusory. There were already mass desertions from a major Ustasha formation (XII Brigade)<sup>97</sup> on 17 September, when Tuzla was taken, and during the Croatian 369th Infantry Division's withdrawal from the coast of Herzegovina there was actual disintegration, which, in the case of one battalion (II/370th), went as far as the murder of the German cadres. This gave the pursuing partisans, who had landed with British naval support on both sides of the Neretva estuary in the early hours of 16 October, the unhoisted opportunity to advance to the outskirts of Mostar. The loss of the Viluše–Trebinje–Mostar road, in particular, had far-reaching consequences for the German command, since it constituted the final stretch of the shortest withdrawal route for XXI Mountain Army Corps, which was deployed in Albania and Montenegro. Successful evacuation of the corps was thus called into question overnight.<sup>98</sup>

#### 4. SERBIA AFTER THE DEFEAT OF THE 1941 UPRISING

The situation which arose in the area east of the Drina at the end of 1941, when the Communist partisans had been defeated in battle and politically discredited, was different from the situation in the NDH. In Serbia, until well into 1944, there were not four or five players in the power game but only three, namely the Commanding General in Serbia (Military Commander South-East as from 26 August 1943), the Serbian government assisting him, and the Serbian nationalist resistance under

<sup>95</sup> The intended future course of the front was the Fiume–Senj–Velebit mountains–Knin–Livno–Mostar–Nevesinje–Gacko line. See 'OB Südost, Abt. Ia an OKW/WFSt' (5 Oct. 1944), BA-MA RH 19 XI/28. Despite the forces that would be saved as a result, this withdrawal was not uncontested. See, e.g., the view expressed by the army group's acting chief of staff in post since 21 October, in 'MSG 1/1508, handschriftl. Tagebuch von Gyldenfeldt' (entry for 30 Oct. 1944). Gyldenfeldt's opinion carries some weight since, as a result of his role in Army Group G's successful exit from southern France (Aug./Sept. 1944), he had practical experience of planning and carrying out major withdrawal movements. On this, see also the very detailed work by Lieb, *Konventioneller Krieg oder NS-Weltanschauungskrieg?*, particularly chs. 2 and 5.

<sup>96</sup> 'Oberbefehlshaber Südost an OKW/WFSt' (21 Sept. 1944), BA-MA RH 19 XI/21.

<sup>97</sup> Earlier accounts, which spoke of the entire unit changing front, have been convincingly challenged recently. See <[www.axishistory.com](http://www.axishistory.com)>, 1. Jan. 2006.

<sup>98</sup> KTB OB Südost, Abt. Ia (19 Oct. 1944), BA-MA RH 19 XI/14.

Draža Mihailović. Although the Chetnik forces too had been defeated and scattered in the wake of Operation UZICE, a considerable number of them enlisted in Serbian government units. This development was observed with some concern on the German side, but only half-hearted attempts were made to prevent it. For the Chetniks, unlike the partisans, December 1941 was not accompanied by a devastating political defeat, because their leaders had not made any untenable promises (such as a Soviet counter-offensive in 1941), nor had they, during the uprising, pursued the aim of overthrowing the existing social order. The Serbian nationalist resistance movement's greater readiness to adapt the nature and scale of its activities to the possibility of German reprisals also brought it the support of the population, who still had the traumatic losses of the First World War very much in mind.<sup>99</sup>

The Serbian government's position was reasonably stable in the winter of 1941/2. Prime Minister Nedić had made it clear, in a series of radio addresses during the summer and early autumn, that the uprising had no prospect of success, and had warned of the reprisals to be expected. Franz Böhme's strategy of specific strikes against regions in the western part of the country that had been identified as centres of the uprising had also left Nedić largely free to use the security forces at his disposal, making some modest but nevertheless important contributions to the defeat of the rebellion, particularly in central and eastern Serbia. However, much of the political capital that had been gained was rapidly lost at the turn of the year, when a Bulgarian corps occupied south-eastern Serbia. The withdrawal of command over the Ljotić volunteers on 27 February, and over the Serbian State Guard in several stages from the beginning of May to the beginning of July,<sup>100</sup> was an unmistakable sign that the Serbian government's relative freedom of decision in the late autumn of 1941 and the following winter was not an expression of Germany's trust but was born of necessity, resulting from the difficulties with which the occupying power had to contend.

On the German side, Böhme's successor, Paul Bader,<sup>101</sup> faced the problem, in December 1941, of controlling a still largely hostile population without 342nd and 113rd Infantry Divisions, which had been withdrawn, so as to prevent, as far as possible, any repetition of the events of the late summer. So the fact that, after the uprising had been put down, almost 20,000 armed Serbians were serving in German units was regarded by Bader as a (future) problem rather than a source

<sup>99</sup> Between 1914 and 1918 around 1,075,000 citizens of the kingdom of Serbia died as a direct result of military operations, or from starvation or epidemics (population at the beginning of the war: approx. 4.5 million). See Judah, *The Serbs*, 101.

<sup>100</sup> Although both formations were placed under the command of the senior SS and police leader, he had to hand over command of the volunteers to the commanding general a month later. On this process, see Schmider, *Partisanenkrieg in Jugoslawien*, 421–34.

<sup>101</sup> As 'Plenipotentiary and Commanding General in Serbia', Bader combined in one person the powers of territorial and military commander with effect from 7 December 1941. After the orphaned staff of the former commander in Serbia had also been incorporated in Bader's command structure, his title was changed to 'Commanding General and Commander in Serbia' with effect from 4 March 1942. The German troops operating in the territory of the NDH were under Bader's command until 16 November 1942.

of possible support.<sup>102</sup> A way out of the dilemma—a solution that was discussed in the OKW at the end of December 1941 in relation to Croatia as well as Serbia—was provided by an offer from the Bulgarian Axis partner, which had hardly been fully stretched so far. As from 5 January 1942, south-eastern Serbia would be handed over to a Bulgarian army occupation corps of three infantry divisions (about 26,000 men), while the German military administration continued to perform its tasks in the area as usual. The obvious disadvantage of this arrangement was the reaction that was to be expected on the Serbian side. In the case of a Bulgarian rather than a German occupation, there was, despite all Bader's assurances, always a lurking suspicion that the occupied area would eventually be annexed. For Serbs willing to collaborate, the Bulgarian occupation proved to be the heaviest burden arising from their pro-German policy. Prime Minister Nedić threatened to resign immediately at the end of December and, for Kosta Pećanac, the loss of face associated with the arrival of the Bulgarians was effectively the beginning of the end of his dominant position in south-eastern Serbia. In the course of the next few months, an area that had been regarded as perfectly quiet during the worst crisis in September/October 1941 became the most important refuge for the partisans in Old Serbia, and eventually the starting base for their advance on Belgrade in October 1944.

Despite this political burden and the prevalence, in the first few months, of predictions that the events of 1941 were about to be repeated, 1942 turned out to be the quietest and most trouble-free year of the occupation of Serbia for the Germans and Bulgarians. The main reason for this is undoubtedly to be found in the relatively strong forces that Bader was able to deploy all over the country, despite the withdrawal of the two front divisions. Apart from the arrival of the Bulgarians, this was due above all to the temporary deployment (from the beginning of September to the end of December) of the 22,000-strong<sup>103</sup> 7th SS Division 'Prinz Eugen', formed in the Banat from 'ethnic Germans' recruited locally, who now had an opportunity to complete their training in the relatively peaceful environment of south-western Serbia. Of almost equal importance was the fact that, as from July 1942, the Wehrmacht Commander South-East's radio intelligence was able to decipher most of the Mihailović organization's<sup>104</sup> radio communications, so Bader always had the information he needed to forestall his most important opponent's next move. With these trump cards in hand, the commanding general was able to impose a regime on the collaborating Chetniks under which—unlike their comrades collaborating with the Italians in Croatia and

<sup>102</sup> Bader's greatest concern in his first months as Böhme's successor appears to have been the fact 'that a great many guns and large amounts of ammunition remain in the hands of the Serbs—in the hands of numerous illegal and so-called legal organizations'. See 'Der Kommandierende General an den Wehrmachtbefehlshaber Südost' (10 Dec. 1941), BA-MA RH 19 XI/81 ('Die Bekämpfung der Aufstandsbewegung im Südostrauraum', pt. 1), 81–4.

<sup>103</sup> 'AOK 12, Abt. Ia, Notiz zur Gefechtsstärke' (31 Oct. 1942), BA-MA RH 20-12/151.

<sup>104</sup> A file note in the papers of the German general in Zagreb provides at least indirect evidence that it had been possible to decipher the partisans' radio messages since May 1942. See 'Aktenvermerk über die Besprechung in Saloniki am 20.5.1942. Beginn: 9.05 h' (n.d.), BA-MA RH 31 III/9.

Montenegro—they were subject to extremely strict conditions in respect of target strength, arms and ammunition, freedom of movement, and area of operation. Units guilty of a serious breach of the rules were disbanded without exception.

The biggest problems still facing the German military administration in this situation were to some extent of its own making. This was inevitable since, although the principal representatives in Belgrade of the Four Year Plan (NSKK-Gruppenführer Franz Neuhausen), the foreign ministry (Ambassador, Felix Benzler), and—as from March 1942—the police and SS (SS Gruppenführer August Meyszner) were under Bader's command, they nevertheless maintained channels of communication with their authorities in Berlin, through which they could, if necessary, easily question directives issued by the commanding general. Moreover, they all had the right to issue instructions to Nedić within their respective remits, so the Serbian government had not just one but four, or (if we include Privy Councillor Harald Turner, head of the military administration) even five, possible interlocutors. In 1942 the OKW and the foreign ministry both made attempts to clear up the confusion to the benefit of their own representatives, and the fact that on the last occasion not even an (admittedly verbal) Führer order sufficed to change the status quo gives a good idea of the extent of the muddle.<sup>105</sup> Only the senior SS and police leader, Meyszner, had some success in this respect. By exploiting, on his arrival, the existing tensions between the commanding general and the Wehrmacht Commander South-East, on the one hand, and the SS representative, Turner, on the other, he was able to bring about the gradual disempowerment and ultimate removal of the privy councillor (November 1942).

The sequence of events that gave rise to the German military administration's only serious crisis in 1942 gives a good idea of the direct, or at least indirect, consequences of this style of administration. First, on 1 September the senior SS and police leader attempted to take over the last remaining powers which the Serbian government exercised over its most numerous military force, the Serbian State Guard, by establishing a 'head of the state security service' under his direct command.<sup>106</sup> Then, just two weeks later, two events occurred almost simultaneously that finally caused the Serbian prime minister to lose patience. In eastern Syrmia, only a few kilometres from the Serbian capital, there was another Ustasha pogrom against the Serbs, in which almost 1,000 people lost their lives. In addition, Nedić learned that the administrator in charge of the Four Year Plan had started exporting grain from occupied Serbia again, breaking a promise he had made in July.<sup>107</sup> Although Ambassador Benzler finally managed to persuade Nedić to withdraw a letter of resignation he had submitted on 16 September, it must have become painfully clear to the Serbian prime minister in the next few weeks that his pro-German policy would not be reciprocated to any appreciable extent in the foreseeable future. Of all the areas in which Nedić had hoped for some concession

<sup>105</sup> For more details, see Schmider, *Partisanenkrieg in Jugoslawien*, 437–42.

<sup>106</sup> 'L'incaricato d'affari a Belgrado, Spalazzi, al ministro degli esteri, Ciano' (5 Sept. 1942), *DDI*, Ninth Series, ix. 112–14.

on the German side (an end to the Bulgarian occupation, diplomatic recognition of his government, action to curb Ustasha violence, the reduction of grain exports), the only prospect in the medium term was one token concession, namely an official visit from the German foreign minister. From the Serbian point of view, the only valid reason to pursue a policy of collaboration with the occupant in this situation was the fact that the other representative of anti-Communist Serbian nationalism, Draža Mihailović, had suffered a series of setbacks during the period in question (October/November). Most of the 'legal' Chetnik units considered as belonging to his movement, which had enabled him to maintain a cadre of troops ready for deployment at any time, had been disbanded by the occupation forces,<sup>108</sup> and his attempt to organize a sabotage campaign against the rail companies, as well as his call for a universal boycott by civil servants,<sup>109</sup> came to nothing. This was due just as much to the refusal of many of his subordinates to implement the latter measure as to Bader's ability to see exactly what his opponent, Mihailović, was up to in every step he took.<sup>110</sup> The leader of the Serbian nationalist resistance ended the boycott campaign in December. Attempts to sabotage the railways continued, however, but the discrepancy between the reports of successes which Mihailović sent to the Yugoslavian government-in-exile in London<sup>111</sup> and those that can be checked in the files of the commanding general's Ia and Ic departments<sup>112</sup> raises the question whether Mihailović was deceived by his subordinates in this connection, or whether he himself lied for political reasons.

This setback for his most important political adversary may have encouraged the Serbian prime minister—previous disappointments notwithstanding—to try yet again at the turn of the year to obtain a concession from the Germans that was not purely cosmetic. On New Year's Day 1943 he submitted a detailed memorandum<sup>113</sup> to the commanding general, setting out the need to give the regime a broader base and suggesting that a representative body of the people be established for that purpose. Having regard to the grounds on which the German military authorities had rejected a first attempt to broach this question in March 1942, the proposal was based on the positively absurd idea that a quasi-parliament of this kind

<sup>108</sup> 'Korpsbefehl des Kommandierenden Generals und Befehlshabers in Serbien' (18 Nov. 1942), BA-MA RW 40/35.

<sup>112</sup> The language of the reports by the enemy intelligence and counter-intelligence department, which were distributed to subordinate agencies by the commanding general's staff, is particularly clear in this connection. See 'Ic-Lagebericht 1.10–10.10.1942' (10 Oct. 1942), BA-MA RH 26-114/13; 'Ic-Lagebericht 11.10–18.10.1942' (19 Oct. 1942), ibid.; 'Ic-Lagebericht 19.10–29.10.1942' (29 Oct. 1942), ibid.; 'Ic-Lagebericht 30.10–8.11.1942' (9 Nov. 1942), BA-MA RH 26-114/14; 'Ic-Lagebericht 9.11–18.11.1942' (18 Nov. 1942), ibid.; 'Ic-Lagebericht 19.11–29.11.1942' (29 Nov. 1942), BA-MA RH 26-114/15.

<sup>113</sup> 'Der Präsident des Ministerrates an den Kommandierenden General und Befehlshaber in Serbien Herrn General der Artillerie Paul Bader' (1 Jan. 1943), repr. in Hnilicka, *Das Ende*, 239–52.

would operate without any form of voting system, and that its members would act in a purely advisory capacity. It appears that some members of Bader's staff were inclined to take a positive view of the proposal, but after more than two months a decision arrived from Führer headquarters turning it down.<sup>114</sup> Even if the proposal had been agreed in principle at this point, it is doubtful whether it would have compensated for the setback Nedić suffered when, as from 5 January 1943, the Bulgarian occupation zone was extended to include the whole south of the country (see later discussion).

Despite the devastating blows inflicted on the Serbian national resistance in the autumn of 1942, there were already signs in the first two months of the new year that 1943 would bring a whole new set of problems for Paul Bader and his Bulgarian allies. First and foremost among them was, of course, the transfer of 7th SS Division to the Croatian theatre of war at the turn of the year, which deprived the occupying forces, at a single blow, of 22,000 well-trained and—for guerrilla-warfare conditions—heavily armed troops. As the Bulgarian occupying corps brought only six battalions into the area that had been vacated,<sup>115</sup> the quest for troops to replace the 'Prinz Eugen' Division was as urgent as ever, and it was rendered even more urgent by the prospect of losing the last of the original divisions occupying the area, 704th Infantry Division, which was to be transferred to Greece by the end of July at the latest. Half-hearted attempts to bring in the first two Croatian legionnaire divisions or a Hungarian contingent failed owing to fears of increased ethnic unrest and hesitation on the part of Budapest.<sup>116</sup> In the end, even what was actually the most obvious solution, that is, to strengthen the Serbian government's two most reliable formations, the Russian Corps (RSK) and the Serbian Volunteer Corps (SFK), was undermined by a regular SS smear campaign.<sup>117</sup> The most serious result of this development was the steady decrease in reliable occupying forces in the country. It allowed the Mihailović movement to bring so much pressure to bear on the State Guard—increasingly left on its own and somewhat compromised by its numerous links with the Chetnik movement—that an increasing number of its men deserted, obliging the occupant to concentrate the unit in fewer and fewer posts. This in turn enabled Mihailović first to undermine the Belgrade executive power in rural areas and finally to effectively replace it in many localities.<sup>118</sup> The result, in the summer of 1943, was a situation—contradictory

<sup>117</sup> Meyszner's reservations may have been motivated by fear that the SFK and the RSK might supersede the Serbian State Guard under his command, as the Serbian state's most important armed force. See KTB Komm.Gen. und Befh. in Serbien, Abt. Ia (entry for 30 Apr. 1943), BA-MA RW 40/40. It is impossible to determine from the available sources how far Himmler's motives in this matter were simply to support his representative in Belgrade. The OKW did not even attempt to make use of the anti-Communist collaborators. See 'Der Chef des Oberkommandos der Wehrmacht an den Reichsführer SS und Chef der deutschen Polizei' (12 Mar. 1943), BA-MA RW 4/709.

<sup>118</sup> 'Kommandierender General und Befehlshaber in Serbien, Ic-Lagebericht für die Zeit vom 1. bis 17.3.1943' (17.3.1943), BA-MA RH26-104/53: 'The cause of the DM [Draža Mihailović] movement's increasing influence out there in the country may be the subordinate administrative

in appearance only—in which the occupying forces were engaged in a large-scale attempt to capture or kill the leader of the Serbian nationalist resistance (Operation MORGENLUFT, 14–21 July 1943),<sup>119</sup> while, at the same time, some German district commanders were endeavouring to safeguard the harvest for which they were responsible by negotiating standstill agreements with Mihailović's subordinates.<sup>120</sup>

The problem of finding enough troops of sufficient quality to occupy Serbia had not been solved by the summer of 1943, and it remained unsolved for the rest of the occupation. Nevertheless, the Allied landing in Sicily on 10 July, and the fall of Mussolini two weeks later, convinced the German authorities of the need to simplify the political and administrative structures in occupied south-eastern Europe, a measure that had been mooted since 1942.<sup>121</sup> The first step was the appointment (on 15 August 1943) of a territorial commander responsible for the whole of Serbia, with headquarters in Belgrade. His task was to relieve the Commander-in-Chief South-East of all duties not connected with the repulsion of an anticipated enemy landing. On 21 August the newly appointed 'Military Commander South-East', General Hans-Gustav Felber, also took over the tasks of the Military Commander in Serbia, Paul Bader, relieving him of his office.

Another measure, the significance of which is harder to evaluate, was the appointment on 24 August of a 'special foreign ministry plenipotentiary for the south-east' to 'ensure unified handling of foreign-policy matters in the area'.<sup>122</sup> That task was, in principle, virtually identical to that of Felix Benzler, but extended to the whole of the south-east. The description of his powers, which was not considered binding, gave little reason to expect that the new special plenipotentiary would not be just as lost in the maze of responsibilities in Belgrade and Thessaloníki as the ambassador, Benzler, had been before him. The fact that the special plenipotentiary, Hermann Neubacher, was an 'old campaigner' of the Nazi movement, and that he was already responsible for important tasks in the south-east, may at least partly explain the rapid increase in his power and influence over the next few weeks. This already became clear on the occasion of Nedić's frequently announced and equally frequently postponed visit to the German foreign minister (on 18 September). When the meeting threatened to end in scandal as a result of Ribbentrop's overbearing manner and uncompromising conduct of the discussions, Neubacher intervened and secured an arrangement for the prime minister to be received

bodies' failure to provide protection against the DM supporters who are terrorizing them. In order to prevent smaller SSW stations from being disarmed, the SSW has been combined with larger units. In the absence of troops and reliable police forces, it is no longer possible to ensure that the local authorities' orders are carried out in various stretches of land that are not on the main transport routes.'

<sup>119</sup> On MORGENLUFT, see KTB Komm.Gen. und Befh. in Serbien, Abt. Ia (entries for 9, 16, 17, 18, and 21 July 1943), BA-MA RW 40/43.

<sup>122</sup> *Führer-Erlasse*, 350–1.

shortly by Hitler, so the meeting could at least conclude with a propaganda success for both sides.<sup>123</sup> Two weeks later Neubacher put the task of strengthening Nedić at the top of his agenda, and took over Benzler's post for the purpose on 2 October.

The definition and substantial extension of Neubacher's powers as plenipotentiary were confirmed in a directive issued on 29 October. He probably owed this not only to the single-minded pursuit of his aims but also to the fact that, on 24 or 25 October, he had been able to submit to his supreme commander an offer from Draža Mihailović to conclude an armistice and join the coalition. In principle, Hitler was still fundamentally opposed to any agreement with guerrillas, but his aversion had been somewhat mitigated by the dominant role which the Communist resistance was now playing both in Greece and in Yugoslavia.<sup>124</sup> The fact that, at the end of October, Mihailović's last remaining power base came under threat for the first time, as two National Liberation Army divisions advanced on south-west Serbia, may also have made it easier for Neubacher to convince his supreme commander that there was relatively little risk involved in a truce with the Old Serbian Chetniks. Neubacher was accordingly authorized, with effect from 29 October 1943, to enter into 'negotiations with the leaders of partisan gangs', and also to issue instructions to SS and police authorities on political matters, for example, on the question of shooting hostages. At least equally surprising was the number of orders authorizing him to introduce and implement new 'economic policy principles in the south-east' in order to ensure food supplies for the population of the occupied areas.<sup>125</sup>

The first results of this revolution in coalition policy were not long in coming. In Serbia—unlike Croatia, where there is evidence of initially covert cooperation with a few groups of Chetniks operating independently in the early summer of 1942—Bader had always been careful to cooperate only with sections of the Serbian nationalist movement that were prepared to be bound by the straitjacket of German orders and control measures. Moreover, even this was regarded more as emergency assistance, the ultimate aim still being to disband most of these formations. Apart from more basic considerations, another contributory factor was the knowledge that, despite long periods of attentism, most of the Chetniks in Old Serbia regarded themselves as a resistance movement opposed to the occupying power and as subject, at least indirectly, to the authority of the acting minister of war of the Yugoslavian government-in-exile. The units in the NDH, on the other hand, had given up the defensive battle against the Ustasha in the summer of 1941, and their main concern now was to protect their respective settlement areas from their civil-war opponents and ethnic adversaries. The oaths of allegiance to Mihailović that they had sworn in the course of 1942 were often nothing but lip service.

<sup>123</sup> For further details of this meeting, see *ADAP*, Series E, vi. 556–9, 'Aufzeichnung über das Gespräch zwischen dem Herrn Reichsaßenminister und dem serbischen Ministerpräsidenten Nedić am 18.9.1943' (19 Sept. 1943); Neubacher, *Sonderauftrag Südost*, 135.

<sup>124</sup> See also 'Beurteilung der Lage im Südostraum' (1 Nov. 1943), BA-MA RH 21-2/592, and *KTB OKW*, iii/2, 1268 (10 Nov. 1943).

<sup>125</sup> *Führer-Erlasse*, 368–9.

The National Liberation Army's invasion of Serbia in October/November 1943, of which we have already spoken, now forced Mihailović and Neubacher into a community of interests. The Germans and the Chetniks both found themselves—from a strategic point of view, at least—on the defensive against the partisans. The major Allied landing Mihailović was hoping for was unlikely to take place until the next spring, and the idea of an understanding between the two parties in the Serbian civil war had been abandoned again in the summer as having no prospect of success,<sup>126</sup> so from a military point of view at least, all the conditions were met for a temporary alliance between the Germans and the Serbian nationalists. From a political point of view, a possibility that had of course to be reckoned with in the medium term was that this development might drive a wedge not only between the Chetniks and their more radical followers, but also between the Germans and their most loyal collaborators (Nedić, 'Zbor', and the SFK).

It was undoubtedly owing to these considerations that Mihailović left the negotiations to his regional subordinates, that he did not appear in person, and that the agreements—set out in writing—were to run for only six to eight weeks. The fact that the first of these agreements was signed, sealed, and delivered before the Commander-in-Chief South-East even had an opportunity to issue a basic order approving the new course of action gives a good idea of the change in the weight of the leading authorities within the occupying power brought about by the new special plenipotentiary. It is at least conceivable that the Commander-in-Chief South-East's disapproval of the said course of action was the reason why Neubacher's efforts to secure a new arrangement regarding reprisals made such slow progress.<sup>127</sup> The Military Commander South-East had approached Neubacher about this matter in September, that is, even before his powers were extended, but Baron Maximilian von Weichs waited until the end of December before issuing the necessary directive.<sup>128</sup>

The senior SS and police leader was to be even more disturbed than the Commander-in-Chief South-East by Neubacher's course of action. He was unyielding, and thus opposed to Neubacher, on the question of hostages, but that was not all. The special plenipotentiary's concentration of all the most important powers in his own department and that of the military commander inevitably meant a loss of authority for Meyszner (and to a lesser extent Neuhausen). However, the confrontation which the police chief immediately and deliberately sought proved overwhelmingly one-sided. Neubacher's appeals to his good friend,

<sup>126</sup> After talks between Politburo member Milovan Djilas and members of the Chetnik high command. "Venezia"' (16 Oct. 1943), BA-MA RH 21-2/739. Talpo, *Dalmazia*, iii. 611–12, refers to a note of 28 July without letter-heading or signature, probably from the same source as the first two (radio intelligence of the Servizio Informazioni Militari).

<sup>127</sup> 'Weisung des Oberbefehlshabers Südost' (21 Nov. 1943) in Hnilicka, *Das Ende*, 268–9.

<sup>128</sup> 'Befehl des Oberbefehlshabers Südost zu Sühnemaßnahmen' (22 Dec. 1943), BA-MA RW 40/89. The relevant passage in Neubacher's memoirs is of no help in deciphering this process. See Neubacher, *Sonderauftrag Südost*, 140.

Ernst Kaltenbrunner,<sup>129</sup> and to the enemies that the senior SS and police leader had made in his own camp,<sup>130</sup> put paid to any hope of a repetition of the scenario in which Harald Turner had been deprived of his powers. Instead, it was Meyszner who was dismissed from his post, with effect from 15 March 1944. And his successor, SS Brigadeführer Hermann Behrends, was immediately urged by Heinrich Himmler to keep on good terms with Neubacher, come what may.<sup>131</sup>

Meanwhile, the closer relationship with the Mihailović Chetniks ran into criticism from various quarters in the course of the winter, until finally the special plenipotentiary was the only one adhering to it. The worst stumbling block was the continued political expansion of the Serbian nationalist resistance—now protected by the ceasefire—at the expense of the Serbian government and other loyal Serbs, which was the main reason for the second Nedić resignation crisis at the end of February.<sup>132</sup> Felber attempted to counter this development by banning an initially welcome extension of the armistice to the territory of Chetnik commanders who had not signed an agreement, and by finally replacing coalition treaties with the possibility of ‘tacit toleration’. Shortly afterwards, Felber agreed with Neubacher’s superior in the foreign ministry ‘to keep firmly to the Nedić line’, and to receive further initiatives from the Serbian nationalists ‘without showing any particular interest’.<sup>133</sup>

In this situation, only the National Liberation Army could revive the alliance between the occupying power and the Serbian nationalists. On 17 March 1944 Tito’s partisans began their second attempt to invade Old Serbia. However, unlike the offensive in the previous autumn, this one did not come to a halt on the outskirts of Užice but pressed on past the Bulgarian 24th Infantry Division to the Ibar line, with a view to joining up with the Old Serbian partisans in their retreat in south-eastern Serbia. Although the former treaty procedure was not renewed even now, relatively smooth cooperation with the Chetnik units affected was once again possible until the forces in question withdrew to the Sandžak in the middle of May. Significantly, once the partisans had been driven out in most parts of Serbia, most of the Chetnik units immediately resumed their attacks on Serbian collaborators and—to a lesser extent—on Germans. This time Felber appeared determined to make a final break with the practice of the winter of 1943/4 (‘The DM movement is and always will be an *enemy*.’).<sup>134</sup> However, in view of the Bulgarian corps’

<sup>129</sup> ‘Der Sonderbevollmächtigte des Auswärtigen Amtes für den Südosten an den Chef des Reichssicherheitshauptamtes SS-Obergruppenführer Dr. Ernst Kaltenbrunner’ (12 Jan. 1944), BA, SSO-Akte Meyszner.

<sup>134</sup> ‘Militärbefehlshaber Südost, Abt. Ic, Betr.: Verhalten gegenüber der DM-Bewegung’ (16 May 1944), BA-MA RW 40/88.

extensive failure during the defensive operation that had just ended, and the fact that there was little prospect of German units being permanently posted to this theatre of war, it must have been clear to all concerned that the unwelcome alliance would be revived when the partisans next attempted to invade the country. Meanwhile, even the Serbian collaborators had come to terms with this idea, as shown by a round of talks on 20 May between 'Zbor' founder Dimitrije Ljotić and Mihailović's chief of staff for the Old Serbia area, Miroslav Trifunović. The fact that Trifunović frankly admitted in the course of the meeting that Mihailović had only very limited control over most of his subordinates,<sup>135</sup> but nevertheless laid down conditions tantamount to the voluntary self-abandonment of the Serbian state and its constituent bodies, shows the position of strength which the Mihailović movement had attained in relation to the occupying forces. By now, Neubacher had nothing to pit against it. He had managed to persuade Nedić not to resign at the beginning of March, but he had even failed to get Hitler's permission for the unification of Serbia and Montenegro, which would have strengthened the Serbian government, symbolically at least.<sup>136</sup>

In Old Serbia, the period up to the beginning of August was largely one of transition and preparation, pending the National Liberation Army's next invasion. It is interesting that, in the event, the German side was remarkably restrained in its further relations with Mihailović. The fragmentary surviving sources<sup>137</sup> do not provide a final answer, but there are some indications that the reason for pursuing this policy had little to do with disappointment over the erratic and unreliable behaviour of most of Mihailović's subordinates. On the contrary, the virtually powerless Serbian prime minister appears to have succeeded, with his 22 February letter of resignation, in making such a lasting impression on Felber and Neubacher that they were prepared to let Nedić take the lead in dealing with future approaches from Mihailović. Although the round of talks on 20 May was largely fruitless, it can undoubtedly be regarded as the first manifestation of this new policy.

The occupying power nevertheless continued to pursue the course of cooperation with the Chetniks in Old Serbia, though only at the military level, culminating in two major operations against the Old Serbian partisans' retreat in the area round Prokuplje. Operation TRUMPF (10–18 July) and Operation KEHRAUS (19 July–6 August) were prime examples of the OKW's strategy of entrusting the tasks of the occupation in Yugoslavia to troop units that could not in any case have been employed in any other theatre of war, given their level of training, nationality, or ethnic composition. Thus, apart from a German police battalion, the only forces deployed in these two operations were units from two Bulgarian divisions, the SFK, and Chetniks willing to cooperate, who fielded for the first time a major new unit

<sup>135</sup> A government state secretary, Čeka Djordjević, was assassinated by Chetniks during the negotiations. See 'Junker an Neubacher' (24 May 1944), PA, SbvolSO R 27302.

<sup>136</sup> Neubacher made a number of attempts in this respect (14 Dec. 1943, 6 May 1944, 6 July 1944). See Ritter, 'Herrmann Neubacher', 216; ADAP, Series E, viii. 24–5, 'Aufzeichnung für den Herrn Reichsausßenminister' (7 May 1944), and 180–1, 'Neubacher an Auswärtiges Amt' (6 July 1944).

<sup>137</sup> The Military Commander South-East's surviving war diary, and all the annexes to it, end in May 1944 (BA-MA RW 40/88).

modelled on the Proletarian Brigades. Although only partially successful, TRUMPF and KEHRAUS were an indication of the change that had come upon the Serbian anti-Communist camp in the meantime. Joint deployment of SFK forces and Mihailović Chetniks would have been wholly unthinkable in the spring. But by the middle of August this development had gone so far that, after a secret meeting with Mihailović (probably on 15 August), Nedić agreed to an unconditional alliance and the effective abandonment of his state, an idea that had already been discussed at Gornji Milanovac on 20 May. This was followed on 17 August by a request that the occupying power join the alliance and provide it with a greater supply of weapons. Neubacher must have received prior warning of this development, because on 16 August he was already speaking to his central authorities about the need to ‘clarify our relations with Draža Mihailović’.<sup>138</sup> Interestingly, Felber and Weichs must both have had a ‘road-to-Damascus experience’ on the question of cooperation with Mihailović at some point after the end of July. Both officers had so far appeared, at best, to have reservations about the possibilities of further collaboration with the Serbian nationalist movement, but this experience seems to have turned them at a stroke into starry-eyed advocates of this course of action. After Nedić made his offer on 17 August, the two commanders-in-chief and Neubacher must have had lengthy talks—of which there are unfortunately no records—before advising their respective superiors, on 19/20 August, to accept it. However, even this development was not destined to turn the tide in the battle against the National Liberation Army. Hitler’s distrust of the Serbs in general and the Mihailović movement in particular,<sup>139</sup> and the small number of booty weapons available in the short term, meant that German arms deliveries, which still continued in the last ten days of August, were kept within reasonable limits. Those deliveries were finally stopped, on the orders of the Commander-in-Chief South-East, after Mihailović’s call to his supporters on 1 September opened up the prospect of the long-awaited national uprising against the occupant.<sup>140</sup> The National Liberation Army’s breakthrough in separate waves from Bosnia and Montenegro, starting on 26 August, was not held up to any appreciable extent by the belated ‘mass uprising of the Serbian people against the Red partisans’ (Neubacher).<sup>141</sup> Mihailović’s people no longer even had the benefit of the German units (particularly 7th SS Division) which were transferred to Serbia at this time. This troop movement was motivated by Bulgaria’s step-by-step<sup>142</sup> change of sides,

<sup>142</sup> 23 August: Bulgaria requests withdrawal of the occupation force to the area held before 1 January 1943; 27 August: the occupying force starts withdrawing of its own accord; 30 August: the German military mission is summoned to withdraw all German troops from Bulgarian state territory; 4 September: Germany disarms the Bulgarian units that are still on Serbian soil; 6 September: Bulgaria breaks off diplomatic relations with Germany; 8 September: Bulgaria declares

which, combined with the collapse of the German position in Romania, made it necessary to establish a provisional defensive line on the Bulgarian–Serbian border. By the end of the month, while the Nedić government and the plenipotentiary, Neubacher, watched from the sidelines, the Chetniks' main units, left largely to themselves (particularly the 'Assault Corps', armed with the assistance of the Germans), had been broken up by the advancing partisans and reduced to militarily and politically negligible dimensions.<sup>143</sup> Their remnants subsequently joined the Army Group E units withdrawing through southern Serbia and northern Montenegro in the course of the next few months. Until the end of the war they remained dependent on proximity to the Wehrmacht, which was ever more unwillingly granted,<sup>144</sup> in order to survive.<sup>145</sup> The Chetnik command's sporadic attempts to play its own part during these final months<sup>146</sup> only used up its remaining resources even faster.

## 5. THE YUGOSLAVIAN THEATRE OF WAR AS THE CORNERSTONE OF THE SOUTHERN SECTION OF THE EASTERN FRONT (OCTOBER 1944 TO MAY 1945)

### (a) The Temporary Stabilization of the Front (October to December 1944)

With Romania's change of sides on 25 August, and Bulgaria's on 8 September, the Commander-in-Chief South-East, Baron Maximilian von Weichs, was confronted with the fact that the whole of his eastern flank, from the northern edge of the Banat to the Aegean Sea, had been torn wide open more or less overnight. Only the vast distance that the Soviet spearheads would now have to travel, and the fact that Bulgaria's change of sides had got off to a hesitant start, with no contingency plans to take control of parts of the occupied territories in Serbia, Macedonia, and Thrace in the face of German resistance, gave Felber and Weichs a brief four-week respite to prepare for the inevitable Soviet invasion. The first orders which the Commander-in-Chief South-East gave at this time were still marked by an optimism that would have been more appropriate in an earlier phase of the war. In the knowledge that there was a major fighting force at hand in the form of 1st Mountain Division, which had just been withdrawn from Montenegro (Operation

war on Germany; 9 September: the Bulgarian Communist Party takes power in Sofia. See also Schmider, *Partisanenkrieg in Jugoslawien*, 511–19.

<sup>143</sup> For more details of events in those chaotic days, see *ibid.* 502–21.

<sup>144</sup> Mihailović's control of the numerous Serbian nationalist resistance groups, which was often purely symbolic in any case, was further reduced by the defeat of September 1944, resulting in a sudden, though short-lived, rise in the number of Chetnik attacks on German troops. See KTB H.Gr. E, Abt. Ia, entry for 3 Nov. 1944, BA-MA RH 19 VII/28.

<sup>145</sup> Tomasevich, *War and Revolution*, i. 421–53.

<sup>146</sup> Particularly the unsuccessful attempt to take the north-eastern Bosnian town of Tuzla from the partisans in the closing days of December 1944. *Ibid.* 435.

RÜBEZAHL), and probably under the influence of clear signs of disintegration during the Bulgarian occupation corps' withdrawal from Serbia, initial directives were issued to secure the former Yugoslavian–Bulgarian border and advance on Sofia with a view to disarming the mechanized units of the Bulgarian army (Operation HUNDESOHN).<sup>147</sup> However, such ideas were rapidly overtaken by events and were replaced by the question of what forces would be used to defend the remainder of the German sphere of power. By the end of September, the forces still available in the Banat (4th SS Police Armoured Infantry Division and 92nd Motorized Infantry Regiment), in Old Serbia (1st Mountain Division and parts of 7th SS Division), and in Macedonia (11th Luftwaffe Field Division) looked quite considerable on paper but would still not be numerically strong enough to ensure continuous defence, even with the addition of a number of troop units still being brought in (notably Infantry Regiment 'Rhodos' and parts of 117th Light Infantry Division).<sup>148</sup> Moreover, with the exception of 1st Mountain Division, these units' combat experience was confined to engagements with partisans. That was also true of the Bulgarians now fighting on the other side, but some of them were better equipped than many German units, thanks to the increased German military aid received since the end of 1942 under the 'Barbara Programme'. Owing to the lack of Luftwaffe units, the Soviet and Bulgarian air forces enjoyed almost absolute air superiority, although, owing to the autumn weather and the mediocre level of training of the air crews on the Soviet side,<sup>149</sup> the effect of this superiority was not quite so devastating as in the western theatres of war. It is therefore not altogether surprising that the day after 3rd Ukrainian Front (Marshal Fedor Tolbukhin) began military operations proper with a large-scale attack in the Negotin area of north-eastern Serbia on 29 September, Weichs gave Felber, the military commander south-east charged with defending Serbia (Army Detachment Serbia, as from 6 October), various pieces of advice that must have raised certain doubts in the recipient's mind as to the feasibility of the task entrusted to him: 'Belgrade must be built up into a fortress as quickly as possible [...]. Since there are not yet enough forces available to defend the front—as in the area north of the Danube and in western Serbia—the first thing is to gain time.'<sup>150</sup>

A core element of the Soviet plan was a sweeping movement of the main components of 3rd Ukrainian Front (57th Army and 4th Mechanized Guards Corps, as well as 2nd Ukrainian Front's 75th Rifle Corps, which had been placed under the command of 3rd Ukrainian Front for the purposes of this operation) from north-eastern Serbia to Belgrade, so as to join up there with 2nd Ukrainian Front's 10th Guards Rifle Corps, which would meanwhile have rolled up the

German position in the Banat.<sup>151</sup> The Bulgarian 2nd Army's slightly staggered move against Niš was a flanking operation that was also aimed at the capture of the major traffic nodes of Niš, Kraljevo, and Priština, which were important for the withdrawal of Army Group E. Whereas three more Soviet infantry divisions were assigned to the Bulgarian operation against Niš, no such assistance was forthcoming for the new coalition partner in the neighbouring Macedonian theatre of war. There, the Bulgarian 1st and 4th Armies had to perform the task assigned to them—namely to block the route for Army Group E's withdrawal from Thessaloníki to Skopje—alone.<sup>152</sup> The Mihailović units, concentrated mainly in western Serbia, had been largely defeated by the end of September, so Tolbukhin could also count on the armed support of a dozen divisions of the National Liberation Army.

On 1 October the German 1st Mountain Division, which bore the brunt of the attack and had soon suffered various breaches in its line, informed Army Detachment Serbia that the military task assigned to it 'cannot be executed at the present time'.<sup>153</sup> This was followed, on 3 October, by the first withdrawal movement towards the Morava. The situation north of the Danube, in the Banat, was even bleaker. Command Group Schneckenburger was beaten back on a broad front, and on 3 October, to the dismay of the commander-in-chief,<sup>154</sup> it was forced into two bridgeheads on the east bank of the Tisza (at Titel) and on the north bank of the Danube (at Belgrade). The transfer of operational command in Serbia on 1 October to a particularly well-tried and tested troop commander (General Friedrich-Wilhelm Müller)<sup>155</sup> came too late to remedy the situation.

The situation that took shape in Serbia over the following days gave reason to fear not only the loss of Old Serbia itself, but also that of the bulk of the units in the area. The Soviet 57th Army continued to advance, and on 8 October 1944 took advantage of a gap between 1st Mountain Division and 7th SS Division to thrust forward to the Morava, where it immediately established three connected

<sup>151</sup> *Geschichte des Großen Vaterländischen Krieges*, iv. 479–81. A total of 19 infantry divisions, approximately 500 tanks and assault guns, and 2,000 aircraft from the two army fronts took part in the 'Belgrade Operation'. By way of comparison, 1st Belorussian Front and 1st Ukrainian Front deployed 164 infantry divisions, 6,500 tanks and assault guns, and close on 4,800 aircraft, in the operation to conquer Poland in January/February 1945. See *ibid.* and Erickson, *Stalin's War*, ii. 379 and 447.

<sup>152</sup> *Geschichte des Großen Vaterländischen Krieges*, iv. 480–1.

<sup>154</sup> On this, see the letter to Felber from C-in-C South-East's chief of staff, which refers, *inter alia*, to 'Command Group Schneckenburger's continuing tendency to retreat'; 'Generalleutnant Winter an den Oberbefehlshaber der Armeearbeitung Serbien, Herrn Gen.d.Inf. Felber' (6 Oct. 1944), BA-MA RH 19 XI/22.

<sup>155</sup> At least in the opinion of the commander of the 'Prinz Eugen' Division, Otto Kumm. See Kumm, *Vorwärts, Prinz Eugen!*, 275. Müller had recently been 'commander of the German troops in Crete' from 1 July to 13 September 1944. His substantial force initially included both 7th SS Division and 1st Mountain Division but it became the headquarters (previously 'Müller Group') only from 24 October on. Müller and Felber must have agreed on the division of their respective remits, but there is no evidence of this in the files. Although Müller was largely responsible for the conduct of operations, a few operational orders were left to Felber for the next two weeks. See 'OB Armeearb. Serbien an Kampfkommandant Belgrad, Kampfgruppe Wittman, Kampfgruppe 1. Geb.Div., Rgt. Rhodos,-Gen. Kdo. Müller' (13.10.1944), BA-MA RW 40/120.

bridgeheads on the west bank of the river (9 October).<sup>156</sup> The next day, the Soviet 10th Guards Rifle Corps crossed the Danube west of Belgrade. And, as a result of Felber's efforts to scrape together all available forces to eliminate the Soviet bridgeheads on the Morava, the Belgrade bridgehead north of the Danube had to be abandoned a day later.<sup>157</sup> That same day 7th SS Division, under heavy pressure from the Bulgarian 2nd Army, received permission to abandon Niš, with the proviso that the Morava line was to be held for as long as possible. However, the hope that Serbia might continue to be defended on the basis of that natural barrier, which had meanwhile become extremely fragile, vanished on 13 October, when permission was given to 'withdraw, section by section'.<sup>158</sup>

On the same day, when it became clear that these attempts would fail and that the Soviet mechanized units which had broken through had changed course and were advancing on Belgrade,<sup>159</sup> the logistic link between the Müller Group and the higher German formations in the south-eastern area was broken. Any further contact with Army Detachment Serbia was blocked for the time being by 3rd Ukrainian Front. In the case of 2nd Armoured Army in Croatia, the obstacle was the National Liberation Army's control of the area between Sarajevo and Višegrad in eastern Bosnia.<sup>160</sup> Until the beginning of November, when it was joined by the first sections of 104th Light Infantry Division, Müller's group consisted only of the bulk of 7th SS Division. In this situation, the Commander-in-Chief South-East resorted to the only operational move that remained open to the German command to the last, even in the closing phase of the war, that is, reorganization of the command structure. Although it would still be some weeks before contact was made with the Army Group E spearheads advancing from Greece, Müller was placed under their command for tactical and supply purposes with effect from 14 October. In view of this relationship, Col.-Gen. Alexander Löhr was already instructed on 13 October to ensure that the Müller Group was supplied with ammunition from the abundant stocks still held in the area under his command (notably Crete).<sup>161</sup> Müller's prospects of keeping Kraljevo, at least, open as a rail connection for Army Group E after the loss of Niš were immediately called into question again by yet another setback on the following day. As a result of delays in constructing a bridge over the Morava, the evacuation of the bulk of the 'Prinz Eugen' Division from Niš was held up to such an extent that the pursuing Bulgarians had the opportunity to score their only operational-scale success of the campaign. West of the Morava, 2nd Army's armoured brigade launched an attack from the south against the flank of the division's retreating vanguard, destroying

<sup>161</sup> 'OB Südost an OKW/WFSt' (13 Oct. 1944), BA-MA RH 19 XI/33.

most of its vehicles and forcing the survivors to embark on an exhausting five-day march on foot westwards across the Kopaonik mountains.<sup>162</sup> At the time, Müller and Felber had to assume that the losses incurred during the SS division's withdrawal from the Niš area had amounted to more than 5,000 men.<sup>163</sup> On that assumption, it would probably have been impossible to mount a successful defence of Kraljevo.

Whereas this near-catastrophe was at least partly attributable to tactical circumstances over which the high command had very little control, the next reverse unquestionably fell within the Commander-in-Chief South-East's sphere of responsibility. In a directive issued on 14 October he already spoke openly about the possibility of abandoning the Yugoslavian capital, but at the same time he ordered 1st Mountain Division, which had been cut off and was engaged in fighting its way back to the west, to join in the battle for the city that had started that day, so as to relieve the numerically weak defence forces. The possibility of withdrawing the division via Šabac on the Sava, which was located further to the west, depended, he said, on how the operational situation developed.<sup>164</sup>

The result was that, in the course of 17 October, 1st Mountain Division—combined with parts of 117th Light Infantry Division, 92nd Motorized Infantry Regiment, and Infantry Regiment 'Rhodos' to form Corps Group Stettner—made a whole series of hopeless and costly attempts to force its way through the ranks of the attacking Soviet forces, which had already been engaged for 48 hours in fighting their way from the south side of Belgrade to the inner city. Stettner did not give the order to break through to Šabac until the evening,<sup>165</sup> and he himself fell in the course of the ensuing fighting. As in the case of 7th SS Division, Felber and Weichs did not know the extent of the losses incurred until almost three days later, but as the 1st Mountain Division radio transmitter was not responding, they feared the worst. On 20 October the Commander-in-Chief South-East found himself facing a situation in which, even with the units transferred from the Yugoslavian capital to Syrmia, there were no more than '5 to 6 battle-worn battalions with a few additional batteries' available to form a new front on the courses of the Sava and the Danube.<sup>166</sup> Only the unexpected arrival in Šabac, on 21 October, of the vanguards of the combat group now under the command of 117th Light Infantry Division,

<sup>162</sup> On this, see impressions gathered from various members of the division, in Kumm, *Vorwärts, Prinz Eugen*, 275–304.

<sup>163</sup> According to 'OB Südost an OKW/WFSt' (4 Nov. 1944), BA-MA RH 19 XI/24, 7th SS Division lost a total of 451 dead and 2,025 missing between 25 September and 25 October 1944, at which time there was no prospect of being joined by any more stragglers from the Niš area.

<sup>164</sup> 'OB Südost, Abt. Ia an Pz.AOK 2 und Armeearbt. Serbien' (14 Oct. 1944), BA-MA RH 19 XI/22.

<sup>165</sup> On this, see the two existing histories of the division, which are, however, largely concerned to exonerate Stettner. The person held to be mainly responsible by both authors is not Weichs but—as a link in the chain of command—the commander of Army Detachment Serbia, Hans-Gustav Felber. Lanz, *Gebirgsjäger*, 282–9; Kaltenegger, *Die Stammdivision*, 330–42.

Sources: OKW situation maps, BA-MA, Kart RH2 SO72.

Lt.-Gen. August Wittman, saved Weichs from having to bear the final consequences of his ill-considered directive of 14 October.<sup>167</sup>

This further setback marked the absolute nadir in the German conduct of operations in Serbia. The Russians and the partisans continued to advance towards Syrmia, but only extremely hesitantly. The feared attempt to cut Syrmia off completely, which was a distinct possibility given the lack of any link between the area of the Commander-in-Chief South-East and that of Army Group South,<sup>168</sup> never took place. Instead, the Soviet forces and the National Liberation Army proceeded step by step, and by the end of the month they had reached a line 60 kilometres west of the capital.<sup>169</sup> The evacuation of the Tisza line north of Belgrade, which was held until 21 October, followed in due course by that of the Bačka, went smoothly on the whole.<sup>170</sup> On 23 October Löhr finally presented Weichs with a strategy which, for the first time since Romania changed sides, gave the German defence in the south-east something resembling a medium-term prospect. Command Group Müller was to be reinforced as quickly as possible by 104th Light Infantry Division, which was still relatively strong and was on its way through Macedonia. These forces would then be able to break through to 2nd Armoured Army on the other side of the Drina, and their combined units, including the remains of Army Group E, would be incorporated in the new eastern front on the Serbian–Croatian border.<sup>171</sup> As the bulk of 1st Mountain Division had time to establish the first section of this new defence line along the northern Drina in the last week of October and, despite some setbacks, 11th Luftwaffe Field Division and a regiment of 22nd Infantry Division had managed, since the end of September, to hold off the Bulgarian 1st and 4th Armies advancing against the Thessaloníki–Skopje road, the prospects of implementing the Löhr plan appeared to be good. The danger lay above all in Kosovo, where the forefield of Mitrovica and Priština had to be held against the Bulgarian 2nd Army, which had resumed its advance on 1 November after taking Niš, and in the Kraljevo bridgehead, which had been under attack by Soviet forces since 24 October. The fact that Army Group E was able to hold its ground at both these focal points was due, at least in part, to factors beyond the control of the Commander-in-Chief South-East. In Kosovo, for example, a successful mobilization of the population of arms-bearing

<sup>167</sup> Lanz's estimate of the division's losses during the Belgrade battles (5,000 dead or missing) is probably on the high side. According to KTB OB Südost, Abt. II b, 'Anlage zu Nr. 321/44 g.Kdos. vom 18.12.1944', BA-MA RH 19 XI/27, 1st Mountain Division lost 472 men killed and 2,957 missing between 20 September and 31 October, and it should also be borne in mind that at least some of those losses occurred during the unsuccessful attempt to defend north-eastern Serbia and the Morava line. The figure given in *Die geheimen Tagesberichte*, xi. 146 (21 Oct. 1944), i.e. a total of 15,000 to 16,000 survivors, refers to the corps group as a whole. However, the losses of heavy equipment could only be made good by partly disarming the unreliable 13th SS Division. On the consequent controversy with the Reich Leader SS, see Lepre, *Himmler's Bosnian Division*, 264–71.

<sup>168</sup> 'OB Südost, Abt. Ia an Pz.AOK 2' (22 Oct. 1944), BA-MA RH 19 XI/23.

<sup>169</sup> KTB OB Südost, Abt. Ia (29 Oct. 1944), BA-MA RH 19 XI/14.

<sup>170</sup> *Die geheimen Tagesberichte*, xi. 149, 152 (22 and 23 Oct. 1944).

<sup>171</sup> KTB OB Südost, Abt. Ia (25 Oct. 1944), BA-MA RH 19 XI/14.

age was conducted with the help of local notables,<sup>172</sup> a highly remarkable achievement in view of Germany's fortunes in the war, without which the Schulz Group operating in the area would probably not have been able to hold its 'strongpoint-based front'<sup>173</sup> until 19 November (abandonment of Priština) and 22 November (abandonment of Mitrovica).<sup>174</sup>

The equally positive outcome of the battle for Kraljevo should also be seen mainly in the light of the Soviet command's strategic priorities. After the 68th Rifle Corps of the Soviet 57th Army had attacked the key German position from 24 October to 2 November 1944 without success, the Soviet unit gradually withdrew and was replaced by units of the Bulgarian 2nd Army. Admittedly, the decisive reason for this move was not the German success on the battlefield but the need to attend to the strategically and politically more important Hungarian theatre of war, where the first offensive in the direction of Budapest had already been launched on 29 October and the left flank of the Soviet army front was lagging behind. However, this shift of the point of concentration in the southern section of the eastern front<sup>175</sup> relieved the pressure on the Commander-in-Chief South-East for only a week or so.

Meanwhile, the effective obliteration of the dividing line between the old Yugoslavian and the new Hungarian theatres of war on 9 October<sup>176</sup> had been confirmed on 27 October, when Army Detachment Serbia was dissolved and replaced by a front HQ (LXVIII Army Corps staff under General Rudolf Konrad, flown in from Greece) under the command of 2nd Armoured Army.<sup>177</sup> The hope of establishing a new front west of the Bačka based on the Danube, which flows from north to south in this area, suffered a serious setback on 7 November, when the Soviet forces established a bridgehead. The German command reacted with two measures that were once again of a purely organizational nature. The newly established Drina front was left to the improvised Corps Group Kübler (1st Mountain Division, the bulk of 118th Light Infantry Division released from the

<sup>172</sup> KTB H.Gr. E, Abt. Ia (4 Nov. 1944), BA-MA RH 19 VII/28: 'The order to mobilize all Albanian males between 16 and 60 years of age for the fight against the Bulgarian Communist enemy, issued some 14 days ago at local instigation, has been largely complied with [...] As the Albanians are engaged in ethnic battle against the Slavs [sic], political considerations take second place.'

<sup>173</sup> The term used by Army Group E; see KTB H.Gr. E, Abt. Ia (16 and 27 Oct. 1944), BA-MA RH 19 VII/27.

<sup>174</sup> Two major uprisings had to be dealt with, and martial law had to be declared (Feb. to June 1945), before the province was final reintegrated in the Yugoslavian federation. See Malcolm, *Kosovo*, 310–13.

<sup>175</sup> On the importance which both sides attached to the Hungarian theatre of war in the autumn of 1944, see Part V, Chapter VII of the present volume.

<sup>176</sup> Command of the improvised units (the Böttcher division and Combat Group Kühlwein) that were to hold the front on the Tisza and the Danube had been transferred to 2nd Armoured Army on 9 October. See *Die geheimen Tagesberichte*, xi. 110 (9 Oct. 1944).

<sup>177</sup> All forces on Croatian soil were still under the command of 2nd Armoured Army at this point: LXVIII Army Corps and V SS Mountain Army Corps (Herzegovina–south-eastern Bosnia), XV Mountain Army Corps (western Bosnia–Dalmatia), and LXIX Army Corps on special mission (Croatia north of the Sava). See *Die geheimen Tagesberichte*, xi. 164 (27 Oct. 1944) and 167 (28 Oct. 1944).

Adriatic, and substantial sections of the German–Croatian gendarmerie).<sup>178</sup> LXVIII Army Corps' area of operations was henceforth confined entirely to the area north of the Drava, and its placement under the command of 2nd Armoured Army was confirmed.<sup>179</sup> The removal from Army Group South's area of operations of Hungary south of the Baja–Kaposvar–Lake Balaton (west bank) line was probably due in no small measure to the idea that the army group should be relieved of all tasks not directly connected with the defence or relief of Budapest. This restructuring, however, could not disguise the fact that the weak units at LXVIII Army Corps' disposal in the middle of November (31st SS Volunteer Armoured Infantry Division,<sup>180</sup> the 1st Regiment of Division 'Brandenburg', and 92nd Motorized Infantry Brigade)<sup>181</sup> were wholly inadequate to its task, and that only one more major unit, 44th Reich Infantry Division 'Hoch- und Deutschmeister', was being brought in. The view expressed by the Commander-in-Chief South-East's chief of staff in this connection ('The division must be described as *extremely battle-worn*'<sup>182</sup>) is some indication of how hopeless the task was—precisely because that view was expressed at a point in the war when the admonition to be 'hard' and 'ruthless' had been repeated so often that it was almost a platitude.<sup>183</sup>

The last piece of good news that the Commander-in-Chief South-East was to receive for a long time came during the period when the Soviet bridgehead on the west bank of the Danube was successfully, if temporarily, cordoned off. On 12 November 1944 a link was established between Command Group Müller (Army Group E) and 2nd Armoured Army, although it continued to be disputed. That put within reach, at least in the medium term, the evacuation of the fought-over south-western part of Serbia and the incorporation of numerous, albeit battle-worn, units (7th SS Division, 11th Luftwaffe Field Division, and 104th Light Infantry Division) in the new eastern front.<sup>184</sup> On 17 November V SS Mountain Corps, operating in the eastern Bosnia-Herzegovina area, was placed under the command of Army Group E.

Meanwhile, in order to provide LXVIII Army Corps with the help needed to hold the Danube line, 2nd Armoured Army urged Weichs to move 1st Mountain

<sup>178</sup> 'Gefechtsbericht Korpsgruppe Kübler für die Zeit vom 12.11. bis 12.12.44' (n.d.), BA-MA RH 24-34/74. According to 'OB Südost, Abt. Ia an Pz.AOK 2' (17 Nov. 1944), RH 19 XI/25, the German–Croatian gendarmerie contingent numbered over 15,000 men.

<sup>184</sup> *Die geheimen Tagesberichte*, xi. 204 (13 Nov. 1944). XXXIV Army Corps from Command Group Müller was placed on special mission with effect from the same day.

Division north, largely abandoning the so-called Drina front. Although the commander-in-chief was unwilling to endorse such an extreme approach, he nevertheless agreed to transfer some sections of the elite unit. However, the Red Army got there first, breaching the German defensive line north of the Drava on a broad front in the middle of the day on 22 November. This was followed by a two-stage attack that came to a standstill only in mid-December at the Margit Line, which ran north to south from the western tip of Lake Balaton to the Croatian-Hungarian border. Then, on 23 November, 1st Mountain Division was ordered to move all its forces to the theatre of war north of the Drava, without even waiting to be replaced by the spearheads of 11th Luftwaffe Field Division, although that replacement was absolutely essential to prevent the immediate loss of the link with Command Group Müller, which had only just been re-established.<sup>185</sup>

For Weichs, the worst result of the Soviet offensive in southern Hungary was that within two weeks he found himself facing a new front on the northern edge of the area under his command, a front that was 150 kilometres long and seemed to have emerged from nowhere. There were serious doubts as to the operational status of the forces immediately available to defend the Drava line, with regard both to numbers<sup>186</sup> and to political reliability.<sup>187</sup> Hopes of making more use of the Ustasha in this situation, since it was seen as having ‘opened up the way to a better future’,<sup>188</sup> had been dampened by a 2nd Armoured Army report of 7 November.<sup>189</sup> The Commander-in-Chief South-East’s chief of staff complained loudly in this situation—as his predecessor had already done at the beginning of October—about subordinate units’ ‘tendencies to retreat’, and in the case of 2nd Armoured Army called for its chief of staff, Ulrich Bürker, to be dismissed and replaced by a ‘heavyweight with plenty of experience of the east’.<sup>190</sup> Such complaints and demands were quite usual at this stage in the war.

The next blow to the Commander-in-Chief South-East came from a somewhat unexpected quarter, despite the fact that, by the end of October, most of his

<sup>185</sup> ‘OB Südost, Abt. Ia an OKW/WFSt’ (23 Nov. 1944), BA-MA RH 19 XI/25.

<sup>186</sup> ‘KTB OB Südost, Abt Ia, Ferngespräche am 4.12.1944’, BA-MA RH19 XI/26: ‘I draw attention once again to the Drava front, which is very weak indeed—only three small battalions of Croatian police to cover 60 km, and they are starting to defect to the Ustasha. Even continuous monitoring is impossible’ (20.05: Ia-Gen. Kübler).

<sup>187</sup> There were considerable reservations about deploying 1st Cossack Division against the Red Army; see Eltz, *Mit den Kosaken*, 175 (29 and 30 Nov. 1944).

<sup>188</sup> ‘Oberbefehlshaber Südost an OKW/WFSt, Abt. Ic’ (16 Nov. 1944), BA-MA RW 4/714b.

<sup>189</sup> ‘Panzerarmeeoberkommando 2, Abt. Ia an OB Südost Ia/IId. Betr.: Zersetzungerscheinungen bei kroatischen und Ust.-Verbänden’ (7 Nov. 1944), BA-MA RH 19 XI/38. Although the opinion of Ustasha units tended at least to be more favourable than that of most army units, in this case too assessments such as ‘of limited use for security and defence purposes’ (VII Ustasha Brigade) predominated. The only exception was the ‘Poglavnik’ Bodyguard Brigade, formed in May 1942, which had reached the strength of a two-part division by the end of 1943. This positive evaluation is also confirmed by various personal impressions; see Eltz, *Mit den Kosaken*, 128 (4 July 1944): ‘This bodyguard regiment makes a surprisingly good impression. The officers are well-trained and mannerly.’

<sup>190</sup> ‘KTB OB Südost, Abt. Ia, Ferngespräche am 6.12.1944’ (20.00, Chef-Gen. von Grolman), BA-MA RH 19 XI/26; also ‘handschrifftl. Tagebuch Generalleutnant von Gyldenfeldt’ (9 Nov. 1944), MSg. 1/1508. Colonel Ulrich Bürker was transferred to the Führer reserve with effect from 7 December, but he was to serve once again as 1st Armoured Army chief of staff from 15 February 1945 until the end of the war.

positions on the Dalmatian coast had finally been abandoned, with the aim of withdrawing the Adriatic front to positions requiring fewer troops and thus obtaining more forces (notably 118th Light Infantry Division) to fight on the new eastern front. It was the decision to include Knin, a small town in northern Dalmatia, in the new defensive line that proved problematic. The resulting defensive position protruded into territory controlled by the National Liberation Army, and this, plus the fact that Knin was a local traffic node, made it an attractive and indispensable target for the conduct of future offensive operations in the area. The distant approaches to the town were captured in the first half of November, and the assault on Knin itself, by three divisions (19th, 20th, and 26th Divisions), lasted from 26 November to 4 December. The units involved were fortunate in having been completely rearmed by the British, and they were consequently able to conduct their attack with weapon systems, such as light tanks and medium-calibre artillery, which had occasionally been captured as booty in the past but had never been used for long, owing to the difficulties involved in maintaining them and obtaining ammunition<sup>191</sup>—a problem that was a thing of the past now that a number of ports on the Adriatic had been captured. The outcome was by far the most devastating defeat that the Wehrmacht had suffered so far in its fight with the National Liberation Army. The bulk of a regiment of 264th Infantry Division and a battalion of the (Croatian) 373rd Infantry Division were wiped out in the battle or taken prisoner.<sup>192</sup> And in this case, unlike Banja Luka just two months earlier, the geographical position and the critical situation on the new eastern front made any idea of retaking the town out of the question.

The next challenge for the Commander-in-Chief South-East arose from events on the Hungarian front, where 3rd Ukrainian Front's successful advance into western Hungary from its bridgeheads on the Danube called into question the decision, taken two weeks earlier, to divide the Hungarian theatre of war between Army Group South-East and Army Group South. On the German side, the authorities again responded by taking the only measure still available to them at this stage in the war, that is, reorganization of the command structure. This consisted in the complete and final transfer of 2nd Armoured Army north of the Drava, and the placement of all command groups still in Yugoslavia, with one exception (LXIX Army Corps), under the command of Army Group E.<sup>193</sup> LXIX Army Corps was placed, for tactical purposes, under the direct command of the Commander-in-Chief South-East (Army Group F). The next formal step required—dissolution of one of the two command groups, either Army Group E or Army Group F, and the transfer of the remaining tasks in the south-eastern

<sup>191</sup> e.g. in the Prozor area at the beginning of March 1943; 718. ID Abt. Ic, 'Lagebericht für die Zeit vom 27.2. bis 6.3.1943' (6 Mar. 1943), BA-MA RH 26-118/34.

<sup>192</sup> The OKW situation report gives a total of 2,730 dead or missing, 700 captured, and 1,058 wounded; see *Die geheimen Tagesberichte*, vi. 282 (11 Dec. 1944). Since at this stage in the war any subsequent correction of those figures would necessarily result in their reduction (owing to the return of stragglers), the figure of over 10,000 dead and captured, quoted in the Yugoslavian post-war literature, is presumably a politically motivated exaggeration.

<sup>193</sup> KTB OB Südost, Abt. Ia (1, 2, and 4 Dec. 1944), BA-MA RH 19 XI/14.

area to the other—was not taken until 23 March 1945. However, it became quite clear in Syrmia, only 24 hours later, that this shift of scenery had little or no effect on events at the front. For the time being, this section of the front had to be regarded as the main theatre of war within the remit of the Commander-in-Chief South-East, if only because it contained such a massive concentration of National Liberation Army forces.<sup>194</sup> The proximity to Belgrade, combined with the fact that Corps Group Kübler was able to locate its—albeit strongpoint-based—defence of this area on a section of the Danube that was consequently lacking as a supply line for 3rd Ukrainian Front, may have persuaded the Soviet and Yugoslav commanders to force the German line in Syrmia westwards before the last Soviet army units were finally moved out of Yugoslavia.<sup>195</sup> The beginning of December was an ideal time for such an operation, since Kübler had already been obliged to send some 1st Mountain Division units to the theatre of war north of the Drava, and 118th Light Infantry Division currently consisted, except for three battalions, of German and Croatian units which were only provisionally under its command and whose ‘fighting strength could only be described as minimal’ (Kübler).<sup>196</sup> Lastly, 7th SS Division was still engaged in crossing the Drina and fighting its way northwards through eastern Bosnia. On the Soviet side, 52nd Rifle Division and 1st Guards’ Fortified Area were available, together with half-a-dozen National Liberation Army divisions. The attack launched on 3 December initially took the form of a purely frontal assault that forced 118th Light Infantry Division back some 10 to 15 kilometres. This was followed, in the next few days, by battalion-strength landing operations on the south bank of the Danube at Vukovar, Osijek, and Valpovo. Kübler did not get very far in his attempts to recapture the old main battle line (the Nibelungen line), which was particularly well situated for future defence purposes, but by 11 December he had managed to destroy all the bridgeheads and had largely maintained control of this disputed stretch of the Danube.<sup>197</sup> The Soviet offensive can only be described as half-hearted, suggesting that the Allied side had speculated on a rapid collapse of the German defences. A second attempt, more carefully planned and employing stronger forces, was not to be. On 16 December the Soviet units began to move to the Hungarian theatre of war, leaving only advisers, trainers, and a fighter- and ground-attack group in the Yugoslavian theatre.<sup>198</sup> Their place on the Syrmian front was taken by the first divisions of the Bulgarian 1st Army (3rd, 8th, and 11th Divisions), which had been formed in November to enable Bulgaria to participate in operations beyond the borders of Yugoslavia.

<sup>194</sup> Corps Group Kübler had already identified five National Liberation Army divisions on a relatively narrow section of the front (about 30 km) in the middle of November. See ‘Gefechtsbericht Korpsgruppe Kübler für die Zeit vom 12.11. bis 12.12.1944’ (n.d.), BA-MA RH 24-34/74.

<sup>195</sup> The post-war literature makes virtually no mention of the Soviet part in the hostilities in Syrmia; see Erickson, *Stalin’s War*, ii. 433–4.

<sup>196</sup> ‘Gefechtsbericht Korpsgruppe Kübler für die Zeit vom 12.11. bis 12.12.44’ (n.d.), BA-MA RH 24-34/74.

<sup>197</sup> Ibid.

<sup>198</sup> *Geschichte des Großen Vaterländischen Krieges*, v. 215.

The turn of the year was dominated by three unexpected successes on the German side, obscuring for a few days the disastrous nature of the general situation in which the Commander-in-Chief South-East now found himself. First, an apparently hasty and ill-prepared attempt by the Bulgarians to complete the task assigned to the Soviet 68th Rifle Corps (22 to 28 December 1944) ended in a fiasco that even the glowing accounts of historians in post-war Communist Bulgaria could not entirely gloss over.<sup>199</sup> Although the Bulgarian 1st Army withdrew a few days later, on the orders of its commander-in-chief, to the relatively peaceful Drava front, it seems from the available sources that the German side did not perceive the connection between these two events. At almost the same time, a unit of the German 1st Cossack Division (2nd Brigade) had to be deployed to eliminate a small Soviet bridgehead established on 25 December at Barcs on the south bank of the Drava. Despite political reservations expressed in this connection, the action was a complete success. Then, on 27 December, the Soviet 233rd Rifle Division was driven back on a broad front, incurring substantial losses.<sup>200</sup> With the help of local partisan units, it managed to hold out for a few more weeks on the south bank of the river, but withdrew to the Hungarian side between 26 and 28 January 1945. The relative lack of German forces in the area nevertheless allowed the partisans to maintain a narrow bridgehead at Barcs. In all of this, it must of course be borne in mind that the German success was possible only because of the limited Soviet commitment to operations on Croatian soil.<sup>201</sup> Had the Red Army deployed anything even approaching the—actually quite small—numbers involved in the Belgrade operation, the total collapse of the position held by LXIX Army Corps in Slavonia would probably have been inevitable and, with it, that of the entire south-east command.

On the Syrmian front, a combat group formed around a battalion of 7th SS Division (III Battalion, 14th Regiment) managed to take the National Liberation Army defenders by surprise and largely restore the course of the old main battle line (the Nibelungen line). Fortune favoured the Germans, in that the vanguard of the Bulgarian 1st Army, which had failed in its mission here at the end of December, was already in the process of moving to the area north of the Drava and must not have taken any part in the battles, or at least not in any appreciable numbers.<sup>202</sup>

Nevertheless, none of these successes gave reason to mitigate the situation assessment which the Commander-in-Chief South-East entered in his war diary for 28 December 1944, and which became something of a leitmotif in 1945. The

<sup>200</sup> Eltz, *Mit den Kosaken*, 181–2 (25 and 27 Dec. 1944).

<sup>201</sup> The Soviet 233rd Rifle Division's mission appears to have included protection of the flanks of the Soviet units advancing into Hungary and the establishment of a durable connection with the partisans in the adjoining Bilogora mountains. On this, see 'OB Südost, Gruppe Ic, Ic-Abendmeldung vom 27.12.1944', BA-MA RH 19 XI/27; *Die geheimen Tagesberichte*, xi. 329, 333 (28 and 30 Dec. 1944), and Strugar, *Der jugoslawische Volksbefreiungskrieg*, 251.

<sup>202</sup> *Die geheimen Tagesberichte*, xii. 10 (3 Jan. 1945). '14th SS Regiment succeeded in establishing a bridgehead over the river at Nijemici. Enemy (only guerrillas detected).' Otto Kumm, commander of 7th SS Division at the time, states in his memoirs that his forces found themselves facing Russians, Bulgarians, and National Liberation Army units, in equal measure. See Kumm, *Vorwärts, Prinz Eugen!*, 356.

entry in question contained a numbered list of all the sections of the front and the forces available to defend them. After the statement under item 6 that the section in the south-east of the NDH between Nevesinje and Višegrad (although over 50 kilometres long, as the crow flies) was not just somewhat weakly manned but completely exposed, the list concluded with the following: '7. In the interior of the country: there are no longer any forces available for active anti-partisan warfare. 8. C-in-C South-East has no reserves of any kind.'<sup>203</sup>

### (b) The End of the War in Yugoslavia (January to May 1945)

How did things stand for the Commander-in-Chief South-East, in the shrinking area within his remit, at the beginning of 1945? On the positive side, the first

<sup>203</sup> 'KTB OB Südost, Abt. 0Ia' (28.12.1944), BA-MA RH19 XI/14.

noteworthy factor was the completion at this time of the withdrawal of the last sections of Army Group E from the Greece–Albania–Montenegro area (LXXXI Army Corps, with 22nd, 181st, and 297th Infantry Divisions).<sup>204</sup> This meant that the army group now had substantial and extremely welcome reinforcements at its disposal, although the troops in question were admittedly completely battle-worn in many cases. At least equally important was the fact that 3rd Ukrainian Front's comparatively half-hearted attempts to block Army Group E's last escape route at Kraljevo, or to break into Croatian territory through Syrmia, clearly showed that the Soviet high command had decided not to include western Yugoslavia in its further advance. The occupation of the Drava front by the Bulgarian 1st Army—and by the Yugoslavian 3rd Army alongside it to the east—unquestionably confirmed that decision.

On the negative side there was the fact that, primarily for political reasons, Hitler insisted on maintaining the defence of the NDH, which was now in the nature of a salient, and on giving his personal consent for even comparatively minor moves to straighten the front (such as the abandonment of Višegrad in the Serbian–Croatian border area, for example).<sup>205</sup> The result was that, with the exception of the Syrmian front, all other sections of the front could now be manned by appreciable troop contingents only at the most obvious points of attack, while the remainder was only loosely monitored. And, just when military developments seemed likely to force the partisans to adopt a more orthodox form of warfare, this weakness on the part of their opponents enabled them to continue moving large units into the German-occupied hinterland. The development which an increasing number of National Liberation Army brigades and divisions had undergone in recent months was also a source of some concern. On the one hand, there was little doubt that German units with the fighting strength of 1st Mountain Division, 7th SS Division, or even 118th Light Infantry Division would be able to hold their own in any tactical situation for the foreseeable future, even against partisan formations that were numerically superior and well armed by the Allies. On the other, an increasing number of combat units on the German side were deficient in various ways, in respect of training and/or equipment, and were now in danger of getting into serious trouble, as 264th Infantry Division had at Knin, in any encounter with the National Liberation Army's new military hardware.

Lastly, the process by which Ante Pavelić endeavoured to mobilize the last human resources of his Ustasha state at the turn of the year had almost no operational effect. Neither his personal assumption of supreme command of the army, navy, and air force on 4 December 1944<sup>206</sup> nor the announcement of the

<sup>204</sup> The vanguard of this unit reached the Višegrad bridgehead in Croatian territory on 13 January, shortly before it was evacuated. With that, Army Group E's expedition was at an end. See also Part VI, Chapter III of the present volume.

<sup>205</sup> *KTB OKW*, iv/1, 1049 (28 Jan. 1945).

<sup>206</sup> Except during short transitional periods, this office in the NDH had usually been exercised by the minister of war rather than the head of state. See 'Lagebeurteilung und Tätigkeitsbericht des Marineverbindungsstabes Kroatiens für die Zeit von Anfang Dezember 1943 bis Ende Januar 1944' (n.d.), BA-MA RM 35 III/173.

amalgamation of regular army units and Ustasha militia to form 16 new divisions on 1 January 1945 had any impact on the further course of the war. In the first case, this was because, under the agreements concluded in 1942 and 1943, the relevant German army group or the army high command was in any case in command of operations in the field in the vast majority of cases. In the second case, the measure in question did nothing whatever to repair the shattered relationship between the majority of Croatian recruits and their unloved state or to remedy the deficiencies in training and equipment.<sup>207</sup>

Only by means of military successes—insofar as they were still within the realm of possibility—could the Commander-in-Chief South-East hope to change the hapless situation in the area under his command to his advantage, at least in the short term. With the arrival of two ‘Prinz Eugen’ regiments on 17 January, an opportunity arose to build on the success achieved on the Syrmian front on 3 January and, with the assistance of 41st Fortress Division and 11th Light Infantry Division, establish a main battle line that was based on the course of the Danube in the north and on the course of the Sava in the south, and could therefore be held with fewer forces. This operation, code-named FRÜHLINGSSTURM (17 to 19 January 1945), was a complete success. Not only was the Syrmian front moved, as planned, to the narrowest stretch between the Danube and the Sava, but, despite the fact that it had involved a frontal attack on heavily armed enemy forces, the relative losses on either side resembled those of the more successful large-scale operations of 1942/3 rather than those incurred in more regular warfare.<sup>208</sup> On the Yugoslav side, the two Syrmian operations in January 1945 undoubtedly led to a real crisis of confidence within the high command of the National Liberation Army, which was then in the process of restructuring with the regular army.<sup>209</sup> The fact that the two Bulgarian divisions severely damaged in the same theatre of war in December 1944 were shaken by numerous cases of insubordination and mutiny during their move to Hungary<sup>210</sup> could also

<sup>207</sup> German observers were therefore also inclined to take a somewhat cynical view of this latest development: ‘No sign so far of any appreciable start on the general mobilization ordered by the government, especially as—apart from the basic attitude—the organizational and technical prerequisites are also lacking. Some of the conscripts have already been registered, but the general opinion among them is that the preparations will drag on until the situation changes and conscription becomes unnecessary. Efforts are also being made to avoid the call-up by obtaining medical certificates of unfitness, etc. The “general mobilization” is often mocked for being a grand announcement that nobody takes very seriously.’ See ‘Bericht der Einsatzgruppe der Sicherheitspolizei und des SD Kroatien’ (28 Dec. 1944), BA-MA RH 19 XI/38. For details of the amalgamation of regular army and Ustasha armed forces, see Tomasevich, *War and Revolution*, ii. 456–60.

<sup>208</sup> According to *Die geheimen Tagesberichte*, xii. 66 (21 Jan. 1945), enemy losses totalled 2,019 dead and 257 captured, plus booty of 60 rifles and 170 machine guns. *KTB OKW*, iv/2, 1033 (23 Jan. 1945) puts the German losses at 188 dead. For a brief insight into the planning and course of the operation at company level, see Hoffmann, *Rückzug*, 86–95.

<sup>209</sup> Djilas, *Wartime*, 441–2.

<sup>210</sup> Whereas Communist historiography saw these events as the work of ‘reactionary pro-German subversives’, recent Bulgarian research has concluded that the first ‘wave of purges’ in September/October 1944 and the abrupt introduction of the commissar system were primarily responsible for the defeat and the ensuing demoralization; see Ratschew, ‘Bulgarien’. It should, of course, also be borne in

have been entered by Commander-in-Chief South-East on the credit side of his account, had he known about them at the time.<sup>211</sup>

7th SS Division had to move to central Slavonia at the beginning of February for a major operation of conventional proportions. The purpose of the operation was to cut the connection that the National Liberation Army's VI Corps maintained with the outside world through the Barcs bridgehead, and to destroy or capture as booty the stocks of supplies that were thought to be held in the Papuk mountains.<sup>212</sup> 297th Infantry Division and some units of 1st Cossack Division were deployed alongside the 'Prinz Eugen' Division. Although a number of well-stocked supply depots were found in the Papuk mountains and either secured or destroyed, it is difficult to determine from the few sources available just how successful Operation WEHRWOLF (6 to 21 February) was.<sup>213</sup> Although Barcs was taken, partisan movement across the Drava seems to have resumed after a week at most.<sup>214</sup>

Clearly, with the situation as it was, concentrations of forces of the kind that permitted these successes in Syrmia and in the Papuk mountains came at a price. So, after the collapse of the German position in Serbia, there can have been no question of monitoring the front, even partly, in the most northerly section of the Drina. Even after the complete transfer of Army Group E, there was still a yawning 150-kilometre-wide gap between XXI Mountain Army Corps in the Sarajevo area and XXXIV Army Corps in Syrmia. To remedy this situation, 22nd Infantry Division, newly arrived from Montenegro and placed directly under the Commander-in-Chief South-East (Army Group F), was ordered to push north from south-eastern Bosnia and, 'employing mobile tactics, to secure the lower reaches of the river between Zvornik and Drinjaca'. In particular, the associated idea of 'opening up the Zvornik–Tuzla road [...] as a supply line for the division'<sup>215</sup> proved problematic, since this was the supply line used by the National Liberation Army in recent weeks to begin developing Tuzla, which had been held by the partisans since the end of September 1944, into a salient extending deep into the north-eastern part of the country.<sup>216</sup> As a result, 22nd Infantry Division was

mind that, since 1918, the Bulgarian army had had only very limited experience of military action against irregular formations, and that it now faced a completely new task.

<sup>211</sup> On German unawareness of these incidents, see *KTB OKW*, iv/2, 1002: 'Tito's forces are now stationed on the northern front, instead of the Bulgarians; the reason for this is not yet known' (entry for 9 Jan. 1945).

<sup>212</sup> See divisional order for Operation WEHRWOLF (4 Feb. 1945), excerpts of which are reproduced in Kumm, *Vorwärts, Prinz Eugen!*, 366–9.

<sup>213</sup> As far as the course and outcome of WEHRWOLF are concerned, the situation reports and entries in the OKW war diary are confined to a few cryptic comments. This includes the final report, which mentions the figure of 1,988 dead (see *KTB OKW*, iv/2, 1123, 24 Feb. 1945) but contains no information at all about rifles and machine guns captured as booty. No operation file could be obtained.

<sup>214</sup> *KTB OKW*, iv/2, 1131, 1138 (27 Feb. and 2 Mar. 1945).

<sup>215</sup> Excerpts quoted in 22. Infanteriedivision, Abt. Ia, No. 100/45 geh., 'Bericht über die Durchbruchskämpfe aus dem Raum Sokolac–Vlasenice über Zvornik nach Bijeljina' (28 Feb. 1945). See Hnilicka, *Das Ende*, 323–50.

<sup>216</sup> See annex 7 to 22. Infanteriedivision, Abt. Ia, No. 100/45, geh., 'Die Entwicklung der Feindlage im Raum Sokolac–Vlasenice–Zvornik–Musl, Sepak–Janja' (Jan.–Feb. 1945) (Ic): '22nd Division came up against enemy forces which had, in the meantime, made the Drina area their own

exposed during its march north (starting on 27 January) to very heavy attacks, both from the east and from the north, by at least six National Liberation Army divisions and units of three others. Although—unlike 264th Infantry Division two months earlier—the German unit proved equal to every crisis, and tactically superior to the enemy forces in both attack and defence, the persistent Yugoslav counter-attacks made any idea of establishing even a temporary rear communication line completely illusory. On 11 February, after Zvornik had been in German hands again for just a week, the decision was taken to withdraw 22nd Infantry Division from the Drina line and place it at the disposal of XXXIV Army Corps in Syrmia for the defence of its southern front.<sup>217</sup> Subsequent attempts by the Commander-in-Chief South-East to do more than merely ‘monitor’ this section of the front, or to reduce the Tuzla salient (discussed later), were also unsuccessful. For the first time, the National Liberation Army had succeeded in inflicting an operational-level defeat<sup>218</sup> on a major unit of the Wehrmacht that could rightly be described as ‘elite’<sup>219</sup> by the standards obtaining in this theatre of war. A further setback, probably inevitable in the circumstances reigning at the time, was the fall of Mostar (14 February). The Mostar–Nevesinje area, held only by the bulk (that is, 369th and 370th Infantry Regiments) of the (Croatian) 369th Infantry Division, much reduced in numbers since October 1944, had been under large-scale attack by the National Liberation Army VIII Corps (9th, 19th, 26th, and 29th Divisions) since 5 February, an attack in which 1st Armoured Brigade, deployed to such decisive effect at Knin, was also engaged.<sup>220</sup> The German positions were soon overrun on all sides, and the numerical inferiority resulting from the capitulation of the Croatian units attached to the German forces (mainly sections of the Croatian 9th Division, a new division consisting of Domobrani and Ustasha units), and also of the remaining Croatian troops of the (Croatian) 373rd Infantry Division, was felt even more strongly than it would have been in any case. A relief attempt by 181st Infantry Division also failed, so the remnants of the two regiments had to force their way out alone after the fall of Mostar, and only one of them (370th

assembly and transit district, moving the above-mentioned units westwards through it and strongly covering its flanks, especially to the south.’ See Hnilicka, *Das Ende*, 356–61.

<sup>217</sup> See 22. Infanteriedivision, Abt. Ia, No. 100/45, geh., ‘Bericht über die Durchbruchskämpfe aus dem Raum Sokolac–Vlasenice über Zvornik nach Bijeljina’ (28 Feb. 1945). See Hnilicka, *Das Ende*, 331.

<sup>218</sup> Hnilicka’s account is mainly concerned with 22nd Division’s tactical successes, and his conclusion that the operation was ‘successful’ is clearly short of the mark. See Metzsch, *Die Geschichte der 22. Infanteriedivision*, 120–1.

<sup>219</sup> In 1940 the German 22nd Infantry Division and 7th Air Division together formed the only fully operational airborne force in the world (XI Air Corps). 22nd Infantry Division was fully involved in the landing in the Netherlands in May 1940, 5th Mountain Division being deployed in its place in the operation against Crete in the following year. After eleven months on the eastern front the division was stationed in Crete from November 1942 on, to defend it in the event of an anticipated British landing. See also Metzsch, *Die Geschichte der 22. Infanteriedivision*. Although most of the heavy equipment was left behind when the division withdrew to Thessaloníki (Sept./Oct. 1944), it was markedly different from most of the Army Group E units, in that its troops were younger, and its cadres had more front-line experience and more firepower.

<sup>220</sup> Strugar, *Der jugoslawische Volksbefreiungskrieg*, 287.

Infantry Regiment) succeeded.<sup>221</sup> In the following days the partisan units were able to press on and occupy the Neretva valley as far as the 'Ivan Saddle' pass, not far from Sarajevo. And by the beginning of March even this line could be held only with the help of parts of the 13th Regiment of 7th SS Division that were hastily brought in.

Operations such as FRÜHLINGSSTURM and WEHRWOLF may still have been justified in the context of the Yugoslavian theatre of war as a whole, despite the dangerous exposure of other sections of the front that this entailed, but the next operation was a gross misjudgement of the Commander-in-Chief South-East's limited possibilities. As a flanking measure to support the latest German counter-offensive in Hungary (Operation FRÜHLINGSERWACHEN), Army Group E was instructed on 6 March to establish two bridgeheads on the north bank of the Drava, and to advance from there towards Mohacs (Operation WALDTEUFEL). The mobilization of troops for this purpose (297th Infantry Division, 11th Luftwaffe Field Division, 104th Light Infantry Division, and 1st Cossack Division) necessarily meant thinning the forces on the other Yugoslav fronts, a step that was more than irresponsible.<sup>222</sup> In Hungary itself, a position 6 to 8 kilometres deep was successfully established north of the river, but only because the attackers initially faced only two Bulgarian infantry divisions. However, this phase soon came to an end when the Soviet 133rd Rifle Corps joined in the fray. On 19 March the German attempt to seize the initiative on the Drava front ended irrevocably with the evacuation of the bridgeheads.

The National Liberation Army's response was not long in coming. On 20 March the NLA 4th Army (the National Liberation Army had introduced army high commands on 1 January 1945) began a concentric move against the west Bosnian city of Bihać, which was largely free of German troops. The attempt to move 104th Light Infantry Division rapidly to this new focal point, after it returned from Hungary, came too late to have any effect. On the evening of 28 March Bihać fell into the hands of the partisans.<sup>223</sup> The last German offensive operation in this theatre of war also failed because of the practice of shifting most units back and forth from one focal point to another at shorter and shorter intervals. The aim of the operation, code-named MAIGEWITTER (24 to 31 March 1945), was to retake Tuzla in north-eastern Bosnia, captured by the partisans in September 1944. The city had been incorporated in the front of the Yugoslavian 2nd Army since the middle of January, and now formed a salient threatening the supply line to Sarajevo. Although XXXIV Army Corps had quite substantial forces assigned to it, that is, three regiments (one each from 7th SS Division, 117th Light Infantry Division, and 22nd Infantry Division) and the Geiger Group (a provisional combat group of German–Croatian gendarmerie), the attack failed after only a few days. The late arrival of the SS regiment, which had been obliged to assist the hard-pressed 181st Infantry Division

<sup>221</sup> On the course of the battles for Mostar, see Schraml, *Kriegsschauplatz Kroatiens*, 116–22, and the highly descriptive article by Biocic, 'L'Opération de Mostar'. The failure of the remaining Croatian troops of 369th Infantry Division can be deduced only by reading between the lines of Schraml's history of the division, and the OKW assessment ('largely destroyed') is much clearer. See *KTB OKW*, iv/2, 1411.

<sup>222</sup> *KTB OKW*, iv/2, 1148 (6 Mar. 1945).

<sup>223</sup> Ibid. 1191, 1202, 1205 (22, 27, and 28 Mar. 1945).

in the Sarajevo area, gave the Yugoslavian 2nd Army the opportunity to block the attacking wedges that were endeavouring to reach Tuzla from the east (the Geiger Group) and the north (the regiments of 117th Light Infantry Division and 22nd Infantry Division), and embroil them in costly engagements.<sup>224</sup> The operation was terminated on 31 March without achieving its objective.<sup>225</sup>

On 28 March, even before Operation MAIGEWITTER was brought to an end, the Yugoslavian 2nd Army command launched a large-scale attack on the exposed city of Sarajevo, which had been held for so long only because a large part of 7th SS Division had spent the whole of March stabilizing the front in the south and keeping the last supply line to the north (via Zenica) open. On 30 March Führer headquarters bowed to the pressure from seven divisions of the Yugoslavian army and granted XXI Mountain Army Corps permission to abandon the second-largest city in the NDH.<sup>226</sup> Surprisingly, the realization that if the city were evacuated the remaining northern half of the Croatian state would no longer present any of the geographical features required for long-term defence, came only 24 hours later. On 31 March orders were given for Sarajevo to be evacuated and for Croatia also to be evacuated as far as the Bihać area—Una river—Bjelovar—2nd Armoured Army line in Hungary.<sup>227</sup> However, the time allowed in this connection (until 20 April) proved much too generous, because the Yugoslav spring offensive was launched in the early hours of 12 April. From a strategic point of view, this major Yugoslav operation was questionable, to say the least, since in the north the Red Army was already close to Vienna and Berlin. It can be understood only in the context of the fear that was still at the core of Tito's plans, even at this late date—the fear that his opponents within the country might still find a way of securing the assistance of the western Allies at the last minute, and so deny him the unlimited control over the entire territory of the former kingdom of Yugoslavia that he had been seeking since 1941.<sup>228</sup>

From an operational point of view, given the course of the front in the limited area now within the Commander-in-Chief South-East's remit, the most obvious option for the Yugoslavian command would actually have been to delay operations in the east and thrust into the flanks of Army Group E from the Bihać area (4th Army) and the other side of the Drava (3rd Army). Instead, it placed the point of concentration of the attack—with thirteen divisions of 2nd Army, ten divisions of 1st Army, plus the latter's 2nd Armoured Brigade<sup>229</sup>—on the eastern front in eastern Bosnia and Syrmia, where, particularly in the Syrmian section, by far the greatest concentration of German troops per kilometre was to be expected in a relatively narrow space. While this approach was relatively secure and predictable, it

<sup>224</sup> The account in Hoffmann, *Rückzug*, 102–14, gives a vivid picture of the difficulties of fighting an ‘irregular’ opponent who, by now, had distinctly superior firepower.

<sup>225</sup> *KTB OKW*, iv/2, 1213 (31 Mar. 1945).

<sup>226</sup> Ibid. 1210 (30 Mar. 1945). <sup>227</sup> Ibid. 1213 (31 Mar. 1945).

<sup>228</sup> On this, see the impressions of one of his closest advisers during the years in question: Djilas, *Wartime*, 441.

<sup>229</sup> *Historical Atlas of the Liberation War*. Unlike 1st Brigade, deployed at Knin and Mostar, which had been equipped with light American Stuart tanks by the British, this unit fielded Soviet T-34s.

Map VI.II.5. The course of the front in the area of Army Group E (C-in-C South-East) on 12 April 1945

also involved the prospect of heavy losses on the Yugoslav side.<sup>230</sup> As far as the author knows, it is impossible at present to determine with absolute certainty whether the final decision in favour of a frontal attack was prompted primarily by the desire to make up for the dent suffered on the Syrmian front in January 1945,<sup>231</sup> or by recollections of German units' ability to fight their way out of almost any encirclement as 'moving pockets'. The politically pertinent question as to whether the first option would have been feasible without the help of larger mechanized—that is, foreign (Bulgarian or Soviet)—units may have also played a part.

On the German–Croatian side, the new Commander-in-Chief South-East, Alexander Löhr, had what appeared to be an impressive array of troops at his

<sup>230</sup> Ibid., according to which 1st Army alone lost 36,000 dead during the April campaign.

<sup>231</sup> According to Djilas, *Wartime*, 442, this may have played at least a minor part in the decision-making process.

disposal for defence against this operation, but it consisted largely of units that were either completely worn down (such as the three Croatian legionnaire divisions, reduced to weak regimental strength) or normally used for other purposes (like the German–Croatian police battalions). The only continuously built-up position on the front was the Syrmian section defended by XXXIV<sup>232</sup> and LXXXI Army Corps,<sup>233</sup> and even there the only available means of anti-tank defence were close-combat weapons. XXI Mountain Army Corps' tardy withdrawal<sup>234</sup> from the Sarajevo area towards the Sava did enable the front to be shortened, but it also meant that the crossing over the Sava at Brod had to be held until the evacuation of this large formation had been completed. After the loss of Bihać, the weak XV Mountain Army Corps<sup>235</sup> was immediately exposed to further attacks by the Yugoslavian 4th Army, and it spent the next few weeks fighting its way back along the north Adriatic coast. Eastern Slavonia was held by the newly formed XV Cossack Cavalry Corps,<sup>236</sup> and western Slavonia (below the level of Barcs), including Zagreb, was held by LXIX Army Corps.<sup>237</sup> On the eve of the large-scale Yugoslav attack, the army group reserve in Zagreb consisted of one motorized army sapper battalion, one army anti-aircraft battalion, and one armoured anti-tank company.<sup>238</sup> The fact that the bulk of the newly formed Croatian army, together with three of its own command HQs, was concentrated in an area that—after the experiences of the past few months—would have been regarded as the last possible location for a conventional major enemy operation (western Slavonia) shows that even the reformed Croatian forces were felt to have, at most, the minimal competence required to fight local partisan units.

Lastly, a rear position in which parts of Löhr's army group could have regrouped after losing the salient formed by the NDH existed only on paper. Although the Karlovac–Dugoselo–Koprivinca position, known as the 'Zvonimir line', had been explored in the autumn of 1944 out of consideration for German–Croatian relations, it had not been consolidated to any extent.<sup>239</sup>

An encirclement operation by the Yugoslavian 1st Army in the Syrmia area was blocked for long enough to allow XXI Army Corps to withdraw from eastern Bosnia, but not without a price. 11th Luftwaffe Field Division lost the equivalent of a regiment before 7th SS Division crossed over at Brod on 18 April, enabling the Syrmian salient to be abandoned. There were no further setbacks of this kind, but once again, the attempt to establish even a moderately continuous defensive front lasted barely a week (25 April to 2 May, some 60 kilometres east of Zagreb). It

<sup>232</sup> Composition on 12 April 1945: parts of 7th SS Division, 22nd Infantry Division, 41st Fortress Division, 963rd Fortress Brigade.

<sup>236</sup> Composition on 12 April 1945: 1st and 2nd Cossack Divisions.

<sup>237</sup> Composition on 12 April 1945: Fischer Division (18th SS Police Mountain Regiment, 5th SS Police Regiment), 20th Light Infantry Reserve Regiment.

<sup>238</sup> Schmidt-Richberg, *Der Endkampf*, 112–13.

<sup>239</sup> Ibid. 117–18.

might already have been suspected that this regrouping too was in vain, because in the meantime XV Mountain Army Corps, in retreating along the Adriatic coast in the face of the Yugoslavian 4th Army's renewed attack on 1 April, had effectively deprived the army group of its deep flank. The bulk of the corps had to withdraw towards Ljubljana, while the Croatian 392nd Infantry Division, driven back in a north-westerly direction, found itself again in the area of XCVII Army Corps (237th Infantry Division, 188th Mountain Division), which was in the process of evacuating the Istrian peninsula.<sup>240</sup> On 20 April, to prevent the Yugoslavian 4th Army from attacking the bulk of his army group on its unprotected right flank, the Commander-in-Chief South-East ordered the Croatian 392nd Infantry Division to form a hedgehog position round Fiume, together with XCVII Army Corps, and tie down the enemy forces. The move was successful, but it resulted in the loss of the three divisions. In the face of superior enemy force, they were obliged to lay down their arms in the early hours of 7 May, the first of the army group's major formations to do so.<sup>241</sup> Meanwhile, the past two weeks had been dominated by Col.-Gen. Löhr's efforts to get as much of his army group as possible into Austria, so that it could surrender to the forces of the western Allies. However, Germany's unconditional surrender on 8 May meant that Löhr's plan only worked for the vanguard of the army group. Between 175,000 and 200,000 German troops ended up in Yugoslav captivity, where the privations were such that less than half of them survived.<sup>242</sup> It is still a matter of debate whether a speedier withdrawal could have prevented such an outcome.<sup>243</sup> Things went even harder for the Croats, Serbs, Slovenes, and Russian exiles (Cossacks) who had been trying to reach the Yugoslavian–Austrian border with Army Group E. They were either taken prisoner by the National Liberation Army or (in the case of the Cossacks) forced back over the border by the British after 9 May. Many of them were shot in a series of mass executions in the second half of May, in which, in the case of the NDH forces, the number of victims was almost as high as the losses they had suffered in the previous four years of war.<sup>244</sup>

<sup>240</sup> XCVII Army Corps was placed under the C-in-C South-East only with effect from 24 April. See Hnilicka, *Das Ende*, 137.

<sup>241</sup> One of the best descriptions of the downfall of XCVII Army Corps is still Schraml, *Kriegsschauplatz Kroatien*, 278–82.

<sup>242</sup> Estimate based essentially on Böhme's analysis in *Die deutschen Kriegsgefangenen in Jugoslawien*, 42–136 and 254. Böhme assumes that about 80,000 Germans and Austrians died in Yugoslav captivity. The picture of the situation in the last days of the war is so confused that it is extremely difficult to determine exactly how many Wehrmacht troops ended up in Yugoslav captivity after 8/9 May 1945, and future research on the subject will still have to rely on estimates. It is even more difficult to estimate how many German prisoners died as a result of arbitrary attacks by their guards in the first days and weeks after they were captured, and how many died of exhaustion in the course of their march into the interior. The custodial authorities may have been unwilling to produce figures for the number of such cases, or they may not have been in a position to do so. The Red Cross has reliable data only on the number of men who returned home in 1948/9 (about 85,000). *Ibid.* 277–8.

<sup>243</sup> Schmidt-Richberg, *Der Endkampf*, 151. There are conflicting accounts of the precise circumstances in which the Yugoslavians captured Löhr and his staff. See *ibid.* 156, and Tomasevich, *War and Revolution*, ii. 756–7.

<sup>244</sup> According to Tomasevich, *War and Revolution*, ii. 765, the Croatian armed forces (Ustasha and territorial army) had reported some 65,000 dead and missing by May 1945. A further 60,000 were killed in the mass executions of May 1945.

## 6. EXCURSUS: WAR CRIMES COMMITTED BY THE OCCUPYING POWERS

The practice of the occupying powers, Germany, Italy, Bulgaria, and Hungary, with regard to deportations and reprisals in the territory of partitioned Yugoslavia has always held a special place in the historiography of occupation regimes in the Second World War. This is attributable on the one hand to the fact that Yugoslavia was the only area in Europe under German rule where the repressive measures were comparable in scale and intensity to those adopted in Belorussia and Poland. This, in turn, is closely bound up with the question of the driving forces behind this policy, and the extent to which racist motives played a decisive part and therefore justify speaking of 'ethnic cleansing', or even genocide, in this connection.

The crimes discussed in greatest detail in the research literature are those committed on the German side during the repression of the 1941 Serbian uprising. This applies both to the numbers shot (about 20,000 in barely four months)<sup>245</sup> and to the connection with the Holocaust resulting from the extensive extermination of the Jewish community. The murder of the Jews has largely contributed to a bewildering confusion of Holocaust and reprisal policy in post-war perceptions.<sup>246</sup>

In order to classify German, Italian, Bulgarian, and Hungarian reprisal policy during the occupation, one must first consider the different political conditions in the various occupation zones or successor states resulting from partition. In this respect, northern Slovenia (occupied by Germany), central Dalmatia and the offshore islands (occupied by Italy), eastern and central Macedonia (occupied by Bulgaria), and the Bačka and the Mur area (occupied by Hungary) were special cases, since they were all, *de facto* and *de jure*, provinces of the occupying mother country. The ensuing deportations certainly justify the use of the term 'ethnic cleansing', but they differed greatly in respect of aims and intensity. The policy first appeared, in its clearest and most uncompromising form, in German-occupied Slovenia and in the Bačka, whereas in Dalmatia the Italians preferred to reduce the Croatian share of the population by encouraging existing ethnic conflicts. In Macedonia, the willingness to wait and see with which the majority of the population greeted annexation by the Bulgarians, with whom they had close cultural and historical ties, rendered a policy of 'ethnic cleansing' largely superfluous.

In Slovenia and the Bačka, the hardest hit were members of the intelligentsia (teachers, clerics, lawyers), who were regarded as the bearers of national aspirations, and farmers, whose farms were confiscated and handed over to ethnically 'more acceptable' new settlers—in the case of Slovenia, to ethnic Germans from the Gottschee area in the Italian occupation zone.<sup>247</sup>

<sup>245</sup> 'Der Bevollmächtigte Kommandierende General in Serbien an den Wehrmachtbefehlshaber Südost' (13 Feb. 1942), BA-MA RW 40/26.

<sup>246</sup> It was primarily Wehrmacht units that were responsible for murdering almost all the male members of the Jewish population during the 1941 Serbian uprising. On this, and the reasons for the intersection of Holocaust and reprisal policy in Serbia in 1941, see Browning, *The Origins*, 334–46, and Manoschek, *Serbien*.

<sup>247</sup> On German occupation policy in Slovenia, see Griesser-Pecar, *Das zerrissene Volk*, 17–32.

While such measures are unquestionably contrary to international law, the historian is faced with an incomparably more complex state of affairs when it comes to assessing the reprisals that were taken in fighting the resistance. The international laws of war that were applicable during the Second World War had for the most part been codified in the years preceding the outbreak of the First World War, and as a result of the many compromises made in the process of drafting them there were a number of gaps. A further problem was that the idea that Europeans might one day go to war with the intention not only of defeating neighbouring peoples but of permanently subjugating or even exterminating them had never entered the heads of educated men and women at the time. A natural-law theorist would probably have considered a situation such as that which arose for the Serbs in the NDH after the summer of 1941 as a classic case of legitimate self-defence. An international-law theorist, on the contrary, would have paid less attention to the causes of this defensive battle than to the manner in which it was conducted. The recognition of guerrillas as belligerents under the 1907 Hague Regulations respecting the Laws and Customs of War on Land was subject to conditions which both the partisans and the Chetniks probably met only in isolated cases, at least until the late summer of 1944.<sup>248</sup> No less problematic was the invocation, under the Hague Regulations, of a basic right of resistance of the civilian population of an occupied country, a right which has never existed in that form but which some recent writers deduce from Article 2 of the Hague Regulations.<sup>249</sup> In the case of the National Liberation Army, this lack of entitlement was further cemented by the fact that, unlike the Chetniks in the Mihailović organization, the NLA was not in a position to claim the status of a force recognized and commanded by the Yugoslav government-in-exile. However, according to the understanding of the international laws of war that was current in the inter-war years, that would have been a *sine qua non* for the recognition of belligerent status, even in theory. Under the law as understood at the time, whether captured guerrillas were to be spared was entirely and exclusively at the discretion of the occupying power.<sup>250</sup>

The legal position was less clear with respect to reprisals taken by the occupying power against the civilian population in the area of operations. Article 50 of the Hague Regulations stipulated that reprisals against the civilian population were

<sup>248</sup> The conditions were: 1. To be commanded by a person responsible for his subordinates; 2. To have a fixed distinctive emblem recognizable at a distance; 3. To carry arms openly; and 4. To conduct their operations in accordance with the laws and customs of war. The requirement to have a fixed distinctive emblem recognizable at a distance, a requirement that was particularly difficult for a guerrilla organization to meet, may have been fulfilled for the first time by the National Liberation Army's VIII Corps, which came over from the island of Viš and landed in Herzegovina in September and October 1944. However, this large formation had been equipped by the Allied high command in Italy. Schmider, *Partisanenkrieg in Jugoslawien*, 414–15.

<sup>249</sup> See, e.g., Meyer, *Die deutsche Besatzung in Frankreich*, 245, n. 10. Article 2 of the Hague Regulations spoke only of the right of the inhabitants of a state at war, on the approach of the enemy, to spontaneously take up arms and, with a fixed distinctive emblem recognizable at a distance, take part in the hostilities.

<sup>250</sup> On this, see the commendably sober analysis in Lieb, *Konventioneller Krieg oder NS-Weltanschauungskrieg?*, ch. I.1, with further references.

permissible only if there was clear evidence of resistance. Of course, this did not alter the principle, accepted by most international-law theorists in the inter-war period, that it was permissible to take hostages in order to ensure the internal security of occupied territory. As to whether reprisals might extend to killing hostages, the Hague Regulations had nothing to say either for or against. This omission, and the view taken by German international-law theorists that Article 50 applied only in occupied areas that were demonstrably no longer within the ‘combat area’—that is, that given the continuing war in the air and the threat of a ‘Second Front’, it applied in almost none of the countries under German rule—was the legal basis for most of the crimes committed by units of the Wehrmacht involving the death of members of the Yugoslav civilian population. The Nuremberg war crimes tribunals sentenced the Wehrmacht commanders who had engaged in this practice to long terms of imprisonment, but the sentences handed down by the Allied judges were based on the excessive use of the practice (shooting 50 for 1 or 100 for 1), not on the view that killing civilians was in itself reprehensible.<sup>251</sup>

The one-sided interpretation of the international laws of war discussed above might suggest that German occupation policy was subordinated from the outset to an all-embracing concept of repression that left no room for political priorities. That was by no means the case, as is shown by the way the occupiers felt compelled to take account of the different framework conditions they encountered in the independent state of Croatia on the one hand, and the Serbian ‘residual state’ on the other. The fundamentally different conditions prevailing in those two territories, and the effect of those conditions on the reprisal policy of the German, Italian, and—as from January 1942—Bulgarian occupying powers, have not always been sufficiently taken into account in the literature.<sup>252</sup>

The first thing to bear in mind is that Old Serbia, essentially confined to its 1912 borders (including the Banat), was not even recognized as a sovereign state by the Axis alliance until the end of German occupational rule, so that public life there was wholly determined by the military law of the occupier. The situation in the NDH was different. Although the Pavelić regime was partially incapacitated by the Italians (1941/2) and the Germans (1943/5) in many areas (such as tactical command of the bulk of its own armed forces), its status as a member country of the Tripartite Pact enabled it to negotiate a considerable attenuation, or even cancellation, of many German or Italian demands. With regard to reprisals, this meant that the usual practice in Serbia of shooting 50 for 1 or 100 for 1 was reduced to shooting 10 for 1 west of the Drina, where, furthermore, the task had to be performed by the Croatian security organs. It should also be borne in mind that the special circumstances in the NDH (above all, the fact that the leader of the Serbian nationalist resistance movement had little influence there) facilitated a gradual rapprochement between the German occupying power and a number of

<sup>251</sup> See *ibid.* and the official publication on the 7th Nuremberg Trial (the South-East Case), *Hostage Case*.

<sup>252</sup> See, e.g., the extensive suppression of this aspect in Gumz, ‘Wehrmacht Perceptions’, esp. 1018, 1024, and 1030.

Chetnik groups. In Old Serbia such a rapprochement did not begin until November 1943, and it was always overshadowed by Mihailović's fundamental readiness to engage in armed uprising ('The DM movement is and always will be an enemy').<sup>253</sup> The Old Serbian Chetniks and their followers were therefore exposed to German reprisals in the same way as the partisans, especially during periods when they were taking stronger action against the occupying forces (in the autumn of 1942 and, to a lesser extent, the summer of 1943).

A further point to be mentioned in this connection is the operational context of German reprisals east and west of the Drina. In Serbia, the collapse of the uprising in the late summer/autumn of 1941, and the subsequent willingness of large sections of the Serbian nationalist movement to wait and see, enabled the situation to be stabilized, resulting in a gradual reduction of the shooting of hostages, and finally to the virtual end of the practice. In the NDH, however, developments were incomparably more complicated, mainly because the spiral of violence was driven by the genocidal pogroms of the Ustasha rather than the actions of the occupation forces. At the same time, the Ustasha's weakness, and its inability to bring the wildfire unleashed by its 'ethnic cleansing' operations under control again by its own means, encouraged the formation of armed resistance groups. Even after the Ustasha's initial attempts to clear whole stretches of land inhabited by Serbs were over, the memory of the murderous attacks of 1941 was one of the main reasons why most partisans, however war-weary, never thought of giving up or changing sides.<sup>254</sup> With the Pavelić regime losing control of wide areas of the country, the attempt to transfer responsibility for reprisals to the Croatian government gradually lost all credibility,<sup>255</sup> and the troop units concerned increasingly took matters into their own hands. As a result, the dividing line between shootings that were, in principle, 'legitimate' under the international laws of war and unlawful excesses became increasingly blurred. And this leaves entirely out of account the extent to which the regular mass murders of Muslims by Montenegrin or Bosnian Chetniks, and vice versa,<sup>256</sup> helped to create an atmosphere of existential insecurity. In such an environment, where—unlike in Serbia—cooperation with the occupying power was by no means enough to secure even halfway reliable protection against possible murder or abduction for oneself and one's family, reprisals largely failed to achieve their aim and only contributed to a further escalation of the violence.

Bulgarian reprisal policy is the easiest to classify, because in Old Serbia—unlike the annexed area of Greece and Macedonia—it was essentially an instrument of German occupational rule. Thus, with regard to its deployment, the Bulgarian

<sup>253</sup> 'Militärbefehlshaber Südost, Abt. Ic, Betr.: Verhalten gegenüber der DM-Bewegung' (16 May 1944), BA-MA RW 40/88.

<sup>254</sup> A highly instructive source in this connection is '714. ID, Abt. Ic: Aus Vernehmungen und Feindpapieren—Nachrichtenblatt Nr. 12' (15 Mar. 1943), BA-MA RH26-114/18.

<sup>255</sup> 'Vorsprache des Deutschen Bevollmächtigten Generals beim Poglavnik am 3.3.1943', BA-MA RH 31 III/9.

<sup>256</sup> 'Verhältnis zu den Četniks' (13 Oct. 1942), BA-MA RH 26-118/29; 'Die nationale Aufstandsbewegung der Četniks im Unabhängigen Staat Kroatien, Slovenien und Montenegro. Stand: 1.5.1943' (5 May 1943), BA-MA RH 24-15/4.

occupation corps was under the command of the Commanding General in Belgrade in the same way as a German occupation division. The administration of Bulgarian-occupied territory in Nedić's Serbia remained in the hands of the German military and local headquarters. It was the commander in Serbia, General Paul Bader, and his successor, General Hans-Gustav Felber, who were responsible for deciding whether hostages were to be shot in reprisal for the killing or wounding of a Bulgarian soldier. The only problem preventing any real pacification of the Bulgarian-occupied area proved to be the historic antagonism between the two Slavic ethnic groups. This resulted politically in permanent Bulgarian opposition to any attempt at German-Serbian collaboration,<sup>257</sup> and militarily in a whole series of excesses in the wake of major operations against the Old Serbian partisans, in the course of which—according to Yugoslavian data—more than 11,000 civilians died by the end of the war.<sup>258</sup> After a good twenty months of Bulgarian rule of a large part of Serbia, things had reached a point where, even in military command south-east headquarters, this trend was felt to be counter-productive. Even allowing for the fact that the more-or-less simultaneous attempt at a rapprochement with the Serbian national resistance (discussed later) certainly played an important part in the resulting change of course, the memorandum of 13 October 1943, in which Felber records his impressions during his latest visit to the Bulgarian occupation corps, is certainly a curiosity unique in the history of German occupational rule: 'The Bulgarians again raised the question of hostages. They say that every Serb done away with is of value to us [...] Order to be issued: Bulgarian operations planned well in advance: Gendarmerie and SD must be present, to ensure that innocent people, women, and children are not shot, and that houses are not burned down.'<sup>259</sup>

It is difficult to determine how far this change of course was or was not implemented in the months that followed. Occasional indications of a particularly good relationship between the Bulgarian troops and the Serbian civilian population, to be found in Tito's radio messages to the Comintern for example, may, of course, have been prompted by the Yugoslavian partisan leadership's need to influence the Bulgarian chairman of the Comintern, Georgi Dimitrov, in its favour, rather than by a realistic assessment of the situation.<sup>260</sup>

In the case of the Italian 2nd Army (Slovenia/Dalmatia/Herzegovina) and 9th Army (Montenegro and Kosovo), the first months of the occupation were dominated by costly attempts to ease the lot of the subject population by means of a mild occupation regime and ample deliveries of food.<sup>261</sup> These efforts were largely in

<sup>257</sup> See, e.g., 'Bericht für den stellvert. Befehlshaber Südost General Kunze [sic], über die Lage in dem vom 1. Kgl. Bulg. Okkupationskorps besetzten Raume zum 12.6.1942', BA-MA RH 20-12/146, and 'KTB Militärbefehlshaber Südost, Abt. Ia' (22 Feb. 1944), BA-MA RW 40/85.

<sup>260</sup> This relationship became very strained as the war went on, as a result of Tito's requests for material support, which were turned down. See Dimitroff, *Tagebücher*, i. 492 (8 Mar. 1942), 521–2 (24.5.1942), 527 (1 June 1942), 648 (10 Feb. 1943).

<sup>261</sup> On Montenegro, see Verna, *Jugoslavia under Italian Rule*, 164–8.

vain, as was shown most clearly by the brute force with which the Italian authorities in Montenegro crushed the uprising in July 1941. As a result of these events, Vittorio Ambrosio and Alessandro Pirzio-Biroli had hostages shot at a rate not far short of Franz Böhme's in Serbia.<sup>262</sup> However, the shootings were substantially reduced following a temporary lull in the situation in Montenegro and Herzegovina in 1942,<sup>263</sup> and the practice was amended in at least one area (that of XI Army Corps in Slovenia), where there was no longer any fixed 'reprisal rate', and it was left to the responsible military authority to determine the scale of retribution,<sup>264</sup> although this did not affect the usual practice of automatically shooting captured partisans, including the sick and wounded.<sup>265</sup>

But the most devastating consequences for the civilian population were the pillaging of 'suspect' villages after large-scale operations, and the Italian authorities' tendency to delegate the task of combating the National Liberation Army to that army's opponents within Yugoslavia (particularly the Serbian nationalist Chetniks), in order to avoid incurring losses themselves—a tendency that became increasingly apparent in 1942 and 1943. The ethnically motivated mass murders that frequently resulted from this policy may certainly have suited the occupier's political agenda in Dalmatia, but the increasingly poor operational status of most Italian troop units meant that the Italian 2nd Army and the military command in Montenegro had less and less control over their local auxiliary forces. By the beginning of 1943 this had gone so far that Pavle Djurišić's Montenegrin Chetniks were able to extract their Italian patrons' agreement to the mass murder of thousands of Muslim civilians (mainly women and children) simply by intimating that they might not take part in the forthcoming battle against Tito's main group.<sup>266</sup>

With regard to German reprisal policy, the observer is presented with the picture of a wave-like movement with two distinct crests, clearly defined in time. In one of these periods, which lasted roughly from August/September 1941 to March/April 1942 and was mainly devoted to suppression of the Serbian uprising, it was normal practice to shoot hostages at the rate of 100 for 1, and also to shoot not only all the guerrillas who were caught, including deserters, but also any civilians found in the

<sup>262</sup> A Pirzio-Biroli directive of 12 January 1942 stipulated that 50 hostages were to be shot in reprisal for the killing of a rank-and-file soldier or the wounding of an officer, and 10 for the wounding of a rank-and-file soldier. See Scotti and Viazzi, *Le aquile delle montagne nere*, 114.

<sup>263</sup> See *ibid.* 337; Talpo, *Dalmazia*, ii. 1187; Cuzzi, *L'occupazione italiana*, 198–9.

<sup>264</sup> See Cuzzi, *L'occupazione italiana*, 198–9.

<sup>265</sup> That this was still normal practice, even in May/June 1943, is clear from the final report on Operation BLACK by the C-in-C of the military command in Montenegro: 'Relazione sul ciclo primavera-estate 1943' (n.d.), ASUSSME, M3/19.

<sup>266</sup> For details of these events, see the Ic reports of the Commanding General and Commander in Serbia, based largely on information obtained by decoding Chetnik radio communications: 'Komm. Gen. und Befh. in Serbien, Abt. Ic, Lagebericht für die Zeit vom 31.12.1942 bis 8.1.1943' (8 Jan. 1943), BA-MA RH 26-114/16; 'Komm. Gen. und Befh. in Serbien, Abt. Ic, Lagebericht für die Zeit vom 9.1. bis 18.1.1943' (19 Jan. 1943), BA-MA RH 26-114/16; 'Komm. Gen. und Befh. in Serbien, Abt. Ic, Lagebericht für die Zeit vom 30.1. bis 8.2.1943' (8 Feb. 1943), BA-MA RH 26-114/17. Also 'Die nationale Aufstandsbewegung der Četniks im Unabhängigen Staat Kroatien, Slovenien und Montenegro. Stand: 1.5.1943' (5 May 1943), BA-MA RH 24-15/4, particularly 19–21, and 'Bericht über die montenegrinische Frage im Zusammenhang mit dem Sicherheitsproblem auf dem Balkan. Auf Grund einer Montenegroreise im Juni' (n.d.), BA-MA RH 21-2/749.

wider operational area. The operations in north-eastern Bosnia in January/February 1942 were the only exception. As this area was largely controlled by Serbian nationalist Chetniks under the command of Jezdimir Dangić, who was known to be consistently pro-German, his men—provided they were disarmed without resistance—were granted prisoner-of-war status.<sup>267</sup> However, it did not escape even German officers known to favour a hard line that such a policy of indiscriminate repression was problematic, if only because its lasting application required forces that could be spared for the Yugoslavian area, if at all, only for a short time. On 1 November 1941 the plenipotentiary commanding general in Serbia decreed that civilians in intervening territory were to be shot only if found with weapons in their hands.<sup>268</sup> The commander of 342nd Infantry Division, Maj.-Gen. Hoffmann, followed suit on 11 December, forbidding reprisals against Serbian civilians suspected of supporting the Serbian nationalist side in the civil war ('they had no alternative if they didn't want to go over to the Communists').<sup>269</sup> On 24 November the troops received formal orders for the first time that they were to take Communist partisans into custody, although the orders said nothing about their ultimate fate.<sup>270</sup> The hostage-shooting rate of 100 for 1 applying in Serbia, which had led in October to outright massacres of civilians mostly uninvolved in the fighting, was finally halved on 22 December 1941.<sup>271</sup> The insistence on 'ruthless severity' appears to have been more emphatic the further the commanders in question were from events at the front. General Walter Kuntze, Wehrmacht Commander South-East from 29 October 1941 to 8 August 1942, is a typical case in point. Countermanding an order from Böhme's successor, Paul Bader, who was endeavouring to clarify the highly contradictory situation regarding orders on taking partisans into custody, Kuntze stressed the absolute need to kill every prisoner and deserter: 'Captured insurgents must always be hanged or shot. If they are used for intelligence purposes, that shall only mean that their death is briefly postponed.'<sup>272</sup> Bader felt compelled to counter this demand, which grotesquely ignored his own options and was bound to play straight into the partisan leaders' hands. On 23 March 1942 he finally wrested his superior's agreement to a compromise under which deserters at least would be allowed to live.<sup>273</sup>

The phase from April to October 1942 was marked by a certain relaxation of the German policy on repression. This was probably attributable, at least partly, to the defeat of the insurgents in Old Serbia and the fact that a major uprising which the

Germans had expected in March had still not occurred by the beginning of spring. The surviving records contain a number of orders issued at the time by Paul Bader in Belgrade, and by Maj.-Gen. Johann Fortner, the commander of what was, until July 1942, the only German division in the NDH, with a view to halting the escalation.<sup>274</sup> It is no coincidence that the first exchange of prisoners between the Wehrmacht and the National Liberation Army took place during this period. Many of these arrangements were contrary to both the spirit and the letter of the directives in force, issued by the Wehrmacht Commander South-East, Walter Kuntze. It is no longer possible to determine, in this case, whether Kuntze had experienced a Damascene conversion in the meantime, or whether Bader quite simply and systematically went behind his back.

The arrival of Kuntze's successor, Col.-Gen. Alexander Löhr, as Wehrmacht Commander South-East from 8 August 1942 to 25 August 1943 ('Commander-in-Chief South-East' as of 1 January 1943), marked a new turn towards 'intensification' of the war against the partisans. In his first tour of the area under his command, Löhr already spoke of the need not to let the enemy see any sign of weakness in the region.<sup>275</sup> Then, when the notorious 'Commando Order' was issued, he added an appendix on his own initiative, specifying that it must be made absolutely clear to the insurgents that 'in no circumstances' would they escape with their lives.<sup>276</sup> Löhr had probably been induced to make this disconcerting U-turn during his latest visit to Führer headquarters. There, on 23 September 1942, in the presence of Löhr, Kasche, and the Croatian head of state, the Führer had exclaimed so vehemently against the alleged lack of severity in conducting the fight against the partisans that even the notoriously pro-Ustasha Kasche feared that the 'Poglavnik', Pavelić, might see it as a call for a repeat of the 1941 pogroms against the Serbs.<sup>277</sup> An OKW basic order on the conduct of the fight against the partisans, issued on 16 December 1942, which was tantamount to a general pardon for all crimes committed in this theatre of war,<sup>278</sup> could only strengthen this new turn in German reprisal policy in the western Balkans.

Paradoxically, the cycle of operations conducted in the first six months of 1943, which were wholly directed at the destruction of the main forces of the National Liberation Army (Operations WHITE I and II and Operation BLACK), was characterized both by compliance with these new directives and by failure to comply with them. First, there was the clause in the order for the launch of Operation WHITE I stipulating the systematic deportation of all civilians found in the 'partisan state' of western Bosnia. This was quietly removed on 15 January, apparently as a

result of a protest by Glaise von Horstenau.<sup>279</sup> As regards the capture and preferential treatment of deserters, the commander of the German troops in Croatia gave orders that were diametrically opposed to Löhr's directive of 28 October. The reality on the battlefield appears to have been somewhere between the two theoretical scenarios. Even allowing for the fact that, at this point, the National Liberation Army command structures enabled the weapons of combatants who had been killed or wounded to be recovered, the ratio of enemy dead to recovered weapons at the end of the WHITE operations nevertheless suggested that there must have been a large number of unarmed civilians among the dead.<sup>280</sup> At least in some cases, even partisans who were captured or who deserted were shot on the spot or immediately after capture.<sup>281</sup> And, at the same time, there was the absurd situation of the Commander-in-Chief South-East launching an initiative to support deserting partisans, and making complete nonsense of his own directive of 28 October 1942 in the process.<sup>282</sup> A further glimmer of light was a directive issued by Paul Bader on 28 February, who took advantage of the situation in Serbia, his area of command, which was still quiet, to substantially reduce the number of hostages shot in future by specifying the circumstances in which 'retribution' was permissible.<sup>283</sup>

The escalation reached its peak during the large-scale Operation BLACK in northern Montenegro and south-eastern Bosnia. Although the troops in these areas were ordered to treat the local Muslim civilian population well,<sup>284</sup> and were also allowed to take both Serbian nationalist Chetniks and Communist partisans prisoner, the Communist partisans at least appear to have been shot automatically, as a general rule.<sup>285</sup> To prevent Tito escaping undetected from the forces that were

<sup>279</sup> 'Privatbrief Glaise von Horstenaus an Löhr' (4 Jan. 1943), BA-MA RH 31 III/12; 'Divisionsbefehl für Unternehmen "Weiß"' (15 Jan. 1943), BA-MA RH 26-117/5. Glaise von Horstenau had pointed out to Löhr that 'everyone in Croatia is particularly pleased when the wrong people are shot as hostages'.

<sup>280</sup> For 11,915 enemy troops reported dead, there were 47 machine guns and 589 rifles. See 'Lagebeurteilung OB Südost (Ob.Kdo. H.Gr. E) März 1943' (1 Apr. 1943), BA-MA RH 2/683. <sup>281</sup> See 'Div.Kdr.-Besprechung in Sanski Most am 16.2.43, 13.00 Uhr', BA-MA RH 26-118/33. These minutes contain the following, highly informative admonition to Lüters' divisional commanders from their commanding general: 'Deserters who have been confirmed by us and who make statements, have been shot, in some cases simply because they could not be returned immediately. This is intolerable!' See also *Die geheimen Tagesberichte*, vi. 207 (6 Mar. 1943), on the shooting of captured partisans by 7th SS Division.

<sup>282</sup> On the occasion of a visit to 718th Infantry Division in the closing phase of Operation WHITE II; see 'KTB 718. ID, Abt. Ia' (12 Mar. 1943), BA-MA RH 26-118/31. There is no mention of this in the war diary kept by Löhr's own department.

<sup>283</sup> 'Körpsbefehl des Kommandierenden Generals und Befehlshabers in Serbien' (28 Feb. 1943), BA-MA RW 40/38.

<sup>284</sup> Except if the civilian population showed a 'hostile attitude', in which case they were to be dealt with by means of 'ruthless and brutally harsh' measures; see 'Komm.Gen. und Befh. in Serbien, Abt. Ia, Operationsbefehl für den Fall "Schwarz"' (6 May 1943), BA-MA RW 40/53.

<sup>285</sup> In the case of 1st Mountain Division, 411 of the 498 men captured were shot; see 'Bericht der 1. Gebirgsdivision über den Einsatz in Montenegro' (10 Jul. 1943), BA-MA RH2/682.

rapidly closing in during the final phase of the operation, Lüters even gave orders on 10 June that all prisoners taken from then on were to be shot.<sup>286</sup>

The further—and this time permanent—change in German reprisal policy is generally attributed to the ‘new policy’ adopted by the special envoy, Hermann Neubacher, who was entrusted on 24 August with the task of coordinating cooperation between the occupying power and all anti-Communist forces in the western Balkans. It culminated in a directive issued by the Commander-in-Chief South-East on 22 December 1943 in which, for the first time on the German side, the number of hostages to be shot in a given case was no longer laid down but was left to the discretion of the officer responsible for taking the decision.<sup>287</sup> However, Neubacher’s task was facilitated by the fact that there had already been signs of a turnaround in German repression policy in the weeks preceding his arrival. Although the driving forces behind this development cannot be identified with absolute certainty, there is some evidence that experience on the eastern front played a decisive part. An OKH directive of 1 July 1943 on the treatment of prisoners and deserters from the Soviet partisan movement stipulated that captured guerrillas were to be shot in future only if they were wearing German uniform or were ‘caught in the act’.<sup>288</sup> Then, on 18 August, an OKW directive was issued which went so far as to specify that guerrillas were generally to be granted prisoner-of-war status.<sup>289</sup> However, this was never followed by an order putting a complete stop to the shooting of hostages in any form, although that would have been the only logical consequence of this development, since otherwise the absurd situation would inevitably arise in which the guilty were spared while those who were most probably innocent were shot.

For the historian, the search for evidence that this directive was actually implemented in the Yugoslav theatre during the last 18 months of the war is a thankless task. What is clearly documented, above all, is that in Old Serbia ‘systematic’ shootings of hostages were substantially reduced and, in some places, stopped altogether, mainly as a result of the rapprochement between the Serbian nationalist resistance and the German occupying power. It is much harder to determine the extent to which instructions to spare captured partisans or civilians found in the theatre of operations were actually followed at divisional and battalion level. In the NDH, for example, the decline of the Croatian executive resulted, from 1943 to 1945, in a situation in which the central direction of reprisals by the Croatian authorities existed on paper only. There is also evidence of German units engaging in spontaneous retribution as early as 1942, but such cases became increasingly routine in the following years, and Neubacher’s ‘new policy’ does not seem to have

<sup>286</sup> ‘Der Befehlshaber der deutschen Truppen in Kroatien an die 1. Geb.Div.’ (10 Jun. 1943, 18.25), BA-MA RH 28-1/96.

<sup>287</sup> ‘Komm.Gen. und Befh. in Serbien, Abt. Ia, Befehl des Oberbefehlshabers Südost zu Sühnemaßnahmen’ (22 Dec. 1943), BA-MA RW 40/89.

<sup>288</sup> ‘Oberkommando des Heeres HQu., Grundlegender Befehl Nr. 13a über die Behandlung von Partisanen’ (1 July 1943), BA-MA RH 3/746.

<sup>289</sup> The original directive is no longer available, but there are frequent references to it in correspondence in the following months, as, e.g., in BA-MA RW 4/714b.

affected them particularly. Given the state of the sources, it is extremely difficult to form even an approximate idea of the numbers involved. Reliable data is available only for cases which had still had political repercussions during the war, possibly because they were likely to compromise collaboration with the ethnic groups concerned.<sup>290</sup> In addition, and above all, the ratio of the number of small arms seized in the course of an operation to the number of enemy dead is a reasonably reliable indication as to whether the operation in question had a military purpose or was more in the nature of retribution. The conclusions reached in Yugoslavia after the war by the 'State Commission for the Investigation of the Crimes of the Occupants and their Accomplices' can be accepted only with some reservations, in view of the Tito government's systematic falsification of the country's losses during the war.<sup>291</sup>

In conclusion, German reprisal policy in the territory of occupied Yugoslavia was marked by two relatively clear periods, followed by phases of de-escalation. It is noticeable, however, that in the first peak period of German repression (August 1941 to March 1942), particularly bloodthirsty and unrealistic directives issued by the OKW or the Wehrmacht Commander South-East were often watered down or even ignored at corps and divisional level—a trend that gathered strength in subsequent months. Evidence of a divisional commander knowingly going beyond what was officially required exists only in the case of 342nd Infantry Division in September/October 1941. In the second peak period too (October 1942 to June 1943), it seems that the directives of 28 October and 16 December 1942, which called for particularly uncompromising repression of the partisans, were actually implemented by the local commanders only in the first couple of months.<sup>292</sup> The first directives watering down this 'new old' policy were already issued during the WHITE operations, and the turnaround in July/August 1943 largely reversed it. The fact that the reversal of policy remained patchy in the war against the partisans west of the Drina was due mainly to the special circumstances obtaining in the Bosnian theatre of war. In that area, unlike Serbia, a war constantly spilling over into genocide had been raging since June 1941. Isolated attempts at de-escalation on the German or Yugoslavian side had been too brief, or too closely tied to a specific objective (the exchange of prisoners), to permanently halt the forces unleashed by the murderous policy of the Ustasha.

Thus, the observer is presented with a picture of the last year and a half of the war in embattled Yugoslavia that is full of contradictions. On the one hand, there are troops who, under the pressure of years of local genocidal ethnic conflict, appear

<sup>290</sup> See, e.g., 'Gedächtnisnotiz (auszugsweise) über meine Besprechung mit Nedić am 19.10.1942' (20 Oct. 1942), BA-MA RW 40/93; 'Aktennotiz über die Besprechung des Reichsführers SS mit SS-Obergruppenführer Phleps am 28.7.1943', BA, NS 19/1434; Glaise von Horstenau, *Ein General im Zwielicht*, 396 (May 1944); 'Kasche an Auswärtiges Amt' (9 and 16 Apr. 1944), PA, Inland IIg 401, 2824.

<sup>291</sup> The number of Yugoslavs who died in the war was rounded up to 1,706,000 by the new government, for reasons of domestic and foreign policy (real figure: approx. 1,015,000). A summary of the current state of research on the subject is found in Tomasevich, *War and Revolution*, ii. 718–50.

<sup>292</sup> See, e.g., the orders on the shooting of civilians found in intervening territory in 'Divisionsbefehl für die Säuberung des Raumes Prijedor, Bronzani Majdan, Sanski Most' (4 Jan. 1943), BA-MA RH 26-114/16.

to have abandoned all restraints. In addition to the killing of National Liberation Army prisoners, offences against property that cannot, with the best will in the world, be attributed to any conceivable form of retribution appear to have become commonplace.<sup>293</sup> Remarks such as Glaise von Horstenu's observation, that in the fifth year of the war it had become normal for troops, 'among other things, to obey even Führer orders only to a limited extent',<sup>294</sup> as well as excesses such as those committed at Otok (28 March 1944), point to a process of escalation at company and battalion level that seems to have been beyond senior commanders' ability to control. But, at the same time, reports have survived from which it can be concluded that, by the autumn of 1943, bringing prisoners back and accommodating them had become quite normal and was no longer exceptional.<sup>295</sup> There are even documented cases of bedridden patients being moved from partisan field hospitals and given further treatment in German establishments.<sup>296</sup> Whereas during the first year and a half of the war basic orders issued at army group or army high command level were surprisingly often watered down at corps and divisional level by officers acting on their own initiative, this practice appears to have shifted downwards by several levels of command between 1943 and 1945. It seems to have been regimental and battalion commanders of long-serving 'Balkan units', in particular, who were now often prepared to disobey orders that seemed to them to make little sense. Unlike the early years, when this creative disobedience was effective in putting a damper on the existing processes of escalation, it now had the opposite effect.

## 7. CONCLUSION

Whereas, until the summer of 1944, the German command in Old Serbia succeeded in holding, at relatively little cost, a state where most of the population was hostile,<sup>297</sup> the German–Italian occupation policy in the independent state of Croatia was a complete fiasco, the worst in the whole of occupied Europe. From a relatively promising start, with most ethnic groups (Croat and Muslim) prepared to give German rule the benefit of the doubt on the basis of their past experience of life under the Austro-Hungarian monarchy, by the turn of 1941/2, at the very

<sup>294</sup> 'Der Bevollmächtigte General an das Pz.AOK 2' (15.11.1943), BA-MA RH31 III/12.

<sup>295</sup> KTB OKW, iii/2, 1393 (30 Dec. 1943).

<sup>296</sup> '371. ID, Abt. Ia, Gefechtsbericht Unternehmen "Panther" (31 Dec. 1943), BA-MA RH24-15/33. This was admittedly a unit from outside the Balkans that was deployed there for only six weeks.

<sup>297</sup> The part played by Milan Nedić resulted in his unconditional condemnation as a 'Quisling' in the post-war historiography of Communist Yugoslavia, which took no account of his achievements in providing food for Serbian refugees from Kosovo and the NDH, and reducing the German hostage quotas. A distinctly more balanced picture of Nedić is found in more recent research; see esp. Vecanski, 'General Milan Dj. Nedić', 126–31; Tomasevich, *War and Revolution*, ii. 209–28; Schmider, *Partisanenkrieg in Jugoslawien*, 421–524.

latest, a situation had arisen in which the radical fascists of the Ustasha party had irrevocably turned large sections of their own people against them with their partly implemented and partly failed programme of 'ethnic cleansing', and had forcibly provoked the formation of various resistance movements which enjoyed both historical and topographical advantages. Most of the responsibility for this avoidable catastrophe undoubtedly lay with the Italian command authorities, at whose insistence overall control of the new state of Greater Croatia had been transferred to Ante Pavelić and his Ustasha party in April 1941. Mussolini's continued support for his man in Zagreb during 1942 and 1943 shows the price that Rome was prepared to make Croats pay in order for it to hold on to what had by now become a wholly undermined 'hegemony' in the western Balkans.

The fact that the consequences of this situation for German conduct of the war were relatively easily absorbed was due more to chance than to the perspicacity of the German high command. From 1942 on, the resistance succeeded in substantially reducing and, in some cases, even completely preventing the exploitation of most of the mineral resources that were important for German armaments (particularly bauxite, low-phosphorus iron ore, copper, and chromium). This could have had decisive military consequences, most of all in the case of chromium. However, that crucial metal happened to be mined in Macedonia, an area which, because of the ethnic mix of the inhabitants, had become involved in the fight against the occupants only at a very late stage. The result was that German chromium mining was still at record levels in 1944.<sup>298</sup>

The element of chance also played an important part with regard to the strategic threat posed by the existence of a large insurgent area on the southern edge of 'fortress Europe'. Thus, with the best will in the world, the OKW could not have foreseen that first the western Allies (from July/August 1943) and then the Soviet Union (from October/November 1944) would spurn the operational possibilities offered by an invasion of the NDH State in favour of other options. It was only in the choice of troops to defend this secondary theatre of war that the professionalism of the German staffs helped to keep the consequences for the conduct of the war as a whole to a minimum. Apart from training units and local formations for which no sensible use could have been found in most of the other theatres of war, they were mostly foreign volunteers, whose training and/or national characteristics meant that there were problems about using them against the western Allies (SS Brigade 'Nederland', Croatian legionnaire divisions, Russian Corps) or against both the western Allies and the Soviet Union (1st Cossack Division, 13th SS Division). This helped to keep the number of divisions withdrawn from the fronts in Russia, Italy, and north-western Europe within tolerable limits for the purposes of the German conduct of the war as a whole.<sup>299</sup>

<sup>298</sup> A more detailed account of the procedure adopted by the occupants in exploiting occupied Yugoslavia, and the long-term effects on the national economy, is to be found in Tomasevich, *War and Revolution*, ii. 611–717. For an analysis that takes account of the National Liberation Army's attempts to stop this process, see Schmider, *Partisanenkrieg in Jugoslawien*, 555–68.

<sup>299</sup> The number of German units confined to this theatre of war by the need to combat the National Liberation Army has been hotly debated for more than 50 years in the British and American

Despite this damage limitation, the final assessment of the German war in Yugoslavia is that a bloody campaign, accompanied by numberless genocidal excesses, could probably have been avoided, at least at that level of intensity. For that to have happened, however, the German authorities in the area who had been in a position to gain a picture of the crimes committed by the Ustasha and who had reasonably regular access to the top political leadership—namely Edmund Glaise von Horstenau, Walter Kuntze, Alexander Löhr, Maximilian von Weichs, and Lothar Rendulic—would have had to insist in 1942/3 that Hitler get rid of the Pavelić government, and to have threatened to resign unless he did so.

## Appendix: Yugoslavian Resistance and Collaboration Armed Formations

### CHETNIKS, FROM THE WORD ČETA (BAND)

Serbian nationalist monarchist guerrillas in the centuries-old tradition of resistance to the Ottomans. Except for those in Old Serbia, they were primarily engaged in fighting the Communist partisans from 1941 on. *Odredi* (detachments) of various strengths formed spontaneously in Serbia, Montenegro, and the NDH in the summer of 1941, and it was quite common in the early stages for them to act in concert with Communist or Communist-influenced elements. The two movements drifted apart between November 1941 and April 1942, and most Chetnik leaders chose to join Draža Mihailović. At the same time, most Chetnik units appeared to be prepared to collaborate with Italian and—to a lesser extent—German occupying forces. Mihailović periodically attempted to get the units, often only nominally under his command, to agree on joint action against the Axis powers. These attempts came to nothing because the civil war in Serbia took priority, the large-scale Allied landing failed to materialize, and, from the middle of 1943 on, he lacked the necessary military strength. The president of the traditional pre-war Chetnik movement, First World War veteran Kosta Pećanac, was the first Chetnik leader to call for collaboration with the German occupying power in August 1941. Although he was a potential rival of Mihailović at the time, his position was largely undermined by German distrust, and by the Bulgarian occupation of his home region around Prokuplje (January 1942).

literature. According to the author's estimates, not counting the units that would have been needed in any case for defence purposes in the event of invasion, six more average-strength divisions were needed for the period January to June 1943 (Operations WHITE and BLACK), five more average-to-low-strength divisions for the period July 1943 to September/October 1944 (Soviet–Bulgarian invasion of eastern Yugoslavia), and three more high-strength divisions for the cycle of large-scale operations (winter 1943/4). See Schmider, 'Wehrmacht's Yugoslav Quagmire', 14–24.

## CHETNIKS, ILLEGAL

(a) In Old Serbia, there were relatively few Chetniks operating illegally between the end of 1941 and the beginning of 1943, because Mihailović was given the opportunity to employ most of the legal Chetniks as a cadre to prepare a major uprising on the approach of the Allied armies. Forced by the disbandment of these units, and favoured by the Serbian government's gradual surrender of remote regions from the spring of 1943 on, Mihailović set about forming a force comprising a large number of 'standing' units without, however, abandoning the basic principle of mobilization only in case of need (in the event of an Allied landing or a National Liberation Army invasion). Although, in the late summer of 1943, some Chetnik leaders began to substantially increase their attacks on collaborators, Bulgarians, and Germans, Mihailović was increasingly obliged to join the occupying forces in combating three invasions by the National Liberation Army (October/November 1943, March/April 1944, and August/September 1944). Maximum actual strength: approx. 25,000 (August 1944),<sup>300</sup> although most of the men were no match for the partisans.

(b) In the NDH and Montenegro: resulting from growing divisions in Croatia and Montenegro, which began at the end of 1941 and culminated in a split between guerrillas loyal to the king on the one side and Communist (or Communist-led) guerrillas on the other. Most of the Chetnik groups in mid-1942 had every reason to think they were winning the civil war in Serbia. In 1942/3, in numbers alone, they constituted the most powerful force that Draža Mihailović was ever to have at his disposal. However, there were problems arising from the wide political and regional differences between these units, the wavering loyalty of many of their leaders, and the fact that this made it virtually impossible to reach any firm conclusion about their military potential. Despite receiving more than adequate supplies of weapons from the Italian side, the main units led by Pavle Djurišić and Bajo Stanišić suffered a series of disastrous defeats in combat with the National Liberation Army between March and May 1943, so that the survivors, from a position of weakness, were obliged to serve in the 2nd Armoured Army as auxiliaries after 8 September 1943. Maximum actual strength: over 30,000 (January 1943).<sup>301</sup>

## CHETNIKS, LEGAL

(a) In Old Serbia: Chetnik detachments deployed by the German occupying power as auxiliary gendarmerie from October 1941 to March 1943. Although most of these units belonged to the wide following of the loyalist Chetnik leader Kosta Pećanac, indications (in decoded Mihailović radio communications) of increasing infiltration of these units by the Mihailović movement prompted the commanding general in Belgrade to disband the bulk

<sup>300</sup> 'Mappe Vortrag des OB, Gen.Feldm. Frhr von Weichs, beim Führer am 22.8.1944. Vermutliche Stärken der D.M. [Mihailović]-Verbände (oD.), festgehaltene Schätzung des Militärbefehlshabers Südost' BA-MA RH 19 XI/31. Although there may have been a certain tendency to round the figures up in this case (Weichs was particularly concerned to emphasize the strength of the Mihailović organization in his report to Führer headquarters), it should be remembered that the collaboration between 'Old Serbian' Chetniks and the occupying power, which had started in October 1943, had given the German staffs a unique insight into the military structures of the monarchist resistance east of the Drina.

<sup>301</sup> 19,000 in the NDH and 15,000 in Montenegro, according to Italian estimates. See Kasche to Foreign Ministry, 11 Jan. 1943, BA-Mam RH 31 iii/7.

of them in the autumn of 1942. Some of the men were deployed again in the ranks of the Serbian State Guard. Maximum actual strength: 13,400 (May 1942).<sup>302</sup>

(b) MVAC. Anti-Communist, mostly Serbian nationalist, auxiliary troops formed by the Italian 2nd Army in the spring of 1942. Unlike the illegal Chetniks in the NDH State, they were attached to specific Italian divisions or command headquarters, from which they received not only arms, ammunition, and food supplies but also rudimentary uniforms. Their contacts with the Mihailović organization were so advanced that it appeared highly doubtful that they would be loyal to the Italian occupying power in the event of a large-scale Allied landing. An estimate of their actual strength is problematic owing to the indiscriminate use of the MVAC acronym by various Italian agencies.

### GENDARMERIE, GERMAN–CROATIAN

The attempt, following the WHITE cycle of operations (March/April 1943), to permanently secure territory recaptured from the National Liberation Army by deploying gendarmerie with German cadres was the first German attempt to prevent a repetition of the experiences following Operation TRIO I/II in 1942 (when returning Serbs were terrorized and robbed by Croatian gendarmerie) by depriving the Croatian executive of some of its powers. Since the assembly phase did not begin until the WHITE operations had been concluded, and since mustering Reich German and ethnic German police cadres<sup>303</sup> and Croatian rank-and-file<sup>304</sup> took an unexpectedly long time, the new unit was mainly deployed not in west Bosnia—as originally planned—but in the Slavonian region of northern Croatia, where there were fewer partisans to be reckoned with. Contrary to the original task assignment, the gendarmerie was increasingly obliged, owing to increasing enemy pressure, to engage with the National Liberation Army not as security forces at village level but as a compact unit. Total strength in December 1944: almost 15,000, all deployed as a divisional unit on the Syrmian front.

### CROATIAN TERRITORIAL ARMY (DOMOBRANI)

A regular army of the NDH. Barely out of the cradle, the territorial army, whose members were known as Domobrani, played a decisive part in checking the first wave of the uprising in the late summer/autumn of 1941. A structure gradually emerged in the course of these operations, in which brigades comprising three to six infantry battalions were preferred to regiments. Divisional- and corps-level command structures played a diminishing role at operational level from month to month, because the nature of the partisan movement they were fighting made it necessary to split up the available formations, and the overall conduct

<sup>302</sup> 'Komm.Gen. u. Befh. in Serbien an W.B. Südost', 1 Dec. 1942, BA-MA RW 40/36. There were only 3,800 men still under arms on 1 December 1942.

<sup>303</sup> The plan specified 5,000 but only 250 were available on 5 April 1943: see 'H.Gr. F, KTB Abt. 1a', 5 Apr. 1943, BA-MA RH 19 VII/7.

<sup>304</sup> See 'Aktenvermerk zur Besprechung des Deutschen Bevollmächtigten Generals mit Brigadeführer Kammerhofer in Esseg am 21.6.1943' (n.d.), BA-MA RH 31/III/9, according to which the new gendarmerie numbered only 2,300 ethnic Germans and 2,069 Croats after more than three months. See also the statement by the Reich Leader SS to the C-in-C South-East during a short visit to Zagreb on 5 May, reported to the Foreign Ministry by Kasche on 5 May 1943 and reproduced in PA, StS Kroatiens, iv. 693, that 'deployment of the Kammerhofer police was not expected to have an impact for at least six months'.

of operations was, more and more often, taken over by the Germans or Italians. This trend continued in the course of 1942 and 1943, until the final reorganization of the territorial army, which began with a politically motivated amalgamation of the Domobrani and the Ustasha (20 November 1944), re-established the role of the division, at least on paper. In the following years the operational effectiveness of the Domobrani was reduced by an increasingly widespread collapse of morale, caused mainly by the rift between the Pavelić regime and its aims, on the one hand, and the majority of Croats, on the other. German attempts to counteract this development by taking an ever-increasing part in the command and training of the Croatian army were only partly successful (notably, in the case of five mountain brigades established with German assistance in March/April 1942). From the turn of 1942/3 it could no longer be denied that most territorial army units could now be deployed with some prospect of success only to defend the narrow confines of their homeland against adversaries in the Yugoslavian civil war. The clearest evidence of this development was not so much desertions to the partisans as engagements which, in many cases, did not even amount to a pretence at combat, and which repeatedly enabled the National Liberation Army to replenish its stocks of arms and ammunition at very little cost. However, this experience did not prevent Tito from wreaking bloody revenge on Domobrani who, despite repeated calls to desert, remained on the side of the Pavelić regime until the end of the war.<sup>305</sup>

#### LEGIONNAIRE DIVISIONS, GERMAN–CROATIAN

Two-part infantry divisions of the German Wehrmacht, manned by Croatians with German cadres (planned target strength 10,000 to 12,000).<sup>306</sup> Identical in conception to the Croatian infantry regiment defeated at Stalingrad, the first legionnaire division (Croatian 369th Infantry Division), which was originally still intended for service on the eastern front, was instead deployed at home from January 1943. The inclusion of Croatian conscripts in German command, disciplinary, and supply structures was, in the end, simply an attempt to protect the troops, if possible, from the demoralizing realities of their martyred homeland and the regime they served. As was only to be expected, this attempt—especially given the general course of the war—could work only for a limited time. The two divisions that followed after the Croatian 369th Infantry Division (the Croatian 373rd Infantry Division in July 1943 and the Croatian 392nd Infantry Division in January 1944) were already markedly less operational. From June 1944 on, the German authorities even began to stop Croatian troops taking any leave, for fear of desertions. Then, from the end of September 1944, all three divisions were shattered by mutinies and mass desertions, reducing them to combat groups approximately two battalions strong, half of which consisted of German cadres. The formation and deployment of the Bosnian Muslim 13th SS Division ('Handschar')

<sup>305</sup> By far the most detailed breakdown of the Croatian armed forces (Ustasha and territorial army) at the present time exists only in electronic form: <[www.axishistory.com](http://www.axishistory.com)>. Its publication in book form is a desideratum of the first order.

<sup>306</sup> The actual strength of the (Croatian) 373rd Inf.Div. still being assembled at the beginning of March 1943 was 9,079. See 'Aktenvermerk über eine Besprechung Döllersheim', 8 Mar. 1943, BA-MA RH 31 III/9.

followed the same course, but in this case less was achieved at greater cost because of the relatively short period of deployment (March to October 1944).

### MIHAILOVIĆ MOVEMENT

Umbrella organization of the Serbian nationalist resistance, under the command of Draža Mihailović, a colonel in the royal army and (as from January 1942) Yugoslavian minister of war. Most of the Chetnik units outside Serbia had been formed in 1941 without Mihailović's involvement, so his powers of command were subject to substantial limitations. Only in eastern Herzegovina and the neighbouring state of Montenegro did Mihailović have both a high military potential and largely unchallenged political powers of command between May 1942 and May 1943.

### *ODRED* (DETACHMENT)

Yugoslav term for a guerrilla unit of unspecified size attached to a particular geographical region, whose strength depended on local framework conditions (such as harvest time and winter weather). Efforts to expand this concept of guerrilla warfare, which was based on centuries-old tradition, by establishing major formations of fixed size were pursued by the partisans with much greater consistency and success than by their Serbian nationalist opponents in the civil war.

### PARTISANS, AS FROM 19 NOVEMBER 1942 NATIONAL LIBERATION ARMY

Armed wing of the Communist Party of Yugoslavia (CPY). At the outbreak of the first battles against the occupant in June/July 1941, the CPY was in an exceptionally favourable position. The collapse of the defeated kingdom, the partition of the country, the Ustasha genocide, and the uprisings against foreign occupation in Serbia and Montenegro favoured by historical tradition together opened the prospect of establishing a Stalinist Soviet dictatorship on the ruins of the old Yugoslavia. Where the small number of CPY members<sup>307</sup> precluded the formation of exclusively Communist guerrilla detachments, the party leaders endeavoured to take over the existing detachments by infiltrating or eliminating the command apparatus. These methods, and the premature imposition of some of their long-term social and political objectives in areas liberated by the CPY, provoked a backlash, with the result that by May/June 1942 the most important Communist sphere of power in eastern Bosnia, Montenegro, and Herzegovina had largely collapsed, and an approximately 5,000-strong vanguard had hastily withdrawn to western Bosnia. The almost simultaneous surrender of this area by the Italian 2nd Army, and the relatively long period (six months) that elapsed before the Axis powers' next major operation, enabled Tito to make a fresh political start and to form a regular army, based on 1,000-strong brigades which, unlike the *odredi*, were not tied to a specific area. This, together with a command structure which,

<sup>307</sup> According to Redzic, *Bosnia and Herzegovina in the Second World War*, 201, the CPY had about 12,000 members in Yugoslavia in July 1941, only 830 of whom were in what was to be the main theatre of war, Bosnia-Herzegovina.

unlike that of the Mihailović organization, was based clearly on the principle of command-and-obey, enabled the partisans to defeat and destroy even numerically superior enemy forces in 1943, in the decisive battles of the civil war. Despite the CPY's political claim to speak for all Yugoslav ethnic groups, Serbs and Montenegrins were distinctly over-represented in the partisans' ranks before 1944. Maximum actual strength before the capture of eastern Yugoslavia in the autumn of 1944: almost 300,000 (late autumn 1943), although this figure was put forward mainly by historians and journalists close to the partisans' cause, so it is probably on the high side.<sup>308</sup>

### RUSSIAN CORPS (RSK)

Volunteer formation raised by the White Russian community in Belgrade at the height of the Serbian uprising and placed at the disposal of the Nedić government, initially to protect economically important industrial installations (original title: Russian Factory Protection Corps). Much more reliable than the Serbian State Guard, the RSK had to contend with an age-related problem, since most of its men were veterans of the Russian Civil War (1918–21). Moves in 1943 to enlist Soviet prisoners of war or Russian exiles living in Romania as supplementary forces, although very promising, had to be abandoned under pressure from the Reich Leader SS. Maximum actual strength: 11,118 (August 1944).<sup>309</sup>

### SERBIAN STATE GUARD (SSW)

Old Serbian gendarmerie formation which was the Serbian government's most important executive organ in 1942/3. For the occupying forces it was a doubtful tool, in that, from the middle of 1943 at the latest, it was influenced and infiltrated by the Mihailović organization to such an extent that its reliability was of noteworthy proportions only in operations against Communist partisans. In phases of open confrontation between Mihailović and the occupying power (e.g. in September 1943), the SSW could be regularly crippled by rapidly mounting desertions. It was under the command of the senior SS and police leader August Meyszner from April 1942 on, and it is conceivable, though difficult to prove, that his open Slavophobia accelerated the process of desertion. Maximum actual strength: almost 15,000 (turn of 1943/4).<sup>310</sup>

### SERBIAN VOLUNTEER CORPS (SFK)

Political militia which emerged from the fascist 'Zbor' movement during the Serbian uprising and offered its services to the occupants in the fight against the insurgents. Although the SFK was not a large force (about 2,500 in 1941), and although it was initially neglected by the Nedić government in favour of more 'traditional' anti-Communists, the

<sup>308</sup> Most recently in Redzic, *Bosnia and Herzegovina in the Second World War*, 227. See also Djilas, *Wartime*, 374–5.

<sup>309</sup> Militärbefehlshaber Südost 1a, 'Gegenüberstellung der Feindstärken und der eigenen einsatzfähigen Kräfte im serbischen Raum', 21 Aug. 1944, BA-MA RH 19 XI/31.

<sup>310</sup> 'Militärbefehlshaber Südost, Chef des Generalstabes an den Herrn Chef des Generalstabes der H.GR. F', 19 Jan. 1944, BA-MA RW 40/84.

volunteers soon proved to be by far the strongest fighting force among the Old Serbian collaborators. Despite their primarily anti-Communist orientation, they also showed great commitment in combat against the Serbian nationalist guerrillas, who regarded them for a time as opponents in the civil war. This singular commitment to the occupying power ought to have prompted a move to combine the demobilization of clearly suspect Serbian troops (SSW, legal Chetniks) with systematic consolidation of the SFK. Lack of imagination, and an almost pathological distrust of the Serbian nation, even among Wehrmacht officers who had no prior prejudices in this connection (based on the prevalent Slavophobia or on close connections with the NSDAP), meant that such action was taken only at a point (December 1943) when, as a result of the course of the war, Serbian willingness to collaborate had distinctly waned. German observers nevertheless considered that the volunteers' contribution to the defence during the National Liberation Army's second invasion of Old Serbia (March/April 1944) was more substantial than that of the German and Bulgarian units involved. Maximum actual strength: 9,886 (August 1944).<sup>311</sup>

### USTASHA

Croatian militia of the NDH State party, more or less comparable in its own eyes to the German Waffen SS. Initially a relatively small force (15,000 in November 1941), it was established as the 'political' army of the Croatian state following rapid expansion which resulted in the formation of 23 battalions between August 1941 and April 1942, followed by the creation of the first five brigades. As a result of its close connection with the new state, the Ustasha soon proved to be the only noteworthy support for the Pavelić regime in its 1941 deportation and destruction campaigns against the Serbian population. In addition to substantial privileges as compared with the regular (territorial) army, this was apparent above all in its steady growth, its takeover of other armed state formations (assumption of command of the Croatian gendarmerie on 26 June 1942), and, in the second half of the war, its increasing actual strength compared with that of the army (September 1943: Ustasha 28,500, territorial army 124,000; December 1944: Ustasha 76,000, territorial army 70,000).<sup>312</sup> A particular problem, from the German point of view, was that in most Ustasha units—unlike the SS—radical political views were translated into greater operational capability and military efficiency only to a limited extent. The few exceptions to this rule (e.g. the 'Black Legion' and the Ante Pavelić Bodyguard Division) were by no means sufficient to make up for the political damage caused by the mere existence of the militia.

### III. The Withdrawal from Greece

*Klaus Schönherr*

On 23 August 1944 the German–Romanian defence in Moldavia and Bessarabia collapsed. This event had a shattering effect on the Wehrmacht’s military position throughout south-eastern Europe. There was now almost nothing to prevent the Red Army from pressing forward into northern Yugoslavia. The German troops in the south of the Balkan peninsula were in danger of being cut off. This applied particularly to Army Group E, which in the late summer of 1944 had 300,000 men deployed in Greece, on the Ionian and Aegean islands, and on Crete.

In September 1943 the army group—consisting of three corps, the Fortress Crete garrison, and Assault Division ‘Rhodos’—had been obliged to assume responsibility for the security of occupied Greece when, following Italy’s capitulation, control of the occupation passed almost completely into German hands. The army group’s resources were sufficient only to protect the coastal strips against enemy landings and to monitor regions of economic and strategic importance. As in Yugoslavia, the situation in Greece was determined by resistance groups established mainly in the interior of the country. Thus, the Communist-controlled Greek People’s Liberation Army (ELAS) held political sway in Boeotia, Epirus, and the Peloponnese, virtually unhampered by the Germans. In addition to the 20,000 Communist partisans, some 8,000 nationalist-monarchist insurgents of the National Democratic Greek League (EDES) were fighting the occupants in north-western Greece. However, the combat strength of the resistance groups was absorbed by mutual rivalry, so that by the summer of 1944 the Wehrmacht was essentially master of the situation.<sup>1</sup>

The resistance groups could become a considerable threat to the German forces if, in the event of a withdrawal, the army group was obliged to reduce its strength in the occupied territory. However, the situation in Yugoslavia was much more dangerous, because by the middle of 1944 the People’s Liberation Army was strong enough to cause serious and, above all, lasting damage to Army Group E’s rear communication lines.<sup>2</sup> The only effective transport route from Thessaloníki to Belgrade via Niš—the army group’s lifeline, essential for any withdrawal movement—was particularly exposed to sabotage. The situation in the southern

<sup>1</sup> *KTB OKW*, iv/1, 665–70, 677–80.

<sup>2</sup> For details, see Part VI, Chapter II of the present volume.

section of the eastern front could also become a source of enormous danger to the German troops in Greece. For if Romania and Bulgaria were to leave the Axis coalition as a result of military developments, the Balkan peninsula would be left almost completely unprotected against the Soviet advance. In those circumstances Army Group E, under its commander-in-chief, Col.-Gen. Alexander Löhr, had to make all necessary preparations to avoid being cut off in the south of the Balkan peninsula.

## 1. THE WITHDRAWAL MOVEMENT IN GREECE

When the southern section of the eastern front collapsed in the second half of August 1944, there were eight German divisions and five fortress brigades in Greece, south of the Corfu–Thessaloníki line, the strongest forces being stationed on Crete and the Aegean islands. In view of the critical situation on the eastern front, the high command in Thessaloníki was prompted to make plans for a possible withdrawal from Greece. It was proposed to allow about three months for the operation. Although the occupation of Crete, the Aegean islands, and the Peloponnese was of little operational importance, Hitler had so far refused to permit any change in the status quo. After the fiasco in Romania, the Commander-in-Chief South-East considered it necessary to issue an order on 29 August 1944 instructing Army Group E to defend the south-eastern area.<sup>3</sup> Pursuant to that order, combat units and command staffs were to start moving out of the Greek islands in the strictest secrecy, and preparations were to be made to evacuate the mainland.<sup>4</sup> The order did not involve any radical change in the army group's situation, as it had already started making the necessary preparations to withdraw at the end of August, insofar as they could be concealed from the OKW.<sup>5</sup> However, the dramatic deterioration in the situation east of Belgrade and on the Bulgarian–Serbian border required substantial forces to be moved to that area immediately.<sup>6</sup>

On 26 August the Commander-in-Chief South-East had already ordered 4th SS Police Armoured Infantry Division to move from north-western Greece to the Skopje area.<sup>7</sup> At the end of August the troops in the Romanian–Bulgarian area of operations were facing a fiasco. So, on 3 September, the commander-in-chief decided to withdraw 11th Luftwaffe Field Division from the Athens region and deploy it as a safety measure on the eastern border of Macedonia.<sup>8</sup> At this point there were still 34,000 German troops on Crete, and more than 23,000 on the

islands in the Dodecanese.<sup>9</sup> Despite the precarious situation on the southern section of the eastern front, it was not until 6 September that Hitler took the decision to move as many units as possible from the islands to the mainland.<sup>10</sup> As it had become clear in the first half of 1944 that the superiority of the British navy in the eastern Mediterranean more or less precluded any possibility of moving them out by sea, the bulk of the German units had to be evacuated by air, and almost all the heavy military equipment was left behind on the islands. Although the withdrawal had already started on 28 August, when parts of 22nd Infantry Division were moved out of Crete, the operation proper only got going at the beginning of September, reaching its climax in the middle of the month, when 100 transport aircraft a day were engaged in the evacuation.<sup>11</sup> Hitler finally approved the complete evacuation of the Greek islands only in mid-September.<sup>12</sup> The daily transport capacity diminished after that point, owing to Allied air superiority and the need to fly the evacuated units as far as Thessaloníki or even to the Belgrade area. Nevertheless, by the end of October some 2,050 missions had successfully transported almost 31,000 men and 1,000 tonnes of equipment to the mainland.<sup>13</sup> The evacuation of the Greek islands had to be halted on 30 October, when Army Group E abandoned the Thessaloníki region. There were still 11,800 German troops and 4,750 Italian troops on Crete, and they formed a hedgehog position in the Chania area, which they continued to defend until the capitulation on 8 May 1945. In the eastern Aegean it was impossible to evacuate Rhodes, Leros, and Kos completely. About 11,200 German and 5,500 Italian troops were left behind on those islands.<sup>14</sup>

Along with the evacuation of the Greek islands, the withdrawal on the mainland started according to plan at the beginning of September. 41st Fortress Division in the Peloponnese moved northwards in stages, and a strong bridgehead was established in the Corinth area. This served both as a rear assembly zone for the retreating land forces and as protection for southern Greece. Thanks to the secret preparations, the evacuation of the Peloponnese was completed without much difficulty by 21 September, in four stages.<sup>15</sup>

To prevent any threat to a speedy withdrawal, Army Group E felt it necessary to establish a strong defensive position at Antirion, in order to defend south-western Greece and the Gulf of Corinth. Moreover, Bulgaria's entry into the war on 8 September on the side of the Allies forced the army group not only to evacuate Greece immediately but also to protect the open flank in south-eastern Macedonia, and 'cooperation' between Bulgarian and Soviet troops to drive the German enemy

<sup>9</sup> Hümmlchen, 'Balkanräumung 1944', 574. There were also about 6,500 Italian paramilitary auxiliaries on Crete, and nearly 7,350 troops on the Aegean islands.

out of the Balkans was one of the issues ‘discussed’ in the Bulgarian–Soviet armistice negotiations on 10 September.<sup>16</sup>

On 13 September the 3rd Ukrainian Front chief of staff, General Sergei Semyonovich Biryuzov, was sent to Sofia to prepare the Bulgarian forces for the offensive against the Wehrmacht. Then, only three days later, Marshal Fedor Ivanovich Tolbukhin assumed operational command of the Bulgarian army. The operation against the German defensive front on Bulgaria’s western border was not launched until 21 September, an earlier start having been prevented by a substantial restructuring of the Bulgarian forces—in particular, a ‘purge’ of the officer corps to suit the new masters. The aim of the Bulgarian–Soviet forces in this offensive, whose point of main effort was directed against the southern section of the Macedonian front, was to break the important Thessaloníki–Skopje–Niš connection—the potential weak link in any German withdrawal to Yugoslavia—so that Army Group E would be cut off in Greece. Despite their superior strength, however, the Bulgarians failed to achieve any decisive successes initially, because the loss of tactical commanders prevented effective deployment of the operational forces.<sup>17</sup> 22nd Infantry Division and 11th Luftwaffe Field Division held out against the enemy offensive until the end of the month, without losing much ground.

During the last ten days of September 3rd Ukrainian Front HQ, on the Stavka’s instructions, worked out the plan for Operation BELGRADE. The operation, to be launched in mid-October, was designed as a coordinated offensive by Soviet, Yugoslav, and Bulgarian troops, aimed at liberating Belgrade and attacking Army Group E’s withdrawal routes to prevent the enemy forces from leaving Greece.<sup>18</sup> The Commander-in-Chief South-East already had information about an impending large-scale Soviet offensive at the end of September, and Field Marshal Maximilian von Weichs had repeatedly asked the OKW to decide on the measures it planned to take in Greece. On 3 October the OKW finally issued the order to evacuate Greece, southern Albania, and southern Macedonia.<sup>19</sup> The high command in Thessaloníki was given the task of moving the forces under its command as quickly as possible north of the Scutari–Skopje–Klisura line.<sup>20</sup> According to Weichs’ instructions, the evacuation was to start ‘on 10 Oct. 1944 [...] and was not to include full withdrawal of the forces occupying the islands’.<sup>21</sup>

The Wehrmacht forces still in Greek territory at the end of September were XXII Mountain Corps,<sup>22</sup> securing the area west of the Pindus mountains, and LXVIII Army Corps,<sup>23</sup> on the east coast between Corinth and Thessaloníki. The withdrawal movement started promptly in the first days of October. LXVIII Corps dismantled the Corinth bridgehead and gradually evacuated the Athens–Piraeus area. On 12 October the last German units left the Greek capital, which had

<sup>22</sup> At the end of September, 104th Lt.Inf.Div., 966th and 1017th Frt.Brig. were under the command of XXII Mtn.A.C.

<sup>23</sup> LXVIII A.C. included 133rd Frt.Div., 41st Frt.Div. and various combat groups.

already been declared an 'open city' on 10 October.<sup>24</sup> The first British units reached Athens two days later in the course of Operation MANNA, the purpose of which was to secure the capital and reinstate the Papandreu government, and so prevent ELAS from taking advantage of the power vacuum left by the Wehrmacht's departure to take control of the city.<sup>25</sup>

The German withdrawal along the Aegean coast went without major difficulties, because although the opposing British forces were in close pursuit, they avoided direct engagements.<sup>26</sup> The defensive attitude of the pursuing British forces led the German side to speculate that the enemy might possibly be interested in Army Group E remaining in northern Greece and southern Macedonia. As a result, the high command in Mitrovica appears to have come up with the fantastical idea of entering into negotiations with the British, with a view to their 'taking over the task of supplying Army Group E, in return for which [...] Army Group E would remain on Greece's northern border to defend it against the Soviet and Bulgarian forces'.<sup>27</sup> However, there were compelling reasons for the British attitude. In the first place, the roads were in such bad condition that the British 2nd Parachute Light Infantry Brigade could only follow the retreating LXXXI Corps<sup>28</sup> slowly, and secondly, some of the British forces had to be regrouped in connection with Operation MANNA. The reality was that the units deployed in Greece had been withdrawn for that purpose from the Italian theatre of war, where they were now urgently needed.<sup>29</sup> Some British troops remained in Greece, with the task of ensuring that the country remained stable if the Papandreu government managed to re-establish a functioning administration.<sup>30</sup> Despite the Allied air raids, which seriously hampered the withdrawal from Greece, the rearguard of LXXXI Army Corps reached the Larissa area five days later, and finally left the city on 25 October.

The situation proved much more problematic west of the Pindus mountains, where General Napoleon Zervas' Greek nationalist resistance group fiercely engaged the retreating forces of XXII Mountain Corps.<sup>31</sup> The combined forces of 104th Light Infantry Division and the fortress brigades in the Ioánnina area were nevertheless able to withdraw via Bitola without serious losses and reach Veles, where they joined up with the LXVIII Army Corps units that were retreating northwards. By the middle of October, XXII Mountain Corps had already left Greece and was fighting in southern Yugoslavia, where it was defending the southern border of Kosovo. At this point, Army Group E operations were already commanded from Mitrovica, where the army group HQ had moved on 14 October.<sup>32</sup> The last German troops abandoned Thessaloníki on 31 October

and crossed the Greek–Macedonian border on 2 November 1944. Only the Greek partisans had hampered the German withdrawal from time to time, and by the end of October 1944 Army Group E had lost very few men as a result of their attacks.<sup>33</sup> Crossing the border to Macedonia marked the end of German occupational rule in Greece, which had lasted for more than three years.<sup>34</sup>

## 2. THE WITHDRAWAL BATTLES IN MACEDONIA

If Löhr hoped that the army group's withdrawal in Macedonia too would be rapid and relatively trouble-free, then he underestimated the Bulgarians, who seriously hampered the German retreat in eastern Macedonia. In mid-October, while Löhr's rearguard was still in Greece, Tolbukhin launched Operation BELGRADE, an offensive by 3rd Ukrainian Front and units of the Yugoslav People's Liberation Army with its point of concentration directed towards Belgrade. The main attack was supported by the Bulgarian 2nd Army with a flanking thrust against Niš, aimed at capturing this major traffic node and preventing the German troops' withdrawal from the south of the Balkan Peninsula.<sup>35</sup> At first Tito refused absolutely to have Bulgarian troops participating in operations on Yugoslav territory, and he agreed only under pressure from Stalin.<sup>36</sup> With the fall of Belgrade and the loss of Niš in the second half of October, Army Group E's withdrawal route was permanently blocked in two places. The German troops in southern Macedonia and northern Greece were effectively cut off. The only remaining way out was the road from Skopje to Sarajevo, via Mitrovica and Kraljevo, and Tito's units posed a threat to transport routes in Kosovo and eastern Bosnia.

The successes in the second half of October prompted the Soviet–Bulgarian enemy to continue his offensives on a massive scale. While the Bulgarian 1st, 2nd, and 4th Armies operated in the Skopje area, a Soviet corps launched an attack to the north, aimed at capturing the weakly defended city of Kraljevo. The loss of Belgrade and Niš had deprived the Commander-in-Chief South-East of his direct link with Army Group E, so Weichs transferred the conduct of operations in Macedonia and southern Serbia to Löhr, placing the Müller Group<sup>37</sup> under the command of Army Group E.<sup>38</sup> The only way the army group could save itself in this critical situation was to hold the key positions in Kraljevo and Skopje until the last German units had passed them. Löhr's first step was to strengthen the defence of Kraljevo by flying in the remains of 22nd Infantry Division and Assault Division

<sup>33</sup> A.Gr. E incurred approx. 8,300 losses (1,500 dead, 5,550 wounded, and 1,000 missing) in the period 1 Sept. to 28 Oct. 1944, the majority, i.e. about 6,050 men, as a result of the heavy fighting in Macedonia between 21 and 28 Oct. 1944; BA-MA RW 6/v. 559, fos. 29–35.

'Rhodos' to the endangered region, and bringing parts of 104th and 118th Light Infantry Divisions up to the front at Kraljevo. From 22 October to 2 November a bitter battle was fought for possession of the city, the cornerstone of German defence in southern Serbia. Hitler's reaction, in this critical situation, was to demand that the army group pull out of Macedonia in a series of forced marches<sup>39</sup>—clear evidence that Hitler and the OKW were helpless in the face of the virtually hopeless situation of the army in Greece. In a last desperate effort, the Soviet offensive was halted and the city held. An existential threat had been temporarily averted.<sup>40</sup>

In addition to the Soviet advance in southern Serbia, the Bulgarian forces south and south-west of Niš constituted the main threat to the last German withdrawal route, the road from Skopje to Sarajevo. The point of concentration of the Bulgarian offensive was the traffic node at Skopje. To avoid being cut off again, the high command in Mitrovica deployed parts of 22nd Infantry Division at Skopje, while 11th Luftwaffe Field Division shielded the operational area to the north at Priština. For this defensive operation, in the absence of combat troops, the army group was obliged to rely on fortress troops, Luftwaffe march battalions, and naval companies. In the course of the fighting a crisis arose at Priština at the beginning of November, when the remains of 11th Luftwaffe Field Division gave way under the massive Bulgarian assault. The army group nevertheless managed to establish a new blocking line and restabilize the defence front, enabling the German position at Skopje, essential to the evacuation of Macedonia, to be held. The rearguard of 41st Fortress Division abandoned Veles on 11 November, and the

hard-fought-over city of Skopje three days later. The last German units left Macedonian territory on 16 November.<sup>41</sup>

At the end of October, in view of the critical situation at Kraljevo and Skopje, Löhr had already deployed a combat group to open up a march route through the Sandžak, while the Müller Group attempted a breakthrough in the direction of

41 KTR OKW iv/1 726

Višegrad at the beginning of November. Despite heavy fighting with units of the Yugoslav People's Liberation Army, both formations managed to reach the Višegrad area by 11 November, thus restoring the link with Second Armoured Army and the Commander-in-Chief South-East. The German forces' withdrawal from the southern part of the Balkan Peninsula was now largely complete.<sup>42</sup> All that remained to be done was to get XXI Mountain Corps, which was still in Albania, out of the country, so as to establish a continuous defensive front on the southern border of Croatia.

### 3. XXI MOUNTAIN CORPS' WITHDRAWAL FROM ALBANIA

Italy's capitulation in September 1943 necessitated the establishment of a new political order in Albania. Berlin wanted the country's independence restored. A pro-German national government would pacify the country and the German military presence in Albanian territory would subsequently be reduced to a minimum. Nevertheless, in parallel to the national government of Rexhep Bej Mitrovica, the Germans set up a power structure of their own, of which the main pillar was XXI Mountain Corps, with its two divisions.<sup>43</sup> Although it had some success at first, especially in forcing the Communist-influenced 'National Liberation Movement' to give ground, the experiment did not achieve its intended aim. In the end, the resistance group was so strong that by the autumn of 1944 it had gradually extended the area under its control. As the occupying power's administrative structures gradually collapsed during the summer of 1944, the 'National Liberation Movement' gained the upper hand both militarily and politically.<sup>44</sup>

The military developments in the Serbian and Hungarian theatres, and the consequent inevitable withdrawal of Army Group E, meant that the 21,000-strong XXI Mountain Corps also had to withdraw from Albania. However, this substantial unit had to protect Army Group E's south-western flank until its rearguard had evacuated Greece and Macedonia. The Commander-in-Chief South-East's withdrawal plan had originally been for XXI Corps to move away northwards to Mostar, via Scutari and Nikšić. But by the time the last units of LXXXI Corps reached the Serbian–Macedonian border in the middle of November, the Yugoslav People's Liberation Army was already firmly established in Montenegro and on the Neretva. Thus, the German forces in Albania were 'cut off from [their] natural withdrawal route'.<sup>45</sup> They now had to fight their way north-east through the karst mountains, where Tito's troops were also in control. Starting from Podgorica, XXI Mountain Corps endeavoured, from 20 November, to break through the enemy blocking line at Nikšić, but without success. The Commander-in-Chief South-East therefore

<sup>42</sup> Hnilicka, *Das Ende*, 88–96; Hümmelchen, 'Balkanräumung 1944', 579–81; Gosztony, 'Der Krieg zwischen Bulgarien und Deutschland', 92–4.

<sup>43</sup> XXI Mtn.A.C. consisted of 181st Inf.Div., 297th Inf.Div., and a number of fortress brigades.

<sup>45</sup> KTB OKW, iv/1, 725.

decided to turn the corps north-east at Podgorica—through Kolasin and Bjelopolje to Prijepolje—so as to join up with the units that were coming from Macedonia.<sup>46</sup> However, it took until 29 November for the last units to leave Scutari. The withdrawal from Albania was accompanied by hard and continuous battles with the People's Liberation Army, and the bad weather and disastrous flooding made it even more difficult. In the end, the corps was able to escape encirclement only because the army group HQ 'sent the [...] only active army unit that was left, namely 22nd Infantry Division, through the mountains to meet it'.<sup>47</sup> The breakthrough succeeded after heavy fighting with Tito's units, and XXI Mountain Corps joined with the army group on 18 December.<sup>48</sup>

With the arrival of the last units of Army Group E in the area of the Montenegro–Croatia border in the middle of December, the withdrawal from the southern part of the Balkan peninsula was completed more or less successfully, though with considerable losses.<sup>49</sup> Although partisan activity in Greece, Yugoslavia, and Albania, increasingly intense after the summer of 1944, had made life difficult for the German occupying forces, it was the military disaster in Romania that gave rise to the danger threatening Army Group E. When Romania and Bulgaria changes sides and joined the Allies, the Commander-in-Chief South-East's strategic position deteriorated to such a degree that withdrawal from the Balkans became the only option. Finally, the Soviet–Bulgarian troops cut the major withdrawal routes in southern Serbia and Macedonia. The threatening destruction of Army Group E was avoided only by skilful manoeuvring, the early dismantlement of positions in Greece, and evacuation of the Greek islands. When Army Group E reached southern Croatia in mid-December 1944, it seemed that the danger of destruction had finally been overcome.

## IV. The End of the North African Campaign and the War in Italy, 1943 to 1945

*Gerhard Schreiber*

On 4 November 1942 the German–Italian armoured army under Field Marshal Erwin Rommel suffered a catastrophic defeat at the Egyptian city of El Alamein.<sup>1</sup> But the military leaders and the home front still hoped to become ‘masters of their fate’ once again, despite the turn of events in North Africa.<sup>2</sup>

Four days later, on 8 November, the Allies landed in Morocco and Algeria (Operation TORCH),<sup>3</sup> and the situation came to a dramatic head. The word now, on the German side,<sup>4</sup> was that the war had acquired ‘a new look’ overnight; its enemies were aiming to ‘drive the Axis’ out of North Africa, and ‘regain control of the Mediterranean shipping lanes’—with adverse consequences for its own conduct of naval operations. This strategic threat was recognized in the Wehrmacht high command, but they were unable and unwilling to move the main focus of operations to the Mediterranean.<sup>5</sup>

The Axis powers, at odds in respect of their war aims,<sup>6</sup> responded to TORCH by occupying the rest of France and Corsica and establishing the Tunisian bridgehead.<sup>7</sup> This was something which Berlin and Rome could ill afford, since the ever-widening gap between the demands of the front and the satisfaction of needs was a compelling reason to concentrate their forces. Moreover, two years of desert warfare had

<sup>1</sup> *Germany and the Second World War*, vi. 721–90; Greiselis, *Das Ringen*, 53–72. The following account of the military events from February 1943 to May 1945 is extremely brief, and the author proposes to cover the events in the Italian theatre of war in a detailed monograph. He takes this opportunity to thank Dr Jürgen Förster (Freiburg), Prof. Manfred Messerschmidt (Freiburg), and Lt.-Col. Michael Poppe (Mengerskirchen) for their valuable advice and information on hidden sources. He would also like to thank Dr Klaus A. Maier (Schliengen), Prof. Wolfgang Michalka (Heidelberg), Prof. Klaus-Jürgen Müller (Hamburg), Dr Werner Rahn (Berlin), Dr Hans Umbreit (Freiburg), and Brig.-Gen. (ret.) Winfrid Vogel (Bad Breisig) for their painstaking perusal of the manuscript.

brought insoluble supply problems. Nevertheless, on 19 December 1942 Adolf Hitler, infected by the opportunistic optimism of the Commander-in-Chief South, Field Marshal Albert Kesselring, decided to 'hold North Africa'.<sup>8</sup> Benito Mussolini opened up the practical possibilities for this soon afterwards by instructing Field Marshal Rommel, who had been placed under his command, to move his army to Tunisia.<sup>9</sup> The German and Italian troops had made their way back there by February 1943—fighting all the way, but unable to halt the British 8th Army advancing from Egypt under the command of General Bernard Law Montgomery.

### 1. NORTH AFRICA AND ITALY IN THE STRATEGY OF THE ANTI-HITLER COALITION AND THE AXIS ALLIANCE AT THE BEGINNING OF 1943

'Problems of Victory' was the title Winston S. Churchill gave to the chapter of his memoirs in which he discussed the Allies' situation in November and December 1942. The British prime minister's choice of words was an ironic reference to the differences of opinion between the Americans, British, and Russians—after the victory in North Africa—on the question of military commitment in southern Europe.<sup>10</sup> Talks were needed in this connection,<sup>11</sup> particularly on the question of a second front on the old continent.<sup>12</sup> When and where should they take place? As the Soviet dictator, Joseph V. Stalin was apparently unable to travel on account of the battle raging in and around Stalingrad,<sup>13</sup> only President Franklin D. Roosevelt and Prime Minister Churchill attended the conference, which was held in Casablanca from 14 to 24 January 1943.<sup>14</sup>

The contradictory ideas which the British and the Americans had at the time about how to proceed in north-western Europe, in the Mediterranean area, and in East Asia were soon resolved.<sup>15</sup> The principal western powers now decided to concentrate on plans for the landing in Sicily, Operation HUSKY, making the Mediterranean area temporarily the main theatre of war. The success of HUSKY would further secure the east–west connection in the Mediterranean and persuade Rome to exit the war. Hitler would then be forced to occupy not only Italy but also the areas occupied by Mussolini's forces in the south of France and the Balkans, and the islands in the eastern Mediterranean. In order to do so, the Germans would have to withdraw substantial land and air forces from north-western Europe and the east, thereby weakening their attack and defence potential in those areas. The Red Army, above all, would benefit from this. On the other hand, the decision to opt for

<sup>15</sup> On the following, see *Grand Strategy*, iv. 239–88.

HUSKY meant that Roosevelt and Churchill were effectively postponing the landing in Normandy until 1944. And that was not in Stalin's interest.

Rome and Tokyo would have liked a similar point of concentration for the operations of the Axis powers, but in that case the war would have ceased to be Hitler's war.<sup>16</sup> The Germans had indeed attempted to deploy their own troops in the Mediterranean area in the summer of 1940, with a view to freeing the Wehrmacht's rear during the eastern campaign by defeating and destroying the British in North Africa and thus persuading them to reach a settlement with Berlin before the attack on the Soviet Union. That attempt had failed, on the one hand, because of Mussolini, who thought he could use his forces to conduct a 'parallel war' exclusively designed to serve Italian interests, and, on the other, because of the Spanish head of state and government, Generalissimo Francisco Franco y Bahamonde, who, it seems, was never really prepared to enter the war on the German side at any point, despite his occasional waverings: from the Spanish point of view, the risk was simply too great.<sup>17</sup> Hitler's strategists accordingly proposed to leave major operations in Africa and the Near East until the battle against Stalin had been won.<sup>18</sup>

German troops were nevertheless stationed in the Balkans from the spring of 1941,<sup>19</sup> and engaged in operations in the North African area from February that year, where an attack on Egypt and even on the Middle East seemed within the possibilities open to the Axis powers.<sup>20</sup> In fact, this all rested on a situational calculation. Germany had been supporting the precarious regime in Rome since the end of 1940—unwillingly but, of course, in its own vested interest, since Europe's southern flank could well be exposed to the enemy if Italian fascism were to collapse. This danger was all the more serious in 1943, when Mussolini's position deteriorated even further as a result of the heavy military setbacks suffered by the Axis partner. The Italians were shaken, in particular, by the loss of Tripoli, which had to be evacuated on 23 January 1943. The dictators therefore attempted to hold Tunisia, in the hope that tactical successes there would help relieve the domestic tension in Italy. A realistic assessment of the situation would have required abandonment of that theatre of war, which was under the Wehrmacht high command (OKW). That never happened. The Axis' conduct of operations in the Mediterranean continued, as before, to resemble a series of contradictory experiments. It was pure propaganda when the Duce spoke of its 'decisive importance' for 'final victory'.<sup>21</sup>

In April 1943 Hitler and Mussolini discussed the strategic situation at Klessheim Castle near Salzburg. A few days earlier, the Italian head of government had

<sup>21</sup> ADAP, Series E, v, doc. 135, 16 Feb. 1943, 229, and doc. 192, 9 Mar. 1943, 377: Mussolini spoke of Tunisia as an 'important factor in the overall strategic plan'. But there was no overall strategic plan.

deliberately declared to the ambassador, Hans Georg von Mackensen, that the Axis was ‘mathematically certain’ to win if the eastern front could be ‘liquidated’.<sup>22</sup> A peace treaty would seem to be the best solution, failing which the question of organizing defence behind an impregnable eastern wall should be considered.<sup>23</sup> However, the German dictator would not hear of it,<sup>24</sup> which, in view of his exchange of letters with Hitler on the eve of the Salzburg ‘shadow play’ in 1943,<sup>25</sup> can hardly have come as a surprise to Mussolini.<sup>26</sup> The Duce then proceeded to indulge, in his talks with the Führer, in dreams of attacking the enemy ‘in the rear, via Spain and Spanish Morocco’, and seizing control ‘of the western Mediterranean’.<sup>27</sup> He was determined, in any case, to defend Tunisia ‘to the last bullet’. On this they were both agreed. Hitler assumed that if, in the bridgehead, the ‘Mareth Line, or at least [...] the Chott Line could be held, and if order could be restored in the convoy system’, his own position in North Africa would be impregnable.<sup>28</sup>

## 2. THE FINALE IN TUNISIA

At the beginning of January 1943 German and Italian diplomats met in Rome at the Chigi palace, the seat of the Italian foreign ministry, for a ‘conference on Tunis’.<sup>29</sup> Policy was discussed again, and there was no lack of subjects connected with the occupying powers’ ongoing wartime routine.<sup>30</sup> Special items were added to the agenda, for example, the fate of the Tunisian Jews,<sup>31</sup> the difficult relations with the French administration,<sup>32</sup> the distrust of Vichy’s resident-general in Tunis, Admiral Jean-Pierre Esteva,<sup>33</sup> the delicate dealings with the Bey of Tunis, Mohammed al Munsif,<sup>34</sup> the uncertainties regarding the assessment of the Arab nationalist leader Habib Bourguiba,<sup>35</sup> and the formation of a German–Arab volunteer unit.<sup>36</sup> These were important individual issues, but the participants in the talks all held that

they were less important than the fact that, 'at the moment, the whole problem of Tunis is primarily a military one',<sup>37</sup> and the problem of supplies was central.

In fact, from the very beginning it was always the case that the North African theatre of war could be adequately supplied only if more Luftwaffe units were transferred from continental Europe to the Mediterranean area. Malta was eliminated as a base for the Royal Air Force (RAF), at least for a time,<sup>38</sup> but from November 1942, when the Tunisian bridgehead too had to be supplied, the supply situation became alarmingly acute. The head of the German naval command in Italy, Vice-Admiral Eberhard Weichold, recommended to Rommel that he permit withdrawal to Tunisia; otherwise it would be impossible to keep the armoured army supplied, and it could well cease to be operational. Rommel himself considered that the battle in Libya and Tunisia was a lost cause anyway,<sup>39</sup> but the authorities in Rome and Berlin refused to believe it. The Führer and the Duce clung to Tunisia, and their hopes were high when their troops established themselves in the bridgehead in February 1943. And indeed they were safe there for a time, but ultimately they were doomed.

Impending operational developments were marked, even more clearly than in previous months, by the Grand Alliance's absolute command of the sea<sup>40</sup> and air,<sup>41</sup> and by the successes of Britain's ULTRA decryption system.<sup>42</sup> Not least on that account, there were early signs of disaster for Army Group Africa (commander-in-chief Field Marshal Rommel), formed on 23 February 1943 and comprising Fifth Armoured Army (Col.-Gen. Hans-Jürgen von Arnim) and the Italian 1st Army (Col.-Gen. Giovanni Messe), formerly the German-Italian Armoured Army.

The Germans and Italians improvised desperately. There was often no room for them on normal transport vessels, so men and military equipment of all kinds were taken to Tunisia by air, and on warships (even U-boats) and small boats. As the last-mentioned could not set out in heavy seas, there were frequent bottlenecks at the front—even without any enemy intervention.

The next development was therefore something of a foregone conclusion. To see the situation in Tunisia for himself, the deputy chief of the Wehrmacht operations staff, Lt.-Gen. Walter Warlimont, visited Rome and Tunis from 5 to 14 February 1943. In his report he identified 'shortage of supplies' as the crucial deficit in the German conduct of operations. The bridgehead needed about 150,000 tonnes of supplies a month, whereas the Comando Supremo was proceeding on the assumption that '80,000 tonnes at most, i.e. half the amount needed, could be provided' every month. Thus, allowing for the 25 per cent 'sinkage rate', 60,000 tonnes would have been a realistic figure.<sup>43</sup> The reality was even more discouraging. According to

the official Italian records, a monthly average of 42,314 tonnes of supplies of all kinds was successfully shipped to Tunisia in 1943.<sup>44</sup> There were also 4,787 Italian and 37,780 German servicemen, of whom 4,126 and 35,336 reached North Africa.

Like Rommel, Warlimont, saw his own position as a 'house of cards'. Furthermore, he thought that professionalism and pugnacity alone would not make up for the shortage of manpower, arms, ammunition, fuel, motor vehicles, materials, and reserves on the long front. In any case, there was good reason to suppose that neither Fifth Armoured Army, facing the British 1st Army in the north, nor the Italian 1st Army, in the 35-kilometre-wide Mareth Line stretching from the sea to the Matmata Hills, would withstand a determined large-scale attack.<sup>45</sup>

Altogether, the lieutenant-general was in favour of evacuating Tunisia, and wanted to inform the Führer of his view. The commander-in-chief of the Luftwaffe, Reich Marshal Hermann Göring, and Field Marshal Kesselring prevented him from doing so. Hitler was all too willing to believe their confident assurances, which they knew to be false. The head of the OKW, Field Marshal Wilhelm Keitel, shared Warlimont's concerns but did not dare make them known to his Führer.<sup>46</sup>

Operation TEBESSA (Algeria), better known as the battle of the Kasserine Pass, is to be seen in this context. The operation was originally intended to serve two purposes. The first was to 'secure the Tebessa area by an attack via Sbeitla-Gafsa', that is, to reach the enemy's rear area. Ideally, if the advance went as far as Bône, or at least Constantine, 120 kilometres south-west of Bône, it would be possible to destroy the Allies' north-western front and compel their commander-in-chief, General Dwight D. Eisenhower, to withdraw the bulk of his forces to Algeria. The second aim was to destroy the enemy positions in south-western Tunisia. The Wehrmacht high command's idea was to prevent the Allies from using Gafsa as a base for operations at Gabes on the east coast so as to separate the two armies. The German-Italian forces would then be regrouped and mustered for an attack on the British 8th Army south-east of the Mareth Line.

On 14 February 1943, with a view to ensuring that Fifth Armoured Army could not be separated from the Italian 1st Army at any time in the foreseeable future, the official Comando Supremo in Tunisia ordered Col.-Gen. von Arnim, with 21st Armoured Division and parts of 10th Armoured Division, to attack the American troops (II US Corps) at Sidi Bou Zid and Sbeitla, and largely destroy them (Operation FRÜHLINGSWIND). A day later, a Rommel combat group, consisting essentially of the German Africa Corps (DAK) and parts of Armoured Division 'Centauro', was to take Gafsa (Operation MORGENLUFT).<sup>47</sup>

The attackers made good progress, helped by the fact that their American adversary had not yet seen any action. Bir el Hafey, Sidi Bou Zid, Hadjeb el Aioun, Pichon, Sbeitla, Gafsa, Feriana, and Thelepte fell in the course of the first few days. Rommel therefore decided, on 18 February, ‘to take the risk and, with all his forces’, attack Tebessa, an important traffic node, supply centre, and airbase. In order to ‘bring about the collapse of the entire British front in Tunis’, he needed—in addition to the DAK combat group already under his command—10th and 21st Armoured Divisions, and ‘adequate provisions’ from Fifth Armoured Army HQ. In this situation it proved particularly irksome that Col.-Gen. von Arnim was ‘not keen’ on Rommel’s proposal.

The field marshal—bold and determined as ever, but not rash—nevertheless did all he could to obtain the Comando Supremo’s permission for his operation.<sup>48</sup> It arrived at 01.30 on 19 February. However, the attack was not to be directed to the north via Tebessa, but to El Kef via Thala and Sbiba. Rommel later described that decision as ‘an appalling and unbelievable piece of shortsightedness’ which ‘caused the whole plan to go awry’. A thrust along that line ‘was far too close to the front and was bound to bring us up against the strong enemy reserves’. That was true enough, but Rommel initially thought his troops might nevertheless ‘destroy the Anglo-American positions’.<sup>49</sup> The attacks were launched that same day, on Sbiba (21st Armoured Division), which the Allies successfully defended, and on the Kasserine Pass (DAK combat group and parts of 10th Armoured Division), where the breakthrough was achieved on 20 February. However, the enemy was able to ward off what was to have been the decisive thrust to Thala, having managed to move reserves up to the front line at the last minute, effectively strengthening his defences.<sup>50</sup>

In view of this military situation, and the simultaneous threat to the southern front from the British 8th Army, Rommel and Kesselring agreed on 22 February that ‘continuation of the Le Kef operation’ had no prospect of success. They therefore considered that it would be ‘advisable’ to ‘gradually wind up’ the operation.<sup>51</sup> But Rommel had not given up. Just before taking ‘overall command in

<sup>49</sup> See, in this connection, Rommel, *Krieg ohne Hass*, 353 ff.; Rommel’s comments on the Comando Supremo’s decision in the daily report for 19 February 1943 were somewhat milder. It reads: ‘The C-in-C considers an advance towards Le Kef to be inadvisable, as it would be too close to the front and would probably come up against the British reserves, whereas an advance on Tebessa would be more effective from a psychological point of view, and would cause immense confusion in the enemy camp.’ BA-MA N 117/74.

<sup>50</sup> Rommel, *Krieg ohne Hass*, 354–61.

<sup>51</sup> ‘Tagesbericht GFM Rommel’, 22 Feb. 1943’, BA-MA N 117/74; see Josef Moll, ‘Ausarbeitung Kriegsschauplatz Nord-Afrika, 15.11.1942–15.5.1943’, written in June 1943, BA-MA N 733/7, 26.

Tunisia', he again felt the urge to 'go on the offensive'—this time towards the south-east, where Montgomery was assembling the British 8th Army facing the Mareth Line.<sup>52</sup>

On 6 March the field marshal launched his last offensive in the North African theatre of war. The major attack on the British positions began at 06.00. This was Operation CAPRI, generally referred to as the battle of Medenine.<sup>53</sup> It soon became clear that there was no chance of success in this battle against a militarily superior enemy, which was, moreover, aware of German intentions thanks to its ULTRA signals decryption system. In short, when the enemy was not taken by surprise, CAPRI was doomed. Rommel broke the operation off,<sup>54</sup> handed the high command over to Col.-Gen. von Arnim on 8 March 1943, and left Tunisia the next day. This step was in no way an attempt to avoid responsibility. The field marshal was convinced that 'for the army group to remain on the African continent any longer' would be tantamount to 'suicide',<sup>55</sup> and this firm conviction was given particular emphasis by the step he took.

For the German–Italian troops, it turned into suicide by instalments, starting on 20 March with the British attack on the Mareth Line.<sup>56</sup> The attack was unsuccessful, and the bulk of the British 8th Army then had to circumvent the defenders in the west and circle round to the east through the Tebaga Gap. It managed to get through the gap and break into the German–Italian defence line south-west of El Hamma. However, the Axis troops, mainly Italian 1st Army units, escaped encirclement and withdrew to the Chott–Akarit line. After Montgomery resumed the offensive on 6 April 1943, they moved back to the Enfidaville line within a few days.

At that point, Army Group Africa—with 999th Africa Division (a probationary unit still en route), 10th Armoured Division, and 21st Armoured Division now placed under its direct command—still consisted of the Italian 1st Army and 5th Armoured Army (see Diagram VI.IV.1).<sup>57</sup>

An unequal battle ensued, in which strong, well-supplied Allied divisions—optimally equipped with tanks, artillery, ammunition, and fuel—faced battle-worn Axis divisions. The latter were no longer receiving any supplies to speak of, and as most of them were short of both fuel and ammunition, they were only partly operational. Moreover, the British and Americans had complete command of the air and sea respectively. Theoretically, they would have been in a position to starve the bridgehead out.

Nevertheless, the Tunisian affair had already taken longer than expected, and was proving to be much more difficult than had been supposed. This was making even Churchill nervous. On 27 February General Harold R. L. G. Alexander, who was Eisenhower's deputy and commander-in-chief of the Allied 18th Army Group at the time, wrote to him: 'Hate to disappoint you, but final victory in North Africa is not just around the corner.'<sup>58</sup>

Then again, the Germans and the Italians too could have put an end to the senseless enterprise. But the generals lacked the necessary courage, preferring to obey insane orders to hold on. Every day counted, according to Hitler and Mussolini and their entourage. In fact, the bridgehead, for which the Allied, German and Italian troops were fighting so fiercely, was shrinking almost by the hour. Tunis and Bizerta fell on 7 May, and deliveries of supplies by sea had to be stopped three days later. The Axis powers' last major formation, the 1st Italian

<sup>58</sup> Churchill, *The Second World War*, iv. 683.

Army under its newly appointed commander-in-chief, Field Marshal Messe, surrendered on 13 May. The previous day the German Africa Corps, led by General Hans Cramer under Messe's overall command, had sent the following radio message: 'Ammunition gone. Arms and equipment destroyed. The DAK has fought on, as ordered, until it could fight no more. The DAK will rise again. Heia Safari!'<sup>59</sup>

Contrary to what this suggests, the campaign in North Africa was by no means a happy hunting expedition, and troops were not its only victims. The British, Americans, and French lost 11,109 dead, 40,782 wounded, and 24,134 missing in Tunisia. The Wehrmacht lost some 3,600 officers there, a loss that weighed particularly heavily.<sup>60</sup> Between 267,000 and 275,000 highly seasoned Italian and German troops were captured. And the Axis alliance also lost about 40,000 dead and wounded.<sup>61</sup> With facts like these in mind, it seems no exaggeration to say that—in purely quantitative terms—Tunisia was a second Stalingrad for the invaders.<sup>62</sup> Altogether, the Allies lost about 220,000 men and the Axis 620,000 in the North African theatre of war.<sup>63</sup>

### 3. THE ATTACK ON 'FORTRESS EUROPE': SICILY 1943

Hitler had predicted in March 1943 that the loss of Tunisia would result in the loss of Italy.<sup>64</sup> But it was only at the beginning of May that the German high command set about doing what they and their opposite numbers in Rome had essentially left undone, namely making the necessary organizational, logistic, infrastructural, and tactical preparations to repel an attack on the Italian mainland, Corsica, Sardinia, Sicily, or the Peloponnese and Dodecanese.<sup>65</sup> This was a difficult task, given the Allied superiority at sea and in the air, and the Axis powers' shortage of transport capacity, air defence, and convoy escort vessels, as well as the deficient loading and unloading facilities in the various ports. To discuss all these matters, the commander-in-chief of the German navy, Grand Admiral Karl Dönitz, spent 12 to 14 May 1943 in Rome. He also discussed with Mussolini the question of where the enemy invasion would take place.

<sup>59</sup> KTB OKW, iii. 465 (12 May 1943); KTB Skl. pt. A, xlv. 266 (14 May 1943), and 201 (10 May 1943), which contains the following quotation from Fifth Armoured Army HQ's final report: 'In loyal fulfilment of their duty, the last remaining Fifth Armoured Army troops send greetings to their homeland and our Führer. Long live Greater Germany.' There must have been an exceptionally large number of convinced National Socialists among the German troops fighting in Africa. Even after the surrender in Tunisia, 'most of them continued for a long time to believe firmly in "final victory" and to express the deepest hatred for anti-fascists', i.e. the 999ers. Quoted in Klausch, *Die 999er*, 120.

The Germans and Italians had failed to reach any agreement on this point by 9 July, and the British naturally did everything they could to encourage this uncertainty. On 30 April they launched Operation MINCEMEAT, an elaborate deception manoeuvre designed to get the enemy to believe that there were to be landings on the Peloponnese and Sardinia. Hitler and his henchmen were completely taken in by it.<sup>66</sup>

As regards the Grand Admiral's talks with the Duce, however, the latter, unlike the Führer, maintained that the strategically important island of Sicily was the most likely target, not Sardinia and the Peloponnese. The occupation of Sicily would finally give the enemy free access to the sea route via the Mediterranean, which—compared with the tonnage required for transport via the considerably longer route round the Cape of Good Hope—would be tantamount to a saving of up to 2 million gross registered tonnes. It was all the more surprising that Mussolini refused Hitler's offer to move five German divisions to Italy, or to form five divisions there. The Duce, who appeared surprisingly optimistic despite his precarious military and internal political position,<sup>67</sup> assured his interlocutor that three divisions would suffice, though he asked, in the same breath, for 'much greater deployment' of the Luftwaffe.<sup>68</sup>

According to the German military attaché in Rome, General Enno von Rintelen, it was Mussolini who was the source of the perceptible 'resistance' to having any more German troops stationed in Italy after the North African disaster. The Italian dictator may have overestimated the fighting strength of his own troops once again, and he probably also wanted to preserve the nation's prestige. There were also practical considerations, since the large number of Wehrmacht troops in the country imposed enormous economic burdens.<sup>69</sup>

Rintelen, who as military attaché also held the post of 'resident German general in the headquarters of the Italian armed forces', had to form three infantry divisions from the 'Tunis reserve' of German troops who would no longer be sent to North Africa. There were just enough men to form two large units. One was 'Division Sardinia', formed as from 12 May. Its staff was referred to as 'Sardinia HQ' until 16 September 1943, and its components were commanded as 90th Armoured Infantry Division from 6 July. The other was 'Division Sicily' (formerly 'Sicily command'), which grew, from 14 May, out of the 'march battalions for Africa' assembled on the island after which it was named. Its name was changed to 15th Armoured Division on 1 July, and to 15th Armoured Infantry Division 14 days later.<sup>70</sup> Until the invasion of Sicily, the other divisions and corp HQs for the defence of Italy came from Army Group D in France.<sup>71</sup>

<sup>71</sup> The transfer of the remnants of Luftwaffe Armoured Division 'Hermann Göring' began on 16 May. It was followed in turn by that of XIV Armoured Corps HQ, 16th Armd.Div., 29th Armd.Inf. Div., Aslt.Brig. 'Reichsführer SS', 3rd Armd.Inf.Div., 26th Armd.Div., and LXXVI Armd.Corps HQ;

As well as increasing the number of German troops in Italy, Hitler was able to strengthen his grip on the planning and conduct of operations in the Mediterranean area by reallocating responsibilities. As also evidenced by Kesselring's service instruction of 23 June, this involved strengthening the position of the Commander-in-Chief South. All army units, SS units, and Luftwaffe units to be deployed in ground operations, the German naval command in Italy, Air Fleet 2, and the German general in the Royal Italian Air Force headquarters were henceforth under his command. Rintelen and the Mediterranean plenipotentiary of the Reich commissioner for shipping were also placed under Kesselring's command, with certain restrictions.<sup>72</sup>

When that service instruction came into force, the German high command had already been preparing, for almost five weeks, to defend Europe's southern flank alone if necessary, but that did not mean that Berlin was looking towards the break-up of the Axis.<sup>73</sup> Washington and London, on the other hand, were hoping that Rome would capitulate as a result of the landing in Sicily.<sup>74</sup>

The planning of the largest landing operation in history, a process that started in January 1943, proved an arduous task. This was mainly due to the complicated Allied command structure in the Mediterranean theatre (there was no unified British and American high command in that area until December 1943), the occasionally inconsistent situation assessments, and the difficult personal relations in some cases.<sup>75</sup>

From an operational point of view, it was necessary to capture efficient harbours and usable airfields as quickly as possible. This was clearly important, because not all parts of Sicily were within the range of fighter aircraft based in Malta, so they would not be able to provide cover for all the troops on the ground. But apart from that, there was no better place for a landing. Not only did the island have a long coastline, which obliged defenders to spread their forces; it also offered a secure link with the supply area of North Africa. The Germans, on the other hand, in planning the defence of Sicily on land and sea, had to take account of the fact that their supply lines were stretched over a long distance and in danger of attack by enemy air and naval forces.

nine fortress battalions, formed in Italy or transferred from the south of France, were brought in, of which 902nd, 905th, 906th, 907th, and 908th Battalions and the staffs of 925th Battalion and the newly established 155th and 200th Fortress Regiments were stationed on Sardinia. 903th, 904th, and possibly 926th Fortress Battalions were earmarked for Sicily. See *Die geheimen Tagesberichte*, vi. 415, 424, 439, 450–1, 458; vii. 5, 19, 43, 51–2, 68, 74–5, 81, 83, 100, 103, 107, 111–12, 132, 177, 200; Schröder, *Italiens Kriegsaustritt*, 120–3; Tessin, *Verbände und Truppen*, xiii. 106, 108–9, 111–14, 131; KTB OKW, iii. 754–6 (6 Jul. 1943); 'Meldungen OB Süd für die Lage am 1.7., 7.7. und 9.7.1943', BA-MA RH 2/647.

<sup>75</sup> See Alexander, *The Alexander Memoirs*, 105–8; Carver, *The War in Italy*, 1–7; Liddell Hart, *History of the Second World War*, 557 ff.

Between 11 and 14 June the Allies occupied the small islands of Pantelleria, Lampedusa, Lampione, and Linosa, in the forefield of their intended landing area. Then, after months of logistic and military preparations and a massive air offensive, Operation HUSKY began at 23.50 on 9 July—with a wholly failed attempt at an airborne landing at Syracuse.<sup>76</sup>

Axis aerial reconnaissance located the enemy landing units at around 16.30 on 9 July. Naval command rightly assumed they were on their way to Sicily, to land in the ‘Syracuse–Cape Passero or Gela–Licata area’.<sup>77</sup> And in fact US 7th Army troops landed in the latter sector at 02.45 on 10 July. The British followed at 04.15, in a sector south-west of Syracuse.

The commander-in-chief of the invasion troops was General Eisenhower. Admiral Andrew Browne Cunningham commanded the naval forces, Air Marshal Arthur William Tedder the air forces, and General Alexander the land forces, that is, 15th Army Group, which then comprised General Montgomery’s 8th Army and General George S. Patton’s US 7th Army.<sup>78</sup>

The invasion force had a total of 2,590 to 3,000 ships and boats at its disposal (including six battleships and two large fleet carriers) and 3,462 combat aircraft, of which 2,510 were reported operational on 10 July. Following the successful, professionally executed landing, there were 1,800 cannon, 600 tanks, 14,000 vehicles, and 181,000 troops on the island. And at the end of the 38-day campaign there were 467,000 or possibly even 478,000 Allied military personnel in Sicily.<sup>79</sup>

While the invasion force initially encountered little resistance on land, the pilots of the Axis powers achieved remarkable successes against the attackers,<sup>80</sup> although the numbers show they were fighting a losing battle. The Italian air force had 930 aircraft on the day of the invasion, 449 of which were considered to be operational. In Air Fleet 2, under Field Marshal Wolfram von Richthofen’s command, 563 of the 932 aircraft were operational.<sup>81</sup>

The naval forces deployed by the Axis powers against the landing were negligible. That applied, without exception, to the Italian heavy units: all they could do off Sicily was simply pointless sacrifice.<sup>82</sup>

<sup>76</sup> On this and the following discussion, see Gundelach, *Die deutsche Luftwaffe*, ii. 584–651; *The Mediterranean and Middle East*, v. 35–184; Santoni, *Le operazioni in Sicilia e in Calabria*, 129–407; Roskill, *The War at Sea*, iii/I. 105–52; Schröder, *Italiens Kriegsaustritt*, 158–76, 258–69. The figures given by the various authors are not compatible. On the implications of the landing in Sicily for German operations on the eastern front, see Part II, Chapter III of the present volume.

Different figures are given by Gundelach, *Die deutsche Luftwaffe*, ii. 605, according to whom Air Fleet 2 had 838 combat aircraft (507 operational) on 10 July 1943, of which 282 (142 operational) were located in Sicily.

<sup>82</sup> Baum and Weichold, *Der Krieg der ‘Achsenmächte’*, 338–41.

Col.-Gen. Alfredo Guzzoni, the commander-in-chief of the Italian 6th Army, was responsible for defending the island, under the direct authority of the Comando Supremo. On 26 June 1943 Lt.-Gen. Fridolin von Senger und Etterlin, the German liaison officer to the Italian 6th Army, had assumed responsibility for the interests of the German troops which were placed under Guzzoni's command for tactical purposes. He acted as 'Wehrmacht commander' of the German forces on the island until 18 July, when General Hans Valentin Hube, the commander of XIV Armoured Corps, took command of all the German units in Sicily.

The German forces in Sicily before the invasion comprised Armoured Division 'Hermann Göring'—reinforced by the OKW before 10 July with the Maucke Infantry Regiment (three battalions), Infantry Battalion 'Reggio' (a march battalion), Construction Battalion 'Messina', a Tiger company (17 tanks), and a heavy GHQ artillery battalion with three batteries—plus 15th Armoured Infantry Division, 22nd Anti-Aircraft Brigade (mot.), and 903rd Fortress Battalion. Once the hostilities began, they were joined by the bulk of 1st Paratroop Division (from 12 July) and 29th Armoured Infantry Division (from 15 July), Battalions I, II, and III of 382nd Armoured Infantry Regiment, 904th Fortress Battalion, the staff of 924th Fortress Regiment, and a fortress battalion (probably 923rd) on which there is no concrete information.<sup>83</sup>

General Guzzoni's 6th Army consisted of two army corps. XII Army Corps had Infantry Divisions 'Aosta' and 'Assietta', 202nd, 207th, and 208th Coastal Divisions, and 136th Infantry Regiment under its command. XVI Army Corps had the Infantry Division 'Napoli', 206th and 213th Coastal Divisions, and XVIII and XIX Coastal Brigades at its disposal. The army reserves comprised eight 'mobile' groups and eight tactical groups, as well as Infantry Division 'Livorno'.

Altogether, there were close on 28,000 German and 175,000 Italian first-line troops in Sicily on 10 July. There were also 57,000 supply troops, bringing the total military personnel to 260,000. By the end of the campaign the German trench strength had increased to 62,000, and the Italian trench strength to 191,931 men. Including the 65,000 members of the supply services, 5,000 of whom were German, the Axis powers had up to 320,000 men at their disposal.<sup>84</sup>

Three days after the landing, Kesselring reported to the OKW that most of the Italian forces had fallen by the wayside, with the result that the situation was now perilously acute. The 'burden of battle' rested entirely on the shoulders of the German army, which was operating without the necessary air support because the strength of the 'Luftwaffe close-combat units' had been drastically reduced. A 'counter-attack' was no longer possible. In Kesselring's words: 'The island cannot be held with the present German forces alone.'

<sup>84</sup> Santoni, *Le operazioni in Sicilia e in Calabria*, 85, 400, 499.

The field marshal dithered over increasing the troop contingent, as military logic required, on the assumption that ‘the reinforcement of German troops in Sicily’ would ‘probably’ be unable to keep pace with that of Allied troops. On the other hand, there was no question of evacuation. In the end, Kesselring nevertheless preferred to send more troops to the island in order to gain time, as it were. According to the field marshal, the ‘rapid loss’ of the island was likely to have ‘serious repercussions on the Italians’ powers of resistance’. That may well have been so, but what was the *slow loss* of Sicily expected to mean, apart from a few thousand more dead?

From a purely operational point of view, it was a matter of ‘bringing the enemy advance to a standstill at a fall-back position before Etna, roughly on the Santo Stefano–Adrano–Catania line’. The Italians were to help, but Hitler ordered XIV Armoured Corps HQ to take ‘overall command of operations in the Sicilian bridgehead’, ‘discreetly bypassing’ the relevant Italian ‘command posts’.<sup>85</sup> German–Italian relations deteriorated rapidly after this. There were some serious armed incidents, with casualties on both sides. Even so, General Guzzoni—acting on the instructions of the Comando Supremo—handed over ‘command of all German and Italian troops in the combat zone’ to General Hube on 31 July.<sup>86</sup>

With the Axis partners increasingly divided, the US divisions had occupied the whole of western Sicily by 23 July, thanks to the operational proficiency which the units previously deployed in North Africa had very quickly acquired there. They then turned eastwards, operating to the west and north of the boundary between the armies. In the period from 23 July to 17 August 1943 the boundary moved from a point near Pozzallo, via Modica, eastwards past Ragusa and Chiaramonte, west of Caltagirone and Piazza Armerina to Enna, from there to a point between Agira and Nicosia, and in the south from Troina to Randazzo, finally reaching Messina. General Patton’s men were in the city on 17 August. The British, who had been fighting their way north, to the east of the boundary between the armies, followed soon afterwards.

The gate to ‘Fortress Europe’ was open. All the difficulties they had experienced counted for little. It was a triumph all along the line, even if the Allies found Messina empty, which was an annoying setback. In a skilful evacuation operation (LEHRGANG),<sup>87</sup> executed in a professional, though not exactly comradely fashion with regard to their relations with the Italians, the Germans had successfully transported 39,569 Wehrmacht troops and their weapons, 9,065 motor vehicles, 27 tanks, 94 cannon, 1,100 tonnes of ammunition, and 970 tonnes of petrol to the mainland between 11 and 17 August 1943. Between 3 and 17 August 62,000 Italians had also reached the mainland safely.

<sup>85</sup> On this, see *KTB OKW*, iii. 776–9 (13 Jul. 1943); Warlimont, *Im Hauptquartier*, 350 ff. The quotations are from *KTB OKW*.

<sup>86</sup> Frido von Senger und Etterlin, ‘Der Kampf um Sizilien’, n.p., 1951’, BA-MA ZA 1/1321, fos. 51 ff.

<sup>87</sup> Schröder, *Italiens Kriegsaustritt*, 263.

Human losses in the fighting on the island were as follows: 4,678 German, 4,325 Italian, 2,721 British, and 2,811 American troops died, that is, about 237 Axis troops and 146 Allied troops a day. The wounded numbered 13,500 Germans, 32,500 Italians, 7,939 British, and 6,470 Americans, and a further 9,892 American and 11,590 British troops caught malaria in Sicily, a disease that was often fatal at the time; 4,583 Germans and 40,655 Italians were reported missing, and 5,532 members of the Wehrmacht and 116,681 members of the Italian armed forces were taken prisoner.<sup>88</sup>

#### 4. ITALY'S EXIT FROM THE WAR

Since November 1942 there had been a danger that Rome might exit the war. The prospect was a veritable nightmare for Hitler. It is true that, in the course of a two-hour-long situation briefing on 15 May 1943, he said he would not be averse to a neutral Italy in the 'present situation', but he immediately took that back. Italy, he asserted, 'would be unable to remain neutral but would go over to the enemy, either of its own free will or under pressure'. Hitler prepared his high command for that contingency, and counter-measures were planned. At the same time, however, the National Socialist regime continued to give its Axis partner extensive military and material support. Berlin was thus proceeding along two tracks. In fact, draft directives for two operations, code-named ALARICH and KONSTANTIN, were already on the table on 21 May. The first of these concerned Italy, its islands, Corsica, and the Italian-occupied areas in the south of France, while the second concerned the Balkan states and islands in the eastern Mediterranean that were occupied by Italy. The intention was to occupy the territories in question and disarm the Italian forces, and when Operation HUSKY destabilized Mussolini's regime, Hitler was forced to act. The dictators met on 19 July in Feltre, a small town in the province of Belluno in northern Italy.<sup>89</sup> The Führer had two reasons for arranging the meeting. On the one hand, he wanted to find out whether the Italians were really able to hold out, and on the other, he intended to persuade them to increase their military commitment.<sup>90</sup>

As the Italians saw it, however, the Germans lacked commitment with regard to defence of the Mediterranean region. In mid-July 1943 Rome's ambassador in Berlin, Dino Alfieri, suggested to Hitler that the latter's only concern was 'to prevent any attack on Reich territory for as long as possible'. The 'occupied or

<sup>88</sup> On this, see Santoni, *Le operazioni in Sicilia e in Calabria*, 400–1; *World War II in Europe*, 1679; Clodfelter, *Warfare and Armed Conflicts*, 844.

<sup>89</sup> On the situation conference of 15 May 1943, see the handwritten letter of that date from Captain Wolf Junge, OKW/WFS/L Op M, to the commander-in-chief of the navy, referred to in Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich*, 39; on what follows, see ibid., 42–3. The problem of a 'separate peace' is discussed by Aga Rossi, *Una nazione*, 37–42, who argues that it would have been out of the question in the period between mid-1942 and the fall of Mussolini; see also Ciano, *Diario*, 690 ff. (19–25 Jan. 1943).

<sup>90</sup> Plehwe, *Schicksalstunden*, 62–3.

allied states on its borders' were of interest to the Führer solely and exclusively 'as bastions of Fortress Germany'.<sup>91</sup>

A Comando Supremo memorandum dating from that time, which is unsigned but must have come from Col.-Gen. Vittorio Ambrosio, opens with the ominous words: 'Sicily's fate must, sooner or later, be regarded as sealed.' And it closes with the observation that the Germans:

cannot convince us that the Axis still has a chance of winning while the war in Russia is still going on, if steps are not taken to prevent the formation of a second front in Europe. If this cannot be prevented, it would be incumbent on the highest political authorities to consider whether it would not be advisable and indeed essential to spare the country from further suffering and ruin, and to terminate the struggle by anticipation, because the end result would undoubtedly be even worse in one or more years' time.<sup>92</sup>

This was a clear formulation of the key motive for Italy's exit from the war, dictated by reasons of state.

The political and military authorities had furnished Mussolini with arguments for exiting the war. According to the urgent demand presented by Ambrosio, and supported by Alfieri and the under-secretary of state in the foreign ministry, Giuseppe Bastianini, the country should end hostilities within 14 days.<sup>93</sup>

But in direct confrontation with the Führer, the Duce once again behaved lamentably. His attendant staff were appalled. Hitler, for his part, apparently left Feltre with renewed confidence in Mussolini's staying power. He even issued an order—never carried out on account of the events of 25 July—cancelling his earlier orders for ALARICH and KONSTANTIN. Furthermore, Field Marshal Rommel was no longer to be in overall command in Italy, but was to 'take over command in Greece and the islands'.<sup>94</sup>

Back in Rome, Mussolini engaged in some damage-limitation exercises, first with King Victor Emmanuel III, who, since the middle of May, had not ruled out separating the Italian forces from the German forces.<sup>95</sup> The Duce assured the sovereign that he would sever his links with Germany by 15 September.<sup>96</sup> But as ever, on the aforesaid 25 July 1943, the solution came at a stroke, in the form of the deposition of the Duce—carried out at the initiative of a group of officers and the Crown, and condoned by the fascist executive body, the Grand Council of Fascism. Shortly afterwards, Mussolini was arrested. And so, from 17.20 that same day,

<sup>96</sup> Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich*, 43–4.

fascist rule in Italy was a thing of the past.<sup>97</sup> The new head of government was an old acquaintance, Marshal Pietro Badoglio. There are indications that the fall of Mussolini had crucial repercussions for the fate of the Nazi regime itself, since the turnaround in Italy removed the basis for the plans of the German resistance, which were well advanced at the end of July 1943. It meant that 'all the troops they had hoped to use in order to seize power left Berlin and the surrounding area [heading south] in the first few days of August'.<sup>98</sup>

As for Italian fascism, its time was up, and to quote ambassador Hans Georg von Mackensen, it 'quietly vanished from the scene'.<sup>99</sup> Hitler reacted to events in Italy with primitive verbal abuse, directed at the Vatican in particular, but he nevertheless attempted to return the 'Blackshirts' to power by means of Operation EICHE, the successful liberation of the 'ex-Duce', on 12 September 1943, and Operation SCHWARZ (also known as Operation STUDENT), that is, a violent *coup d'état*. The Italians took defensive measures, so the coup was never carried through. Nevertheless, by planning an unsuccessful coup against the leaders of what was still an allied country, Hitler established 'treachery, German style'<sup>100</sup> as a historical fact. There was no other 'treachery' in the south. In fact, the Badoglio government only began armistice negotiations with the Allies on 12 August 1943, after putting out feelers that were in no way binding.<sup>101</sup> After 26 July the Germans were no longer entitled to speak of 'treachery', irrespective of whether the Italian exit from the war was conducted in secret or not.<sup>102</sup>

After El Alamein in November 1942, Stalingrad in January 1943, Tunisia and the loss of the U-boat war in May 1943, most Germans were depressed by the news from Italy, whereas, in Italy itself, people were buoyed up for a short time by the hope that the end of fascism also meant the end of the war. That hope faded when Badoglio proclaimed, in an address to the Italians: 'The war continues'.<sup>103</sup> The watchword for the home front was 'discipline, calm, and verbal restraint'.<sup>104</sup>

The ensuing political developments were marked, until 8 September 1943, by the extraordinarily complex process of dissolving the Axis alliance—a process in which distrust was the prime factor—and by the laborious rapprochement between

the Allies and the kingdom of Italy in the context of Grand Alliance strategy.<sup>105</sup> While all this was going on, the Axis partners continued to discuss joint defence tactics. Talks at the highest level took place on 6 August in Tarvisio, and for the last time, on 15 August in Casalecchio near Bologna, where the Italians learned, to their displeasure, that Rommel was to be commander-in-chief of Army Group B in northern Italy.<sup>106</sup>

Moreover, the Comando Supremo and the army general staff assumed that the German government was primarily interested in continuing to exploit the economically important Padan Plain.<sup>107</sup> From their point of view, Berlin clearly regarded the land south of the Apennines as a forefield for military operations, and was indifferent to Italy's vital concerns. There was distrust on both sides, since for their part the German authorities suspected that Rome wanted to move the Wehrmacht units so as to prevent them, first of all, from withdrawing northwards when the country capitulated, and later to hand them over to the Allies.<sup>108</sup>

In these circumstances, the rupture of the Berlin–Rome Axis was foreseeable. It came to pass when, on 8 September, the Allies published the conditions of armistice, or 'short terms', signed five days earlier at Cassibile in Sicily. The short terms consisted of twelve articles dealing essentially with the termination of hostilities. The conditions for Italy's complete surrender (the Instrument of Surrender, or 'Long Terms') were delivered later.<sup>109</sup> The Instrument of Surrender was a document containing 44 articles, including the Allies' demand that Italy surrender unconditionally and that Mussolini be handed over to them.<sup>110</sup> On 29 September, however, when Eisenhower and Badoglio signed the Italian unconditional surrender in Malta on board the British battleship *Nelson*,<sup>111</sup> Mussolini was already head of state and government in a puppet state at Hitler's grace and favour.<sup>112</sup>

In the meantime, the Wehrmacht had been preparing itself systematically for Operation ACHSE—the code-name, since 1 August 1943, for the counter-measures to be taken in the event of Italy's exit from the war—and, in particular, for the transfer of numerous units to Italy, the south of France, and the Balkans.<sup>113</sup> An

order of 30 August, prepared for that eventuality, contained instructions for the occupation of all territories under Italian control, the disarmament of the royal forces, the return of the German troops stationed in southern Italy and Sardinia, the execution of 'destruction measures' 'as in enemy territory', the control of the Apennine passes and 'all mountain crossings', and the 'movement of [Army Group B] security forces to a line east of Elba–Perugia–Porto Civitanova, to join up with the forces of Commander-in-Chief South'.<sup>114</sup>

Army Group B (with headquarters at Lake Garda) was to be responsible for implementing the counter-measures in northern Italy. For that purpose, Field Marshal Rommel had at his disposal four army corps, with eight divisions:

- Withöft Corps HQ: 44th and 71st Infantry Divisions, and Brigade 'Doebla';
- LXXXVII Army Corps HQ: 76th and 94th Infantry Divisions;
- II SS Armoured Corps: SS Armoured Infantry Division 'Leibstandarte Adolf Hitler' and 24th Armoured Division;
- LI Mountain Army Corps (en route): 65th and 305th Infantry Divisions.

The forces to be disarmed on the Italian side were:

8th Army (headquarters in Padua), comprising:

- XXIII Army Corps (Venezia Giulia area): Infantry Division 'Sforzesca';
- XXIV Army Corps (Veneto): Infantry Division 'Torino' and Alpine Division 'Julia';
- XXXV Army Corps (South Tyrol): Alpine Divisions 'Cuneense' and 'Tridentina'.

Infantry Division 'Cosseria' and 3rd Bersaglieri Regiment were in Lombardy, 3rd Motorized Division was stationed in Emilia Romagna;

5th Army (headquarters in Viterbo):

- II Army Corps (Tuscany): Infantry Division 'Ravenna', 215th and 216th Coastal Divisions;
- XVI Army Corps (Liguria): Infantry Division 'Rovigo' and Alpine Division 'Alpi Graie';

and 4th Army (headquarters in Sospel):

- I Army Corps: 223rd and 224th Coastal Divisions;
- XII Army Corps: Infantry Division 'Taro', Alpine Division 'Pusteria', and 2nd Motorized Division;
- XV Army Corps: 201st Coastal Division.

<sup>114</sup> KTB OKW, iii. 1026–9 (29 Aug. 1943). On developments to the south-east that are not covered here, including the disarming of Italian forces in that area, see Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich*, 139–207; see also Part VI, Chapter II of the present volume.

The bulk of the Italian 4th Army was being moved back to Italy from the south of France at the time, so the task of disarming it fell not only to Army Group B but also to Army Group D, Nineteenth Army (Armoured Infantry Division ‘Feldherrnhalle’, 356th and 715th Infantry Divisions, 157th Reserve Division, and parts of 2nd Air Division), which was responsible for the south-of-France area.

Field Marshal Kesselring (headquarters in Frascati) was responsible for implementing Operation ACHSE orders in southern and central Italy. The boundary between the area under his command and that of the commander-in-chief of Army Group B was the Pisa–Arezzo–Ancona line. In other words, the German troops deployed south of that line, and on the islands off the Italian coast, were under Kesselring’s command. The order to disarm also applied to the Commander-in-Chief South. However, the evacuation of his own troops from Sardinia to Corsica, where Assault Brigade ‘Reichsführer SS’ was assembled, took priority. The most urgent task appeared to be to move Tenth Army, reconstituted on 22 August, from southern Italy back towards the capital. That was another reason why the Germans wanted to take Rome, a task which Field Marshal Kesselring assigned to XI Air Corps (General Kurt Student) with 2nd Paratroop Division and 3rd Armoured Infantry Division.<sup>115</sup>

The Italian forces assigned to defence of the capital had been under the direct command of the Army General Staff since 5 September. They consisted of the following units:

- Corpo d’Armata motocorazzato (an armoured corps, referred to as ‘mot. A.C.’ in the German sources): Armoured Divisions ‘Centauro’ and ‘Ariete’, Motorized Infantry Division ‘Piave’, and Infantry Division ‘Granatieri di Sardegna’;
- XVII Army Corps: Motorized Infantry Division ‘Piacenza’, Infantry Divisions ‘Re’ and ‘Lupi di Toscana’ (both en route), 220th and 221st Coastal Divisions;
- Corpo d’Armata di Roma (Rome Army Corps): Infantry Division ‘Sassari’, Division ‘Podgora’ (Carabinieri Reali), and an armoured infantry regiment.

The Germans prepared for armed clashes with the Italians in the course of the withdrawal from southern Italy. This applied to:

- XIV Armoured Corps: Luftwaffe Armoured Division ‘Hermann Göring’, 16th Armoured Division, 15th Armoured Infantry Division, and parts of 1st Paratroop Division; and also to:
- LXXVI Armoured Corps: 26th Armoured Division, 29th Armoured Infantry Division, and the bulk of 1st Paratroop Division.

Tenth Army was—theoretically—under threat from the Italian 7th Army (headquarters in Potenza), comprising:

- IX Army Corps: Infantry Divisions ‘Piceno’ and ‘Legnano’, 209th and 210th Coastal Divisions, and XXXI Coastal Brigade;

<sup>115</sup> Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich*, 49–57.

- XIX Army Corps: Infantry Division 'Pasubio', 222nd Coastal Division, and XXXII Coastal Brigade;
- XXXI Army Corps: Infantry Division 'Mantova', 211th, 212th, 214th, and 227th Coastal Divisions.

On Sardinia, 90th Armoured Infantry Division, and the five fortress battalions and three fortress regiment staffs faced the following units:

- XIII Army Corps: Infantry Division 'Sabauda', 203rd and 205th Coastal Divisions, and XXXIII Coastal Brigade;
- XXX Army Corps: Infantry Division 'Calabria', 204th Coastal Division (parts), IV Coastal Brigade, and 19th Coastal Regiment.

As for mobile reserves, 'Military Command Sardinia' had at its disposal Infantry Division 'Bari', Paratroop Division 'Nembo', and an armoured battalion. The Italian forces in Corsica were VII Army Corps troops (Infantry Divisions 'Friuli' and 'Cremona', 225th and 226th Coastal Divisions, an Alpine battalion, and an armoured battalion) which, like 'Military Command Sardinia', were under the direct command of the Army General Staff when Italy exited the war. The occupation force on Elba consisted of 5th Army troops, mainly 108th Coastal Regiment. All in all, there were 6,273 Italian and 80 German troops on the island.<sup>116</sup>

Thus, after 25 July, Berlin made rigorous preparations to take command in the south, while Rome created the conditions that were to turn its withdrawal from the world war into Italy's greatest military and social catastrophe in modern times.<sup>117</sup>

In attempting to explain the disastrous course of events, it is important to bear in mind, first and foremost, that the Italian authorities did not try to prevent the German troops from 'marching in' at all costs, by blocking the border crossing points, for example. It is also a fact that Badoglio's autocratic rule had serious political repercussions within the country, making it impossible to establish any basis of trust between the people and their leaders. One result of this state of affairs was the extreme secrecy surrounding the preparations for the armistice, which meant that the troops were not prepared, either militarily or psychologically, for withdrawal from the war on 8 September. Fatal technical mistakes were also made; for example, orders which, for no logical reason, forbade use of the element of surprise. The Italian forces were permitted only to react to German aggression.

This all had fateful consequences. But the two main reasons why armed resistance collapsed so quickly were the general and ever-increasing war-weariness of the Italian troops and the fact that, in the crucial phase of 9 to 11 September, they were operating with practically no contact with the highest authorities. The king and his family, the government, the head of the Comando Supremo, the chief of the army general staff, and other highly placed dignitaries had left Rome early in the morning

<sup>116</sup> On the relative strength of the forces, see *ibid.* 101–8, 133–4; Torsiello, *Le operazioni delle unità italiane*, 52–60 and 196–7, n. 46; *Die geheimen Tagesberichte*, viii. 563 (5 Sept. 1943).

<sup>117</sup> See Rochat and Massobrio, *Breve storia dell'esercito*, 299.

of 9 September, travelling first to Pescara and from there, by ship, to Brindisi, where Victor Emmanuel III and the head of government, the Comando Supremo, and the general staffs of the three military services established themselves on 10 September in the afternoon.<sup>118</sup> And from there, on the following day, the order was issued that the Germans were to be treated as enemies. The official declaration of war, never acknowledged by the Nazi regime, was dated 13 October 1943.<sup>119</sup>

In this connection, historians have repeatedly argued that the king's flight was necessary in order to preserve the continuity of the state. There is little to be said against that view. However, it in no way diminishes responsibility for the failure to prepare properly for withdrawal from the war. This applies especially to generals and admirals who unnecessarily left their men in the lurch and betrayed them when they found themselves, unprepared, facing armed clashes with units of the Wehrmacht.<sup>120</sup>

In September the Allies had achieved their aim, and the central problem of their strategy in the Mediterranean area after Casablanca, that is, Italy's exit from the war, had been solved. An important contributory factor was the success of Operation HUSKY, which encouraged the British and Americans to invade the Italian mainland (Operation PRICELESS). Specifically, they planned landings in Calabria (Operation BAYTOWN) and the Gulf of Salerno (Operation AVALANCHE).

This raises the question why the Allies did not decide to invade further north, rather than in the Gulf of Salerno. Contrary to a widespread assumption, everything required for a landing further north could have been made available. What carried most weight in the decision to land at Salerno was the fact that the stony beaches north of Naples appeared unsuitable for a landing. But above all, further north the Americans and British would have been able to deploy only carrier-based aircraft, and they thought that was too risky. Salerno, on the other hand, was still within range of the fighters stationed in Sicily, and the beaches of the bay were good for landing purposes. The drawback was that the defenders had a clear view of that whole stretch of the coast. The fact that this disadvantage did not dissuade the Allies from staging the invasion in the Gulf of Salerno was, apart from the question of air support, mainly because the area promised to provide a stable base for the attack on Naples and a good starting point for an operation to encircle the German units located in Calabria.

On 24 August, while the armistice between the Italians and the Allies was still in the making, Eisenhower presented the plans for the landing prepared by his staff in Algiers to the Combined Chiefs of Staff. In doing so, he did not conceal the fact that he had reservations about Operation AVALANCHE. He considered that the forces available were not strong enough, and the build-up of Allied forces after the landings would probably be a slow process. In addition, there were doubts

<sup>118</sup> Badoglio, *Italy*, 76–86; Roatta, *Otto milioni di baionette*, 337; Aga Rossi, *Una nazione*, 113–21; Garland and Smyth, *Sicily*, 513–19.

<sup>119</sup> ADAP, Series E, vii, doc. 42, 14 Oct. 1943, 78.

<sup>120</sup> On the initiation of the armistice, see Garland and Smyth, *Sicily*, 436–509; Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich*, 79–92; Torsiello, *Le operazioni delle unità italiane*, 34–48.

concerning the possibilities for rendering the harbours serviceable, and a large proportion of the troops had seen very little action.

Alexander, the commander-in-chief of the Allied 15th Army Group, took a very similar view. Possible remedies were considered. But just a few days later, on 28 August, Eisenhower suggested that the risks attaching to Operation AVALANCHE would be greatly reduced if Italy could be persuaded to give its active, or at least passive, support.<sup>121</sup> Both forms of cooperation had already been mentioned, as possibilities to be pursued, in the guidelines that Roosevelt and Churchill had given General Eisenhower on 18 August, on his way to negotiations with Badoglio's negotiator, Maj.-Gen. Giuseppe Castellano.<sup>122</sup> So Eisenhower's suggestion was aimed at securing a binding commitment. It should be noted, in this connection, that Castellano had mentioned the possibility of changing sides during the armistice talks on 15 August. He had not been authorized to do so, even indirectly, and that created problems.<sup>123</sup>

For the rest, Eisenhower's professional diplomacy, with substantial military backup, had indeed brought about the armistice of 3 September, but the attempt to coordinate the Allied and the Italian plans for withdrawal from the war failed, in a bewildering mixture of deceit, delusion, misunderstanding, incompetence, cowardice, dilettantism, and irresolution.<sup>124</sup>

The whole thing became a tragicomedy when, early in the morning of 8 September, the American commander-in-chief received a telegram from Badoglio asking him (less than 24 hours before Operation AVALANCHE was due to begin) not to announce the armistice because the situation had supposedly changed dramatically. Eisenhower refused. In this connection, he was assured, in a message from President Roosevelt and the British prime minister, Churchill, late that afternoon, that 'no consideration, repeat no consideration, need be given to the embarrassment it [i.e. announcement of the armistice] might cause the Italian Government'.<sup>125</sup>

At 18.30 GMT, Eisenhower, speaking in his capacity as commander-in-chief of the Allied forces, announced on Radio Algiers that the Italian armed forces had surrendered unconditionally, whereupon he had granted an armistice which Rome had accepted without reservations. He further declared that all Italians 'who now act to help eject the German aggressor from Italian soil will have the assistance and support of the United Nations'. Ten minutes later, Rome having said nothing in the meantime, Radio Algiers broadcast the announcement agreed between Badoglio and the Allies.

The Germans were officially informed by the foreign minister, Raffaele Guariglia, who summoned the ambassador, Rudolf Rahn, to his office shortly before 17.00 hours, so that he could put him in the picture. The German spoke of betrayal, the

<sup>125</sup> *Grand Strategy*, iv. 532.

Italian would not have it, and they parted without shaking hands.<sup>126</sup> Hitler himself received a telegram from the Italian head of government in which the latter stated quite correctly: 'Italy no longer has the strength to resist.'<sup>127</sup>

This merely served to bring the hatred and malice of the Germans down on Badoglio's head. At about 20.00 on 8 September 1943, after the code-name ACHSE had been transmitted, over 600,000 members of the German army, navy, Luftwaffe, SS, and police set about disarming the Italian troops in Italy, the south of France, and the Balkans—around 3,488,000 in all in the summer of 1943.<sup>128</sup>

From the outset, the German counter-measures, originally planned as a pragmatic reaction to the constraints imposed by Italy's exit from the war, turned into a murderous act of vengeance, marked by resentment and racism. Criminal orders issued by Hitler and the OKW on 10, 12, and 18 September, and measures taken by German commanders in breach of international law, were intended as state legitimisation of reprehensible behaviour based on the principle that right is what is advantageous for the German people. All in all, about 7,000, possibly even as many as 12,200 officers, NCOs, and men died, not counting the 13,300 or so who lost their lives—often because there was no life-saving equipment—while they were being taken off the islands.<sup>129</sup>

About 1,007,000 men were disarmed. The rest apparently vanished without a trace. Those who were taken into custody were classified as military internees, on the basis of a so-called Führer order of 15 September 1943. It is still not clear why this classification was chosen, but the results are very clear: their captors could do whatever they liked with the Italian prisoners, most of whom offered unarmed resistance by refusing to work, because, having been thus labelled, they did not have the status of prisoners of war and were consequently not protected by the Geneva Convention of 27 July 1929. On average, 523,000 of them toiled away as military slaves in the German war economy, with no rights, hungry, weak, and—with little medical care—extremely prone to illness. In August 1944, as a political gesture to help the Duce on the home front, Hitler ordered a change of status to civilian workers.<sup>130</sup>

The disarmament operation as such was completed in Italy itself by September 1943, but it lasted somewhat longer in the Balkans and the islands in the eastern Mediterranean. The Germans often had an easy job, although not always. There was, for example, heroic resistance on Cephalonia, in Naples, Barletta, and Monterotondo, and at Mont Cenis.<sup>131</sup>

<sup>126</sup> ADAP, Series E, vi, doc. 290, 8 Sept. 1943, 501; Rahn, *Ruheloses Leben*, 229–30.

<sup>130</sup> Hammermann, *Zwangarbeit*, 73–93; Schreiber, 'Die italienischen Militärinternierten—politische, humane und rassenideologische Gesichtspunkte'. On resistance by military internees, see esp. Natta, *L'altra Resistenza*, *passim*.

<sup>131</sup> Schreiber, 'Die italienischen Militärinternierten', 109–38, 147–207.

The successful conduct of Operation ACHSE can be described, with sarcasm, as the Wehrmacht's final victory. The army, the Luftwaffe, and the navy acquired an enormous amount of loot, even though the bulk of the Italian fleet had managed to escape to Malta and ports in the Balearic islands.<sup>132</sup> The most important acquisition was the men and women who, as deportees and military internees, were employed as forced labour in the factories and freed Germans for deployment at the front. The material gains were also considerable:<sup>133</sup> aircraft, battleships and merchant ships, raw materials, all sorts of equipment, medical supplies, fuel, tents, camouflage netting, horses, clothing, blankets, food, and wine in large quantities. And, by 31 December 1943, the following weapons and vehicles had been seized: 977 tanks, armoured reconnaissance vehicles, and assault guns, 5,568 cannon, 8,736 grenade launchers, 1,173 anti-tank cannon, 1,581 anti-aircraft cannon, 179 anti-tank rifles, 39,007 machine guns, 13,906 sub-machine guns, 1,285,871 rifles, and 16,236 pistols, as well as 762 traction vehicles, 13,128 heavy goods vehicles, 2,422 motor cars, and 320 other vehicles.

The disarmament process, which included the immediate enrolment of volunteers and paramilitary auxiliaries in the Wehrmacht and SS, was accompanied by the organization of German occupational rule in Italy and of relations with Mussolini's satellite state—starting with the 'Führer order on the appointment of a Greater German Reich plenipotentiary in Italy and the structure of Italian territory occupied on 10 September 1943'.<sup>134</sup> As has been concluded succinctly: 'For the most part, Italian sovereignty amounted to no more than administrative autonomy under German supervision.'<sup>135</sup> In effect, the Duce's role was reduced to that of the Führer's stooge in facilitating German exploitation of the country for the war effort.

The essential nature of the Nazi occupation in the Apennine peninsula, and of German–Italian relations, is shown concretely by the fact that, from September 1943 to May 1945, a daily average of 160 men, women, and children, of all ages,

<sup>132</sup> Ibid. 214–30.

<sup>133</sup> Ibid. 214–21; Schröder, *Italiens Kriegsaustritt*, 302–13.

<sup>134</sup> ADAP, Series E, vi, doc. 311, 11 Sept. 1943, 533–5. With regard to the formation and structure of the occupation regime, attention should be paid in particular to the role and responsibilities of the following: the Greater German Reich plenipotentiary in Italy (senior envoy Rahn, from 5 November 1943 German ambassador in Fasano); the special adviser on police affairs with the Italian Fascist National Government and senior SS and police leader (SS-Obergruppenführer and Waffen SS General Karl Wolff); the supreme commissioners for the operational zones 'Adriatic Littoral' (SS Obergruppenführer Friedrich Rainer) and 'Alpine Foreland' (NSKK Obergruppenführer Franz Hofer); and the plenipotentiary general of the Wehrmacht in Italy (Infantry General Rudolf Toussaint); as well as to the influence which the general plenipotentiary for manpower (Gauleiter Fritz Sauckel) and the Reich minister for armament and war production (Albert Speer) exerted on the alliance between the Third Reich and the ensuing 'Italian Social Republic', and to the structure of the military administration. Attention should also be paid to the following subject areas: economic relations; looting and plundering; the deportation of Jews, political prisoners, and forced labourers; the formation of fascist combat units and police forces (Klinkhammer, *Zwischen Bündnis und Besatzung*, 355–421; Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich*, 341–409); partisan repression and reprisals; the prevailing mood in the population at large. On the last three subjects, see esp. Bocca, *Storia dell'Italia partigiana*, *passim*; Pavone, *Una guerra civile*, *passim*; Schreiber, 'Partisanenkrieg'; and on all subjects, see *Germany and the Second World War*, v/II. 78–97, 273.

<sup>135</sup> *Germany and the Second World War*, v/II. 86.

died directly or indirectly at the hands of the Germans. This figure does not include the 44,720 partisans killed in battle or murdered,<sup>136</sup> the 2,027 Italians who died fighting on the Allied side,<sup>137</sup> or the victims of the effects of war, especially the air raids. The Italian records for the period 10 June 1940 (when Italy entered the war) to 25 April 1945 show that 64,354 died in air raids, of whom 59,796 civilians and 4,558 members of the armed forces.<sup>138</sup> After January 1943, when, among other things, the strategic air war against 'Hitler's Europe' was discussed at the Casablanca Conference,<sup>139</sup> American and British bombers attacked objectives in Italy day and night. The main target, as in the bombing campaign against the Reich,<sup>140</sup> was public morale, and carpet bombing, preferably of suburbs where key industries were located, was adopted as a means to that end.<sup>141</sup> However, this view of things is not uncontested. It has been rightly pointed out that most of the damage from the air raids was to infrastructure, communications, roads and railways, and housing. Industry got off comparatively lightly.<sup>142</sup>

As regards the effect on public morale, some people fled from the cities, but it should be remembered that there were virtually no effective anti-aircraft defences and no air-raid shelters to speak of.<sup>143</sup> That proved to be a particularly serious disadvantage when, after Italy withdrew from the war, the Allies carried out heavy raids on German-occupied northern Italy: 43,402 or possibly even more than 50,000 Italians were killed in those raids, of whom at least 41,420 civilians of all ages.<sup>144</sup>

## 5. THE WAR IN ITALY (SEPTEMBER 1943 TO JUNE 1944)

The main thing about the strategic bombing campaign in the Mediterranean area is that it was repeatedly interrupted or restricted by operational or tactical demands. That had been the case during the preparations for and conduct of the invasion in Sicily, and it happened again during the landing in the Gulf of Salerno, already referred to, when the Allied high command was compelled to bring in the Strategic Air Force of the Northwest African Air Command for tactical purposes.<sup>145</sup>

### (a) The Decisive Battle of Salerno

The name ‘Salerno’ symbolizes the solo role of the Americans and the British in the drama of Italy’s exit from the war. It also denotes one of the decisive battles of the Second World War. While their victory in Sicily had opened the gate to ‘Fortress Europe’ for the powers of the anti-Hitler coalition, only the outcome of the battle at Salerno would determine whether they could remain there indefinitely. Would the de facto second front last, or would the Wehrmacht succeed in throwing its adversaries back into the sea? In the latter case, the war on the Italian mainland would probably be suspended indefinitely, and Hitler would be able to transfer some battle-tried units to the eastern front or to the south-east, where they were urgently needed.

If, on the contrary, the troops of the Grand Alliance managed to break out of beachheads in the Gulf of Salerno and move inland in pursuit of the German defenders, substantial Wehrmacht forces would be tied down in the Italian theatre, probably until the end of the war. As is known, precisely that strategic diversionary effect was the Allies’ main objective.

Seen in that way, Salerno offered the Führer one last chance to turn the tables in the south, and prevent the Mediterranean from becoming an inland sea and Italy an unsinkable enemy aircraft carrier from which Allied pilots could attack the territory of the Reich and the irreplaceable Romanian oilfields.

The Americans and the British, like the Germans themselves, were conscious of the strategic importance of the battle of Salerno. Both sides were accordingly highly committed, and in the event, the troops of Commander-in-Chief South very nearly imposed a ‘military fiasco’ on the US 5th Army.<sup>146</sup>

On 3 September, six days before the landing in the Gulf of Salerno, Operation BAYTOWN was launched. At 3.45, preceded, as usual, by air attacks and heavy artillery fire, parts of the Canadian 1st Infantry Division belonging to the XIII Army Corps of the British 8th Army, together with troops of the British 5th Infantry Division, landed at Reggio di Calabria. The Allied force met with no noteworthy resistance. Even the Luftwaffe attacks made little impact.<sup>147</sup> 5th Infantry Division then advanced along the west coast towards Salerno, and on 15 September it was at Sapri on the Gulf of Policastro, by which time the Canadian 1st Infantry Division had reached Trebisacce on the east coast of Calabria.<sup>148</sup> The Allies expected Operation BAYTOWN to result in the withdrawal of German troops—in this case, 16th Armoured Division and Armoured Division ‘Hermann Göring’—from the areas where the Operation AVALANCHE landings were planned.<sup>149</sup> If, in these circumstances, the Germans were to move south, the main attack at Salerno would cut their connections with the north.

<sup>146</sup> Subtitle of Morris, *Salerno: A Military Fiasco*, which gives a vivid picture of the course of the battle.

<sup>147</sup> Gundelach, *Die deutsche Luftwaffe*, ii. 670 ff.; Schröder, *Italiens Kriegsaustritt*, 272 ff.

<sup>148</sup> *The Mediterranean and Middle East*, v. 236–42; Santoni, *Le operazioni in Sicilia e in Calabria*, 410–29.

<sup>149</sup> *The Mediterranean and Middle East*, v. 223.

These hopes were not fulfilled. The commanding general of the British XIII Corps, General Miles Dempsey, did not achieve even part of his aim in landing 231st Brigade Group at Pizzo Calabro on 8 September, namely to at least cut off the German units that were withdrawing before his 5th Infantry Division.

In the event, after some exceptionally hard fighting in the Pizzo Calabro area, the German Tenth Army units continued to move steadily northwards.<sup>150</sup> The main units involved were 26th Armoured Division, 29th Armoured Infantry Division, and 1st Paratroop Division.<sup>151</sup>

A third Allied landing, Operation SLAPSTICK, was carried out at Taranto on 9 September. Its main aim was to occupy ports that were in good working order, which was considered an urgent necessity. The British 1st Airborne Division was deployed for the purpose, having been brought in from Bizerta on warships.<sup>152</sup> The Italians cooperated willingly, so there were no problems on their side.<sup>153</sup> The Germans caused no problems either, since their only basic concern was 'to get the Tenth Army and Luftwaffe units out of southern Italy by means of swift, flexible action', including the evacuation of Sardinia.<sup>154</sup>

On the Allied side, the planning for the main landing at Salerno, by which the Americans and British hoped to gain a firm foothold in southern Italy, had since 27 July 1943 been in the hands of the US 5th Army, which together with the British 8th Army, as already mentioned, formed the Allied 15th Army Group at that time.<sup>155</sup>

The beaches in the Gulf of Salerno are known to be exceptionally suitable for landing purposes. However, it must be borne in mind that the narrow coastal plain is surrounded on three sides by high, steep hills, which gave the defenders a good view of the landing area and provided ideal firing positions. Furthermore, the Germans had strung barbed-wire barriers along the dunes at the waterline, and had laid mines further out.<sup>156</sup> The Italians are said to have disclosed information to the Anglo-Americans before 5 September about the mines that had been laid, and about mine-free routes in the bay.<sup>157</sup> Be that as it may, the invasion fleet included 48 minesweepers, which cleared five fairways before the landing started.<sup>158</sup>

<sup>158</sup> Roskill, *The War at Sea*, iii/I. 160–1.

The landing force itself consisted of 627 ships and boats, including four battleships, three fleet carriers, and five escort carriers (Force H and Force V).<sup>159</sup> The German navy had only three U-boats and a couple of S-boats to fight this armada.<sup>160</sup> And, once again, the Allied air forces proved superior in every respect. In the end, it was the air forces and the impressively effective naval artillery that determined the outcome of the back-and-forth battle, in which the commander-in-chief of the landing force, General Mark Wayne Clark, had 3,127 operational aircraft at his disposal on the day of the attack, including 1,395 fighter bombers and fighters;<sup>161</sup> 660 of the latter provided air support during the landing.<sup>162</sup>

The German Air Fleet 2, with Field Marshal von Richthofen as commander-in-chief since June 1943, had, *inter alia*, 181 (91) fighters, 90 (51) fighter bombers, and 260 (110) bombers at its disposal on 30 August 1943. It possessed 722 (387) aircraft in all, including reconnaissance and transport planes. After the battle of Salerno, Richthofen only had 641 (345) aircraft at his disposal, including 111 (67) fighters, 32 (20) fighter bombers, and 195 (113) bombers.<sup>163</sup>

In the medium term, Operation AVALANCHE was designed to facilitate the capture of Naples, which was one of the operational objectives. The land operations began at 3.30 on 9 September on the stretch of coast between Amalfi and Agropoli. For tactical purposes, General Clark divided his forces into two attack groups. In the north, the British X Corps (General Richard L. McCreery) landed between Maiori, 4 kilometres north-east of Amalfi, and the mouth of the river Sele, with two British commando forces, three US ranger battalions, and troops of the British 46th and 56th Infantry Divisions. The British 7th Armoured Division was to follow four days later. South of the Sele estuary, the only attacking force was the reinforced 36th Infantry Division of US VI Corps (Lt.-Gen. Ernest J. Dawley). There was also a floating reserve in the form of two regimental combat groups from US 45th Infantry Division, which landed on 10 September.

Clark was counting on the element of surprise on 9 September, so he decided to forgo artillery support from the British X Corps, a mistake that was to prove costly for the troops of the US 36th Infantry Division<sup>164</sup>—especially as the landing by no means found the Germans without weapons. The relevant German HQ had been inclined since 18 August to classify the ‘Naples–Salerno coastal area’ as the area ‘under greatest threat’. The situation assessment varied from time to time, but all in all, on 5 September the OKW was expecting a landing in the Naples area.<sup>165</sup> Two days later the aerial reconnaissance reports removed any remaining doubts: a major landing was in the offing! It was still not clear exactly where the enemy would land,

but XIV Armoured Corps (Lt.-Gen. Hermann Balck, pp. General Huber), to which 15th Armoured Infantry Division (Gulf of Gaeta), Armoured Division 'Hermann Göring' (Naples), and 16th Armoured Division (Gulf of Salerno) belonged, prepared for a probable landing.<sup>166</sup>

The task of repelling a landing expected in the Salerno area accordingly fell to 16th Armoured Division, and its commander subdivided the 45-kilometre defensive front into eight strongpoints, as deeply imbedded as possible. Among other things, the troops manning them had heavy weapons (anti-tank cannon and some anti-aircraft cannon) at their disposal. Four mobile units were positioned behind the strongpoints, since there were not enough forces to man a continuous defence line.<sup>167</sup> 16th Armoured Division was soon unable to hold its ground any longer in the face of the massive naval artillery barrage, and by 10 September it had withdrawn, as instructed, to a line running from Bellizzi (16 kilometres south-east of Salerno) through Persano to Capaccio.<sup>168</sup>

On the first day of the operation the Americans and British managed to establish four bridgeheads and hold on to them. More determined action might perhaps have achieved a breakthrough into the interior, but in any case, as 9 September drew to a close, 23,000 of X Corps' 74,000 troops were on the beaches at Salerno, with 80 tanks, 325 cannon, and 2,155 motor vehicles.<sup>169</sup> Even so, for Clark the battle was still far from being won.

By the morning of 10 September neither the German nor the Allied side had gained the upper hand. However, the strong Italian forces in the vicinity of Rome surrendered that same day, to the great relief of Commander-in-Chief South. The German 3rd Armoured Infantry Division and 2nd Parachute Division had been tied down in the capital, and Field Marshal Kesselring could now deploy them elsewhere.

In the course of the next six days a complicated battle ensued, with many vicissitudes. There were no breaks, but four phases can be distinguished.<sup>170</sup> The *first phase* was the struggle for the bridgeheads, a struggle which the landing forces eventually settled to their advantage. In the event, the decisive factor was that the attempts by the mobile combat groups of 16th Armoured Division to drive the enemy forces back to the coast were generally halted by the concentrated fire from the ships' guns. Those unsuccessful attacks were followed by a move onto the defensive, and then by the above-mentioned withdrawal to the new resistance line ordered by Tenth Army HQ, approximately 10 kilometres east of the beach, which was to be held until the arrival of the German reinforcements en route from the south and the north.

The *second phase* of the battle, in which the Americans and British strove, with some initial success, to extend their bridgeheads, began on 10 September and lasted

for three days. Their intention was then to open up the roads leading north from Salerno and neighbouring Vietri sul Mare. They managed to establish themselves in both those places, but in the meantime the Germans had established firm positions in Altavilla and in Battipaglia, which appeared favourable for launching a counter-offensive. Kesselring, General Heinrich von Vietinghoff-Scheel, and the commander of LXXVI Armoured Corps, General Traugott Herr, were all confident that they would beat the enemy. From 11 September General Herr's corps took charge in the section of the front south of Salerno, while the units on the army's right wing remained under the command of XIV Armoured Corps.

Starting from Battipaglia, Eboli, and Altavilla, Tenth Army HQ launched the attack on 13 September, with 16th Armoured Division, 29th Armoured Infantry Division, and parts of 26th Armoured Division. The forces for this *third phase* of the battle had been prepared faster than the opposing Allied forces, and the attack made rapid progress. The sense of crisis among the Allies, both inside and outside the visibly shrinking bridgehead, became so acute that they even considered plans for withdrawal.<sup>171</sup> Shortly afterwards, however, the German side's confident reports of victory proved premature. The enemy recovered, mobilized all its remaining reserves, and fought bitterly. But above all, the American and British aerial and naval bombardment resumed with even greater fury, causing painful losses on the German side.<sup>172</sup> That was the turning-point. A German counter-offensive on 16 September soon ground to a halt.

On 18 September, in the *fourth phase*, the German Tenth Army stopped fighting and began its withdrawal to new defensive positions. Churchill, quoting the Duke of Wellington after the battle of Waterloo, summed up the bitter struggle in the Gulf of Salerno as 'a damned close-run thing'.<sup>173</sup> It was also a very costly thing in terms of losses.<sup>174</sup>

### (b) Back and Forth—Nearing the End

The political and military actions taken by the combatants in the southern theatre of war after the Allied victory at Salerno must, of course, be judged in the light of the planned, and anticipated, landing in northern France. The main aim of both parties was, in Italy, to use as few of their own troops as possible to keep as many enemy troops as possible tied down there.<sup>175</sup> The Germans followed the tactical principle of 'fighting forwards while moving backwards', which repeatedly resulted

<sup>171</sup> See Roskill, *The War at Sea*, iii/I. 178 ff.

<sup>172</sup> KTB Skl, pt. A, xl ix. 337 (16 Sept. 1943).

<sup>173</sup> Churchill, *The Second World War*, v. 131.

<sup>174</sup> According to Clodfelter, *Warfare and Armed Conflicts*, ii. 845 ff., whose figures relate to the period from 9 September to 6 October 1943, the Allies lost 2,149 dead, 7,366 wounded, and 4,105 missing, and total German losses were around 8,000. According to Morris, *Salerno*, 305, which is based on the 'official histories', the losses—albeit in the period from 9 to 18 Sept. 1943—were as follows: the Wehrmacht lost 840 dead, 2,002 wounded, and 630 missing; the Americans lost 225 dead, 835 wounded, and 589 missing; and the British forces lost 725 dead, 2,734 wounded, and 1,800 missing.

<sup>175</sup> *Germany and the Second World War*, vii. 558.

in a war of position that facilitated German exploitation of important economic resources<sup>176</sup> in parts of the country not yet occupied by the Allies.

So, basically, the Wehrmacht units had to withdraw to the north,<sup>177</sup> but they had to do so as slowly as possible, in order to gain the necessary time to build up rear defensive positions and undertake destruction measures. There was also the above-mentioned economic motive. In southern Italy this involved the transport of considerable quantities of loot and the deportation of 'slaves', in what was described as a brutal 'manhunt'.<sup>178</sup>

In practice, what the withdrawal meant for Kesselring's troops was that they moved from one blocking line to the next in a series of debilitating defensive battles.<sup>179</sup> Tactics of this kind required strong defensive positions if the German divisions, which were fighting in Italy more and more often without 'cover'—that is, with no air support worth mentioning—were not to be destroyed sooner or later.

The Americans and British, on the other hand, were in a comfortable position. They could deploy their air forces almost without restriction. At the height of the military operations in the Salerno area their aircraft cut off all access to the battlefield (air interdiction) and completely stopped the traffic on the German supply routes.<sup>180</sup>

After Commander-in-Chief South terminated the fighting, Tenth Army had to swing back round the Salerno 'pivot' from the previous defence line, which had stretched from the coast to Altamura via Potenza, and move through security lines 1, 2, and 3 (terminating on the coast at Trani, Margherita di Savoia, and Zappaneta respectively) to resistance line zero, which it reached on 25 September. It was instructed to hold that line, which ran from Salerno through Bovino to the Adriatic at Manfredonia, at all costs until the end of the month.<sup>181</sup>

On 25 September Kesselring marked out the course of the Bernhardt Line, as follows:<sup>182</sup> Minturno, west bank of the Garigliano, Monte Camino, north of Mignano, Venafro, west of Colli a Volturno, Castelnuovo a Volturno, Alfedena, Roccaraso, Pescocostanzo, Montagna della Maiella, Mozzagrogna, and Fossacesia Marina on the Adriatic.

A day later Tenth Army HQ defined its operational plans for the coming weeks. According to those plans, the troops were to withdraw from the line zero to the Bernhardt Line through nine intermediate blocking lines. The withdrawal movement started on 27 September<sup>183</sup> and, at the beginning of October, the troops took up their positions on the Viktor Line, which they were to defend until 15 October. That line ran along the Volturno to Castel Campagnano, and from there, via

Guardia, San Giuliano, Campodipietra, Casacalenda, and Guglionesi, to the coast south of Termoli.<sup>184</sup>

When British units landed there on 3 October, Kesselring dispatched 16th Armoured Division to the Adriatic at forced march. There followed a series of costly battles, in which the division at first put up an outstanding fight. It lost the battle in the end, however, because it lacked the necessary reserves and there was nothing to match the strength of the Allied air forces.<sup>185</sup>

The hostilities at Termoli were still under way when, on 5 October, Tenth Army HQ took command on the Bernhardt Line, a deeply staggered system of blocking lines. A second main battle line, the Gustav Line, was established on the Castelforte heights, following first the course of the Garigliano and then running along the Gari north of Sant'Ambrogio, to take in Sant'Angelo in Theodice and Cassino, and finally west of the Rapido to Alfedena, where it joined the Bernhardt Line.

In building the Bernhardt–Gustav defensive system, Tenth Army HQ attached particular importance to armour security and protection against artillery fire. It therefore decided on a reverse slope position. The various sections were accordingly flanked by artillery units, securing the front of the defence line. The defensive installations were deeply embedded, wherever possible, and forward command posts were positioned on the ridges and overhangs. Enormous importance was attached to the deployment of mines.

When the Tenth Army units gradually withdrew everywhere to positions along the Bernhardt Line in the first week of November, without occupying the line immediately, work on the fortifications was still far from finished. They were said to be 50 per cent complete in some sections, but only 25 per cent in most of them.<sup>186</sup>

As the German high command saw it, the occupation of the Bernhardt Line would mark the beginning of a decisive phase in the war in Italy. So, on 4 October, Vietinghoff-Scheel expressly called on the men under his command to be prepared for sacrifices. They must all be resolutely 'determined to fight hard to the last man'. He warned the officers to take care that the delaying tactics imposed by the enemy did not give rise to general defeatism. The German command's primary aim in establishing this new defence line was, of course, 'to secure central Italy, which was of great importance both militarily and politically', but the Bernhardt Line could also serve as a base from which to launch their own 'offensive operations'. The officers must ensure that the troops believed this.<sup>187</sup>

Meanwhile, on 16 September, the Italian forces occupying the island of Elba surrendered.<sup>188</sup> And by 18 September approximately 28,500 members of the Wehrmacht had left Sardinia and were heading for Corsica. When it became apparent that the navy would not be able to provide adequate supplies for a garrison capable of defending the island, the OKW gave orders for Corsica to be evacuated by sea and air. By 4 October 1943, 29,486 Germans, 700 prisoners of war, 105 tanks, 361 cannon, 3,026 motor vehicles, and 6,032 tonnes of equipment had

<sup>184</sup> Schreiber, 'La Wehrmacht', 119.

<sup>185</sup> *The Mediterranean and Middle East*, v. 433–7.

<sup>186</sup> Schreiber, 'La Wehrmacht', 121 ff.

<sup>187</sup> Ibid. 121.

<sup>188</sup> Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich*, 131–2.

reached the mainland. The Luftwaffe lost 32 aircraft, including 25 transport planes, in the process.<sup>189</sup> The navy reported that it had lost the following craft during the evacuation of Sardinia and Corsica: '1 J-boat, 7 naval ferry barges, 2 submarine hunters, 1 tugboat, 3 Siebel ferries, 1 peniche, and 3 steamers, each of 16,943 [GRT].'<sup>190</sup>

A little earlier, in reaction to German occupation policy in the city, there had been a bloody popular uprising in Naples, lasting four days, from 27 to 30 September 1943. There, for the first time, the autonomous resistance of military and civilian forces compelled the Wehrmacht to abandon an occupied city sooner than planned.<sup>191</sup>

Before they left Naples, the German troops put into practice the OKW's order of 18 September regarding the withdrawal movement in southern and central Italy, that is, to inflict the greatest possible destruction. The order applied to power-supply, food-production, and arms-production plants, as well as to port installations, transport facilities, railway lines, and roads in general. Regarding its implementation, Field Marshal Keitel specified: 'The commanders in charge, of all ranks, are expected to conduct the evacuation and destruction with the utmost energy, giving no quarter and showing no regard, in view of the unparalleled nature of the betrayal and the German troops lost as a result of that betrayal. Inflicting damage on the enemy must outweigh all human considerations.'<sup>192</sup>

Hitler's generals, most of whom had served in the east, understood that order and carried it out accordingly. Even cattle were not to fall into the hands of the Allies alive. Any that were not carried off were to be slaughtered 'ruthlessly', regardless of the fact that the civilian population was starving. And the territory to be surrendered must be nothing but a 'wasteland' when left to the enemy.

It was not just a matter of starvation and material damage. On the contrary, the Wehrmacht left a broad trail of blood behind it during its withdrawal from southern Italy. So, for example, men in German uniform massacred close on 700 people in the province of Caserta alone.<sup>193</sup>

The role of the 'Resistenza' must also be borne in mind. Its 'unofficial Italy', where national liberation committees with varying degrees of political weight performed central or regional administrative functions, depending on the situation,<sup>194</sup> existed, de facto, alongside the kingdom of Italy (seat of government Brindisi, and later, as from June 1944, Rome), which, though dependent on the Allied occupation powers, maintained the continuity of the state, and the

<sup>189</sup> Oberbefehlshaber der Luftwaffe, Führungsstab Ic, HQ, 31 Oct. 1943, 'Kurzbericht über Leistungen der Luftwaffe bei Räumung der Insel Korsika und des Kubanbrückenkopfes', BA-MA RH 2/637, fos. 108–11.

'Repubblica sociale italiana', linked to the Germans (Mussolini resided at Salò).<sup>195</sup> Superficial doubts are often expressed about the military efficiency of the 'Resistenza' in Italy, but given its successful attacks on the German supply lines, it was actually—from an operational point of view—among the most effective European resistance movements. In some cases its fighters gave Hitler's divisions more trouble than the Allies,<sup>196</sup> with whom they repeatedly fought shoulder to shoulder. After attacks by resistance fighters, the Germans and their fascist allies took revenge in the cruellest fashion, usually on innocent civilians.<sup>197</sup>

It would certainly have been a blessing for the people in southern and central Italy if the Wehrmacht troops had withdrawn quickly to the northern Apennines, as Hitler and his military commanders had considered doing immediately after 8 September 1943. In fact, the Wehrmacht high command had made plans for a defence line in the north at the narrowest point between the Adriatic and the Ligurian Sea. Army Group B HQ was entrusted with the relevant reconnaissance, and on 25 September Hitler approved the results presented by Rommel. In reality, however, the Führer had already changed his mind. He now wanted to defend the country much further south, roughly on the Gaeta–Ortona line,<sup>198</sup> and the relevant directive concerning 'the command structure in Italy' was issued on 6 November 1943.<sup>199</sup>

According to that directive, the Bernhardt Line was 'to be held permanently', and it was therefore essential that 'all the forces in Italy be placed under a unified command'. To general surprise, Hitler chose Kesselring, not Rommel, for the purpose.<sup>200</sup> Rommel had suspected some such thing at the end of October,<sup>201</sup> but it was only on 5 November, during the briefing at Führer headquarters, that the field marshal learned that he was to be put in charge of an army group on special mission, directly under Hitler's command, to defend against an Allied landing in north-western France.<sup>202</sup> His enemies and enviers had apparently brought the plot they hatched in North Africa to a successful conclusion. Goebbels' diaries provide a synthesis of the defamation levelled at Rommel. In the autumn of 1943, we read, Rommel 'had become rather weak and inconsistent in his views'. 'He can almost be said to have a defeatist attitude to the war.' Frequently 'the view is expressed that Rommel has become a general who only knows how to retreat'. His 'long time in North Africa' had apparently 'broken him inside'—a 'fact' that, according to the propaganda minister, was 'not to be mentioned in public at present'. Finally, Rommel was still the 'military idol of the German people', but the one gaining

in prestige was Kesselring, who, as a result of ‘Rommel’s failure [...] had naturally acquired a somewhat higher standing’.<sup>203</sup>

On 21 November 1943 Kesselring took command in Italy as Commander-in-Chief South-West and commander-in-chief of Army Group C. At the same time, Army Group B handed over command to Fourteenth Army (Col.-Gen. Eberhard von Mackensen).<sup>204</sup> Commander-in-Chief South-West was now in command of the ‘units of the three Wehrmacht formations and the Waffen SS units that were engaged in land combat’, as well as the Mediterranean plenipotentiary of the Reich commissioner for shipping in matters affecting the ‘conduct of military operations’, and those parts of the Todt Organization that were in the Italian area.

The German naval command (Rear Admiral Wilhelm Meindsen-Bohlken) and Air Fleet 2 remained under the command of the commanders-in-chief of the navy and Luftwaffe respectively, for the purposes of operations at sea and in the air. However, in the case of operations on the mainland and in connection with coastal defence, they were to receive their instructions from Commander-in-Chief South-West. Corresponding rules applied to the plenipotentiary general of the Wehrmacht in Italy, General Rudolf Toussaint, with regard to matters that fell within the remit of Commander-in-Chief South-West or ‘indirectly’ affected his conduct of military operations. Kesselring was also granted ‘permission to exercise executive power in the operational areas in Italy’.<sup>205</sup>

One point that was not settled in the directive on ‘the command structure in Italy’ was the question of the respective responsibilities of Kesselring and the special adviser on police affairs with the Italian Fascist National Government, senior SS and police leader Karl Wolff, with respect to the repression of partisans. This led to friction, and Himmler was obliged to intervene. Finally, on 26 April 1944, Keitel transferred ‘supreme command of all banditry repression in the Italian area’ to Commander-in-Chief South-West. However, ‘responsibility for conducting’ such action outside the area of operations, and outside a 30-kilometre-wide coastal area, was assigned to the senior SS and police leader—under Kesselring’s personal command and acting on his instructions.<sup>206</sup>

The most important task assigned to Commander-in-Chief South-West under the 6 November 1943 directive was ‘to defend central Italy’ north of the Bernhardt Line. He was also responsible for coastal defence in the Adriatic, the Ligurian Sea, and the Tyrrhenian Sea. In addition, Kesselring had to liberate north-eastern Italy, partly occupied by rebel forces, and prepare draft plans for an attack on Apulia in case the Americans and British intended to attack the Balkans.<sup>207</sup> Hitler and the OKW assumed that the ‘main attack by the western powers’ would be directed at south-eastern Europe. That was one of the reasons why, at the end of September

1943, the Führer already wanted to defend in southern Italy and keep his adversaries 'at sword's point' there.<sup>208</sup>

Apart from concern about the south-east, the fact that, surprisingly, the Allies were advancing only very slowly was also a key factor in determining the German conduct of operations in Italy after 8 September 1943.<sup>209</sup> On 27 September the British 8th Army had captured the large airbase at Foggia, which had suffered serious and lasting damage, and on 1 October the US 5th Army had marched into Naples, which had already been liberated by its inhabitants.

American experts were unexpectedly quick in repairing the port installations, which had been devastated by Allied bombardment and German destruction measures: 212,000 men, 45,000 motor vehicles, and 154,000 tonnes of cargo were landed in the Naples–Salerno area in the first week of October, so that 13 of the planned 20 Allied divisions were now in place on the Italian mainland.<sup>210</sup> At the beginning of October, Rommel and Kesselring had 18 divisions and two brigades at their disposal.<sup>211</sup>

After the battle of Termoli, the Germans had to withdraw Tenth Army's left wing to the north bank of the Biferno, while, in the west, the US 5th Army reached the Volturno on 6 October. In view of this encouraging development, Eisenhower gave orders to continue the advance on Rome, and Alexander even planned to push on from there as far as Livorno and Florence. Both generals mistakenly assumed, on the basis of reports that had been overtaken by events, that Kesselring still intended to withdraw his units to northern Italy. In any case, Clark attacked on 12 October, and Montgomery's 8th Army went on the offensive on the 22nd. In the face of fierce German resistance, the British succeeded in crossing the Trigno and approached the south bank of the Sangro.<sup>212</sup>

On 23 November Montgomery continued his offensive, with the aim of reaching the road from Pescara to Avezzano. It was hampered from the start by torrential downpours, causing operations to be suspended temporarily and severely restricting the deployment of aircraft. Nevertheless, on 2 December the whole of the 8th Army was on the north bank of the Sangro, where the main battle line now ran roughly from Castel di Sangro to the coast.

In the area of the British V Corps the front had been driven back to a line running from Casoli, through Orsogna, to a point on the coast 10 kilometres south of Pescara, thus creating a breach in the Bernhardt Line.<sup>213</sup> However, the 8th Army did not take advantage of this success, although it was superior in armour, infantry, and artillery to LXVI Armoured Corps, which was positioned on the Adriatic. Its commander-in-chief, who won many battles, was not one of those military

commanders who are prepared to take risks.<sup>214</sup> He considered it necessary to regroup, and he was worried about the rapidly dwindling supplies of artillery ammunition. He also was concerned by the heavy losses incurred, and on top of everything, the weather was getting even worse. When, in the night of 27 to 28 December, the men of the German 1st Paratroop Division abandoned Ortona, for which they had fought for a whole week in murderous house-to-house battles and close combat, Montgomery halted the offensive.<sup>215</sup> Three days later he left Italy for England, to take command of the Allied 21st Army Group, which subsequently took part in the major landing in Normandy on 6 June 1944.

General Oliver William Hargreaves Leese took over as commander-in-chief of 8th Army at the end of December 1943. His main task was to maintain the status quo on the Adriatic, and he was to undertake deception measures to induce the German command to believe that a further attack on LXXVI Armoured Corps was imminent. In addition, the actions of 8th Army were still designed to help the US 5th Army, whose offensive had come to a temporary halt in icy weather conditions about 8 kilometres south of the Rapido.<sup>216</sup>

In retrospect, the course of the battle on the Sangro suggests that the Allies could have achieved more there if their operational planning had been bolder. They managed to force the German Tenth Army to withdraw the front to the Adriatic, but when the British 8th Army command suspended the offensive it had not yet achieved its operational objectives, namely the city of Pescara, the river Pescara, and the road from there to Avezzano.

From January 1944 on, military operations on the Adriatic declined. The point of concentration in the Italian theatre of war moved west, to the area of XIV Armoured Corps (General Fridolin von Senger und Etterlin), where the US 5th Army had launched its expected offensive on 12 October with two corps, each comprising three divisions. By 15 October the US forces had established three strong bridgeheads on the north bank of the Volturno.

Kesselring's troops, withdrawing slowly but steadily, demanded everything from their adversaries. And the closer the front got to the outposts of the Gustav Line—after the Barbara Line, which ran south from Mondragone towards Isernia via Presenzano, had been breached and the Bernhardt Line overcome—the more bitter the German resistance became.

The advance required a great deal of force. On 13 November 1943 General Clark was obliged to order his completely exhausted and partially decimated units to halt hostilities for two weeks, and he took advantage of the pause to regroup his forces. The attack was resumed on 29 November and 1 December, but by 15 January 1944 Clark's men had gained very little ground in a series of bloody encounters—not least on account of the bad weather.<sup>217</sup> Nevertheless, the US 5th

Army now stood facing the Gustav Line, and the real ‘major battle’ on the Italian mainland was about to begin—a battle that ‘in some respects’ surpassed even ‘the ferocity of the battles in the east’.<sup>218</sup>

The Liri valley opens to the south of Cassino, a town of 25,000 souls located at the foot of the ancient abbey of Monte Cassino, and consisting largely of solidly built houses that were reduced to rubble in the course of the hostilities. Unusually for the Apennine peninsula, this valley runs north-west to south-east, not east to west or vice versa. It seemed ideal for the purpose of a rapid advance on Rome, some 125 kilometres away, forming, as it were, the natural approach to the capital. However, it is flanked on the northern and southern sides by mountains that were in German hands at the time and would be very difficult for an attacker to cross.<sup>219</sup>

On 4 January 1944, with the battle for Cassino looming, the German Tenth Army, which had taken over responsibility for repelling the enemy forces, comprised XIV and LXXVI Armoured Corps, and the Hauck Group. XIV Armoured Corps was to defend a 70-kilometre section of the 135-kilometre long, 16-kilometre deep Bernhardt–Gustav defence system, starting at the west coast. It consisted of 5th Mountain Division, 15th Armoured Infantry Division, and 44th and 94th Infantry Divisions, while LXXVI Armoured Corps was able, at that point, to deploy 1st Paratroop Division, 26th Armoured Division, 3rd Armoured Infantry Division (en route), 90th Armoured Infantry Division, and 334th Infantry Division. The Hauck Group consisted essentially of 305th Infantry Division, with Armoured Division ‘Hermann Göring’ as a reserve force. There were also independent units of the army and the two armoured corps, and the units under the senior 316th Artillery commander and the rear area commander (1017th Military Command).<sup>220</sup> As regards the conditions of deployment, the Wehrmacht’s divisions were certainly inferior to the Allies’ in respect of head count, artillery, and air support, but the difficult terrain was to their advantage.

In the following account, contrary to the usual practice, the hostilities at Cassino are treated not as a series of three or even four battles, but as phases in a single battle lasting from mid-January to mid-May 1944. This seems to make better sense, on the one hand, because the hostilities were never completely suspended, and on the other, because the field of battle, the tactics adopted, the operational objectives, and the units deployed all remained unchanged throughout that period.

On 15 January 1944 the major formations on the Allied side were deployed as follows:<sup>221</sup> on the British 8th Army’s right wing there was the British V Corps (General Charles Walter Allfrey), together with the Canadian 1st Infantry Division, parts of the Canadian 5th Armoured Division, and the Indian 8th Infantry Division; on its left wing, the British XIII Corps (Gen. Sidney Chevalier Kirkman), together with the New Zealand 2nd Infantry Division (army group reserve as from 17 January), the British 78th Infantry Division, and parts of the Indian 4th Infantry Division.

<sup>218</sup> KTB OKW, iv. 80.

<sup>219</sup> Ben Arie, *Die Schlacht*, 78.

<sup>220</sup> AOK 10, KTB No. 4, ann. 88 a–c, BA-MA RH 20-10/88; Ben Arie, *Die Schlacht*, 78–91.

<sup>221</sup> *The Mediterranean and Middle East*, v. 595 ff.

On the US 5th Army's right wing there was the French Expeditionary Corps (Gen. Alphonse Juin), together with the Moroccan 2nd Infantry Division and the Algerian 3rd Infantry Division; in the centre of the front, the US II Corps (Gen. Roger Keyes), to which the US 1st Armoured Division, the US 34th and 36th Infantry Divisions, a brigade (special unit), and the Italian 1st Motorized Group belonged; and on the left flank, the British X Corps (Gen. McCreery), with 5th, 46th, and 56th Infantry Divisions, and 23rd Armoured Brigade—all British units. The US 45th Infantry Division was ready as army reserve.

In works on the battle of Cassino, it is virtually a must to discuss, in addition to the military developments, the rescue of the cultural and artistic treasures in the Monte Cassino monastery, the bombardment of the abbey, and in that connection, the question whether—contrary to the agreement with the Vatican—there were German soldiers stationed in the monastery.

The fact is that in 1943 the cultural treasures in the abbey had been both rescued and stolen. After the war 13 masterpieces belonging to Neapolitan museums turned up in a tunnel in the Altaussee salt mines, where Hitler and Göring stored their 'art collections'. Like many other valuable items, they had been moved to Monte Cassino during the war.<sup>222</sup>

The bombardment of the abbey of Monte Cassino on 15 February 1944 claimed the lives of some 300 civilians. There were about 800 people in the monastery, mostly monks and refugees, and the Allies had dropped leaflets there a few days before, informing them of the impending aerial bombardment and urging them to leave the abbey.

15th Army Group command had concerns about the action. Witness, *inter alia*, the controversy between General Clark, who would have preferred to avoid destroying the monastery, and General Alexander, who decided against his American subordinates in favour of the commander of the New Zealand Expeditionary Corps, General Bernhard Cyril Freyberg. In the end, Freyberg's men were to attack Cassino in the very spot where the US 34th and 36th Infantry Divisions had lost up to 80 per cent of their combat strength in heavy fighting. Freyberg knew what awaited the New Zealanders. The Germans on the monastery hill were like shadows, invisible and omnipresent. They watched the battlefield from excellent cover, recorded every move their adversaries made, and directed their artillery fire accurately against the enemy troops, who were stuck in the freezing mud on the floor of the valley. No wonder the attackers, including Freyberg, were 'obsessed' with the hill.

Freyberg insisted on the bombardment and destruction of the monastery. This was partly because the German defensive positions were within 300 metres of the abbey, and he firmly believed that Field Marshal Kesselring would sooner or later order his troops to occupy it. Freyberg also assumed that if the monastery were destroyed, it would be easier to take than if the buildings were intact. He was wrong about this. The ruins of Monte Cassino, as General Clark rightly pointed out, provided ideal defensive possibilities.

<sup>222</sup> Klinkhammer, *Die Abteilung 'Kunstschutz'*, 503–14.

The question remains whether there were members of the Wehrmacht stationed in the monastery illegally, that is, contrary to the agreement that had been reached with the Vatican. According to German contemporary witnesses and sources, that was not the case. Thus, for example, Baron Ernst von Weizsäcker, who had been German ambassador to the Holy See since 31 March 1943, wrote in his 'papers' on 19 February 1944:

Yesterday, the old abbot of Monte Cassino [!] came to see me after his monastery had been reduced to rubble. I was sorry to have to extract yet another statement for propaganda purposes from this broken man, trembling, exhausted, and dirty as he was. It is surprising that our press has so much sympathy for the monastery. We are not usually keen on Catholic monasteries [...] But the truth is that we have never used or occupied the monastery for military purposes. The enemy knew that from my message via [!] the Vatican.

In fact, that appears to have been so. However, Allied troops who were there firmly maintain the contrary.<sup>223</sup>

The battle for Cassino was still in its early days when, at 02.00 on 22 January 1944, the US VI Corps (Gen. John P. Lucas) landed on both sides of Anzio (Operation SHINGLE), about 50 kilometres south of Rome. The following forces were deployed: 1st Infantry Division, 2nd Special Brigade, an armoured regiment, and an armoured battalion (all British units), and the US 3rd Infantry Division, a US armoured battalion, three US ranger battalions, and a regiment and battalion of US airborne troops.

The naval force consisted of 30 large and 103 smaller warships, and 241 landing craft. The German navy had three small speedboats and two U-boats to oppose them. The U-boats were to reach the theatre of operations within 30 hours—and that was all. The relative strength of the forces shows, once again, that German naval operations in the Mediterranean after Italy's exit from the war can only be classified as 'also fighting'.

As to aircraft, the Allies had more than 2,700 at their disposal for deployment at the Anzio beachhead,<sup>224</sup> whereas the German Air Fleet 2 had a total of 337 aircraft on 20 January, of which only 223 were operational.<sup>225</sup>

The expectation on the Allied side was that the landing would lead to the tactical combination of Operation SHINGLE with the planned frontal attack on the Gustav Line. For that to happen, General Lucas had only to make rigorous use of the element of surprise and advance against the rear of the German Tenth Army immediately after the landing, so as to cut it off or at least threaten it with encirclement. It was assumed that this would force Col.-Gen. von Vietinghoff-Scheel to abandon the western section of the German defence line.

<sup>223</sup> The quotation is from Weizsäcker, *Die Weizsäcker-Papiere*, 369–70 (19 Feb. 1944); see Klinkhammer, *Die Abteilung 'Kunstschutz'*, 514 ff.; Carver, *The War in Italy*, 142–6; *The Mediterranean and Middle East*, v. 704–14; *World War II in Europe*, 1585–8.

<sup>224</sup> *The Mediterranean and Middle East*, v. 650–4; KTB Skl, pt. A, liii. 396 (22 Jan. 1944).

<sup>225</sup> Gundelach, *Die deutsche Luftwaffe*, ii. 767.

The US VI Corps landing, at least, came as a complete surprise, as the German naval command recorded: 'Neither the assembly nor the approach of the landing force were in any way detected by German reconnaissance. The landing therefore encountered no resistance, precisely in an area where the military forces deployed to combat landings had been withdrawn a few days earlier for transfer to the southern front.'<sup>226</sup>

Since General Clark and General Lucas did not take advantage of the chance they were given, the German Tenth Army was not cut off. The two Allied commanders' primary concern was to consolidate the bridgehead, in which there were already up to 50,000 men on 24 January, and they proposed to resume the offensive only in a second, as yet unspecified phase of the operation. This decision met with very sharp criticism in Allied military circles, but also with some understanding. In any case, when Lucas finally attacked on 30 January, it was far too late, and on 22 February 1944 he was replaced by Lt.-Gen. Lucian K. Truscott.

Field Marshal Kesselring used the time which the enemy had given him to establish a robust defence front as quickly as possible, under the overall supervision of Fourteenth Army HQ, a front that very soon acquired considerable offensive strength. On 28 January, Fourteenth Army HQ was in command of the following major formations:<sup>227</sup>

I Paratroop Corps (Gen. Alfred Schlemm):

- Armoured Division 'Hermann Göring' (minus armoured regiment),
- 26th Armoured Division (en route),
- 3rd Armoured Infantry Division (minus the reinforced 8th Motorized Infantry Regiment),
- 71st Infantry Division (minus the reinforced 211th Infantry Regiment, but with the bulk of 191st Infantry Regiment),
- 715th Infantry Division,
- Pfeiffer Group (Maj.-Gen. Hellmuth Pfeiffer) (65th Infantry Division, en route, but minus the reinforced 146th Infantry Regiment),
- 4th Paratroop Division (operational sections),
- 104th Armoured Infantry Regiment (minus III Battalion),
- 2nd Artillery Training Regiment (en route),
- 1027th and 1028th Motorized Infantry Regiments (en route),
- Berger Combat Group (Lt.-Col. Berger, commander of 9th Armoured Infantry Regiment) with the 114th Light Infantry Division's reinforced 721st Light Infantry Regiment,<sup>228</sup> which was to serve as army reserve upon arrival;

<sup>226</sup> KTB Skl. pt. A, liii. 395 (22 Jan. 1944); see also *Grand Strategy*, v. 225–31; *The Mediterranean and Middle East*, v. 643–89, 723–75, and on Lucas in particular, 750 ff.

<sup>227</sup> AOK 14, KTB No. 2, ann. 4a, 26 Jan., and ann. 21, 28 Jan. 1944, BA-MA RH 20-14/25.

<sup>228</sup> Schreiber, 'La Wehrmacht', 143; Tessin, *Verbände und Truppen*, vi. 254.

LI Mountain Army Corps (General Valentin Feurstein):

- 362nd Infantry Division (minus the reinforced 954th Infantry Regiment),
- the Commandant of Elba,
- and numerous other separate troop sections and independent units.

A few days later LXXVI Armoured Corps HQ took over the divisions previously under the command of I Paratroop Corps HQ, and I Paratroop Corps HQ took command of the units of the Pfeiffer Group and the German Commander in Rome.<sup>229</sup>

In the end, the attacks and counter-attacks by the opposing forces proved inconclusive, and, from 18 February on, the bridgehead was in deadlock and the front was frozen.<sup>230</sup> At the end of the month LXXVI Armoured Corps, I Paratroop Corps, and nine divisions and three regiments of the German Fourteenth Army were tied down in this situation.<sup>231</sup>

The first phase of the battle for Cassino had also come to an end in the middle of February. The British and American forces' attempt to take the German defence line by storm had failed, and XIV Armoured Corps rightly accounted this a defensive success. Optimism spread, encouraged, among other things, by the hope that Fourteenth Army might yet succeed in clearing the Anzio bridgehead and launching a counter-offensive.<sup>232</sup>

However, the war on the Cassino front simmered quietly for a while. Both sides took advantage of the lull to make material and military preparations for a second intensive phase in the battle. It began on 15 March, when, after the usual demonstration of power by the Allied artillery, fighting flared up dramatically. The raging battle died down only gradually, on 23 and 24 March.<sup>233</sup>

Tenth Army HQ considered that the second phase of the battle for Cassino had also been a success. For that very reason, Col.-Gen. von Vietinghoff-Scheel and his staff assumed that the enemy would shortly launch a third major attack on the Gustav Line. After all, the Allies could not be expected to accept two defeats in quick succession.<sup>234</sup>

This state of affairs obliged General Alexander to take the initiative. His intention was to destroy the right wing of the German Tenth Army and then force any surviving remnants of von Vietinghoff-Scheel's troops, together with

<sup>229</sup> AOK 14, KTB No. 2, ann. 34, 3 Feb., and ann. 45, 4 Feb. 1944, BA-MA RH 20-14/25.

The following major formations were involved: Armoured Division 'Hermann Göring', 26th Armoured Division, 3rd and 29th Armoured Infantry Divisions, 4th Paratroop Division, 114th Light Infantry Division, 65th, 92nd, and 715th Infantry Divisions, as well as the German Commandant in Rome.

<sup>232</sup> *KTB OKW*, iv. 151–70.

<sup>233</sup> These were the days on which the Wehrmacht and the SS committed a terrible crime in the Ardeatine Caves in Rome. In reprisal for an attack in the Via Rasella, in which the 2nd company of Police Regiment 'Bozen' lost 33 men, they massacred 335 people who had had nothing whatever to do with it. See Prauser, 'Mord in Rom', 269–301; Staron, *Fosse Ardeatine*, 32–70.

<sup>234</sup> XIV Armoured Corps, KTB No. 6, ann. 685 and 735, BA-MA RH 24-14/110.

those of the Fourteenth Army, back to the north of Rome. After that, he intended to pursue them relentlessly as far as the Rimini–Pisa line, inflicting maximum losses in the process.

In the event, the British general took his time. It was seven weeks before he launched his final offensive, Operation DIADEM, in the night of 11 to 12 May 1944. The attack was launched on a 32-kilometre-long front, running from Scauri on the Tyrrhenian Sea to Sant'Elia Fiumerapido. According to the reported ration strength, there were 269,371 men in the ranks of the British 8th Army and 350,276 in those of the US 5th Army. On the German side, there were 365,616 Wehrmacht troops.<sup>235</sup> The combat strength of the German forces, that is, the number of men actually fighting or directly assisting men who were actually fighting, was 81,932 on 23 April in the case of Tenth Army, and 76,873 on 10 May in the case of Fourteenth Army.<sup>236</sup>

Alexander's spring offensive, Operation DIADEM, was preceded by Operation STRANGLE, an air offensive launched on 19 March 1944, which continued until the night of 11 to 12 May. The attacks were aimed primarily at the road and sea links, but they also focused on the railway lines and shunting yards south of the Pisa–Rimini line. The Allies chose targets that were at least 100 kilometres north of the main battle line, in order to put even more pressure on the overstrained German transport system. Their aim was to oblige Kesselring to make increasing use of his scarce heavy goods vehicles, which were vulnerable to attack from the air, in the risky transport of supplies.

The Luftwaffe lacked the means to prevent an enemy interdiction of this kind, which made it extraordinarily difficult for the Germans to conduct operations in Italy. On the other hand, the Allies failed to achieve the actual aim of Operation STRANGLE, that is, the Wehrmacht's withdrawal from the Gustav Line, despite the fact that the American and British pilots flew about 21,000 sorties (388 a day), dropping almost 22,500 tonnes of bombs, in the course of an operation which lasted almost eight weeks.<sup>237</sup>

In this third phase of the battle for Cassino the British 8th Army had five corps with 13 divisions at its disposal. The US 5th Army had three corps, also with 13 divisions, of which the US VI Corps, including a seven-division reinforcement ordered by the commander-in-chief of the Allied 15th Army Group, was stuck in the now completely overcrowded Anzio bridgehead,<sup>238</sup> surrounded by the forces of the German Fourteenth Army.<sup>239</sup> At the opening of hostilities, the German Fourteenth Army brought two corps and seven divisions to the front. On 17 May the German Tenth Army had two corps and eleven divisions under its command.<sup>240</sup>

<sup>238</sup> *The West Point Atlas*, ii, map 104.

<sup>239</sup> Ellis, *Cassino*, 290; *The Mediterranean and Middle East*, v, map 43.

<sup>240</sup> Tessin, *Verbände und Truppen*, iii. 162, 289.

In the US 5th Army's area of attack, the points of concentration of the Allied offensive were on either side of Minturno and Castelforte, on Monte Fuga and Monte Maio, and at Sant'Andrea and Sant'Apollinare, that is, in the inhospitable Aurunci Mountains, where units of the French Expeditionary Corps and, in the south, troops of the US II Corps were fighting their way forward.

The British 8th Army's area of attack stretched roughly from the confluence of the Liri and Rapido rivers, through Cassino, to Caira, about 6 kilometres to the north. The main attack in the area of Cassino, Monte Cairo, the Liri valley, and the Sacco valley was conducted by troops of the British XIII Corps and the Polish II Corps (General Władisław Anders).<sup>241</sup>

On 17 May Kesselring learned that the French Expeditionary Corps, with the support of the US II Corps, had 'broken through the German front in southern Italy'.<sup>242</sup> This happened at a point where no special measures had been taken to build up the defensive positions, because it was assumed that this was unnecessary in the rocky, trackless terrain of the Aurunci Mountains<sup>243</sup>—a mistake that played a decisive part in the outcome of the battle for Cassino.

Since Sicily, however, the Wehrmacht high command had regularly attributed 'enemy successes' not to its own operational errors, of which there was no shortage, but solely and stereotypically to the Allies' 'material superiority' in aircraft, armour, and artillery. That dominance certainly existed, and the inability of the Wehrmacht's very weak air forces to relieve the burden on the hard-pressed front in the Italian theatre of war weighed especially heavily. The information about German plans and intentions that was obtained by means of the ULTRA decryption system also played a part, as did the competent command of the French Expeditionary Corps in particular, and the fighting spirit of many Allied troops. Their spirit was in no way inferior to that of the German troops, whose fortitude was described by Col.-Gen. von Vietinghoff-Scheel as tantamount to 'deliberate self-sacrifice in some cases'.<sup>244</sup>

In any case, this says little about the nature of the war in Italy which, like that of every war, was primarily reflected in the fate of the civilian population. Two examples will serve as illustration. Members of the French North African divisions committed atrocities in Italy, notably rape on a large scale, in circumstances which the French military authorities have not convincingly clarified to this day, especially as regards responsibility.<sup>245</sup>

The same applies to crimes committed by members of the Wehrmacht, the SS, and the German police in the Italian theatre of war. In October 1943 the 16th Armoured Division tribunal recorded in its minutes that German soldiers were 'increasingly' moving through the country 'like marauders in the Thirty Years War,

<sup>241</sup> AOK 10, KTB No. 6, 12 May 1944, fos. 70–75, BA-MA RH 20-10/113; *The West Point Atlas*, ii, map 104; *Atlas of the Second World War*, 124–5.

<sup>245</sup> Mourrut, 'La campagna d'Italia', 58 ff.

totally without supervision'. 'Plunder and rape [are] the order of the day.' Kesselring, who must have known this better than anyone else, stated after the war that Germans, 'in large numbers, raided and robbed even peaceful villages and their inhabitants'. Even inherently 'well-disposed members of the Italian population in the ranks of the partisans' behaved in the same way. On 8 July 1944, when plunder had become a real epidemic, Commander-in-Chief South-West ordered that 'plunderers caught in the act' were to be 'shot immediately, i.e. without court martial'. However, under pressure from Reich Marshal Göring and Field Marshal Keitel, he revoked his order on 1 August.<sup>246</sup> At that point in time the front, in the form of the Arno Line, ran from Marina di Pisa through Florence to Senigallia on the Adriatic.<sup>247</sup>

Let us now return to the operational developments. By 17 May the retreat of the German troops had become inevitable, and the following day they were forced to abandon the battlefield at Cassino and Monte Cassino. The Wehrmacht's war in Italy—effectively lost since Salerno in September 1943—was not yet over, but the end was in sight.

On 20 May 1944 units of the US 5th Army thrust into the Senger Line (formerly known as the Hitler Line), which ran, at a distance of 10 to 40 kilometres north-west of the Gustav Line, from Terracina, through Pontecorvo and across the Liri valley, to Monte Cairo. Shortly afterwards Allied troops breached the Senger Line in the Pico–Pontecorvo area. Terracina fell on 25 May, and the US II Corps at once joined forces with the US VI Corps, which had broken out of the Anzio bridgehead on 23 May.

The last serious obstacle before Rome was now the 215-kilometre-long C line, which was still under construction and ran from the west coast (20 kilometres south of Ostia) to Valmontone (2.5 kilometres south-west), then through Avezzano (5 kilometres north-west) to Pescara on the Adriatic. On 26 May Hitler ordered the C line to be held 'come what may', although its loss was now a foregone conclusion.<sup>248</sup>

Given the situation on 25 May, the bulk of the German Tenth Army seemed doomed. It was about to be encircled. But then the unimaginable happened. Instead of turning east, Clark ordered the US 5th Army units to march straight on to Rome. And on 4 June 1944 his troops entered the capital in triumph.

The American general's egocentric coup saved the German Tenth Army, at least temporarily.<sup>249</sup> Once the Italian capital had fallen, there was no all-out, decision-seeking pursuit of the hard-hit German troops, although Alexander had included this in his strategic plan to march on to Vienna.<sup>250</sup>

## 6. THE ITALIAN THEATRE OF WAR ON THE SIDELINES (JUNE 1944 TO MAY 1945)

The American chiefs of staff had no regard at all for Alexander's ambitious plans, which Churchill supported.<sup>251</sup> For them, the Italian campaign served merely as preparation for the operations in France. Thus, the operations in the south, conceived as a strategic diversion, were always overshadowed by Operation OVERLORD and Operation DRAGOON, the landings in Normandy on 6 June and in the south of France on 15 August 1944.<sup>252</sup>

For that reason, the Allied 15th Army Group had to give up three American divisions, two Moroccan divisions, an Algerian division, and a French division. While some special units were assigned to the group by way of compensation,<sup>253</sup> the fact remained that this bloodletting reduced the British and American forces in the Italian theatre by a quarter. General Alexander was consequently obliged to abandon his plan for a frontal attack by the US 5th Army and the British 8th Army, to be launched on both sides of the Futa pass (about 40 kilometres east of San Marcello Pistoiese) and aimed at Bologna.<sup>254</sup>

Operation DRAGOON presented Commander-in-Chief South-West with a new front to man in the western Alps, where four divisions were now tied down.<sup>255</sup> At the same time, both his armies, which he had ordered on 8 June to apply 'scorched earth tactics' more ruthlessly than ever, were now withdrawing step by step to the 270-kilometre-long Green Line, extending from Cinquale to Pesaro (known as the Gothic Line until 15 June 1944).<sup>256</sup> The fierce resistance to the Allies was sometimes felt to be counter-productive even on the German side, because it used up the reinforcements in men and equipment before the Green Line was reached. The intention behind such resistance was to gain the necessary time to build up the defensive position, but that was a pious hope. On 22 August Tenth Army, the left wing of Army Group C, already began moving to positions in the forefield of the Green Line, and from 31 August on, Fourteenth Army withdrew, section by section, directly to the Green Line itself.<sup>257</sup>

From 3 August 1944 on, Army Group C also included Army 'Liguria', commanded by Marshal Rodolfo Graziani. This was a German-Italian formation, developed from Gustav-Adolf von Zangen's army detachment (LXXXVII Army Corps HQ).<sup>258</sup> Altogether, Commander-in-Chief South-West had three armies, six

<sup>256</sup> *Deutschland im zweiten Weltkrieg*, v. 143–4.

<sup>257</sup> *KTB OKW*, iv. 550 ff.; *Deutschland im zweiten Weltkrieg*, vi. 146, where the daily strength of Tenth Army on 2 Oct. 1944 is given as 94,332, and the fighting strength as 54,725.

<sup>258</sup> Tessin, *Verbände und Truppen*, xiv. 146. According to the records of the general staff of the 'Italian Social Republic', the puppet state had 143,000 troops in its army in the autumn of 1944, 26,000 in its navy, and 79,000 in its air force. In addition to these 248,000, there were another 564,000 men serving in German military units (122,000), in 'Organization Todt, etc.' (120,000), in

army corps, one corps detachment, 29 divisions (including an armoured division), one fortress brigade, and a regiment of Division 'Brandenburg' under his command on 12 August. As for the Allied 15th Army Group, on 25 August it comprised two armies, seven corps, 20 divisions (five armoured divisions), six armoured brigades, a Greek mountain brigade, an Italian relief corps, and a Brazilian expeditionary corps.<sup>259</sup>

The Green Line, continuously under construction since Italy's exit from the war, failed to deliver what the Germans expected of it and the Allies feared, especially in the weak Adriatic sector. The practical constraints, resulting from the shortcomings in the last major defensive line before the Po valley, forced Kesselring and his generals to improvise on a massive scale.<sup>260</sup>

The transfer of forces for the purposes of Operation DRAGOON had made it impossible for the British 8th Army to carry out its intended frontal attack in the centre of the Green Line. The plan now was for it to launch an offensive on the Adriatic and, after taking Pesaro, Rimini, and Ravenna, to advance on Bologna. General Clark's army was to launch an offensive 14 days later in the original direction of thrust, that is, frontally.

This combined offensive was code-named Operation OLIVE. The British 8th Army's attack began on 25 August and, as it soon became clear that the Green Line was not very resistant, the frontal attack by the US 5th Army was brought forward and launched on 1 September. By mid-September the German defensive positions had been breached in many places, but the nature of the terrain and the atrocious autumn weather made it difficult for the attackers to advance. On the east coast, Rimini fell on 21 September, after extremely fierce fighting on the Gemmano and Coriano ridges. On 1 October, however, Clark, having deployed all his reserves, was still trying to force access to Bologna. His attempt failed on 20 October, when the attack was brought to a standstill by massive German fire, just 14 kilometres from its goal. The exhausted American divisions settled in for the winter in the Apennine mountains. Their attack had not been altogether in vain, however, since it had forced Field Marshal Kesselring to withdraw troops from the area where the British 8th Army was attacking, thus enabling it to gain more ground. At the beginning of December the British forces launched a limited offensive designed

'Organizzazione Paladino', named after the head of the general labour inspectorate (40 000), in Germany as 'militarized workers' (100,000), in the 'Guardia Nazionale Repubblicana' (150,000), with the 'Blackshirts' (22,000), and in the Italian Waffen SS (10,000). Figures quoted in Cospito and Neulen, *Salò-Berlino*, 85. On the other hand, C-in-C South-West assumed on 16 March 1945 that there were 676,500 (revised figure) 'deployed Italians' on the German side, of whom 73,000 were serving in the fascist army, 16,200 in 'the SS and police', 16,000 in the 'Black Brigades', 68,300 with C-in-C South-West (30,300 in coastal battalions, etc., 29,000 in the Luftwaffe, and 9,000 in the navy), 286,000 in the Todt Organization in Italy, and 74,000 employed by construction organizations in Germany. The deployment of the remaining 143,000 was not specified. Figures quoted in 'Tagebuch Generaloberst Jodl', 82 ff., BA-MA RW 4/v. 33. On the organization of the forces of the Italian Social Republic, see Battistelli, 'Formationsgeschichte'.

<sup>260</sup> Schreiber, 'La Linea Gotica', 35 ff.

primarily, in line with the Allied 15th Army Group's main task, to prevent the German troops withdrawing from Italy. On 15 January 1945, as a result of that offensive, the front ran from the Comacchio wetlands on the north bank of the Senio river, north of Casola Valsenio and south of Vergato, to the Ligurian Sea south of Massa.<sup>261</sup>

The end of 1944 brought changes in the Allied high command. Alexander, promoted to field marshal in November (with effect from 4 June), became the Allied commander-in-chief in the Mediterranean. Clark (promoted to colonel-general soon afterwards, in March 1945) took over 15th Army Group, General Truscott succeeded him as commander-in-chief of the US 5th Army, while General McCreery had already replaced General Leese as commander-in-chief of the British 8th Army in November.<sup>262</sup>

On the German side, Vietinghoff-Scheel took over from Kesselring as Commander-in-Chief South-West and commander-in-chief of Army Group C on 10 March 1945, before Clark launched his spring offensive. General Herr remained in command of the German Tenth Army until the end of the war.<sup>263</sup>

There had been a lull in the fighting on the front in the western Alps and in the Apennines since December 1944. It lasted, with some exceptions, until the end of March 1945, but did not apply to the 4,000 or so aircraft deployed by the Americans and the British.<sup>264</sup> The Luftwaffe had only 79 aircraft in Italy in April 1945, and the Mussolini regime had a similar number.<sup>265</sup> Enemy aircraft regularly attacked the German supply lines, particularly the bridges over the Po, and the railway lines (there were 900 major disruptions in December 1944, for example), and the enemy air superiority was so overwhelming that the German and Italian fascist pilots were reduced to the role of extras.<sup>266</sup>

The Wehrmacht high command staff saw the 'problem of supplies' as being of decisive importance in the Italian theatre of war—rightly so, since the motorized units were so short of fuel that they could only 'move another 150 kilometres' in February. With a 'major enemy attack' expected in the Po valley since 23 March, this was not a promising prospect, despite some improvements during the lull in the fighting.<sup>267</sup>

The Allied high command was intent on destroying the bulk of the German forces as far as possible before they withdrew to the other side of the Po. To that end, the British 8th Army was to concentrate its operations initially on Ferrara, after which the US 5th Army was to take Bologna and advance to Bondeno, some 16 kilometres north-west of Ferrara. The two armies would then join up, cross the Po together, and advance on Verona, in order to prevent the units of Army Group C

from retreating to Germany. The offensive to destroy the German forces south of the Po, code-named Operation GRAPESHOT, began at 19.00 on 9 April 1945, following an artillery barrage and aerial bombardment, with an attack by the British V Corps and Polish II Corps in the direction of Ferrara and Bologna.

As to the relative strength of the forces,<sup>268</sup> there were 1,500,000 men and women serving in the Allied forces in Italy at the time. Of these, 266,000 belonged to the US 5th Army and 350,642 (including 70,468 Italians) to the British 8th Army. So there were altogether 616,642 men and women serving in these two major units in April 1945. The rest of the military personnel belonged to rear-area services and the military administration. On 7 April 1945 the total strength of the troops fighting for Germany was 599,514 (including 160,180 Italians).

German resistance to the attack by the British V Corps collapsed on 14 April. Units of the British 8th Army also got through the operationally important Argenta Gap in the Comacchio wetlands. The Polish II Corps, efficiently supported by the British XIII Corps, had taken Imola on the previous day.

The US 5th Army also attacked on 14 April in the morning. General Truscott, who possessed air support on a scale unprecedented in the Italian theatre of war, massed his units—except for the reinforced US 92nd Infantry Division, which was moving on to La Spezia—on a front that was only 40 kilometres wide. On 20 April the Americans, who now had some mountain troops at their disposal as well, crossed the mountains and reached the plain outside Bologna, north of the main battle line.

In this situation, Vietinghoff-Scheel's task was to get his army group to the north bank of the Po, occupy the prepared positions, and establish a new front. It was a virtually impossible operation. Almost all of Army Group C's fuel supplies had been used up by 17 April, and its armour and motor vehicles could move another 50 kilometres at most. Munitions would probably run out in three or four days. The transport situation had deteriorated dramatically as a result of the Allied air attacks on the railway lines, and no supplies had arrived via Brenner for over a week. Moreover, the troops had to leave local stocks of provisions behind as they withdrew, and there was no sign of any improvement in transport conditions. In these circumstances, the army group's quartermaster-general, Col. Ernst Fähndrich, thought it no longer possible to withdraw the troops across the Po.<sup>269</sup> To make matters worse, they would have to move through flat, easily reconnoitred terrain without any protection from Allied aircraft, and the excellent road network

<sup>268</sup> Figures according to *Deutschland im zweiten Weltkrieg*, vi. 152 ff. Army Group C ('Spitzengliederung, Offizierstellenbesetzung und Ostverbände'), Ia/Id, HQu, 6 May 1945, gives very different figures for the units, independent combat units, and supply troops of Army Group C as at 9 Apr. 1945, BA-MA RH 19 X/70, fo. 15: AOK 10 (151,999), AOK 14 (71,462), AOK Liguria (29,099), and O.Qu. (3,297), i.e. 255,857 men in all; independent combat units: AOK 10 (18,420), AOK 14 (9,719), AOK Liguria (7,316), and O.Qu. (329), total 35,784 men; supply troops: AOK 10 (10,493), AOK 14 (5,867), AOK Liguria (2,761), and O.Qu. (16,771), i.e. 35,892 men, making altogether 327,533 men. According to *The Mediterranean and Middle East*, vi/III. 333, the German land forces in Italy on 9 April 1945 totalled 439,224 men, not including the Italians.

<sup>269</sup> Geschichte der Waffenstreckung der deutsch-italienischen Truppen in Italien, 1945', BA-MA N 422/2, fo. 11.

in the Po valley made it easy for the highly mobile enemy divisions to outmanoeuvre their lame adversaries. Finally, there was yet another extremely serious problem: the bridges over the Po were all gone, and the river itself was unwadeable.

Bologna fell to the Allies on 21 April, and the race to the Po began. The US 10th Mountain Division got there first, reaching the river on the next day. German rearguard units put up bitter resistance at Finale Emilia, enabling strong Army Group C contingents to get across the river using improvised means of transport, though without their heavy weapons and equipment. But establishing a continuous front with those troops was no longer possible.<sup>270</sup>

By the end of April, when the National Liberation Committee (Comitato di liberazione nazionale) called for the great popular uprising<sup>271</sup> commemorated on Italy's Liberation Day (25 April), there was virtually no military resistance—apart from the partisans. And it was the partisans who summarily executed Mussolini on 28 April 1945.<sup>272</sup>

Describing the military situation at that point, the chief of staff of Army Group C, General Hans Röttiger, recorded in an account written shortly afterwards:<sup>273</sup> ‘All the existing gaps in the front had widened. Men streaming back were gathered together at central points by special reception bodies, reorganized, and deployed in the gaps, but they did not fight on. As a rule, they had no arms and no ammunition. The infantry was almost entirely wiped out. The last prepared and built-up resistance line, a territorially strong blocking position at the northern end of Lake Garda, was occupied by the enemy.’ And Fourteenth Army reported a hopeless situation regarding the weapons at its disposal: ‘2 light field cannon with 30 rounds of ammunition between them[,] 1 operational anti-tank cannon[,] 8–10 machine guns on a 100-kilometre-wide front[,] no tanks.’ The German Tenth Army was in a similar situation, reporting, on the night of 28 to 29 April 1945, ‘that it has practically ceased to exist’ because ‘most of the heavy weaponry, the motor vehicles and the heavy equipment [...] are left south of the Po’. And ‘there are no longer any links with subordinate staffs because of the lack of signalling equipment’. In other words, Army Group C had effectively ceased to exist. All that remained was the surrender (Operation SUNRISE), which had been discussed, and partly implemented, for weeks. It should be emphasized that Army Group C command, which was responsible for the process on the German side, acted on military grounds in the light of the local situation. Questions of overall strategy, and the frictions that arose within the anti-Hitler coalition in connection with the partial surrender of the

Source: OB Südwest, BA-MA RH 19 X /64.

German forces,<sup>274</sup> were somewhat secondary considerations, but that does not mean that the German side did not attempt to take advantage of them.

In any event, on 29 April Army Liguria laid down its arms with immediate effect,<sup>275</sup> and the instrument of unconditional surrender of the German forces in Italy was signed at Allied headquarters in Caserta near Naples. Lt.-Col. Victor von Schweinitz of the general staff signed the document on behalf of Col.-Gen. von Vietinghoff-Scheel, the Commander-in-Chief South-West and commander-in-chief of Army Group C. SS Sturmbannführer Eugen Wenner signed for SS Obergruppenführer and Waffen SS General Wolff, who, in addition to his function as senior SS and police leader, was also the plenipotentiary general of the Wehrmacht in Italy. General William D. Morgan, as chief of staff, signed on behalf of Field Marshal Alexander. The surrender entered into force at 14.00 on 2 May.<sup>276</sup>

The frequently described genesis of Operation SUNRISE can be traced back to the autumn of 1944. This was the first time an entire theatre of war had surrendered, and the reasons for the operation are correspondingly complex. Ideological, economic, military, and political considerations all played a part. The hard confrontation between the western Allies and the Yugoslavs on the issue of Trieste in 1945 was providing a foretaste of the Cold War, and Army Group C command and its associates endeavoured to take advantage of the clouds gathering on the political horizon. They put forward the watchword that the real enemy was in the east, which enabled them to offer themselves as allies in the battle against Bolshevism. However, the Grand Alliance held firm, and the German approaches, aimed at achieving a split, were stoutly rejected. The main motivation of the Allied, Italian, and Swiss parties involved in the Operation SUNRISE process was the fear of massive destruction, which had to be prevented at all costs with a view to the economic stabilization of Italy in the post-war period, as well as humanitarian concern to end the senseless bloodshed.

In this connection, writers constantly claim that the surrender by the German and Italian fascist forces shortened the hostilities in Europe by at least six, if not eight, weeks, spared northern Italy from devastation, and saved tens of thousands of lives. However, this view, which derives from statements by Field Marshal Alexander, is at odds with General von Vietinghoff-Scheel's assessment of the situation. Commander-in-Chief South-West noted, on 28 April 1945, that the fighting would quite simply stop in a day or two because of the lack of arms and ammunition. If this realistic assessment is accepted, there would hardly have been tens of thousands killed if the hostilities had continued. As to the destruction measures ordered by the Führer, Army Group C also took steps to ensure, from 11 April 1945 at the latest, that Hitler's orders in this connection would not be carried out, even if Operation

<sup>274</sup> On this, see Gruchmann, *Der Zweite Weltkrieg*, 463 ff.

<sup>275</sup> Max-Josef Pemsel, 'Kapitulation des Armeoberkommandos "Ligurien" am 29.4.1945', Materialsammlung 1945–1973, BA-MA MSG 1/2359. The unconditional surrender, which entered into force immediately, was signed in Castiglione (Piedmont) by the chief of staff, Lt.-Gen. Pemsel, on behalf of AOK Liguria. The commanding general of the American IV Army Corps, Lt.-Gen. Willis D. Crittentenberger, signed on behalf of the US Army.

<sup>276</sup> KTB OKW, iv. 1662–6 (announcement of surrender and execution order).

**Table VI.IV.1.** Losses incurred by the German Field Army in Italy, September 1943 to 31 March 1945

	Dead	Wounded	Missing	Total losses
Army 'Liguria'	76	(5)	204 (13)	70 (2)
Fourteenth Army	17,145	(544)	59,195 (1332)	45,734 (644)
Tenth Army	20,550	(1074)	106,174 (3075)	161,736 (4672)
Other units	1,034	(42)	2,998 (81)	699 (8)
Total	38,805		168,571	208,239 415,615 (11,482)

*Source:* Figures (corrected) from *KTB OKW*, iv. 1516. The numbers in brackets refer to officers. The figures in this table are those of the OKH medical officer, which do not include the losses shown in the last report and are not to be equated with the total losses incurred by C-in-C South-West.

SUNRISE failed. It was a matter of negotiating tactics that the other parties were not informed of this state of affairs. In fact Army Group C command, without whose consent Operation SUNRISE would not have been feasible, continued to haggle until the very last minute in order to obtain the best possible terms of surrender. With regard to the delaying tactics employed by some of the generals, it should also be remembered that many would have preferred not to negotiate until a decision on their 'fate' had been taken in the Reich. Their oath of allegiance apparently provoked some pangs of conscience. There was also the question whether the younger officers would also be involved in the surrender. They were well aware of the chaotic state of Army Group C command at the end of April. Furthermore, Field Marshal Kesselring, who was by then Commander-in-Chief West, intended to have Col.-Gen. von Vietinghoff-Scheel and General Röttiger court-martialled and shot as the military commanders primarily responsible for initiating the surrender. In the end, the terms of the agreement remained 'unconditional surrender'. They were accepted shortly before Hitler's suicide facilitated a return to 'normality', at a point when Commander-in-Chief South-West effectively had no alternative.<sup>277</sup> And some of those involved in the proceedings may already have been thinking about their personal future in the post-war period.

## 7. CONCLUSION

The war in Italy ended on 2 May 1945, a war in which the Allied side had lost 312,000 men and Commander-in-Chief South-West's field army had lost at least

<sup>277</sup> On the present summary, see Capus, 'Zwischen allen Fronten', IV; Deakin, *The Brutal Friendship*, 759–74; *Deutschland im zweiten Weltkrieg*, vi. 749–52; Dollmann, *Dolmetscher der Diktatoren*, 213–49; Dulles, *The Secret Surrender*, *passim*; *From Hitler's Doorstep*, *passim*; *Grand Strategy*, vi. 122–8; Knesebeck, *Zeiten des Übergangs*, 207–12; Kreis, 'Das Kriegsende in Norditalien', 507–21; *The Mediterranean and Middle East*, vi/II. 424 ff., and vi/III. 181–2, 237–45, 296–9, 328–36; Rahn, *Ruheloses Leben*, 275–95; Schiemann, 'Der Geheimdienst beendet den Krieg', 142–65; Smith and Agarossi, *Operation Sunrise*, *passim*; Theil, *Kampf um Italien*, 259–394; Vietinghoff-Scheel, *Kriegsende in Italien*, 179–238; Waibel, 1945—*Kapitulation in Norditalien*, *passim*.

415,615.<sup>278</sup> On the Italian side, at least 330,000 men, women, and children had lost their lives. Most Italians initially regarded the war as a ‘war of national liberation’. Subsequently—and in a sense, vying with that view—the idea of ‘civil war’ was introduced, an idea originally preferred by neo-fascist authors. The controversy over these competing views has become highly emotional and political, and at the same time abstract.

The practical legacy of the war that raged in Italy from September 1943 to May 1945 can be described, in short, as the damage to the image of humanity caused by brutal criminal atrocities and the impact of the war in general, or as the murderous consequence of the inhuman National Socialist regime. When they were obliged to leave the political or military stage, the very people who were jointly and specifically responsible for the murder, torture, deportation, and exploitation falsified historical reality by creating the myth of the immaculate Wehrmacht.

That myth, with regard to the Italian theatre of war, first took shape on 3 May 1945, when General Vietinghoff-Scheel issued an order of the day in which he expressed no sympathy for the victims of German tyranny, but stated, among other things: ‘It is with great pride that we can look back on the Army Group’s deeds on historic Italian soil.’ Perhaps the former Commander-in-Chief South-West was able to consider the events on the Apennine peninsula only from a technocratic viewpoint. He may have had in mind only the tactical and operational skills of the German troops, and their talent for improvisation when it came to supplies and transport. But no one could have felt any pride in Germany’s occupation policy in Italy as a whole, or in the conduct of operations by the Wehrmacht, the SS, and their fascist accomplices. A sense of shame would appear more right and proper.

As to the part the war in Italy played in the strategy of the principal protagonists, both sides pursued diversionary operations wherever possible. From the Allied point of view, the decision to embark on the campaign in Italy made sense in 1943, when London and Washington wanted to get Rome to capitulate, despite the fact that a second front in Italy could never determine the outcome of the war. For the Wehrmacht, operations in the south ultimately served solely and exclusively to prolong the war, in other words, to delay Germany’s inevitable collapse and keep the enemy first out of ‘Fortress Europe’, then out of ‘Fortress Germany’, and finally out of ‘Fortress Berlin’. In practice, however, Hitler’s troops in Italy—since the Allied invasion of Sicily in 1943 at the latest—were no longer capable of anything but a fighting withdrawal.

## GERMANY ON THE BRINK OF THE PRECIPICE

*Bernd Wegner*

# I. Waging War ‘as if . . .’

## Germany’s Strategic Position from the Spring of 1944 Onwards

Of the manifold strategic problems facing the German leadership in the second half of the war, the shortage of forces on all fronts was perhaps the most difficult, in that it was ultimately insoluble. As the possible timing of coordinated major offensives by the Allies against ‘Fortress Europe’ became clearer, so the question of how an area of rule that was still far overstretched was to be held with shrinking reserves against a numerically superior enemy became increasingly pressing. It is therefore not surprising that the struggle between the Wehrmacht High Command (OKW) and the Army High Command (OKH) over the allocation of the few forces still available became increasingly acute in the run-up to the invasions in the spring of 1944.<sup>1</sup> All the more so, since the unavoidable conflicts of interest between the central command authorities and departments were not, as a rule, settled by tough negotiations (as they were in the case of the western Allies, for example) but were simply overridden by ‘Führer decisions’. Knowing that Hitler’s priorities went to the western theatres of war, the OKW was in a more favourable position in this respect.<sup>2</sup> Nevertheless, right until the Allies landed in Normandy the OKW had repeatedly to defend itself against the complaint that, while half the army was fighting desperately in the east for the very survival of the German people, the other half was in the rest of Europe doing nothing, waiting for an invasion that never came. It is only too easy to sympathize with the disappointment and frustration that Kurt Zeitzler, for example, must have felt when, during a visit from the head of naval command, Vice-Admiral Wilhelm Meisel, in March 1944, at the height of the crisis in the Crimea, he informed his guest that, according to his calculations, ‘53 per cent of the fighting troops were currently on the eastern front, and 47 per cent, most of them “on standby”, in OKW theatres of war’.<sup>3</sup> One of the bitter witticisms circulating at the time was that the war had been lost in 1918 thanks to the ‘fleet in being’, and it was now being lost thanks to the ‘army in being’.<sup>4</sup>

<sup>1</sup> The problems in this connection are discussed at length in *Germany and the Second World War*, v/II and vii.

<sup>2</sup> See Part III, Chapter III.1 of the present volume.

<sup>3</sup> ‘Niederschrift über die Dienstreise C/Skl ins Führerhauptquartier vom 10. bis 13.3.1944’, 4, BA-MA RM 7/261.

<sup>4</sup> See ‘OKW/WFSt, Strategischer Überblick und Verteilung der Gesamtstreitkräfte des deutschen Heeres vom 13.4.1944’, 2, BA-MA RW 4/v. 876.

In mid-April 1944 the Wehrmacht Operations Staff addressed a self-justificatory memorandum on the subject to the command authorities in the east. According to that memorandum, only 131, that is, less than 40 per cent, of the 341 army and Waffen SS units that were fully operational were not deployed either in the east or on the home front. And, of those, only 41 divisions were, by their nature, suitable for deployment in the east, but they were mostly engaged in combat in Italy and Finland, in coastal protection, and in fighting partisans. The Wehrmacht High Command also warned that:

In view of the few reserves that are available, a successful enemy landing in Denmark, the North Sea, Holland, Belgium, or France that is not repelled or immediately blocked will lead to the loss of the war in a short time. For that reason, the Supreme Command, in full knowledge of the crises in the east, has taken a risk which is at the limit of its responsibility to history and the nation. The Führer expects that this explanation of the issues will suffice to prevent any more unseemly debates about the allocation of military forces in the future.<sup>5</sup>

Despite the geographical shift in strategic priorities, the Soviet Union was still the most important European theatre of war in the spring of 1944, in terms of the size of the forces deployed by all sides. A Foreign Armies department estimate of the distribution of enemy forces mustered for the assault on 'Fortress Europe' (although it contained some errors) left little doubt as to the real point of concentration. According to the department's calculations, the Soviet Union had more than 380 major formations (apart from army and army group reserves) located on its European front in February 1944, whereas the western Allies had barely 120 divisions covering the area between Iceland and North Africa, Britain and the Near East (see Table VII.I.1).<sup>6</sup> On the German side too, as the Wehrmacht Operations Staff reassuringly pointed out, 'the vast majority of the German armed forces, in respect of the number of units as well as the combat efficiency of those units, are deployed in the east'. According to the above-mentioned OKW memorandum, only 46 of the 162 army and Waffen SS infantry divisions that were operational or under assembly on 1 March 1944 were deployed 'elsewhere than in the east or on the home front', and in the case of armoured divisions, only 11 out of 34.<sup>7</sup>

While such number games provided useful support for arguments in the struggle between the Wehrmacht High Command and the Army High Command over the allocation of forces, they were no more than window dressing when it came to

<sup>5</sup> Ibid. 23. See also Jodl's similar exposition in 'Die strategische Lage im Frühjahr 1944', a briefing to the Reich cabinet on 5 May 1944, 25–31, BA-MA N 69/18.

<sup>6</sup> Even if, for the purposes of comparison, the strength of the Soviet forces is assumed to be only 50% of that figure, that still gives them a superiority of 190 to 120 divisions. According to the same Foreign Armies estimate, the British and American forces were superior only in fighters and bombers, with 13,000 aircraft in all compared with 10,400 Soviet aircraft. See OKW, Europakarte, 10 Feb. 1944 (date handwritten), Central Archives of the Ministry of Defence of the Russian Federation (Podolsk, Russia), fond 500/op. 12450/d. 292.

<sup>7</sup> See OKW/WFSt, 'Strategischer Überblick und Verteilung der Gesamtstreitkräfte des deutschen Heeres', 13 Apr. 1944, BA-MA RW 4/v. 876, esp. p. 21 and annex. On the basis of Overmans' findings in *Deutsche militärische Verluste*, 300–1, it must be assumed that the eastern army had in fact long been weaker than the figures suggested, because the figures for losses were incomplete.

Table VII.I.1. Distribution of Allied land and air forces (divisions and aircraft as per Wehrmacht Operations Staff estimates, status: February 1944)

	Inf.Div.	Armd. Div.	Abn. Div.	Total Divisions	Fighters	Bombers <sup>(a)</sup>	Total Aircraft
Iceland	2	—	—	2	—	—	—
Britain	35	14½	5	54½	3,940	4,275 (300)	8,215
Sardinia/Corsica	1½	—	—	1½	385	315 (315)	700

Germany's real needs in the eastern theatre of war. In the course of 1944, with the relative depletion of the German eastern army on the one hand, and the massive concentration of Soviet offensive units on the other, the disparity between the opposing forces on the eastern front assumed increasingly grotesque proportions. According to estimates by Foreign Armies East, the actual strength of the eastern army was already only 45 per cent of that of the Red Army sections deployed (and held in reserve) on the Soviet front in Europe at the start of the year, but it had dropped to just over a third (34.5 per cent) by the beginning of October (see Diagram VII.I.1).<sup>8</sup> This development is all the more remarkable as Soviet losses during that period were estimated at almost four times those of the Germans. The explanation for this apparent contradiction was found by Reinhard Gehlen's department to be that the Red Army had apparently brought in six times (!) more replacement forces than Germany's eastern army (see Diagram VII.I.2). Things were somewhat different, according to German estimates, with respect to the armoured capability of the opposing units. Here the German capability, which had sunk to a minimum after Stalingrad, had been doubled within a year by steadily bringing in new tanks and assault guns. The defensive capability had thus been strengthened, but it was undermined by two factors: on the one hand, only a relatively small proportion of the tanks supplied to the eastern army were in fact

<sup>8</sup> In fact, the relative inferiority of the eastern army was even greater, since the Germans continued to underestimate the head count of the Red Army forces.

**Diagram VII.I.1.** Comparison of actual strength of the German Eastern Army and the Soviet army on the European front, 1 January to 1 October 1944 (in thousands)

operational,<sup>9</sup> and on the other, the Red Army had also been able to increase what was in any case a vastly superior armoured capability of tanks—to a lesser extent in terms of proportion, but to an even greater extent in absolute numbers.<sup>10</sup>

Given the relative strength of the forces on the eastern front, a situation that had grown steadily worse since the failure of Operation CITADEL, it is not surprising that what Hitler had accepted as a 'last resort' in Directive No. 51, namely 'a loss of territory even on a major scale' in the east,<sup>11</sup> had long since developed into one long series of setbacks and retreats, with only the occasional breathing space. The Soviet Central Front under General Konstantin Rokossovsky had already succeeded in crossing the Dnieper in September, and this was followed almost immediately by the Soviet autumn offensive, in which Dnepropetrovsk, Kiev, and Gomel were lost just a few weeks later. The reverses suffered in the winter were even more deeply symbolic. On 4 January 1944, 1st Ukrainian Front crossed the Soviet–Polish border of September 1939 for the first time, at Sarny. Army Group North also came under heavy attack in the same month, and Leningrad, where Hitler had placed such high hopes in the blockade, was finally liberated. In February the German defenders had to abandon the mineral deposits at Nikopol and Krivoy Rog—including the manganese-ore mines of which, only a year before, the Führer had said that for him their loss would mean that the war was over.<sup>12</sup> Vinnica, where the German dictator had launched Operation BLUE in the summer of 1942, fell on 20 March. And just a week later Soviet troops crossed the Prut, north of Iași, and advanced into Old Romania. At the end of March, with winter on the way out, the German units on the southern wing of the eastern front found themselves thrown back almost everywhere some 300 to 500 kilometres from the positions which they had held in December. And the end of the Soviet offensive was not yet in sight. On 7 April an attack on the approaches to the Crimea was launched, leading within days to the loss of Odessa. Four weeks later the Red Army recaptured Sevastopol as well.

In these circumstances, strict compliance with Führer Directive No. 51 was out of the question. On the contrary, developments in the east forced the OKW, on 25 March 1944, to release a series of units, including the only fully operational large armoured formation in the west, II SS Armoured Corps (9th and 10th SS Armoured Divisions), for deployment on the eastern front. But this was to be the last time that Hitler yielded to Erich von Manstein's massive demands.<sup>13</sup> In the course of the winter and spring of 1944 the dictator had come to terms with the fact that the time for large-scale operations in the east was over.<sup>14</sup> It was no accident that he gave the very same reason when, at the end of March, he decided to change the

<sup>9</sup> According to a Foreign Armies East comparison of forces dated 14 Oct. 1943, 700 tanks were actually operational, out of a total of 2,304 at the disposal of the German units on the eastern front (BA-MA RH 2/2598).

<sup>10</sup> According to semi-official Russian data, the Red Army had 11,732 tanks altogether at the end of 1943, of which 5,357 were deployed at the front and 2,350 were with reserve army fronts; there were 271 tanks in the Stavka reserve and 3,754 in the hinterland. See *Velikaya Otechestvennaya Voina 1941–1945*, iii. 426.

<sup>11</sup> *Hitlers Weisungen*, 233.

<sup>12</sup> See Part I, Chapter III, n. 6 of the present volume.

<sup>13</sup> See Manstein, *Verlorene Siege*, 610–12; Ziemke, *Stalingrad*, 280.

<sup>14</sup> Manstein, *Verlorene Siege*, 615.

commanders of Army Group A and Army Group South (now renamed 'Army Group South Ukraine' and 'Army Group North Ukraine'<sup>15</sup>). Walter Model and Ferdinand Schörner, simultaneously appointed field marshal and colonel-general respectively, took the place of Manstein and Ewald von Kleist.<sup>16</sup> Neither of the new army group commanders had the reputation of a strategist, but they were both expected—not without reason—to have considerable 'staying power'.<sup>17</sup> Their unrelenting toughness, and a marked inclination to lead 'from the front' and not from behind a desk, meant that they were never suspected of being among those generals 'sitting on their backsides', 'who have given us so many losers on the eastern front'.<sup>18</sup> Equally important was the fact that both generals were reputed to be absolutely true to the party line: Schörner, holder of the *Pour-le-mérite* medal ('a leader from tip to toe'<sup>19</sup>) had been a convinced National Socialist since the early 1930s, and Model too was seen as 'a man truly in the National Socialist mould'.<sup>20</sup> Accordingly, high hopes were placed in the dictator's circle on the appointment of these two generals. Now that there were 'first-class army group commanders in the east once again', they were expected not only 'to achieve a decisive reversal of the military situation in the southern section of the eastern front, but also to overcome the "crisis of confidence" reigning hitherto in relations between the Führer and the army group commanders'.<sup>21</sup>

Not everyone shared the brief euphoria felt at Führer headquarters and by Joseph Goebbels. We find, reading between the lines of his memoirs, that Manstein himself seems to have had a much more cautious opinion of his successor's capabilities.<sup>22</sup> And he was not alone. Almost all his staff resolutely sought to resign. Far more serious, and more significant of the inner condition of the top military leadership, was the fact that the chief of the Army General Staff, the dictator's most important adviser on the conduct of the war in the east, was prompted by Manstein's and Kleist's dismissal to tender his own resignation.<sup>23</sup> Zeitzler's request to be relieved of his post, which was submitted orally and in writing and was brusquely refused by Hitler, was

<sup>15</sup> In view of the fact that both army groups had already been driven out of the Ukraine, this change of titles was, probably quite rightly, understood as purely programmatic. See Görlitz, *Model*, 182.

<sup>16</sup> See Schmundt, *Tätigkeitsbericht*, 132 (31 Mar. 1944). On the manner of his dismissal, when Hitler—as also in the case of Kleist—was at pains to avoid any suggestion of a crisis of confidence, see Manstein, *Verlorene Siege*, 615.

<sup>17</sup> See also, to the same effect, the recent biographical sketches by Ludewig, 'Stationen'; Mitcham and Mueller, 'Generalfeldmarschall Walter Model'; Schönher, 'Ferdinand Schörner'; Steinkamp, 'Generalfeldmarschall Ferdinand Schörner'.

<sup>18</sup> Goebbels, *Die Tagebücher*, pt. 2, xii. 314 (18 May 1944). That this description refers indirectly to the dismissed field marshals is clear from the propaganda minister's diary entry of 23 April 1944, in which he commented that the debacle in the east was 'mainly attributable to the fact that both Kleist and Manstein conducted their command exclusively at the map table, and that neither of these two marshals had any direct relationship with the troops' (*ibid.* 173).

<sup>19</sup> *Ibid.*, xii. 173 (23 Apr. 1944). <sup>20</sup> *Ibid.*, xi. 587 (31 Mar. 1944).

<sup>21</sup> Thus Goebbels' view, which was strongly influenced by Schmundt: *ibid.*, xi. 589 (31 Mar. 1944), and xii. 38 (1 Apr. 1944); see also *ibid.* 52 (5 Apr. 1944).

<sup>22</sup> See Manstein, *Verlorene Siege*, 616–17, and Görlitz, *Model*, 183.

<sup>23</sup> On this and the following, see Manstein, *Verlorene Siege*, 615; Heusinger, *Befehl im Widerstreit*, 303 ff. and 306 ff.; Warlimont, *Im Hauptquartier*, 449–50 and 469, and Meyer, *Adolf Heusinger*, 257–8.

an expression both of personal exhaustion and of a general mood of resignation that was spreading in the Army General Staff during the spring of 1944. That resignation was more than a passing phenomenon. It did not spring from some spectacular quarrel, but rather from all-round mental wear and tear. Years of working on the staff under extreme nervous tension, the constant responsibility for hundreds of thousands, indeed millions, of human lives, the daily, often fruitless struggle to put through measures which they knew to be right, and the endless news of military disasters—all weighed heavily on the senior members of the Army General Staff, especially when there was little prospect of any real turn for the better. Zeitzler's hopes of reforming the structure of the top military leadership also began to fade once Manstein was gone. Moves, in conjunction with Friedrich Fromm and Albert Speer, 'to break up the military coterie surrounding the Führer' and instead install 'a commander-in-chief of the army, an energetic head of the OKW, assisted by a good quartermaster-general for the Wehrmacht as a whole',<sup>24</sup> soon got bogged down.

The chief of the Army General Staff, who was now increasingly represented by a deputy, was clearly demoralized and unwell, and he was not the only one. Adolf Heusinger, who, as head of the operations division, was responsible for representing Zeitzler, would have been only too glad to give up his post. 'Not being a fighter by nature',<sup>25</sup> he confessed (in letters to his wife) that he had suffered 'inwardly throughout the entire course of the war', and that he awaited its end with growing despair, haunted by thoughts of suicide.<sup>26</sup> In these circumstances, the atmosphere in the General Staff also suffered inevitably, and many disagreeable issues that should have been dealt with at once were put on the back burner. Colleagues were reminded of the conditions that had prevailed earlier under Franz Halder and Walther von Brauchitsch. Heusinger repeatedly held orders up, 'because Zeitzler was not in the mood, and Zeitzler thought Hitler was not in the mood, and so on'.<sup>27</sup>

The fact that Zeitzler and his colleagues were tired of office did not go unnoticed outside the General Staff, and it became a source of further friction. Goebbels noted at the time—not, it would seem, without *Schadenfreude*—that 'Schmundt is getting a sore throat cursing the General Staff, which is constantly causing problems and is wholly unwilling and unable to comply with the Führer's way of thinking and working.' Zeitzler appeared to Hitler's chief adjutant to have fallen 'completely into the hands of the General Staff officers around him, who have turned him into a creature suited to their purposes'.<sup>28</sup> Even other officers who—like Heinz Guderian,

<sup>24</sup> *Alles was ich weiß*, 207.

<sup>25</sup> According to the contemporary opinion of his ordnance officer, Captain Münchhausen, quoted in Meyer, *Adolf Heusinger*, 262.

<sup>26</sup> Heusinger's letter to his wife, 26 Apr. 1944, quoted in ibid. 258.

<sup>27</sup> Thus Münchhausen, quoted in ibid. 261 and 865 (n. 372). Guderian wrote later (*Erinnerungen eines Soldaten*, 320) that he had inherited 'a disorganized staff' from his predecessor.

<sup>28</sup> It was therefore, above all, 'difficult, at present, to get him on board with regard to the National Socialist transformation of the army'. Goebbels, *Die Tagebücher*, pt. 2, xii. 409 (6 Jun. 1944). In Speer's opinion too, expressed shortly after the end of the war, Zeitzler, despite his energetic and active nature, was 'not personally in control of the situation. He relied to a great extent on the opinion of his general staff. He was therefore largely under its control, and was more or less its mouthpiece.' *Alles was ich weiß*, 205.

for example—still imagined that a dozen armoured divisions could turn the war around, had nothing good to say about the Army General Staff. The inspector-general of armoured troops suspected, probably rightly, that Zeitzler's staff were half-hearted and dilatory in executing the orders from on high to release units from the eastern front for the benefit of the west.<sup>29</sup> Guderian's further accusations, that the General Staff was remote from the front and reluctant to take decisions, broke into the open at the beginning of May and led to a further request from Zeitzler to be relieved of his post, which Hitler again refused.<sup>30</sup>

Another reason—by no means the least important—why the army leadership must have been depressed by the dismissal of Manstein and Kleist was that it probably meant that the battle for mobile defence in the east was now finally lost. It is true that Hitler had been persuaded in February, literally at the last minute, to allow the German units encircled on Eighth Army's left wing at Cherkassy to break out,<sup>31</sup> and that, on 8 May, he had finally abandoned his resistance to evacuation of the Crimea. Nevertheless, both events are evidence not so much of the army leadership's influence as of its impotence. In both cases, Hitler had been able to impose his principle that every square metre of captured territory must be defended until the last possible moment, irrespective of horrendous losses. In the case of the Crimea, where he feared that evacuation would also have negative political repercussions on Romania, Bulgaria, and Turkey,<sup>32</sup> he held to this principle for a full six

<sup>29</sup> See Guderian, *Erinnerungen eines Soldaten*, 293.

<sup>31</sup> For details see Part VII, Chapter III.6(c) of the present volume.

<sup>32</sup> See Hillgruber, *Die Räumung*.

months, and on 30 April—just eight days before he himself issued the order to evacuate!—he demonstratively dismissed Col.-Gen. Erwin Jaenecke, the commander-in-chief who, more than any other, had constantly insisted that the army should withdraw from the Crimea.<sup>33</sup>

The same line of holding on at all costs was taken in Führer Order No. 11 of 8 March 1944, on the appointment of 'battle commandants' of 'local strongpoints' and 'fortified places'.<sup>34</sup> The commandants, each of whom was to be 'a specially selected, hardened soldier', were to be given comprehensive full powers, with the main task of preventing the enemy from occupying areas of decisive operational importance. They were to 'allow themselves to be surrounded, thereby holding down the largest possible number of enemy forces and establishing conditions favourable for successful counter-attacks'.<sup>35</sup> However, in the course of the next few months the concept of 'fortified places' proved counter-productive, and sometimes, as in the case of Vitebsk and Vilnius, positively catastrophic.<sup>36</sup> Frequently eroded from the outset in the conflict of interests between the front commanders and Führer headquarters, it never really achieved its main aim of delaying and weakening the Soviet advance. Ultimately, the 'fortified places' seemed to have tied down the German forces rather than those of the enemy, which simply overran or bypassed them, and did not allow themselves to be tied down. By 13 July 1944 the Red Army had taken eleven of the original twelve 'fortified places' in the area of Army Group Centre. The consequences for the garrisons in question were devastating in every case, with more than 30,000 men lost in Vitebsk alone. Altogether, about 10 per cent of all German losses incurred by mid-July, in the course of the Soviet summer offensive against Army Group Centre, were attributable to the fortress concept.<sup>37</sup>

However, there was no focus on any of this before the launch of the major Allied offensives in June 1944. In the spring of that year, despite all the Soviet successes, the eastern front remained curiously overshadowed by the impending invasion in the west. Preparing for that invasion was 'the overriding preoccupation of Hitler and his military advisers'.<sup>38</sup> But the invasion took its time coming, and the wait was nerve-racking. The Army General Staff was not alone in beginning to wonder whether the western Allies 'are really going to invade'.<sup>39</sup> Even Hitler, although convinced in his heart of hearts that the invasion was imminent, could 'not help

<sup>33</sup> For the last time in a letter to Hitler dated 30 Apr. 1944, BA-MA RH 20-17/270. Jaenecke had served as commanding general in Stalingrad during the siege, and he was determined not to repeat the experience. In late October 1943, as commander-in-chief of Seventeenth Army, he had already warned that his units would break out on their own authority if necessary. The following entry in Goebbels' diary on 27 Apr. 1944 is particularly telling in this connection: 'The Führer does not think much of Col.-Gen. Jaenecke in the Crimea either. I am sharply critical of him. Jaenecke is the sort of smug, self-satisfied officer who goes into shock if a serious crisis occurs' (*Die Tagebücher*, pt. 2, xii. 197). In January, however, the propaganda minister had still been referring to Jaenecke in much more positive terms, not least because he was impressed by the latter's reports from the Stalingrad pocket; see *ibid.* xi. 176 (26 Jan. 1944).

thinking, sometimes, that the whole thing is ultimately just brazen theatrics'.<sup>40</sup> The calm was deceptive. The atmosphere in the dictator's circle at the Berghof struck a visitor as 'a mixture of war and peace'.<sup>41</sup> In the east too, the situation seemed remarkably undramatic for the time being, apart from developments in the Crimea and some lesser trouble spots. In a directive issued at the beginning of April, Hitler boldly asserted that the Russian offensive in the southern section of the eastern front had 'passed its peak. The Russians have exhausted and fragmented their forces.' Thus, 'the time has come to bring the Russian advance to a final standstill'.<sup>42</sup> Alfred Jodl too, in an address to the Reich cabinet a month later, expressed his conviction that Joseph Stalin's victorious advance had 'reached its culminating point'.<sup>43</sup>

Such optimism appears surprising, and not only with the benefit of hindsight. In March the Foreign Armies East department of the Army General Staff had already pointed out 'that there was no reason, in respect of manpower or equipment, to expect any let-up in the Russian offensive in the coming months, apart from short pauses in the operations'. And as Gehlen expressly recorded in a file note,<sup>44</sup> this situation assessment, which was obviously also presented to Hitler, was 'fully endorsed by the chief of the Army General Staff'. In the following weeks Gehlen's department had repeatedly warned that the Red Army was preparing to launch a large-scale summer offensive with far-reaching objectives, so the Army General Staff had mixed feelings about the perceptible decline in the fighting in the east from mid-May. On the one hand, the relaxation of tension came as a relief. Compared with the nerve-racking situation in the west, and the dramatic deterioration in Italy, where the Allies entered the capital on 4 June 1944,<sup>45</sup> the eastern

Hitler repeatedly expressed the same view in conversations with Goebbels during the weeks that followed. See Goebbels, *Die Tagebücher*, pt. 2, xii. 129 (18 Apr. 1944), and 196 (27 Apr. 1944).

<sup>43</sup> 'Vortrag vom 5.5.1944: Die strategische Lage im Frühjahr 1944', 10c, BA-MA N 69/18.

<sup>44</sup> FHO (Chef), file note, 13 Apr. 1944, BA-MA RH 2/2565.

<sup>45</sup> On developments in Italy and the fall of Rome, see Part VI, Chapter IV of the present volume.

front seemed, for the time being, almost like a secondary theatre of war. Zeitzler talked of a consolidation of conditions in the east, and Heusinger too appeared 'quite confident' at times.<sup>46</sup> On the other hand, there were no illusions about the fact that the calm was probably just the calm before the storm, from which—as Heusinger ominously predicted on 12 June—there could well be 'a rude awakening in a few days' time'.<sup>47</sup>

The fact that the Red Army would launch a large-scale summer operation sooner or later had been an open secret since May. Even propaganda minister Goebbels, who only received his information at second hand, had been expecting—a full month before Operation BAGRATION was actually launched—an 'enormous Soviet offensive [...], probably timed to coincide with the invasion planned by the English and the Americans'.<sup>48</sup> The question that was harder to answer was *where* the point of concentration of the offensive that everyone expected would lie. Basically, as the Germans saw it, the enemy had two options: either he could try to advance from the Lutsk–Kovel–Kamin Kashirskiy area, via Warsaw, to the Baltic coast, or he might be tempted to launch an attack against the Balkans from the area between Pripyat and the Black Sea, via Romania, Hungary, and Slovakia.<sup>49</sup> On the assumption that, apart from minor holding attacks on other sections of the front, the Red Army would be in a position to launch only *one* of the two large-scale operations, Foreign Armies East quickly and unambiguously settled on the Balkan operation as the more likely scenario. The distribution of the Soviet forces, as well as political considerations, appeared to support this assumption. Would the loss of the Romanian oilfields not hit Germany incomparably harder than the loss of Belorussian forests? Strong Communist influence in the Balkan States, and the likelihood of weaker resistance there, also promised rapid, resounding successes. Furthermore, a Balkan operation would, it was thought, guarantee the Soviet Union political control of the strategically important south-eastern area, where the British and American powers were also interested in gaining a foothold.<sup>50</sup>

As in the case of the forthcoming invasion in the west, the predictions as to the point of concentration of the attack in the east proved to be well-founded but wrong. The German intelligence services in the east, like those in the west, had fixed on a specific geographical area where they expected the attack to take

<sup>46</sup> See Goebbels, *Die Tagebücher*, pt. 2, xii. 419 (7 Jun. 1944), and Meyer, *Adolf Heusinger*, 263.

<sup>47</sup> Meyer, *Adolf Heusinger*, 263.

<sup>48</sup> Goebbels, *Die Tagebücher*, pt. 2, xii. 333 (21 May 1944). See also Jodl's comments in his briefing to the Reich cabinet on 5 May 1944, 'Die strategische Lage im Frühjahr 1944', 23–4, BA-MA N 69/18.

<sup>49</sup> These options already formed the basis for the Wehrmacht Operations Staff's judgements in February. See 'WFSt/Op (H), Vortragsnotiz für Chef OKW vom 13.2.1944', 2–3, BA-MA RW 4/v. 829. See also Heider's analysis in 'Zum Einfluß falscher Lagebeurteilung', Kröker's in *Fehleinschätzung*, and esp. Part V, Chapter I.3 of the present volume.

<sup>50</sup> This calculation was highly relevant, particularly in the context of British ambitions. However, London was already able to come to an arrangement with Moscow on 5 May 1944, based on a proposal—fatally reminiscent of the 1939 Hitler–Stalin pact—to divide south-eastern Europe into two separate operational zones (Romania as the Soviet operational zone, and Greece the British operational zone). The two powers' respective spheres of influence in the region as a whole were subsequently negotiated in percentage terms when Churchill met Stalin in Moscow on 9 October. See Hillgruber, *Der Zweite Weltkrieg*, 135–6 and 141–2.

place—in the east, the southern section of the eastern front, and in the west, the Channel coast—and they stuck firmly to their view of the situation to the very end. Indications to the contrary, produced by the Luftwaffe high command among others, were noted, but their operational and strategic significance was misinterpreted. Zeitzler too was apparently still convinced on 20 June that an attack would be launched against the southern rather than the central section of the front,<sup>51</sup> and even on the morning of 25 June, when the Soviet offensive against the central section of the front had been under way for almost three days, the head of Foreign Armies East still assured the chief of the General Staff that, 'despite the developments in the area of Army Group Centre, there is at present no reason to change the assessment of the enemy's plans, particularly as regards the point of concentration of the entire Russian operation, which is expected to be in the area of Army Group North Ukraine'.<sup>52</sup> Hitler himself, on the other hand, had already appeared more sceptical in the last few days before the Soviet offensive was launched, and had warned the Luftwaffe on 21 June that Army Group Centre was about to be attacked. Goebbels noted, after a private discussion on the same day, that the Führer 'is quite sure the offensive will be launched tomorrow morning, Thursday 22 June, because of the date's connotation. The Bolsheviks' preparations for the offensive are complete'.<sup>53</sup>

Once again, as the next day was to show, the dictator's proverbial intuition had not failed him. Those who still believed in him may well have seen this as proof of his genius. And there were still some straws—though fewer and fewer—to clutch at, in those months before the summer's great disasters. After all, weren't new units still being formed overnight, and new records being achieved in the arms industry? Hadn't the Allied advance in Italy been successfully blocked, the situation in Hungary stabilized since the Germans moved in, and Finland successfully deterred from coming to terms with the Soviet Union? And, above all, wouldn't the retaliation weapons, the V-1 rockets deployed against England from 12 June on,<sup>54</sup> turn the tide of war? For the optimists—and optimism was a duty, after all!—it was all a matter of interpretation. And it seems that confidence increased in direct proportion to the deterioration in the real situation. Jodl's above-mentioned address to the Reich cabinet on 5 May 1944 is a typical example.

Without in any way concealing the serious nature of the situation and the potential threats to the Reich, the chief of the Wehrmacht Operations Staff—if his speaking notes are to be believed—took a much more optimistic view than in his sombre address to the Reichs- and Gauleiters six months before.<sup>55</sup> Doubts as to

<sup>51</sup> See Irving, *Hitler's War*, 644.

<sup>52</sup> FHO (Chef), file note, 25 June 1944, BA-MA RH 2/2565, fo. 18. Gehlen's assurance is all the more surprising in that he draws attention, in the same connection, to 'the almost complete lack of radio intelligence and air reconnaissance', and to the fact 'that the picture of the enemy forces is based almost exclusively on reports from agents'.

<sup>53</sup> Goebbels, *Die Tagebücher*, pt. 2, xii. 524 (22 Jun. 1944). See also Irving, *Hitler's War*, 644.

<sup>54</sup> For a more detailed account of the use of V-weapons, see *Germany and the Second World War*, vii. 420–58.

<sup>55</sup> The text of the address delivered on 7 November 1943 is contained in *KTB OKW*, iv. 1534–62.

whether Germany had sufficient forces at its disposal to defend its territory were brushed aside with a reference to history: 'Very few commanders have ever been lucky enough to have sufficient forces at their disposal!' In any case, 'the strongest possible efforts' had been made to create more reserves. 'The impossible had been demanded, and all that was possible had been achieved.'<sup>56</sup> Jodl's statements about the eastern front bordered on euphoria. At the peak of the battles for the Crimea, and only a few days before the Germans were forced to withdraw from the peninsula, he told the members of the cabinet, in all seriousness, that the southern section of the front 'is standing firm, and is being increasingly fortified, day by day'; Army Group North and Army Group Centre were, in any case, 'firmly established in good positions'. Moreover, 'Bolshevik material and manpower too [...] are not inexhaustible either.' The fighting value of the Red Army was deteriorating 'rapidly, month by month', and above all, 'the bulk of the infantry was no longer worth powder and shot'.<sup>57</sup> As to Finland, Hitler's chief strategist actually stated that major Soviet attacks were 'impossible' at present.<sup>58</sup> He was also hopeful about the war at sea, despite the prevailing crisis. New U-boats would go into action in the summer, and 'attacks on the enemy's maritime connections will be resumed, with the prospect of major successes'.<sup>59</sup> Jodl even had encouraging remarks to make about the air war. Pointing to the rising production figures for fighters, fighter bombers, night fighters, and heavy fighters, he stressed that the new fighter types equipped with jet engines, in particular, would give Germany 'a decisive lead over enemy aircraft'. Furthermore, even Allied experts had meanwhile realized that 'aircraft alone [...] have never beaten a well-equipped modern army'.<sup>60</sup> Only a week after Jodl's address, 935 daylight bombers from the US 8th Air Force attacked fuel plants in central and eastern Germany. As Speer later recounted, this marked 'a new era in the air war' and meant 'the end of German arms production'. 'On that day,' he wrote, 'the technological war was decided.'<sup>61</sup>

Jodl's assertions had almost nothing to do with the realities of the war. The purpose of his declarations, in this case as in many others, was clearly not to inform listeners about the war situation as such, but rather to erect psychological and rhetorical barriers against the despair that was taking hold, even in leadership circles. The more hopeless the battle against the external enemy, the more resolute must be the fight against 'defeatism', seen as the most dangerous internal enemy. Shattering reports from the front could no longer be prevented, but they should not be allowed to go down so badly that nothing positive could be derived from them. The attitude to the unmistakable rapprochement between Japan and the Soviet Union which Jodl adopted in his address was entirely along these lines. Describing

<sup>56</sup> 'Die strategische Lage im Frühjahr 1944', manuscript, 25–6, BA-MA N 69/18.

<sup>57</sup> Ibid. 10a–c.

<sup>58</sup> Ibid. 11. The major Soviet attack on the Karelian Isthmus was launched less than six weeks later. See, in this connection, the account in Part VI, Chapter I of the present volume.

<sup>59</sup> 'Die strategische Lage im Frühjahr 1944', manuscript, 40, BA-MA N 69/18.

<sup>60</sup> Ibid. 36–7.

<sup>61</sup> Speer, *Erinnerungen*, 357. On the background and sequence of events, see *Germany and the Second World War*, vii. 146–9.

the rapprochement as 'not altogether pleasing', he nevertheless saw an 'advantage' in it for the conduct of the war as a whole, since it put paid to America's hope of 'using Vladivostok as a base for the air war against Japan, and could therefore make the hard battle a little easier to fight'.<sup>62</sup> The wait for the British and American landing in western Europe was of great assistance to the German leadership in its efforts to present the military situation in an optimistic light, and to prevent any reduction in readiness to wage war. Depicted as the decisive battle of the war, the invasion was, as it were, the event on which all Germany's hopes were pinned in the spring of 1944. It was presented as the key event that would mark the division between the problem-ridden present and the bright future. Germany's anticipated victorious defence would 'transform the military and political situation from top to bottom, because a landing operation of this kind, prepared in every detail over many years, could not simply be repeated, not to mention the political repercussions in England and America'.<sup>63</sup>

Hitler himself had long held that the invasion would decide the outcome of the war and its failure would be 'the end of the story'.<sup>64</sup> Everything would take a turn for the better, and in an inherently hopeless strategic situation a new horizon would open up, putting all present hardships and problems into perspective. That bright future seemed already lost, however, when the Soviet summer offensive broke through the German eastern army on 22 June, and the hopes that had been bound up with it gave way to a perceptibly more sombre mood. Bernard Montgomery's Allied army group had managed to assemble well over 600,000 troops, more than 200,000 tons of equipment, and close on 100,000 motor vehicles in the bridgehead on the Normandy coast. A fruitless German counter-attack on the invasion front east of the Orne had to be broken off after a few days. The Atlantic fortress of Cherbourg was blocked off. In Italy, Perugia fell to the Allies in those same days, and the German troops on Elba were evacuated. Finland appeared to be on the brink of collapse in the face of very heavy Soviet attacks. On top of everything, the US 8th Air Force had bombed industrial targets (above all, hydrogenation plants) in northern Germany just before the Soviet Operation BAGRATION was launched, and had then sent some 2,500 bombers and fighters against Berlin on 21 June. As Goebbels had to record, the government quarter in particular had been 'very hard hit by the enemy air gangsters'.<sup>65</sup> Nevertheless, as the next few weeks were to show, this was all relatively harmless compared with the orgy of destruction to which the eastern front was about to be exposed.

The shattering effect of the Allies' coordinated multi-frontal attack on 'Fortress Europe' in June 1944 was felt, as Hitler's 'Platterhof speech' shows, at the very centre of power. On 26 June 1944 more than 100 high-ranking participants in an

<sup>62</sup> 'Die strategische Lage im Frühjahr 1944', manuscript, 46, BA-MA N 69/18.

<sup>63</sup> Ibid. 50. See also, in very similar vein, Goebbels, *Die Tagebücher*, pt. 2, xii. 407 (6 June 1944).

<sup>64</sup> Hitler's *Lagebesprechungen*, 444 (evening situation, probably 20 Dec. 1943). The fact that the invasion was also regarded on the Allied side as absolutely decisive for the outcome of the war is quite rightly stressed by Salewski, 'Die Abwehr der Invasion', 220 ff.

<sup>65</sup> Goebbels, *Die Tagebücher*, pt. 2, xii. 533 (23 Jun. 1944).

armaments conference Speer had organized in Linz gathered at the Platterhof<sup>66</sup> to hear a speech by the Führer.<sup>67</sup> Although none of those present had any idea that this was to be the last speech that Hitler would make to a large non-military audience, there were already—at least in hindsight—many signs of the approaching end. There was, first of all, the appearance of the speaker himself, whose 'frightening state of exhaustion'<sup>68</sup> the armaments minister was not alone in noting. Other leading industrialists and ministry officials who were present, Hans Kehrl for example, who had heard the dictator express himself 'clearly and precisely' in discussions only a few weeks earlier, were appalled:

The man that Speer was bringing in looked nothing like the same man. [...] It was almost as if Speer had to propel him onto the podium like a puppet. His movements were awkward, his arms hung limp at his sides, his voice was weak. He talked about everything under the sun, except what we had expected to hear. [...] He had once been a master of the spoken word. Now, he spoke haltingly, didn't finish his sentences, became lost in thought; in short, he looked like someone in a state of extreme exhaustion and mental distraction. He was clearly not in control of himself.<sup>69</sup>

Although Hitler employed the keywords which Speer had given him, he was manifestly unable to convince his audience on the substantive issues, or to grip their emotions.<sup>70</sup> 'We were all dumbfounded,' the armaments minister admitted later.<sup>71</sup> And Kehrl summarized the general impression which Hitler had left on his audience as follows: the man was 'no longer capable of ruling', and they were all 'on a stricken ship, with no one at the helm'.<sup>72</sup>

Hitler's dreadful physical and mental condition on that day—and increasingly often in the further course of the war<sup>73</sup>—not only sheds light on the individual problem of a chronically overworked and increasingly overburdened dictator. Even

<sup>66</sup> 'Platterhof' was the name of a hotel built in Obersalzberg before the war, on Hitler's instructions, mainly to provide accommodation for guests of the dictator, who lived at the Berghof nearby.

<sup>67</sup> Domarus, *Hitler. Reden und Proklamationen*, ii. 2113, gives the wrong date, 4 July, for this event. Sources also vary as to how many people were present. Speer, *Erinnerungen*, 369, speaks of 'about a hundred', whereas, according to Kehrl, *Krisenmanager im Dritten Reich*, 395, there were about 150 and, according to Domarus, as many as 200. On the purpose and subject matter of the armaments conference, see *Germany and the Second World War*, vi/II. 808–9.

<sup>68</sup> Speer, *Erinnerungen*, 369. <sup>69</sup> Kehrl, *Krisenmanager im Dritten Reich*, 395–6.

<sup>70</sup> Significantly, according to the surviving sound documents, the speech was interrupted only once by applause. See Domarus, *Hitler. Reden und Proklamationen*, ii. 2114.

<sup>71</sup> Speer, *Erinnerungen*, 370.

<sup>72</sup> Kehrl, *Krisenmanager im Dritten Reich*, 396–7. Only Goebbels, who was not present at the speech, wrote in his diary a few days later that Hitler had made some 'extraordinarily strong and decisive statements about the current military situation'; *Die Tagebücher*, pt. 2, xii. 568 (29 June 1944).

<sup>73</sup> The main reason for this was Hitler's Parkinson's disease, but the extremely unhealthy life he led must also have played a part. His ability to lead was seriously compromised in that he was confined to his bed for days at a time, particularly in the last week of September and first week of October. On this, see Kershaw, *Hitler 1936–1945: Nemesis*, 611–12 and 726 ff.; also Irving, *The Secret Diaries of Hitler's Doctor*, 52 and 119, Schenck, *Patient Hitler*, 388 ff., and Carr, *Hitler*, 144 ff. Hitler told Goebbels on 2 December 1944 that 'he has his enemies in the General Staff, not his enemies at the front, to thank for this nervous disease' (Goebbels, *Die Tagebücher*, pt. 2, xiv. 333).

more, it illustrates one of the decisive structural weaknesses of an autocratic regime in which—with the collapse of traditional government institutions—the person of the leader, as Goebbels asserted without exaggeration, was 'for us, the decisive factor for the outcome of the war'.<sup>74</sup> In the given situation, Hitler's condition was therefore nothing less than a serious impairment of the strategic decision-making centre at a time of extreme military threat. Three weeks after the invasion in the west, and four days after the major Soviet offensive against Army Group Centre began, disaster was looming simultaneously on both sides of the continent. From the east, 'news of a large-scale Bolshevik breakthrough' arrived on 26 June 'like a bolt from the blue', and in the west, Cherbourg, a deep-water harbour on the Atlantic coast that was extremely important to the Allies for supply purposes, was 'now expected to fall any day, or almost any hour'.<sup>75</sup> Developments in the days and weeks that followed<sup>76</sup> exacerbated and accelerated the leadership crisis in the regime that had long been the normal state of affairs. A striking illustration of the process was the increasingly hectic 'renewal' of personnel in almost all top military posts.

Apart from some vacancies due to accidental death or similar misfortune (Hans Valentin Hube, Eduard Dietl, Erwin Rommel),<sup>77</sup> the reshuffle was prompted by the unending series of spectacular military setbacks in the west and in the east, for which—as in previous months and years—scapegoats were sought and found. But now, unlike then, the victims of Hitler's crisis management were not just those he found awkward, but also generals who were distinctly loyal to the Führer. The first to go was Field Marshal Ernst Busch, who was replaced as commander-in-chief of Army Group Centre by Walter Model on 28 June, and who was only employed again in the last weeks of the war. Significantly, the charge that he had been a 'complete military failure'<sup>78</sup> was levelled at a man who was regarded in Führer headquarters as 'very sound politically' and who had simply obeyed his Führer's orders.<sup>79</sup> Just two days later Hitler also fell out with the chief of the Army General Staff. In a heated argument with Hitler, Zeitzler refused to take responsibility for the defence of Courland, which in his view was pointless, and for the encirclement thus threatening Army Group North. He had already been persuaded to act against his own convictions on two occasions—'once at Stalingrad, and once regarding the Crimea'—and he was not about to do so for the third time. Moreover, he said, the

<sup>74</sup> Goebbels, *Die Tagebücher*, pt. 2, xii. 196 (27 Apr. 1944). Kershaw, *Hitler 1936–1945: Nemesis*, 611–13, rightly criticizes Speer's individualistic interpretation of the dictator's weaknesses.

<sup>75</sup> Goebbels, *Die Tagebücher*, pt. 2, xii. 551 (26 June 1944). Heusinger too admitted at the time that 'the scale of the crisis in the east is very surprising' (quoted in Meyer, *Adolf Heusinger*, 264). On the battles for Cherbourg, see Neitzel, 'Der Kampf um die deutschen Atlantik- und Kanalfestungen', 387 ff. and, on the Soviet operations, see Part V, Chapter II of the present volume, esp. section 3.

<sup>76</sup> For more on developments in the west, see *Germany and the Second World War*, vii. 585–635 and, on developments in the east, Part V, Chapter II of the present volume.

<sup>77</sup> Col.-Gen. Hube and Col.-Gen. Dietl, who were highly valued by Hitler, lost their lives in plane crashes on 21 April and 23 June 1944, and Field Marshal Rommel was forced to commit suicide on 14 October 1944.

<sup>78</sup> This quotation and the following one are from Goebbels, *Die Tagebücher*, pt. 2, xii. 563 (28 June 1944).

<sup>79</sup> See Mitcham, 'Generalfeldmarschall Ernst Busch', 24 ff.

war was lost and it was time to end it.<sup>80</sup> The dispute ended with the chief of the General Staff having a heart attack. He remained formally in office for the time being, but had to be represented once again by Heusinger. Finally, on the evening of 20 July, his tasks were entrusted to Guderian.<sup>81</sup> Other eminent commanders were also relieved of their posts during those weeks: in the east, the commander-in-chief of Army Group North, Col.-Gen. Lindemann, who had long been an awkward customer, was replaced by General Johannes Friessner on 3 July, and in the west, the Commander-in-Chief West, Gerd von Rundstedt, was replaced by Günther von Kluge on the same day.<sup>82</sup> Then, only two weeks later, Rommel was wounded and von Kluge had to take command of Army Group B as well.

These numerous dismissals, and many more of the same kind, together with vacancies arising for other reasons,<sup>83</sup> largely contributed to the new face of the German military leadership, particularly the Army High Command, from the summer of 1944 on. The repercussions of the assassination attempt on 20 July were even more decisive in this respect. For one thing, the ensuing wave of arrests included, in addition to the narrow circle of accomplices, many actual or alleged accessories, thus adding to the already long list of changes and new appointments required. For another, the campaign against the army leadership as a 'hotbed of reaction' could not fail to affect its professional self-image. While, on the night of 21 July, Hitler still held that 'only a very small clique of ambitious, unscrupulous, and criminally stupid officers' were responsible for the plot,<sup>84</sup> only a few days later he showed himself determined 'to exterminate, root and branch, the whole clan of generals who have stood against us, and to break down the wall that this clique has artificially erected between the army, on the one hand, and the Party and the people, on the other'.<sup>85</sup> Limits may have been set to the 'process of extermination'<sup>86</sup> for the time being, in view of the extremely precarious military situation, but the psychological effects were obvious. Daily work, particularly that of the army's operations staffs, was now conducted in a constant atmosphere of fear and suspicion, distrust, hatred, and denunciation.<sup>87</sup> Hitler's appointment of Reich Leader SS Heinrich Himmler in place of Friedrich Fromm, as the new head of army armament and commander of the replacement army (increasing the duties

<sup>80</sup> Zeitzler, 'Abwehrschlachten in Rußland', 165 ff., BA-MA N 63/80.

<sup>81</sup> Manstein, Schmidt, and Reinhardt had apparently also been considered as successors to Zeitzler; see Goebbels, *Die Tagebücher*, pt. 2, xiii. 121 (15 July 1944). Zeitzler was subsequently transferred to the 'Führer reserve' and discharged from the Wehrmacht on 31 January 1945. See also Stahl, 'Generaloberst Kurt Zeitzler', 288–9, and Meyer, *Adolf Heusinger*, 264 ff.

<sup>82</sup> Just seven weeks later, on 17 August, Kluge too was relieved of his command, and two days later he committed suicide on the way back to Germany; see Mueller, 'Generalfeldmarschall Günther von Kluge', 134. Rundstedt was reappointed Commander-in-Chief West soon afterwards.

<sup>83</sup> e.g. Dollmann, the commander-in-chief of Seventh Army, died on 28 June, and the commander-in-chief of Armoured Group West, Geyr von Schweppenburg, was obliged to stand down along with Rundstedt; see *Germany and the Second World War*, vii. 600. Many other generals were taken prisoner in the course of the Soviet summer offensive.

<sup>84</sup> Radio address of 21 July 1944, quoted in Domarus, *Hitler. Reden und Proklamationen*, ii. 2128.

<sup>85</sup> Quoted in Goebbels, *Die Tagebücher*, pt. 2, xiii. 142 (23 July 1944). <sup>86</sup> Ibid.

<sup>87</sup> See also Meyer, *Auswirkungen des 20. Juli 1944*, 476 ff.

associated with that post at the same time),<sup>88</sup> which he carried out right away on 20 July, was just as symptomatic of the new style of leadership as was the collaboration of the new chief of the Army General Staff, Guderian, with the military 'court of honour', established on Hitler's orders, which was to expel the 20 July 'traitors' from the Wehrmacht and hand them over to the people's court to be tried as common criminals. Quite apart from the question of how far Guderian's policy of compliance was determined by inner conviction, tactical considerations, or personal animosity towards the old General Staff,<sup>89</sup> one thing is certain: his efforts to transform what was, in his view, a 'disorganized'<sup>90</sup> and in fact a 'virtually leaderless' General Staff, now that Heusinger and many other officers were gone,<sup>91</sup> into a tool in the dictator's hands with no will of its own soon bore fruit. True, not all the General Staff officers in the operations division left for the front within 24 hours, as Guderian had clearly intended initially, but, as one of them noted with regret, 'the old solidarity and comradeship' gradually disappeared.<sup>92</sup> Hitler himself described the same state of affairs, in his own way, when he told Goebbels at the beginning of December that 'his enemies in the General Staff' had finally been 'reduced to silence, for fear of the noose'.<sup>93</sup>

The new army leadership now largely fell in with Hitler's line, not only politically and ideologically, but in military matters too. His principle of holding on at all costs was no longer fundamentally called into question. More and more large cities and traffic nodes were classified, by decree, as 'fortresses' and 'fortified places', thus countenancing their total destruction into the bargain. Capital cities and cultural metropolises had been spared so far, provided they were not seen as symbols of Bolshevik power, but they too were now to fall victim to systematic destruction. In the case of Rome, the possibility of comprehensive destructive measures had already been discussed at the beginning of June, just before the Allies moved in, but in the end the 'eternal city' was declared an 'open city'.<sup>94</sup> As for Paris, Hitler had expressly stated on 23 August that the enemy should find nothing but 'a pile of rubble' if it fell into their hands,<sup>95</sup> and if the French capital remained almost intact in the end, it was primarily because the 'Wehrmacht Commander of Greater Paris', Lt.-Gen. Dietrich von Choltitz, refused to obey orders.<sup>96</sup> Warsaw's fate was infinitely worse. The underground Polish Home Army began an uprising there on

<sup>88</sup> For details of Himmler's position, see Stumpf, *Die Wehrmacht-Elite*, 345 ff., n. 177.

<sup>89</sup> On this, see Meyer, *Auswirkungen des 20. Juli 1944*, 481 ff., Wilhelm, 'Heinz Guderian', 200 ff., Megargee, *Inside Hitler's High Command*, 294 ff., and Guderian's own account, *Erinnerungen eines Soldaten*, 313 ff.

<sup>90</sup> Guderian, *Erinnerungen eines Soldaten*, 320.

<sup>91</sup> According to Wilhelm, 'Heinz Guderian', 201. Heusinger, who had been wounded in the attack, spent several weeks locked up and was then assigned to the 'Führer reserve'. See Meyer, *Adolf Heusinger*, 266–90.

<sup>92</sup> Quoted in Meyer, *Adolf Heusinger*, 287.

<sup>93</sup> Quoted in Goebbels, *Die Tagebücher*, pt. 2, xiv. 333 (2 Dec. 1944). According to the same source (p. 326), Hitler also announced on this occasion that 'he intended to do away with the general staff altogether after the war, and replace it with a small, very carefully selected operations staff'.

<sup>94</sup> See Weizsäcker, *Die Weizsäcker-Papiere*, 378–9 (11 June 1944), and Goebbels, *Die Tagebücher*, pt. 2, xii. 397 (4 June 1944) and 403 (6 June 1944).

<sup>95</sup> Quoted in *Germany and the Second World War*, vii. 614.

<sup>96</sup> *Ibid.*

1 August, but—although it was improvised and ostentatiously ignored by the Red Army standing just outside the gates of the city—it took German SS and army units more than two months to put it down.<sup>97</sup> What was left of the city was so thoroughly destroyed by German sappers that even Goebbels found the pictures he was shown 'gruesome'.<sup>98</sup> In crushing the uprising,<sup>99</sup> which was aimed militarily against the German occupation but politically also against the Soviet Union, the German units ultimately did the Red Army's work for it. And in causing the death of not only hundreds of thousands of civilians but also most of the surviving members of the Polish ruling class, they removed what was potentially the decisive barrier to the subsequent Sovietization of the country.<sup>100</sup>

What the Germans did in Warsaw, and the crushing of the Slovakian uprising a few weeks later,<sup>101</sup> were symptomatic of the 'strategy' of continuing radicalization of the war, imposed above all by Hitler himself. The chances of implementing that strategy had obviously improved as a result of the events of 20 July. The dictator's endlessly repeated insistence on the 'need to fight for every square kilometre, and thus for every week of time gained' might not have made such a strong impression on everyone as it did on the chief of the Wehrmacht Operations Staff,<sup>102</sup> but it was henceforth accepted as the general line for the defence of Germany, a line that was undisputed, if not always followed consistently. In fact—apart from ending the war—there was no longer any alternative. As a result of the reshuffle of top personnel before and after 20 July, there were no longer any advocates of the concept of flexible defence over large areas which had long been favoured by the army leadership. Moreover, the military setbacks in the summer meant that there were no longer spaces in which such operations could be conducted.<sup>103</sup> The 'spatial capital we are living off',<sup>104</sup> which Jodl had still considered indispensable in May, had been irrevocably exhausted by the late summer of 1944. Hitler himself had no illusions on that score. On the contrary, in a discussion with Jodl and Walter Warlimont on 31 July, he suggested that 'given the situation as a whole, it may not be such a bad thing that we are relatively hemmed in. It has its disadvantages, but there are advantages too. If we hold on to the territory we now possess, it will still be sufficient for us to live in, and our forces will no longer have to cover such vast distances'.<sup>105</sup>

<sup>97</sup> See Borodziej, *Der Warschauer Aufstand 1944*.

<sup>98</sup> Goebbels, *Die Tagebücher*, pt. 2, xiv. 51 (7 Oct. 1944).

<sup>99</sup> On the massacres perpetrated by SS and police units, especially in the initial phase of the uprising, see Borodziej, *Der Warschauer Aufstand 1944*, 119–25; Umbreit, 'Wehrmachtverbände und Sondercheinheiten', and, for a palliative gloss, Guderian, *Erinnerungen eines Soldaten*, 322 ff.

<sup>100</sup> Weinberg, *A World at Arms*, 710, goes so far as to describe this irony of history as 'a repeat performance of the 1939 Nazi–Soviet Pact against Poland'.

<sup>101</sup> See Germany and the Second World War, v/II, 97–9, and Schönher, 'Die Niederschlagung'.

<sup>102</sup> Jodl, 'Tagebuch', 56–7 (3 July 1944), BA-MA N 69/33.

<sup>103</sup> In this context, Hitler's opinion that Guderian was 'the first mobile and flexible chief of the General Staff' since the beginning of the war has a certain—doubtless involuntary—irony about it. Quoted in Goebbels, *Die Tagebücher*, pt. 2, xiii. 401 (3 Sept. 1944).

<sup>104</sup> Jodl, 'Die strategische Lage im Frühjahr 1944', 2, BA-MA N 69/18.

<sup>105</sup> Hitlers *Lagebesprechungen*, 584 (31 July 1944).

Quite clearly, as this and many other testimonies show, the devastating defeats of the summer had not broken the determination of the dictator and his committed entourage to continue the war. Before the Allied invasion began, everyone had been saying that its success or failure would decide the outcome of the war. After the German failure to repel it, however, no one would listen to that view.<sup>106</sup> How many times in the war had there been talk of 'decisive battles', when, in fact, there had been nothing decisive about them! If, from a historical point of view, the summer months of 1944 nevertheless seem to us to represent a decisive turning point, it is not because they decided the outcome of the war. That had long since been decided. It is because the post-war era was decided in those months. The significance of 9 May 1945 for the ensuing division of political power in Europe—that is the perspective of a later generation, not of those who were there at the time.<sup>107</sup> Most German contemporaries must have seen the great setbacks suffered by the Wehrmacht on the western, eastern, and southern European fronts as just more in the long series of disasters which they had grown used to hearing about. Whether they thought the war could still be won or that it was already lost, none of them knew how much longer it would last or what it still held in store. Nor was it entirely safe to be heard speculating about it. In those circumstances, the vast majority of the German 'folk community' clearly thought it best to resign themselves to the 'normality of the abnormal',<sup>108</sup> do what was demanded of them as their duty, and for the rest, keep as low a profile as possible.

Those in charge of the conduct of the war behaved in much the same way. Against the background of the purges in the army leadership after 20 July, senior staff endeavoured, as far as ever possible, to continue 'business as usual'. The war was conducted as if it were still to be decided and, if possible, won. This conduct of the war 'as if' was facilitated by the absence of realistic explanations when hopes were disappointed, and the absence of new plans or rumours that might raise fresh hopes. After all, according to the information from the SS about the background to the attempted coup, wasn't it obvious that 'the collapse of our front in the west [...] was due entirely to treachery', and that the breakdown in 'the central section of the eastern front was caused by the defeatism' of Henning von Tresckow, 'which had contaminated the entire general staff of Army Group Centre'?<sup>109</sup> And now that the Führer, saved by Providence, was ruthlessly extinguishing the disease at its source, should 20 July not also be seen as 'the day of our resurrection'?<sup>110</sup> Were there not now grounds for new hope? In addition to the continuing prediction of the breakdown of the enemy coalition, the main reasons for fresh hope were

<sup>106</sup> In a discussion with Goebbels on 24 August 1944, Hitler stressed 'once again that he will never surrender, that his belief in victory is completely unshaken' (Goebbels, *Die Tagebücher*, pt. 2, xiii. 314). See also the similar account in Below, *Als Hitlers Adjutant*, 375–6.

<sup>107</sup> This is also emphasized by Salewski, '1944—Nach fünfzig Jahren', 15–16.

<sup>108</sup> Thus the title of an essay by Wegener, 'Die Normalität des Anormalen'.

<sup>109</sup> Thus Hitler, quoted in Goebbels, *Die Tagebücher*, pt. 2, xiii. 402 (3 Sept. 1944) and 210 (3 Aug. 1944).

<sup>110</sup> Ibid., xiv. 350 (4 Dec. 1944).

Germany's own 'retaliation weapons' ('the best horse in our stable')<sup>111</sup> and the 'blitz bomber' project based on development of the Me 262.<sup>112</sup> Plans for offensive land operations were also being discussed again. While the front in Italy was to remain on the defensive, Hitler and the OKW were already engaged in preliminary discussions in August with a view to a major operation in the west, the future Ardennes offensive.<sup>113</sup> And, as regards the east, Hitler already showed signs of renewed confidence at the beginning of September, announcing that the situation on the northern and central sections of the front was 'stable' and that 'the Soviets would shortly be dealt some heavy operational blows'.<sup>114</sup>

In view of the developments on the various fronts, which were apparent to all concerned, such announcements sounded positively bizarre. In the west, the US 7th Army, together with Free French units, had landed on the French Mediterranean coast in mid-August (Operation DRAGOON).<sup>115</sup> The Allied troops were advancing rapidly in the south of France, and Charles de Gaulle made a triumphal entry into Paris on 25 August 1944. Meanwhile, the Red Army had been successfully continuing its series of large-scale summer offensives since 20 August, with 2nd and 3rd Ukrainian Fronts launching an attack on Army Group South Ukraine.<sup>116</sup> In a kind of domino effect, the Reich rapidly lost almost all influence in south-eastern Europe. Turkey had already broken off relations with Berlin on 2 August,<sup>117</sup> and Romania<sup>118</sup> and Bulgaria<sup>119</sup>—overrun by the Red Army just a few days after it launched its attack—followed Ankara's example later in the month. Furthermore, the Red Army's advance to the Yugoslav border now gave it the chance to operate in conjunction with Tito's partisan units and oblige the German occupying forces in Greece (Army Group E), which were in danger of being cut off, to leave the country.<sup>120</sup>

Since 8 September, as a result of the virtually simultaneous change of sides by Romania, Bulgaria, and Finland,<sup>121</sup> Germany had now been at war, *de jure* or *de facto*, with three of its four hitherto most important European partners. Only Hungary was kept in line for a few more months, thanks to the persuasive powers of

<sup>111</sup> Ibid., xiii. 97 (12 July 1944). The first Type A-4 (V-2) rocket was launched against England on 8 September 1944. More than 1,000 V-2 rockets had hit England by the time the V-weapon offensive came to an end at the end of March 1945. German bayonets.<sup>122</sup> The loss of these allies—collectively labelled ‘treachery’ at Führer headquarters<sup>123</sup>—had long been feared by Hitler, and he had employed all the diplomatic and, ultimately, in the case of Romania, all the military<sup>124</sup> means at his disposal to prevent or at least delay it. By no means the least of the problems he faced were the increasingly serious repercussions of the military developments on the war economy. In the north, the imminent fall of Petsamo meant the irreplaceable loss of 87 per cent of Germany’s entire nickel requirement,<sup>125</sup> and in the south-east, the damage to the Ploieşti oilfields by American air raids, followed by the Soviet occupation at the end of August, deprived Germany of its most important source of fuel. The loss of Romanian oil was all the more disastrous for Germany’s conduct of the war because the Allied air raids on hydrogenation plants in Germany, which had been going on since the spring, had also reduced the domestic production of synthetic fuel to a minimum.<sup>126</sup> That finally put paid to any idea of a ‘mobile’ conduct of operations by Germany.

In the course of the summer and autumn, Germany lost not only the territorial, political, and economic basis for any conduct of the war beyond short-term improvisation. The human losses incurred during the summer put all the past catastrophes—including Stalingrad—in the shade. The OKH estimated German losses in the first three weeks following the start of the Soviet offensive against Army Group Centre, that is, from 22 June to mid-July, at around 300,000 dead or missing, and the Red Army’s subsequent operation in the south-east cost the Wehrmacht an estimated total of 380,000 men in an even shorter space of time.<sup>127</sup> According to recent research, the Wehrmacht lost three-quarters of a million men, in dead alone, in just three months (June to August). This was approximately equal to the total number lost in the previous nine months, or in no fewer than the first fifteen months of the war in the east.<sup>128</sup> Admittedly, the full extent of the massive losses was concealed, not only from the public—with more

<sup>122</sup> One last attempt by the Regent, Horthy, to extract Hungary from the war ended on 15 October 1944 with his arrest by the SS and subsequent replacement by Szálasi, the leader of the radical right-wing Arrow Cross party. The new man was ‘the very last piece on the chessboard’ (Borus, ‘Die Einschätzung der Lage Deutschlands’, 173). According to Guderian, he gave the impression that ‘nothing could be expected of him. He seemed a reluctant upstart. We no longer had any Axis partners’ (Guderian, *Erinnerungen eines Soldaten*, 378). See also Part V, Chapter VII of the present volume.

<sup>123</sup> A typical entry by Goebbels on 3 September 1944 reads: ‘The southern front would certainly not have got into such an appalling mess if Romania had not suddenly broken ranks. It had long been accepted that the Romanian royal clique wanted to betray us, but doing it in such a vile fashion was something fairly new, even after the earlier example of Italy. The Romanians will have a high price to pay for their treachery’ (*Die Tagebücher*, pt. 2, xiii. 400). Just a day later the minister noted, apropos of Mannerheim, that he ‘had revealed himself as a marshal of capitulation’ and had ‘faithfully followed in Badoglio’s footsteps’ (*ibid.* 409).

<sup>124</sup> After the fall of Antonescu on 23 August, the Romanians offered to allow the unimpeded withdrawal of all German troops. Hitler responded with air raids and an unsuccessful attempt at military occupation of Bucharest. At the same time, he installed the commander of the Iron Guard, Horia Sima, who was being held in the Buchenwald concentration camp, as the head of a puppet government—a completely powerless government-in-exile based in Vienna.

<sup>125</sup> See Vuorisjärvi, *Petsamon Nikkeli kansainvälisessä politiikassa*, 201.

<sup>126</sup> On the context, see *Germany and the Second World War*, v/II. 813–19.

<sup>127</sup> Figures according to Wegner, ‘Im Schatten’, 120, and Weinberg, *A World at Arms*, 714.

<sup>128</sup> See Overmans, *Deutsche militärische Verluste*, 238 (fig. 3).

and more families waiting for the return of men reported 'missing'—but apparently also from the operations staff in the Army and Wehrmacht High Command. The losses in the eastern army before the collapse of Army Group Centre and Army Group South Ukraine were already about half a million higher than the figure given in the Wehrmacht statistics, and the discrepancy was to rise to about a million dead by the end of 1944.<sup>129</sup> The gradual collapse of the reporting system thus meant that the central operations staffs—and Hitler too—were increasingly working with units on their situation maps that, in reality, no longer existed in that form.

Despite increasingly serious errors of this kind, the absolutely 'wretched situation regarding replacements for the east'<sup>130</sup> was no secret: it was even, to some extent, the consciously accepted price of the debilitating 'stand firm strategy' ordered by Hitler and supported by the new Army General Staff. The reason for that support was decidedly no longer military but ideological. As Guderian declared in November during a Home Guard swearing-in ceremony, it was a matter of proving to the enemy that '85 million National Socialists [...] stand behind Adolf Hitler', so that the 'invincibility of our generation', which had 'defended the right against all foes', would go down in history.<sup>131</sup> This vision of invincibility, and thus ultimately of 'final victory', was increasingly placed at the centre of all public and semi-public pronouncements, the stronger the reasons for doubting it became. As Goebbels said, in an address designed to raise the spirits of the German people and broadcast during the darkest days of July: 'We must persist through this hell of opposition, burdens, and dangers before we can emerge in the open once more and breathe fresh air.' He had no doubt that 'we shall succeed. We *must* succeed; otherwise we shall all be lost.'<sup>132</sup> The striking emphasis on the *necessity* of victory, of which there are endless examples, especially after 1943, was a rhetorical means of escaping the fact—increasingly clear to the German leadership, above all—that the *will* to win is not the same thing as the *ability* to win. If, to quote Nietzsche, the *will* to achieve something means nothing else than subjecting one's own ability to the test, the Third Reich was quite clearly in the process of failing that test.

The developments in the military situation in the second half of 1944 led to a growing realization that this supposedly worst of all outcomes was a real possibility. In response, the leading members of the regime adopted two intrinsically conflicting attitudes. On the one hand, the fact that the enemy was now right on the German borders, in the west (at Aachen) and in the east (in East Prussia), prompted serious thought about the form which destruction operations should take in Germany itself.<sup>133</sup> On 16 September Hitler issued a basic directive which

<sup>129</sup> Figures according to *ibid.* 300–1.

<sup>130</sup> Guderian, quoted in Goebbels, *Die Tagebücher*, pt. 2, xiii. 194 (2 Aug. 1944).

<sup>131</sup> Quoted in Schwendemann, 'Strategie der Selbstvernichtung', 228.

<sup>132</sup> Radio address of 26 July 1944, quoted in *Archiv der Gegenwart* (1944), 6465 (author's emphasis). Goebbels was repeating, almost word for word, a formulation which Hitler himself had used in conversation with him just two days earlier; see Goebbels, *Die Tagebücher*, pt. 2, xiii. 155 (24 July 1944).

<sup>133</sup> On the organizational aspect, which is not dealt with further here, see in particular Hitler's decrees of 13 July, 19 September, and 20 September 1944, repr. in *Führer-Erlasse*, 426–9 (docs. 336 and 337) and 455–7 (docs. 362 and 363).

anticipated the spirit of the notorious 'Nero Decree',<sup>134</sup> and in its destructive consequences went far beyond the undoubtedly radical measures envisaged in the 'Morgenthau Plan' that Franklin D. Roosevelt and Winston Churchill were discussing at the same time in distant Quebec.<sup>135</sup> According to the directive, signed by Jodl, 'every bunker, every block of houses in every German town, and every German village, must become a fortress against which the enemy bleeds himself dry or in which the garrison goes under in hand-to-hand combat. All that remains to us is holding on or destruction.'<sup>136</sup> Field Marshal von Rundstedt, whom Hitler had just reinstated as Commander-in-Chief West, added that the severity of the fighting in their home country might oblige them 'not only to abandon property but also to destroy it on operational grounds', and that this also applied to artistic monuments and other works of cultural value.<sup>137</sup>

Hitler saw his proposal to apply the 'scorched earth' principle to his own country too as the consistent final step in radicalizing his war,<sup>138</sup> and it was justified by some of his supporters on precisely those grounds: '[I]t is now a matter of the final step and, when the nation is fighting for its life, we must not shrink from taking the final step.'<sup>139</sup> Nevertheless, the dictator's call for what amounted to nothing less than collective self-destruction was a definitive departure from the aim propagated until then, namely to emerge *victorious* from the war. It is hardly surprising that not everyone was prepared to accept the complete mental 'somersault' of shaping one's own downfall rather than that of the enemy. Reservations, incomprehension, and covert rejection were therefore to be expected among the general population, but they were evident even in the Führer's inner and outer circle.<sup>140</sup>

The probability that Germany would be defeated could no longer be waved away after the heavy defeats suffered in the summer. Towards the end of 1944, the nightmarish prospect of its complete destruction—whether at its own hands or at the hands of the enemy—finally turned the thoughts of high-ranking military and civilian members of the dictator's entourage once again in a completely different direction. Wolfram Freiherr von Richthofen<sup>141</sup> and Rommel<sup>142</sup> had both endeavoured, in the course of the summer, to persuade Hitler to soften his policy so as to

<sup>134</sup> On the text of the decree, see *ibid.* 486 ff. (doc. 394). See also the observations in the next chapter.

<sup>135</sup> The main purpose of the plan, which was named after its initiator, the American finance minister, and discussed during the British-American Quebec Conference (12 to 16 Sept. 1944), was to turn post-war Germany into a deindustrialized and demilitarized agricultural country, to internationalize the Ruhr district and other areas, and to divide what remained of Germany into two separate states. On the background, see Greiner, *Die Morgenthau-Legende*.

<sup>136</sup> Hitler's order issued on 16 Sept. 1944, BA-MA RW 4/v. 494, fo. 108.

<sup>137</sup> Quoted in Schwendemann, 'Strategie der Selbstvernichtung', 229.

<sup>138</sup> See the next chapter for further details.

<sup>139</sup> Thus Goebbels, *Die Tagebücher*, pt. 2, xiii. 492 (16 Sept. 1944).

<sup>140</sup> See, e.g., *ibid.* 491; Speer, *Erinnerungen*, 411 ff.; and Sereny, *Albert Speer: His Battle with the Truth*, ch. 18.

<sup>141</sup> See Below, *Als Hitlers Adjutant*, 385.

<sup>142</sup> Rommel sent the following telegram to Hitler on 15 July 1944: 'The troops are fighting heroically everywhere, but the unequal battle is almost over. I must ask you to draw the necessary conclusions from this situation without delay.' Quoted in *KTB OKW*, iv. 1573). See also Below, *Als Hitlers Adjutant*, 375, and Fraser, *Knight's Cross*, 452 ff.

allow the possibility of a separate peace, or at least an armistice. Kluge too had implored his Führer, in a farewell letter written the day before his suicide on 19 August 1944, to have the magnanimity now, after fighting a 'great and honourable battle', to 'bring the hopeless struggle, if necessary, to an end'.<sup>143</sup>

Goebbels had also finally concluded in August that, in order to avoid surrender, an effort had to be made 'to get out of this war on two fronts by inclining towards either the west or the east'.<sup>144</sup> Considering that he himself was undoubtedly the right man to initiate the relevant 'reorientation of our foreign policy',<sup>145</sup> the minister submitted a memorandum to his Führer a few weeks later, designed essentially to persuade the dictator to put out peace-feelers to the Soviet Union: 'Stalin, a cool-headed calculator, must know that he is bound to clash with the western powers sooner or later, and that he cannot afford to allow himself to be bled dry on the eastern front first, nor still less allow the English and the Americans to take possession of a major share of Germany's armaments and human potential in the meantime.'<sup>146</sup>

The generals who, as the dictator's closest advisers on strategy, should have done their duty in this connection long ago, finally spoke up three months later, though far less resolutely than the propaganda minister. Only towards the end of the year, when an attack by vastly superior Soviet forces on the German front between the Baltic and the Carpathians was imminent, endangering 'seven hundred years of German work, German battles, and German successes',<sup>147</sup> did Guderian urge Hitler, strongly, but in vain, to move the point of concentration of all his forces to the eastern front, in order—as he put it<sup>148</sup>—to create the necessary conditions for 'a different kind of peace' from 'unconditional surrender', which seemed to him criminal, shameful, and unacceptable. Even Jodl, the most energetic opponent of Guderian's plans, plucked up his courage when the Ardennes offensive—of which there had been such high hopes<sup>149</sup>—came to a standstill towards the end of the year. In an ultimately fruitless one-to-one meeting, he made his apparently first and only attempt, in a roundabout way and with the help of false claims, to persuade Hitler to undertake a political initiative to end the war.<sup>150</sup>

Given the nature of the National Socialist regime's command and decision-making structures, which we have already discussed,<sup>151</sup> it is not really surprising that all the above-mentioned rather half-hearted attempts to find a political solution to the strategic dilemma of the war got no further, especially as the advocates of a political

<sup>143</sup> Quoted in *KTB OKW*, iv. 1576 (18 Aug. 1944).

<sup>150</sup> Percy E. Schramm, annex to letter of 4 May 1946 re '1944: Vorschlag an die Verteidiger des Generalobersten Jodl', BA-MA N 63/15.

<sup>151</sup> See Part I, Chapter II.2 of the present volume.

solution were not, as a rule, inclined to link their own future to the proposals they made. On the contrary, apart from Rommel and Kluge, they were all perfectly willing to accept Hitler's brusque rejections, and to pursue the appointed course of collective self-destruction. This willingness is a further illustration of the importance of Hitler's person in the closing phase of the war, and it raises once again the question of the personal motives of the man himself, who contributed, more than any other, to the prolongation of what had long become a senseless war.

## II. Orchestrating the End

The question why Hitler himself never made any serious attempt to prevent the impending downfall of the Reich by political or diplomatic means, but absolutely insisted on fighting on, a decision that was to cost the Wehrmacht more than twice as many men in the last year and a half of the war as it had lost in the whole of the first four years,<sup>1</sup> is a question to which historical research has found differing answers. Common to most historians is the assumption that Hitler held obsessively to his original war aims right to end<sup>2</sup> and, despite all the setbacks, never ceased to believe that, ‘if they only held out, the war could still be won’.<sup>3</sup> The assumption that Hitler continued to harbour delusions of final victory, an assumption that is apparently confirmed by a host of pertinent Führer quotations and assertions by third parties, is—implicitly or explicitly—at the interpretative core of almost the entire historiography of the Second World War.<sup>4</sup> However, the research carried out in the course of the present project has raised considerable doubts about this interpretation. Those doubts are summarized once again below, as the starting point for a reinterpretation of Hitler’s determination to continue the war. The objections to the thesis that Hitler was an unworldly strategist, besotted with the idea of ‘final victory’, are threefold. First, the thesis is incomplete; second, it is dubious as to its content; and third, it is far less strongly substantiated from the sources than might appear at first sight.

The thesis briefly outlined here is incomplete, in that there are many gaps in the explanation it offers, gaps that can be closed only by making contradictory assumptions. For example, if it was an unshakeable belief in the possibility of a turnaround in the war that caused Hitler to insist on continuing it, that does not plausibly

<sup>1</sup> On the figures, see primarily Overmans, *Deutsche militärische Verluste*, 238 (fig. 3).

<sup>2</sup> Thus, e.g., Weinberg, ‘Zur Frage eines Sonderfriedens im Osten’, 182. Hillgruber, *Der Zweite Weltkrieg*, 128–9, also emphasizes the ‘consistency of Hitler’s main strategic concepts’ to the very end.

<sup>3</sup> Bullock, *Hitler and Stalin*, 843.

<sup>4</sup> See also, in addition to the works mentioned in nn. 2 and 3, Gruchmann, *Totaler Krieg*, 226; Dülffer, *Deutsche Geschichte 1933–1945*, 142; Wendt, *Deutschland 1933–1945*, 556; and Kershaw, *Hitler 1936–1945: Nemesis*, 607 ff. All these authors assume that Hitler still believed long after 1942, i.e. at least until the summer of 1944, in the possibility of a military turnaround and the collapse of the Allied coalition. ‘He had to believe these ideas,’ Kershaw writes, with respect to the ‘final victory’ rhetoric, ‘and did, certainly down to the summer of 1944, if not longer’ (p. 792). Kershaw’s reasoning is apodictic rather than empirical: ‘Without the inner conviction, Hitler would have been unable to sway those around him, as he continued so often to do, to find new resolve. Without it, he would not have engaged so fanatically in bitter conflicts with his military leaders. Without it, he would have been incapable, not least, of sustaining in himself the capacity to continue, despite increasingly overwhelming odds’ (p. 610).

explain why the dictator still showed this determination even when the realization that his cause was lost impelled him to commit suicide.<sup>5</sup> Thus, at the latest, when he was writing his political testament on 29 April 1945, there must have been other reasons why Hitler called on the commander-in-chief of the Wehrmacht units ‘to strengthen by all possible means the spirit of resistance of our troops according to the ethos of National Socialism’.<sup>6</sup> Nor does the thesis explain why Hitler—who, on the evidence of his own statements and in the opinion of most historians writing about him, counted on the break-up of the Allied coalition to the very end—made no serious diplomatic efforts of any kind to exacerbate the tensions between the western powers and the Soviet Union, tensions that undoubtedly existed and were registered in Germany too,<sup>7</sup> by engaging in political manoeuvres of his own—such as ostensibly secret talks on a separate peace—to bring about the break-up.<sup>8</sup> If he had really thought ‘that every military defeat gives us a political opportunity’, and that all the Red Army’s military successes would ‘have a positively shattering effect on the enemy in the west’,<sup>9</sup> it is impossible to see why he did not seize any of these political opportunities, although pressed on all sides, and instead insisted obstinately and exclusively on holding out militarily.

Even more important than this explanatory deficiency is the internal inconsistency of the picture of Hitler that emerges. The common idea of Hitler as simply a fanatical dictator, militarily incompetent and therefore lacking in insight, was first propagated by the surviving generals after the war, partly out of genuine subjective conviction and partly for transparent personal motives, that is, self-exculpation,<sup>10</sup> and historians have since made only half-hearted attempts to correct it.<sup>11</sup> A more thorough investigation of Hitler’s role as a military commander in the second half of the war quickly shows how unsound this idea is. There may still be some grounds for the accusation of professional incompetence and obstinacy in the purely operational conduct of the war, but it is not justified at the strategic level. From the outset, Hitler had a very much more modern and complex idea of warfare than the great majority of his generals, and a relatively clearer idea of the demands of a war involving the whole of society.<sup>12</sup> The fact that the structural constraints of his regime made it impossible for him to put his ideas into practice is quite another matter.

Even the undoubtedly justified reference to the deterioration in the state of the dictator’s health as the years went by does not justify the assumption that Hitler

<sup>5</sup> Kershaw’s arguments in *Hitler 1936–1945: Nemesis* appear illogical on this point.

<sup>6</sup> *Hitlers politisches Testament*, quoted in KTB OKW, iv. 1968.

<sup>7</sup> 1./Skl, Kriegstagebuch, pt. C/VIII, entry for 8 Nov. 1943, ‘Beurteilung der Konferenz von Moskau’, BA-MA RM 7/214, fo. 336.

<sup>8</sup> Thus also Haffner, *Anmerkungen zu Hitler*, 117 ff.

<sup>9</sup> Quoted in Goebbels, *Die Tagebücher*, pt. 2, xii. 406 (6 June 1944).

<sup>10</sup> For a detailed discussion, see Wegner, ‘Erschriebene Siege’.

<sup>11</sup> In fact, German historians in particular have shown little interest in Hitler’s function as a military leader during the second half of the war—a failing that is all the more surprising as the dictator devoted by far the greatest proportion of his time to military matters during those years.

<sup>12</sup> Schramm, *Hitler als militärischer Führer*, 57, quite rightly warned against ‘belittling Hitler as a strategist’. On this, see also the basic points made in Plack, *Wie oft wird Hitler noch besiegt?*, 25–31.

misread the dramatic increase in the pace at which the strategic balance tipped against Germany after 1942/3. On the contrary, there is no lack of examples showing that Hitler had a sober view of strategic trends during this time. Thus, we know from internal statements that he already reckoned at the beginning of 1942 that the United States could probably be the overall winner in this war,<sup>13</sup> that he also reckoned from January 1943 onwards that North Africa would be lost and that Italy would exit the war,<sup>14</sup> that he also had few illusions about his Axis partners' efforts to withdraw,<sup>15</sup> and that in the very last weeks of the war he came to the following remarkably clear conclusion about subsequent developments:

After defeat of the Reich, pending the rise of nationalist movements in Asia, in Africa, and possibly in South America too, there will be only two powers left in the world that can stand up to each other on equal terms: the United States and Soviet Russia. Given the historical forces at work and the geographical situation, these two giants are bound to take the measure of each other's strength, whether militarily or only on the economic and ideological level. And it is equally certain that both powers will be enemies of an independent Europe.<sup>16</sup>

Against this background, it is hard to maintain that Hitler completely misunderstood the direction that the war took from the winter of 1941/2 on.<sup>17</sup> These doubts are confirmed by an analysis of the available source material. True, there is no lack of relevant quotations supporting the picture of a Führer who believed in victory to the very end. In countless orders of the day, proclamations, speeches, and minutes of meetings we come across those fixed ideas that constituted the endlessly recurring set pieces of an increasingly bizarre 'final victory' propaganda, that is, the belief in the strategic advantage of the 'inner line',<sup>18</sup> the hope placed in 'the existence of hitherto unknown, singular weapons',<sup>19</sup> the expectation that crises in manpower and food supplies would finally bring about the inevitable collapse of the Soviet Union,<sup>20</sup> and, last but not least, the above-mentioned speculation about growing differences within the enemy coalition that would ultimately cause its breakdown.<sup>21</sup> Such statements

<sup>13</sup> Hitler, *Monologe*, 199.

<sup>14</sup> See Goebbels, *Die Tagebücher*, pt. 2, vii. 176 (23 Jan. 1943), Below, *Als Hitlers Adjutant*, 334, and 'privatdienstliches Schreiben von Kapitän z.S. Junge an Dönitz vom 15.5.1943 über den Inhalt der "Führerlage" vom gleichen Tage', BA-MA RM 7/260; also Hitler's discussion with Keitel on 19 May 1943, repr. in *Hitlers Lagebesprechungen*, 205–12.

<sup>15</sup> See 'Junge an Dönitz, 15.5.1943', BA-MA RM 7/260, and Hitler's discussion with Keitel, 19 May 1943, in *Hitlers Lagebesprechungen*, 205–12.

<sup>16</sup> Quoted in Hitler, *Hitlers politisches Testament*, 124 (2 Apr. 1945).

<sup>17</sup> Jodl's opinion, expressed in 1946, is significant: 'Hitler suspected and knew that the war was lost sooner than anyone else in the world' (quoted in *KTB OKW*, iv. 1721).

<sup>18</sup> As, e.g., in Hitler's address to Reichs- and Gauleiters on 8 May 1943 (Goebbels, *Die Tagebücher*, pt. 2, viii. 239).

<sup>19</sup> Hitler's proclamation to the troops of Army Group South and Air Fleet 4 on 19 February 1943, quoted in Domarus, *Hitler. Reden und Proklamationen*, ii. 1989.

<sup>20</sup> See, e.g., Goebbels, *Die Tagebücher*, pt. 2, vii. 292 (8 Feb. 1943) and 593 (20 Mar. 1943), and *Hitlers Lagebesprechungen*, 477 (27 Dec. 1943).

<sup>21</sup> Thus Hitler, in an order of the day issued on 15 April 1945, the day of Roosevelt's death: 'At this moment, when fate has removed the greatest war criminal of all time from this earth, the turnaround in the war has been decided' (*KTB OKW*, iv. 1590); see also Hansen, *Das Ende des Dritten Reiches*, 41–2.

are unhesitatingly advanced as proof of continuing confidence in victory, but they are taken out of context: a critical reading of the sources shows that they are statements *ad usum delphini* rather than expressions of inner conviction. In fact, only relatively few of Hitler's statements in the closing years of the war must have been spontaneous expressions of his opinion or personal confessions.<sup>22</sup> On the contrary, when he was speaking, whether in a large or a small circle or in one-to-one conversation, he was as a rule fully conscious of his role as the solely responsible 'Führer'. And it would have been completely incompatible with his understanding of that role to admit that he was at a loss or could not see a way out.<sup>23</sup> Hitler's increasingly strong display of strategic optimism in the last two years of the war must therefore be regarded primarily as an instrument employed by a dictator totally convinced of his rhetorical powers of persuasion, in order to strengthen the universally crumbling belief in the possibility of final victory, irrespective of the real situation, and so maintain the most important mental precondition for resolute continuation of the war.<sup>24</sup>

This predominantly tactical use of arguments in conversation easily led to contradictions, as some of the dictator's close circle also noted.<sup>25</sup> With regard to the V-weapons, for example—the 'retaliatory weapons' that were hailed as decisive for the outcome of the war—we know that even Hitler doubted their effect.<sup>26</sup> Another example is Hitler's oft-repeated contempt for strategic comparisons of numbers, which, combined with the excessive importance he attached to pure 'willpower', is often taken as the expression of a lack of realism. That this might have been a rhetorical device to repel unwelcome arguments is supported by an unquestionably authentic statement which Hitler made in a very small circle on 20 August 1942. The history of war, he said, contained 'not a single example of a situation where, despite a gross disparity in the strength of the forces on either side, victory went to the smaller number. Frederick the Great was always lucky that we somehow managed to muddle through.'<sup>27</sup> The last sentence is also significant, since it sheds light on Hitler's subsequent attempts to present the difficult situation of the king of Prussia in the Seven Years War as an encouraging precedent and a source of hope.<sup>28</sup>

Other sources too show that, as the war went on, Hitler believed less and less in a miracle à la 1763, that is, a collapse of the Allied coalition. Thus, for example,

<sup>22</sup> See Speer, *Erinnerungen*, 446. On the context, see Eichholz, *Geschichte der deutschen Kriegswirtschaft*, iii. 662 ff., and Sereny, *Albert Speer: His Battle with the Truth*, ch. 18.

<sup>23</sup> See *Staatsmänner und Diplomaten*, pt. 2, 379 (16 Mar. 1944). Consciously or unconsciously, Hitler was engaging in the cult of the leader promulgated in the nationalistic poetry of his generation and popularized by Flex, e.g. in his poem 'Leutnantsdienst' (repr. in Flex, *Im Felde*), KTB Skl, pt. A, xlvi. 635-A, n. 90 (9 July 1943). Significantly, this statement was omitted in the version of the minutes of the meeting approved by Dönitz.

<sup>24</sup> For that reason, Hitler repeatedly expressed the firm view that 'military command without optimism is absolutely impossible' (*Hitlers Lagebesprechungen*, 614, situation at noon, 31 Aug. 1944).

<sup>25</sup> e.g. Below, *Als Hitlers Adjutant*, 357, on the subject of discussions with Hitler towards the end of 1943, recalls that 'he often contradicted himself'.

<sup>26</sup> See Goebbels, *Die Tagebücher*, pt. 2, xii. 525 (22 June 1944). Even the propaganda minister had to admit that 'retaliation [...] was, of course, just a drop in the ocean', 568 (29 June 1944).

<sup>27</sup> Hitler, *Monologe*, 354.

<sup>28</sup> Thus, e.g., in Goebbels, *Die Tagebücher*, pt. 2, vii. 292 and 294–5 (8 Feb. 1943).

during a naval commander's conference on 11 November 1943, Karl Dönitz reported—apparently with direct reference to similar statements by Hitler—that 'there are indeed some possibilities of strife in the enemy camp,' but it 'would not have any effect on military developments at present', since 'they have a common interest in bringing the war in Europe to an end quickly, Russia on account of the huge losses it has suffered, and Britain and America on account of their plans in Eastern Asia'.<sup>29</sup> As late as 2 April 1945, Hitler told Martin Bormann that he was convinced that the enemies of the Reich 'certainly [will] not lay down their arms until they have destroyed National Socialist Germany, annihilated it, and completely broken it up'.<sup>30</sup>

The doubts expressed here about the all-too-easily accepted view of a 'Führer' out of touch with the realities of war open the way for an alternative interpretation of his strategic behaviour. If some of the building blocks for that interpretation are provided in what follows, it is not because they are completely new,<sup>31</sup> but because their sustainability has scarcely been explicitly discussed hitherto. Basically, it is a matter of certain insights that are essential to the interpretation of German policy and conduct of the war during its second half. They are reiterated here in the form of theses with supporting evidence.

After the failure of Germany's second eastern campaign in the late summer of 1942, the German leadership no longer had an overall strategic concept for the continued conduct of the war.<sup>32</sup> Hitler was increasingly aware that 'his' war was unwinnable. The enormous confidence in victory that he undoubtedly felt in the summer of 1941, at the peak of 'his' war, was based primarily on the conviction that the attack on the Soviet Union, conceived as a 'blitzkrieg', would succeed, and that Operation BARBAROSSA would accordingly be over before the winter started.<sup>33</sup> This, in turn, was based on the traditional view that a winter war could be waged only with difficulty,<sup>34</sup> and above all, on the calculation that the rapid conquest of extra space in the east for raw materials and arms production would render further war against the Anglo-American naval powers unnecessary in the short term and winnable in the long term.<sup>35</sup> The definitive failure of the German attack on Moscow, foreseeable in the late autumn of that year, therefore meant not only an operational disaster but nothing less than the collapse of the strategic basis for

<sup>29</sup> 'OBdM, Befehlshaberbesprechung am 11.11.43', BA-MA RM 7/98, fo. 159.

<sup>30</sup> Hitler, *Hitlers politisches Testament*, 120–1 (2 Apr. 1945).

<sup>31</sup> See similar suggestions and starting points for interpretation, notably in Schramm, *Hitler als militärischer Führer*, in Haffner, *Anmerkungen zu Hitler*, 141, in various studies by Fest (*Hitler*, 910–11, *Fremdheit und Nähe*, 135–6, and *Der Untergang*), and in Lukacs, *The Hitler of History*, ch. 5. On the other hand, despite some apparently similar conclusions, the following reflections have nothing to do, either empirically or methodologically, with Fromm's thesis, advanced in *The Anatomy of Human Destructiveness*, ch. 13, that Hitler had a necrophilia-induced death wish.

<sup>32</sup> On this, see the discussion in *Germany and the Second World War*, vi, esp. 142–4, and in Part I, Chapter I.3 of the present volume.

<sup>33</sup> See Kroener, 'Der "erfrorene" Blitzkrieg', 133–48.

<sup>34</sup> See also Hitler's candid remarks to Mannerheim, repr. in Wegner, 'Hitlers Besuch in Finnland', 132–3.

<sup>35</sup> For a basic discussion of this issue, see *Germany and the Second World War*, iv. 13–51 and 118–224.

German conduct of the war. Hitler had already begun to suspect in November 1941 that 'the two enemy groups cannot destroy each other'.<sup>36</sup> Against this background, Jodl's claim in the first few days after the end of the war, which he repeated many times thereafter, that Hitler—and he too, as Hitler's most influential adviser on strategy—had been well aware, 'since that crucial point at the beginning of 1942', that 'victory could no longer be achieved' seem entirely credible.<sup>37</sup>

The dictator nevertheless considered that he had not yet exhausted all strategic options. In Hitler's view, the dangers to the Reich arising from the change from a short to a long war might possibly be offset by the opportunities afforded by the simultaneous change from a European to a global war. Assuming Japanese successes in the area, the opening of the Pacific theatre would tie down the American military forces, which were by no means ready for war, for a long time and delay their deployment in Europe.<sup>38</sup> This appeared to give the German dictator, once again, a narrow time frame in 1942 in which to round off his conquests in the east and adapt German conduct of the war to the changed situation, before the full weight of American military power was brought to bear against the Reich. The main aim of German planning in the summer of 1942 had therefore been to capture the Soviet production centres of the armaments and raw materials essential for a long war, especially the heavily industrialized Donets Basin and the Caucasian oilfields. This would have deprived the Soviet Union in the medium term of the material conditions for its own conduct of the war, and have provided Germany with the extra space needed for the expected confrontation with the Anglo-American naval powers, thereby establishing the decisive condition for engaging in the long war that was now inevitable.<sup>39</sup> Thus, the failure of these military ambitions, which had been unmistakably clear to Hitler since the beginning of September 1942 and gave rise to the regime's worst leadership crisis so far<sup>40</sup>—combined with growing awareness of the turnaround in the war in the Pacific brought about by the battle of Midway<sup>41</sup>—marked the definitive end of German autonomous overall strategy.

In this sense, although the failure of the second German campaign against the Soviet Union was not a 'turning point in the war' in general,<sup>42</sup> it was nevertheless a turning point in German *conduct* of the war. The decisive mark of this change was not that, strategically, Germany was henceforth a reactive rather than an active power, since history provides many examples of the fact that reactive powers too can decide the outcome of wars in their favour. Rather, the crucial factor was that, from the autumn of 1942 on, the German leadership no longer had any idea of

<sup>36</sup> Halder, *Kriegstagebuch*, iii. 295 (19 Nov. 1941).

<sup>37</sup> KTB OKW, iv. 1503 (15 May 1945), 1501 (13 May 1945), 1712 ff., and 1721 (Jodl's notes, written in prison in Nuremberg in 1946).

<sup>38</sup> See also *Germany and the Second World War*, vi. 116–17.

<sup>39</sup> See *ibid.* 843–63. <sup>40</sup> On the September crisis, see *ibid.* 1048–59.

<sup>41</sup> For a more detailed account of the strategic significance of Midway, see Willmott, *Empires in the Balance*, 518 ff.

<sup>42</sup> On the 'turning point' question, see the discussion in Part I, Chapter I.1 of the present volume.

how, with its own forces, it might bring the war as a whole to a victorious or even tolerable conclusion.

The constantly recurring core problem for German conduct of the war during its second half was the increasingly unbridgeable and ultimately grotesque gap between the German command's realization of the enemy's strategic possibilities, on the one hand, and its awareness of the inadequacy of its own means, on the other. Now, in contrast to 1941 or even the spring of 1942, the relevant German authorities no longer underestimated the enemy's strength and resources. They were well aware of the Allies' strategic possibilities for conducting a reciprocally coordinated multi-front war, and of the impossibility of conducting offensives of their own that could determine the outcome of the war. Consequently, despite the enormous forces deployed, even the large-scale German offensive against the Kursk salient in July 1943, code-named 'Citadel', was the first summer offensive in which Hitler himself had no strategic aims but merely operational objectives.<sup>43</sup> Significantly, the dictator had already let it be known before the attack was launched that he had resolved, in case of doubt, to concentrate the main effort in his further military endeavours on preventing the opening of a second front in southern or western Europe,<sup>44</sup> thus indirectly admitting the failure of his expansionist plans in the east.

This perception of his own military situation was therefore a sign of increasing, rather than decreasing realism. It was not blindness, but an attempt to avoid the conclusions to be drawn from his own assessment of the situation, that caused Hitler and his closest associates to resort increasingly, from 1943 on, to ideological wishful thinking, propaganda, and empty promises. At moments of extreme pressure, even those who were responsible for producing it realized how empty the propaganda was. Thus, at the height of the crises on the western and eastern fronts at the end of June 1944, Goebbels, of all people, complained that 'the OKW are unrestrained over-optimists, not to say illusionists. They throw dust in their own eyes. Every bit of bad news from the front is given a liberal dose of whitewash, so that only a critical intelligence can get to the truth of the matter'.<sup>45</sup> The minister's criticism was nothing less than hypocritical, since he knew full well that 'critical intelligence' getting to the heart of the matter had long ceased to be of any concern. What was wanted was by no means rational calculation, but an 'unlimited declaration of belief in German victory'.<sup>46</sup> It was in this spirit that Jodl declared, in November 1943: 'we shall win because we must win, for otherwise world history will have lost all meaning'.<sup>47</sup>

<sup>43</sup> See Part I, Chapter III.1 of the present volume. Hitler himself repeatedly referred to the planned operation as a 'limited offensive'; see Goebbels, *Die Tagebücher*, pt. 2, viii. 225 (7 May 1943).

<sup>44</sup> On this see Part I, Chapter I.3 of the present volume.

<sup>45</sup> Goebbels, *Die Tagebücher*, pt. 2, xii. 552–3 (26 June 1944).

<sup>46</sup> Ibid. 134 (18 Apr. 1944).

<sup>47</sup> Quoted in *KTB OKW*, iv. 1562. Hitler himself also constantly emphasized that they *must* win, and that there *could* be no doubts about the possibility of winning. See, e.g., Goebbels, *Die Tagebücher*, pt. 2, xiii. 155 (24 July 1944).

The interpretation presented here raises the question why, despite his early realization that there was no prospect of military success, Hitler made no attempt to reach a political settlement—as most Anglo-American intelligence experts expected—but resolutely continued the fight, in a process of internal and external radicalization, right until his own downfall. The answer to this question leads us to another basic thesis. Despite the language which the regime continued to use, it was no longer ‘final victory’, but the form his own end would take, that increasingly became for Hitler the central point of everything he thought and did during the last two and a half years of the war. By seeking to orchestrate his downfall as a great historical event (drawing on a virulent tradition of heroic self-sacrifice dating back to the Romantic movement), he hoped to transform military defeat into moral victory.

On the reasons that caused him to take this course, two central themes in particular have been the subject of detailed recent research: on the one hand, the profound impression made on him by the experience of collapse, revolution, and counter-revolution following the 1918 armistice,<sup>48</sup> and on the other, the connection between military and genocidal war, which the dictator considered indissoluble by 1941 at the latest.<sup>49</sup> Accordingly, only continuation of the war—whether it was winnable or not—would give Hitler the opportunity to physically annihilate European Jewry and thus bring his personal historic mission to a ‘successful’ conclusion. It is true that Hitler’s decision on the Holocaust was already firmly established, but more recent research<sup>50</sup> appears to confirm Martin Broszat’s earlier finding that, as the prospects of military victory faded, ‘the fateful battle against the Jews came to be depicted as the war itself’—a war which, despite everything, Hitler still believed could be won.<sup>51</sup> It is this connection between military war and genocide that explains the renewed intensification of Hitler’s ‘extermination’ rhetoric from the end of September 1942 on,<sup>52</sup> that is, from the very month that marked a major turning point in the process of his strategic disillusionment. It was by no means merely a rhetorical reinterpretation of the war, aimed at assigning world-historical significance to the failing military struggle. There was a much more concrete interconnection between what was happening in the extermination camps and the military developments. The events on the battlefield served not least of all as cover for measures to achieve the ‘final solution’, which were stepped up again precisely after Stalingrad (in France, the Ukraine, and Hungary, for example), while the genocide, for its part, constituted a decisive psychological barrier to any idea of ending the war on 1918 lines. By the time he first began to have doubts about the military outcome, the murder of approximately half a million Jews in the first five

<sup>50</sup> See Gerlach, ‘Die Wannsee-Konferenz’, 7–44, and Gerlach, ‘Die Ausweitung der deutschen Massenmorde’, 10–84.

<sup>51</sup> Broszat, ‘Hitler und die Genesis der Endlösung’, 771.

<sup>52</sup> For detailed evidence of this, see Mayer, *Der Krieg als Kreuzzug*, 515 ff.

months of the eastern campaign alone<sup>53</sup> must have already been for Hitler a constraint that ruled out all thought of a compromise peace. Convinced that ‘a life-and-death struggle [...] cannot be decided by diplomatic manoeuvres’,<sup>54</sup> the dictator saw from the outset no alternative to further radicalization of Germany’s conduct of the war. Goebbels got to the crux of the matter a few weeks after Stalingrad, when he noted with reference to a conversation with Göring that the latter was ‘quite clear about what threatens us all if we weaken in this war [...] On the Jewish question, above all, we are so deeply committed that there is no escape. And a good thing too. Experience shows that a movement and a people who have burnt their bridges put up a far more determined fight than those who still have the possibility of retreat.’<sup>55</sup> Hitler himself expressed the same view a few weeks later, when he assured the Romanian head of state, in remarkably similar terms, that he ‘would rather burn all the bridges, because Jewish hatred is enormous anyway’.<sup>56</sup>

While Hitler may have felt there was ‘no turning back on the road embarked upon’,<sup>57</sup> a historic way out of an entirely different kind seemed open to him. Although it involved what can certainly be described as a ‘strategic’ concept in the broader sense of the term, the implications for the historiographical discussion of German policy and conduct of the war in its second half seem not to have been fully recognized. The concept in question was that, if the war could no longer be won militarily, it should be lost in a way that would cause later generations to thrill with admiration. After a visit to Führer headquarters at the beginning of May 1943, state secretary Weizsäcker described the prevailing mood there in the following terms: ‘What they were saying was this: We shall win. If not, we shall go down with honour, fighting to the last man. That was also Frederick the Great’s motto.’<sup>58</sup>

The adoption of that attitude was prompted by the destruction of Sixth Army at Stalingrad a few months earlier. The German soldier’s ability to stand steadfast and immovable, with no thought for himself, when there seemed to be no sense in fighting and no prospect of success, was raised by Goebbels (with Hitler’s express approval) to a basic principle of his propaganda, in which the battle on the Volga was portrayed as a ‘heroic drama’ and an ‘image of truly classical grandeur’ that ‘put even the *Nibelungenlied* in the shade and [...] would endure for centuries’.<sup>59</sup> Ultimately, it was above all a matter of exploiting the shock caused by the military disaster to further radicalize the conduct of the war. The dead were to be used to obligate those still living to go to the ultimate extreme, so that their sacrifice became the measure of what was demanded in future. Entirely in this spirit, the

<sup>53</sup> See Longerich, ‘Vom Massenmord zur “Endlösung”’, 251.

<sup>54</sup> Thus, not without threatening undertones, to the Hungarian Regent, Horthy, on 16 April 1943, quoted in *Staatsmänner und Diplomaten*, pt. 2, 248.

<sup>55</sup> Goebbels, *Die Tagebücher*, pt. 2, vii. 454 (2 Mar. 1943).

<sup>56</sup> Quoted in *Staatsmänner und Diplomaten*, pt. 2, 233 (16 Apr. 1943). <sup>57</sup> Ibid.

<sup>58</sup> Weizsäcker added the laconic comment: ‘I think Frederick the Great was talking about himself, not the Prussian state’ (Weizsäcker, *Die Weizsäcker-Papiere*, 337; 2 May 1943).

<sup>59</sup> Goebbels, *Die Tagebücher*, pt. 2, vii. 175 (23 Jan. 1943) and 211 (28 Jan. 1943). Goebbels’ comments about Paulus on 1 February 1943 are also instructive: ‘Fate put him in a situation where, especially as so many of his men had fallen, he had to give up fifteen or twenty years of his life to ensure that his name would live for thousands of years’ (*ibid.* 234).

SS newspaper *Das schwarze Korps* wrote that the fate of the troops who fought at Stalingrad was ‘like entering a realm from which there is no return [...] That is what they demand of us, that we all advance to the place where they now lie.’<sup>60</sup>

This interpretation, with its specific transformation of the dead into heroes, grief into pride, and defeat into victory, became the prevailing interpretative model for the subsequent events that led ultimately to the collective downfall of the Reich.<sup>61</sup> In the last two years of the war it was no longer policy or strategy, but increasingly the orchestration of this historic collective ending, that was Hitler’s main concern. Once it became necessary to leave the stage of history, he wanted at least to ‘slam the door behind him so that the whole world heard it’.<sup>62</sup> Hitler’s confidence in victory despite developments in the war—which he displayed demonstratively, although he knew better, especially from the autumn of 1943 until a few weeks before his suicide<sup>63</sup>—is not inconsistent with this aim. On the contrary, it was the necessary precondition for its achievement. Hitler was firmly (and probably quite rightly) convinced that everything depended on his personal behaviour. After all, *one* hero could ‘turn a thousand cowards into men’, just as *one* coward could ‘turn a thousand men into weaklings’.<sup>64</sup> Only a leader who remained strong and optimistic in all circumstances would be able to keep the German people with him until the very end. In an order issued on 25 November 1944, the dictator insisted that ‘a commander of German troops’ must be a man ‘who, with every mental, spiritual and physical fibre of his being, himself meets every day the demands he must make of his troops. Energy, decisiveness, firmness of character, strong conviction, and unconditional readiness for action are essential qualities in battle. Anyone who lacks those qualities, or no longer possesses them, cannot be in command and must stand down.’<sup>65</sup> There can be little doubt that Hitler took this as the standard for his own conduct too. Consequently, he saw it as his task, ‘especially since 1941’, above all ‘[not] to lose his nerve in any circumstances but, wherever there was a [collapse], always to[find] some way out, some way of remedying the situation’.<sup>66</sup> The more hopeless Germany’s situation became, the more important he felt it was for him, as

<sup>60</sup> Quoted in Kumpfmüller, *Die Schlacht von Stalingrad*, 71. See also Bernig, *Eingekesselt*, 233 ff. Contemporary works of art depicting the dead are in the same category, e.g. Rudolf Warnecke’s woodcut *Soldiers’ Graves*, bearing the inscription: ‘War graves are fields of eternal victory, sown with the seeds of fame’, repr. in Schmidt, ‘Maler an der Front’, 679.

<sup>61</sup> Typical examples include Guderian, who declared exultantly, in a speech he made at a Home Guard swearing-in ceremony on 6 November in his capacity as chief of the Army General Staff, that ‘the invincibility of our generation’ would still be spoken of ‘hundreds of years from now’ (quoted in Schwendemann, ‘Strategie der Selbstvernichtung’, 228).

<sup>62</sup> Thus Goebbels in the spring of 1945, quoted in Heiber, *Goebbels*, 391. Fest, *Der Untergang*, 71, quotes the minister as saying: ‘But when we bow out, let the whole earth shake.’

<sup>63</sup> According to Speer, *Erinnerungen*, 305, Hitler had appeared ‘depressed at times’ from the spring of 1942 to the summer of 1943. ‘But after that, a remarkable change seemed to take place. He generally appeared confident of final victory, even in desperate situations.’ See also Below, *Als Hitlers Adjutant*, 361, according to which Hitler alternated ‘between an occasionally sober, indeed serious way of looking at things and unjustified confidence’.

<sup>64</sup> Hitler, *Reden, Schriften, Anordnungen. Februar 1925 bis Januar 1933*, iv/I. 31 (25 Oct. 1930).

<sup>65</sup> Quoted in Kunz, ‘Die Wehrmacht in der Agonie’, 110.

<sup>66</sup> Thus to Generals Westphal, Krebs, and Keitel in a briefing on 31 August 1944, quoted in *Hitlers Lagebesprechungen*, 611.

'a shining example of the National Socialist fighting spirit', to 'restore confidence among his military commanders', depressed as they were by the constant setbacks.<sup>67</sup> In a conversation in the spring of 1944, he explained that the mass of people basically wanted to be led like a military company, and he explicitly likened his own role to that of the commander of a military unit: 'What a disastrous impression it would make if a company commander were to tell his men, in a difficult situation, that he himself did not really know what to do at the moment.'<sup>68</sup>

In fact, it is one of Hitler's most remarkable, but also one of his most fateful, achievements as leader that he only rarely gave his associates that impression. It is true that he openly admitted that he was strategically at a loss on at least one occasion, when he confessed to Dönitz in the summer of 1943—at the height of the Kursk offensive—that he was 'muddling along from one month to the next'.<sup>69</sup> This was a notable lapse, but it was not typical of the way Hitler presented himself to his inner or outer circle. Visitors who met their Führer in less informal situations than Nikolaus von Below, on the other hand, had very little chance of seeing through the façade. So, for example, in an interview given soon after the end of the war, Zeitzler, who as chief of the Army General Staff had had occasion to observe Hitler for years in daily situation briefings, gave the following possibly exaggerated but probably essentially accurate account of his general behaviour: 'Never spoke a word—even in private!—that was not deliberate. Probably never spoke or acted on impulse. What looked like acting on impulse was usually deliberate! An amazing achievement.'<sup>70</sup>

Trusting in the enduring cohesive power of the image he presented, Hitler was able—with very little resistance—to organize the war as a 'heroic downfall'. Measures such as the preparation of an 'East Wall', the adoption of 'scorched earth' tactics, the designation of strongholds and 'fortified places' that were to be held at all costs, and the continuation of counter-offensives that had no prospect of success and involved heavy losses—all this had less to do with the strategic outcome of the war than with setting the scene for its end. The culmination of this self-destructive conduct of war was the 'scorched earth' policy which Hitler sought to introduce in his own country with the 'Nero Decree' of 19 March 1945.<sup>71</sup> The decree ordered the destruction of 'all military transport and communications facilities, industrial establishments, and supply depots, as well as anything else of value within Reich territory', because if the war was lost, then the people too were

<sup>67</sup> Thus Goebbels' enthusiastic impression on 2 December 1944 in the run-up to the Ardennes offensive (*Die Tagebücher*, pt. 2, xiv. 321).

<sup>68</sup> Quoted in *Staatsmänner und Diplomaten*, pt. 2, 379 (16 Mar. 1944). Consciously or unconsciously, Hitler was engaging in the cult of the leader promulgated in the nationalistic poetry of his generation and popularized by Flex, for example, in his poem 'Leutnantsdienst' (repr. in Flex, *Im Felde*).

<sup>69</sup> KTB Skl, pt. A, xlvi. 635-A, n. 90 (9 July 1943). Significantly, this statement was omitted in the version of the minutes of the meeting approved by Dönitz.

<sup>70</sup> Müller-Hillebrand, note of 11 April 1948 on a conversation with Zeitzler the day before, BA-MA N 553/v. 42. According to Below, *Als Hitlers Adjutant*, 352, Zeitzler had already ceased to believe 'a single word that Hitler said' in November 1943.

<sup>71</sup> See *Führer-Erlasse*, doc. 394, 486–7.

lost. There was therefore ‘no need to consider what the German people would require for primitive survival’.<sup>72</sup>

Significantly, the ‘Nero Decree’ was not the desperate act of a dictator suddenly driven mad by delusions of victory, but simply the end result of a long-term policy of self-destruction.<sup>73</sup> Hitler had already informed the relevant ministries of his intentions in this connection in the late summer of 1944, and had prepared the German public for the unthinkable. ‘Not a blade of German grass shall feed the enemy,’ read a leading article by the dictator himself in the *Völkischer Beobachter* of 7 September 1944. ‘No German mouth shall give them information. No German hand shall offer them help. They shall find every bridge destroyed, every road barred. They shall meet with nothing but death, destruction, and hatred.’<sup>74</sup>

To the historian judging it with hindsight, Hitler’s unmistakable recourse to battle as an end in itself after the military failures in the Caucasus, at Stalingrad, and in North Africa—and his concomitant acceptance, affirmation, and staging of his own downfall—seems an unparalleled act of monstrous cynicism, but to the dictator and part of the generation that had consciously experienced the end of the First World War, it was a thoroughly familiar concept. Hitler, and no few of his henchmen, saw themselves as consummators of a quasi-Romantic tradition in which not only was war glorified as an inspiring and rejuvenating element in the life of nations and a vehicle of moral progress and national integration, but defeat and downfall—even more than victory—were celebrated as the hero’s hour. According to this understanding, the greatest manifestation of the human—or, to be more precise, masculine—will was the readiness to defy the superior power of destiny and face one’s own end without fear.<sup>75</sup> It was no accident that the *Nibelungenlied*, with its pathos of death, was so popular with German Romantics,<sup>76</sup> and that Richard Wagner’s interpretation thereof was probably the strongest formative experience in the life of the young Hitler, who admired, above all in the figure of Siegfried, the ‘magnificent mystery of the dying hero’.<sup>77</sup> It provided an interpretative model which propagandists and interpreters of their own downfall could easily invoke at any time. That the events at Stalingrad invited this interpretation is clear, both from the comments by Goebbels referred to earlier and, above all, from Göring’s notorious appeal to the Wehrmacht on 30 January 1943, in which he likened the final battles in the metropolis on the Volga to the fight in

<sup>76</sup> For a detailed discussion, see Krausse, ‘Zur Darstellung des Todes im Nibelungenlied’, 245–257, Ehrismann, ‘Siegfried’, 39 ff., and Swanton, ‘Heroes, Heroism and Heroic Literature’.

<sup>77</sup> Statement made by Hitler in 1936, quoted in Fest, *Hitler*, 684. See also Hamann, *Hitlers Wien*, 89 ff., and Köhler, *Wagners Hitler*, 11 ff.

Etzel's hall, and proclaimed that Stalingrad would be remembered by future generations as the place where 'Germany set the seal on final victory'<sup>78</sup>

In addition to the Nibelungen material, the repertoire of downfall rhetoric mustered by the National Socialist leadership in the second half of the war mainly consisted of the works of authors and poets dating from the 1813 'War of Liberation'. Apart from the universally recognizable symbolic reference to 1813,<sup>79</sup> it seems to have been mainly their intoxicating affirmation of death that destined poets like Ernst Moritz Arndt, Max von Schenkendorf, and above all Theodor Körner to be the main witnesses of National Socialist downfall ideology. Körner, for example, had seen himself as one of the 'martyrs in the holy German cause', prepared, 'in bold and joyful sacrifice', 'to throw their young bodies with delight into the fray'. 'Your heart beats high, high grow your oaks, what matter then your piles of corpses? Plant freedom's banner high upon them!'<sup>80</sup> It is hardly surprising that Körner's name is also linked with the events at Stalingrad. In his speech at the Sportpalast on 18 February 1943, Goebbels' framed his call for total war in the words of the opening lines of one of Körner's poems: 'Now people arise and storm break forth!'<sup>81</sup> Just a year before his own war was unleashed, Hitler recalled with enthusiasm that long ago, in his youth, he himself had 'so often sung that same song with a heart full of belief'.<sup>82</sup>

There is no need, for the purposes of this discussion, to consider whether, and to what extent, the National Socialist leadership's references to historical and literary precedents were internally consistent or justified. The only question is by whom the material was invoked and whose interests it served. There is much to support the view that, for Hitler at least, invoking the Romantic gesture of self-destruction was more than a propaganda device to boost the troops' fighting spirit. On the contrary, it appears to have furnished the dictator with the ideological model and historical justification for his own orchestration of downfall.

In this respect, possibly the most illuminating example is Hitler's invocation of Clausewitz, which, although both frequent and consistent, has so far been mentioned only in passing in the relevant historiography.<sup>83</sup> Hitler had already concerned himself with the works of the Prussian military theorist before the First World War,<sup>84</sup> and repeatedly referred to them in his speeches, writings, and conversation from 1921 until the very eve of his death. Remarkably frequent—especially in

<sup>78</sup> Quoted in Krüger, 'Etzels Halle und Stalingrad', 180.

<sup>79</sup> The evidence for this is too extensive to be listed in detail here; suffice it to mention institutions such as the Iron Cross.

<sup>80</sup> Quotations from Körner's poems 'Die Eichen' (1810) and 'Aufruf' (1813). On the context, see also Lutz, *Vom Sterben im Krieg*, 36 ff.

<sup>81</sup> On the historical significance of the speech, see Moltmann, 'Goebbels' Rede', and Boelcke, 'Goebbels und die Kundgebung im Berliner Sportpalast'.

<sup>82</sup> Quoted in Hamann, *Hitlers Wien*, 25. On Körner and on the question of the historical significance of National Socialist images of the hero, see also Schilling, 'Die soziale Konstruktion', id., 'Die "Helden der Wehrmacht"', and lastly id., *Kriegshelden*, ch. 1.

<sup>83</sup> The few exceptions include Tallgren, *Hitler und die Helden*, 243–52, and Maser, *Adolf Hitler*, 24 ff. The still controversial question of the extent to which Hitler actually applied Clausewitz's principles in his conduct of the war is of secondary importance here.

<sup>84</sup> For evidence, see Maser, *Adolf Hitler*, 242–3.

the early twenties and the later war years—are the references to Clausewitz's 'Memorandum of Confession', written in the spring of 1812,<sup>85</sup> in which the author, then at a turning point in his life, appears as passionate patriot rather than cool theorist. The first part of the memorandum contains the following passage:

I believe and confess that a people can value nothing more highly than the dignity and liberty of its existence; that it must defend these to the last drop of its blood; that there is no higher duty to fulfil, no higher law to obey; that the shameful blot of cowardly submission can never be erased;

That this drop of poison in the blood of a nation is passed on to posterity, crippling and eroding the strength of future generations, that one can only lose one's honour once; [...]

That even the destruction of liberty after a bloody and honourable struggle assures the people's rebirth. It is the seed of life which one day will bring forth a new, securely rooted tree;

I solemnly declare before the world and posterity that the false cunning with which little men would avoid danger is to me the worst consequence of fear and anxiety; [...]

That I would be only too happy to find a glorious death in the splendid struggle for freedom and dignity of the fatherland!<sup>86</sup>

Significantly, these are the passages to which Hitler referred over and over again throughout his life, and which must have impressed him more than anything else in Clausewitz's works. To him, they seemed 'forged for our time [...] word for word'.<sup>87</sup> They served as the rhetorical weapons with which Hitler, the young party platform speaker, attacked the 'system politics' of the Weimar Republic,<sup>88</sup> Hitler the putschist defended his actions in court,<sup>89</sup> and Hitler the political theorist grounded his understanding of the 'right of emergency defence'.<sup>90</sup> In the run-up to the launch of war in 1939, Hitler again attuned his civilian and military comrades to the words of Clausewitz's 'Memorandum',<sup>91</sup> and in the following years too he left no doubt that it would serve as his guideline for action. The reference to Clausewitz's 'Memorandum' was present in Hitler's last brief radio message to the commander-in-chief of Sixth Army, on the point of destruction in Stalingrad, where the confession was 'about to find fulfilment',<sup>92</sup> as well as in Jodl's November 1943 speech, already mentioned, the conclusion of which was

<sup>85</sup> Repr. in Clausewitz, *Politische Schriften und Briefe*, 80–119.

formulated in very similar terms to the sentences of Clausewitz quoted above.<sup>93</sup> Those same sentences are to be found on leaflets inserted in German officers' paybooks, and it was they which still motivated the dictator on the eve of his suicide, when, invoking the spirit of Clausewitz, he called for the fight against 'the enemies of the Fatherland' to continue.<sup>94</sup>

A look at the First World War shows the effect that the tradition of self-destructive idealism, briefly outlined here, had on Hitler's own generation. The pomp and circumstance of the centenary celebrations held in the year before the war had already shown that, although the political situation as a whole was now completely different, the 'ideas of 1813' were still—or rather, were once again—very much alive.<sup>95</sup> It was the spirit of the German liberation wars (rather than, say, the spirit of the foundation of the Reich in 1870/1) which appeared to the enthusiastic protagonists of war in 1914 as 'the truly congenial parallel'.<sup>96</sup> Celebrating war as 'the eternal form of higher human existence',<sup>97</sup> they connected seamlessly with the cult of unconditional dedication—that is, dedication that asks for no success—developed a hundred years earlier. In the age of mass armies, what had been a personal need of individual volunteers in the War of Liberation was radically transformed into a collective demand for self-commitment, whereby all were required to make the supreme sacrifice. Readiness to die was raised to the criterion separating the worthy from the unworthy.<sup>98</sup> The precious element in 'German fidelity', as the German philologist Gustav Roethe put it in 1915, 'is the unreserved commitment of the whole man who, without haggling or weighing the cost, stands firm to the end, even if it leaves the whole world in ruins'.<sup>99</sup> This was more than one lone voice, as the Reich Chancellor, Max von Baden, discovered to his cost in the autumn of 1918, when he agreed to Erich Ludendorff's request that he take political steps to end the war. His decision was by no means universally approved. It also met with protests from national associations, ecclesiastical circles, and women's organizations, insisting even then that the country 'fight to the end'.

The calls from publicists and war poets, theologians and men of letters were increasingly put into practice by the armed forces. When the German Admiralty ordered the High Seas Fleet to attack in October 1918—an order which resulted in a naval mutiny—it was from the outset not for solely military purposes but also—indeed, primarily—in order to orchestrate an honourable collective defeat.<sup>100</sup> That too was the decisive motive for the scuttling of the fleet at Scapa Flow in June of the following year.<sup>101</sup> And the military men who, enraged by the terms of the Versailles peace treaty, called for the war to be resumed in 1919 were well aware that their

demands made no military sense, but they nevertheless held that the fight must continue, even at the cost of destroying the Reich, for the sake of ‘honour’ alone.<sup>102</sup>

The same self-destructive concept of honour was popularized by nationalist war writers in the years that followed. Claiming that only the fallen soldier, ‘a figure belonging to eternity’, was truly immortal, Ernst Jünger, for example, called for the training of a warrior type ‘capable of seeing death as the highest freedom’.<sup>103</sup> ‘Man’s deepest happiness is to be sacrificed, and the highest art of command is to show him goals worthy of sacrifice.’<sup>104</sup> Writing at the same time, Ernst von Salomon prefigured the end of the Third Reich, extolling the men of the ‘lost company’ who, deprived of hope, lit a funeral pyre ‘in which ideas, values, demands, and norms were reduced to blackened crusts’—men for whom all that remained was ‘to consign themselves to the harsh splendour of their fate’.<sup>105</sup>

These ideas did not fail to impact the self-image of the professional soldier. On the occasion of the Langemark commemoration in Berlin in 1934, Field Bishop Franz Dohrmann, for example, urged German youth to be ‘readier to die joyfully’.<sup>106</sup> And two years later the following passage appeared in the semi-official *Manual of Modern Military Science*, under the heading ‘The Art of War’: ‘Even attacking with no hope of victory, attacking for its own sake, may be justified as a last act of desperation that leads to a heroic end instead of ignominious surrender’.<sup>107</sup> The same spirit marked an order issued by Grand Admiral Dönitz on 10 February 1944. Invoking the ‘time-proven naval tradition that the commander of a ship fights with his crew to the last shell’, it was left to the commander’s discretion whether to allow himself to be rescued once he had done his duty, ‘as the officer in question cannot know what further tasks await him in his country’s service’. But at the same time, it was emphasized that ‘a different standard’ applied to the conduct of senior naval commanders: ‘A commander who goes down with his ship will live on in the history of the German nation as an emblem of the highest soldierly virtue and the finest German fulfilment of duty. His heroic death renders the greatest service to the fighting spirit of later generations of soldiers and to their military training’.<sup>108</sup>

These demands with regard to the conduct of war at the operational level were fulfilled by Hitler at the strategic level. He was not the inventor of the ideology of self-destruction, but its final executor. Consciously or not, he resembled the type of the ‘heroic idealist’ who, following Ernst Jünger, ‘was capable of passionately blowing himself up and seeing that very act as confirmation of the rightful order’.<sup>109</sup> For

<sup>102</sup> For examples, see Breit, *Staats- und Gesellschaftsbild deutscher Generale*, 109–10. No less a figure than Hindenburg declared at the time that he doubted whether there was any chance of military success if the fight was resumed, but that he must, ‘as a soldier, prefer an honourable fall to an ignominious peace’ (quoted in Wohlfeil, ‘Heer und Republik’, 89).

<sup>103</sup> Jünger, *Der Arbeiter*, 37–8.

<sup>104</sup> Ibid. 71. On the context, see Bohrer, *Die Ästhetik des Schreckens*.

<sup>105</sup> Salomon, ‘Der verlorene Haufe’, 126.

<sup>106</sup> Quoted in Schilling, ‘Die “Helden der Wehrmacht”’, 557.

<sup>107</sup> *Handbuch der neuzeitlichen Wehrwissenschaften*, i. 212.

<sup>108</sup> Directive issued by Dönitz on 10 Feb. 1944, BA-MA RM 7/1099.

<sup>109</sup> Ernst Jünger, quoted in Mohler, *Die konservative Revolution*, 126. The establishment of a suicide squadron to attack the invasion fleet with manned flying bombs was in fact discussed in

Hitler too, a heroic end was no meaningless act of desperation. It was not the physical destruction of the people that he feared, but their social destruction. He had already expressed the view, in *Mein Kampf*, that peoples do not necessarily perish as a result of lost wars, but only when ‘military defeat is the payment meted out for their inner rottenness, cowardice, lack of character, in short, unworthiness’.<sup>110</sup> Conversely, a heroic end might be a chance, rather than a loss. The closing years of the Second World War can therefore—as the prospect of victory became ever more remote—be seen as a ‘second-best solution’. They marked the Führer’s failure as a politician, but not as a theoretician. Hitler had already drawn a clear distinction between politicians and theoreticians in *Mein Kampf*, explaining that, while ‘the art of the politician is the art of the possible, the theoretician is one of those of whom it can be said that they are pleasing to the gods only if they demand and want the impossible. [...] For the greater a man’s works for the future, the less the present can comprehend them, the harder his fight, the rarer success.’<sup>111</sup>

Hitler clearly regarded himself, especially in the years of his definitive political and military failure, as one of the ‘marathon runners of history’ who, ‘not understood by the present, are nevertheless prepared to carry the fight for their ideas and ideals to their end’.<sup>112</sup> At all events, as his own end approached, the dictator increasingly placed hope in a more distant future.<sup>113</sup> Although, in the closing phase of the war, he had repeatedly painted a dismal picture of the complete destruction threatening a defeated Germany, in the last weeks of the war he often let it be known that ‘even this vision of horror’ could not take from him ‘his unshakeable belief in the future of the German people. [...] The more we shall have to suffer, the more spectacularly will the imperishable Reich rise again!’ It remained a ‘law of nature in this cruel age [...] that only those white peoples who are capable of holding out and, devoid of hope, still have the courage to fight to the death, only they have the prospect of surviving and flourishing once more’.<sup>114</sup> And, on the day before his death, he dictated the following sentence to Bormann, once again invoking Clausewitz: ‘Through the sacrifices of our soldiers and my own fellowship with them unto death, a seed has been sown in German history that will one day grow to usher in the glorious rebirth of the National Socialist movement in a truly united nation.’<sup>115</sup>

Luftwaffe circles in 1944; see *Germany and the Second World War*, vii. 336–7. And in October 1944, when the Allies were expected to advance into Germany, Himmler even spoke enthusiastically of using the population to turn the territory of the Reich into ‘a living minefield’ (address to the men of the Prussian Home Guard, 13 Oct. 1944, quoted in Kunz, ‘Die Wehrmacht in der Agonie’, 105).

<sup>111</sup> Hitler, *Mein Kampf*, 231–2. <sup>112</sup> Ibid. 232.

<sup>113</sup> On Hitler’s concept of the future, see Kroll, ‘Geschichte und Politik im Weltbild Hitlers’, 338–9.

<sup>114</sup> Hitler, *Hitlers politisches Testament*, 121 and 125 (2 Apr. 1945).

<sup>115</sup> Quoted in *KTB OKW*, iv. 1668 (29 Apr. 1945). On similar allegorical lines, Hitler had already imagined, in the years and decades preceding his failed putsch in November 1923, that the ‘blood of the fallen’ in his movement would be transformed into ‘water to baptize the Reich’; Reichel, *Der schöne Schein*, 221.

Here, at the latest, the contradiction always inherent in Hitler's world-view between Romanticism's 'sacrificial hero' and the 'leader-hero' of Social Darwinism is unmistakable.<sup>116</sup> While the leader-hero had repeatedly warned that, if it became weak, the German people would rightly be destroyed and would not be worth lamenting,<sup>117</sup> the sacrificial hero appeared to find hope precisely in hopelessness. The leader-hero was defined exclusively and directly by victory, the sacrificial hero by his end. That end was, in the Romantic view, not so much an end as a beginning, containing the seed of an all the more glorious future victory. By finally resorting to the role of the dying hero—a role which he, as an 'artist', had always admired<sup>118</sup>—Hitler apparently left the Social Darwinist behind him in a final attempt to give a sense to what had long been senseless.

<sup>116</sup> For a fundamental discussion of this question, see Behrenbeck, *Der Kult um die toten Helden*, 99 ff.

<sup>117</sup> Thus, again, to Speer on 18 March 1945; see Speer, *Erinnerungen*, 446.

<sup>118</sup> Mention should be made, in this connection, of the lasting impression that Wagner's opera *Rienzi* made on the young Hitler. The overture to this work, which deals with the rise and fall of the tribune celebrated and eventually betrayed by the people of Rome, was played every year at the opening of the Party congress in Nuremberg; see Hamann, *Hitlers Wien*, 39–40. In this connection, Joachim Fest has aptly observed that Hitler 'regarded the avoidance of downfall as one of struggling humanity's original sins'; see Fest, *Fremdheit und Nähe*, 296–7.

# Concluding Summary

*Karl-Heinz Frieser*

From today's viewpoint, the war unleashed by Hitler must be considered to have been lost by the end of 1941. After the collapse of the blitzkrieg strategy in the autumn of 1941 and the failure of the 'second campaign' against the Soviet Union a year later, the German command, as Bernd Wegner explains in his introductory chapter, was at an end—not yet operationally but nevertheless strategically, in terms of 'grand strategy'. Largely forced onto the defensive, it no longer had any coherent overall strategic conception of how the war could be brought to a victorious, or at least tolerable, conclusion. The 'stand firm strategy' characteristic of German conduct of the war from 1943 to 1945 was essentially a defensive concept geared solely to gaining time, *without* any strategy.

The dilemma facing the German command rested on a series of systemic and external factors. Among the latter, the main problem was the unfavourable evolution of human and material resources. Despite the conversion to a 'total war' economy, the losses could scarcely be made good any longer. Instead, Germany was increasingly failing to keep up with the dynamic growth of the Allies' mobilization and production capacities. The problem of the increasingly asymmetrical distribution of resources between the two sides was further aggravated from 1943 on by the growing interconnection between the European theatres of war. This interdependence of the eastern and southern European theatres is shown in exemplary fashion by Hitler's decision to break off Operation CITADEL.

Both the new front in Italy and the threat of a 'second front' in the west or north of the continent helped to undermine Germany's military action on the eastern front. The Allies' ability to attack 'Fortress Europe' at many different points imposed the need for defensive preparations all the way from Norway to France and from Italy to Greece. More and more units had to be withdrawn from the east, constantly reducing the strength of Germany's eastern army, while the size of the Red Army—despite horrendous losses—reached new heights. For that reason, as Foreign Armies East clearly recognized, further setbacks were virtually programmed in advance. The collapse of the centre of the eastern front in June 1944—which, in contrast to the invasion of France taking place at the same time, has almost entirely disappeared from German historical consciousness—was the dramatic consequence of that development. To Hitler, however, the most heavily contested theatre of operations no longer seemed the most important. In the course of 1943 he had

come to the conclusion that strategic victory in the east was scarcely possible any longer, whereas strategic defeat in the west might yet be avoided. Führer Directive No. 51 was therefore based on the premiss that Germany was more directly threatened by an invasion in the west (if only for geographical reasons) than by further setbacks in the east.

From 1943 on, the discrepancy between strategic necessities and available resources led to a heightening of already existing tensions within the German command. That is true of the conflict between the Army and Wehrmacht High Commands caused by separation of the OKH and OKW theatres of war, which developed into a bitter battle for the allocation of dwindling resources. But in relations between Hitler and his generals too, the mutual distrust which had always been apparent, and was outweighed by euphoria only in times of military success, increasingly became the basis of their daily joint activity. Suggestions for a political end to the war remained undiscussed, as did proposals for reform of the top military leadership. Spectacular proclamations of the top generals' loyalty to their Führer took the place of systematic discussion of the strategic situation and the consequences to be drawn from it. In reality, there existed in the Third Reich neither a war cabinet nor any other body competent to deal with fundamental issues of war and peace. The dictator himself, a man increasingly marked by overstrain and illness, was and remained the only organ responsible for issues of overall strategy. This situation was doubtless advantageous for Hitler's standing in his regime, but for the difficult conduct of a total war it was certainly disastrous.

## OPERATIONS ON THE EASTERN FRONT

Hitler's offensive plans in the war against the Soviet Union grew more modest from year to year. In the summer of 1941 the dictator had still believed he could shatter the Red Army in a blitzkrieg in a matter of months. For the summer of 1942, however, he planned a campaign aimed at conquering the raw-materials base needed for continuation of the war. In the summer of 1943 the offensive in the Kursk area was only *operational* in character. Thereafter, until the end of the war, the German forces conducted only local counter-attacks.

The decisive strategic paradigm shift occurred at the end of 1941, after the failure of the blitzkrieg approach in the winter battle before Moscow. That was when the nightmare of the First World War—a war of attrition lasting for years, which the German command had wanted to avoid at all costs—became a reality. Hitler's 'second campaign' against the Soviet Union in the following year was no longer planned strategically as a blitzkrieg. After its failure in the spring of 1943, a further paradigm shift took place: Hitler increasingly moved the point of main effort from the eastern front to the west of the continent. Faced with the realization that the Red Army could no longer be decisively defeated, he refrained from any further strategic offensive. For the summer of 1943 he planned only a 'limited offensive' in the Kursk area. While that was under way, a new danger loomed in the rear of the eastern front as the western Allies prepared to land in Italy from North

Africa. Germany would have to fight a multi-front war, and only a small window of time remained before it started. To forestall coordinated action by his enemies, Hitler planned to concentrate all his forces one last time on the eastern front and deal the Red Army a punishing blow.

In this operation the Army High Command had only two limited aims. One was to establish a more favourable defensive line by slicing off the Kursk salient, so as to be able to withdraw troops for the anticipated second front against the western powers. The other was to deal the Soviet forces massed in the Kursk salient a preventive blow before they could begin their summer avalanche offensive, that is, to attack the waiting avalanche before it started to roll. Operation CITADEL was thus only a relief attack from the strategic defensive. Hitler was by no means an unequivocal advocate of the Kursk offensive, mainly because his closest advisers in the Wehrmacht High Command were opposed to it. They did not want the precious armoured reserves to be sacrificed in the east for tactical/operational objectives, when they were needed in the west for the strategic purpose of preventing a multi-front war.

The failure of Operation CITADEL was virtually programmed in advance, since the attackers were facing forces that were many times superior and entrenched in a deep defensive system. But the main reason why Hitler broke off the offensive was an event that occurred 3,000 kilometres away. Scarcely had the German units penetrated the first Soviet lines when American and British troops landed in Sicily. In that situation, the dictator reacted exactly as he had already decided to do in the event of an Allied landing: he stopped the offensive in the east. By coincidence, the greatest armoured battle of the war took place at the same time to the south of Kursk—a battle that was later to be raised to the status of a legend. According to the Soviet version, the outcome of the war was still balanced on a knife edge, and it was settled in a titanic tank battle at Prokhorovka in which Soviet forces ‘broke the neck’ of the German armour.

In truth, the battle of Kursk was by no means a turning point in the Second World War, whose outcome was long since decided. Even if the German plan had succeeded and the two pincer arms had joined at Kursk, it would have been only another of the habitual ‘lost victories’, that is, a temporary operational success, and would soon have been rendered meaningless by the war on two fronts now beginning. Moreover, at Prokhorovka the Red Army suffered a fiasco. Whereas the German armour emerged from the clash with insignificant losses, those inflicted on the Soviet armoured units were catastrophic. And that is true of the battle of Kursk overall. The Red Army lost a total of over 6,000 fighting vehicles, more than eight times as many as the Germans. The Wehrmacht’s preventive strike was thus a partial success, since it took the impetus out of the ensuing Soviet summer offensive. Stalin had planned to advance to the German border in 1943, but only managed to do so a year later.

The real turning point in the summer of 1943 was the Allied landing in Italy, since it marked the beginning of the two-front war in Europe. In its conflict with the Soviet Union, Germany had actually been obliged from the outset to conduct a multi-front war at sea, in the air, and also on land. That factor—and with it, the

role of the worldwide British empire—has so far been underestimated in both Soviet and British historiography. The United States too, as an economic super-power, supplied the Soviet war economy with aid under the lend-lease programme that was of considerable strategic importance from 1943 on. The air forces of the western Allies proved especially dangerous. While the greatest land-air battle in history was taking place at Kursk, the Luftwaffe lost in Italy and on the ‘home front’ many times more aircraft than were shot down on the eastern front.

After the failure of Operation CITADEL the Red Army finally gained the initiative, while for the German troops there began the phase of continuous setbacks and withdrawal battles. Hitler sought to prevent that development by holding on rigidly to specified areas—an approach exaggeratedly described as a ‘stand firm strategy’. That led to a lasting dispute between him and some of his generals over the rival concepts of ‘mobile’ versus ‘rigid’ defence. The dictator refused to give up space and stubbornly insisted on linear forward defence, whereas his generals, having regard to Russia’s vast expanses, wanted to use space as a weapon and adopt mobile operation. Such ‘free operation’, however, was both difficult and risky. It required a high degree of professional command expertise, which Hitler did not possess. To him, ‘operating’ often seemed merely an excuse for rearward withdrawal. The longer the war lasted, the more strongly he enforced his will. At first, the German generals still possessed some room for manoeuvre. Although they were unable to stop the Red Army permanently by means of their ‘offensive defence’, the Soviet forces had to pay dearly for every territorial gain. During that phase the Wehrmacht was still in a position, even in the case of bitter defeats, to inflict many more times as many losses on the enemy as it suffered itself.

The main problem for German conduct of the war in the east was that Hitler had gone over to strategic defence without carrying it through consistently at operational level. Above all, he ought to have chosen a favourable defensive line that enabled him to repel Soviet attacks durably. In the late summer of 1943 his military advisers urged him to carry out a large-scale withdrawal to the ‘Panther Line’, which was formed by wide rivers like the Dnieper. That shortening of the front would have freed up enough units to create an operational reserve at last. The dictator, however, wanted to hold on to every little front salient. Above all, he refused to withdraw from the Donets Basin, which was important for Germany’s war economy, even though he lacked the forces to defend it. When he finally did authorize withdrawal, it was far too late. The mechanized Soviet units won the race to the Dnieper and were able to establish bridgeheads in several places.

In the winter of 1943/4 the Red Army conducted a major offensive along the whole front, from Leningrad to the Black Sea. Once again, Hitler’s ‘stand firm’ mania had disastrous consequences. He repeatedly brought about a fiasco by his constant refusal to withdraw in time. Instead of active delaying combat, there was often only hasty flight from a threatening encirclement. But sometimes the trap snapped shut. At the end of March, First Armoured Army was enclosed by seven Soviet armies at Kamenets Podolsky. Its destruction would have meant the collapse of the eastern front’s whole southern wing. In that situation, Field Marshal von Manstein pulled off an operational master stroke, rescuing First Armoured Army

from the trap and outmanoeuvring his opponent, Marshal Zhukov. But his most dangerous opponent was Hitler, who once again wanted to reject a breakout. The dictator acceded to Manstein's demand only when the field marshal threatened to resign. And soon afterwards Hitler relieved him of his command.

Manstein's dismissal was a highly symbolic act that introduced a new paradigm shift. Hitler announced that the time for large-scale operations in the east was over. Instead, what was needed was simply to 'stand firm rigidly'. With that, one of the dictator's most disastrous ideas came into play: the concept of 'fortified places'. According to Führer Order No. 11, the troops concentrated in places so designated should voluntarily allow themselves to be enclosed, in order to tie down the strongest possible enemy forces. Up till then, the dictator had wanted to defend lines rather than operating flexibly in space. Now he narrowed his defensive concept to points. He believed that, in using such 'fortified places' as breakwaters, he had found the recipe for stemming the flood of enemy attacks.

In reality, however, Hitler's obsession with rigid defence on the eastern front arose from a hazardous offensive strategy which, for 1944, can be expressed by the simple formula: 'strike in the west, hold on in the east.' But that was an all-or-nothing game. The dictator planned on inflicting a decisive defeat on the Allied invasion troops on the coast, so as to turn the tide of war. In pursuing that idea, he worked himself up into an 'autosuggestive euphoria' (Albert Speer). At the same time, however, his interest in the eastern front visibly declined. He sent more and more tanks and aircraft to the OKW's western theatre of war, although the units in the OKH's eastern theatre had long been obliged to fight a 'poor man's war'. Most alarming of all was the fact that there was no operational reserve immediately available in the event of a Soviet breakthrough. That reserve was 2,300 kilometres away, on the western front. Hitler's intention was to throw 35 divisions onto the eastern front immediately after victory on the Atlantic, and return to the offensive. That scenario is reminiscent of the Schlieffen Plan, according to which a decisive battle would first be fought in the west and the bulk of troops would then be transferred to the east.

The Army High Command viewed this asymmetrical distribution of forces with great concern. It feared the Red Army could take advantage of the temporary period of weakness on the eastern front to launch a decisive offensive. For that reason, German enemy intelligence stared spellbound at the Kovel salient, which pointed towards Warsaw. If a breakthrough was achieved there, the Soviet tanks could advance to the Baltic coast and enclose two German army groups. However, the Red Army high command did not venture to mass the bulk of its troops for an offensive that would decide the outcome of the war. Instead of thrusting into the rear of Army Group Centre from Kovel, it attacked the Belorussian balcony directly from the east. With that change of the point of main effort, the Soviet high command allegedly achieved a complete surprise. In fact, the Soviet intentions were relatively well known from intelligence reports up to the level of the army command. But the commander-in-chief of Army Group Centre, Field Marshal Busch, intimidated by Hitler, failed to pass on such 'defeatist' findings properly, resulting in misinterpretation at the top command level.

The collapse of Army Group Centre was the most costly defeat in German military history. In the summer of 1944 the weakened eastern front was like a house of cards about to fall. The German units increasingly resembled those of the First World War, and usually had to race against the enemy's mechanized and motorized enemy troops on foot and with horse-drawn carts. Soviet superiority, especially in terms of material, had meanwhile become overwhelming; in many sectors of the front it attained grotesque proportions. At the same time, in the summer of 1944 the Red Army underwent a decisive transformation into a modern war machine. As the Soviet forces had taken over various successful methods from the Wehrmacht, the two sides came increasingly to resemble each other, though moving in opposite directions: in 1944 the Red Army practised the German war of movement of 1941, whereas the Wehrmacht was now imitating the Red Army's rigid defence of the same period. After the disastrous results of his 'stand firm' orders at the beginning of the war, Stalin had realized that he had to heed the advice of the military experts. In Hitler's case, on the other hand, the breathtaking initial successes led to a loss of touch with reality. No general was capable of talking the 'military commander' Hitler out of the doctrine of rigid defence.

When Army Group Centre's front collapsed at the very beginning of the Soviet major offensive in June 1944, immediate withdrawal from the trap was called for. Fourth Army and large parts of the two neighbouring armies were threatened with enclosure. Although the commanding generals desperately demanded retreat, the dictator ordered them to 'stand firm at all costs'. In those circumstances, the 'fortified places' proved a perversion of static defence, since enclosure was programmed in advance. While defeat appeared inevitable, Hitler's 'stand firm' orders turned it into a catastrophe. In the summer of 1944 German losses on the whole eastern front rose dramatically. A large proportion, however, were self-inflicted. Hundreds of thousands of dead, wounded, and captured are unequivocally attributable to Hitler's crassly wrong decisions.

When Field Marshal Model was appointed as the new commander-in-chief of Army Group Centre, the front had collapsed along a width of 400 kilometres. As he was too weak to defend, Model chose to attack. Without bothering too much about Hitler's linear defence concepts, he let the Soviet spearheads advance and then attacked them in the flank with his tanks. After some reserves had been brought in, he did manage to stabilize the situation to some extent. But then the front of the neighbouring Army Group North Ukraine also collapsed, and that was followed immediately by the offensive thrust which the OKH feared most—a breakthrough near Kovel. Armoured units of 1st Belorussian Front pushed towards the almost undefended area to the east of Warsaw. From there, they would have been able to advance along the Vistula to the Baltic Sea and enclose the whole northern wing of the German eastern front. On 1 August 1944, which also saw the beginning of the Warsaw Uprising, the fate of the eastern front hung in the balance. That day Model saved the front by a surprise counter-attack at the gates of the Polish capital, and the Germans were able to hold the Vistula line until January 1945.

Operation BAGRATION, which took the Red Army from Vitebsk to Warsaw, was a great Soviet success. Nevertheless, it did not achieve what would probably have

been possible, that is, to bring about the collapse of the eastern front with one mighty blow. At that stage the war was not only lost for Germany; it was actually almost at an end, since the eastern front resembled a house of cards. But the Soviet command did not venture to concentrate all of its available forces at the critical point, Kovel, in order to deal the German eastern army the death blow. Even during the final phase of Operation BAGRATION, the (belated) pincer attack with relatively weak armoured forces might still have succeeded. From today's perspective, it is clear that a major offensive in that direction, combining the whole Soviet offensive potential, would probably have ended the war earlier.

After the Red Army had been stopped at the Vistula, Hitler made one more attempt to turn the tide. The strategic approach was the same as in the early summer of 1944: strike in the west, hold on in the east. The dictator saw his only chance in the contradictions within the enemy coalition, and predicted its imminent collapse 'with a huge clap of thunder'. To that end, he planned the Ardennes offensive as a surprise blow that would inflict 'another Dunkirk' on the western Allies. In this respect, the interdependencies with the eastern front are interesting. Historians have repeatedly puzzled over why Hitler refused to allow Army Group North to withdraw from the Baltic region in October 1944, thereby obliging it to submit voluntarily to enclosure in the Courland peninsula. With its 500,000 men, it should have been deployed, in the view of the OKH General Staff, as an operational reserve in defence of the territory of the Reich. But Hitler intended to use Courland as a bridgehead to return to the attack, and to do so immediately after the Ardennes offensive. The massive transfer of troops from the west to the eastern front, which he had originally been planning for the summer once the Allied invasion had been successfully repelled, would then at last take place. So in Hitler's eyes the Courland pocket was a bridgehead, indeed a springboard, for a future offensive. The Courland 'fortified area' was intended to serve the same purpose as the system of 'fortified places' on the eastern front in the summer of 1944. From the purely tactical viewpoint, those 'fortresses' had the defensive function of breakwaters against the assault of the Red Army. At the same time, however, they were intended—and not even most of the generals knew this—as springboards for future attacks, in accordance with Hitler's utopian offensive strategy. That also explains their exposed position in bridgeheads or front salients like Vitebsk, which were extremely difficult to defend. Hitler acted increasingly like a gambler going for broke. In Albert Speer's view, he had manoeuvred himself into such a hopeless position that he had only the choice of 'the offensive or defeat'. But that reckless 'all-or-nothing' strategy was a criminal risk for the German people, and above all for the troops sacrificed in suicidal missions.

In the literature so far, especially the memoir literature, we repeatedly encounter the cliché of the generals' operational competence and Hitler's operational incompetence. It has led to the creation of a satirical stereotype. A comprehensive evaluation of the German files leads to the surprising conclusion that the satire is surpassed by reality. Hitler's operational interventions were even more amateurish, and his strategic visions even more reckless, than previously assumed. In addition, the Führer stubbornly interfered, like a 'one-man high command', in the tiniest

tactical details. In the end, he managed to override the military experts, which resulted in an increasing de-professionalization of Germany's conduct of the war. But the blame lies also with the generals. It was they who let themselves be incapacitated by Hitler, the civilian. In contrast to the First World War, when the military dominated politics, the Second World War saw the opposite extreme—a perverse primacy of politics.

Germany's standing as a military power rested not only on its quantitative superiority, but above all on the operational school of thought of its general staff. Since Moltke the Elder, that institution had been on a higher intellectual level than in any other country. Although Hitler as 'commander' blunted that intellectual weapon, it remained effective, even in the offensive war against the Soviet Union. Nevertheless, a very ambivalent judgement of the role of Germany's military elite is called for, even regarding those officers who were not actively involved in crimes. In 1941 many generals stood by and watched as Hitler pursued a war of annihilation against the population of the Soviet Union. In the further course of the war, most generals also stood by and watched as Hitler sacrificed their men. Thus they failed on their own ground. Precisely because their understanding of military matters was so highly developed, they must have realized at an early stage what would be the consequences of Hitler's orders for the troops entrusted to them. They asked their men to attack Soviet tanks with hand-held rocket-propelled grenade launchers and sticky bombs, whereas most of them did not have the courage to rebel against the Führer's orders. That is precisely where the moral and ethical failings of many generals lie, as does the failure of the military command system as a whole. Only a few, like the 20 July conspirators, dared resort to active resistance.

In the practice of their craft, the German officers mostly proved very efficient. In 1941 the Wehrmacht had advanced to the gates of Moscow in less than five months, whereas it took the Red Army another three years to force it back to its starting position. The two armies were structured differently, mainly because of the geostrategic premisses. Since Germany lay in the centre of Europe, its general staff naturally assumed that it would have to fight simultaneously against enemy superiority on several fronts. Significantly, the basic principle of the Schlieffen school was: 'from inferiority to victory'. An obsession with efficiency developed, since quantitative inferiority had to be compensated for by qualitative superiority. That also resulted in the modern operational war of movement known as blitzkrieg, aimed at high-speed execution, with which the Wehrmacht achieved spectacular successes at the beginning of the Russian campaign. To its adversaries, the Wehrmacht then appeared an astonishingly well-operating war machine. In no other army in the world did officers enjoy such freedom of action in a framework of mission-type tactics. Nowhere was the value of teamwork so clearly recognized. While the Stalinist system treated the individual soldier as an exchangeable 'mass-production item', the Wehrmacht, at least in the first half of the war, put a premium on welding its men together in close-knit primary groups. Only then were they sent to the front. Combined-arms combat also functioned remarkably well because the officers, in units of manageable size, were well attuned to each other, whereas the Red Army piled any number of units together in gigantic

formations. The same striving for qualitative superiority was apparent in the technical field. The German armour, a generation behind because of the restrictions imposed by the Treaty of Versailles, at first appeared to have little chance against the T-34s. From 1943 on, however, its Tigers and Panthers gave it technical superiority. The mere fact that all German fighting vehicles were fitted with radios proved an inestimable advantage. Nevertheless, the weight of numbers prevailed. Although the Soviet armour suffered 96,500 total write-offs (which meant a cruel death for many crews in burning tanks), the number of fighting vehicles produced was even greater.

German soldiers who had served on various different fronts largely concurred in reporting that the Red Army troops were the most difficult of their adversaries. Their toughness was astonishing. They fought even under weather and hygienic conditions which units of western armies would have rejected as unacceptable. Their defiance of death was particularly shocking. But precisely therein—in the spirit of self-sacrifice of those brave soldiers—lies an immeasurable tragedy, since the Stalinist leadership availed itself of the seemingly limitless mass of human beings without the slightest scruples. For Soviet officers too, it was much easier to crush the enemy without regard to one's own losses than to attempt risky manoeuvres. At that time, independent and innovative thinking could be extremely dangerous in civilian life too. While the official figures for Red Army losses are shockingly high in themselves, the real number remains a puzzle. In the Soviet era, military operations which proved particularly disappointing were simply blotted out of memory.

For some years there has been a controversy among military historians as to whether the Wehrmacht's fighting power resulted primarily from National Socialist ideology or from its own systemic efficiency. The study of an abundance of documents concerning the war in the east has shown without doubt that the latter hypothesis is to be preferred. In the second half of the war, above all, ideology played an ever-decreasing role. The Wehrmacht troops were fighting not for 'Lebensraum' but for bare survival.

The longer the war went on, the fiercer it became. Both sides fought with terrifying cruelty. The increasing ferocity was felt by prisoners of war in particular, if indeed prisoners were taken. Since the Germans had committed numerous crimes, especially in the first phase of the war, many Red Army soldiers were bent on revenge. In turn, fear of capture pushed the Wehrmacht troops into desperate resistance that cost the Red Army huge losses, for which further vengeance was exacted. And so the violence escalated. In the course of their retreat, the Germans employed 'scorched earth' tactics to destroy the infrastructure which the Red Army needed for its military operations. They left behind a wide trail of devastation and inflicted great damage on the mass of the population. At the same time, many people were deported to Germany as forced labourers. The partisans played a fatal role in the whole witches' cauldron. By attacking German troops, they provoked reprisals against the civilian population. The ensuing German 'counter-insurgency' measures, portrayed as complying with international law, were partly a cloak for genocidal conduct of the war. However, the various partisan movements

fought among themselves and also oppressed the population. After the territory was liberated by Soviet troops, the population was again caught up in the maelstrom of war. A wave of terror began against real or alleged collaborators. Massive recruitment operations were conducted, in which large numbers of men, and even adolescent youths, were enlisted in the Red Army and sent to the front as cannon fodder without any training worth mentioning. On the other hand, the retreating Wehrmacht units were accompanied by a wave of civilian refugees who feared the return of Stalin's commissars. In October the fury of war reached East Prussia: the massacre of German civilians in Nemmersdorf was the first writing on the wall.

### THE SOUTH-EAST EUROPEAN, ITALIAN, AND SCANDINAVIAN THEATRES OF WAR

At the end of February 1944 Soviet troops marched into northern Transnistria. For the first time, as Klaus Schönerr recounts, military operations on the eastern front reached the territory of one of Germany's allies. The Red Army now directly threatened *Romania*, which had supported the eastern campaign with numerous units. While the Soviet advance was stopped at first, the hostilities on old Romanian territory led to the end of German hegemony in south-eastern Europe. Although Germany's most important ally at that time intensively supported the formation of a defensive front in Moldavia and on the Dniester, the first cracks appeared in the coalition. Romanian war-weariness was one of the main causes of the internal political changes now beginning. When the Red Army launched its summer offensive at the end of August 1944, the German–Romanian front collapsed at the first assault. The Soviet breakthrough at Iași and Tiraspol led to a military catastrophe in which Sixth Army was destroyed for the second time. That development led to the country's withdrawal from the war. Even though German post-war literature attributes the fiasco to 'Romanian betrayal', the documents show that errors of command on the part of the Wehrmacht were largely to blame. The German side displayed arrogance and lack of perspicacity. Despite the political changes, it believed it could conquer Bucharest by purely military means and install a pro-German government. The Bucharest–Ploiești adventure also ended in a debacle and gave Romania grounds for hostilities against the German troops.

The few German troops who had escaped the disaster in Romania established a new security line in southern Transylvania with Hungarian support. Almost at the same time, a national uprising broke out in Slovakia, another member of the Axis coalition. At the beginning of September the Stavka took advantage of the situation to launch a large-scale pincer operation against Army Groups North Ukraine/A and South Ukraine/South. The Red Army attacked from the Beskids and southern Transylvania, with the aim of enclosing large parts of the two army groups in the Carpathian salient. However, the German forces were still strong enough both to suppress the uprising and to fend off the Soviet offensive.

Germany's coalition partner *Bulgaria* had kept out of the fighting throughout the war and had by no means declared war on the Soviet Union. With a military disaster looming in Romania, the Bulgarian government sought to withdraw from the coalition and stress its political neutrality vis-à-vis the Soviet Union. In an attempt to win Soviet goodwill, it adopted a restrictive attitude to the German troops. But despite all Bulgaria's efforts to avoid a military and political confrontation, the Red Army marched in at the beginning of September 1944 and occupied the country. Only a few weeks later, after Bulgaria had concluded an armistice with the Allies, it fought on the side of the Soviet Union against its former coalition partners.

In *Greece*, Army Group E responded to the fiasco in the Romanian theatre by preparing withdrawal from the Greek islands and the mainland. The withdrawal movement from the southern Balkans, as Klaus Schönherr also recounts, went very well at first. But then the German troops' retreat from Macedonia and Albania was also threatened with disaster. By the end of the year, however, Army Group E had managed to repel the attacks by Soviet and Bulgarian troops and the Yugoslav People's Liberation Army to such an extent that it was able to establish a relatively stable defensive line on the Bosnian-Macedonian border.

As Krisztián Ungváry stresses, events in the *Hungarian theatre of operations*, and especially the role of the Honvéd Army, have received little attention in the German specialist literature. In most accounts, the description of German military strategy ends with the Ardennes offensive in December 1944. But it was only afterwards that Hungary became, from Hitler's viewpoint, a major theatre of operations. It was in Hungary that the Wehrmacht conducted its last offensives in the Second World War, and they would have been impossible without Hungarian support. In September 1944 the Honvéd Army provided 950,000 troops, and even in March 1945 it accounted for 30 per cent of Army Group South's artillery and 20 per cent of its infantry. That made it the Wehrmacht's most important ally in the last twelve months of the war. Yet the German war diaries mention the Honvéd troops almost only in regard to their failures. The importance of the partnership in terms of material supplies was even greater than its military importance. Hungary produced large quantities of armaments, and became, from 1944, Germany's most important supplier of foodstuffs. Without Hungarian oil supplies, Germany would have been unable to continue the war by September 1944 at the latest. For that reason, Hitler transferred numerous divisions to the Hungarian theatre instead of reinforcing the territory of the Reich. In the end, half of the armoured divisions on the eastern front were stationed there. Most Wehrmacht operations in Hungary proved effective. After Christmas 1944 the Germans launched five large-scale operations, while remaining on the defensive in all other theatres of war. Those operations inflicted heavy losses on the Red Army. Strong Soviet forces were tied down in the region, which relieved the pressure on the home front. The fighting in Hungary largely contributed to the continuation of the war for several more months. According to the Stavka's plans, the Soviet troops should have already conquered Austria by the spring of 1945 and should have been approaching

Bavaria. In the event, only a small part of Austria, including the capital, Vienna, had fallen to the Red Army.

In *Yugoslavia*, as Klaus Schmider argues, the occupation policy of the Axis powers was doomed to failure. In the territory of the NDH (Independent State of Croatia) coalition partner, the insurgency movements of the Communist partisans and the Serbian nationalist Chetniks were soon afforded extensive possibilities for development. The causes were the arbitrary demarcation of the border, the genocidal excesses of the Ustasha militia, and Italy's Croatia policy, which oscillated between patronage and bullying. In Serbia the temporary build-up of a point of military concentration, along with terroristic reprisals, made possible the 'pacification' of that territory until the summer of 1944, whereas in the NDH similar measures failed or were effective only in the short term. The considerable numbers of ground forces which the Croatian state put into the field in 1943 also failed to contain, let alone solve, the problem, owing to their increasing demoralization (in the case of most Territorial Army units) or political unreliability (in the case of the Ustasha). In this respect, the extensive lack of interest of most German officials in the offers to collaborate from a significant minority of the Serbian community was an appreciable negative factor. A change came only in the summer of 1944, under the pressure of military developments, but by then it was much too late. Only the gradual rallying of the losing side in the internal Serbian civil war—the Chetniks—to the occupying power could be reckoned by the latter as a positive, if unintentional, by-product of its occupation policy.

When Old Serbia was conquered by 2nd and 3rd Ukrainian Fronts and parts of the People's Liberation Army in the autumn of 1944, it was mainly thanks to the transfer of most Soviet units to the Hungarian theatre that 2nd Armoured Army and Army Group E (Col.-Gen. Alexander Löhr), which was withdrawing from Albania, Macedonia, and Montenegro, were saved from destruction. In the next few weeks the German forces managed to stabilize the front. Löhr's army group was also evacuated via south-western Serbia, northern Montenegro, and finally south-eastern Bosnia. In the following months, together with the units already transferred to Bosnia, the Germans strove to maintain the largest possible part of the NDH against a People's Liberation Army which, with Soviet aid, was turning into a regular combat force. The transition from small-scale operations to normal ground warfare, including combined-arms combat, brought the former partisans both major setbacks (on the Syrmian front in January 1945) and the first victories over their former arch-enemy (the battle for Tuzla in February 1945). After the Red Army conquered almost all of Hungary, the NDH formed a balcony-like salient in the southern part of the eastern front. The attempt by Hitler and the OKW to maintain that salient with insufficient forces ended in disaster in the last days of the war. A large-scale offensive launched by the People's Liberation Army on 12 April 1945 herded the forces of Commander-in-Chief South-East together in costly battles in the Slovenian–Austrian border area. The few units that escaped destruction eventually surrendered to British forces.

The *Italian theatre of war*, discussed in this volume by Gerhard Schreiber, strikingly illustrates the interdependencies in the multi-front war. The western

Allies' landing in Sicily on 10 July 1943 was the main reason why Hitler called a halt to the Operation CITADEL offensive against Kursk. In any case, he sent only part of the originally intended troops to Italy, since other conflagrations had broken out on the eastern front. The German troops' tactical and operational action in Italy must nevertheless be deemed efficient. They displayed an astonishing talent for improvisation, especially in regard to supplies and transport. But even the greatest military skill was unable to make up for the Germans' material deficits in comparison with the Allies. The fact that the Wehrmacht's losses in Italy were generally higher than those of the Allied forces, although the latter were continuously on the attack, is largely explained by the Allies' overwhelming air superiority. Another fact which, as the author stresses, even a purely military account of events must not fail to mention, is that the Wehrmacht and SS repeatedly engaged in criminal and racially motivated warfare. In terms of the integration of the war in Italy in the overall strategy of the main powers, both sides fulfilled their relevant strategic diversionary tasks by tying down strong enemy forces in the Italian theatre. The campaign in 1943, when London and Washington sought to bring about Rome's withdrawal from the war, was significant but never decisive for the outcome of the war. For the Wehrmacht, the purpose of operations in the south was, in the final analysis, only to prolong the war, that is, to delay the long-certain German collapse and keep the enemy away as long as possible, first from 'Fortress Europe', then from 'Fortress Germany', and finally from 'Fortress Berlin'. In reality, however, at the latest since the Allied landing in Sicily, the German forces were no longer capable of anything more than 'fighting forwards while moving backwards'.

For a long time, as Bernd Wegner explains, *Northern Europe* lay in the lee of the large European theatres of war, but there too a gradual shift to Germany's disadvantage was discernible from 1943 onwards. Increasing resistance among the population of Norway and Denmark, the reorientation of Swedish neutrality policy in favour of the western Allies, and the cautious defensive manoeuvres on the part of the Finnish 'comrade-in-arms' all pointed to a change in the situation, which remained below the surface at first but assumed dramatic form with the beginning of the Soviet offensive on the Karelian peninsula in June 1944. From a seemingly hopeless starting position, Finland managed to cleave a way out of the war and—as Germany's only European ally, and at the same time the only European state directly bordering on the Soviet Union—avoid occupation and preserve its constitutional order. That was not only the result of bitter military resistance and a number of lucky historical circumstances, but especially the fruit of skilful—at times, devious—policy on the part of Helsinki, which understood how to take best advantage of the little room for manoeuvre remaining to it.

#### THE 'STRATEGY OF DOWNFALL'

Looking, in conclusion, at the deficiencies of German strategic warfare in the second half of the war, one is struck in particular by the extensive renunciation of creative foreign affairs and alliance policy. It is all the more surprising, as in

previous years the regime had acted with notable success in precisely that area. The dwindling importance of the foreign ministry and the simultaneous growth of the influence of the SS, the ministry of propaganda, and other departments was not so much a cause as a symptom of a development in which politics was increasingly reduced to propaganda. Against that background, the German alliance system eroded all the more quickly as, apart from anti-Communism, it was based almost exclusively on the initial superiority of German arms, and hardly at all on long-term common interests or shared values.

Even more damaging was Hitler's refusal, imposed against the wishes of most of his coalition partners and many of his advisers, to seek a political way out of a war that was recognizably lost. His rejection on principle of all attempts to conclude a separate peace had to do neither with the Allied demand for unconditional surrender nor even with his supposed belief, in defiance of the strategic realities, in a German 'final victory'. Rather, Hitler's decision to continue the war, once begun, to the last extremity was rooted—as Bernd Wegner argues—in his determination to stage the downfall, which he himself recognized as inevitable, as a heroic finale. The ensuing 'orchestration of the end' led to a radicalization of Germany's conduct of the war, and thus contributed decisively to prolonging the war and adding millions to the number of victims. Perhaps the most horrendous expression of that will to destruction was the 'scorched earth' tactic adopted in the east (which Hitler wanted adopted in the last months of the war in Germany too, in accordance with the 'Nero Decree'). But the orgy of destruction did not only affect bridges and power stations. The toll of human lives mounted to a crescendo through forced deportations and murder operations, as, for example, during the evacuation of the concentration camps. The measures adopted in the Soviet theatre of war, until recently dealt with only sketchily in the research literature, led to a further increase in the dynamic of destruction set in train in 1941 under entirely different auspices. Now, in the mind of the dictator, it was also directed against his own people, to whom—in the event of defeat—he denied the very right of existence. He had left no doubt about it, having issued the threat years before: 'In this, too, I am as cold as ice. If the German people proves no longer strong enough, or sufficiently self-sacrificing, to pay for its existence with its own blood, then let it perish and be destroyed by another, stronger power [...] then I shall shed no tears for the German people.'<sup>1</sup> Thus, Hitler's only strategy in the final phase of the war was a 'strategy of downfall'.

<sup>1</sup> This statement was made by Hitler on 27 November 1941 in the presence of the Danish foreign minister, Erik Scavenius, and the Croatian foreign minister, Mladen Lorković; see Haffner, *Anmerkungen zu Hitler*, 152. A similar pronouncement is reported in Speer, *Erinnerungen*, 446.

Fond 3400/op. 1, d. 23

Fond. 3407/op. 1, d. 108

CAMO Collection, Documents on the Battle of Kursk:

At the 35th International Military History Conference of the MGFA, held in Ingolstadt in September 1993, the Russian delegation presented an exhibition of a set of hitherto unknown documents from CAMO, mainly concerning the battle of Kursk in 1943. The conference volume contains an essay by Viktor V. Mukhin in which the 38 documents in question are described, although without archive file references ('Vorstellung und Kommentar zu Exponaten und Dokumenten über die Schlachten von Charkov und Kursk', in *Gezeitenwechsel im Zweiten Weltkrieg?*, 241–53). The following is a list of the documents from that set which are quoted in the present volume by Karl-Heinz Frieser in his discussion of the battle of Kursk. Copies of the documents listed are contained in the MGFA's collections.

## Document 20

*Spravka o poteriakh tankov po deistvuyushchim frontam v boyakh s 5.7.43 g. po 20.7.43 g.* [Report on (Soviet) tank losses, broken down by front, in the battles from 5 to 20 July 1943]; date: 23 July 1943

## Document 21

*Spravka o poteriakh voisk frontov, poteriakh, nanesennykh imi protivniku, i vyvody o deistviach tankovykh voisk protivnika v operatsiakh s 5-go po 15-e iyulia 1943 goda* [Report on (tank) losses by front-line troops, losses suffered by the enemy, and conclusions regarding combat action by enemy armoured troops in operations from 5 to 15 July 1943]; date: 19 July 1943

## Document 22

*Po Glavnому upravleniu bt i mv ot 22.7.43 g.* [Report by the Commander of 1st Armoured Army, Gen. Mikhail E. Katukov, to the Main Administration of Armoured and Mechanized Troops on Enemy Losses (Voronezh Front)]; date: 22 July 1943

## Document 23

*Svedenia o bezvozvratnykh poteriakh tankov, imevshikhsya na vooruzhenii bt i mv Voronezhskogo fronta za period oboronitelnogo srazheniya Kurskoi bitvy (s 5.7.43 goda po 23.7.43 goda)* [Data on irreplaceable tank losses of the Voronezh Front in defensive operations during the battle of Kursk from 5 to 23 July 1943]. Source given: f. 203, op. 2843, d. 341, 11. 138–167; date according to Mukhin: July 1943 (manuscript archive copy of 12 Aug. 1993)

## Document 24

*Svedenia o bezvozvratnykh poteriakh tankov (vsech tipov), imevshikhsya na vooruzhenii 5. gvardeiskoi tankovoi armii, pridannoi iz rezerva Stavki VGK Voronezhskomu frontu za period oboronitelnogo srazheniya Kurskoi bitvy (5.7.43–23.7.43 gg.)* [Data on irreplaceable losses incurred by 5th Guards Armoured Army of tanks (all types) assigned to the Voronezh front from the Stavka reserve for the duration of the defensive operations in the battle of Kursk.] Source given: f. 203, op. 2843, d. 341, 138–167; also: f. 203, op. 2847, d. 5, 11. 1–2; date according to Mukhin: July 1943 (manuscript archive copy of 12 Aug. 1993)

## Document 30

*Iz otcheta o boevykh deistviakh 5-i Gvardeiskoi Tankovoi armii za period s 7 iyulia po 24 iyulia 1943 goda* [Report on combat action by 5th Guards Armoured Army in the period 7 to 24 July 1943, drawn up by Chief of Staff Maj.-Gen. of Armoured Troops Baskakov and Chief of Operations Division Col. Belozerov, ratified by C-in-C 5th Guards Armoured Army Lt.-Gen. Rotmistrov and Military Council Member Maj.-Gen. Grishin]; date: 30 July 1943

## Document 30a

*Svedenia o sostoyanii, poteriakh i trofeyakh czastei i soedinenii 5 gvardeiskoi tankovoi armii na 16.7.43 g.* [Data on the strength, losses and booty of 5th Guards Armoured Army on 6 July 1943]; handwritten date: 17 July 1943. It is unclear whether, according to Mukhin's listing, this document is to be classified as an annex to Document 30 or to Document 24.

## Document 33

*Boevye donezenia shtaba 18-go tankovogo korpusa za period s 11. iyulia po 15 iyulia 1943 goda* [Combat information from the staff of 18th Armoured Corps for the period 11 to 15 July 1943]; date: July 1943

## Document 35

*Otchet o boevykh deistviakh 29 tankovogo korpusa za period s 7.7. po 24.7.43 g.* [Report on combat action by 29th Armoured Corps for the period 7 to 24 July 1943; date: July 1943]
