INTRODUCTION	1
--------------	---

## PART I FROM STALINGRAD TO KURSK *by Bernd Wegner*

I. BASIC PROBLEMS IN GERMAN CONDUCT OF THE WAR AFTER STALINGRAD	7
1. Stalingrad a Turning Point?	7
2. Losses and Resources: The Changing Strategic Coordinates	12
(a) The Manpower Situation of the Eastern Army and the Failure of Total Mobilization	12
(b) Material Losses and Ostensible Successes in the War Economy	22
3. 'Fortress Europe' and the Problem of the Second Front	30
II. GERMAN ALLIANCE POLICY AND THE QUESTION OF A SEPARATE PEACE	44
1. The Erosion of the Axis Pact	45
2. The Illusion of a Separate Peace	53
III. THE GENESIS OF THE BATTLE OF KURSK	62
1. Basic Considerations	62
2. The Conflict over the Timing of the Attack	72

## PART II THE BATTLE OF THE KURSK SALIENT *by Karl-Heinz Frieser*

I. THE HOPELESS GERMAN STARTING POSITION	83
1. Disastrous Planning: A Frontal Attack without the Element of Surprise	84
2. Relative Strength: An Assault against an Avalanche	86
(a) The German Potential in the Kursk Salient	87
(b) The Soviet Potential in the Kursk Salient	93
(c) Ratio of Opposing Forces in Operation CITADEL	95
(d) Comparison of Total Potential in the Kursk–Orel Area	97

(e) The Bottom Line: Soviet Superiority and the Impossibility of a Decisive Battle	99
3. ‘Fortress Kursk’	101
 II. THE FAILURE OF OPERATION CITADEL	104
1. The Abortive Soviet Pre-emptive Strike	104
2. The Failed Attack by Ninth Army (5 to 13 July 1943)	106
3. The Advance of Army Group South up to 12 July	112
4. The Myth of Prokhorovka	118
(a) The Soviet Encirclement Plan	118
(b) Prokhorovka: Legend and Reality	120
(c) Balance-Sheet of the Soviet Debacle	128
(d) Epilogue: The Tank Battle that Never Took Place	134
5. Hitler’s Order to Halt the Offensive—‘Victory Thrown Away?’	138
(a) Operation ROLAND’s Chances of Success	142
(b) The Donets–Mius Offensive	143
(c) The Offensive in the Orel Bulge	144
(d) The Allied Landing in Sicily	145
 III. OPERATION CITADEL—A TURNING POINT?	147
1. Causes of the German Failure	147
2. Quantitative Balance-Sheet: Asymmetrical Losses	150
3. Technological and Tactical Balance-Sheet: The Qualitative Turnaround in Favour of German Armour	157
(a) ‘Tiger Shock’ and Soviet Armour’s ‘Technology Gap’	157
(b) Tactical Efficiency	164
4. Strategic Balance-Sheet: CITADEL—Only a Virtual Turning Point	168
 IV. THE SOVIET COUNTER-OFFENSIVES	171
1. The Orel Counter-Offensive (Operation KUTUZOV), 12 July to 18 August 1943	172
2. The Belgorod–Kharkov Offensive of 3 to 23 August (Operation RUMYANTSEV)	188
3. Balance of Losses in the ‘Greatest Battle in History’	200

PART III THE PERPLEXITIES OF WAR: THE SOVIET  
THEATRE IN GERMAN POLICY AND STRATEGY  
FROM THE SUMMER OF 1943

*by Bernd Wegner*

I. THE SOVIET THEATRE OF WAR IN GERMAN POLICY AND STRATEGY FROM THE SUMMER OF 1943	209
 II. FROM THE SETBACKS IN THE SUMMER OF 1943 TO A PERMANENT CRISIS OF LEADERSHIP	213

III. THE ABANDONMENT OF FOREIGN POLICY AND THE ISOLATION OF GERMANY	230
IV. WITHDRAWAL FROM THE EAST? ‘FORTRESS EUROPE’ AND THE DILEMMA OF INTERCONNECTED WAR	243
1. Führer Directive No. 51	243
2. Scorched Earth	253
3. The East Wall Debate	266
 <b>PART IV THE SWING OF THE PENDULUM: THE WITHDRAWAL OF THE EASTERN FRONT FROM SUMMER 1943 TO SUMMER 1944</b>	
PROLOGUE: THE ‘FORGOTTEN YEAR’	273
I. THE WITHDRAWAL OF ARMY GROUP NORTH FROM LENINGRAD TO THE BALTIC	274
<i>Karl-Heinz Frieser</i>	
1. Defence against Soviet Offensives in the Second Half of 1943	275
2. Withdrawal to the Panther Line in the Baltic (14 January to 1 March 1944)	280
3. Summary: The Beginning of the End in the North	290
II. THE WITHDRAWAL OF ARMY GROUP CENTRE TO BELORUSSIA UP TO THE SPRING OF 1944	293
<i>Karl-Heinz Frieser</i>	
1. Developments up to Mid-September 1943	293
2. Withdrawal to the Panther Line (16 September to 2 October 1943)	297
3. The Winter Battles of 1943–1944: An ‘Unknown War’	301
(a) Third Armoured Army in the Winter Battles of Vitebsk	307
(b) Fourth Army in the ‘Highway Battles’ near Orsha	318
(c) Ninth Army in the Defensive Battles to the East of Bobruisk	327
(d) Second Army and Protection of the Open Southern Flank	330
III. ARMY GROUP SOUTH’S WITHDRAWAL OPERATIONS IN THE UKRAINE	338
<i>Karl-Heinz Frieser</i>	
1. In the Shadow of Kursk: Defence against the Two Soviet Relief Offensives on the Southern Wing (17 July to 2 August 1943)	338
2. The Collapse of the Front to the East of the Dnieper (16 August to 15 September 1943)	343
(a) The Soviet Advance into the Donets Basin	351
(b) The Crisis on the Northern Wing	352
3. The Withdrawal to the Dnieper up to the End of September 1943	354
(a) The Dispute over Withdrawal	354

(b) The 'Panther' Withdrawal to behind the Dnieper (16 to 29 September)	356
(c) The Soviet Airborne Operation at Bukrin on 24–25 September	358
4. The Battle of the Dnieper Line (29 September to 23 December 1943)	361
(a) Fourth Armoured Army in the Kiev Sector	362
(b) Eighth Army in the Lee of the Wind	372
(c) First Armoured Army at Zaporozhye	374
5. The Start of the Soviet Dnieper–Carpathian Offensive at the Turn of 1943/4	379
(a) Fourth Armoured Army's Withdrawal and First Armoured Army's Counter-Attack	381
(b) Eighth Army at Kirovograd	387
6. The Breakout from the Cherkassy–Korsun Pocket (24 January to 17 February 1944)	388
(a) The Encirclement (24 to 31 January)	388
(b) The Relief Attacks (1 to 16 February)	391
(c) The Conflict about the Pocket and the Decision to Break Out	398
(d) The Breakout on 16–17 February	403
(e) Summing Up: 'No Stalingrad on the Dnieper'	409
7. The Withdrawal Battles of Fourth Armoured Army in the Northern Ukraine from the End of January to April 1944	413
(a) The Kovel Gap	414
(b) The Soviet Attack towards the South	415
(c) The Tarnopol Disaster	420
(d) The Behaviour of the Population in the Ukraine and Galicia	426
8. The Breakout by First Armoured Army from the Kamenets Podolsky 'Moving Pocket'	427
(a) The Encirclement of First Armoured Army	429
(b) Manstein's Ultimatum to Hitler	433
(c) The Breakout by First Armoured Army	435
(d) Outlook	439
9. Manstein's Dismissal and the 'End of Operations'	442
 IV. THE WITHDRAWAL OF ARMY GROUP A THROUGH THE CRIMEA TO ROMANIA	446
<i>Klaus Schönherr</i>	
1. The Kuban Bridgehead	447
2. From the Wotan Line to the Dnieper	454
3. The Crimea in the Winter of 1943/4	460
4. Nikopol	465
5. The Withdrawal to the Bug	474
6. From the Bug to the Dniester–Iași Position	476
7. The Loss of the Crimea	483

## PART V COLLAPSE IN THE EAST: THE WITHDRAWAL BATTLES FROM THE SUMMER OF 1944

I. ERRORS AND ILLUSIONS: THE GERMAN COMMAND'S MISCALCULATIONS IN THE EARLY SUMMER OF 1944	489
<i>Karl-Heinz Frieser</i>	
1. 'Attack or Perish': Hitler's Auto-Suggestive Victory Euphoria	490
2. 'Window of Vulnerability': The Risky Neglect of the Eastern Front in Favour of the Western	492
3. 'The Balkans or the Baltic': The Delusion of a Decisive Soviet Offensive	497
4. The Danger Ignored: German Enemy Intelligence and the Belorussian Balcony	501
(a) The Confusion about the Soviet Point of Concentration	501
(b) Army Group Centre's Inconsistent Assessment of the Enemy Situation	503
(c) The 'Trilemma' Faced by Foreign Armies East	509
(d) The Causes of the Erroneous Assessment by German Enemy Intelligence	511
5. Hitler's 'Fortified Places': The Doctrine of Self-Imposed Encirclement	514
II. THE COLLAPSE OF ARMY GROUP CENTRE IN THE SUMMER OF 1944	522
<i>Karl-Heinz Frieser</i>	
1. The Asymmetry of Forces	522
(a) The Soviet Potential: An Unprecedented Concentration of Force	522
(b) Army Group Centre: A House of Cards about to Collapse	524
2. The Military Planning	532
3. Opening Phase: The Operational Breakthrough on the Wings (22 to 28 June 1944)	534
(a) The Disaster of Third Armoured Army at Vitebsk	536
(b) The Withdrawal of Fourth Army at Mogilev	539
(c) The Encirclement of Ninth Army at Bobruisk	541
4. The Formation of the Pocket at Minsk (28 June to 4 July)	544
(a) The Counter-Attacks by 5th and 12th Armoured Divisions	546
(b) The Downfall of Fourth Army in the 'Moving Pocket'	548
5. The Fighting during Withdrawal to Poland and Lithuania (4 to 31 July)	555
(a) Model's Crisis Management	555
(b) The 'Zeitzler Plan' Controversy	557
(c) The Counter-Attack at Vilnius and Withdrawal to the Brest-Litovsk-Kaunas Line	560
(d) Danger on the Flanks: 1st Belorussian Front's Advance to the Vistula	563

6. The Stabilization of the Front between Warsaw and Riga up to the end of August	566
(a) The Tank Battle before Warsaw as an Operational Turning Point	566
(b) Operation DOPPELKOPF: Reconnection with Army Group North	585
7. Analysis of the Worst Defeat in German Military History	589
(a) Importance in the Framework of the Eastern Campaign	589
(b) The Causes of the Catastrophe	592
(c) Operation BAGRATION: The Soviet Missed Opportunity for a Swift End to the War	599
 III. THE DEFENSIVE SUCCESSES OF ARMY GROUP CENTRE IN THE AUTUMN OF 1944	 602
<i>Karl-Heinz Frieser</i>	
1. The Problem of the Vistula Bridgeheads	603
2. Prevention of the Breakout to the North in the Bug–Narew Sector	605
3. The Repulsion of the Soviet Thrust towards East Prussia (16 October to 5 November 1944)	610
Epilogue: Nemmersdorf, the Writing on the Wall	617
 IV. ARMY GROUP NORTH'S WITHDRAWAL BATTLES TO COURLAND	 621
<i>Karl-Heinz Frieser</i>	
1. The Dismal Starting Position in the Summer of 1944	621
2. The Withdrawal in the Baltic Region up to the End of August	624
(a) Hitler's Reasons for Holding on to the 'Baltic Fortress'	624
(b) The Open Southern Flank and the Danger of Enclosure	627
3. The Evacuation of Estonia	633
4. The Final Separation of Army Group North in Courland	639
(a) The Soviet Advance to the Baltic Coast in October	639
(b) The Plans for a Breakout to East Prussia	653
5. The Courland Battles	654
(a) The First Three Courland Battles up to the End of 1944	654
(b) The Fighting up to May 1945	658
6. Conclusion	661
(a) Military-Operational Analysis	661
(b) Hitler's Utopian Strategy: Courland as a Bridgehead for 'Final Victory'	665
 V. THE BATTLES FOR GALICIA AND THE BESKID MOUNTAINS	 675
<i>Klaus Schönherr</i>	
1. Army Group North Ukraine in Galicia	675
(a) The Army Group's Situation in the Spring of 1944	676
(b) The Enemy Forces and Their Plans	678
(c) The Operational Possibilities of Securing Galicia	680
2. The Withdrawal Battles in Galicia	683
(a) The Battles in the Army Group's Central Section (13 to 19 July 1944)	684

(b) The Enclosure of XIII Army Corps	688	
(c) The Loss of Unity in the Front North of Lvov	690	
(d) The Breakthrough on the Army Group's Northern Wing	693	
(e) Fourth Armoured Army's Withdrawal to the Vistula	699	
(f) The Crisis on the Middle San	702	
(g) The Developments on the Army Group's Southern Wing	705	
3. The Struggle to Establish a Defensive Front from the Vistula to the Northern Carpathians	709	
(a) The Establishment of a New Defensive Front	710	
(b) The Battles for the Baranów Bridgehead	713	
4. The Autumn Battles in the Beskid Mountains and Slovakia	716	
(a) The Slovak National Uprising	717	
(b) The Battles for the Dukla Pass and the Beskid Mountains	722	
(c) The Situation of Army Group A in the Autumn of 1944	726	
VI. THE WITHDRAWAL BATTLES IN ROMANIA AND TRANSYLVANIA IN THE SUMMER AND AUTUMN OF 1944		729
<i>Klaus Schönherr</i>		
1. Army Group South Ukraine on the Romanian Defence Front (Summer 1944)	730	
(a) The Situation in the Romanian Theatre of War	731	
(b) The Soviet Enemy on the Dniester and in Northern Romania	742	
2. The Fighting in Romania and Transylvania (Late Summer to Autumn 1944)	744	
(a) The Fighting in Moldavia and Bessarabia (20 to 23 August 1944)	745	
(b) The Events in Bucharest on 23 August 1944	771	
(c) The Battles in the Bucharest-Ploieşti Area	775	
(d) The Army Group's Reaction to the Political Changes in Romania	799	
(e) The Withdrawal to the Carpathian Ridge	802	
(f) The Destruction of Sixth Army	805	
(g) The Withdrawal to Bulgaria	813	
3. The Battles in Transylvania (Autumn 1944)	816	
(a) The Establishment of a Defensive Front in the Carpathians	816	
(b) The Battles in Central Transylvania	822	
(c) The Final Loss of Transylvania (October 1944)	834	
4. The Situation of Army Group South after the Loss of Transylvania (End of October 1944)	843	
VII. THE HUNGARIAN THEATRE OF WAR		846
<i>Krisztián Ungváry</i>		
1. The Hungarian Government's Foreign Policy after the German Defeat at Stalingrad	846	
(a) Equipment and Organization of the Honvéd Army between 1944 and 1945	848	
(b) The Hungarian Occupation Force	850	

2. The Occupation of Hungary and the Impact on Armaments	854
3. The Hungarian Theatre of Operations	863
(a) The General Situation in the Carpathian Basin in the Autumn of 1944	865
(b) The Soviet Offensives against Budapest	882
(c) The Fighting in Budapest	900
(d) The Relief Attempts	902
(e) The Final Battle in Budapest and the Breakout	917
(f) The Last Offensives	924
4. Hungary's Place in Hitler's Calculations: A Final Reckoning	955

## PART VI THE WAR ON THE NEIGHBOURING FRONTS

I. THE END OF THE WAR IN SCANDINAVIA	961
<i>Bernd Wegner</i>	
1. The Price of Peace: Finland's Situation in 1943/4	963
(a) Relations between Berlin and Helsinki in the Aftermath of Stalingrad	963
(b) First Peace-Feelers	972
2. German Reactions and Plans in the Event of Finland's Withdrawal from the War	979
3. From the June Crisis to Finland's Withdrawal from the War	984
4. The Lapland War	992
5. The End of the War in Norway	1000
II. THE YUGOSLAVIAN THEATRE OF WAR (JANUARY 1943 TO MAY 1945)	1008
<i>Klaus Schmider</i>	
1. Geographical, Topographical, Climatic, and Transport Conditions	1008
2. A Look Back (May 1941 to December 1942)	1010
3. Climax and Failure of the Fight against the National Liberation Army (January 1943 to September 1944)	1015
4. Serbia after the Defeat of the 1941 Uprising	1034
5. The Yugoslavian Theatre of War as the Cornerstone of the Southern Section of the Eastern Front (October 1944 to May 1945)	1046
(a) The Temporary Stabilization of the Front (October to December 1944)	1046
(b) The End of the War in Yugoslavia (January to May 1945)	1059
6. Excursus: War Crimes Committed by the Occupying Powers	1069
7. Conclusion	1080
Appendix: Yugoslavian Resistance and Collaboration Armed Formations	1082
III. THE WITHDRAWAL FROM GREECE	1089
<i>Klaus Schönerr</i>	
1. The Withdrawal Movement in Greece	1090
2. The Withdrawal Battles in Macedonia	1095
3. XXI Mountain Corps' Withdrawal from Albania	1098

IV. THE END OF THE NORTH AFRICAN CAMPAIGN AND THE WAR IN ITALY, 1943 TO 1945	1100
<i>Gerhard Schreiber</i>	
1. North Africa and Italy in the Strategy of the Anti-Hitler Coalition and the Axis Alliance at the Beginning of 1943	1101
2. The Finale in Tunisia	1103
3. The Attack on 'Fortress Europe': Sicily 1943	1109
4. Italy's Exit from the War	1115
5. The War in Italy (September 1943 to June 1944) (a) The Decisive Battle of Salerno	1126
(b) Back and Forth—Nearing the End	1127
6. The Italian Theatre of War on the Sidelines (June 1944 to May 1945)	1154
7. Conclusion	1162
PART VII GERMANY ON THE BRINK OF THE PRECIPICE	
<i>by Bernd Wegner</i>	
I. WAGING WAR 'AS IF...': GERMANY'S STRATEGIC POSITION FROM THE SPRING OF 1944 ONWARDS	1167
II. ORCHESTRATING THE END	1194
CONCLUDING SUMMARY	1212
<i>Karl-Heinz Frieser</i>	
<i>Bibliography</i>	1227
<i>Index of Persons</i>	1297

## *List of Illustrations*

VI.IV.5. Development of the situation in Italy, 21 September to 5 October 1943	1142
VI.IV.6. Development of the situation in Italy, 5 October 1943 to 31 August 1944	1143
VI.IV.7. Development of the situation in Italy, 31 August 1944 to surrender on 2 May 1945	1144

## *List of Tables*

I.I.1.	Monthly Army and Luftwaffe losses, 1941–1943 (average figures)	13
I.I.2.	Human reserves of Germany and the Soviet Union in early 1943 as estimated by Foreign Armies East	16
I.I.3.	Armaments expenditure of the warring camps from 1935 to 1944	23
I.I.4.	Eastern army booty figures (1 January to 31 December 1942)	25
I.I.5.	Soviet tank and aircraft production, 1942/3	26
I.III.1.	German estimate of relative strength on the eastern front (status: 1 April 1943)	66
II.I.1.	Relative German–Soviet strength on the eastern front at the beginning of July 1943	84
II.I.2.	Breakdown of VIII Air Corps (Air Fleet 4) at 5 July 1943: deployment with Fourth Armoured Army and Army Detachment Kempf/Army Group South ( <i>CITADEL</i> )	90
II.I.3.	Breakdown of 1st Air Division (Air Fleet 6) at 5 July 1943	92
II.I.4.	Troop breakdown of Central Front and Voronezh Front at 1 July 1943 (excl. Steppe Front)	94
II.I.5.	Relative strength in the Kursk–Orel area on 5 July 1943	100
II.III.1.	Tank losses during Operation <i>CITADEL</i>	151
II.IV.1.	Breakdown of Air Fleet 6 at 10 July 1943 (before the Soviet counter-offensive at Orel)	174
II.IV.2.	Breakdown of Air Fleet 4 at 3 August 1943 (before the Soviet counter-offensive at Kharkov)	193
III.IV.1.	‘Fortress Europe’: size and distribution of forces in October 1943	244
IV.I.1.	Army Group North: order of battle (status: 21 July 1943)	276
IV.I.2.	Breakdown of Air Fleet 1 (assigned to Army Group North) at 20 July 1943	277
IV.I.3.	Breakdown of Air Fleet 1 (assigned to Army Group North) at 10 January 1944	283
IV.II.1.	Army Group Centre: order of battle (status: beginning of October 1943)	305
IV.II.2.	Breakdown of Air Fleet 6 at 10 October 1943 (for deployment with Army Group Centre)	306
IV.III.1.	Breakdown of Air Fleet 4 at 10 October 1943 (for deployment with Army Groups South and A)	363
IV.III.2.	Breakdown of Air Fleet 4 at 20 January 1944 (for deployment with Army Groups South and A)	383

IV.iv.1. Army Group A: order of battle (status: 4 October 1943)	455
IV.iv.2. Seventeenth Army: order of battle (status: 2 February 1944)	462
IV.iv.3. Army Group A: order of battle (status: 26 March 1944)	479
V.i.1. Planned distribution of forces in ‘fortified places’ in the sector of Army Group Centre (29 March 1944)	516
V.ii.1. Breakdown of Soviet forces for the Belorussian operation (1st phase: 22 June to 4 July 1944)	523
V.ii.2. Number of major formations and independent troop units of the four Soviet army fronts at the start of the Belorussian operation (22 June 1944)	525
V.ii.3. Soviet strength for Operation BAGRATION	526
V.ii.4. Strength of Soviet air armies before the start of the Belorussian operation (20 June 1944)	526
V.ii.5. Army Group Centre: order of battle on 22 June 1944	527
V.ii.6. Strength of Army Group Centre on 22 June 1944	528
V.ii.7. Air Fleet 6: aircraft operational on 20 June 1944	529
V.iv.1. Air Fleet 1: aircraft operational in the summer and autumn of 1944	623
V.v.1. Army Group North Ukraine: order of battle (status: 8 July 1944)	682
V.v.2. Army Group North Ukraine: order of battle (status: 15 August 1944)	714
V.vi.1. Army Group South Ukraine: order of battle (status: 15 August 1944)	737
V.vi.2. Army Group South Ukraine: order of battle (status: 31 August 1944)	818
V.vi.3. Army Group South: order of battle (status: 28 August 1944)	833
V.vii.1. Subordination of Royal Hungarian Occupation forces as at 26 December 1943	852
V.vii.2. Breakdown of German–Hungarian units in the Carpathian Basin on 5 October 1944	869
V.vii.3. Relative strength of forces in Hungary at the beginning of October 1944	872
V.vii.4. Losses in the tank battle for Debrecen–Nyíregyháza	874
V.vii.5. Proportion of German and Hungarian troops in Army Group South	877
V.vii.6. The 2nd Ukrainian Front and the German–Hungarian forces of Army Group South at the beginning of December 1944	887
V.vii.7. Strength of the German and Hungarian forces defending Budapest (24 December 1944 to 11 February 1945)	897
V.vii.8. Relative strength of the German and Hungarian forces defending Budapest (status: 24 December 1944)	897
V.vii.9. Army Group South and 2nd and 3rd Ukrainian Front tanks and assault guns on 1 January 1945	906
V.vii.10. Relative strength of forces at the time of Operation KONRAD II in the southern section of the front (between 7 and 11 January 1945)	909

V.VII.11. Relative strength in respect of tanks and assault guns during Operation KONRAD III (18 and 27 January 1945)	912
V.VII.12. Soviet military losses in major offensive operations	923
V.VII.13. Relative strength of forces at the beginning of the offensive in Transdanubia on 6 March 1945	930
V.VII.14. Breakdown of German and Hungarian units in the Carpathian Basin on 6 March 1945	932
V.VII.15. Relative strength of forces at the beginning of the Vienna Offensive Operation between Lake Balaton and the Danube on 16 March 1945	943
V.VII.16. Losses in the Vienna Offensive Operation (16 March to 15 April 1945)	953
VI.III.1. Army Group E: order of battle (status: 28 September 1944)	1096

VII.I.1. Distribution of Allied land and air forces (divisions and aircraft as per Wehrmacht Operations Staff estimates, status: February 1944)	1169
VII.I.2. Foreign Armies East's estimate of Soviet land forces (status: 1 June 1944)	1175
VII.I.3. Foreign Armies East's estimate of numbers of Soviet tanks and assault guns in the first half of 1944	1177

## *Notes on the Authors*

**Dr Karl-Heinz Frieser** (b. 1949), Colonel in the Bundeswehr. Studied political science and medieval and modern history at Würzburg (doctorate in 1981). From 1985 to 2009, research associate at the MGFA, lastly head of research on the world war era. Publications include *Krieg hinter Stacheldraht. Die deutschen Kriegsgefangenen in der Sowjetunion und das Nationalkomitee 'Freies Deutschland'*, Mainz, 1981; *Blitzkrieg-Legende. Der Westfeldzug 1940* (3rd edn.), Munich, 2005 (translated into several languages and awarded the *Prix Edmond Fréville* in Paris in 2004); *Ardennen—Sedan. Militärhistorischer Führer durch eine europäische Schicksalslandschaft* (2nd edn.), Frankfurt am Main and Bonn, 2006. Main research area: Operational history of the Second World War.

**Dr Klaus Schmider** (b. 1966). Studied medieval and modern history, political science, and public law at Mainz. Master's dissertation (1977) on 'Das erste Kriegsjahr im Mittelmeerraum 1940–1941'; doctorate in 2001. Publications include *Der Partisanenkrieg in Jugoslawien 1941–1944*, Hamburg, 2002. Since May 1999, senior lecturer at the Royal Military Academy, Sandhurst, UK. In July 2006, on exchange with the Academia de Guerra del Ejercito de Chile.

**Klaus Schönerr, MA** (b. 1947), First Lieutenant (ret.). Studied history, classical archaeology, and political science at the Justus Liebig University of Giessen and the University of Vienna. From 1980 to 2005, research associate at the MGFA. His numerous publications on the Second World War, especially concerning the Balkans, Slovakia, and Turkey, include *Luptele Wehrmachtului în România 1944* [The Wehrmacht's Battles in Romania 1944], Bucharest, 2004.

**Dr Gerhard Schreiber** (b. 1940), Frigate Captain (ret.). Studied medieval and modern history, ancient history, and history of art at the University of Hamburg (doctorate in 1978). From 1976 to 1996, research associate at the MGFA. His numerous publications on the National Socialist period, and especially on German–Italian relations, include *Revisionismus und Weltmachtstreben. Marineführung und deutsch-italienische Beziehungen 1919 bis 1944*, Stuttgart, 1978; contributions to *Das Deutsche Reich und der Zweite Weltkrieg*, vol. 3, Stuttgart, 1984; *Hitler-Interpretationen 1923 bis 1983. Ergebnisse, Methoden und Probleme der Forschung* (2nd amended edn., expanded by an annotated bibliography for the period 1984 to 1987); *Die italienischen Militärinternierten im deutschen Machtbereich 1943–1945. Verraten—Verachtet—Vergessen*, Munich, 1990 (awarded the Guareschi History Prize by the city of Acqui); *Kurze Geschichte des Zweiten Weltkriegs*, Munich, 2005.

**Dr Krisztián Ungváry** (b. 1969). Studied history and German philology in Budapest, Jena, and Freiburg im Breisgau (Roman Herzog Scholarship). Obtained his doctorate in 1999 and was awarded the 'Young Military Historian of the Year' prize by the Budapest Institute of War Studies in the same year; currently in post at the Institute for the History of the 1956 Hungarian Revolution. Publications include *Die Schlacht um Budapest* (4th edn.), Munich, 2005 (translated into several languages, 14 editions in all); *A magyar honvédség a második világháborúban* [The Hungarian Honvéd Army in the Second World War] (2nd edn.), Budapest, 2005; *A második világháború. Szövegyűjtemény* [The Second World War. Source Edition], Budapest, 2005. Main research areas: minority issues, Hungarian state security from 1945 to 1990, right-wing extremism, anti-Semitism, and nationalism in Hungary.

**Prof. Bernd Wegner** (b. 1949). Studied history, philosophy, and political science in Tübingen, Vienna, and Hamburg. Awarded doctorate (1980) and postdoctoral habilitation (1995) by the University of Hamburg; In 1979–80, Volkswagen Research Fellow at St Antony's College, Oxford. From 1980 to 1995, research associate at the MGFA. Since 1995, Professor of Modern History at the Helmut Schmidt University of the Bundeswehr in Hamburg. From 2000 to 2005, chair of the German Committee for the Study of the Second World War. Publications include *Hitlers Politische Soldaten: Die Waffen-SS 1933–1945*, Paderborn, 1982 (7th edn. 2006; English edn. Oxford, 1990); ‘Der Krieg gegen die Sowjetunion 1942/43’, in *Das Deutsche Reich und der Zweite Weltkrieg*, vol. 6, Stuttgart, 1990; as editor: *Zwei Wege nach Moskau. Vom Hitler–Stalin-Pakt zum Unternehmen Barbarossa*, Munich, 1991; *Wie Kriege entstehen*, Paderborn, 2000 (2nd edn. 2003); *Wie Kriege enden*, Paderborn, 2002. Co-editor of the series ‘Krieg in der Geschichte’ (Paderborn) and of *Militärgeschichtliche Zeitschrift* (Munich).

## Introduction

The main subject of the present volume is one of the most eventful phases of the Second World War: the battles on the eastern front in 1943 and 1944. In no other period of the war, apart from its concluding phase in 1945, did the Wehrmacht suffer such enormous losses. The land battles of those years, first and foremost the battle of Kursk in the summer of 1943, were among the biggest in world history. In the winter of 1943/4 the Red Army showed itself for the first time capable of conducting large-scale offensives against all German army groups simultaneously. It was no longer a matter of isolated flare-ups: the whole eastern front was in flames. The dramatic climax was reached in the summer of 1944, when the collapse of Army Group Centre led to what was then the heaviest defeat in German military history. It was nevertheless overshadowed by events on the western front, with the Allied invasion of Normandy in June 1944. And it is that which dominates perceptions in western societies to this day and has relegated the catastrophe in the east, despite its unprecedented proportions, to the rank of an almost ‘forgotten war’.

German historiography has contributed significantly to this one-sidedness of the collective memory. Until recently it had little to say about the war in the east after Stalingrad. Only the very last months of the war have again recently attracted the attention of professional historians. Moreover, the subject is dominated by self-justifying memoirs and a non-fiction literature of little scholarly value. The lack of research interest in the history of the operations of 1943 and 1944 is particularly striking. Numerous works on the general history of the war repeatedly suggest that, as far as the military course of events is concerned, everything has long been said and written. The fact that that view is totally untenable is one of the main reasons for the unusual size of the present volume. The contributors have benefited not least from a certain relaxation in German–Russian scholarly relations. For historians too, the Cold War was a decades-long ‘ice age’. Research was hampered by taboos and mental blocks on both sides, as well as by the fact that Soviet military history had to glorify the role of the Party and the army. In the Soviet Union, moreover, free access to archives was not possible even for Soviet historians, let alone their foreign colleagues. This restricted representation of the war from the German viewpoint too, since major collections of Wehrmacht documents were kept in Russian archives as ‘captured files’. Since then, a considerable amount of new knowledge has been acquired from those sources in the course of research by contributors to this volume.

The eighth volume in the *Germany and the Second World War* series begins with the starting situation after the battle of Stalingrad in the spring of 1943. Its central

topic is the Wehrmacht's retreat on the eastern front from the Kursk salient to the German border. This 'longitudinal' volume is essentially arranged chronologically and is the complementary equivalent of the seventh volume in the series, which was devoted mainly to the situation in western Europe. It also links up with the earlier volumes on the eastern war (Volume IV on 1941 and Volume VI on 1942) and continues the account of events up to the end of 1944. Only developments on the neighbouring fronts in northern, southern, and south-eastern Europe are described up to the end of the war, while the 'final battles' in the territory of the Reich will be the subject of the tenth and last volume in the series.

The specific characteristic of the present volume is that it is more strongly devoted to military operational issues than has generally been the case so far, although the political-strategic context is not neglected. Individual key episodes are repeatedly described down to the tactical level, so as to highlight the complexity of military operational procedures at the different levels. It was possible to devote so much space to the often dramatic combat operations not least because the general premisses and framework conditions had already been discussed in detail in the 'latitudinal' Volumes V and IX. A comprehensive understanding of the strategic, operational, and tactical developments discussed in the present volume can be achieved only by looking at them in conjunction with the analyses of mentality and ideology, and of domestic, economic, and occupation policy, undertaken in previous volumes.

The distribution of topics among the team of authors is as follows: Bernd Wegner discusses the overall strategic context (as well as developments in Finland), while Karl-Heinz Frieser analyses the bulk of military operations on the eastern front. Events in the states of south-eastern Europe are dealt with by Krisztián Ungváry for Hungary, Klaus Schmider for Yugoslavia, and Klaus Schönherr for combat operations involving Romanian troops, and for Galicia and the south-eastern Balkans. Gerhard Schreiber's contribution on Italy extends the analysis to the interdependences between the eastern front and the Mediterranean region. This topic is included here in a shortened form, while the full version is being published as an independent monograph in another MGFA series.

Given the complexity of the material, the authors' task was to develop issues and criteria permitting analysis of the subject areas. At the strategic level, the first issue was the interaction of various factors such as the war economy and armament. The analysis sought to determine the dynamics with which the disparity in the strength of the opposing sides made itself perceptible in the theatres of operations, and the extent to which German defeats were determined by the numerical and material superiority of the Allies. Even though the eastern front was the central concern, a decisive role was played by interrelations with other fronts, which constituted the main problem facing the German leadership in a war on several fronts. Thus, for example, a number of Hitler's inexplicable operational decisions only make any sense when the connection with other theatres of war is elucidated. At the same time there arises the question of the rationality of the military decision-making process within the National Socialist 'Führer state', and in relation to its Axis partners. As the hostilities shifted increasingly to the territory of Germany's allies,

there arose for the latter a conflict of aims between loyalty to the Axis Pact and national self-preservation. The examples of Italy and Finland, and Romania and Hungary, show the different conditions under which this conflict was managed, and the differing results.

For Germany the outcome of the war—in accordance with the initial postulate of this volume—was decided no later than the end of 1941 with the failure of the ‘blitzkrieg strategy’ before Moscow and Hitler’s declaration of war on the United States. But although Germany was no longer in a position to win with its own strength, the Führer continued the war in the years that followed. Repeatedly invoking the example of Frederick the Great in the Seven Years War, he too placed his hope in the collapse of the enemy coalition. As he declared to his generals, he would delay the end of the war until ‘one of our damned enemies gets tired of fighting’.<sup>1</sup> However, this hope too eventually proved wholly illusory. Why then did he continue the war until the final downfall? In response to this question, which runs through the present volume, Bernd Wegner, the author of the concluding chapter, offers an interesting interpretation.

In addition to the investigation of political-strategic issues, the task was to describe the course of the military operations. A number of events, for example the tank battle at Prokhorovka, remain clouded in myth to this day. In the eastern war there was also a series of now-forgotten battles whose drama and huge losses far overshadow the battles in the west about which so much has been written. The new statistical material uncovered in the Russian archives—a resource which researchers were lacking hitherto—enabled reliable estimates of comparative strength for a number of operations to be made for the first time. The figures sometimes yielded shocking results, not least with regard to comparative casualties. In that respect the German–Soviet war rightly counts as one of history’s bloodiest conflicts.

Beyond simple reconstruction of the facts, the aim was to analyse military events at the operational and tactical level. Here the question arises why the Wehrmacht was able to maintain such substantial superiority for years and why the Red Army did not succeed in toppling the ‘house of cards’ on the German eastern front at an early stage. Military efficiency proved a particularly important factor in a comparison of the different operational systems (assignment tactics versus command tactics) and the deployment principles of the two warring sides. This can also be seen in the interrelations between tank technology and tank tactics, for example in the battle of Kursk. The discussion also touches on the disputed issue of whether the fighting strength of the Wehrmacht rested on National Socialist ideology or on systemic efficiency (*inter alia*, primary group bonding).

One of the most important topics is the permanent dispute between Hitler and some of his generals, primarily over strategic priorities and preference for ‘rigid’ or ‘flexible’ defence. Although we must grant the German generals a high degree of professional competence in the conduct of operations, there nevertheless remains,

<sup>1</sup> Hitler’s *Lagebesprechungen* (31 Aug. 1944), 615.

in view of the hopelessness of the war, the question of their long-term strategic vision and their moral and ethical self-conception. This goes beyond their responsibility for the troops entrusted to them, since they must have been aware of the collateral damage which their conduct of the war was inflicting on the civilian population.

The authors extend their thanks to the editorial board of the MGFA, and in particular to the graphics department, whose many years of work resulted in the impressive illustrations. In addition to the inherent difficulty of the subject matter, the copy-editors were faced with the complicated task of finding an appropriate, practical, and as far as possible uniform transcription system for the names of places belonging to different political entities at different times. The objectively neutral solutions adopted by the MGFA editorial staff naturally differ from some which one or other of the authors might have preferred.

The contributors owe special thanks to many people and institutions in Germany and abroad who supported us in our research. Mention should be made, for example, of the German Academic Exchange Service, whose generous support enabled Bernd Wegner to spend several periods of time in Finnish archives. Special mention should also be made of the helpful collaboration of the Institute for Military History in Moscow and the Special Archive of the RGVA in the same city, as well as the Russian Central Military Archive (CAMO) in Podolsk. It is, among other things, a sign of the reconciliation between our two nations that is so encouraging.

## FROM STALINGRAD TO KURSK

*Bernd Wegner*

# I. Basic Problems in German Conduct of the War after Stalingrad

## 1. STALINGRAD A TURNING POINT?

Any discussion of German conduct of the war in the months and years after Stalingrad must start from the basic premise that, on any reasonable view, Germany was no longer able to win the war.<sup>1</sup> That fact was indeed already widely apparent to contemporary observers both inside and outside Germany. The tragedy on the Volga, as the SS security service reported in the second half of January 1943, had ‘most profoundly disturbed the whole nation’.<sup>2</sup> Moreover, it permanently transformed the public’s assessment of the overall war situation. ‘Universally,’ according to another situation report of 4 February 1943, ‘there is a conviction that Stalingrad marks a turning point in the war’.<sup>3</sup> Not surprisingly, the mood of the population had reached ‘the low point of wartime morale’.<sup>4</sup> New questions, hitherto repressed, characterized the expectations of the population after Stalingrad. Anxious hopes gave way to worries about ‘how it will all end’.<sup>5</sup> The question ‘How long will it be until victory?’ was replaced by ‘How long can we hang on in this war with the prospect of a favourable end?’<sup>6</sup> Even the person of the Führer, who, although his myth was wearing progressively thinner, had until then largely escaped direct grumbles, henceforth became a target of criticism.<sup>7</sup>

Against that background, the defeat of Sixth Army acted at the same time as a catalyst for the reviving non-leftist civilian and national-conservative military resistance movements.<sup>8</sup> The directly related calls for sedition issued by members

<sup>1</sup> This position, for which the present volume (like earlier volumes in this series) furnishes a great deal of supporting material, is disputed in international research. Thus Overy, *Why the Allies Won*, argues that the war was decided in favour of the Allies only over the period 1942 to 1944 (similarly Weinberg, *A World at Arms*). On the other hand, the opinion appears to be gaining ground, especially among German historians, that the ultimate failure of Germany’s blitzkrieg strategy in the late autumn of 1941 already put paid to its chances of final victory. This issue is further developed in the following discussion.

<sup>2</sup> *Meldungen aus dem Reich*, xii, No. 354, 4720 (28 Jan. 1943).

<sup>3</sup> ibid., No. 356, 4751 (4 Feb. 1943).

<sup>4</sup> Quoted in Kershaw, *The Hitler Myth*, 192.

<sup>5</sup> *Meldungen aus dem Reich*, xii, No. 358, 4784 (11 Feb. 1943).

<sup>6</sup> ibid., No. 357, 4761 (8 Feb. 1943).

<sup>7</sup> See Kershaw, *The Hitler Myth*, 193 ff.; further evidence in Steinert, ‘Stalingrad’, 175 ff., and Boberach, ‘Stimmungsumschwung’.

<sup>8</sup> Characteristically: Hassell, *Vom andern Deutschland*, 347–8 (14 Feb. 1943); see also the records kept by Hermann Kaiser, repr. in Roon, ‘Hermann Kaiser’, here 274 ff. On categorization of this

of the White Rose movement,<sup>9</sup> who were arrested shortly afterwards, testify to the effect of Stalingrad as a signal, as do the two assassination attempts on Adolf Hitler originating in Major-General Henning von Tresckow's circle in March.<sup>10</sup> Even if these were isolated actions by small groups, they were nevertheless symptomatic of the accelerating erosion of the *Volksgemeinschaft* (national ethnic community), 'which the National Socialist state had been striving to create but had managed to achieve only rarely and momentarily'.<sup>11</sup> While this process, which is to be explained as a psychological effect of Stalingrad, did not attain such proportions as to directly threaten the regime, it nevertheless forced a change in the course of Hitler's domestic policy in the months from the spring to the autumn of 1943—a change which culminated in the appointment of Heinrich Himmler as Reich minister of the interior and raised the task of securing the regime's rule inside the country to a level equal to pursuit of the war outside Germany.<sup>12</sup>

In the countries allied to Germany, the psychological effects of the Stalingrad catastrophe were no less serious than in Germany itself.<sup>13</sup> There too, as now became clear, the public mood was directly dependent on German military success. A particularly striking instance was Finland, where discreet investigations into the mood of the population revealed a quite dramatic collapse of confidence in victory, in sharp contrast to the continuing emphatic declarations of loyalty to Germany by the government and to the censored and self-censored press. In September 1942 the investigations had shown that 90 to 95 per cent of members of centre and right-wing parties were convinced of German victory; by February 1943 their numbers had shrunk to 40 to 50 per cent. The picture was even clearer on the Left: in the autumn, 65 per cent of Social Democrats and 80 per cent of Communists had reckoned with German victory; after the Soviet successes at Stalingrad and Leningrad, however, the figures dropped to only 19 and 14 per cent respectively. At the same time, belief in an Allied victory had grown considerably among members of all

period in the history of the resistance, see Müller, 'Nationalkonservative Eliten', 42–3; Roon, 'Widerstand und Krieg', 64–5; Messerschmidt, 'Militärische Motive', 1030 ff., and Hoffmann, *Claus Schenk Graf von Stauffenberg*, 270.

<sup>9</sup> Repr. in Steffahn, *Die Weiße Rose*, 131–44, and in Scholl, *Die Weiße Rose*, 119 ff.

<sup>10</sup> On this, see the accounts by the participants: Gersdorff, *Soldat im Untergang*, 126–33; Schlabrendorff, *Offiziere gegen Hitler*, 64 ff., and the accounts by Thun-Hohenstein, *Der Verschwörer*, 221–32, and Åretin, *Henning von Tresckow*, 301 ff.—Also of interest in this connection is an entry in the diary of Hermann Kaiser (KTB-Führer beim Chef HRüst und BdE), dated 18 Jan. 43: 'General Schmundt mit F[ührer?]. F told him he knew of plans to stage a coup. He was informed about them and prepared for them', BA-MA MSg. 1/1454. That the assassination attempts were only the tip of the iceberg, and that there was strong unrest below the threshold of resistance, even in the Führer's closest circles, is testified to, *inter alia*, by Engel, *Heeresadjutant*, 144–5 (entries for Feb. 1943); Speer, *Erinnerungen*, 267, 271, and Hassell, *Vom andern Deutschland*, 347–8 (14 Feb. 1943).

<sup>11</sup> Thus Steinert, 'Stalingrad', 182. The establishment of a central special court martial, imposed by Hitler on 21 June 1943, to deal with political offences in the Wehrmacht also shows how the situation had changed.

<sup>12</sup> Similarly Rebentisch, *Führerstaat*, 499.

<sup>13</sup> Japan was an exception, owing not least to the difference in political culture. There, especially in military circles, the German 'heroic battle' on the Volga was seen as a sign of strength rather than weakness; see Martin, 'Die Einschätzung der Lage Deutschlands', 133–4; id., 'Japan und Stalingrad', 231.

parties.<sup>14</sup> Matters were not very different with Germany's other Axis partners, especially when, like Romania and Hungary, they had suffered the loss of substantial parts of their national armed forces as a result of the Stalingrad enterprise and, moreover, found themselves subjected to massive accusations and blame by Berlin. It is not, therefore, surprising that during those weeks Germany's diplomatic representatives more than ever reported a 'growing war-weariness both among sections of the Romanian army and among the population'<sup>15</sup> and an 'unstable attitude of influential [Hungarian] circles with regard to the war and the determination to see it through'.<sup>16</sup>

The extent of the German defeat and the powerful momentum of the Soviet winter offensive were met with surprise, and usually also with concern, on the part of the neutral countries too. In Istanbul, as in Berne and Stockholm, they resulted in a thoroughly negative assessment of the Axis powers' remaining chances of victory.<sup>17</sup> As had been the case a year earlier, it was once again a Swedish observer who predicted Germany's position most accurately. On 16 March 1943 the Swedish military attaché in Berlin, who had long been convinced that German defeat was inevitable, wrote that 'it will probably take another two or three years for Germany to collapse'.<sup>18</sup>

The sobriety of these and similar assessments stands in notable contrast both to the self-comforting rituals of the German leadership and to the growing euphoria in the Anglo-Saxon world since the turn of 1942/3. For the British public, which until the late summer of 1942 had still feared a Russian collapse, the battle of Stalingrad marked a 'turning point in the war' which, despite only a vague knowledge of events in the Soviet Union, further boosted the Russophilia reigning in the country since 1941.<sup>19</sup> The situation in the United States was not much different. In America, as in Britain, those months were marked by a strikingly broad consensus that it was the military efforts of the Soviet Union, rather than those of one's own country, which justified hope in a victorious outcome to the war.<sup>20</sup>

The political and military leaderships of both countries, meeting in Casablanca in mid-January, also proceeded on the assumption that, provided the Allied coalition continued to exist, the Soviet Union would survive the war and Germany would lose it.<sup>21</sup> What is more, as the full scale of the destruction wrought by the

<sup>14</sup> Jutikkala, 'Mielialojen kirjo jatkosodan aikana', 131 ff., 145 ff.

<sup>15</sup> Report from the German general assigned to the Romanian army high command, 5 Mar. 1943, quoted in Förster, *Stalingrad*, 138 (app. 1).

<sup>16</sup> Report from the envoy in Budapest to the foreign ministry, 17 Feb. 1943, ADAP, Series E, v. doc. 136, 237.

<sup>17</sup> On this, see the articles by Böhme ('Stalingrad und Schweden'), Schönherz ('Die Türkei'), and Bourgeois ('Barbarossa').

<sup>18</sup> Quoted in Böhme, 'Stalingrad und Schweden', 385. At the same time, the Swedish military attaché in Berlin predicted the failure of the German U-boat campaign. See also Carlgren, 'Die Einschätzung der Lage Deutschlands', 178 ff.

<sup>19</sup> See Bell, *John Bull and the Bear*, 88 ff., and id., 'Großbritannien und die Schlacht von Stalingrad', here mainly 357 and 368.

<sup>20</sup> On the results of the relevant opinion surveys, see Bell, *John Bull and the Bear*, 92–3, and Kimball, 'Stalingrad', 332. In April 1943 a third of the British population expected the war to end within a year (see Bell, *John Bull and the Bear*, 96).

<sup>21</sup> Kimball, 'Stalingrad', 341, and id., 'Aus der Sicht Washingtons', 58.

Soviet success on the Volga became apparent,<sup>22</sup> the long-entertained fears of a collapse of Soviet resistance gave way to concern that the Red Army could achieve a rapid victory over Nazi Germany that was unconducive to British and American interests.<sup>23</sup> A report by the Joint Intelligence Committee dated 15 February 1943, which not only presented Germany's defeat in the east as irreversible but also doubted the possibility of an effective German defensive campaign, is characteristic of the temporary exaggeration of the situation:

For her campaign in Russia she [i.e. Germany] constructed the largest and most complex military machine that has ever existed. It has been hammered and damaged to such an extent that it is questionable if it can ever be repaired. The supply, maintenance and administration of her retreating armies may already be beyond Germany's capacity to control. We believe, therefore, that a situation may arise, and for which we must be prepared, in which the Germans will be unable to stabilise and hold a line in Russia for any length of time at all. If that should occur, organised German resistance in Russia might collapse.<sup>24</sup>

The widespread subjective feeling of contemporary observers that Stalingrad was the turning point in the war was raised in post-war writings—from the earliest testimonies of participants<sup>25</sup> to the later memoir literature<sup>26</sup>—to the rank of an eminently self-evident historical fact. From the historians' perspective, however, matters are much less clear, for the following reasons, which we shall simply indicate at this point.

The first is that irrefutable experience, since the First World War at the latest, shows clearly that modern, highly complex wars can no longer be decided by 'decisive battles'.<sup>27</sup> The manpower, material, logistic, and technological resources

<sup>22</sup> Although the American secret services, to the very end, greatly underestimated the number of German troops enclosed at Stalingrad (in mid-January they were still putting the figure at around 70,000), the OSS already reported, at an early stage, that this was 'perhaps in the truest sense, the turning point of the whole war'; quoted in Kimball, 'Stalingrad', 333.

<sup>23</sup> *ibid.* 338.

<sup>24</sup> J.I.C. (43) 64 (Final), *The German Military Situation*, 15 Feb. 1943, No. 17. A week later the report was submitted to the War Cabinet by the Chiefs of Staff Committee, with a few restrictive comments; PRO, CAB 80/39, doc. 27401. See also Hinsley, *British Intelligence*, ii. 615–27. The fact that German diplomatic observers were informed about the Anglo-American assessment of the situation, at least in a rudimentary fashion, is shown by a telegram from the envoy in Lisbon, 7 Mar. 1943, PA, R 29821, No. 729.

<sup>25</sup> Zeitzler himself gave his (unpublished) account of Stalingrad the subtitle 'The Turning Point of the War'.

<sup>26</sup> Witness the characteristic titles of articles written on various anniversaries of the battle: 'Stalingrad: "Wendepunkt des Krieges"' [Stalingrad: the turning point of the war] (*Der Spiegel*, 31 Jan. 1993); 'Kriegswende Stalingrad' [Stalingrad: the war changes course] (*Europäische Wehrkunde*, 32 (1983)); 'Die Schlacht um Stalingrad. Der Wendepunkt des Zweiten Weltkrieges' [The Battle of Stalingrad. The turning point of the Second World War] (*Das Parlament*, 48, 4 Dec. 1982). More serious than such quick-fire journalism is Alan Bullock's assertion, as late as 1991 and with disregard for more recent research, that 'nineteen forty-three was the decisive year of the war. At the end of it [...] it was as certain as anything can be in war that Germany could not win it' (*Hitler and Stalin*, 779). Similarly, Hubatsch (*KTB OKW*, iii. 1487 ff.), on the basis of an all-too-narrow operational understanding of the war, talks about 'Kulminationsjahr 1943' [1943, the year of culmination].

<sup>27</sup> Failure to recognize this was, as Hillgruber has already convincingly demonstrated ('Das Russlandbild der führenden deutschen Militärs', 258–9), one of the fundamental errors made by the

available to the parties, and their ability to deploy them effectively and coordinate them systematically, appear to be much more decisive factors, especially in a war of long duration. That being so, the outcome of individual battles is nevertheless an indicator of the infrastructure and performance potential of a political system, and of its ability or inability to organize war at the level of society as a whole.

Secondly, the turning-point argument is questionable in suggesting that after—and because of—Stalingrad the war took a fundamentally different course. With regard to Germany, this would mean that, with the outcome of the battle, it had finally abandoned the road to victory, and that a war until then still winnable had changed into one that was hopeless. But that is in no way the case. The boundless nature of Hitler's war aims, the early globalization of the war, the extremely asymmetrical distribution of human and material resources, America's lead in nuclear-weapons development, and finally the determination of all the Allied great powers not to end the war before total German capitulation—all these together, in retrospect, invalidate any thesis that Germany ever had a real chance of winning the war *as a whole* in the way Hitler understood it.<sup>28</sup> To speak of Stalingrad as a 'turning point' in general and without qualification is therefore misleading.

An entirely different question is whether the annihilation of Sixth Army marked a turning point in the war *in the east*.<sup>29</sup> There, at least, the Wehrmacht had twice been close to a decision of strategic import. Both in the autumn of 1941 outside Moscow and in the following summer on the southern sector of the front, a collapse of the Soviet defence, if not of Stalin's regime as such, was within the realm of possibility. Nevertheless, in both cases it was a constellation of relatively few factors, and in no way the 'inevitability'<sup>30</sup> invoked by Soviet historiography, that ultimately decided the outcome. With its defeat on the Volga, Germany's eastern army definitively lost its capacity to recreate comparable critical situations in the future. It lost forever the strategic initiative in this theatre of war, as indeed elsewhere. In that sense the events at Stalingrad mark the final conclusion of a gradual process of diminishing options of victory in the east. The crucial stages in this process were the battle of Smolensk in July 1941 and the resulting stoppage of the German advance, the failure before Moscow in December of the same year, the eastward relocation of substantial parts of Soviet industry, rightly described as the 'economic Stalingrad',<sup>31</sup> and Hitler's decision in July 1942 to split Operation BLUE in two. After each of these events the foundations of German victory in the east had

German general staff in the planning stage of Operation BARBAROSSA. Speer's conclusion in his post-war reflections is noteworthy in this respect: 'In the final analysis, modern wars are decided by superior technological capacity, and we didn't have that' (*Spandau: The Secret Diaries*, 48). On the traditional thinking of the German military leadership, which diverged strongly from the foregoing and was based entirely on operational success, see also Wallach, *Das Dogma der Vernichtungsschlacht*.

<sup>28</sup> See summary of the main arguments in Levine, 'Was World War II a Near-Run Thing?' For diverging historiographical views, see Overy, *Why the Allies Won*, and Weinberg, *A World at Arms*.

<sup>29</sup> See also Bullock, *Hitler and Stalin*, 778.

<sup>30</sup> For an example of such an interpretation, see Yakushevsky, 'Stalingradskaya bitva'.

<sup>31</sup> Thus Belikov, 'Transfert', 48.

become more fragile, and the number of options smaller. In this process of a cumulatively progressive turning point, the tragedy of Stalingrad represented the final military consequence. After it, there was no realistic hope left of victory in the east. Realization of this fact might have occasioned a turn in German war policy too. Why it failed to do so, and instead became the starting point for a further radicalization of the German war effort, is the subject of the following discussion.

## 2. LOSSES AND RESOURCES: THE CHANGING STRATEGIC COORDINATES

The fact that since the autumn of 1942 not only the global war as such but also the land war in the east were no longer winnable for Germany resulted from an ultimately irreversible constellation of medium-term situational and long-term structural circumstances. These were fundamental for elucidating the German leadership's remaining room for manoeuvre and defined the limits of what could still be achieved militarily.

### (a) The Manpower Situation of the Eastern Army and the Failure of Total Mobilization

Of the many sobering realizations which the spring of 1943 had in store for Germany's political and military leadership, perhaps the bitterest of all was that despite earlier hopes, the Soviet theatre of war, in which close on 3 million men—some 70 per cent of the total German land army—were tied up, would remain the great death-mill it had been since the beginning of the German offensive in June 1941.<sup>32</sup> As was already the case during Operation BARBAROSSA, in the second year of the German–Soviet war (i.e. in the period from May 1942 to April 1943 inclusive) over 95 per cent of all army losses—as well as 70 per cent of all Luftwaffe losses—were incurred on the eastern front. Worse still, limitation of the summer 1942 offensive to only one sector of the front had made practically no difference to the absolute casualty figures. Month after month the eastern army was still losing an average of almost 109,000 men, including more than 3,000 officers, killed, wounded, or captured.<sup>33</sup> The proportion of irreplaceable losses had actually risen,

<sup>32</sup> The following discussion is confined to those aspects that are directly relevant to an understanding of German conduct of the war in the spring of 1943. A detailed analysis of manpower policy and 'human resources management' by Bernhard Kroener is contained in volume v/II, part III of the present series.

<sup>33</sup> Unless otherwise indicated, the figures for losses are based throughout on contemporary estimates by the official departments. That these figures were by no means always reliable, and frequently tended to underestimate Germany's own losses, has been proven by recent research, in particular Overmans, *Deutsche militärische Verluste*.

**Table I.I.1.** Monthly Army and Luftwaffe losses, 1941–1943 (average figures)*Army losses*

(Number of officer losses in brackets)

	War year <sup>(a)</sup>	Army total	of which, on the eastern front <sup>(b)</sup>	
Killed	1941/2	23,975	(900)	23,094 (866)
	1942/3	19,570	(605)	18,687 (566)
Wounded	1941/2	84,793	(2385)	81,944 (2309)
	1942/3	71,428	(1726)	68,246 (1611)
Missing	1941/2	5,850	(97)	5,205 (80)
	1942/3	23,207	(878)	21,948 (854)
Total monthly losses	1941/2	114,618	(3382)	110,243 (3255)
	1942/3	114,205	(3209)	108,881 (3031)

(a) War Year 1941/2 = 22.6.1941–30.4.1942; War Year 1942/3 = 1.5.1942–30.4.1943; (b) excl. Finland.

mainly because of a leap in the numbers taken prisoner. Owing to massive deployment to supply Stalingrad, Luftwaffe losses had also risen considerably (see Table I.I.1. ‘Monthly Army and Luftwaffe losses, 1941–1943’).

As in the previous year, the altogether horrendous losses in the second year of the eastern war, totalling over 1.3 million men, were far from compensated by the arrival of replacement troops or recovered soldiers. Thus, despite the reduction in

divisional target strength in 1942,<sup>34</sup> the monthly shortfalls between gains and losses during the main operational phase from August 1942 to February 1943 amounted to no fewer than 825,000 unfilled posts.<sup>35</sup>

The situation of the armies of Germany's Axis partners fighting as part of the eastern army was equally catastrophic. The losses they suffered were no less exorbitant, and were not only downplayed by the German leadership for political reasons at the time,<sup>36</sup> but also long ignored in the German post-war literature. In the course of the winter battles on the Don (from December 1942 to February 1943) the Italian 8th Army lost over 114,000 men, and the Hungarian 2nd Army had close on 105,000 killed, wounded, or taken prisoner.<sup>37</sup> For November and December 1942 the combined losses of the two Romanian armies deployed in the Stalingrad area totalled over 109,000 men.<sup>38</sup>

Apart from the immeasurable human tragedies which lay behind these figures, their magnitude had major consequences both politically and militarily: politically—and we shall go into this in greater detail at a later stage<sup>39</sup>—because the inevitable questions, doubts, and recriminations contributed significantly to the internal collapse of the Nazi war coalition; militarily, because the extensive damage inflicted on the forces of Germany's Axis partners led in the spring of 1943 to the total withdrawal of Italian and Hungarian combat units from the eastern front<sup>40</sup> and an appreciable reduction in the deployment of Romanian troops. Despite the endless German complaints about the insufficient fighting capacity of the armies in question, their withdrawal certainly meant a painful weakening of the German eastern army, which now had to take upon itself the task of securing several hundred additional kilometres of the front.

The extent to which the size of the haemorrhage outlined above was strategically significant for Germany's further conduct of the war depended decisively on its estimates of the losses suffered by the Soviet Union at the same time and the human reserves available to both sides in the short and medium term. What was certain was

<sup>34</sup> In the spring of 1942 no fewer than 69 of a total of 75 infantry divisions of Army Groups Central and North were reduced from nine to six battalions. Similar reductions were made to the other forces, with the exception of units in Army Group South; see Müller-Hillebrand, *Das Heer*, iii. 62–3.

<sup>35</sup> See 'Gains and Losses of Personnel by the Eastern Army, December 1941–April 1943', repr. in *Germany and the Second World War*, vi. 865 ff.

<sup>36</sup> In this connection see also Chapter II.1.

<sup>37</sup> Figures given by Schreiber, 'Italiens Teilnahme am Krieg', 278, and Wimpffen, 'Die zweite ungarische Armee', 342–3. To the Hungarian losses must be added approx. 30,000 members of Jewish Labour Service units, large numbers of whom are presumed to have gone over to the Red Army. In any event, the total of around 70,000 men lost in the winter battles, as reported to the Hungarian Council of Ministers by Col.-Gen. Vilmos Nagy in February 1943 (see Gosztony, *Hitlers Fremde Heere*, 362), must certainly have been considerably understated.

<sup>38</sup> Of those alone, some 70,000 were missing or taken prisoner. The figures kindly made available to the author by Jürgen Förster (Freiburg i. Br.) are based on data from the Arhivele Ministerului Apărării Naționale (Archive of the Ministry of National Defence, Bucharest), Fond M.St.M., Dossier No. 160, doc. 5. The figure of 173,000 for total losses given by Gosztony (*Hitlers Fremde Heere*, 328), based on Soviet sources, would need to be corrected accordingly.

<sup>39</sup> See Chapter II.1.

<sup>40</sup> Of the remains of the Hungarian 2nd Army, only three light divisions and two security divisions were still deployed in the rear area; Müller-Hillebrand, *Das Heer*, iii. 113.

that in the past year the Soviet Union had again suffered casualties on a huge scale, far exceeding the German losses in absolute figures. In the calendar year 1942 the Red Army had lost at least 1.5 million men as POWs alone.<sup>41</sup> While that was fewer than in the catastrophic year of 1941, it was still around ten times the number of German troops who had fallen into Soviet hands up to the collapse of the Stalingrad cauldron.<sup>42</sup> That brought the total of Soviet prisoners reported by German army groups from the beginning of the war to the end of the winter battles of 1943 to nearly 5.4 million (status at 31 March 1943).<sup>43</sup> The Foreign Armies East section estimated that the Red Army's 'blood losses' over the same period were a million higher, totalling 6.4 million.<sup>44</sup> With its resulting combined estimate of 11.7 to 11.9 million for Red Army losses up to early 1943, Maj.-Gen. Reinhard Gehlen's section was apparently not far off the mark, although it may have underestimated Germany's own losses. More recent Russian research, however, puts the total losses of the Red Army and Soviet navy (excl. NKVD) over the period under discussion at almost 14 million, showing that, contrary to popular perception, the second year of the war (from May 1942 to March 1943 inclusive) by no means cost the Soviet Union fewer lives than the first ten months, which had been so critical for the country's survival.<sup>45</sup>

So was the Soviet military machine, despite its recent operational successes, on the brink of collapse? Or was it, perhaps, as Hitler never tired of repeating, really only a question of which of the opposing sides had stronger nerves and longer breath?<sup>46</sup> Remarkably, the German departments responsible for assessment of the enemy—in contrast to the optimism they had displayed only a year earlier—this time resisted the temptation to make the Soviet losses the basis for German

<sup>41</sup> Estimates of prisoners taken vary between 1.52 million (GenQu) and 1.65 million (Foreign Armies East): FHO (I), Gefangen- und Beutezahlen, 1 Jan.–31 Dec. 1942, 10 Jan. 1943, BA-MA RH 2/2621.

<sup>42</sup> According to Russian data, the Red Army had taken only around 171,000 prisoners in all from 22 June 1941 to 3 February 1943; Galicky, 'Vrazheskie voyennoplennye', 40 (Table 1). According to German estimates made to date, which are admittedly based on unconfirmed sources, the total number might have been higher by several tens of thousands; see Böhme, *Die deutschen Kriegsgefangenen in sowjetischer Hand*, 10–21.

<sup>43</sup> Liaison officer OKW/WPr, 22 June 1943, *re* prisoner and captured material figures of the army groups as reported by OKH/Foreign Armies East on the basis of Ic reports, BA-MA RW 4/v. 309 b; see also Streit, *Keine Kameraden*, 244 ff.

<sup>44</sup> See Table I.I.2. 'Human reserves of Germany and the Soviet Union in early 1943'. Although this table is based on a single document from October 1943, there are corresponding, only slightly divergent estimates from early 1943; see FHO diagram 'Personelle Wehrleistung und Menschenreserven der Sowjetunion ab 22 June 1941', status at 1 Mar. 1943, BA-MA RH 2/2089.

<sup>45</sup> See *Grif sekretnosti snyat*, 156–8, also, in an English summary, Krivosheyev, 'Military Casualties', 2 (table). This is the first published comprehensive statistical analysis of Soviet human losses, emanating from the circle of the former Soviet general staff. Although it encountered massive criticism on grounds of both methodology and content (see, e.g., the review by Boris Sokolov in *Nezavisimaya Gazeta*, 2 Feb. 1993), the figure cited here is, at least, unlikely to be an overestimation of Soviet losses.

<sup>46</sup> Characteristic of Hitler's attitude was his irritation on 11 March 1943 when juggling with the Soviet and German loss statistics for the benefit of the assembled generals of Army Group South: 'With that kind of loss ratio it will have to end soon' (H.Gr. Süd/Ia, KTB, 1092 reverse side, BA-MA RH 19 VI/41). For similar statements on other occasions, see also Goebbels, *Tagebücher*, pt. 2, vii. 292 (8 Feb. 1943); *Hitlers Lagebesprechungen*, 477 (27 Dec. 1943), and Manstein, *Verlorene Siege*, 475.

**Table I.i.2.** Human reserves of Germany and the Soviet Union in early 1943 as estimated by Foreign Armies East (in millions and as %)

	Germany (Birth Years 1888–1925)		Soviet Union (Birth Years 1888–1926)	
Total male population originally available	19.8	(100.0)	43.7 <sup>(a)</sup>	(100.0)
Deductions due to territorial losses	—	—	3.9	(8.9)
Unfit for military service	3.6	(18.2)	6.4	(14.7)
Exemptions	5.3	(26.8)	5.0	(11.4)
Total losses since 1939	2.4 <sup>(b)</sup>	(12.1)	12.2 <sup>(c)</sup>	(27.9)
Actual strength of land army on the German–Soviet front	2.7 <sup>(d)</sup>	(13.6)	5.7 <sup>(e)</sup>	(13.1)
Other combat troops	5.3 <sup>(f)</sup>	(26.8)	7.1 <sup>(g)</sup>	(16.2)
Remaining human reserves fit for military service at 1 March 1943	0.5	(2.5)	3.4	(7.8)

(a) Incl. 1.7 million from birth year 1926; (b) incl. 0.9 million convalescent or in infirmaries; (c) of which: 6.4 million casualties, 5.4 million POWs, 0.5 million losses in the Finno-Russian Winter War of 1939/40; (d) incl. Waffen-SS; (e) incl. Finnish front; (f) of which: 1.4 million army units in OKW theatres of war (incl. Finland), 0.8 million Replacement Army troops, 2.0 million Luftwaffe troops, 0.7 million naval troops, 0.4 million others (incl. SS); (g) incl. far-eastern troops, Luftwaffe troops, naval troops, NKVD, home units, construction and security troops.

*Source:* FHO (Ia), 'Bisherige Entwicklung des deutsch-sowjetrussischen Kräfteverhältnisses seit Kriegsbeginn und seine mögliche Weiterentwicklung bis Ende 1943', Ann. 1 and 2, 17 Oct. 1943, BA-MA RH 2/2566.

confidence in victory.<sup>47</sup> Rather, since the autumn of 1942 there was increasing realization that some of the parameters adopted for calculating Soviet 'defence capability' had been wrong. In particular, it had transpired that, in the Soviet Union, year groups eligible for military service were being conscripted earlier than had been assumed and were more rigorously exploited; that exemptions were incomparably rarer; and that the use of women in military functions (including combat) was much more frequent. On the basis of such new information, the Foreign Armies East section revised its calculations of the Red Army's capacity for human-resources regeneration in the spring of 1943 and reached very different, sobering conclusions (see Table I.i.2. 'Human reserves').

If the Red Army was now assumed to have an available human reserve of 3.4 million persons fit for military service (including birth year 1926), that is, an upward revision of 75 per cent from the previous year,<sup>48</sup> then this assumption, even bearing in mind the massive Soviet losses already discussed, allowed only the sobering conclusion that the Red Army could not be beaten for lack of human resources. The fact that in 1943 the Wehrmacht had human reserves of 0.5 million,

<sup>47</sup> On 20 March 1943 Hitler himself still maintained that 'this colossus [i.e. the Soviet Union] will begin to shake' and suffer 'world-historic collapse', but held the timing of that collapse to be a completely open question. He was convinced, however, that the key factor in triggering the process would be 'human, rather than material, reserves' (Goebbels, *Tagebücher*, pt. 2, 593). For an assessment of such statements by Hitler, see also Chapter I.3.

<sup>48</sup> At 1 April 1942 the corresponding reserve was estimated at a maximum of 1.93 million (with a downward trend); see *Germany and the Second World War*, vi. 885.

a mere fraction of that 3.4 million, for all the potential war theatres of ‘Fortress Europe’ taken together, made this conclusion all the more poignant.

The military implications of such a situation analysis could easily be calculated on the basis of past experience. Foreign Armies East accordingly proceeded on the assumption that around 1.7 million, that is, half of the available Soviet human reserve, would be needed for ongoing replacement, and a further 700,000 men would be used for the thorough rehabilitation of units. The remaining million fit for military service would nevertheless suffice to reconstitute 40 to 60 rifle divisions in the course of the summer, and a further 20 to 30 in the late summer or autumn, that is, around 75 rifle divisions in all, and a corresponding number of other large units.<sup>49</sup>

In this situation the central question for the top German leadership was how—‘whether’ was never an issue—to make available the forces needed to meet the impending danger. The question was by no means new. It had essentially arisen well before the Stalingrad debacle. In the weeks before the start of Operation BLUE in June 1942 the Army General Staff had announced that the army needed a further half a million conscripts by the summer of 1943, in addition to birth year 1924.<sup>50</sup> At the beginning of August, Col.-Gen. Franz Halder, then still chief of the Army General Staff, had likewise warned the chief of the Wehrmacht high command, Field Marshal Wilhelm Keitel, about the expected erosion of the strength of the eastern army, and had called for an increased supply of replacements.<sup>51</sup> Shortly afterwards, the unmistakable growing asymmetry of forces had impelled Col.-Gen. Friedrich Fromm, commander of the replacement army and head of army armament, to go so far as to attempt to persuade Hitler to enter into peace negotiations.<sup>52</sup> By early 1943, however, both generals had been wholly or partly disempowered and, for reasons to which we shall return, peace initiatives were entirely unacceptable to Hitler. There is no doubt, however, that the dictator was fully aware of the problem. ‘The manpower issue is our greatest concern and by far the most serious problem,’ he told the generals assembled in Field Marshal Erich von Manstein’s headquarters in March 1943.<sup>53</sup>

Since the beginning of the Stalingrad disaster, Hitler had become firmly convinced that, in view of the war to be waged in Europe on multiple fronts, Germany’s relative demographic inferiority henceforth required ‘total mobilization of the whole German nation in this our most decisive struggle for survival’.<sup>54</sup>

<sup>49</sup> The talk was of around 40 rifle divisions, 10 cavalry divisions, and tank units ‘according to available equipment’; FHO (IIa), diagram ‘Vermutete Neuauflstellungen und Ersatzlage in der SU. (auf Grund der Berechnung der personellen Wehrleistung)’, Status: 1 Apr. 1943, BA-MA RW 19/832.

<sup>50</sup> OKH/GenStdH, Org.Abt., KTB, 11–15 June 1942, BA-MA RH 2/821, 212.

<sup>51</sup> Müller-Hillebrand, *Das Heer*, iii. 77–8, and Kroener, ‘Nun, Volk, steh auf...!’, 153. At this time, of course, the OKW still believed the losses expected in the coming winter could be made good simply by recovered soldiers, internal savings, and the provision of ground combat units by the Luftwaffe (the subsequent Luftwaffe field divisions).

<sup>52</sup> See Kroener, *Der starke Mann im Heimatkriegsgebiet*, 457 ff., and Kroener’s treatment in *Germany and the Second World War*, v/I. 1101 ff.

<sup>53</sup> H.Gr. Süd/Ia, KTB, 11 Mar. 43, 1089 (reverse side), BA-MA RH 19 VI/41.

<sup>54</sup> Hitler on 25 Dec. 1942, quoted in Rebentisch, *Führerstaat*, 475.

Apart from the fact—as can be stated fairly certainly with historical hindsight—that even such a total mobilization of all forces would not have sufficed to turn the tide once again in a *strategic* sense, it seems worth pointing out that the Nazi regime, in contrast to the Soviet Union in 1941, was not capable of such an extreme war effort. After Joseph Goebbels and Albert Speer, the main proponents of that policy, had in the spring of 1942 already failed to achieve radical exploitation of all available population reserves, despite some minor initial success,<sup>55</sup> this experience largely repeated itself a year later despite the much greater pressure of the problem and propaganda that was now entirely geared to ‘total war’.<sup>56</sup> Since the beginning of the Soviet winter offensive, moreover, there had been no lack of preparatory initiatives on the part of the relevant ministries and departments.<sup>57</sup>

At the beginning of January Keitel put the Wehrmacht’s total manpower requirement for 1943 (as in the two previous years) at 2 million men, of whom 800,000 were ‘already available’ on the basis of earlier agreements and a further 500,000 were expected from the intake of conscripts from the 1925 birth year. Of the remaining ‘roughly calculated’ 700,000 posts, 200,000 could be covered by men whom Speer had promised to release from the armament industry. That left a minimum expected shortfall of 500,000.<sup>58</sup> Against that background Speer, and above all Goebbels (‘too much is expected from the front and not enough from the homeland’),<sup>59</sup> pleaded among other things for the introduction of a comprehensive female labour service, extensive shutdown of branches of the commercial economy not important for the war effort, and the cancellation of 10 to 15 per cent of military service exemptions in the administration and business sectors.<sup>60</sup> With the Führer decree ‘on the comprehensive deployment of able-bodied men and women on Reich defence tasks’,<sup>61</sup> signed by Hitler on 13 January 1943, the (quasi-)legal basis for the desired total mobilization appeared to be in place. To implement it, Hitler appointed a ‘Committee of Three’ composed of the chief of the OKW and the heads of the Party and Reich chancelleries, Martin Bormann and Heinrich Lammers. It is almost ideally typical of the polycratic nature of the Nazi regime that this ‘last attempt to base the Führer state on a rational form of government

<sup>55</sup> See *Germany and the Second World War*, v/I. 1101 ff.

<sup>56</sup> That propaganda effort and its culmination in Goebbels’ Sports Palace speech of 18 February 1943 have been frequently analysed; see the earlier studies by Moltmann (*‘Goebbels Rede’*), Boelcke (*‘Goebbels und die Kundgebung’*), Steinert (*Hitlers Krieg*, 325 ff.), and Balfour (*Propaganda in War*, 321–31), as well the more recent works, which do not go much further, by Reuth (*Goebbels*, 510–24) and Wette (*‘Das Massensterben’*).

<sup>57</sup> See in this connection the interesting in terms of material but ideologically rigid dissertation by Bleyer, *Staat und Monopolie*, 57 ff.

<sup>58</sup> Minutes of meeting in the Reich chancellery on 7 Jan. 1943 *re* deployment of men and women on Reich defence tasks, 12 Jan. 1943, BA R 43 II/655. This shortfall increased in the following weeks and months as the supply of replacements for the field army continued to lag behind its losses; see also Bleyer, *Staat und Monopolie*, 68.

<sup>59</sup> Quoted from the minutes of the meeting of 7 Jan. 1943, BA R 43 II/655, 3.

<sup>60</sup> Boelcke, *Goebbels und die Kundgebung*, 239; *Wollt Ihr den totalen Krieg?*, 318 (5 Jan. 1943), 322–3 (21 Jan. 1943); see also Eichholz, *Geschichte der deutschen Kriegswirtschaft*, ii. 226–7.

<sup>61</sup> Repr. in *Der Zweite Weltkrieg. Dokumente*, doc. 42; see also KTB OKW, iii. 46 (16 Jan. 1943); on the background to the decree and its content, see Rebentisch, *Führerstaat*, 476 ff.

coordinating the various operational tasks<sup>62</sup> failed within a few months. Although an additional few hundred thousand people were freed for tasks in the Wehrmacht and armament industry by means of rationalization, comb-out, and business closures, the actual goal of a ‘total’ war effort involving the whole of society was far from achieved in almost every respect.<sup>63</sup>

Compulsory service for women was not implemented to the desired extent,<sup>64</sup> nor did the ‘Armament Exchange 43’ programme function properly.<sup>65</sup> The business-closure programme, which destroyed a myriad of small commercial and artisan enterprises, also proved a ‘total failure’.<sup>66</sup> Measures intended to simplify administration often led to an increase in bureaucratic bustle, and even uncontroversial measures (such as the ban on horse-racing) frequently proved unenforceable. A multitude of circumstances contributed to the failure of the new policy: opposition from Gauleiters who feared losing the loyalty of their party-base membership and from the conservative ministerial bureaucracy; economy policy incompetence and departmental bickering on the part of authorities outside the Committee of Three; intrigues between Goebbels and Speer on the one hand, and Bormann and Lammers on the other; and, not least of all, arbitrary interventions by the dictator himself, whose determination to achieve ‘total mobilization’ was equally unshaken by reports of successes on the front (such as the recapture of Kharkov in mid-March 1943) and skilfully cultivated concerns about the mood of the German population.<sup>67</sup>

<sup>62</sup> Thus Rebentisch, *Führerstaat*, 493, whose detailed assessment of the work of the committee was the basis for the following exposition.

<sup>63</sup> The Reich Statistics Office itself bluntly admitted in a report on manpower in the war economy (Kriegswirtschaftliche Kräftebilanz 1943. Bearb. im Statistischen Reichsamt, bk. 1 and 2, n.p., 1944, 20 Jan. 1943, bk. 2, 12) that although ‘some features of total war could already be detected’ in the new economic and administrative structure, ‘the war economy [...] still had the appearance of a peacetime economy’. Despite a certain ideological undertone, the judgement of US Strategic Bombing Command a few months after the end of the war, which was based on a comprehensive analysis of German documents, is entirely accurate and agrees with the results of later research. Summarizing the upswing of the German war economy under Speer, the report argues that ‘the increase cannot be considered a testament to the efficiency of dictatorship. Rather it suggests the degree of industrial undermobilization in the earlier years. An excellent case can be made that throughout the war top government management in Germany was not efficient.’ USSBS, Summary Report (European War), September 30, 1945, 2. On the reasons for this failure, see also Rolf-Dieter Müller’s analysis in *Germany and the Second World War*, v/II.

<sup>64</sup> The number of German women in active employment, which had fallen in the first two years of the war from 14.6 to 14.1 million, rose to no more than 14.9 million in the period from 1941 to the autumn of 1944 (Wagenführ, *Die deutsche Industrie*, 139). In this connection, Col.-Gen. von Richthofen’s comment on Fritz Sauckel’s recruitment drive is also revealing: ‘May the German woman work as little as possible in factory production, since she is mostly ineffective and vulnerable, and is supposed to have children’ (Richthofen diary, 16 Mar. 1943, BA-MA N 671/10, 105). See also Winkler, *Frauenarbeit*, 134–42; Ránki, *The Economics of the Second World War*, 100 ff.; Hachtmann, ‘Industriearbeiterinnen’, 341 ff.

<sup>65</sup> Under that programme 150,000 men fit for active service in the field were supposed to be transferred from the armament industry in exchange for soldiers no longer fit for front-line duty; see *Deutschland im zweiten Weltkrieg*, iii. 184.

<sup>66</sup> Thus Rebentisch, *Führerstaat*, 488; similarly, Eichholtz, *Geschichte der deutschen Kriegswirtschaft*, ii. 229 ff.

<sup>67</sup> On this, see the clear description by Speer, *Erinnerungen*, 268–9.

With the provisional failure of the total social mobilization project, which revived only in the summer of 1944, came a shift in political power relationships within a Führer state now increasingly reduced to a propaganda façade in internal politics. As shown not only by the growing influence of Bormann but also by Himmler's rise to Reich minister of the interior, power shifted further towards the Party and SS and away from the military leadership and traditional administrative elites.<sup>68</sup> In those circumstances no commensurate response was found to the gravity of Germany's increasingly acute 'human resources crisis'. The 'system of expedients' developed in previous years therefore continued in 1943: birth year 1925, which was actually not due for conscription until the autumn, was called up in May. In February schoolboys aged 15 to 17 were being deployed on air-raid defence in the framework of the Wartime Auxiliary Service, to release anti-aircraft gunners for service at the front. But, above all, there was an increasing effort to compensate for the shortage of German personnel by employing foreign auxiliaries, forced labourers, and prisoners of war. So despite the difficult military situation and the growing resistance of those concerned, the number of Soviet civilian workers employed in Germany alone rose, from the end of November 1943 to the turn of 1943/4, by almost 700,000 to around 1.8 million, corresponding to an average deportation rate of more than 50,000 per month. In 1943, with a total of close on 1.83 million civilians and POWs, it proved possible to procure almost as many foreigners for labour deployment in the Reich as in the previous year.<sup>69</sup> But this success on the part of the general plenipotentiary for manpower, Fritz Sauckel, was attributable not only to the increasingly brutal methods used by his recruiting officers,<sup>70</sup> but also to the unhoped-for increase in Germany's manpower resources at the end of 1943 due to the capitulation of Italy and the ensuing deployment of hundreds of thousands of Italian military internees as forced labourers.<sup>71</sup> Apart from that special case, it was obvious that Germany's possibilities of exploiting the population of the subjected countries had peaked with the culmination of its military expansion.<sup>72</sup>

<sup>68</sup> Rebentisch, *Führerstaat*, 499 ff.; Kroener, 'Nun, Volk, steh auf...!', 161–2.

<sup>69</sup> See Herbert, *Fremdarbeiter*, 255–8; also Ránki, *The Economics of the Second World War*, 94 ff.; Müller, 'Menschenjagd'.

<sup>70</sup> The impression reported by the foreign ministry's representatives with the eastern army forces at the end of 1942 is characteristic: 'In the massive deportation of workers to Germany, no account whatever is taken of their state of health or family circumstances. The aim of meeting the prescribed quota is pursued mechanically' (Dr Megerle, summary report to Reich foreign minister, 27 Nov. 1942, *re* assessment of the situation in the east by foreign ministry representatives, BA Potsdam, 09.01.60988). See a similar complaint about Sauckel by Alfred Rosenberg, 21 Dec. 1942, repr. in *Die faschistische Okkupationspolitik*, doc. 147, 368–9. Sauckel was totally unimpressed and announced that he was certain of the Führer's approval and was instead determined to divest himself of 'the last vestiges of our humanitarian weakness': 'Where voluntary commitment is lacking (and experience shows that it is lacking everywhere), it shall be replaced by compulsory service. That is now the iron rule of labour deployment for 1943.' Address by Sauckel, 6 Jan. 1943, quoted in Blaich, *Wirtschaft und Rüstung*, doc. 16a, 106.

<sup>71</sup> For a detailed account, see Schreiber, 'Die italienischen Militärinternierten im deutschen Machtbereich', 341 ff.

<sup>72</sup> See also Eichholz, *Geschichte der deutschen Kriegswirtschaft*, ii. 237 ff.

It is all the more remarkable that Hitler strictly rejected, on grounds of political ideology, the effective exploitation of still-available reserves precisely where they were most urgently needed, namely on the eastern front. Several of the front's commanders-in-chief (Hans-Günther von Kluge and Georg von Küchler, among others) were emphatically in favour of building up an anti-Communist Russian national army within the ranks of the German eastern army. According to Hitler, that would never happen; it was 'a phantom of the first order'.<sup>73</sup> While that put paid for the time being to the role of Andrei Andreyevich Vlasov and the 'Smolensk Committee' he had set up only a few months earlier, and shattered his German benefactors' dream of turning Germany's war in the east into a Russian civil war,<sup>74</sup> Hitler's restrictive attitude had, in some ways, already been overtaken by events. The units of Germany's eastern army had long been unable to function without massive replenishment with local auxiliaries.<sup>75</sup> What is more, eastern troop units of 'foreign volunteers'—organized in 176 battalions (infantry, cavalry, artillery) and thirty-eight labour, guard, and training companies—had already reached a total of 130,000 to 150,000 men by the beginning of 1943. That this upward trend continued despite Hitler's dictum is shown by the striking example of Army Group North, where the strength of the eastern troop units—excluding auxiliaries!—rose from 28,668 to 68,672 in the period from February to July 1943 alone.<sup>76</sup>

Germany's desperate, indeed hopeless situation in the spring of 1943 with regard to human resources was thus marked by an extremely complex crisis syndrome. To attribute that situation to Germany's demographic weakness relative to its enemies, or even to the Stalingrad losses, is far too limited an explanation. Rather, the situation resulted from a twofold blunder on the part of the regime:

<sup>73</sup> Thus to Keitel and Zeitzler on 8 June 1943 (*Hitlers Lagebesprechungen*, 256). A little later, on 1 July, the dictator broached the same subject in the middle of his address to army group commanders (extract repr. in Krausnick, 'Zu Hitlers Ostpolitik'). Both documents clearly reveal the motive for Hitler's negative attitude. Apart from what he considered the doubtful military value of such a national army, he feared above all that its existence would arouse expectations of the continuation of Russian statehood: 'I can set no future objectives that will build up independent, autonomous states' (*Hitlers Lagebesprechungen*, 260). A more concrete background to Hitler's fears were the trips to the front by Vlasov to Army Groups Central and North in the spring of 1943, which made the basic lines of his Russian national policy clear; for details see Andreyev, *Vlassov and the Russian Liberation Movement*.

<sup>74</sup> The ideas expressed by the foreign ministry representative at Seventeenth Army HQ in the spring of 1942 are characteristic in this respect; see Hoffmann, *Die Ostlegionen*, 22–3.

<sup>75</sup> Since units often kept quiet about the deployment of auxiliaries, their total number is hard to estimate. What is certain is that in 1942/3 individual armies (e.g. Sixth and Eighteenth) employed up to 50,000 auxiliaries, mostly in ordnance, supply, and repair units, and the like. The total figures found in contemporary sources and in the literature, which are almost impossible to verify, range from 220,000 (probably too low) to 600,000 auxiliaries in the early summer of 1943; see *Hitlers Lagebesprechungen*, 252 (n. 2.), and Hoffmann, *Die Geschichte der Wlassow-Armee*, 14. For the new type of infantry division introduced in October 1943, 2,500 auxiliaries per unit were officially provided for; that brought them to 15% of the total strength of each German infantry division; see statistical overview 'Breakdown of Inf. Div. n.A', 29 Oct. 1943, BA-MA RH 2/1432.

<sup>76</sup> See the detailed breakdown of units in Müller-Hillebrand, *Das Heer*, iii. 114, and the figures given in Mulligan, *The Politics of Illusion*, 150. According to general indications in Hoffmann, *Die Geschichte der Wlassow-Armee*, 14, 'on 5 May 1943 the volunteer units in the Wehrmacht totalled 90 Russian battalions, 140 units of company strength, 90 eastern legion field battalions, and a non-negligible number of smaller units'.

on the one hand, it harboured the totally unfounded expectation that it could wage and win a continental and ultimately global war *without* taking account of existing demographic structures; on the other, it proved incapable of optimally mobilizing the human potential available within the Reich and beyond its borders for the purposes of its own conduct of the war.

### (b) Material Losses and Ostensible Successes in the War Economy

The material situation with regard to Germany's conduct of the war was similar to the human resources situation. There too, there was an unbridgeable gap between the volume of consumption and wear on the one hand, and the reproduction rate indispensable for waging war successfully on the other.<sup>77</sup> The munitions sector is a good example. In the first year of war in the east (up to and including April 1942) the firing statistics, at a monthly average of 90,000 tonnes, far exceeded the experts' worst fears.<sup>78</sup> In the following year, moreover, they rose to an average of 117,000 tonnes per month.<sup>79</sup> Over that period the consumption of infantry ammunition had as much as doubled—particularly as a result of the Stalingrad battles—leading the army's quartermaster-general, Gen. Eduard Wagner, to demand an immediate drastic increase in manufacturing output at the end of 1942. But only two months after the start of Operation BLUE, the firing statistics for most of the other ammunition categories were already such as to make long-term stockholding illusory and permit replenishment only from ongoing production.<sup>80</sup>

Despite widespread awareness of the dangerous extent of such munition losses on the part of the German top leadership, the simultaneous increase in industrial output figures seemed to give reason for cautious optimism. Indeed, Germany's finished munitions production index rose from 100 in 1942 to 149 in the following year and 184 in 1944.<sup>81</sup> More importantly, that increase was by no means achieved at the expense of other war-related production areas; it was entirely in accordance with the general upswing in the German armament industry since early 1942 under Speer's management.<sup>82</sup> The fact that the total output of armament goods more than doubled in two years from the beginning of 1942 to the end of 1943<sup>83</sup> as part

<sup>77</sup> The following discussion is confined to those aspects that are directly relevant to an understanding of German conduct of the war in the spring of 1943. A detailed analysis of the German armament economy in the second half of the war by Rolf-Dieter Müller can be found in volume v/II, part II, of the present series.

<sup>78</sup> See *Germany and the Second World War*, vi. 873 ff.

<sup>79</sup> This was equivalent to the content of 260 ammunition trains a month; GenQu, Gruppe Mun./IIa, statistical overview *re* munitions consumption (east), 10 Dec. 1944, BA-MA RH 3/v. 135.

<sup>80</sup> See Donat, *Der Munitionsverbrauch im Zweiten Weltkrieg*, 35–6; also *Deutschland im zweiten Weltkrieg*, iii. 94.

<sup>81</sup> Based on constant unit prices; see *The Effects of Strategic Bombing on the German War Economy*, 275 (Appendix, Table 100).

<sup>82</sup> On the nature of the restructuring process involved, see Janssen, *Das Ministerium Speer*, chs. 4, 6, and 7; Milward, *German Economy*, ch. 4; and Rolf-Dieter Müller's discussion of the subject in *Germany and the Second World War*, v/I. 773–86, and v/II. 293 ff.

<sup>83</sup> The total index for German finished armament production rose from 100 in January/February 1942 to 222 in December 1943; see Donat, *Der Munitionsverbrauch im Zweiten Weltkrieg*, and

**Table I.I.3.** Armaments expenditure of the warring camps from 1935 to 1944 (annual expenditure in US \$ billions)<sup>(a)</sup>

of this upswing is all the more impressive as that success was achieved under the most difficult infrastructure conditions (Allied air raids, labour shortage, scarcity of raw materials, etc.). It was indisputably an extraordinary organizational achievement on the part of the regime and a significant contribution to prolongation of the war. It is, however, quite another matter—and the decisive question for the present investigation—whether that success made any difference to Germany's hopeless prospects of winning the war.

The answer to that question can only be a clear 'no'. For despite all the German (and Japanese) efforts, the discrepancy between the armament industry output of the Axis powers and that of the 'anti-Hitler coalition' remained, and even increased. In 1941 the volume of German production was only 31 per cent of that of its main adversaries, and it fell in each of the two following years, despite considerable system-immanent rates of increase, to no more than 21 per cent.<sup>84</sup> Even if Japanese production, which was also developing dynamically, though at a lower level,<sup>85</sup> is included in the calculation, the ratio changes only insignificantly. Both in 1942 and in 1943, the three main powers in the 'anti-Hitler coalition' spent three-and-a-half times more money on weapons and ammunition than their two strongest adversaries together (see Table I.I.3. 'Armaments expenditure of the warring camps from 1935 to 1944').

The discrepancy between the production capacities of the two alliances should actually be much greater, since unlike that of Germany and most of the other belligerent states, the armament-industry capacity of the increasingly internationally dominant American economy was far from exhausted even at the peak of the war.<sup>86</sup>

*Deutschland im zweiten Weltkrieg*, iii. At the same time, the share of armaments production in total industrial output increased significantly (from 26% in 1942 to 37% in 1943). It is indicative of the half-hearted nature of the supposedly 'total' war effort that in 1943 the results for the civilian consumer-goods industry, in terms both of production volume and of employment numbers, remained close to those for the previous year; see Henning, *Das industrialisierte Deutschland*, 177–8; Eichholz, *Geschichte der deutschen Kriegswirtschaft*, ii. 384 ff.; Milward, 'The End of the Blitzkrieg', 505 (graph).

<sup>84</sup> See Goldsmith, 'The Power of Victory', 75; Harrison, 'Resource Mobilization', 172 (Table 1).

<sup>85</sup> For a detailed analysis, see Cohen, *Japan's Economy*, here, esp. ch. 4.

<sup>86</sup> See Smith, *The Army and Economic Mobilization*.

Against that background, the fact that in the space of one year Germany's eastern army lost 5,500 tanks (including assault guns), 8,000 cannon (including anti-tank cannon), and 240,000 motor vehicles—and the Luftwaffe, two-thirds of which was also deployed in the east, around 20,000 aircraft<sup>87</sup>—needs considerable clarification. For example, the above-mentioned tank and aircraft losses in the second year of the war in the east were roughly equivalent to a whole year's production in each case. More precisely, they were higher than the finished production figures for 1942 but lower than those for 1943.<sup>88</sup>

Here too, as in the munitions sector, Speer's successful restructuring of production relations was reflected in output figures that increased by leaps and bounds.<sup>89</sup> Whereas in 1942 a total of 4,224 combat tanks came off the production line, the figure for the following calendar year was 5,947. What is more, for the first time a significant proportion (40 per cent) consisted of the legendary 'Tiger' and 'Panther' models, which went into series production in August and November 1942 and were greatly superior in quality to conventional Type III and Type IV tanks.<sup>90</sup> The development of the 'Sturmgeschütz' assault gun, particularly suitable for close infantry combat, was even more rapid: while only 828 were produced in 1942, almost four times as many, namely 3,245, came off the production line in 1943. The increase in the number of military aircraft produced, from 15,546 to 25,668, was also extremely impressive.<sup>91</sup>

In the spring of 1943 the production successes were by no means firmly established, however, although they were speculated upon with some justification.<sup>92</sup> In any case, in those months the experts in the central military leadership bodies were primarily faced with other findings that brought disillusionment. Among these was the realization that material losses incurred during unsuccessful defensive operations or retreat, which had been accumulating since the battle of Stalingrad and

<sup>87</sup> Eichholtz, *Geschichte der deutschen Kriegswirtschaft*, ii. 120. Putting it another way, monthly aircraft losses from May 1942 to April 1943 were from 6.7% to 16.1% of all available planes; see Murray, *Strategy for Defeat*, 115 and 184.

<sup>88</sup> Detailed statistical reviews of output were published, the most reliable of which ought to be those produced by Speer's ministry in March 1945, repr. in Eichholtz, *Geschichte der deutschen Kriegswirtschaft*, ii. 645–69, and in *Deutschlands Rüstung*, 22–5 (as well as the following figures based on data in both those publications). See also Bleyer, 'Der geheime Bericht'.

<sup>89</sup> The expansion of tank and assault-gun production was carried out mainly at the expense of naval construction. At the beginning of January 1943 Hitler decided to halt all work on large surface vessels and ordered them to be taken out of service. In view of the increased need for tanks in the east, he had to 'scrape together all available forces'; Ständiger Vertreter des ObdM beim Führer an Chef Skl, 17 Jan. 1943, BA-MA RM 7/260. See also Milward, *German Economy*, 135; Salewski, *Die deutsche Seekriegsleitung*, ii. 209 ff.; *Lagevorträge*, 457–70 (10 Jan. 1943).

<sup>90</sup> On the technical qualities of the tank models in question, which will not be discussed in detail here, see Spielberger, *Der Panzerkampfwagen IV*; id., *Der Panzerkampfwagen Tiger*; id., *Der Panzerkampfwagen Panther*.

<sup>91</sup> Here, too, things look different from a comparative perspective, as can be seen from John Morrow's assessment: 'All in all, a comparison of the German aircraft industry in the First and Second World Wars leads to the conclusion that, in relation to the industry of the enemy states, it was both quantitatively and qualitatively more productive in the First World War than in the Second' (Morrow, 'Die deutsche Flugzeugindustrie', 77).

<sup>92</sup> A typical example of such speculation is provided by Goebbels, *Tagebücher*, pt. 2, viii. 63 (6 Apr. 1943).

Table I.I.4. Eastern army booty figures (1 January to 31 December 1942)

	Tanks	Guns	Anti-tank cannon	Anti-aircraft guns	Aircraft
Sov. losses as per FHO <sup>(a)</sup>	21,728	13,457	7,204	1,066	1,018
Sov. losses as per QMG	8,036	7,938	3,685	348	371
Difference	13,692	5,519	3,519	718	647

(a) Data from troop reports.

evacuation of the Caucasus, weighed particularly heavily since they were generally irreparable,<sup>93</sup> whereas damage and losses incurred during an advance could often be repaired by the army's own maintenance units.

The fact that this advantage now lay increasingly with the Red Army was sufficient reason for Foreign Armies East to view incoming troop reports of enemy losses with increasing scepticism. Thus, army group reports of Soviet tank losses were reduced by 50 per cent from December 1942, while from January calculations of enemy losses had already been reduced by 20 per cent to allow for inevitable duplication.<sup>94</sup> As can be seen from Table I.I.4, there was nevertheless a substantial discrepancy between the losses reported by Gehlen and the booty calculations of Quartermaster-General Wagner. However questionable the compilation methods may have been, this discrepancy shows what a small proportion of Soviet material actually fell into the hands of the German troops.<sup>95</sup>

The fact that in 1942 the Red Army's material losses, like its human losses, were again several times greater than the corresponding Wehrmacht losses was anything but reassuring for German observers. Rather, it was striking proof that the assumptions still held in the spring of 1942 about the ailing state of the Soviet war economy after the loss of the Donets Basin and other industrial centres had been fundamentally wrong.<sup>96</sup> Otherwise, how could the enemy's huge losses, month after month, have been replaced time and again and many new divisions equipped, so that the Red Army was now superior to the German units on almost every sector of the front (see Chapter 3, Table I.III.1. 'German estimate of relative strength on the eastern front')?

Clearly, the organizational strength of the Stalin regime and the potential of the Soviet industries transferred to the east<sup>97</sup>—and to some extent the enemy's extensive self-sufficiency in raw materials—had been grossly underestimated. On the basis of this insight, which had been slowly maturing since the summer of the

<sup>93</sup> Such concerns were of considerable importance to Hitler, as was already apparent during the battle of Stalingrad; see, e.g., *Hitlers Lagebesprechungen*, 84 (12 Dec. 1942).

<sup>94</sup> See also Wilhelm, 'Die Prognosen der Abteilung Fremde Heere Ost', 24.

<sup>95</sup> Wilhelm (*ibid.*) overlooks the difference in the standpoints from which Foreign Armies East and the quartermaster-general viewed enemy losses: Gehlen's department was concerned with total losses, while the quartermaster-general was interested in the booty acquired by the German army.

<sup>96</sup> See *Germany and the Second World War*, vi. 889–903.

<sup>97</sup> This was acknowledged by Gehlen even in his otherwise whitewashing address to the Military Academy on 5 Jan. 1943; 'Rußlands Wehrkraft, Rüstungsumfang und Wehrmacht an der Jahreswende 1942/1943', BA-MA RH 2/2534, here 23–4.

previous year, the relevant German departments finally arrived, after two unsuccessful campaigns, at a new and at least quantitatively realistic picture of the material basis for Soviet conduct of the war.

Starting from the premiss that the collapse of the German offensive in 1942 provided the Soviet Union with an opportunity to further consolidate its war-economy infrastructure,<sup>98</sup> the Wehrmacht high command's war economy department (WiAmt) assumed in the spring of 1943 (in sharp contrast to the expectations it had expressed a year before) that the Soviet Union's situation in the raw-materials sector would improve continuously. It assumed, quite correctly, that in the current year both coal and oil production, as well as the production of pig iron, aluminium, and other militarily important materials, would increase in practically all industrial urban areas controlled by Moscow. The implication for German conduct of the war was—though not directly stated by Gen. Georg Thomas, chief of the war economy and armaments department—clearly apparent. Even if Germany were again in a position to launch a large-scale offensive on the eastern front in 1943, the Soviet economy, because of its geographical situation and the dispersion of its production facilities, would be less vulnerable than in the first year-and-a-half of the war.

The changed German prognosis of the Soviet Union's capacities in the armaments sector appears even more decisive than the reassessment of the raw-materials industry. In March 1943, in obvious compensation for its striking underestimate of the previous year,<sup>99</sup> the war economy department assumed, for both tanks and aircraft, a threefold increase in monthly production compared with the previous year. It thus arrived at results which, though not correct, were of a reasonable order of magnitude (see Table I.I.5).

**Table I.I.5.** Soviet tank and aircraft production, 1942/3 (unit figures for average monthly production in the first six months of the year)

	Tanks <sup>(a)</sup>		Front-line aircraft <sup>(b)</sup>	
	1st half of 1942	1st half of 1943	1st half of 1942	1st half of 1943
Prognosis of the OKW war economy department <sup>(c)</sup>	500	1,500 (950)	550	1,660
Data from Soviet research	1,837 (ca. 1,013)	2,019 (ca. 1,388)	1,378	2,290

(a) Figures in brackets = number of medium and heavy tanks; (b) excl. transport planes; (c) the relevant memoranda from WiRü- und WiAmt are dated 31 Mar. 1942 and 1 Apr. 1943.

*Source:* BA-MA, RW 19/832 and Wi/ID 138; *Geschichte des zweiten Weltkrieges*, v. 56 and 63, and vi. 428; Simonov, *Voyenno-promyshlennii kompleks SSSR*, 171 ff.; Harrison, *Accounting for War*, 180.

<sup>98</sup> For the Soviet Union the assessment was—not incorrectly—pessimistic only in regard to the food situation; see Gehlen's address to the War Academy on 5 Jan. 1943, BA-MA RH 2/2534, 29 ff., and OKW/WiStab, 'The Food Situation in the USSR 1943/44', 10 July 43, BA-MA RH 2/2349; also, for comparison, Barber and Harrison, *The Soviet Home Front*, 78 and 213 (Table 1).

<sup>99</sup> See *Germany and the Second World War*, vi. 898 ff.

If the figures derived from the changed perception of the Soviet Union are compared with the development of German armaments manufacture, the finding is unambiguous. That is particularly true in the case of tanks, a weapon which Hitler considered decisive for victory in the east. The new construction capacity of 18,000 tanks attributed to the Soviet Union for 1943 by German experts was three times higher than the manufacturing rate on German side. Even if the comparison is confined to the heavy and medium tanks at the centre of Germany's armament efforts, there was a Soviet superiority ratio of 2 to 1.<sup>100</sup> From the German viewpoint, the aircraft production ratio might have seemed more favourable at first sight, since the anticipated Soviet finished manufacture of 25,520 military and transport planes for 1943 corresponded fairly closely to the average German output for 1942 and 1943.<sup>101</sup> However, the balance was only apparent. For one thing, the Soviet Union actually produced considerably more aircraft than the Germans expected (see Table I.I.5. 'Soviet tank and aircraft production, 1942/3'). Moreover, the aircraft manufactured by the Soviet Union were deployed almost exclusively against the German enemy, whereas German production had to cover the total requirement for the defence of 'Fortress Europe' on all its many fronts.

Given such sobering statistics on the Soviet armaments situation, the relevant German departments—already vulnerable to suspicions of defeatism because of their findings—were understandably little inclined to engage in systematic comparisons of output potential that included Anglo-American armaments production. Where a start was made on such comparisons, however,<sup>102</sup> the results were devastating. For the year 1943, mainly because of the American arms build-up already referred to,<sup>103</sup> they showed an Allied (American–British–Soviet) superiority ratio in armaments production of around 9.5 to 1 for tanks and 5.5 to 1 for aircraft. Even if Japanese production was included,<sup>104</sup> the corresponding ratios were still 8.5 to 1 and 3.3 to 1 respectively.<sup>105</sup>

Although such figures were, by their nature, known only to a few experts, and the conclusions drawn from them were in any case discussed only in a small circle, one may rightly assume that concern about the danger represented by the American

<sup>100</sup> Undated WiAmt 'Monatliche Ausbringung', early 1943, BA-MA RW 19/832.

<sup>101</sup> Most of these were assumed to be fighter and ground-attack aircraft; see *ibid.*

<sup>102</sup> The only known *all-inclusive* review of that kind by the war economy department dates, significantly, only from the last months of the war, and the columns intended for German production figures were left unfilled, which can hardly be considered coincidental. It can therefore be adduced for assessing German self-estimates in the spring of 1943 only with some reservations; see BA-MA RW 19/832.

<sup>103</sup> On the general dimensions, see Smith, *The Army and Economic Mobilization*, 6–7, Tables 2 and 3 (US War Program for World War II, 1 July 1940 to 31 Aug. 1945). On American armaments production in 1943 specifically, see Coakley and Leighton, *Global Logistics and Strategy 1943–1945*, 115 ff.

<sup>104</sup> Details in Cohen, *Japan's Economy*, here 208–12 and 237 (Table 31).

<sup>105</sup> According to WiAmt 'Monatliche Ausbringung', Spring 1943, BA-MA RW 19/832, Allied aircraft production in 1943 was estimated (retrospectively) at around 140,000 planes, as against a German–Japanese output of 42,000 (similar figures in Ránki, *Economics of the Second World War*, 175, Table 40). For armoured vehicles, the corresponding figures were 57,300 Allied tanks to 6,723 German and Japanese; if the production of anti-tank assault guns, which was particularly significant in Germany, is included, the Allied superiority ratio in armoured vehicle construction is reduced to approximately 6 to 1.

armaments potential was felt very strongly by the German military leadership and by Hitler himself.<sup>106</sup> All the more so as the United States was strikingly demonstrating its willingness and ability to put its material superiority into operational effect. This was apparent not only from the snowballing American air raids on German cities and in support of the Allied landing in North Africa, but also from the growth of American armaments aid to the Soviet Union.<sup>107</sup>

While the initially vague knowledge of the 'lend-lease' arms deliveries played no significant part in German estimates of Soviet resistance potential in the first half of 1942, in this respect too the situation was entirely different a year later. The material consequences of the failure of Germany's 1942 summer offensive to block the supply route leading from the Persian Gulf to the Soviet Union via Iran were now factored in—unspectacularly but with remarkable accuracy. By December 1942 the competent departments—the OKW's war economy department and the Foreign Armies South-East group in the Army General Staff—had concluded that the estimated volume of 6 million tonnes delivered by that route in 1942 would probably double in the coming year, and that a further increase in the medium term could not be ruled out.<sup>108</sup> That estimate corresponded fairly closely to the volume of material which the western Allies had promised to deliver to the Soviet Union via the Gulf route from July 1942 to June 1943 under the terms of the Second Protocol.<sup>109</sup> But the German estimates hold good even with respect to the volume of material actually delivered in 1942 and 1943,<sup>110</sup> despite the fact that the further significant increase in deliveries following the entry into force of the Third Protocol was not foreseeable at the beginning of the year.<sup>111</sup>

The German assessment of the amounts of Allied war materials transported to the Soviet Union via the northern route (Murmansk–Arkhangelsk), and via

<sup>106</sup> See e.g. statements on the subject by Rommel (quoted in Krumpelt, *Das Material*, 221) and Tresckos (Heusinger, *Befehl im Widerstreit*, 215), as well as Hitler's own comment, which can be understood only in this connection: 'If there is any winner in this war, it will only be America' (Hitler, *Monologe*, 199, 15 Jan. 1942).

<sup>107</sup> The total value of such aid rose from \$1.38 billion in 1942 to \$2.44 billion in 1943 and \$4.07 billion in 1944; see Schlauch, *Rüstungshilfe*, 149, Table 3.

<sup>108</sup> FHO briefing notes for 7 Jan. 1943 on the WiAmt position *re* trend in material support for the Soviet Union by the Anglo-American powers, 3 Dec. 1942, BA-MA RH 2/2092; GenStdH/Gruppe Fremde Heere Südost, study *re* predicted American and British deliveries of war material to the USSR via the Persian Gulf in the first quarter of 1943, 20 Dec. 1942, BA-MA RH 2/1522.

<sup>109</sup> Goods worth \$3 billion were promised, two-thirds consisting of military equipment, with a total volume of 7 million short tons (= 6.35 million tonnes). The volume to be transported from the Anglo-American side was 4.4 short tons (= 3.99 million tonnes), a quarter of which via the southern route. See Butler, *Grand Strategy*, iii. 2, 587; Jones, *The Roads to Russia*, 118–19.

<sup>110</sup> Thus, in December 1942 the Foreign Armies South-East group predicted total deliveries of 276,000 tonnes via the southern route for the first quarter of 1943; the amount actually delivered was around 262,000 tonnes (= 258,000 long tons). See GenStdH/Gruppe Fremde Heere Südost, study *re* predicted American and British deliveries of war material to the USSR via the Persian Gulf in the first quarter of 1943, 20 Dec. 1942, BA-MA RH 2/1522; Coakley and Leighton, *Global Logistics and Strategy 1940–1943*, 591, Table 16). For a detailed presentation of deliveries via the southern route, see Motter, *The Persian Corridor*, here esp. Appendix A, 481–9 (Tables 1–4).

<sup>111</sup> See Schlauch, *Rüstungshilfe*, 153; Coakley and Leighton, *Global Logistics and Strategy 1940–1943*, 731; id., *Global Logistics and Strategy 1943–1945*, 847.

Vladivostok and the ports on the Sea of Okhotsk, was also in line with the trend.<sup>112</sup> Even the rapidly increasing importance of the far-eastern route for the development of the lend-lease programme was essentially correctly predicted by the experts in the war economy department.<sup>113</sup> On the other hand, the assumption that deliveries via Arkhangelsk and Murmansk would increase substantially in the medium term was wrong: in view of the heavy losses suffered in the convoy battles of 1942, the western Allies decided to call a complete halt to transport via the Barents Sea as from March 1943.<sup>114</sup>

Finally, the German side formed no correct ideas about the kind of material that was delivered to the Soviet enemy under the lend-lease programme and overestimated the proportion of heavy weaponry. In any event, the war economy department's assumption at the turn of 1942–3 that 'deliveries of tanks, guns, and aircraft are equivalent to some 20 to 30 per cent of the Soviet Union's own production' is quite out of the question.<sup>115</sup> On the other hand, the German experts seem to have continuously underestimated the importance of lend-lease material less noticeable in front-line deployment—such as trucks and machine tools, special steels and explosives, military boots and tinned food—in relieving the burden on the Soviet war economy.<sup>116</sup>

If these figures are examined in relation to the human and material situation of Germany in the months following Stalingrad, the picture is unequivocal in every respect. Its three defining characteristics are as follows:

- By the spring of 1943 the strategic balance determined by the reciprocal relationship of the belligerents' losses and resources had—largely independently of the Stalingrad events—shifted to a grotesque extent to Germany's disadvantage. The discrepancy in the availability of human resources, raw materials, and military equipment that had developed between Germany and the Soviet Union—and reached its full extent only at the global level—was now so great in purely *quantitative* terms that it was largely unaffected by the persisting, though relatively moderate, *qualitative* imbalances in troop training and motivation, and the technology and operation of weapon systems.<sup>117</sup>

<sup>112</sup> FHO briefing notes for 7 Jan. 1943 on the WiAmt position *re* trend in material support for the Soviet Union by the Anglo-American powers, 3 Dec. 1942, BA-MA RH 2/2092.

<sup>113</sup> In this case the assumption was that deliveries would increase to a maximum of 2 million tons per year; the actual amount delivered was 2.39 million long tons (= 2.42 million tonnes). See Schlauch, *Rüstungshilfe*, 153; Coakley and Leighton, *Global Logistics and Strategy 1940–1943*, 731; id., *Global Logistic and Strategy 1943–1945*, 847; FHO briefing notes for 7 Jan. 1943 on the WiAmt position *re* trend in material support for the Soviet Union by the Anglo-American powers, 3 Dec. 1942, BA-MA RH 2/2092.

<sup>114</sup> On the background to this, see Roskill, *The War at Sea*, ii. 400–1; Schofield, *The Arctic Convoys*, 100–1.

<sup>115</sup> Deliveries of such material did not amount to even 10% of the corresponding Soviet production in the period 1941 to 1944; see Jones, *The Roads to Russia*, 229.

<sup>116</sup> For a survey of the categories of goods delivered to the Soviet Union, see Schlauch, *Rüstungshilfe*, 154–5 (Tables 10 and 11).

<sup>117</sup> Possession of a wealth of resources is not, of course, in itself a decisive factor for the outcome of a war. It becomes so only in conjunction with a multitude of other less quantifiable conditions, including such things as technical know-how, proper economic management mechanisms, a well-trained and

- Despite the language current in the ruling circles of the Nazi state, which countered the increasingly obvious quantitative inferiority of the Wehrmacht by all-embracing references to the alleged qualitative superiority of ‘the German soldier’ and his equipment, there can be no doubt that the departments responsible for strategic analysis at the level of the top leadership were fully aware, or at least suspected, the extent of the disaster. For the first time in the war, there was now a near realistic appreciation—furthered psychologically, though not imposed, by the shock of the Stalingrad defeat—of the demographic, economic, administrative, and military capacity of the Soviet adversary.
- While the policy of gearing society and the economy rigidly to the demands of ‘total war’, which grew out of the realization of Germany’s own desperate situation, did mobilize considerable reserves, especially in the area of armament technology, it nevertheless failed in its actual aim of preserving Germany’s chance of ‘final victory’. While that failure may have been practically inevitable in view of a distribution of human and raw-material resources that was extremely unfavourable to Germany and its allies, it was by no means a process determined by unavoidable external circumstances. Rather, the internal and external situation facing the National Socialist system at the beginning of 1943 was in all major respects the logical consequence of its own policy. And that policy increasingly resembled the efforts of a man struggling to lift himself by his own bootstraps out of a swamp into which he had jumped of his own free will and in full knowledge of its depth.

### 3. ‘FORTRESS EUROPE’ AND THE PROBLEM OF THE SECOND FRONT

Turning from the structural framework conditions of Germany’s strategic situation to its situational characteristics, we are struck by the fact that, after the repeated failure of its military efforts in the east, Germany had fallen hopelessly behind not only with respect to mobilization of its human and material resources. It might appear, upon superficial examination, that Field Marshal Erich von Manstein’s brilliant successes in March 1943 had restored the *status quo ante* at least on the eastern front. Indeed, by the beginning of the muddy season the front line, with a few exceptions such as the Soviet breakthrough at Leningrad, again corresponded by and large to that of the spring of 1942. Nevertheless, the situation was now totally different, and the responsible experts in the Army General Staff were fully

well-motivated work force, a well-developed logistics system, and, not least of all, military planning that deploys human and materials resources rationally and purposefully. The argument in the present contribution that the distribution of resources was decisive for the outcome of the war is based on the premiss, which will not be discussed here in more detail, that in none of those areas were Germany’s adversaries so inferior as to compensate for their enormous advantage in human and material resources.

aware of this. The decisive difference with regard to continuation of the war, as compared with the previous year, was that Hitler's fundamental strategic calculation until the summer of 1942, that is, that the war in the east would be brought to a conclusion before the feared American armament potential had fully materialized,<sup>118</sup> had now definitely proved wrong. Although the European land war on multiple fronts—which Hitler, remembering the First World War, wanted to avoid at all costs—had not yet even begun, the towering Anglo-American superiority in armament and transport capacity was already everywhere apparent. It was shown by the expanding lend-lease programme and the practically unhindered increase in Allied air raids on German cities, as well as by the collapse of the German U-boat campaign and the capitulation of the German–Italian forces in North Africa, an army no smaller than that enclosed at Stalingrad. The two last-mentioned events in particular, both of which occurred in May, had major psychological and strategic consequences. The termination of the U-boat campaign in the previous year's only successful theatre of war<sup>119</sup> signalled the realization that the tonnage race between German sinking successes and Allied construction capacities, in which such great hopes had been placed, was lost. That, however, removed the last great barrier to the establishment of Anglo-American bases for the liberation of continental Europe. At the same time, as the OKW Operations Staff apprehended in a memorandum dated 10 December 1942, the Allied victory in North Africa made the Mediterranean an ideal starting position for an 'actual attack on the southern flank of the European land mass'.<sup>120</sup> It gave the adversary an abundance of strategic options which the relevant German departments were no longer able to calculate.

Any historian looking today at the situation analyses made by the Naval War Staff, the OKW Operations Staff, Foreign Armies West, and Commander-in-Chief South-West in the first half of 1943<sup>121</sup> finds his head spinning. Norway and Jutland are treated as *possible* targets for a major Allied landing, on a par with the Channel coast, the French Atlantic coast, the Iberian peninsula, southern France, Sardinia and Sicily, the Balkans (where the Romanian oilfields at Ploieşti were seen as particularly threatened), and Greece; here the Peloponnese and the offshore islands, as well as Crete and the Dodecanese, were seen as the main target. Furthermore, active military intervention by Turkey on Britain's side was no longer excluded.<sup>122</sup> All these options, of which an invasion of Greece was taken most

<sup>121</sup> See, above all, C-in-C South-West, 30 Jan. 1943, BA-MA RH 2/680; Naval War Staff 3rd Division, 20 Feb. 1943, BA-MA RM 7/260; Foreign Armies West Dept., Enemy Situation Report No. 7/43, 1 Apr. 1943, BA-MA RM 2/1481; OKW Operations Staff, 10 June 1943, BA-MA RH 2/502, as well as the Naval War Staff's situation reviews of 20 Feb. 1943 and 20 May 1943, both repr. in Salewski, *Die deutsche Seekriegsleitung*, iii, docs. 16 and 17, 338–56. See also the OKW Operations Staff's annexed sketch map (Map I.I.1. Intelligence on enemy landing intentions in January 1943).

<sup>122</sup> WFSt/Op., Study of Possible Turkish–Allied Operations in the Balkans, 4 Feb. 1943, BA-MA RH 2/716. The OKW's concern led in the weeks following to German–Bulgarian consultations on

seriously by Hitler and that of Italy by the OKW Operations Staff,<sup>123</sup> were not some kind of abstract mental exercise. They were concrete expectations that were planned for realistically in the coming months, that is, until the summer of 1943. What is more, some of the relevant departments argued that Allied shipping capacity was quite sufficient for the enemy to carry out simultaneous landings in different peripheral areas of German-ruled territory, for example on the Atlantic coast and in the Mediterranean.<sup>124</sup> Here too, the disillusionment is unmistakable. The hopes nurtured in the first months after Pearl Harbor that war in the Pacific would lead to a fragmentation of American military capacity, restrict the United States' operational possibilities in Europe at least temporarily, and thus give the German military leadership time to build up adequate defence resources<sup>125</sup>—all these hopes were shattered once Germany understood, somewhat belatedly, that the battle of Midway in June 1942 had marked the turning point in the war in the Pacific.<sup>126</sup>

The German leadership was thus faced with a strategic situation in which, fifteen months before the start of the Normandy invasion, the European land war on multiple fronts was already a reality of sorts—a reality in the sense of a threat to 'Fortress Europe' that was perceived as directly imminent and could no longer be averted by any means at Germany's disposal. The threat weighed all the more heavily as its location could not be determined, so that defensive preparations needed to be made along more or less the whole perimeter of the vast territory under German rule. The need to do so was compounded by the geographical conditions of a European continent that stretched from Norway to Italy and Greece, which made the swift redeployment of large units in case of need extremely difficult. In those circumstances, the advantage which Germany had been hoping for—that of being able to conserve its strength by defending along an 'inner line', unlike its adversaries, who had to contend with transport over long distances<sup>127</sup>—was out of the question. It was therefore entirely logical that Hitler sought to reinforce the least accessible of the threatened border areas of his empire. His room

possibilities for joint preventive measures; WFSt/Op., briefing notes, 1 Mar. 1943, BA-MA RH 2/716. In this connection, see also Hoppe, *Bulgarien*, 143–4.

Jodl), BA-MA RM 7/260.

<sup>124</sup> This was emphasized, for example, by Foreign Armies West in Enemy Situation Report No. 7/43, 9, BA-MA RH 2/1481.

<sup>125</sup> See *Germany and the Second World War*, vi. 116–24.

<sup>126</sup> Foreign Armies West, situation report on the Pacific region, 10 Jan. 1943, BA-MA RH 2/754, and briefing to ObdM on 'the Indo-Pacific area', 2 Mar. 1943, BA-MA RM 7/254. See also *Germany and the Second World War*, vi. 182–3, and Martin, *Deutschland und Japan*, 144–51.

<sup>127</sup> The OKW Operations Staff had already emphasized that advantage in its memorandum of 14 December 1941 on the significance of the entry into the war of the United States and Japan, BA-MA RH 2/1521, 18–19. In his address to Reichs- and Gauleiters on 8 May 1943, Hitler presented that hope as a factor decisive for the outcome of the war: 'He who possesses the organizational strength to solve the problems of movement in this war will be the winner. In that respect we are superior to our adversary: he has to attack on the outer line, while we defend on the inner line' (Goebbels, *Tagebücher*, pt. 2, viii. 239).

for manoeuvre was minimal, however, as can be seen from the tug of war over the release of a single armoured division for deployment in the Peloponnese.<sup>128</sup>

Rapid constitution of an adequately extended and deeply fortified defensive front was already ruled out by the severe limits on the amount of forces that could be withdrawn from the east. According to a briefing by Foreign Armies East in April 1943, the Red Army was engaged in preparations for a renewed large-scale offensive.<sup>129</sup> As to the direction of the offensive, Gehlen's department was not prepared to commit itself: what seemed most likely was an attack on Army Group South in the direction of the Dnieper, so as to create the conditions for cutting the army group off and pushing on towards the Balkans. Significantly, the Army General Staff already considered that Stalin was deliberately leaving the decision on the timing and direction of his offensive open, so as to be able to coordinate it with potential Anglo-American plans for an offensive in southern, northern, or western Europe.<sup>130</sup>

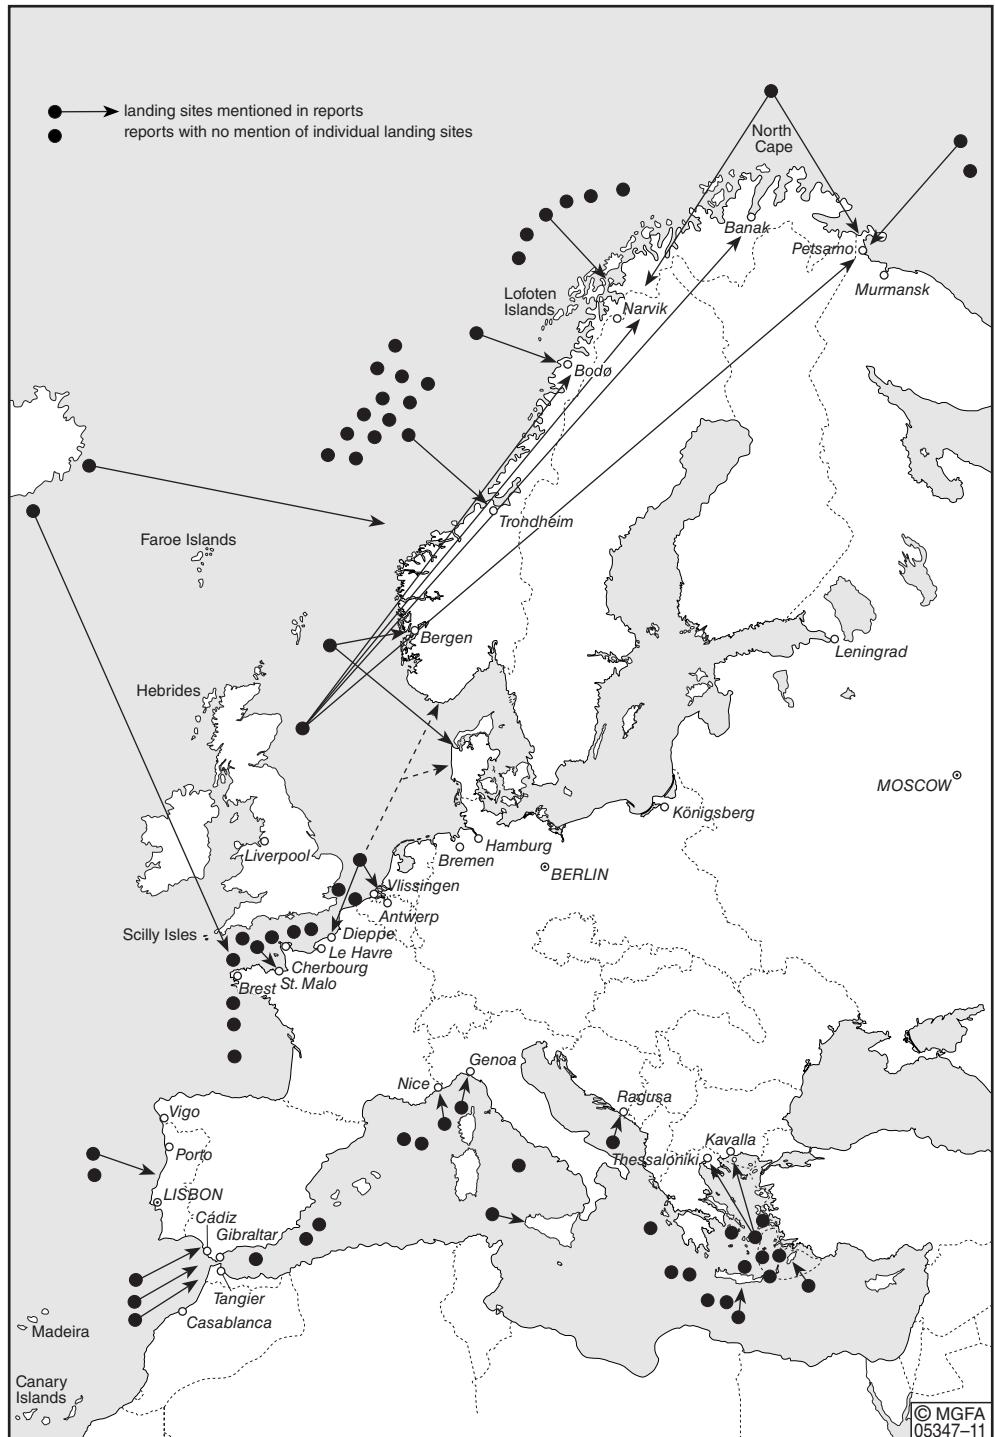

The possibility of such a constellation points to a circumstance decisive for the further development of the war. In itself, Germany's situation on the eastern front already bore all the hallmarks of a serious crisis. But the same applied to the other theatres of operations, to the Mediterranean as well to the sea and air war, and to German alliance policy, the war economy, 'manpower management', and many other sectors directly relevant to conduct of the war. The German leadership was thus faced with a multitude of parallel strategic, operational, economic, and political crises. Worse still, all these crisis areas showed an increasing tendency to interconnect and aggravate each other. Should the Allies manage to coordinate their military operations in eastern Europe with those in the west or south of the continent, this would inevitably further accentuate Germany's already chronic lack of resources, which did not admit of simultaneous defence in several theatres of war.

Furthermore, the interconnection between the various crisis areas, which had been perceptible since the end of 1941 but was now accelerating by leaps and bounds, placed greater demands on the strategic conduct of the war. It was less than ever possible to solve problems in isolation and overcome operational crises in individual front sectors from within. In view of the Allies' increasingly concerted war efforts and Germany's worsening material and human resources situation, it was to be assumed that even subordinate operational decisions (on, for example, the deployment or transfer of a single troop contingent) could have serious strategic consequences. However, a leadership which—rightly or wrongly—had not yet wholly abandoned hope of playing a part in determining the further course of the war could cope with the resulting heightened pressure on decision-making only if it

<sup>128</sup> Hitlers Lagebesprechungen, 205 ff. (19 May. 1943). The problem was very similar in Norway, where Hitler wanted to transfer a mountain division from the east to deter the Allies from attempting an invasion and force Sweden to maintain its policy of neutrality; see KTB OKW, iii. 199 (10 Mar. 1943) and 207 (13 Mar. 1943).

managed to engage in *overall* strategic analysis and planning commensurate with the complexity of the threat.

After Stalingrad, however, the political and military leadership of the Third Reich was less than ever in a position to do so. The segmentation of the top German leadership had become so advanced that an authority with overall strategic responsibility existed only in the person of the Führer. Since the crisis in September of the previous year, the OKW Operations Staff, to which that function should most appropriately have fallen, had degenerated to become a mere work force of the dictator, partly because of the persistent belief in the Führer on the part of its chief, Gen. Alfred Jodl, and partly because of Gen. Kurt Zeitzler's ambition to represent the eastern theatre of operations independently.<sup>131</sup> This was compounded by the fact that the already difficult personal relations between Jodl and Zeitzler, who was chief of the Army General Staff, deteriorated further in the course of 1943. In those circumstances it was out of the question for the two chiefs of staff to sit down together to discuss the overall situation, coordinate the requirements of the individual theatres of operations, and resolve any other persisting tensions. Even during the daily conferences at Führer headquarters, they took care to avoid each other.<sup>132</sup>

Thus it was no accident that the OKW Operations Staff memorandum of 10 December 1942, to which we have already referred, remained the last German situation analysis covering all theatres of the war. It was also the last starting point for an overall strategic concept for 1943. That document, drawn up at the height of the Stalingrad crisis and a few months before the German collapse in North Africa and the Atlantic, reflects very clearly the awareness that Germany was henceforth strategically on the defensive, as well as the conviction that 'the war cannot be brought to a victorious conclusion only by maintaining the gains made so far'. Yet what the OKW Operations Staff had to offer as the key to victory was simply more of the same: continuation of the U-boat campaign and a new large-scale offensive in the east. The main goal of the latter, in addition to the repeated aim of capturing Leningrad, should be to 'finally cut off the Soviets from their economic energy sources in the Caucasus' so as to compel the British and Americans to commit stronger forces in the Middle East and strike at them there.<sup>133</sup> How this calculation, which had determined the failed German strategy of 1942, was to be put into effect in the considerably worsened conditions of the new year—to that question even the OKW Operations Staff gave no answer.

In its situation analyses of December 1942 to June 1943, the Naval War Staff proceeded from an opposite assessment of the eastern war situation.<sup>134</sup> In its view, experience in 1941 and 1942 showed clearly that belief in the defeat of Russia was—as the chief of the Naval War Staff put it in May—'utopian'.<sup>135</sup> A strategic

<sup>131</sup> See *Germany and the Second World War*, vi. 1048–59.

<sup>132</sup> See Warlimont, *Im Hauptquartier*, 272 ff.; Schmundt, *Tätigkeitsbericht*, 97–8 (27 Sept. 1943); Meyer, *Adolf Heusinger*, 225 and 859 (n. 244).

<sup>133</sup> Quoted in Förster, 'Strategische Überlegungen', 104–5.

<sup>134</sup> Repr. in Salewski, *Die deutsche Seekriegsleitung*, iii. 313–63, doc. 14–18.

<sup>135</sup> Quoted *ibid.* 347, n. 5.

rethink was necessary, that is, a change to defensive conduct of the war on all land, air, and sea fronts. A strength-saving defensive strategy should be adopted in the east, and all the efforts of both the navy and the Luftwaffe should be concentrated on the tonnage war, so as to lastingly demonstrate to the Anglo-American naval powers the hopelessness of their invasion plans and thus force them to make peace.

Despite all the Naval War Staff's efforts at clear-sighted assessment of the situation, it is quite obvious that their proposals too did not constitute a royal road out of the dilemma. Not only do they seem to have overestimated the potential effective radius of German weapons in the tonnage war, given the decisive improvements in Allied radar technology, but the situation on the eastern front was also seen far too simplistically. A withdrawal on the eastern front on a scale large enough to release a significant amount of forces would have been possible only at the cost of considerable strategic disadvantages. In the north, for example, a pullback from the area around Leningrad would have significantly accelerated Finland's withdrawal from the war, which had been threatening since the beginning of 1943.<sup>136</sup> It would also have endangered German naval command of the Baltic, the most important U-boat training area. In the south, the German conquerors would have lost the Donets Basin, the very heartland of Soviet heavy industry, which the German leadership considered indispensable for its own conduct of the war.<sup>137</sup>

Although its responsibility was limited to the war in the east, the Army General Staff was also giving thought to Germany's overall strategic position. Like Hitler and the OKW Operations Staff, the chief of the OKH operations division, Lt.-Gen. Adolf Heusinger, maintained that 'Fortress Europe', under attack on all sides, must be held at all costs, and its political erosion, which was beginning to be apparent in Italy and Hungary above all, must be prevented by all possible means. He differed from the planners at Führer headquarters, however, in his comparatively more flexible view of the defensive possibilities. While it was important to adjust the borders of the defence area to the forces available and thus avoid the risk of overextension, Germany should not allow itself to be forced into defending an area that was much too small. Secondly, it was decisive to establish an operational 'central reserve', with the help of which sectors of the front under threat of enemy breakthrough could be stabilized rapidly at any time. Although Heusinger no longer believed in final military victory, he remained confident that flexible defence would enable Germany to maintain for the foreseeable future an area of rule stretching in the west and north to the Atlantic coast, in the east more or less to the Riga–Kiev–Crimea line, and in the south roughly to Thessaloníki, Tirana, and Florence, the Apennines, and the south coast of France.<sup>138</sup>

<sup>136</sup> For more on this, see Chapter II.2.

<sup>137</sup> See comment by OKW/Chef WStb. Ausl., 31 Mar. 1943, BA-MA RH 2/2344. On the expected and actual importance of the Donets area for German conduct of the war, see also the memoranda from Chef WiRü, 13 Feb. 1941, *re* effects of an operation in the east on the military economy, and raw-materials stocktaking for the Donets area as at 24 Sept. 1943, both repr. as app. 1 and 78 to the final report by Economic Staff East in *Die deutsche Wirtschaftspolitik*, 387–401 and 581–4.

<sup>138</sup> See Heusinger, *Befehl im Widerstreit*, 247, and Meyer, *Adolf Heusinger*, 222–3.

As for Hitler himself, he could warm neither to the idea of flexible defence nor to the proposals of the Naval War Staff. Nevertheless, from early 1943—and not, as generally assumed, only after the collapse of Operation CITADEL—the dictator began to take a more relative view of the originally predominant importance of the eastern front. Since the fall of Tunis, in particular, his eyes were turned no less to the west than to the east. In addition to an Allied landing in Greece, Hitler feared above all a change of course by Hungary and Italy. Even before the launch of Operation CITADEL, the Führer had already made up his mind to transfer considerable forces from the east (the talk was of eight armoured and four infantry divisions) in order to stabilize the situation in Italy. As he said in May with reference to possible developments in that country, he was glad he had not yet begun the offensive in the east.<sup>139</sup> Quite clearly, Operation CITADEL, then in preparation, did not have for Hitler the character of a strategically decisive battle which later historiography was to ascribe to it.<sup>140</sup> In those critical early months of 1943, for the first time since the beginning of the war against the Soviet Union, defence in the west, rather than the offensive in the east, gained priority in the dictator's strategic thinking. Preventing the formation of a second front in Europe was the order of the day, he declared to his military advisers on 15 May 1943. Europe must be defended 'in the forward area' and 'no front must arise on the borders of the Reich'.<sup>141</sup> It is characteristic of Hitler's thinking on the (provisional) focus of his military efforts that he went no further than this vague negative objective. But it is no less characteristic of the Führer's military advisers that apparently neither at that meeting on 15 May nor on any other occasion did anyone ask the dictator how the defensive strategy thus formulated was to be realistically implemented with the forces available—not to mention how on that basis 'final victory', still officially taken as self-evident, was to be achieved. Nowhere, it seems, was any further thought given to the efforts required simply to maintain the status quo. Strategic helplessness, as well as the physical and psychological wear and tear of years of unrelenting tension and increasingly frustrating staff work, was everywhere apparent. Baron Ernst von Weizsäcker, appointed German ambassador to the Vatican, described the atmosphere of those weeks in May 1943 as 'a kind of military, political, and mental exhaustion'.<sup>142</sup> And Gen. Georg von Sodenstern, then still chief of the general staff of Army Group South, remarked that 'nowhere was any operational sense of direction apparent, not even the will for strategic reformulation of the overall situation'.<sup>143</sup> As early as April,

<sup>139</sup> Private letter from Capt. Junge to Grand Admiral Dönitz, 15 May 1943, on the content of that day's conference at Führer headquarters, BA-MA RM 7/260. See also Hitler's discussion with Keitel on 19 May 1943, *Hitlers Lagebesprechungen*, 205–12.

<sup>140</sup> For details, see Chapter III.1.

<sup>141</sup> Quoted in the letter from Capt. Junge to Grand Admiral Dönitz, 15 May 1943, on the content of that day's Führer headquarters conference, BA-MA RM 7/260.

<sup>142</sup> Weizsäcker, *Die Weizsäcker-Papiere*, 339 (30 May 1943).

<sup>143</sup> Thus in his manuscript, completed in June 1943, entitled 'Der Feldherr Adolf Hitler' [Adolf Hitler as Commander], BA-MA N 594/9, 76.

Heusinger had also noted that Zeitzler was beginning to tire and that Jodl too had 'broken down'.<sup>144</sup>

Since there is not the slightest basis for the illogical assumption that Hitler sought to keep his strategic ideas secret from his own military advisers where possible, the only reasonable conclusion is that Hitler was now literally finished as 'commander'. At least on one occasion the Führer, otherwise so careful in his choice of words, gave direct expression to his strategic helplessness. On 8 July, at the height of the Kursk offensive, he admitted to Grand Admiral Dönitz: 'You say it's just muddling through. I'm muddling through from one month to the next.'<sup>145</sup> Here we see a decisive difference compared with the situation in the previous year. Whereas behind the summer campaign of 1942 there lay an overall, albeit highly questionable, concept for a victorious conclusion of the war, after the failure of that campaign the German leadership was no longer able to cope with the constantly growing pressure of problems at strategic level.<sup>146</sup> The impressive operational dimensions of the battles for Kharkov and Kursk in March and July should not distract us from the absence of a coherent grand strategy.

All the more so as—from a historical standpoint at least—it is hard to see in what such a strategy could still have consisted, given that all the strategic expectations of the German leadership since the beginning of the war against the Soviet Union had failed to materialize: the Soviet Union had not collapsed under the assault of the Wehrmacht, Britain had not given in, and the United States had not been prevented from entering the war in Europe. The industrial and raw-materials centres considered indispensable for a long war had either not been conquered or had not been exploited as hoped. It had not proved possible to halt transatlantic shipping connections. Nor had Germany managed to establish North Africa as a strategic shield, or even to protect the territory of the Reich itself against the effects of the Allied air war. Not only had the threat of a second land front in Europe not been averted: it had increased acutely. At the same time, the war in the Pacific had taken a turn that vitiated all hopes of waging a transcontinental war in conjunction with Japan. Since the great crisis of September 1942, when Hitler had finally realized that his war was unwinnable,<sup>147</sup> there had been a whole series of defeats and not a single encouraging event of strategic significance.

Although the sources give no one direct access to the dictator's innermost thoughts, it seems highly unlikely that in the spring of 1943 he still seriously harboured illusions as to the expected outcome of the war. There might have been grounds for assuming the existence of such illusions if Hitler had been unable to form a realistic picture of the overall situation because of wrong information from

<sup>144</sup> Quoted in Meyer, *Adolf Heusinger*, 221. The remark concerning Jodl apparently refers to a cure he had undertaken at Bad Gastein.

<sup>145</sup> KTB Skl, pt. A, xlvi, 635-A. I am grateful to my colleague, Werner Rahn, for drawing my attention to this long-unnoticed quotation, which was significantly not included in the published situation reports of the navy's C-in-C (here 520).

<sup>146</sup> For a similar argument, though based on partly different grounds, see Percy E. Schramm, *Hitler als militärischer Führer*, esp. 57 ff., 67 ff.

<sup>147</sup> See *Germany and the Second World War*, vi. 1048–53.

his support staff or an inability to make strategic connections. But precisely that is out of the question. On the contrary, however inadequate he may have been as supreme military commander, Hitler had repeatedly displayed an instinctive grasp of strategic opportunities and risks. There is no reason whatever to deny him that faculty at the very moment when all the available information showed, more unambiguously than ever, that Germany's position was hopeless.<sup>148</sup>

At first sight, this picture of a supreme commander lacking a strategic solution and conscious of the hopelessness of his situation seems hardly to match that of Hitler the ideologist. On the one hand, we see an inclination, quite understandable in the circumstances we have described, to register and now even talk about the possibility of German defeat and its disastrous consequences.<sup>149</sup> On the other, the dictator's various orders of the day, proclamations, addresses, and discussions in the months between Stalingrad and Kursk still show a degree of strategic optimism. While much of it, especially in declarations intended for a wide public, may all too obviously have been whistling in the dark,<sup>150</sup> we already find the 'fixed ideas' which were to serve right into the final phase of war as the set pieces of an increasingly bizarre 'final victory' propaganda: the already mentioned trust in the strategic advantage of the 'inner line';<sup>151</sup> hope in 'the existence of unknown, unique weapons';<sup>152</sup> expectation of the ultimately inevitable collapse of the Soviet Union as a result of manpower and food crises;<sup>153</sup> and, not least of all, speculation about increasing disagreement within the enemy coalition that would eventually split it apart.<sup>154</sup>

Whether Hitler really believed he could still win the war thanks to circumstances such as these cannot be determined with absolute certainty, but it seems unlikely.<sup>155</sup>

<sup>148</sup> Even for the months following Stalingrad there is no lack of testimony to Hitler's sober eye for strategic developments. As early as January, for example, he calculated that North Africa could not be held (see Goebbels, *Tagebücher*, pt. 2, vii. 176, 23 Jan. 1943; also Below, *Als Hitlers Adjutant*, 334). His assessments of Allied operational possibilities in the Mediterranean area and the risk of Italian withdrawal from the war were also thoroughly realistic; see private letter from Capt. Junge to Grand Admiral Dönitz, 15 May 1943, on the content of that day's Führer headquarters conference, BA-MA RM 7/260. See, in similar vein, Hitler's discussion with Keitel on 19 May 1943, *Hitlers Lagebesprechungen*, 205–12. Percy E. Schramm has also rightly warned that 'it would be a mistake to belittle Hitler as a strategist' (*Hitler als militärischer Führer*, 57).

<sup>149</sup> Expressed in particularly striking terms to Antonescu on 10 Jan. 1943 (*Staatsmänner und Diplomaten*, ii. 202–3). See also the evocations of possible defeat which now cropped up regularly in Hitler's public utterances, e.g. in his order of the day at the beginning of 1943 (Domarus, *Hitler. Reden und Proklamationen*, 1970). In his proclamation of 30 January (*ibid.*, 1978) Goebbels also directed official press propaganda against the hitherto propagated dogma that the war could not be lost; see *Wollt Ihr den totalen Krieg?*, 317–18, and Goebbels, *Tagebücher*, pt. 2, vii. 177–8 (23 Jan. 1943).

<sup>150</sup> See Hitler's routine expressions of confidence, e.g. in his order of the day, 1 Jan. 1943 (Domarus, *Hitler. Reden und Proklamationen*, 1970), and to Goebbels, *Tagebücher*, pt. 2, ii. 171.

<sup>151</sup> See Goebbels, *Tagebücher*, pt. 2, viii. 239 (8 May 1943).

<sup>152</sup> Hitler's proclamation to the troops of Army Group South and Air Fleet 3, 19 Feb. 1943, quoted in Domarus, *Hitler. Reden und Proklamationen*, 1989.

<sup>153</sup> Goebbels, *Tagebücher*, pt. 2, vii. 593 (20 Mar. 1943).

<sup>154</sup> *ibid.* 173–4 (23 Jan. 1943).

<sup>155</sup> If, for example, Hitler had seriously speculated on taking advantage of growing discord among the Allies to achieve a favourable exit from the war for Germany, then nothing would have been of greater concern to him than sowing further discord by putting out feelers for a separate peace. In fact, Hitler strictly rejected any such contacts. (see also Chapter II.3).

Not only because such an assumption implies a strategic foolishness on the part of the dictator which is implausible in the light of his earlier conduct,<sup>156</sup> but also because it ignores the specific context of Hitler's speech behaviour. Only relatively few of his statements from those years can have been uninhibited expressions of opinion or personal confessions.<sup>157</sup> Rather he spoke as a rule—whether in a larger or smaller circle, or in a dialogue—in full consciousness of his position as solely responsible leader. In his understanding, however, to admit to not knowing what to do—or, worse still, to acknowledge that a situation was hopeless—was wholly incompatible with that function. 'What a disastrous impression it would make,' he said, comparing his own role significantly with that of a military superior, 'if a commanding officer told his troops, in a difficult situation, that he himself did not know what to do now.'<sup>158</sup> Given this conception of his own role, the strategic optimism displayed by Hitler even after Stalingrad can confidently be seen as an instrument for strengthening belief in the possibility of final victory, which was crumbling on all sides, and for preserving the most important psychological precondition<sup>159</sup> for resolute continuation of the war.<sup>160</sup> In that context, invocation of the disastrous consequences of a German defeat served primarily to justify the absolute necessity of continuing the war.<sup>161</sup>

<sup>156</sup> The fact that Hitler, irrespective of his ideologically determined policy objectives, was a man with a remarkable instinct for strategy, was proven at an early stage, especially by Hillgruber, *Hitlers Strategie*. It has since also become clear that the dictator's particular grasp of strategic realities, which distinguished him from the mass of his military retinue, was grounded in a world-view that was in many respects strikingly modern; see Zitelmann, *Hitler: The Policies of Seduction*, esp. ch. 5.

<sup>157</sup> Zeitzler's judgement is interesting in this respect, since he had the opportunity to observe Hitler daily during the period under discussion: 'No utterance—even in private discussion!—without calculation. Hardly ever an emotive act or statement. Seemingly emotive acts are mostly calculated! A monstrous performance' (Müller-Hillebrand, note, 11 Mar. 1943, on a conversation with Zeitzler the previous day, BA-MA N 553/v.42).

<sup>158</sup> Quoted in *Staatsmänner und Diplomaten*, ii. 379 (meeting with the Bulgarian regency councillor on 16 Mar. 1944). Later too, Hitler decidedly maintained the view that 'military leadership is quite impossible without optimism' (*Hitlers Lagebesprechungen*, 614, midday situation, 31 Aug. 1944).

<sup>159</sup> During the same discussion with the Bulgarian regency councillor on 16 Mar. 1944, Hitler declared: 'one can wage this war the more resolutely, the less one imagines that there might be other ways to conclude it'. He would therefore 'never allow' a discussion on that subject among the German people (*Staatsmänner und Diplomaten*, ii. 376).

<sup>160</sup> This predominantly tactical use of arguments naturally led easily to contradictory statements, especially when Hitler was expressing his 'real' opinion. An important example in this context is his repeatedly expressed contempt for comparative strategic statistics (see *inter alia* Halder, *Kriegstagebuch*, 329, 6 Dec. 1941). That this was by no means Hitler's conviction, but a tactically motivated rejection of unwelcome arguments, is revealed by an indisputable statement in a very small circle on 20 August 1942, which also documents Hitler's incipient inkling at that time that the war was lost: 'There is no example in the history of war where, despite a grossly disproportionate distribution of forces, final victory went to the smaller number. Frederick the Great was always lucky that we managed to cheat our way through Europe' (Hitler, *Monologe*, 354). The last sentence is also interesting in that it shows Hitler's later attempts to portray the Prussian king's situation in the Seven Years War as an encouraging precedent (e.g. in his address to Reichs- and Gauleiters on 8 Feb. 1943; see Goebbels, *Tagebücher*, pt. 2, vii. 292 and 294–5) to be a propaganda ploy which he himself did not take very seriously.

<sup>161</sup> 'The Führer drew the Reichs- and Gauleiters a shattering picture of the possibilities facing the Reich in the event of a German defeat. Such a defeat must therefore have no place in our thoughts. We must consider it impossible a priori and resolve to fight against it to our last breath [...] We live today in a world of destroy or be destroyed. We did not create that world. But we are far in advance of our enemies in having understood that this world is the real world, and that all we can do is use it to

This picture of Hitler as a supreme commander who had a relatively sober appreciation of the overall military situation but was determined to continue the war and acted accordingly would risk being an over-rationalization if we failed to shed light on what might be called the other side of the coin. The tension between his own awareness that the war was unwinnable and his ceaseless invocation of the opposite imposed an extraordinary psychological burden on the dictator,<sup>162</sup> which he sought to overcome by increasingly irrational, sometimes downright bizarre behaviour. He took refuge more frequently than before in utopian hopes, sought consolation in historical reminiscences or gratuitous words of wisdom, and got carried away by reports of second- and third-rate successes. It was already a psychological disaster when Hitler, in an almost hopeless situation, raised holding Stalingrad and Tunis to the level of a decisive existential issue of 'to be or not to be'.<sup>163</sup> The hopes he still expressed at the turn of the year—of reconquering North Africa from Tunisia and throwing the invading enemy back into the sea,<sup>164</sup> for example, or relieving Stalingrad after all and turning the Russian advance 'into a catastrophic defeat'<sup>165</sup>—had nothing to do with any rational calculation, even his own. The same is true of the dictator's remarkable tendency to belittle Allied operational successes, in East Asia for example,<sup>166</sup> or to make statistically absurd comparisons concerning the war-economy potential of individual powers.

Thus he attempted to convince the Romanian prime minister Ion Antonescu, during the latter's visit to the 'Wolf's Lair' on 10 January 1943, not only that the situation of the Soviet Union's war economy was desperate (which was an exaggeration but at least partially true)<sup>167</sup> but also, and in all seriousness, that Germany's own economic production potential was superior to that of Britain and the United States.<sup>168</sup> Nor did he refrain from 'proving' to his interlocutors that the Allied sea powers were at best able to rebuild 50 per cent of the tonnage sunk by the Axis powers.<sup>169</sup> That, however, was a childish fallacy, as the Führer must have known at the latest from the Naval War Staff's situation report of 1 December 1942, which showed that the figures for new construction were coming dangerously close to those

achieve our political goals. [...] In this connection we can naturally admit no questions of right or wrong in the discussion. The loss of this war would constitute the greatest wrong to the German people, and victory would give us the greatest right' (Goebbels, *Tagebücher*, pt. 2, viii. 238).

<sup>162</sup> It cannot be proven here that the frequently attested rapid decline in Hitler's health from 1943 was closely related to this psychological burden, but it seems a plausible assumption; see Irving, *The Secret Diaries*, 52 and 119; Schenck, *Patient Hitler*, 388 ff.; Linge, *Bis zum Untergang*, 267; Carr, *Hitler: A Study*, 144 ff.; Maser, *Adolf Hitler*, 339.

<sup>163</sup> *Staatsmänner und Diplomaten*, ii. 190–1 (meeting with Count Ciano on 19 Dec. 1942).

<sup>164</sup> ibid., n. 2. <sup>165</sup> ibid. 201 (meeting with Antonescu on 10 Jan. 1943).

<sup>166</sup> See ibid. 205.

<sup>167</sup> See Barber and Harrison, *The Soviet Home Front*, 86 ff.; Segbers, *Die Sowjetunion im Zweiten Weltkrieg*, ch. X.

<sup>168</sup> *Staatsmänner und Diplomaten*, ii. 206, and, in very similar vein, Goebbels, *Tagebücher*, pt. 2, viii. 239 (8 May 1943): 'We are practically the world's largest industrial state.' In fact, Hitler was fascinated by industrial development in the USA; see Zitelmann, *Hitler*, 355 ff. At all events, even before the war there was no lack of attempts by Hitler to play down the differences in economic potential between Germany and its Anglo-American competitors; see Thies, *Architekt*, 110–11.

<sup>169</sup> *Staatsmänner und Diplomaten*, ii. 205; similarly to Ciano on 20 Dec. 1942 (ibid. 195).

for tonnage sunk.<sup>170</sup> It was even more bizarre when on 8 May 1943, that is, at the very time when the fate of the Axis in North Africa was being decided (and two years, to the day, before Germany's total capitulation) he proclaimed to the assembled Reichs- and Gauleiters his 'unshakeable certainty' that 'Germany will eventually rule the whole of Europe', thus 'paving the way for world domination': 'he who holds Europe will wrest world leadership for himself'.<sup>171</sup>

All such and similar ritually invoked interpretations and visions did not only act upon the consciousness of those who heard them;<sup>172</sup> quite obviously they also affected their originator. In particular, they provided him with an escape from the almost unrelentingly oppressive daily war routine. This flight from reality would seem to be the price paid for Hitler's 'fanatical determination', in a strategically hopeless situation, 'not to capitulate under any circumstances'.<sup>173</sup> His tendency to auto-suggestive reinforcement of his own 'stick-it-out' mentality, which was so characteristic towards the end of the war, was already clearly perceptible. During military conferences, even at the height of the Stalingrad crisis, the dictator would lecture his listeners for hours on the meaning of history,<sup>174</sup> invoke the role of 'fate' and 'providence', and compare the present fight for existence with 'the movement's period of struggle'<sup>175</sup> or, as the fancy took him, with the West's centuries of resistance to Huns, Moors, and Mongols.<sup>176</sup> World history, as the Führer now put it, had 'a deeper meaning', and that meaning could not possibly be that 'we, as Europe's highest race, should finally fall prey to the technology of a half ape-like people'.<sup>177</sup>

These formulations took shape at a much more irrational level of the dictator's consciousness, a level at which Hitler the ideologist clearly refused himself the very insights which imposed themselves on him as a strategist.<sup>178</sup> He forced himself into a state of stubborn determination, with the aid of an exaggerated regard for strength

<sup>170</sup> See Salewski, *Die deutsche Seekriegsleitung*, iii. 322–3 (doc. 14).

<sup>171</sup> Goebbels, *Tagebücher*, pt. 2, viii. 238 (8 May 1943); see also Weizsäcker, *Erinnerungen*, 354 (mid-June 1943): 'Hitler painted me a picture of the war situation so rosy that he could hardly have believed it himself.'

<sup>172</sup> An equally bizarre example is provided by Keitel, who, when asked by Field Marshal Gen. Fedor von Bock (relieved of his command) how the further conduct of the war was envisaged, replied laconically: 'The others are collapsing! Even the Russians!', Bock, diary ('Osten III'), 33 (22 Mar. 1943), BA-MA N 22/15 A.

<sup>173</sup> *Staatsmänner und Diplomaten*, ii. 207.

<sup>174</sup> See Hitlers *Lagebesprechungen*, 453 (6 Jan. 1943).

<sup>175</sup> See Salewski, 'Von Raeder zu Dönitz', 105; Goebbels, *Tagebücher*, pt. 2, vii. 172–3 and 177–8 (23 Jan. 1943).

<sup>176</sup> *Staatsmänner und Diplomaten*, ii. 203.

<sup>177</sup> By 'a half ape-like people' he meant Soviet Russia. Address by Hitler to Reichs- and Gauleiters, 8 Feb. 1943, quoted in Goebbels, *Tagebücher*, pt. 2, vii. 291. In very similar vein, Jodl concluded his lecture to the same audience on 7 Nov. 1943 with the affirmation 'from the deepest bottom of my heart' that 'we shall win because we must win, for otherwise world history will have lost all meaning', BA-MA RW 4/v. 38.

<sup>178</sup> Split consciousness of this kind is by no means a rare phenomenon. It is frequently exhibited by the incurably ill, for example, whom knowledge of their imminent death forces into a mode that permits them to maintain an outwardly normal life.

of conviction and will-power<sup>179</sup> and a frequently demonstrated tendency to take risks.<sup>180</sup> 'We are still in danger of annihilation,' Hitler had already suspected in August 1942, and had drawn the conclusion that 'in most cases the only thing left' is to attack: 'If I don't hit out in the east, the enemy will.'<sup>181</sup> This too was precisely the mood in Hitler's circle in the spring of 1943, as Weizsäcker, who was staying in Berlin after a visit to headquarters at the beginning of May, pithily described it: 'What they were saying was this: We shall win. If not, we shall go down with honour, fighting to the last man. That was also Frederick the Great's motto.'<sup>182</sup>

Six weeks previously, in an address to the officer corps of the 9th Infantry Regiment, the state secretary and designated German ambassador to the Vatican had made it fairly plain that he by no means shared that view. Making peace at the right time, he said, was 'the great test of a statesman'.<sup>183</sup> Why Hitler did not stand that test despite the urging of most of his allies is one of the fundamental questions in need of elucidation.

<sup>179</sup> Thus, according to Goebbels (*Tagebücher*, pt. 2, vii. 285), Hitler began his address to Party functionaries on 8 February 1943 'with the affirmation that, today more than ever, he believed in victory and neither wanted, nor would permit, any event to undermine that belief'. One of the advantages of such (auto-)suggestive statements of belief was that they left no room for discussion or argument: the only alternatives were to agree or be excluded.

<sup>180</sup> Hitler's famous saying that he had always gone for all or nothing is found in less poignant form but with a similar meaning in many of his statements in 1942 and 1943; see, e.g., Hitler, *Monologe*, 359 (21 Aug. 1942) and 364–5 (25 Aug. 1942): 'In war, he who risks nothing can win nothing [...] Life is one constant gamble.'

<sup>181</sup> ibid. 367 (26 Aug. 1942).

<sup>182</sup> Weizsäcker added laconically: 'I think Frederick the Great was referring to himself, not the Prussian state' (Weizsäcker, *Die Weizsäcker-Papiere 1933–1950*, 337, entry of 2 May 1943).

<sup>183</sup> ibid. 332 (18 Mar. 1943).

## II. German Alliance Policy and the Question of a Separate Peace

Seldom in recent research on the history of the Second World War has an event which never took place aroused so much attention as the idea of a separate German–Soviet peace.<sup>1</sup> This interest, stimulated by the vision of a change of course of world-historical importance and accompanied by wild public speculation,<sup>2</sup> has contributed significantly to a general overestimation of the topic. On the other hand, there is scarcely any disagreement among serious authors that the supposed ‘change of course’ was not understood as such by at least one of the potential treaty parties, namely Adolf Hitler, and that the option of a separate peace with Joseph Stalin was never considered seriously by him.<sup>3</sup> The question is interesting from the point of view of the subject under discussion, however, since it sheds light on how those responsible for Germany’s conduct of the war used their remaining room for manoeuvre.

If, despite Hitler’s negative attitude, the emotive term ‘separate peace’ became a theme in German policy after Stalingrad, over and above its exploitation for propaganda purposes, the impetus came far less from Berlin (or the various German HQs) than from the capitals of Germany’s Axis partners. For the phase of the war under discussion here, the question of a separate peace is inextricably and fatally linked with the erosion of Germany’s system of alliances. In the following section we shall therefore begin by taking a look at the state of those alliance relationships after Stalingrad, and go on to consider why political initiatives to end the war stood no chance of success in Berlin.

<sup>1</sup> For a fundamental study of the issues involved, see Martin, *Friedensinitiativen*. On the phase of the war discussed here, see *id.*, ‘Verhandlungen über separate Friedensschlüsse’ and ‘Deutsch-sowjetische Sondierungen’; Koch, ‘The Spectre of a Separate Peace’; Schröder, ‘Bestrebungen’; Fleischhauer, *Die Chance des Sonderfriedens*.

<sup>2</sup> Above all, the rumour—raised by Liddell Hart, *History of the Second World War*, 623, to the level of historical fact—of a meeting between Ribbentrop and Molotov supposed to have taken place in Kirovograd in June 1943 (similarly Koch, ‘The Spectre of a Separate Peace’, 547). That rumour, for which no proof has ever been adduced, is completely implausible, if only because Ribbentrop did not make the slightest mention of it during the Nuremberg trial, although such a mention would have considerably alleviated his position and might even have spared him the death penalty; see also the critical views in Schröder, ‘Bestrebungen’, 26, and Bloch, *Ribbentrop*, 385–6.

<sup>3</sup> As to whether Stalin considered it seriously, see Fischer, *Sowjetische Deutschlandpolitik*, 38, 45; Martin, ‘Deutsch-sowjetische Sondierungen’; and Weinberg, *A World at Arms*, here esp. 609 ff., 655–6. For the opposing view, see Fleischhauer, *Die Chance des Sonderfriedens*, 285; Einsiedel, ‘Bridge mit Madame Kollontaj’; Sokolov and Fetisov, ‘Byl i nebyl’, 137.

## 1. THE EROSION OF THE AXIS PACT

The coalition of states in the Tripartite Pact differed fundamentally from the opposing anti-Hitler alliance in several respects. The greatly divergent geostrategic interests of its individual members, their markedly disparate political stature, and the peculiarities of their different systems of government had impaired the cohesion of the Tripartite Pact from the outset. From 1942, as the fortunes of war turned increasingly against them, those disparities put a growing strain on relations between the treaty partners. The full extent of the disparities is clearly shown by the fact that the states in the Tripartite Pact lacked a common war aim of the kind which, like their opponents' shared objective of overthrowing Nazi Germany, would have bridged the differences between them.

In fact, Hitler and his allies had not even been able to agree on a common principal enemy. Japan was very anxious to preserve its neutrality vis-à-vis Russia, Germany's mortal enemy, while Hitler hoped to keep Japan's chief adversary, the United States, out of the European theatre as long as possible and to conclude a compromise peace, at little cost to Germany, with Britain, which was Italy's main adversary in the Mediterranean. Among the lesser partners, Hungary and Romania supported Germany's war effort primarily with a view to securing a favourable starting position for a future war against each other. Finland alone shared (for the moment) Germany's view of the immediate life-and-death importance of the war against the Soviet Union, but it was precisely Finland, the only parliamentary democracy on the German side, which endeavoured to avoid any formal alliance with the National Socialist dictatorship and any hostilities vis-à-vis the western powers by describing its conflict with the Soviet Union as an independent 'parallel war'.<sup>4</sup> Quite apart from these disparate interests, the effectiveness of the Tripartite Pact was strictly limited because—again in contrast to the anti-Hitler coalition—none of the partners ever had at its disposal the capacities and resources for global warfare that alone would have made it possible to realize fully the latent potential of such a transcontinental alliance. Even Germany's engagement in the Mediterranean area, the only place where the beginnings of genuine coalition warfare had been taking place since 1941,<sup>5</sup> already exceeded the human, material, and logistical potential of the German armed forces, which, month after month, were suffering ever-increasing losses on the eastern front.

In addition to the severely limited possibilities of cooperation with the Tripartite Pact owing to the divergence of interests and scarcity of resources, it must also be remembered that the Pact was in any case not a coalition of more-or-less equal partners comparable, in terms of integration, to the Anglo-American alliance. Unlike that alliance, relations within the Tripartite Pact lacked any kind of functioning consultative bodies or procedures that might have served to harmonize interests and resolve conflicts, and to facilitate joint planning and the preparation of

<sup>4</sup> For that reason Finland had not joined the Tripartite Pact. For more on this, see Part VI, Chapter I.1 of the present volume.

<sup>5</sup> *Germany and the Second World War*, vi. 631–840.

decisions. This was largely due to the fact that the typical virtues of an alliance, such as cooperation and consultation, power sharing and compromise, were fundamentally alien to the authoritarian regimes linked by the Tripartite Pact. Moreover, the distribution of political weight within that alliance was so asymmetrical that Germany, the most powerful member along with distant Japan, could assume that it was entitled to assert its own vital interests over those of its European partners. The fact that those partners were dependent on Berlin in many political, economic, and military respects proved an effective mechanism for containing, if not entirely preventing, serious discord within the Pact. The German leadership also managed to avoid the eruption of conflicts of interest by evading open discussion with its allies of its strategic plans, or indeed its long-term thinking about the post-war order in Europe; it preferred to keep them in line by vague statements of intent, promises on detailed issues, or veiled threats.

From the German viewpoint, the main value of the Tripartite Pact was not the opportunity for an internationally agreed strategy, but its use as a propaganda platform, a strategic forefield, and a reserve of manpower and raw materials for Germany's own war effort.

Despite various German concessions, the alignment of interests within the 'Hitler coalition' was ultimately asymmetrical; it functioned only as long as the partners' confidence in Germany's political and military primacy on the continent of Europe remained unshaken. As this confidence waned with the increasingly unfavourable turn of the war, Germany's relations with its partners inevitably entered a crisis precisely because of that asymmetry, and this eventually led to the total erosion of the alliance. The process extended over several years, but 1942 represented a transitional stage marked by Germany's endeavours to cement the cracks in the alliance which had become unmistakable after the reverses of the first winter of the war in the east, and to induce its European partners to make even greater efforts.<sup>6</sup> Outwardly successful as these efforts may have been, culminating during the first half of 1942 in Hitler's repeated summit meetings with Benito Mussolini, Ion Antonescu, and Carl Gustaf Mannerheim, the commander-in-chief of the Finnish armed forces, they in no way changed the fundamental vulnerability of their relations to developments at the fronts.

This was never clearer than at the end of the winter battles on the Don and the Volga, which had turned into a mass graveyard for the armies of Germany's allies too.<sup>7</sup> The fact that this aspect of the tragedy—unlike the downfall of Germany's Sixth Army, which was described as 'heroic'<sup>8</sup>—was passed over in silence in German published opinion, while the 'total failure' of the Axis partners

<sup>6</sup> See *Germany and the Second World War*, vi. 904–28.

<sup>7</sup> On the figures for the losses incurred by Germany's allies, see Schreiber, 'Italiens Teilnahme am Krieg', 278; Wimpffen, 'Die zweite ungarische Armee', 342–3; Gosztony, *Hitlers Fremde Heere*, 328.

<sup>8</sup> For details, see Wette, 'Das Massensterben', and esp. Kumpfmüller, *Die Schlacht von Stalingrad*, pt. 1.

was proclaimed as the real reason for the Stalingrad disaster,<sup>9</sup> contributed decisively to the deterioration in the climate of relations within the alliance in those weeks and months. All the more so as Joseph Goebbels, in his judgement that ‘our bakery units and the last supply train [would have] performed better than the Italian, Romanian, and Hungarian elite divisions’,<sup>10</sup> could be confident of expressing a view widely shared in all strata of the population thanks to reports from the front, rumours, and prejudices.<sup>11</sup> The strength of the resentment felt by the troops of Germany’s Axis partners as a result of the experience of the winter battles was reflected, among other things, in a growing number of disciplinary offences. In an order issued in mid-February following reports on the situation, Hitler felt obliged to point out that ‘decency and comradeship also require proper behaviour vis-à-vis defeated allies; moreover, Germany has an interest in the rapid reorganization of those units, and no material should be given for agitation by opposition forces in the allied countries’.<sup>12</sup> Nevertheless, the series of painful incidents continued unabated. The troops of the Royal Hungarian Army deployed to guard the railway lines in the Ukraine—whose reliability, in Hitler’s view, was ‘not worth a powder shot’<sup>13</sup>—continued to be insulted from passing German trains and ‘bombarded with manure’; sometimes they were even shot at or had hand grenades thrown at them.<sup>14</sup> The remnants of both Romanian armies had already been subjected to similar assaults during their westward retreat.<sup>15</sup>

The German top leadership seems to have more or less accepted this damage to Germany’s alliance relations, or at least to have made no resolute attempt to contain it. Only the outer façade of the alliance was spared. In May, for example, the OKH forbade all command headquarters and officers to ‘deliver opinions regarding the combat value and combat performance of Hungarian or other allied troops directly to foreign applicants’.<sup>16</sup> Shortly afterwards, Hitler also prohibited all public discussion of the operations of the winter of 1942/3 on the grounds that they could not be described ‘without a value judgement concerning our allies’.<sup>17</sup> Although the dictator himself had employed similar terms in previous months, wanting the alleged cowardice of his alliance partners to be ‘clearly established only

<sup>9</sup> Hitler, quoted in Goebbels, *Tagebücher*, pt. 2, vii. 162 (23 Jan. 1943) and, in the same words, 285 (8 Feb. 1943). For Goebbels too it was clear that the Sixth Army ‘has only our alliance partners to thank for its bitter fate’ (167, 23 Jan. 1943).

<sup>10</sup> Ibid., 163 (23 Jan. 1943).

<sup>11</sup> This applied particularly to the Italians. See *Meldungen aus dem Reich*, xii, No. 357, 4762 (8 Feb. 1943), and xiii, No. 376, 5125 (15 Apr. 1943).

<sup>12</sup> *KTB OKW*, iii, 124 (14 Feb. 1943).

<sup>13</sup> Goebbels, *Tagebücher*, pt. 2, vii. 172 (23 Jan. 1943). An order from the Hungarian commander-in-chief, Lt.-Gen. Gustav Jány, dated only a day later, which began with the words ‘The Hungarian 2nd Army has lost its honour’, appears to confirm that impression (army order of 24 Jan. 1943, BA-MA RH 2/720) but is put into perspective by other statements by Jány himself and others; see Helmert and Otto, ‘Zur Koalitionskriegsführung’, here, above all, doc. 13, 336 ff.; also Wimpffen, ‘Die zweite Ungarische Armee’, 333 ff.

<sup>16</sup> GenStdH/Op.Abt., 12 May 1943, BA-MA RH 2/720.

<sup>17</sup> Fld. Marsh. Keitel to Gen. zbV beim OKH, Gen.d.Art. Müller, 1 June 1943, BA-MA RW4/v. 309 b.

by later historiography,<sup>18</sup> his consideration for his allies was motivated only by the minimum demands of *raison d'état* and in no way by a genuine desire to preserve the prestige of his partners in Budapest, Bucharest, and Rome.

Quite the opposite: in personal discussions and private talks Hitler willingly broached the subject of his alliance partners' behaviour during the winter crisis and made no secret of his 'absolute contempt' for them, specifically inviting his listeners to make his judgement known internally.<sup>19</sup> In all of this, the dictator and his entourage were quite clearly not concerned to engage in self-critical assessment of errors, mistakes, and omissions in coalition conduct of the war,<sup>20</sup> but wholly and exclusively to propagate language that would relieve Hitler as 'Führer', and the central bodies of his regime, of responsibility for Stalingrad.<sup>21</sup> Open, though not public, denigration of the allies involved in the disaster on the southern wing of the eastern front was a way to shift blame for the defeat and thus preserve the authority of the Führer, at least formally.<sup>22</sup> The propaganda minister would not allow even the fundamental decision to include the foreign armies in the planning for Operation BLUE to be attributed to the Führer. On the contrary, Hitler had 'actually never wanted our Axis partners to be deployed on the eastern front; but Alfred Jodl had talked him into it, obviously from the best of motives'.<sup>23</sup> In an unparalleled contradiction of the actual course of events leading to that campaign, he went on to assert that 'if the Führer had renounced deployment of our Axis partners' divisions from the outset, he would obviously have organized operations in the previous summer quite differently. He would have attacked in the centre and, above all, not have burdened himself with the campaign in the Caucasus'.<sup>24</sup>

<sup>18</sup> Goebbels, *Tagebücher*, pt. 2, vii. 163 (23 Jan. 1943). As Goebbels noted elsewhere (172), Hitler accordingly had 'all the documents collected for historical research. Should those documents ever be published, it would put an end, once and for all, to the military honour of Italy, Romania, and especially Hungary.' In fact, the reports of the collapse of the armies of Germany's allies, even those by German observers, give a differentiated picture; see, e.g., VO/OKW/WPr to Romanian 3rd Army HQ (1st Lt. Steininger), 'Report on the collapse of the 3rd Romanian Army', 13 Jan. 1943, BA-MA RW 4/ v. 309 a; Stab Art.Rgt. (mot) zbV 618, 'Report on the causes of the breakthrough at the 7th Hungarian Army Corps', 13 Feb. 1943, BA-MA RH 2/720, and the report by the chief of the Royal Hungarian Army General Staff, 5 May 1943, on the conduct of the Hungarian 2nd Army in the war against Bolshevism (German trans. in MGFA, M 2/2, App. D./IV-c).

<sup>19</sup> Goebbels, *Tagebücher*, pt. 2, vii. 285–6 (8 Feb. 1943), and similarly 163 (23 Jan. 1943). Ambassador Dino Alfieri's complaint that anti-Italian feeling in the German population was 'fomented by the highest circles' was a typical reaction (*ibid.* 628, 23 Mar. 1943).

<sup>20</sup> Significantly, at the height of the Stalingrad crisis Hitler had already ruled out any complaints by his allies about German leadership; see Förster, *Stalingrad*, 47 (n. 142).

<sup>21</sup> An exception was the Luftwaffe, about which Hitler, as Goebbels credibly reports, 'complained very bitterly'. According to that source, the Luftwaffe was directly responsible for 'rushing the Führer into the situation'—meaning the orders establishing the Stalingrad cauldron—with its false promises (Goebbels, *Tagebücher*, pt. 2, vii. 168–9, 23 Jan. 1943).

<sup>22</sup> Nevertheless, this succeeded only to a very limited extent. Ulrich von Hassell, for example, noted on 14 Feb. 1943: 'Recent weeks have seen the most serious crisis in the war so far, in fact the first real crisis, unfortunately not only a crisis for the leadership and the system, but for Germany itself. It is symbolized by the name Stalingrad. *For the first time Hitler has failed to shift responsibility elsewhere, for the first time the critical rumblings are aimed directly at him*' (Hassell, *Vom andern Deutschland*, 347—author's emphasis).

<sup>23</sup> Goebbels, *Tagebücher*, pt. 2, vii. 162 (23 Jan. 1943).

<sup>24</sup> *Ibid.* 163. On the absurdity of this claim, see also *Germany and the Second World War*, vi. 843–63.

Inevitably, the unilateral attempts to exonerate the German leadership completely destroyed any remaining basis for trust in their alliance relations. Destabilization of the alliance was the necessary price for stabilizing Germany's own claim to leadership. It seemed a small price to pay, especially as, in Hitler's view, the defeats at Stalingrad and Tunis anyway marked the end of active German coalition warfare. 'We can no longer count on our allies,' the Führer told the assembled generals on his visit to Manstein's Army Group South headquarters on 11 March 1943. 'They only cost us supplies. We must cold-bloodedly write them off for our further conduct of the war.'<sup>25</sup>

In other words, following the wholly disastrous end to the second year of the war in the east, the governments in Budapest, Rome, and Bucharest almost completely lost their value to Germany—which had never been highly estimated in any case—both as military partners and as political allies.<sup>26</sup> The value of their countries for Germany's conduct of the war was now increasingly reduced—as even observers favourably disposed towards Germany did not fail to remark<sup>27</sup>—to that of a strategic forefield (Italy and Hungary) and a supplier of raw materials (Romania). Although the above-mentioned Axis partners continued for the time being to be spared ruthless unilateral economic exploitation by Germany, their function within German-controlled Europe began dangerously to resemble that of the occupied countries.<sup>28</sup> The fact that the Wehrmacht was at the same time making contingency plans for the occupation of Italy (code-names ALARICH and ACHSE), and a few months later also for that of Hungary (MARGARETHE I) and Romania (MARGARETHE II),<sup>29</sup> confirms the increasing fluidity of the boundary between alliance and occupation status.

The development just described corresponded to a further decline in German foreign policy, now barely worthy of the name. The German government's ability to wage any kind of political warfare,<sup>30</sup> which had been waning continuously since the attack on the Soviet Union, or at the latest since the events of December 1941, vanished from the beginning of 1943 in an almost total lack of initiative that was by

<sup>25</sup> H.Gr. Süd/Ia, KTB, 11 Mar. 1943, 1092 (reverse side), BA-MA RH 19 VI/41. Similarly Goebbels, *Tagebücher*, pt. 2, viii. 234 (8 May 1943).

<sup>26</sup> Goebbel's agile argumentative linking of the military and political aspects is significant: 'Our alliance partners claimed a leading role in Europe, which they wanted to assume together with us. In the battles in the east, however, they have lost their honour to such a degree that after the war there will no longer be any doubt about who is to lead Europe and who is not. We shall be to Europe what Prussia was to the North German Confederation' (Goebbels, *Tagebücher*, pt. 2, vii. 167, 23 Jan. 1943).

<sup>27</sup> e.g. Ambassador Alfieri's conclusion—admittedly reached only in the shadow of the collapse of Operation CITADEL—that Germany considered 'the territory of its allies and the occupied states only as a bastion for its own country'; letter to Under-Secretary of State Bastianini, 14 July 1943, quoted in Schröder, *Italiens Kriegsaustritt*, 51.

<sup>28</sup> See *Germany and the Second World War*, v/II, 5–291.

<sup>29</sup> For details on ALARICH, see Schröder, *Italiens Kriegsaustritt*, 176 ff.; on MARGARETHE I, see Door, 'Zur Vorgeschichte', and on the subsequently abandoned plans concerning Romania, see Hillgruber, *Hitler*, 177 ff.

<sup>30</sup> Fleischhauer, *Die Chance des Sonderfriedens*, 284; similarly Goebbels, *Tagebücher*, pt. 2, vii. 454 (2 Mar. 1943).

no means lost on Germany's Axis partners.<sup>31</sup> Even the few remaining options for political stabilization of the European area under German control were not seriously taken into account by Hitler. Thus, despite demands from the competent military and civilian agencies,<sup>32</sup> no fundamental rethink of German occupation policy took place, nor was a concept of Europe elaborated which the powers dependent on Germany could discuss as a counter-model to the Atlantic Charter. Instead, in both cases, mainly because of the personal resistance of the Führer, attempts to initiate a change of direction resulted in nothing more than vague propaganda slogans with no political consequences.<sup>33</sup> Quite obviously, the German dictator was fixated on handling the war by military means (and by use of the police in internal political affairs);<sup>34</sup> two years before the collapse of his regime he was plainly consumed by the distaste for politics which he later openly admitted.<sup>35</sup>

Under these circumstances there was no longer any question of a German alliance policy that took account of the specific interests of the individual partners. Instead, as will be shown in more detail through the example of Finland,<sup>36</sup> that policy was reduced to a set of instruments—promises, threats, and sanctions—by which the leading figures in the partner states and their governments could be bound hand and foot to Germany. Hitler's assessment after a talk with Pierre Laval in January 1943, as put about by Goebbels, indicates the general principle of that policy: the French prime minister was said to have understood that, 'if the Führer wins the war, his [Laval's] policy will have proved correct, and, if he loses it, he [Laval] will have his throat cut. That is a sound basis for partnership. Then we need have no fear that he and his government will suddenly turn away from us.'<sup>37</sup>

The erosion of the Axis Pact, which began even before Stalingrad and was sharply accelerated by defeat on the Volga, was not a unilateral process triggered solely by the war-weariness and peace efforts of Germany's Axis partners. Rather, the German government's hostile attitude to the Pact, perceptible since the end of 1942, contributed greatly to the fact that the governments in Rome, Budapest, and Bucharest, suddenly branded as scapegoats for the bungled military situation, now sought to defend their own national interests.<sup>38</sup> The rapid rebuilding of the

<sup>31</sup> On this, see Weizsäcker, *Die Weizsäcker-Papiere*, 339 (30 May 1943); on criticism of this by Mussolini, see Schröder, *Italiens Kriegsaustritt*, 58.

<sup>32</sup> For specific examples, see Mulligan, *The Politics of Illusion*, 47 ff., and Umbreit, 'Das unbewältigte Problem', 138 ff.

<sup>33</sup> Many sources for this are given in Salewski, 'Ideas'. A comprehensive discussion of new approaches to European politics in National Socialism still remains a desideratum.

<sup>34</sup> A typical example is Hitler's statement to Count Galeazzo Ciano on 20 Dec. 1942 that the 'eastern problem' was for him 'an exclusively military matter'; ADAP, Series E, iv, doc. 315, 582.

<sup>35</sup> See Haffner, *Anmerkungen zu Hitler*, 180; Binion, *Hitler among the Germans*, 106.

<sup>36</sup> More details in Part VI, Chapter I.1.

<sup>37</sup> Goebbels, *Tagebücher*, pt. 2, vii. 171–2 (23 Jan. 1943). What Hitler said to Laval on 29 Apr. 1943 is also interesting in this respect (*Staatsmänner und Diplomaten*, ii. 281).

<sup>38</sup> Even Antonescu, who was fundamentally determined to continue the war against the Soviet Union alongside Germany, pointed out in a memorandum to Hitler on 11 Jan. 1942 that this was 'Romania's own war' and that his country had 'its own national issues and historical responsibilities'; quoted in Ancel, 'Stalingrad und Rumänien', 207.

Romanian army in the spring of 1943,<sup>39</sup> kept strictly secret from the Germans, testifies to these efforts, as do the Hungarian and Romanian governments' increasing contacts with the western Allies.<sup>40</sup> Although these feelers were also supposed to be secret, they did not remain hidden from German diplomats and helped to aggravate the crisis in the Axis Pact.<sup>41</sup>

Among the counter-productive consequences of the German leadership's strategy of shifting the blame was that it further weakened the position of Antonescu, Horthy, and Mussolini and their hitherto willingly cooperative governments, which was already undermined by military developments. The humiliating treatment and unjust denigration of their armed forces strengthened anti-German resentment in the countries concerned. Realization of the fragility of German alliance policy also led to a cooling off in personal relations between the dictators. At the same time, it strengthened the domestic opposition circles, which had never been completely silenced and had always warned against too close a tie with Germany.<sup>42</sup> Given these tendencies, which were due not least to Germany's own policy, it is hardly surprising that the German government succeeded neither in its barely veiled demands for dismissal of the politicians who in its view were most to blame (the Hungarian prime minister Miklos Kállay and the Romanian foreign minister Mihai Antonescu)<sup>43</sup> nor in effectively preventing the continuation of Bucharest's and Budapest's diplomatic contacts with the western powers.<sup>44</sup>

Despite the swiftly progressing internal collapse of the 'Hitler coalition' since the end of 1942, Germany still managed to prevent its external breakdown.<sup>45</sup>

<sup>39</sup> See the analysis based on Romanian sources that are now accessible, *ibid.*, 208–9.

<sup>40</sup> For details, see Förster, *Stalingrad*, 107 ff.; Juhász, *Hungarian Foreign Policy*, 218 ff.; Fenyo, *Hitler, Horthy, and Hungary*, 110 ff. and 131 ff.; Hillgruber, *Hitler*, 167 ff.

<sup>41</sup> The 'register of sins' read out by Hitler to Antonescu and Horthy during their visits to Klessheim Castle in April 1943 was by no means unfounded; *Staatsmänner und Diplomaten*, ii, 217 ff. (12 Apr. 1943) and 241 ff. (16 Apr. 1943). This was the context of the German foreign ministry's memorandum to the Hungarian Government dated 18 Apr. 1943, repr. in *Allianz Hitler—Horthy—Mussolini*, doc. 119, 346–50.

<sup>42</sup> See Förster, *Stalingrad*, 48–9; Deakin, *The Brutal Friendship*, 244 ff.; Ancel, 'Stalingrad und Rumänen', 206, 210.

<sup>43</sup> In the case of the Romanian deputy prime minister, Germany's demand for dismissal had already been preceded in October 1942 by various diplomatic démarches aimed at 'amicably' dissuading Antonescu from his contacts with the western powers; see Ribbentrop's telegram to the legation in Bucharest, 14 Oct. 1942, Deutsches Zentralarchiv Potsdam, AA/Polit. Abt., 'Friedensfrage', i; see also documents repr. in ADAP, Series E, v, doc. 86, 156–7, and doc. 140, 241 ff. Despite that, Antonescu had encouraged the Italian government in mid-January, on behalf of Germany's Axis partner, to make contact with the western powers; he had not succeeded because the Duce was more interested in reaching a settlement with Moscow. See also Deakin, *The Brutal Friendship*, 134 ff., and Förster, *Stalingrad*, 72 ff. On Ribbentrop's unsuccessful attempts to draw Italy into a common front against Antonescu and Kállay, see also Schröder, *Italiens Kriegsaustritt*, 55 ff.

<sup>44</sup> According to Romanian sources, in September 1943 Antonescu offered the western Allies '45 wagonloads of gold, huge quantities of grain, and a million armed troops' (Ancel, 'Stalingrad und Rumänen', 210).

<sup>45</sup> Since the peak of the Stalingrad crisis, Hitler had been cautiously optimistic in this respect (see Goebbels, *Tagebücher*, pt. 2, vii. 171, 23 Jan. 1943), but from May he began to be seriously concerned about Italy and Hungary's loyalty to the Axis Pact (see private letter from Capt. Junge to Grand Admiral Dönitz, 15 May 1943, on the content of that day's conference at Führer headquarters, BA-MA RM 7/260. See also Hitler's discussion with Keitel on 19 May 1943, *Hitlers Lagebesprechungen*, 205–12).

The renewed stabilization of the military situation on the southern wing of the eastern front in March, in the immediate run-up to the summit meetings at Klessheim Castle,<sup>46</sup> helped in this respect, as did the anti-Soviet anxiety and fears which had flared up in Romania, Hungary, and other countries since Stalingrad.<sup>47</sup> While the western powers could do little to dispel those fears except recommend capitulation,<sup>48</sup> Germany still had its impressively strong Wehrmacht ranged against Russia. This military factor was taken into account by the Romanian and Hungarian governments all the more seriously as it not only promised protection against the Red Army for the time being but also served as an insurance for Berlin against an all-too-abrupt change of course on the part of its two allies. Ferenc Szombathelyi, chief of the Hungarian general staff, warned the Supreme National Defence Council as late as September 1943 that, despite the heavy defensive battles in which the Wehrmacht was engaged, it was still strong enough to 'inflict terrible blows on those who rebel against it. For that reason the idea that we should leave the Germans to it, even at the risk of their occupying us, is extremely dangerous'.<sup>49</sup> The danger evoked, which materialized for Hungary within half a year, was all the more serious as Berlin also held two political trump cards it could play against the rulers in Budapest and Bucharest. The first was the sizeable ethnic German minority in both countries,<sup>50</sup> which could be mobilized politically at any time. The right-wing opposition movements were the second. Although the opposition around Bela Imrédy, Ferenc Szálasi and his 'Arrow Cross' supporters in Hungary,<sup>51</sup> and Horia Sima and his 'Iron Guard' in Romania<sup>52</sup> represented no real threat to the ruling order in those countries without German support, nevertheless, in the game of power politics between the unequal Axis partners they were jokers in Germany's hand that were played more than once for disciplinary effect.<sup>53</sup>

<sup>46</sup> See *Staatsmänner und Diplomaten*, ii, docs. 29 und 36.

<sup>47</sup> Stoking those fears was a declared aim of German propaganda after Stalingrad; see *Wollt Ihr den totalen Krieg?*, 336 (12 Feb. 1943), 339 (16 Feb. 1943), and 341 (20 Feb. 1943).

<sup>48</sup> See Quinlan, *Clash over Romania*, 90–100.

<sup>49</sup> Quoted in Borus, 'Stalingrads Widerhall', 221; see also Borus, 'Die Einschätzung der Lage Deutschlands', 165 ff.

<sup>50</sup> This is true despite the fact that, in the months following Stalingrad, Budapest and Bucharest made at least half-hearted attempts to improve mutual relations; see ADAP, Series E, v, doc. 62, 122, and doc. 253, 449–50.

<sup>51</sup> With an eye to that opposition, the German envoy in Bucharest, in a telegram dated 3 Apr. 1943, called for a 'stronger gathering of national forces' to be promoted by Germany and incorporated in a 'concentration cabinet' under the leadership of Heinrich Werth, former chief of the Hungarian general staff; ADAP, Series E, v, doc. 276, 525–6. See also Nagy-Talavera, *The Green Shirts*, 186 ff., and Szöllösi-Janze, *Die Pfeilkreuzlerbewegung*, here esp. 274–82.

<sup>52</sup> On the history of those movements, see the comprehensive work by Heinen, *Die Legion 'Erzengel Michael'*.

<sup>53</sup> e.g. the diplomatic agitation and rumours relating to Horia Sima's escape from German custody; see telegram from the German envoy in Bucharest, 28 Dec. 1942, re 'expressions of opinion from the Romanian general staff', PA, R 28884, and 2 Jan. 1943, ADAP, Series E, v, doc. 4, 3–5, here 4. After he was recaptured in January 1934, Sima was transferred to Sachsenhausen concentration camp, where he remained interned in privileged conditions until the overthrow of Marshal Antonescu in August 1944, when the Germans appointed him head of a Romanian 'government-in-exile'. See also Heinen, *Die Legion 'Erzengel Michael'*, 460–1.

## 2. THE ILLUSION OF A SEPARATE PEACE

The state of the ‘Hitler coalition’ outlined above was highly unconducive to any expression within the Axis Pact of the desirability of German peace-feelers, whether to the Soviet Union or the western powers. The German government, and Hitler in particular, considered their European partners (with the exception of the Finns) more or less as a ‘bunch of cowards’,<sup>54</sup> and were at no point prepared to listen to any suggestions of a political conclusion to the war. While the dictator was still not fundamentally opposed to an ‘understanding’ with Britain, he considered it totally impossible to reach such an understanding with the government of Winston Churchill, given the Allies’ demand for unconditional surrender.<sup>55</sup> Moreover, he firmly rejected the idea of negotiating from a position of weakness, although it must have been clear to him that the time when he was in a position of strength had gone forever.<sup>56</sup>

Hitler’s rejection of putting out feelers to Moscow was even more peremptory—and by no means only after the loss of Stalingrad and the Caucasus. Even the idea of a second Brest-Litovsk peace settlement, put to Hitler by Mussolini *before* the start of the Soviet winter offensive and *before* the collapse of the Italian 8th Army on the Don—that is, for the first time on 6 November 1942 via Lt.-Gen. Enno von Rintelen, the liaison officer at the Italian HQ, and scarcely a month later via Hermann Göring—was ignored by the Führer.<sup>57</sup> On 18 December, that is, at the unfortunate moment when both the collapse of Hoth’s relief offensive and the defeat of Sixth Army became clear at Führer headquarters, foreign minister Galeazzo Ciano came to inform Hitler personally of the Duce’s view. He nevertheless brought an alternative proposal with him: should the desired political settlement with Russia ‘prove too difficult to achieve, it would be advisable in the Duce’s view to adopt a position in Russia that would allow large troop contingents to be transferred from east to west as soon as possible’.<sup>58</sup>

Hitler roundly dismissed both proposals, which Ciano had prudently formulated as vague ‘hypotheses’. The dictator’s reasoning was threefold.<sup>59</sup> First, he invoked his vain attempts in the winter of 1940/1 to divert Russia’s imperial interests from Europe to Asia, when it had become clear that Moscow’s ambitions were in reality directed at the area between Finland and the Dardanelles that was also central to Germany’s interests. Given these conflicting interests, an armistice with the Soviet Union would simply give it time to ‘regroup its forces’ and would soon impose on Germany the need for a new war in less favourable circumstances.

<sup>54</sup> Thus Goebbels, *Tagebücher*, pt. 2, vii. 168 (23 Jan. 1943).

<sup>55</sup> Ibid., ix. 582 and 586 (23 Sept. 1943). With regard to the Americans, German envoys did have discreet contacts with men close to Roosevelt (George H. Earle, Allan Dulles, and others) on Turkish and Swiss soil, but they did not go beyond sounding out each other’s views. On this, in addition to Schellenberg’s memoirs (*Aufzeichnungen*, 294–5), see above all Martin, ‘Verhandlungen über separate Friedensschlüsse’, 99–100, and Höhne, *Canaris*, 461 ff.

<sup>56</sup> Goebbels, *Tagebücher*, pt. 2, ix. 566 (23 Sept. 1943).

<sup>57</sup> Schröder, ‘Bestrebungen’, 18–19; Deakin, *The Brutal Friendship*, 61 and 141 ff.

<sup>58</sup> Minutes of the meeting between Hitler and Ciano on 18 Dec. 1942, repr. in *Staatsmänner und Diplomaten*, ii, doc. 22, 170.

<sup>59</sup> On what follows, see *ibid.* 170–4.

Second, the Führer argued that there was no line 'on which Germany and Russia could agree, given their nutritional and raw-material requirements'. Germany could not be content merely with the Baltic and Poland. Its existence, and that of other European states, depended 'on supplies from the area of Russia now occupied by the Axis, in particular oil from the Caucasus. There is no line that would give both Russia and the Axis a basis for existence in terms of coal, iron, and grain'.<sup>60</sup>

Finally, according to Hitler, military considerations also spoke against Mussolini's proposals. Given the permanent threat represented by the mere existence of the Red Army, it would be hard to withdraw significant contingents of German forces from the eastern front in the event of a political agreement with Russia, since a renewed German deployment, which would be necessary when Moscow sooner or later broke the agreement, would take no less than eight months. Not even the Luftwaffe was free for immediate deployment in the west. Its units had first to be reorganized, their crews retrained, and their equipment refurbished. Furthermore, removal of all airbases in the east was much too risky.

Hitler repeated these main arguments in different variants in the following weeks and months. In addition, sometimes in conversation with Ciano but also on other occasions, he gave further reasons for opposing a political settlement with Moscow and a withdrawal from the eastern front.<sup>61</sup> Among the more striking of these was his warning of defection by Finland and a worsening of the German position in Norway, as well as his assumption that 'even very low-key political talks with Russia' would cause the western Allies to speed up their invasion preparations and 'take massive reckless action against the Axis'.<sup>62</sup> But even the idea of an East Wall that would bring Soviet attacks to a standstill seemed to the dictator 'pure theory, since in winter any East Wall, even if equipped with the largest tank-traps, would be covered in snow and ice and thus cease to exist as a barrier'.<sup>63</sup>

<sup>60</sup> ibid. 171–2; similarly to Goebbels on 23 Sept. 1943 (see Goebbels, *Tagebücher*, pt. 2, ix. 582). According to American communication surveillance reports, Hitler also made Russian withdrawal from the Ukraine a precondition for peace with the Soviet Union at a meeting with Oshima on 29 July 1943. Both Weizsäcker and Ribbentrop had already expressed themselves in similar terms to the Japanese ambassador in November and December 1942 respectively, when there was also talk of a transfer of the Caucasus area and of arms limitations on Russia. As late as January 1944 Japan attempted to persuade Germany to give up its demand for withdrawal from the Ukraine. On this, see Krebs, 'Japanische Vermittlungsversuche', 249 and 261; Martin, *Deutschland und Japan*, 188.

<sup>61</sup> The demand for unconditional surrender raised by the western powers in Casablanca played practically no part in the reasons for continuing the war which Hitler propounded during those months. According to Warlimont, 'by all accounts, it was virtually ignored at that time inside German headquarters' (Warlimont, *Im Hauptquartier*, 333). Goebbels too gave it barely more than a passing mention; see Goebbels, *Tagebücher*, pt. 2, vii. 208 ff. (28 Jan. 1943), and *Wollt Ihr den totalen Krieg?*, 327 ff. (27 and 28 Jan. 1943). This suggests that the importance attributed by contemporary observers and historians to the formulation 'unconditional surrender' as a reason for the uncompromising continuation of the war (see the many examples in the otherwise uncritical work by Armstrong, *Unconditional Surrender*, ch. 3) is considerably exaggerated, at least with respect to the period under consideration here. See also Kettenacker, 'Unconditional Surrender'.

<sup>62</sup> Thus to Ciano on 18 Dec. 1942 in *Staatsmänner und Diplomaten*, ii. 173.

<sup>63</sup> Thus in conversation with Horthy on 16 Apr. 1943; see ibid. 236. Despite this, planning for construction of the 'Ostwall' was started after the failure of Operation CITADEL.

The Japanese peace initiatives, whose beginnings went back to the first months of the German–Soviet conflict,<sup>64</sup> fared no better than those of Italy. From the beginning of October 1941, despite differences of opinion within the Japanese leadership,<sup>65</sup> the German Axis partner received repeated signals from Tokyo that it considered a political settlement of the war against the Soviet Union desirable since it would clear the way for a transcontinental coalition war against the Anglo-American powers, and that Japan was prepared to act as a mediator for that purpose. These recommendations brought no reaction at first. They were repeated in the spring of 1942 and firmly rejected, but that did not permanently deter Tokyo from continuing its diplomatic efforts.<sup>66</sup>

On the contrary: not only the military news from Europe, but above all the reports from the Japanese ambassador in Kuibyshev—who was becoming progressively more influential than Hiroshi Oshima, his counterpart in Berlin—gave the impression that the Soviet Union was increasingly gaining the upper hand.<sup>67</sup> This caused considerable concern in Tokyo and strengthened Japan's efforts to consolidate its neutrality.<sup>68</sup> Given this background, it is not surprising that Hitler's demand, in the final phase of the Stalingrad disaster, for a Japanese relief offensive against the Soviet Union<sup>69</sup> was rejected by Japan.<sup>70</sup> Instead, in the following months Tokyo continued to offer its good offices for the establishment of communication between Berlin and Moscow.<sup>71</sup> Hitler's counter-proposal of a renewed German offensive in the east<sup>72</sup> not only failed to dispel Japan's concern but was interpreted in Tokyo, given its rather sceptical view of Germany's situation on the eastern front, as a dangerous erosion of forces.<sup>73</sup>

The fact that it was mainly Italy and Japan who were pressing for a diplomatic settlement of the German–Soviet conflict was no coincidence. On the contrary,

<sup>64</sup> On Japanese mediation efforts, see above all Martin, *Deutschland und Japan*, 110 ff. and 172 ff.; Schröder, 'Bestrebungen', 8 ff.; and finally, with regard to the Japanese sources, Krebs, 'Japanische Vermittlungsversuche'.

<sup>65</sup> Krebs, 'Japanische Vermittlungsversuche', 242, and id., 'Japan und der deutsch-sowjetische Krieg 1941', 575 ff.

<sup>66</sup> Schröder, 'Bestrebungen', 8 ff.

<sup>67</sup> A typical example is the assessment of Russian military strength by the Japanese naval attaché in Kuibyshev, appendix to B. No. 1. Skl I Op. a 13879/43 g.Kdos., 12 May 1943, BA-MA RW 4/v. 886. See also Krebs, 'Japanische Vermittlungsversuche', 254–5.

<sup>68</sup> FHO (IIa), briefing note *re* Russia–Japan relations, 14 Mar. 1943, BA-MA RH 3/1481; telegram from German ambassador in Tokyo No. 1296, 24 Apr. 1943, PA, R 29 721. See also the instructive memoirs of the Japanese foreign minister, Shigemitsu Mamoru, *Japan and Her Destiny*, 295–6.

<sup>69</sup> ADAP, Series E, v. doc. 145, 255–62. On the typically uncoordinated steps taken by Hitler and Ribbentrop in this matter, see also Schröder, 'Bestrebungen', 15–16.

<sup>70</sup> ADAP, Series E, v. doc. 188, 362–8.

<sup>71</sup> The Japanese naval command, in accordance with the German naval attaché, Adm. Paul Wenneker, was also active along these lines. As shown by a letter from Skl (1/Skl 1144/43 g.Kdos. Chefs) to OKW/WFSt, 17 Apr. 1943 (BA-MA RM 7/254), these signals certainly reached the OKW Operations Staff and did not, as Krebs assumes ('Japanische Vermittlungsversuche', 256), get stuck in the naval agencies concerned. See also Martin, *Deutschland und Japan*, 172 ff.

<sup>72</sup> See his letter to Mussolini, 16 Feb. 1943 (ADAP, Series E, v. doc. 135, 227–36), the content of which Rome conveyed to the Japanese.

<sup>73</sup> Krebs, 'Japanische Vermittlungsversuche', 252.

it reflected a fundamental similarity in the strategic interests of the two countries.<sup>74</sup> For them the enemy was Anglo-American sea power, not the continental land power of the Soviet Union, and the most important European theatre of war was not eastern Europe but the Mediterranean. Like Mussolini, the Japanese leadership saw an urgent need to 'transfer the German centre of gravity to the western Mediterranean'. Consolidation of the Tunis bridgehead should be the basis for 'a subsequent concentrated attack on Anglo-American forces in Algiers'.<sup>75</sup> Like the failure of the German–Italian plans regarding Malta,<sup>76</sup> the Tunis operation was also judged extremely seriously in Tokyo because of the possible repercussions in the Asian theatre of operations, since it opened up for the Allies a practically unimpeded passage through the Mediterranean and an overland route from Casablanca via Suez and Basra for supplying the Burma front.<sup>77</sup> In Japanese general staff circles it was suspected that, notwithstanding the 'no separate peace' agreement in force since December 1941, this increased the risk of a German–British settlement, since Germany's position in the Mediterranean had been weakened but it still held a number of cards in its hand. Moreover, a peace settlement with Britain would give Hitler better prospects for continuing his war against Russia.<sup>78</sup> By contrast, a separate peace between Berlin and Moscow would not only secure the desired concentration of German military efforts against the Anglo-American enemy, but would also, given favourable circumstances, open up the possibility of forming a transcontinental block together with the Soviet Union against the western powers.<sup>79</sup>

Quite obviously, these strategic concerns of the Japanese partner, like those of Italy, differed fundamentally from Hitler's strategic interests. And this fundamental difference must have contributed significantly to the failure of the various peace initiatives of both those countries. From the viewpoint of both Rome and Tokyo, a peace settlement in the east should serve to intensify the war against the western powers. That, however, was a war which Hitler had never seen as his own but had always regarded as forced upon him, a war which Germany, because of its geographical position, would be able to wage in the long term only with the support of an eastern empire (Ukraine and the Caucasus) rich in food produce and raw

<sup>74</sup> Amt Ausl./Abwehr, briefing note *re* Japanese assessment of the military situation, 2 Jan. 1943, BA-MA RM 7/254.

<sup>75</sup> Mil.Att. Tokio, Meldung No. 67/43 g.Kdos.Chefs., 14 Apr. 1943, BA-MA RH 2/755. The Japanese general staff accordingly called for rapid establishment of a German military presence in Spanish Morocco, the Balearics, and Spain, for the capture of Gibraltar, and for a strong airbase to be established in the area by transferring half of the Luftwaffe forces deployed on the eastern front (see further Martin, 'Japan und Stalingrad', 239 ff.). The opposition of these strategic concerns to those of the Reich thus came sharply to the fore, and the reaction of the general staff in Tokyo to the news of plans for a new German offensive in the east was decidedly negative. According to a report from the German military attaché dated 27 Apr. 1943, the Japanese military leadership feared 'resounding consequences for the whole Mediterranean region' (BA-MA RH 2/5222, fos. 90–1).

<sup>76</sup> Skl, 'Niederschrift über die Besprechung beim Chef des Stabes der Seekriegsleitung am 22.1.1943', BA-MA RM 7/254. On the Malta plans themselves, see Reuth, *Entscheidung im Mittelmeer*, 135 ff., and, with a somewhat different emphasis, *Germany and the Second World War*, vi. 654–60.

<sup>77</sup> FS Marineatt. Tokio to OKM, 14 May 1943, BA-MA RM 7/254, fos. 124–5.

<sup>79</sup> Ibid. 255.

materials. To give way to the urgings of his Axis partners would, from the German dictator's viewpoint, have meant nothing else than a return to the war of false fronts which had supposedly been forced on Germany in 1939, and whose direction had been corrected only in June 1941 by the attack on the Soviet Union.<sup>80</sup>

So were all efforts at a separate peace hopeless from the outset? Given the unequivocal nature of the German sources, this question can hardly be answered in the negative. Nevertheless, a positive answer must be subject to certain qualifications, which we shall now briefly indicate. The first is that an interpretation of the *Soviet* attitude to the peace question based on a wide range of sources remains impossible to this day.<sup>81</sup> Nevertheless, a number of circumstances give reason to believe that, in the months between the battles of Stalingrad and Kursk, Moscow might have been interested in peace-feelers to Germany. The fact that such feelers might have been seen as a means of exerting pressure on the western powers and persuading them to make political concessions and intensify their military efforts is not the only reason for such a belief. The military superiority proven by Stalingrad, in conjunction with the realization—confirmed by Manstein's defensive successes in the east and the repeated postponement of the Allied invasion in the west—that the Red Army's road to Berlin would be long and bloody, could have been sufficient motives for Stalin, especially as he must have feared that a victory which sapped Russia's strength would ultimately benefit the western powers most of all.<sup>82</sup>

In the case of Hitler's attitude, however, things were also not quite as clear-cut as they seem. In particular, one should not attach too much significance to the brusqueness with which Hitler, in his political negotiations with foreign statesmen, swept the peace issue off the table. Verbal tactics, whereby wavering allies can be influenced only by firmness, played a part in this, as did the dictator's concern about the uncontrollable dynamics by which even the smallest signals were picked up and processed in the rumour mill of international diplomacy.<sup>83</sup> While his

<sup>80</sup> See Hillgruber, *Der Zweite Weltkrieg*, 43 ff.; Förster, 'Hitlers Wendung nach Osten'.

<sup>81</sup> The subject was completely taboo in Soviet historiography and is still difficult to work on because of the competent Moscow archive's decidedly restrictive attitude, even to Russian historians. The recent Russian publication on the subject by Sokolov and Fetisov, 'Byl i nebyl', is also disappointing.

<sup>82</sup> How strong Moscow's interest in a separate peace with Berlin actually was is still a matter of dispute. That it existed—at least in the period under discussion, between Stalingrad and the Teheran Conference—is argued plausibly by Fischer, *Sowjetische Deutschlandpolitik*, 38 and 45, Martin, 'Deutsch-sowjetische Sondierungen', and Weinberg, *A World at Arms*, here esp. 609 ff. and 655–6. The opposite view is taken by Fleischhauer, *Die Chance des Sonderfriedens*, 285, and Einsiedel, 'Bridge mit Madame Kollontaj'. On the basis of an analysis of documents in the archives of the Russian foreign ministry which they do not otherwise identify, Sokolov and Fetisov permit themselves the following conclusion: 'Thus we can state today, in all certainty, that no discussions about a separate peace, nor any kind of contacts with Germans, were conducted by Soviet diplomats in Stockholm [...] The psychology of the Soviet diplomats of the time was wonderfully expressed by A.M. Kollontaj when she stressed that without an order from the centre—and no such order ever existed—she would never have taken such a step' (Sokolov and Fetisov, 'Byl i nebyl', 137).

<sup>83</sup> Goebbels' observation of 6 Feb. 1943 (*Tagebücher*, pt. 2, vii. 270), that 'the question of the supposed peace-feelers [...] is now being aired with exceptional force in neutral and, above all, enemy countries by our side too', is confirmed impressively by reports from German diplomatic representatives; see the numerous examples in PA R 29 721, and Deutsches Zentralarchiv, AA/Polit. Abt. 'Friedensfrage', i.

comments on the peace issue in one-to-one conversations with Goebbels were also dismissive, they were nevertheless noticeably more conciliatory and less dogmatic than on other occasions. If the testimony of the propaganda minister is to be believed, Hitler showed himself ‘more ready to negotiate’ with Stalin than with Churchill, but did not rule out talks with the latter on principle, since ‘no political principles apply in matters of personality’. The Führer remained convinced that ‘conservative England’ would ‘rather end the war today than tomorrow’—a war in which ‘the English people take as little pleasure as the Germans’—and that, once peace was concluded, ‘they will not take up arms again in the next twenty years’. What is more, Hitler saw ‘some chance of a political review’ in the autumn, if ‘calm had been restored on the fronts’.<sup>84</sup>

If we are to assume, as already argued, that Hitler’s psychological make-up was not characterized solely by irrational wishful thinking but that he was fully open to rational strategic considerations, then we must ask whether the causes of the complete failure of all efforts for a separate peace are really to be found only in the dictator’s personality. This question arises not *although* but *because* Hitler himself was the decisive obstacle to the initiation of diplomatic feelers going beyond purely conspiratorial attempts at contact.<sup>85</sup> Not only was the usefulness of such feelers pointed out by almost all of Germany’s Axis partners—it was recognized by many, perhaps even most, of the politicians, officials, and military officers in the Führer’s inner and outer circle.<sup>86</sup> The civilians known to have spoken internally in favour of a political exit from the war—whether by agreement with the western powers or together with Moscow—include, in addition to foreign minister Joachim von Ribbentrop and his state secretary Count Ernst von Weizsäcker,<sup>87</sup> above all Fritz Todt, Reich minister for armament and munitions, Goebbels, Bormann, and

<sup>84</sup> All quotations from Goebbels, *Tagebücher*, pt. 2, ix. 582 and 586 (23 Sept. 1943). Admittedly, the authenticity of these statements by Hitler, made only after the failure of Operation CITADEL, cannot be considered entirely certain. Nor can it be ruled out that Goebbels embellished the Führer’s comments in line with his own views, or that Hitler chose his words ‘*ad usum delphini*’, i.e. to appease his political *compagnon de route*, who had different views on the peace issue. Be that as it may, Goebbels’ observations are confirmed by Ribbentrop’s testimony to the Nuremberg Military Tribunal on 30 Mar. 1946, according to which Hitler, after the collapse of Italy, was ‘resolved on such a peace [with Moscow] and was already sketching out a possible common demarcation line’, IMT, x. 338–9. The foreign minister’s memoirs read similarly: Ribbentrop, *Zwischen London und Moskau*, 264.

<sup>85</sup> Mention should be made, first and foremost, of the Stockholm contacts of counter-intelligence agent Edgar Klaus. Because of the long-overrated memoirs (*Zwischen Hitler und Stalin*) of Peter Kleist, an SS Standartenführer and diplomat who was also involved, it was only in recent years that these contacts were reassessed and their significance greatly diminished; see in particular the meticulous, though not entirely convincing, analysis by Fleischhauer, *Die Chance des Sonderfriedens* (here esp. 114 ff.), and, with a different emphasis, Martin, ‘Deutsch-sowjetische Sondierungen’.

<sup>86</sup> According to Weizsäcker, *Die Weizsäcker-Papiere*, 321 (4 Feb. 1943), ‘thinking Germans, too, held different views as to whether there was any need at all for us to wage war on Russia’.

<sup>87</sup> Ribbentrop, *Zwischen London und Moskau*, 260 ff., even claimed to have sent the Führer a memorandum to that effect via the diplomatic envoy Walther Hewel. See also Goebbels, *Tagebücher 1945*, 118 (5 Mar. 1945); Fleischhauer, *Die Chance des Sonderfriedens*, 111 and 313, n. 103; and, less informative, Bloch, *Ribbentrop*, 361–2, as well as the irritatingly vacuous Weitz, *Hitler’s Diplomat*, 302. What is certain is that Ribbentrop covered discreet contacts between his envoys and the Allies; in this connection, see also Hesse, *Das Spiel um Deutschland*, 314 ff. On Weizsäcker’s attitude, see further Chapter I.3.

even Himmler.<sup>88</sup> As for the generals, some, like Erhard Milch<sup>89</sup> and Friedrich Fromm,<sup>90</sup> Erich Fellgiebel and Wilhelm Canaris,<sup>91</sup> later also Gerd von Rundstedt<sup>92</sup> and Erwin Rommel,<sup>93</sup> took initiatives on the peace issue, though no one from the close circle of Hitler's operations advisers. Nevertheless, given the disillusionment as to Germany's remaining chances of 'final victory' which was perceptible precisely among the military leadership after Stalingrad,<sup>94</sup> we are entitled to conclude that a political initiative would have been welcomed with great relief.<sup>95</sup>

In these circumstances it is noteworthy that Hitler was not subjected to any significant pressure on the peace issue, either from within Germany or from outside. In the case of the rather loose relationship with Japan, which was based on the principle of mutual non-interference, this may be seen as understandable, and Tokyo's policy of repeated reminders as 'decidedly un-Asiatic directness'.<sup>96</sup> All the same, closer coordination of Japan's diplomatic initiatives with the government in Rome would have made sense in view of the two countries' basically similar strategic interests,<sup>97</sup> but no efforts to achieve such coordination seem to have been made by the Italian side either. Rather, Italy avoided putting its powerful German partner under pressure. Not being prepared to call the alliance with Hitler seriously into question, the Duce could bring himself only to present Berlin with vague suggestions and 'hypotheses'. As the failure of his own imperial policy became apparent, Mussolini shied away from threatening a change of course in his alliance policy, which might have had some effect at least until the Allies proclaimed their

<sup>88</sup> In the case of Todt, the sources are not entirely unequivocal; see most recently Kroener, 'Zwischen Blitzsieg und Verhandlungsfrieden', 354. In the case of Goebbels, considerations in favour of a political conclusion to the war are already perceptible in July 1942 (see ADAP, Series E, iii, doc. 138, 237; also Heiber, *Goebbels*, 368). On Bormann's pessimistic assessment of the war situation after Stalingrad, see Bormann, *The Bormann Letters*, 6–7; on Himmler's attitude, see Schellenberg, *Aufzeichnungen*, 278 ff.

<sup>89</sup> See the discussion, based on Milch's own testimony, in Toland, *Adolf Hitler*, 736; also Speer, *Erinnerungen*, 229.

<sup>90</sup> See Kroener, *Der starke Mann im Heimatkriegsgebiet*, 409 ff. and 457 ff., and id., 'Zwischen Blitzsieg und Verhandlungsfrieden'.

<sup>91</sup> See Höhne, *Canaris*, 456 ff. and 460 ff. A denunciation of which Fellgiebel, chief of the intelligence troops, was the victim in early 1943 sheds light on his attitude; on this, see, *inter alia*, a letter from A. Teme to SS-Sturmbannführer G. d'Alquen, 22 Apr. 1942, IfZ, MA 297/2573659. I am grateful to Doron Arazi for drawing my attention to these proceedings.

<sup>92</sup> See the description of Rundstedt in Speidel, *Aus unserer Zeit*, 173–4.

<sup>93</sup> See ibid. 162 and 169; Irving, *Trail of the Fox*, 283, 371 and 375; Reuth, *Erwin Rommel*, 49 ff.

<sup>94</sup> According to Hassell, *Vom andern Deutschland*, 347 (14 Feb. 1943), 'the generals are finally also waking up and realizing what the Wehrmacht has been brought to, and what Germany itself is being brought to'.

<sup>95</sup> According to an SD report on public opinion in May 1943, 'in certain strata (industry, the intelligentsia, part of the middle classes, officers in homeland agencies) people are counting only on a "compromise peace"' (*Meldungen aus dem Reich*, xiii. 5215, 6 May 1943). See also the diary entries in Engel, *Heeresadjutant*, 144–5, Feb. 1943; Sodenstern, 'Der "Feldherr" Adolf Hitler', 70, BA-MA N 594/9; and Heusinger, *Befehl im Widerstreit*, 247 ff. The fact that the chief of the OKH operations division thought an understanding was possible not with Britain but with Russia can be seen from a private letter from Heusinger to his wife, dated 22 May 1943 (copy in the author's possession).

<sup>96</sup> Thus Martin, 'Die politischen Rückwirkungen', 193.

<sup>97</sup> In fact, Rome and Tokyo had no more than a loose understanding on the matter. On the reasons, see ibid. 196.

Casablanca ultimatum.<sup>98</sup> A personal discussion of the peace issue between the two dictators finally took place only in the second week of April, five months after Mussolini's first initiative on the matter—thus much too late to make any fundamental difference to the course of events. Buoyed up by the successful restabilization of the eastern front and the start of preparations for Operation CITADEL, Hitler seems to have had no problem bringing the physically and mentally stricken Duce 'firmly back into line'.<sup>99</sup>

While the peace issue had still figured on the agenda in Germany's negotiations with foreign countries, in internal briefings and situation reviews at Hitler's headquarters it was clearly taboo and was mentioned neither by civilian or military participants. Memoranda on the subject from individuals, such as Fromm or Ribbentrop,<sup>100</sup> disappeared without trace. Spoken references to the issue were made, if at all, only in one-to-one conversations.<sup>101</sup> Even the chief of the Army General Staff seems to have been wholly in the dark about a possible political solution to the conflict. He does not appear to have raised it himself nor, as Hitler's military adviser—his closest military adviser on the war in the east!—does he ever appear to have been confronted with it. As Zeitzler admitted years later, 'Hitler never mentioned to me Mussolini's suggestion of coming to an agreement with Stalin. Indeed, he did everything to keep it from me. I heard of it only after the war.'<sup>102</sup>

And herein lies what was so extraordinary and so characteristic of the National Socialist Führer state: the option of a political conclusion to the war was discarded *without* ever being discussed in the leading circles of the Party, state, and armed forces. What is more—since there was no autonomous leadership of the Wehrmacht, the daily situation conferences were confined to operational issues, and no meetings of either the cabinet or the Council of Ministers for Defence of the Reich took place. In the second half of the war there no longer existed a forum competent to deal with what was perhaps the most important issue for the survival of the regime and the very existence of the Reich. Instead, a process in which the old centres of power had largely dried up and been overgrown by new structures had resulted in a fragmentation of remits such that each was responsible for something, many for the same thing, but no one—except Hitler himself—for the whole. In this situation it would have required a united front of leading personalities, acting in concert and deliberately overstepping

<sup>98</sup> See Schröder, Italiens *Kriegsaustritt*, 47–8. German circles that were counting on a political termination of the war also seemed to have placed hopes in Mussolini during that period, expecting him to push strongly for a separate peace in the east; see Deakin, *The Brutal Friendship*, 245 ff.

<sup>99</sup> Goebbels, *Tagebücher*, pt. 2, viii, 225 (7 May 1943). Hitler's impression that Mussolini, on his arrival in Salzburg, was 'a broken old man' is confirmed by Junge, 'Ostfeldzüge', ch. 8, 36, MGFA M 16/1. No official minutes of the German–Italian talks held at Klessheim Castle from 8 to 10 Apr. 1943 are known to us, but their content can be deduced from numerous indirect sources (see Schröder, 'Bestrebungen', 40, n. 58). Later, at the dictators' meeting in Feltre on 19 July 1943, Mussolini no longer brought up the question of a separate peace.

<sup>100</sup> See Ribbentrop, *Zwischen London und Moskau*, 264; Kroener, *Der starke Mann im Heimatkriegsgebiet*, 409 ff.

<sup>101</sup> As in the above-mentioned cases of Goebbels, Ribbentrop, und Milch.

<sup>102</sup> Letter from Zeitzler, 14 Jan. 1954, replying to questions from Heinrici, BA-MA N 63/15, 8.

their remits, to force the Führer into political settlement of a conflict that could no longer be resolved by military means. If virtually all the conditions for such concerted action were lacking in 1943, it was not only because rivalry and mistrust among the leadership were too great and the commanders-in-chief at the front were light years removed from the centre of power and totally absorbed by the problems confronting them on the spot. Rather, it now also became apparent that those leading personalities who possessed the independence of mind necessary for such action had long since been forced from positions of responsibility, taken the path of resistance, or, for the most part, simply resigned themselves to the situation.

On 20 April 1943, Hitler's fifty-fourth birthday, one of the most clear-sighted leaders of the conservative resistance noted that the longer the war lasted, the worse his opinion of the generals: 'They have technical ability and physical courage, certainly, but little civil courage, no overall understanding or world view, and no inner independence of mind or power of resistance based on real culture, which is why they are entirely subservient and given over to a man like Hitler.'<sup>103</sup> And so, despite a war situation that was both politically and strategically hopeless, the way was clear for a new—and last—military offensive in the east.

<sup>103</sup> Hassell, *Vom andern Deutschland*, 360 (20 Apr. 1943).

# III. The Genesis of the Battle of Kursk

## 1. BASIC CONSIDERATIONS

The starting point for consideration of the basic principles that should apply to the further conduct of the war in the east in the spring of 1943 was the realization, shared by Hitler, the OKW Operations Staff, and the Army General Staff, that for the foreseeable future Germany was condemned to strategic defence, and that a further, third campaign against the Soviet Union was, for the time being, beyond its capabilities. On his first visit to Army Group South HQ in Zaporozhye on 18 February 1943, Hitler left no doubt in the matter, stating that he was ‘unable to undertake any large-scale operations this year’ but ‘only small forays’.<sup>1</sup> On his second visit, barely four weeks later, he expressed himself in similar terms.<sup>2</sup> This realization of the need to move onto the defensive would have been appropriate a year earlier, but at that time it was prevented by overestimation of Germany’s own strength, underestimation of Soviet endurance, and not least the hope that the United States’ relative lag in arms production and mobilization would give Germany a further breathing space in which to conclude the war in the east victoriously before establishing a second land front in Europe. That was all out of the question now. The psychological shock of Stalingrad had boosted willingness to recognize the limits of Germany’s offensive strength just as thoroughly as it had demolished the expectation, which was already becoming increasingly shaky in the second half of 1942, of a rapid collapse of the Red Army. Meanwhile, the western Allies’ successful seizure of the African forefield of ‘Fortress Europe’ signalled the end of the time frame in which it would still have been possible to place the centre of gravity of the German war effort in the east.

All this bitter experience led the German leadership to the realization that defensive conduct of the war was, by and large, inevitable. Hitler, however, was by no means ready for large-scale retreat in the east. For him it was impossible both psychologically and for reasons of alliance policy, but above all on war-economy grounds. To give up the Donets Basin, from which the Soviet Union had derived a quarter of its steel production, seemed to him ‘untenable’ from the outset, since ‘the enemy would also be too strong materially’. Furthermore, control of that area was essential for the maintenance of Germany’s own armament ‘at its present level’. And, not least of all, Donets steel was the raw-material precondition for defence

<sup>1</sup> Quoted in Schwarz, *Die Stabilisierung der Ostfront*, 255 (Appendix C1).

<sup>2</sup> H.Gr. Süd/Ia, KTB, 11 Mar. 1943, 1091 (reverse side), BA-MA RH 19 VI/41.

against Allied air attacks in the west. Hitler considered the Stalino coalfield, the Zaporozhye hydroelectric plant,<sup>3</sup> and the manganese deposits in the Nikopol area<sup>4</sup> ('they cover our manganese requirements for more than 500 years!') of decisive importance. Loss of the ore output alone, he warned his generals, 'would mean the end of the war'.<sup>5</sup>

It is clear from the assessments outlined above that, for the German leadership in 1943, no withdrawal or offensive operations of *strategic* significance were on the table. With regard to operational planning for the German offensive against the Kursk salient (code-name CITADEL), this means that less importance was attached to it from the outset than is suggested by epithets like 'the greatest tank battle in history', which were subsequently commonly ascribed to it in the literature.<sup>6</sup> In terms of its objective and the resources invested in it, CITADEL was not an undertaking comparable to the previous year's Operation BLUE, let alone Operation BARBAROSSA in 1941. It was intended not as an offensive campaign of strategic proportions but as a 'limited offensive'<sup>7</sup> of purely operational importance. Its main purpose was to 'retain the initiative' while conserving Germany's own scarce manpower reserves.<sup>8</sup>

While the planned operation was thus similar to the attacks carried out in the spring of 1942 on a smaller scale in the Crimea and on a larger scale in the Kharkov–Izum area,<sup>9</sup> it nevertheless differed from them in that CITADEL was not intended to serve in the preparation of a strategic offensive comparable to Operation BLUE. In 1943 concrete plans for such an operation simply did not exist. As Goebbels noted ten days before the attack began, the Führer was 'in essence, determined to persist. He wants to make some important adjustments in the coming weeks and deal the Bolsheviks a couple of blows that will cost them a few armies, not to say a whole army group'.<sup>10</sup>

<sup>3</sup> The Dnieper power plant, which had a continuous output of around 100,000 kW in peacetime, had been largely destroyed during the Red Army's retreat and had resumed production only in January 1943, after costly reconstruction; see *Die deutsche Wirtschaftspolitik*, 233. The strongest support for Hitler's position came in a statement by the chief of the OKW war economy staff (foreign countries), 31 Mar. 1943, that 'the loss of Zaporozhye means not only the loss of the war-economy resources of the area east of the Dnieper, but those of the area west of the Dnieper also', BA-MA RH 2/2344.

<sup>4</sup> Although in 1942 Nikopol produced only about a half of the Soviet pre-war output, that amount more than covered the whole of Germany's manganese requirements; see *Die deutsche Wirtschaftspolitik*, 233–4, and Eichholtz, *Geschichte der deutschen Kriegswirtschaft*, ii. 470.

<sup>5</sup> All quotations from H.Gr. Süd/Ia, KTB, 11 Mar. 1943, 1091–2 (reverse side), BA-MA RH 19 VI/41. Hitler had already expressed himself in similar terms on 18 Feb. 1943 (see Schwarz, *Die Stabilisierung der Ostfront*, 255, Appendix C1) and during the midday situation conference on 1 Feb. 1943 (*Hitlers Lagebesprechungen*, 122).

<sup>7</sup> Quoted in Goebbels, *Tagebücher*, pt. 2, viii. 225 (7 May 1943).

<sup>8</sup> H.Gr. Süd/Ia, KTB, 11 Mar. 1943, 1091 (reverse side), BA-MA RH 19 VI/41. See also 'Die Vernehmung von Generaloberst Jodl', here 540.

<sup>9</sup> See *Germany and the Second World War*, vi. 929–54.

<sup>10</sup> Goebbels, *Tagebücher*, pt. 2, viii. 531 (25 June 1943).

There was something to be said for such an approach, which was strikingly similar to that of Stalin a year earlier.<sup>11</sup> For if, in the course of an attack designed to straighten the front, Germany succeeded in weakening the Red Army to such an extent that it was no longer capable of a decisive summer campaign, that would serve, all the better, the main purpose of strategic defence, which was to conserve Germany's own strength. The condition for such success was to avoid excessive losses by its own attacking units while leaving the enemy no chance to escape destruction by means of timely retreat or deeply staggered defence.<sup>12</sup>

But that was precisely where the problem lay, as soon became apparent. Basic consensus on the need for a limited offensive in the context of a strategic defensive objective was one thing, whereas agreement on the place and timing of the planned operation, and the resources to be devoted to it, was quite another. These latter questions were the subject of serious divergences among the competent operations staffs throughout the first half of 1943—divergences which are all the more difficult to reconstruct as, after its failure, the Kursk operation confirmed the adage that victories have many fathers but defeats are orphans. As in the case of Operation BLUE, the German generals who survived the war (and controlled the military historiography of the early post-war period) denied all responsibility for the planning of CITADEL.<sup>13</sup> Zeitzler, for example, stated categorically as late as 1960: 'It was undoubtedly Hitler himself. He was determined to go ahead with the offensive on political grounds and for reasons of prestige, although it was operationally unjustified.'<sup>14</sup> This statement is correct insofar as the dictator's decision to launch the Kursk offensive was taken not only on operational grounds but was, as we have seen, also guided by strategic—especially war-economy and political—considerations<sup>15</sup> for which his military advisers showed little indulgence. As on previous occasions,<sup>16</sup> it again became apparent that the Führer, who alone had overall responsibility, and the military men, who were responsible only for specific departmental issues, theatres of operations, or sectors of the front, reasoned on completely different levels. This increased the dictator's de facto freedom of action (which was anyway unlimited *de jure*) and made his decisions difficult to contest, since he was always able to counter the unwelcome contrary views of military experts with political or strategic arguments.<sup>17</sup>

<sup>11</sup> See Zhukov, *Erinnerungen*, 356 ff.

<sup>12</sup> Zeitzler, 'Abwehrschlachten', 57–8, BA-MA N 63/80.

<sup>13</sup> Unfortunately, the otherwise so thorough work by Klink, *Das Gesetz des Handelns*, pays as little attention to this aspect as does Zins, *Die Operation Zitadelle*.

<sup>14</sup> Zeitzler, statement of position, 17 Feb. 1960, on Ziemke's manuscript 'The German Campaign in Russia, 1942–45', ch. 4 and 5, BA-MA N 63/94.4. Heinrici also states unequivocally that the failure of CITADEL had its root cause in Hitler's operational planning (MGFA, Study T-9, 'Der Feldzug in Rußland. Ein operativer Überblick', Heinrici, Zitadelle, pt. 3, 603); for an opposing view see Töppel, 'Legendenbildung in der Geschichtsschreibung'.

<sup>15</sup> During the battle for Kharkov, Zeitzler had already pointed out to Manstein that, 'for the Führer the capture of the city is highly desirable on *political* grounds'; H.Gr. Don/Süd, KTB, ii., app., 109, telephone conversation, 7 Mar. 1943, BA-MA RH 19 VI/43.

<sup>16</sup> In this respect, matters stood similarly in the run up to Operation BLUE and during the discussion of withdrawal from Stalingrad and the Caucasus.

<sup>17</sup> See the comments on this in Stahlberg, *Die Verdammte Pflicht*, 277 (6 Feb. 1943).

A typical example was Hitler's rejection of the principle of the 'backhand blow' urged by Army Group South HQ. The basic idea of Manstein's proposal was to evade the Soviet attack on the southern wing anticipated at the end of the muddy season, which would probably be directed mainly against the Donets Basin,<sup>18</sup> 'so as to allow the enemy's attacking armies to advance westwards more or less to the Melitopol–Dnepropetrovsk line. Meanwhile, strong forces would be made ready behind the Army Group's northern wing. They would be used to defeat the anticipated enemy attack and then push south or south-west deep into the flank of the enemy armies advancing through the Donets region towards the lower Dnieper and destroy them on the coast.'<sup>19</sup> The advantage of this type of flexible conduct of operations, which, by freeing the way to the lower Dnieper, actually invited the Red Army to attack, was that it gave Germany the opportunity to launch its own attack at a time when the enemy 'had already largely committed his attacking forces and partially used them up'.<sup>20</sup> Hitler, however, was not prepared to accept the two essential preconditions for the success of the Manstein plan, which probably also had the initial support of the Army General Staff,<sup>21</sup> that is, temporary withdrawal from the Donets region and radical concentration of forces on the southern wing of the eastern front at the expense of all other front sectors and theatres of operations.<sup>22</sup> He based his position first of all on the importance of the area between the Donets and the Dnieper for the war economy, which had been strongly impressed on him once again by Speer and Paul Pleiger at a meeting on 4 February. Both had stated that without 6 to 7 million tonnes of Donets coal per year, 'no increase in armaments is possible'.<sup>23</sup> Secondly, neither Hitler nor the Army General Staff thought it possible to send Army Group South reinforcements in the numbers requested, without regard to other threatened sections of the front, such as Velikiye Luki/Pskov.<sup>24</sup>

However brilliant Manstein's ideas might have appeared from a purely operational viewpoint, Hitler's counter-arguments—given Germany's overall strategic situation and its shortage of defensive forces, plus the almost incalculable multitude of offensive options open to the Allies—were not to be rejected out of hand. Precisely on the eastern front, all the army groups were in a highly precarious situation in terms of strength at the beginning of the muddy period. If, as Foreign

<sup>18</sup> As Manstein acknowledged (*Verlorene Siege*, 477), the Red Army had other offensive options, e.g. in the Orel bulge, in the Kharkov area, or in front of the southern wing of Army Group North; see also 'Der Feldzug in Rußland', pt. 2, ch. 12, 16–17, MGFA, Study MS T-9.

<sup>19</sup> Manstein, *Verlorene Siege*, 480. <sup>20</sup> Ibid.

<sup>21</sup> 'Der Feldzug in Rußland', pt. 2, ch. 12, 17–18, MGFA, Study MS T-9.

<sup>22</sup> In a telephone conversation with Zeitzler on 8 Mar. 1943, Manstein first asked for no fewer than 16 additional divisions, a request which Zeitzler had laughed off; H.Gr. Süd/Ia, KTB, appendix, *Ferngespräche des OB*, ii. 111, BA-MA RH 19 VI/43. In his written situation analysis on the same day, Manstein still called for at least 14 infantry divisions to be made available by the beginning of May; see Schwarz, *Die Stabilisierung der Ostfront*, 225.

<sup>23</sup> Quoted in Schwarz, *Die Stabilisierung der Ostfront*, 69; see also Gibbons, 'Soviet Industry', 232 ff.

<sup>24</sup> H.Gr. Süd/Ia, KTB, 11 Mar. 1943, 1092 (reverse side), BA-MA RH 19 VI/41. In its 'assessment of the enemy situation facing the German eastern front', 19 Feb., Foreign Armies East had already pointed to the threat of a Soviet offensive in the Velikiye Luki–Pskov area, BA-MA RH 2/2047.

Armies East estimated, the Red Army had on average nearly twice as many men as Germany's eastern army, and three to four times as many cannon and tanks (see Table I.III.1. 'German estimate of relative strength on the eastern front'), then the German army leadership had practically no leeway in regard to the transfer of combat-worthy units, unless it was prepared immediately to expose whole sections

TABLE I.III.1. German estimate of relative strength on the eastern front (status: 1 April 1943)

Front section	German strength <sup>(a)</sup>			Soviet strength <sup>(a)</sup>		
	Reserves	Front-line/ near-front <sup>(b)</sup>		Front-line/ near-front <sup>(c)</sup>	Reserves	Total
Army Group A	—	8 <sup>(d)</sup>	Inf. div.	44	2	46
	—	1	Armoured units	2	7	9
	—	321,800	Troops	388,000	23,500	411,500
	—	43 (35)	Tanks	45	100	145
		581	Cannon	1,749	87	1,836
Army Group South	4 <sup>(e)</sup>	22	Inf. div.	97	43	140
	—	13	Armoured units	51	43	94
	—	548,000	Troops	1,008,000	524,500	1,532,500
	—	887 (389)	Tanks	765	655	1,420
		928	Cannon	3,799	1,815	5,614
Army Group Centre	—	70 ½	Inf. div.	152	10	162
	—	8	Armoured units	56	11	67
	—	1,221,000	Troops	1,429,000	131,000	1,560,000

	—	22	Armoured units	143	79	251 <sup>(g)</sup>
	—	2,732,000	Troops	3,992,000	730,500	5,152,000 <sup>(h)</sup>
	—	1,336 (612)	Tanks	2,755	1,085	6,040 <sup>(i)</sup>
	—	6,360	Cannon	16,646	2,582	20,683 <sup>(j)</sup>

(a) near-front strength = army group reserves; reserves = 'in-depth' reserves, army reserves; (b) figures in brackets = number of combat-ready tanks; (c) The following terms denote:

Inf. div.: German infantry divisions and Soviet rifle divisions

Armoured units: German tank divisions and Soviet tank brigades

Troops: actual strength

Tanks: incl. assault guns

Cannon: artillery;

(d) incl. units stationed in Crimea; (e) undergoing overhaul; (f) incl. 36 rifle divisions, of which the number remaining is unknown; (g) incl. 29 tank units, of which the number remaining is unknown; (h) incl. 429,500 troops, of whom the number remaining is unknown; (i) incl. 400 tanks, of which the number remaining is unknown and 1,800 tanks newly produced or transported to the troops in March 1943; (j) incl. 1,455 cannon, of which the number remaining is unknown.

of the front.<sup>25</sup> Furthermore, it was by no means certain that, at the end of the muddy season, the enemy would actually launch the offensive for which Manstein was hoping. In any case, according to Gehlen's department, 'no unequivocally clear picture' could be formed in that respect in February and March.<sup>26</sup> While the Red Army might well conduct two operations simultaneously in the southern and central or northern sectors, it was also conceivable that the Soviet leadership would remain on the defensive until the winter or until the start of a large-scale Allied landing in the west.<sup>27</sup>

Clearly, the controversies within the German leadership about rigid versus flexible defence and the effectiveness of a 'backhand' or 'forehand' offensive, which lasted throughout the first half of 1943, cannot be explained simply by stubbornness and lack of military professionalism on the part of the Wehrmacht's supreme commander. As during the leadership crises of the previous year, the lines were much less clearly drawn. There were, for example, considerable differences of view between the OKW and the OKH about the situation on the eastern front in general and the planned offensive in particular. In accordance with their different remits, the OKW Operations Staff called for the acceleration of defence preparations in western and southern Europe (which, given the shortage of reserves, was possible only at the expense of the eastern army), whereas the Army General Staff was primarily concerned to create an operational reserve in the east for defence against the threatened attacks and for the preparation of its own operations.

In this tug of war, strongly conditioned by departmental interests,<sup>28</sup> Hitler himself stood between the lines. He was inclined to leave the operational centre of gravity in the southern wing of the eastern front for the time being, so as to regain the initiative in one place at least, but he also believed he could not afford to weaken the other threatened fronts of his empire excessively or to make force reductions there at the cost of territorial losses.<sup>29</sup> No doubt Hitler's wish to do the one thing without abandoning the other was unrealistic in the given situation, but it accurately reflected the dictator's need to meet the intrinsically justified but ultimately contradictory demands of his various military operations staffs. Here, perhaps more clearly than ever, the Führer showed himself to be a prisoner of the structures he himself had created. In particular, now that far-reaching operational decisions had to be taken under unfavourable strategic conditions, the absence of a

<sup>25</sup> The best remaining way to achieve a significant saving of forces would have been to abandon entirely the 'Kuban bridgehead' on the Taman peninsula (Army Group A), where 10 German divisions were tied down in a costly war of position. The fact that Hitler shied away from such a step and was prepared to consider only a reduction of the bridgehead (which ultimately did not happen either) should be ascribed primarily to political concern about Turkish neutrality.

<sup>27</sup> Ibid.; see also Wilhelm, 'Die Prognosen der Abteilung Fremde Heere Ost', 51–2.

<sup>28</sup> See Warlimont, *Im Hauptquartier*, 347, also Zeitzler, statement of position, 17 Feb. 1960, on Ziemke's manuscript 'The German Campaign in Russia, 1942–45', chs. 4 and 5, 2 ff., BA-MA N 63/94.

<sup>29</sup> In this respect Hitler's approval of the 'Buffalo' movement (see *Germany and the Second World War*, vi. 1199) was an exception to the rule.

body of military experts with *overall* responsibility caught up with him. Unlike the Churchill government, which based its decisions on the recommendations of the Chiefs of Staff Committee, Hitler was obliged to take his decisions *alone* and in the midst of conflict between the opposing interests of various military departments. These conflicts of interest grew, and they did not make Hitler's situation any easier—by no means only because of the differing operational views, but also owing to increasingly sharp competition over remits between the Wehrmacht Operations Staff and the Army General Staff,<sup>30</sup> whose chief, Zeitzler, unlike his predecessor Col.-Gen. Franz Halder, enjoyed the unbroken trust of his Führer even after Stalingrad.<sup>31</sup> Furthermore, in the process of reaching a decision Hitler was faced time and again with the consequences of purely personal animosity and rivalry among the top generals.<sup>32</sup> In particular, in Manstein's relations with some of the front commanders subordinate to him or with whom he had to cooperate, there were complications<sup>33</sup> of which Hitler too was aware.<sup>34</sup> Even more troublesome were the dictator's own relations with the generals, about whom, as Goebbels noted with some malice, he 'had nothing positive to say' and whom he accused of 'deceiving him at every opportunity'.<sup>35</sup>

Accusations of this type, by no means entirely unjustified,<sup>36</sup> were nothing new. What distinguished the 'serious crisis of confidence'<sup>37</sup> following Stalingrad from earlier crises of a similar kind was that it was more strongly reciprocal. 'The crux of the matter', the propaganda minister noted with regard to the generals' difficult relations with the Führer, 'is that they do not believe in him'.<sup>38</sup> In substance, this judgement by Goebbels, who was meanwhile himself losing faith 'in Hitler's star and thus in his victory',<sup>39</sup> was not entirely wrong. At all events, reservations about Hitler as a military leader were more widespread after Stalingrad than ever before.

<sup>30</sup> It is significant in this respect that Zeitzler used to leave the daily situation conferences at Führer HQ before Jodl made his report; see also previous note.

<sup>31</sup> See the relevant comments by Goebbels, *Tagebücher*, pt. 2, vii. 180 (23 Jan. 1943) and 502 (9 Mar. 1943).

<sup>32</sup> e.g. the conflict between Guderian and Kluge, which went so far as a challenge to a duel, and Kluge's greatly deteriorated relationship with Model; see Guderian, *Erinnerungen eines Soldaten*, 279; Macksey, *Guderian Panzer General*, 188; Görlitz, *Model*, 120.

<sup>33</sup> e.g. with Kleist, Kluge, and Richthofen; see Stahlberg, *Die verdammte Pflicht*, 303; Richthofen, 'Tagebuch', ii. 137 (10 Mar. 1943), BA-MA N 671/10. In the difficult weeks after the failure of Operation CITADEL, the conflict between Kluge and Manstein became even sharper, as the latter openly accused Second Army HQ, which belonged to Kluge's army group, of executing the evasion manoeuvre 'too quickly', and thus of responsibility for the crisis that had arisen at the interface of the two army groups; see letter from Chef des GenSt. der H.Gr. Mitte to AOK 2, 22 Dec. 1943, Moscow Special Archive, f. 1275/op. 2/d.380.

<sup>34</sup> See accounts by Stahlberg, *Die verdammte Pflicht*, 305–6, and Richthofen, 'Tagebuch', ii. 137 (10 Mar. 1943), BA-MA N 671/10, 117 and 137.

<sup>35</sup> Goebbels, *Tagebücher*, pt. 2, vii. 503 (9 Mar. 1943); see also 514.

<sup>36</sup> There comes to mind in this connection the 'OKH position' of restraint with respect to a troop build-up recommended to the Army General Staff without Hitler's knowledge; see *Hitlers Lagebesprechungen*, 189 (ca. mid-March 1943). To what extent this concerns 'Führer Order No. 8', 5 Mar. 1943, drawn up by the operations department with reference to Hitler's recommended 'reserve positions', must remain an open question, BA-MA RW 4/v. 708.

<sup>37</sup> Goebbels, *Tagebücher*, pt. 2, vii. 453 (2 Mar. 1943).

<sup>38</sup> Ibid. 176. <sup>39</sup> Thus Speer, *Erinnerungen*, 271.

While none of the front commanders, and scarcely any other generals, saw this as sufficient reason to yield to the increasing attempts at recruitment by the military resistance circle,<sup>40</sup> the view was widespread that it was time to relieve Hitler of his military functions, which were hardly manageable any longer, and return to the principle of overall operational responsibility based on professional criteria. The main idea put forward by Manstein and others was to replace Keitel<sup>41</sup> by a chief of the Wehrmacht General Staff endowed with extensive full powers and responsible for conducting the war autonomously in the framework of general instructions from Hitler.<sup>42</sup> However overdue reform of the Wehrmacht top leadership might have been, it is hardly surprising that all efforts to convince the dictator himself of its necessity literally fell on deaf ears.<sup>43</sup> Quite apart from the resistance to such reform that was to be expected from individual components of the Wehrmacht, Hitler continued to see the liquidation of a unified Wehrmacht leadership as a major achievement and 'a considerable facilitation' of his political leadership role.<sup>44</sup>

The increased personal and institutional friction within the German leadership after the defeat at Stalingrad strengthened Hitler's existing inclination to take fundamental decisions on the basis of intuition rather than planned preparation. That in no way excluded prior consultation in a small circle—in this case, with Zeitzler in particular—but it shielded the dictator to some extent from all the information, objections, and demands with which 'the military leaders made the Führer [...] somewhat apprehensive'.<sup>45</sup> It was no accident that, during his recurrent visits to the supreme commanders of the army groups and armies, Hitler avoided any serious discussion of operational plans beyond the day ahead.<sup>46</sup> Instead of which, on 13 March 1943, only two days after his last visit to Manstein's headquarters, there appeared a Führer order prepared by the operations department of the Army General Staff, entitled Operations Order No. 5, 'on the conduct of combat operations in the coming months'.<sup>47</sup> According to that order, the purpose of the forthcoming operations was to 'lay down the law on at least one section of the front' by means of a pincer attack on the Kursk salient—after the end of the muddy

<sup>40</sup> Mention should be made, *inter alia*, of Carl Friedrich Goerdeler's visits to Kluge (late autumn of 1942) and Guderian (Apr. 1943), and of Claus Schenk von Stauffenberg's visit to Manstein (late Jan. 1943); see Guderian, *Erinnerungen eines Soldaten*, 272–3; Stahlberg, *Die verdammt Pflicht*, 262 ff.; and Aretin, 'Henning von Tresckow', 301.

<sup>41</sup> According to Goebbels (*Tagebücher*, pt. 2, vii. 507, 9 Mar. 1943), Keitel was 'not exactly in the Führer's good books' and was clearly considered 'totally useless and not to be taken seriously' (453, 2 Mar. 1943).

<sup>42</sup> See Manstein, *Verlorene Siege*, 437–8; Stahlberg, *Die verdammt Pflicht*, 278–9; Guderian, *Erinnerungen eines Soldaten*, 266–7.

<sup>43</sup> See Manstein, *Verlorene Siege*, and Schwarz, *Die Stabilisierung der Ostfront*, 49 and 70.

<sup>44</sup> File note by Rudolf Brandt (secretary of the Reich Leader SS) on a remark by the Führer to Himmler, 7 Sept. 1943, NA, Serie T-175/roll 88/... 1418).

<sup>45</sup> Goebbels, *Tagebücher*, pt. 2, vii. 166–7 (23 Jan. 1943).

<sup>46</sup> Thus Stahlberg, *Die verdammt Pflicht*, 301 and 320. Stahlberg's account is confirmed by the minutes of Hitler's visits to Army Group South on 18 Feb. and 10 Mar. 1943 (repr. in Schwarz, *Die Stabilisierung der Ostfront*, 254 ff. and 259 ff.), insofar as they too make no mention of medium- and long-term considerations.

<sup>47</sup> Repr. in Klink, *Das Gesetz des Handelns*, 277–8 (App. I, 1), from which the following quotations are taken, unless otherwise stated.

season, but if possible before the beginning of the new Soviet offensive—and then let the enemy ‘run up and bleed to death’ against a suitably expanded and strengthened German front.<sup>48</sup> In preparation for the attack, the immediate build-up of a strong armoured army on the northern wing of Army Group South was ordered, together with a corresponding offensive regrouping of Army Group Centre in the area of Second Armoured Army. The necessary forces would consist of troops obtained by reducing the Gothic head (Army Group A) and units freed by the ‘Buffalo’ movement,<sup>49</sup> which was still under way.<sup>50</sup> It was hoped that this two-pronged attack, northwards from the area of Kharkov and southwards from the Orel area, would result in the destruction of the Soviet forces arrayed against Second Army.

The idea behind what was to become Operation CITADEL, outlined in Operations Order No. 5, actually had a great deal going for it. The planned encirclement of the Kursk salient, which protruded westwards like a balcony some 120 kilometres deep and around 200 kilometres wide, promised—in addition to the destruction of the enemy units deployed there in preparation for the Soviet offensive—above all a shortening of Germany’s own front line by a good 240 kilometres. Perhaps even more important was that the Red Army would lose suitable positions for launching attacks on the flanks of the two German army groups, which would make an advance towards the Dnieper in the south and the Orel bulge in the north considerably more difficult.<sup>51</sup>

Given its obvious advantages, it is not surprising that the concept of Operation CITADEL, although it superseded alternative concepts under consideration in Army Group South HQ and elsewhere,<sup>52</sup> was at first welcomed by all the staffs involved as very promising, or at least not called into question by any of them.<sup>53</sup> Confident in the momentum gained by his own operations, but also concerned about his army group’s exposed northern flank, Manstein even argued for an immediate move against Kursk. At the beginning of March he had already instructed Fourth Armoured Army HQ (Col.-Gen. Hermann Hoth) that the Donets bridges taken undamaged must be held without fail with a view to a further operation,<sup>54</sup> and in the following weeks he lobbied for rapid exploitation of his army group’s mounting successes.<sup>55</sup>

<sup>48</sup> Only a further operation against Leningrad was envisaged ‘in the second half of the summer’ (meaning from the beginning of July), but that operation, intended mainly to keep the Finns happy, was abandoned in the light of subsequent developments. On this see the various planning documents in BA-MA RH 2/454 and 455. Ganzenmüller, *Das belagerte Leningrad*, 81–2, mentions these plans only in passing, and Glantz’s systematic descriptions of operations, *The Battle for Leningrad*, sheds light almost exclusively on the Soviet side.

<sup>49</sup> On the ‘Buffalo’ movement, i.e. the withdrawal of Fourth and Ninth Armies to the Kirov–Velizh shortened defensive line, see *Germany and the Second World War*, vi. 1199.

<sup>50</sup> In addition, orders were given to transfer several infantry divisions (15th, 38th, and 257th) from the west, as well as sections of Brandenburg Special Unit; see Klink, *Das Gesetz des Handelns*, 60.

<sup>51</sup> See also ‘Der Feldzug in Rußland’, pt. 2, ch. 12, 21–2, MGFA, Study MS T-9.

<sup>52</sup> For details see Klink, *Das Gesetz des Handelns*, 60.

<sup>53</sup> Guderian, *Erinnerungen eines Soldaten*, 282, speaks of the planned pincer attack quite self-evidently as a ‘Zeitzler plan’.

<sup>54</sup> H.Gr. Süd/Ia, app. to KTB, Ferngespräche OB, ii. 103 (1 Mar. 1943), BA-MA R 19 VI/43.

<sup>55</sup> *Germany and the Second World War*, vi. 1184–93.

'The Russians are no longer capable of much on our left flank or on the right flank of Army Group Centre', he reported to Zeitzler on 18 March. 'I believe Army Group Centre could take Kursk now without any problems.'<sup>56</sup>

If Manstein did not succeed in imposing his idea of an immediate operation against Kursk, it was not only because of the onset of the spring mud and—as Manstein saw it—the excessive passivity of Second Army and Second Armoured Army under Kluge's responsibility, but also, and above all, because of Hitler's disapproval. Concerned that the offensive army being assembled in the Kharkov area could be attacked in the rear in a push towards the south-east, Hitler now argued for the rapid establishment of a shortened defensive line from Chuguyev (south of Belgorod) to Izyum—an operation to which Manstein was prepared to agree only if security on the northern flank of his army group, where he considered there was a greater danger of enemy breakthrough, was guaranteed by units from Army Group Centre.<sup>57</sup>

Hitler, however, had already taken his decision. On 21 March he instructed Army Group South HQ to stop the intended operation in the direction of Kursk and prepare an operation towards the south-east.<sup>58</sup> The objective, as specified the following day in an addendum to Operations Order No. 5, was 'to gain a shortened Lisichansk–Kupyansk–Volchansk defensive line<sup>59</sup> and thereby secure the necessary freedom in the rear for the subsequent offensive in the direction of Kursk [i.e. Operation CITADEL].'<sup>60</sup>

The new instruction formed the basis for Operation HAWK, executed in the following weeks by Army Group South, and for a further offensive reaching further southwards, code-named PANTHER. Neither of these operations, which we shall not describe in detail here,<sup>61</sup> had an independent operational objective. They were both conceived only as preparations for CITADEL. Although they were perfectly defensible as such, they were abandoned at the end of the second week in April, and preparations for PANTHER were continued solely for the purposes of deception. It had proved impossible to make the necessary attacking forces available in time without compromising the ongoing rehabilitation. Not least of all, the decision to call off these operations was a long-overdue concession to the condition of the troops.<sup>62</sup> The relevant HQs (Army Detachment Kempf, Fourth Armoured Army) were now warning insistently against overtaxing the men. On 21 March (the day on which Zeitzler had notified Army Group South of Hitler's decision to attack across the Donets towards the east) Col.-Gen. Hoth had already informed his army group HQ that:

<sup>56</sup> Telephone conversation with Zeitzler, 18 Mar. 1943, H.Gr. Süd/Ia, app. to KTB, *Ferngespräche OB*, ii. 115 (1 Mar. 1943), BA-MA R 19 VI/43.

<sup>57</sup> Ibid. 117 (telephone conversation with Zeitzler, 31 Mar. 1943, 11.28 a.m.)

<sup>58</sup> Ibid. 118 (telephone conversation with Zeitzler, 21 Mar. 1943, 5.45 p.m.)

<sup>59</sup> In this Hitler went far beyond the Chuguyev–Izyum line he had targeted only a few days earlier!

<sup>60</sup> Addendum No. 1 to Operations Order No. 5, 22 Mar. 1943, repr. in Klink, *Das Gesetz des Handelns*, 279 (App. I, 2).

<sup>61</sup> For detailed descriptions see Klink, *Das Gesetz des Handelns*, 63 ff., and Ziemke, *Stalingrad*, 126 ff.

<sup>62</sup> According to Karl Adolf Hollidt, the average strength of his divisions on 11 Mar. 1943 was 2,000 to 2,500 men; H.Gr. Süd/Ia, KTB, 11 Mar. 1943, 1090 (reverse side), BA-MA RH 19 VI/41.

the troops, who have been in battle night and day for months without any rest, are under great strain. The latest Führer order, among other things, led them to believe there will now be a period of respite. It would be a severe disappointment for the troops if, having settled as best they can in their present positions, they now had to go into action again. A series of reports from troop commanders known to be 'daredevils' make it clear that the troops are in part apathetic, and only managed to reach the objective—the Donets—under extreme pressure from their officers. The vehicle situation was bad enough before the start of the counter-offensive, and stocks are now even lower. In the event of renewed deployment without a break, armoured divisions like the 11th and 17th, for example, as well as the Leibstandarte Adolf Hitler armoured division, would suffer so badly that in-field rehabilitation, as currently intended, would no longer be possible.<sup>63</sup>

## 2. THE CONFLICT OVER THE TIMING OF THE ATTACK

The cancellation of Operations HAWK and PANTHER would, one might have thought, have speeded up rehabilitation and deployment of the units intended for CITADEL and made possible an early start to the main operation. All parties in principle agreed that the choice of the right moment would be crucial for the success of the offensive. The weaker side—as was known at least since Clausewitz<sup>64</sup>—could gain the upper hand only by means of surprise. In the case at hand, however, surprise could only be temporal, not spatial. The benefits to be expected from an attack on the Kursk salient were so obvious, and the geographical situation of the bulge so inviting, that there were no grounds for hope that the target of the German offensive could come as a surprise to the Soviet leadership.<sup>65</sup> On the other hand, it did not seem unreasonable to suppose that an early attack, as soon as possible after the spring mud had dried, could succeed against an enemy who had not yet completed the rehabilitation of his forces and was not fully prepared for defence.<sup>66</sup>

On the basis of such considerations, the Army General Staff operations division was still assuming in March that it would launch CITADEL in the second half of April 1943.<sup>67</sup> This time frame, however, soon proved illusory. On 22 March Army Group South HQ reported that the required armoured army could be made ready in the envisaged assembly areas by mid-April as ordered, but that, because of the

<sup>63</sup> Response by C-in-C Fourth Armoured Army, 21 Mar. 1943, to an inquiry from C-in-C Army Group South, repr. in Schwarz, *Die Stabilisierung der Ostfront*, 285 (App. F).

<sup>64</sup> Clausewitz, *Vom Kriege*, 209 ff.

<sup>65</sup> So too Zeitzler, 'Abwehrschlachten', 60, BA-MA N 63/80. That the German plans were indeed no surprise for the enemy can be seen from a report by Zhukov to Stavka, 8 Apr. 1943; on this, see Shtemenko, *The Soviet General Staff at War*, i. 216–17, and Andronikov, 'Gitlerovski "fakel"', 2–3.

<sup>66</sup> See 'Der Angriff "Zitadelle" im Osten 1943', MGFA, Study T-26, 10.

<sup>67</sup> As late as 16 March 1943, Count Johann Adolf von Kielmansegg, then Ia of the Army General Staff operations division, refers in his daily schedule to 'the April operation' (doc. in private hands).

need to rehabilitate of the divisions, the army would ‘nevertheless not be operational before the beginning to middle of May’.<sup>68</sup>

The problems were even greater in the north, in the area of Col.-Gen. Walter Model’s Ninth Army, where the necessary deployment preparations were much more extensive than in the case of Manstein’s army group. Among other things, ten of the divisions released in the course of the ‘Buffalo’ movement still had to be transferred to the Orel bulge. Rail transport was needed for a total of around 300,000 troops and 1,000 tanks and assault guns, all of which had to be transferred to the northern deployment area in the shortest possible time and with maximum secrecy.<sup>69</sup>

In the opinion of the general in charge of transportation for Army Group Centre, the railway could not meet that requirement by the originally envisaged date of the attack, if only because of the limited handling capacity of the goods terminals.<sup>70</sup> In addition, there were delays due to increasing partisan activity precisely in the area of Army Group Centre.<sup>71</sup> In the period from February to June, the monthly figure for that area (with a marked upward trend) was 400 to 840 disruptions of the rail network by partisan attacks, in addition to 100 to 150 air raids per month.<sup>72</sup> Some of these attacks had very serious consequences. In March, for example, transports of Ninth Army troops between Minsk and Bryansk were interrupted for periods of five and nine days after a partisan band succeeded in blowing up two bridges over the Desna.<sup>73</sup>

In mid-April a new operations order set the earliest date for the attack at 3 May,<sup>74</sup> but because of all the above-mentioned factors—and others, including weather conditions—that date was unrealistic from the outset. Above all, Model, the commander-in-chief of Ninth Army, kept repeating, with increasing insistence, that his forces were insufficient, both numerically and in terms of mobility and training, to achieve the desired rapid breakthrough.<sup>75</sup> Nonetheless, it is questionable

<sup>68</sup> H.Gr. Süd/Ia to GenStdH/Op.Abt., 22. Mar. 1943, quoted in Klink, *Das Gesetz des Handelns*, 282 (App. I, 3).

<sup>69</sup> For details, see Gläser, ‘Die Schlacht um Kursk’, 36–7.

<sup>70</sup> Teske, ‘Die Bedeutung der Eisenbahn’, 125. In its report to the Army General Staff operations department, 24 Mar. 1943 (repr. in Klink, *Das Gesetz des Handelns*, 284–6, App. I, 4), Army Group Centre HQ still assumed it would be able to complete deployment ‘by around 1 May’.

<sup>71</sup> For details of the consequences, see Klink, *Das Gesetz des Handelns*, 127 ff., and, on the situation in Army Zone Centre, Mulligan, ‘Reckoning the Cost’.

<sup>72</sup> Teske, ‘Die Bedeutung des Eisenbahntransportwesens’, MGFA, Study D-369, 13. From July the number of partisan attacks rose to well over 1,000 per month. Given this development, the OKW Operations Staff, in a ‘report on the partisan situation in April–June 1943’, first reached the sobering conclusion that ‘pacification of the eastern area cannot be expected from our further measures’; *KTB OKW*, iii. 775 (13 July 1943).

<sup>73</sup> Teske, ‘Die Bedeutung der Eisenbahn’, 126. Whether or not the attacks in question are to be attributed to Soviet knowledge of the German deployment plans is a question that cannot be answered here with certainty. On this and subsequent cases, see also Klink, *Das Gesetz des Handelns*, 128–9.

<sup>74</sup> GenStdH/Op.Abt., Operations Order No. 6, 15 Apr. 1943, repr. in Klink, *Das Gesetz des Handelns*, 292 ff. (App. I, 6), here 293.

<sup>75</sup> In the last week of April, AOK 9 still classified only one of its 10 infantry and 6 armoured divisions as ‘fit for any offensive task’; for details, see Klink, *Das Gesetz des Handelns*, 110 ff., here esp. 113–14.

whether Model would have succeeded in imposing his views if he had not had the opportunity to put them to Hitler personally on 27 April. Clearly impressed by Model's arguments, Hitler decided to postpone CITADEL by two days, and then by a further four, until 9 May.<sup>76</sup>

The original hope of a swift victory by surprise over an unprepared enemy was thus undermined at an early stage, much to the chagrin of the Army General Staff operations division,<sup>77</sup> for reasons that had little to do with Hitler himself. Not least important in this respect was the realization, which was gaining ground from week to week, that 'the enemy has recognized the German preparations for an attack and has adopted a defensive position in line with his overall strategy', as Army Group Centre's enemy intelligence department had already suspected on 17 April,<sup>78</sup> and Foreign Armies East conjectured two weeks later in the light of 'new information, partly from a reliable source'. In this connection, Gehlen's department pointed to the 'rehabilitation of Red Army units that have been withdrawn in depth, which has been under way since March', and to the ongoing deployment of new forces opposite the northern wing of Army Group South and the southern wing of Army Group Centre. The German forces thus had to reckon with a constant increase in enemy numbers and combat strength and an even higher level of defensive preparation against possible German attacks than already existed.<sup>79</sup> According to Foreign Armies East, however, none of this meant that Germany should abandon its own offensive intentions, but only that 'the enemy is for the time being waiting to achieve his offensive objectives by means of a counter-thrust, using the reserves he is holding back'.<sup>80</sup>

In their assumption that the Red Army might have adopted the very principle of the backhand blow for which Manstein had been arguing so insistently and unsuccessfully on the German side, Gehlen's department was not far off the mark. Although the final Soviet plan of operations for the defence of the Kursk salient was not adopted officially until the beginning of June, an important preliminary decision was taken at a meeting of Stavka on 12 April, three weeks

<sup>76</sup> Ibid. 114 ff.

<sup>77</sup> See Kielmansegg, 'Bemerkungen eines Zeitzeugen', 143 ff. The fact that the OKH was pushing for acceleration of the preparations for attack is also confirmed by Weichs, 'Tagenotizen', pt. 2, fo. 143, 17 Apr. 1943, BA-MA N 19/15.

<sup>78</sup> H.Gr. Mitte/Ic, 'Befehl über die Durchführung von T-Maßnahmen für das Unternehmen "Zitadell"', 17 Apr. 1943, CAMO Podolsk, Fond 500/op. 12 454/d. 648.

<sup>79</sup> Precisely that point had been made by AOK 9's enemy intelligence department (code-named 'Gruppe Weiss') in an assessment of the enemy dated 25 Apr. 1943, which drew particular attention to the enemy's 'deep, extensively developed defensive line, [...] numerically strong artillery, strong tank defences, and strong mobile reserves'; see *ibid.*

<sup>80</sup> FHO (I, IIa), 'Assessment of enemy situation opposite the north wing of Army Group South and the south wing of Army Group Centre', 2 May 1943, BA-MA RH 2/2047. Richthofen's situation assessment deviates from the picture painted here in that he considered the enemy forces assembled at the Kursk salient front ('300,000 to 400,000 men in all') sufficient 'neither for an attack to the west or south, nor for defence against a pincer attack by strong German forces from north to south'. Nevertheless, he too thought successful destruction of the enemy forces 'questionable', since the Soviet blocking positions could hold back a German attack long enough to enable the enemy to retreat; see Chief of Air Fleet 4, 'Assessment of situation facing Air Fleet 4', 1 May 1943, BA-MA N 671/10, 118–25.

before the situation assessment by Gehlen which we have just quoted. In line with a proposal by Georgii Zhukov,<sup>81</sup> the idea of the Soviet side launching an attack of its own as quickly as possible was set aside in favour of warding off the anticipated offensive by the German enemy deployed to the north and south of Kursk, and then destroying his exhausted and decimated forces in a counter-attack supported by fresh reserves. Only then should the main thrust in the direction of Kharkov, Poltava, and Kiev begin.<sup>82</sup>

Celebrated by Soviet military history for decades as an example of superior art of war, it was only half a century after the end of the war that the Stavka decision was caught in a crossfire of criticism from a new revisionist-oriented Russian historiography.<sup>83</sup> The new studies pointed out, among other things, that the Soviet units located in the Kursk salient facing the German troops assembled in the same area had already achieved a numerical superiority of 1.8 to 1 in the first ten days of April.<sup>84</sup> Assuming that this balance of forces (which can only be conditionally verified) is by and large correct, it only confirms Model's doubts about the potential effectiveness of Operation CITADEL.

Clearly, Hitler had entertained very similar doubts even before his discussion with Model. At any rate, on 18 April he had ordered the preparation of a possible alternative operation based on the idea of carrying out, instead of the planned pincer attack, a concentrated frontal attack on Kursk from the west—from the area of Second Army (the Rylsk area)—with the intention of splitting the enemy forces assembled in the salient.<sup>85</sup> Whether this proposal, based on the hope of avoiding the enemy's most strongly fortified section of the front and breaking through at a relatively weak point, was really so wrong-headed as some commentators considered it<sup>86</sup> is a question that cannot be reliably settled here. It is worth noting, however, that Zeitzler, who flew to the Berghof two days later to talk the Führer out of his 'remarkable variant',<sup>87</sup> wildly exaggerated the logistic difficulties that would be involved in its preparation,<sup>88</sup> and thereby succeeded in changing the mind of a dictator hardly conversant with such matters.

<sup>81</sup> On Zhukov's position statement of 8 Apr. 1943, see also Gurkin, 'Dokumenty i materialy', and Glantz, *The Role of Intelligence*, 92 ff.

<sup>82</sup> See Zhukov, *Erinnerungen*, 423–9; Shtemenko, *The Soviet General Staff at War*, i. 216 ff., and Andronikov, 'Gitlerovski "fakel"', 2–4.

<sup>83</sup> See, above all, Sokolov, 'The Battle for Kursk'.

<sup>84</sup> According to the same source, Soviet superiority at that time was 3.2 to 1 in artillery and 1.3 to 1 in tanks and assault guns. Only the ratio of aircraft numbers was less clear, but was probably more or less even (see *ibid.* 76). The crux of Sokolov's argument is that an earlier Soviet offensive 'on the forehand' in the summer of 1943 would probably have been more successful and, above all, less costly in terms of losses.

<sup>85</sup> *KTB OKW*, iii. 750 (5 July 1943). Zeitzler ('Abwehrschlachten', unpubl. manuscript, BA-MA N 63/80, 66 ff.) and all subsequent authors, with the exception of Irving (*Hitler's War*, 513 and the corresponding footnote), dated this measure of Hitler's incorrectly to the end of May and, already for that reason, considered it not feasible in terms of time.

<sup>86</sup> Thus, e.g., Weichs, 'Tagesnotizen', pt. 2, fo. 145 (19 Apr. 1943), BA-MA N 19/15.

<sup>87</sup> *Ibid.*

<sup>88</sup> Zeitzler, 'Abwehrschlachten', unpubl. manuscript, 67–8, BA-MA N 63/80. In fact, the transport chief of Army Group Centre reported on 19 Apr. 1943 that, given good loading performances on the

The Chief of the Army General Staff's claim that he proposed 'completely abandoning' CITADEL at that meeting<sup>89</sup> seems highly unlikely, given that in the following weeks Zeitzler continued to speak very decidedly in favour of the offensive. He had a further opportunity to demonstrate his position on 4 May, when Hitler, provoked by Ninth Army HQ's repeated requests for postponement, convened a meeting of commanders-in-chief and chiefs of general staffs in Munich. There, at the latest, it became apparent that views as to the most effective timing for CITADEL differed among the professional military too. Insofar as it is at all possible to reconstruct those views from the partially divergent recollections of the generals who were present,<sup>90</sup> it was only Zeitzler and Kluge who, invoking the daily growing strength of the adversary and the danger of a Russian preventive strike, spoke vehemently against any postponement of the German offensive. The chief of the Army General Staff thought the attack should start 'in the last days of May or at the beginning of June at the latest'.<sup>91</sup> Manstein, on the other hand, appears to have been less unequivocal,<sup>92</sup> while Heinz Guderian, the inspector-general of armoured troops, concerned about premature wear and tear on the new tank weaponry under construction, was sceptical about the planned offensive in general, and at least about its timing and the forces assigned to it.<sup>93</sup>

Paradoxically, it was precisely the arrival of new tank weaponry announced by Guderian for May and June which ultimately persuaded the Führer to postpone the attack, in the first instance to 12 June. Technical and organizational problems in the extremely tight tank-production process led to a further postponement in the first week of June, when the attack was provisionally set for 20 June. Immediately before that date it was again postponed to 3 July, and on 25 June it was finally scheduled for 5 July.<sup>94</sup>

relevant stretch of railway, Ninth Army could be assembled in the new deployment zone in eight to ten days; see Teske, 'Die Bedeutung der Eisenbahn', 126.

<sup>89</sup> Zeitzler, 'Abwehrschlachten', unpubl. manuscript, 67–8, BA-MA N 63/80, 68.

<sup>90</sup> In addition to the chiefs of the army and Luftwaffe general staffs, the meeting of 4 May 1943 was attended by Manstein, Kluge (and his deputy), Guderian, Schmundt, and Scherff (appointed by Hitler to compile the history of the war), but not, as Guderian wrongly asserts, Speer and Thomale; Model, who was also absent, had presented his arguments in writing. In addition to Manstein, *Verlorene Siege*, 488–9, and Guderian, *Erinnerungen eines Soldaten*, 276 ff., the following evaluation of the sources draws mainly on Zeitzler's unpublished documents ('Abwehrschlachten', unpubl. manuscript, 67–8, BA-MA N 63/80, 63 ff.) and statements (esp. on Ziemke, 'Stalingrad', BA-MA N 63/94), as well as the opinions collected in Study P-114c, pt. 5, app. 16.

<sup>91</sup> Zeitzler, 'Abwehrschlachten', unpubl. manuscript, 67–8, BA-MA N 63/80, 64.

<sup>92</sup> See the contradictory testimonies in Study P-114c, pt. 5, app. 16. In a letter dated 16 June 1958, Zeitzler wrote: 'It is possible that he [Manstein] voiced certain misgivings [...], but he did not combat the postponement' (*ibid.* 44).

<sup>93</sup> See also the contradictory accounts by Guderian, *Erinnerungen eines Soldaten*, 278 ff., who claims to have fundamentally rejected the offensive, and Zeitzler, who, in a statement of position dated 17 Feb. 1960 (on Ziemke's manuscript 'The German Campaign in Russia', 1942–45, chs. 4 and 5, BA-MA N 63/94) wrote explicitly: 'Guderian did not reject CITADEL. He wanted the disastrous postponement in order to be able to deploy even more tanks' (9).

<sup>94</sup> KTB OKW, iii. 749–50 (5 July 1943); for further details, see Klink, *Das Gesetz des Handelns*, 142 ff.

It was not, however, technological euphoria alone which determined Hitler's repeated postponement of the offensive. His exaggerated hopes in the superiority of the new generation of German tanks and assault guns<sup>95</sup> should rather be understood as a typical reaction on his part to the great uncertainties with which he was confronted. Above all, the now clearly foreseeable collapse of the German–Italian position in North Africa augured military and political dangers with regard to further developments in the Mediterranean for which Hitler believed he had to keep forces in reserve.<sup>96</sup> He was all the more reluctant to commit those reserves prematurely to the Kursk offensive as it was now becoming clear, contrary to initial expectations, that CITADEL would be a major battle and would take up a great deal of time and material. Faced with that prospect, the Führer, as he admitted to Goebbels a few days after the general discussion of 4 May, was 'inclined to wait and see whether the Bolsheviks move against us. We would then have an even better chance than if we take the initiative'.<sup>97</sup> The prospect that German offensive strength would be improved in the meantime by the supply of new weapons to the front fitted seamlessly into the dictator's strategic considerations.

During the tortuously long weeks of May and June, marked by repeated delays, disagreement in the military agencies and staffs involved as to the viability of Operation CITADEL grew more intense. Against a background of increasingly alarming assessments of the enemy situation by Foreign Armies East,<sup>98</sup> scepticism about the ultimate decisive success of the operation also increased in the Army General Staff. In June, Gehlen's department already calculated that, unless the enemy undertook major relief offensives in other sections of the front, a German attack in the Kursk area could expect to encounter enemy forces of no fewer than 138 rifle divisions, 64 armoured brigades, and a total of over 2,350 tanks.<sup>99</sup> Barely three weeks later, on the eve of the attack, Gehlen came to the conclusion that the operation could 'no longer be justified on any grounds', since both essential preconditions—numerical superiority at the decisive point, and the element of surprise—were no longer met:

<sup>95</sup> Hitler already made no secret of his euphoria about the new weaponry during his visits to Zaporozhye in February and March, when he had promised Army Group South that it would receive—if not as many divisions as it wished—tanks and anti-tank weapons 'preferentially, and the best there are', H.Gr. Süd/Ia, KTB, 11 Mar. 1943, 1091–2 (reverse side), BA-MA RH VI/41. In this connection see the rapturous exclamations of Goebbels, *Die Tagebücher*, pt. 2, vii. 174 (23 Jan. 1943), and viii. 531–2 (25 June 1943).

<sup>96</sup> See the chapters by Schreiber in the present volume.

<sup>97</sup> Goebbels, *Die Tagebücher*, pt. 2, viii. 225 (7 May 1943). In view of this and other testimony (FHO, I, II a, 'Beurteilung der Feindlage vor dem Nordflügel der Heeresgruppe Süd und dem Südflügel der Heeresgruppe Mitte', 2 May 1943, BA-MA RH 2/2047; position statement bearing Gehlen's signature, 4 July 1943, BA-MA RH 2/2586), Seaton's view that 'Hitler and the German High Command had little idea that the Soviet enemy was by then almost ready to assume the offensive' (Seaton, *The Russo-German War*, 367) seems unsustainable. In fact Stalin was also repeatedly toying with the idea of a pre-emptive strike; see Glantz, *The Role of Intelligence*, 95 ff.

<sup>98</sup> For details, see Klink, *Das Gesetz des Handelns*, 194 ff.

<sup>99</sup> FHO (I), 'Statistische Aufstellung', 15 June 1943, BA-MA RH 2/2089, fo. 97. That assessment, however, by no means covered all the large Soviet units; see Glantz, 'Soviet Operational Intelligence', 72.

The Russians have been expecting our attack in the relevant sections of the front for weeks and have done everything, with characteristic energy, to absorb it at an early stage both by building several successive defensive positions and by an appropriate deployment of forces. There is therefore little likelihood of a German breakthrough. Nor can it be expected, given the quantity of reserves at the Russians' disposal, that CITADEL will inflict such great losses on them as to prevent them from pursuing their general intentions at the desired time owing to insufficient numbers. On the German side, the reserves which will be sorely needed at a later stage in view of the overall position (situation in the Mediterranean!) would be deployed and used up. I consider the envisaged operation a critical error of the highest order that will have very serious consequences.<sup>100</sup>

It is no longer possible to ascertain whether the chief of the Army General Staff, who must have shared this concern, or at least tended to do so,<sup>101</sup> warned Hitler against the offensive in similarly unequivocal terms, but it seems doubtful, given that he still considered a starting date viable up to the beginning of June. Despite all the delays, however, the commanders-in-chief of both army groups involved did not advise Hitler against proceeding with the operation—which, as Manstein later admitted, ‘might have been a mistake’.<sup>102</sup> Rather, Army Group South HQ remained to the last ‘convinced that our attack would be difficult but ultimately successful’.<sup>103</sup>

Army Group Centre HQ also continued to argue in favour of proceeding with CITADEL even when it was clear that it could not be launched until the beginning of July.<sup>104</sup> Since a Russian offensive could not be avoided anyway, the CITADEL attack, with the distribution of forces now decided, was ‘in my opinion still the best’ of all conceivable options. ‘It forces the enemy into our pincer attack. The attack itself will and must be carried out swiftly, thanks to the armoured strength of both army groups. Its impact will hold all the Russian forces spellbound, including those north of the Orel, and lead to a great success. That is the decisive consideration.’<sup>105</sup>

Admittedly, the preconditions for success were a rapid start to the offensive, actual supply of all the tank and air forces conceivable for the purpose, as well as provision of the manpower and material replacements needed to sustain the battle, which, in view of the massive forces assembled on both sides, would ‘be long and particularly arduous, and demand corresponding sacrifices’. If these preconditions were not met, then in Kluge’s view the only remaining option was a purely defensive operation, which must then, however, ‘under no circumstances

<sup>100</sup> Position statement bearing Gehlen’s signature, 4 July 1943, BA-MA RH 2/2586. At the top edge of this wholly informal document (without departmental heading or file reference) there is a (contemporaneous?) marginal comment by Gehlen: ‘I have informed the chief of the General Staff of my opinion. Outwardly, the Führer’s view must be put forward.’

<sup>101</sup> This is stressed at least by Zeitzler himself (*‘Abwehrschlachten’*, unpubl. manuscript, BA MA N 63/80, 65 and 68) and by Kielmansegg, ‘Bemerkungen eines Zeitzeugen’, 145.

<sup>102</sup> Manstein, *Verlorene Siege*, 494. <sup>103</sup> Ibid. 495.

<sup>104</sup> H.Gr. Mitte, Ic/A.O., 18 June 1943, CAMO Podolsk, Fond 500/op. 12 454/d. 648.

<sup>105</sup> OB H.Gr. Mitte to Chef des GenStdH, 18 June 1943 ‘with the request that it be submitted to the Führer’, 2–3, H.Gr. Mitte, Ic/A.O., 18 June 1943, CAMO Podolsk, Fond 500/op. 12 454/d. 648.

be interrupted by a demand for an offensive that would not be feasible in that scenario'.<sup>106</sup> In their situation assessments of 20 June, Ninth Army and Fourth Armoured Army HQs agreed with Kluge in arguing for execution of the German forces' own offensive without waiting any longer for the enemy to attack.<sup>107</sup>

Hitler was thus by no means alone in his views on the timing and deployment of forces for the planned offensive. At any event, as regards disagreement on the part of the military, which was increasing as a result of the repeated delays, he was more a victim than an initiator. As an untrained autodidact only partly capable of weighing up the frequently contradictory demands of the relevant operations staffs for a rapid start to the offensive on the one hand, and a massive build-up of forces on the other, the Führer displayed throughout those weeks considerable uncertainty, which, as so often in the past, he sometimes tried to overcome by stubbornness. As Officer Ia in the operations department of the Army General Staff complained, 'things are just muddling along until the worst is over. Why is there still a chief of the Army General Staff anyway? Don't ask me.'<sup>108</sup>

Hitler was torn this way and that. As he admitted to Guderian: 'Whenever I think of this attack my stomach turns over.'<sup>109</sup> Meanwhile, things had taken on a dynamic of their own. The absence of Allied offensives in both east and west, and the completion of Germany's own preparations, put the dictator increasingly on the spot. On 18 June, after the Wehrmacht Operations Staff had once again voiced its concern about the situation in the Mediterranean, Hitler finally decided to stick with Operation CITADEL.<sup>110</sup> But that by no means dissipated his worries. A week later he was still stressing to Goebbels the need to 'keep our reserves in hand' in view of the certainty of an Anglo-American invasion.<sup>111</sup> On the other hand, as he explained to the commanders-in-chief and commanding generals summoned to Führer headquarters once again on 1 July, Hitler was now clear that 'we cannot wait until the enemy goes on the attack, which may not happen until the winter or the opening of a second front'.<sup>112</sup>

<sup>106</sup> Ibid. 3; Kluge expressed himself in similar terms a week later (see Klink, *Das Gesetz des Handelns*, 170–1).

<sup>107</sup> Both situation assessments are reproduced in Klink, *Das Gesetz des Handelns*, 306–7 (app. I, 10) and 325 ff. (app. I, 14).

<sup>108</sup> Kielmansegg, pocket diary, entry for 19 May 1943 (in private hands).

<sup>109</sup> Guderian, *Erinnerungen eines Soldaten*, 280. Hitler's vacillation with regard to the Kursk operation, as described here, was also confirmed by Jodl immediately after the war ('Die Vernehmung von Generaloberst Jodl', 540). Zeitzler's later contention that Hitler 'never expressed any doubts about CITADEL to the Army General Staff' therefore deserves little credibility and should be attributed to the chief of the General Staff's efforts to portray Hitler as the sole author of the failed operation; see Zeitzler's statement of position, 17 Feb. 1960, on Ziemke's manuscript, 'The German Campaign in Russia, 1942–45', chs. 4 and 5, BA-MA N 63/94, 9–10.

<sup>110</sup> KTB OKW, iii. 750 (5 July 1943); Warlimont, *Im Hauptquartier*, 347.

<sup>111</sup> Goebbels, *Tagebücher*, pt. 2, viii. 532 (25 June 1943).

<sup>112</sup> Quoted in Manstein, *Verlorene Siege*, 496. On the balance of forces on the eastern front at the beginning of July, see Table II.I.1 (chapter by Frieser at the beginning of Part II of the present volume).

Four days later, on the morning of 5 July, the units of Army Group South and Army Group Centre began their last major offensive. In a proclamation on the previous evening, the Führer informed his troops that this attack must ‘be decisive and lead to a turnaround in the war’.<sup>113</sup> No one knew better than Hitler that this would not be the case even if the battle had a favourable outcome.<sup>114</sup>

<sup>113</sup> Quoted in Domarus, *Hitler. Reden und Proklamationen*, ii. 2021–2.

<sup>114</sup> A clear indication of this is provided, not least, by the fact that German propaganda kept noticeably silent about the German offensive despite its massive dimensions, and the initial successes were cautiously interpreted as defensive victories; see the analysis in Zins, *Die Operation Zitadelle*, 190 ff.

# PART II

## THE BATTLE OF THE KURSK SALIENT

*Karl-Heinz Frieser*

# I. The Hopeless German Starting Position

The battle of Kursk is considered the biggest land battle of the Second World War, indeed the biggest in all of military history.<sup>1</sup> During the fighting the two sides deployed more than 4 million troops, 69,000 cannon and launchers, 13,000 tanks and self-propelled guns, and almost 12,000 aircraft.<sup>2</sup> Even the battle of Stalingrad seems small-scale in comparison. The bitterness of the fighting is shown by the fact that the Red Army lost a total of at least 6,064 tanks.<sup>3</sup> A further, more questionable superlative is that the battle of Kursk must surely rank as one of the most misinterpreted battles of the war, and one of those most obscured by legend. That applies above all to the dramatic climax of the armoured encounter at Prokhorovka, which resulted in a disaster for the Soviet tanks.

For many years Soviet historiography managed to hide the magnitude of the Soviet Union's own errors and losses, until the opening of the archives finally revealed the reality. But myths proliferated on the German side too. According to Erich von Manstein, for example, Operation CITADEL was a 'victory thrown away', since Hitler supposedly broke off the offensive too soon. Most of the erroneous assessments of CITADEL resulted from the fact that it was repeatedly considered in isolation. A correct analysis of the operation is possible only when it is placed in the wider context of the battle of Kursk, including the two Soviet counter-offensives at Orel and Kharkov. Above all, it must be seen in strategic relation to other theatres of war—mainly Italy, where the Allies were landing at the same time. The most important question that needs to be examined is whether the failed German offensive really was—as is maintained in the literature—the turning point of the Second World War or even the decisive battle. In this connection, an accurate comparison of relative strength seems essential. That alone will make it possible to determine what options still remained for Germany, faced with the armament colossus of the Soviet Union.

<sup>1</sup> The battle in the Kursk salient in the summer of 1943 consisted of three partly overlapping operations: Germany's CITADEL offensive (5 to 16 July) and two Soviet counter-offensives at Orel (12 July to 18 August) and Belgorod/Kharkov (3 to 23 August).

*Source:* Zetterling and Frankson, *Kursk 1943*, 5, except for German aircraft on the eastern and Finnish fronts, and the aircraft of Axis partners, for which the source is ‘Einsatzbereitschaft der fliegenden Verbände an der Ostfront am 30.6.1943’, BA-MA RL 2-III/725 (compiled by Ulf Balke).

## 1. DISASTROUS PLANNING: A FRONTAL ATTACK WITHOUT THE ELEMENT OF SURPRISE

Operation CITADEL was one of Hitler’s riskiest undertakings. The attack was directed not only against a stronger adversary but against its strongest bastion, the ‘anti-tank fortress’ of Kursk. Generations of officer cadets had it dinned into them that ‘only a bull attacks head on’. Yet no other German offensive went so much against that maxim. Above all, the German onslaught, in the manner of a battering-ram, was the opposite of the successful methods used in earlier ‘blitzkrieg’ operations. Those were based on the ‘shock-troop procedure’ developed by the Germans during the First World War to overcome the rigidity of positional warfare, a procedure in which small elite formations sought to penetrate enemy positions via the path of least resistance and gain the enemy’s rear. It was Col.-Gen. Heinz Guderian who had combined that method with modern technology, above all tanks.<sup>4</sup> So he was all the more appalled when he learned that Hitler wanted to risk a frontal attack on the Kursk fortress. That was the path of greatest resistance—as if the Germans during the western campaign in 1940 had not attacked the weakest point in the French lines at Sedan but the Maginot Line’s strongest position. On that occasion, in accordance with Manstein’s ‘sickle-stroke’ plan, the Germans had drawn the enemy into empty space, like a bull with a sweep of

<sup>4</sup> Frieser, *Blitzkrieg-Legende*, 419–20.

the matador's cloak,<sup>5</sup> and then unleashed their armoured divisions against his flank, like a sword thrust in the side. At Kursk, however, the bull was to be taken by the horns. Whereas tank forces had hitherto been deployed in free-operation mode in accordance with Guderian's principles, they were now to be misused in a rigid manner for a purely tactical purpose. What threatened was an attempt to 'eat one's way' through enemy defences, so typical of the First World War, and this time in the form of a rolling battle of material attrition. Astonishingly, the planners were prepared to do without the very factor that had guaranteed the success of tank attacks from the very beginning, namely the element of surprise. Finally, the start of the German offensive was postponed so many times that the German preparations for an operation against this sector of the front were no longer a secret.

The strangest thing of all was that Soviet intelligence had determined exactly where the Germans were going to attack, and the Germans knew that the Russians knew it. Hitler was shown aerial photographs which revealed that the Red Army had established deeply staggered defences exactly in the planned direction of the German attack.<sup>6</sup> But the dictator was so convinced of the penetrative force of the new tanks that he nevertheless had the offensive carried out exactly as planned. Soviet intelligence was able to determine not only the direction of attack, but even the time of the German offensive. Large-scale offensives normally begin with a burst of artillery fire on the defence positions which takes the defender by surprise. In the battle of Kursk it was the other way round. The Soviet artillery opened fire first, and the Soviet aircraft were also the first in the air.

As the German tank warfare expert Maj.-Gen. Friedrich Wilhelm von Mellenthin explained in his analysis of the battle of Kursk, the weakness of the Soviet enemy lay precisely in 'his limited ability to cope with surprise attacks'; that was where he was 'most vulnerable'.<sup>7</sup> That had been shown in February 1943, when the Soviet armoured units stormed westwards after the fall of Stalingrad, seemingly unstoppably, and suddenly fell into a trap set by Field Marshal von Manstein.<sup>8</sup> With regard to the tank battles in the first period of the campaign, Mellenthin wrote that the German armoured units 'were unbeatable, in the truest sense of the word, if they were allowed to manoeuvre freely on the vast Russian plains. But instead of trying to create conditions in which mobile warfare was possible [...] the German high command found nothing better to do than have our [...] armoured divisions storm the area around Kursk, which had meanwhile become the strongest fortress in the world!'<sup>9</sup> The German leadership thereby committed exactly the same mistake as at Stalingrad the year before. It sought a direct trial of strength in a restricted space with a quantitatively superior enemy who had no regard for losses. Like Erich von Falkenhayn at Verdun in the First World War, it engaged in a battle of attrition.

<sup>5</sup> Liddell Hart, *The German Generals Talk*, 117.

<sup>6</sup> Guderian, *Erinnerungen eines Soldaten*, 278; BA-MA, Study ZA 1/2071, 80.

<sup>8</sup> See Klein and Frieser, 'Mansteins Gegenschlag', 12–13.

<sup>9</sup> Mellenthin, *Panzerschlachten*, 147.

The offensive was actually intended to make it possible to conserve forces in future. The aim was to achieve a more favourable defensive line by cutting off the Kursk bulge, so that the OKW could subsequently transfer troops from the east to other theatres. Against that background, an attack based on brute force, which had hitherto been more typical of the Red Army's offensive tactics, must have seemed counter-productive since, even in the event of a successful breakthrough, the best that could be expected was a pyrrhic victory. The mood within the military leadership before the start of the attack was neatly summed up in retrospect by Maj.-Gen. Carl Wagener: 'No one on the German side still had any enthusiasm for the offensive. Even Hitler was now wavering.'<sup>10</sup> This 'makeshift operation',<sup>11</sup> which in fact had only limited aims, threatened to turn into a display of strength that would necessarily overstretch the German forces. Hitler was faced with a dilemma in view of the imminent Allied landing in Italy, but saw Kursk as a chance to regain the initiative. This time, however, he committed his troops in an offensive in which there was little to gain but a great deal to lose.

## 2. RELATIVE STRENGTH: AN ASSAULT AGAINST AN AVALANCHE

A military rule of thumb says an attacker should have a superiority of 3 to 1 in order to have a chance of success. While this vague principle applies only at tactical level, the superiority should be even greater if the defender is entrenched behind fortifications. Given the Kursk salient's fortress-like defences, that was precisely the case. In the summer of 1943 the absence of the element of surprise—a factor which had contributed greatly to the success of the German offensives of 1941 and 1942—also played a part. As Carl von Clausewitz stressed, there is a correlation between the element of surprise and economy of force. The more unexpected an attack, the less the defender is able to prepare for it, and the fewer forces the attacker needs to use in order for the attack to succeed.<sup>12</sup> At Kursk, however, the German intentions had long been understood, so that each focal point was countered by a corresponding focal point at which the defender's forces were always far superior to those of the attacker. The Germans could muster only two-and-a-half armies for their offensive, whereas eighteen Soviet armies were concentrated in the Kursk salient alone (Voronezh Front and Central Front, with Steppe Front positioned in the rear). At the same time, further armies with strong armoured units were stationed on the flanks, especially at Orel, ready to move onto the counter-attack once the German offensive had been repelled.

<sup>10</sup> Wagener, *Heeresgruppe Süd*, 236.

<sup>11</sup> Schreiber, *Der Zweite Weltkrieg*, 102.

<sup>12</sup> According to Clausewitz, surprise 'lies more or less at the foundation of all undertakings, for without it superiority at the decisive point is really not conceivable' (*Clausewitz, Vom Kriege*, 379).

### (a) The German Potential in the Kursk Salient

The northern sector of the front in the area around Orel belonged to Army Group Centre (Field Marshal Günther von Kluge). The plan was for Ninth Army, under the command of Col.-Gen. Walter Model, to break through the salient from there, advancing southwards in the direction of Kursk. A symmetrical northward attack by units of Army Group South (Field Marshal von Manstein) was planned, to be carried out by Fourth Armoured Army under Col.-Gen. Hermann Hoth and Army Detachment Kempf. The two pincer forces were to unite concentrically in the Kursk area and enclose all the Soviet units in the salient. The western apex of the salient was covered defensively by Second Army, belonging to Army Group Centre.

Model's Ninth Army formed the northern group.<sup>13</sup> It comprised six armoured divisions, one armoured infantry division, and 14 infantry divisions, i.e. 21 divisions in all, of which only 14 were actively deployed during the offensive.<sup>14</sup> The ration strength is given as around 335,000,<sup>15</sup> but the daily strength of the front-line units<sup>16</sup> must have been only around two-thirds of that figure. At the start of the offensive 599 battle tanks, 299 assault guns, and 90 'Ferdinand' tank destroyers were operational,<sup>17</sup> though some units, for example 12th Armoured Division, did not take part in Operation CITADEL. The operational artillery consisted of 752 cannon and 165 rocket launchers.<sup>18</sup> Air Fleet 6 (Col.-Gen. Robert Ritter von Greim), deployed in Army Group Centre's sector of the front, was tasked with aerial support. It disposed of 640 operational aircraft in the 1st Air Division (Maj.-Gen. Paul Deichmann).<sup>19</sup>

Army Group South was considerably stronger, consisting of one-and-a-half armies: Fourth Armoured Army (Col.-Gen. Hoth) was to attack directly northwards towards Kursk, while to its right Army Detachment Kempf (Gen. Werner Kempf) had to

<sup>13</sup> A detailed breakdown of the German attacking units is reprinted in Klink, *Das Gesetz des Handelns*, 331–4.

<sup>14</sup> Those which did not take part in the offensive were the four infantry divisions of XX Army Corps, the 102nd and 383rd Infantry Divisions, and the 12th Armoured Division.

<sup>15</sup> AOK 9: report by Abt. IVa to Qu., 27 June 1943, BA-MA RH 20-9/409.

<sup>16</sup> No information is given under 'daily strength of divisions and other units'.

<sup>17</sup> 'Panzerlage "M"', Zitadelle: Einsatzbereit am 5.7 im Orëlboogen' [Armour Situation "M", Citadel: Operational on 5 July in Orel Salient] (fo. 6), BA-MA RH 10/65. The 42 assault vehicles added to the overall strength in this report have been excluded, since they consisted of armoured artillery. On the armour situation in detail, see also the statistics given in the documentation, volumes RH 10/60–4, 141, 143, 148, 150, 155, 157, 220, and 246.

<sup>18</sup> Zetterling and Frankson, *Kursk 1943*, 32. The figure quoted includes only the artillery's field guns and heavy grenade launchers (203 mm). In the Wehrmacht, unlike the Red Army, light and medium grenade launchers played only a minor role and were classified as 'infantry' rather than 'artillery' weapons. A completely different strength figure is obtained if, in accordance with the Soviet method of calculation, all barrelled weapons (artillery cannon, grenade launchers, anti-tank and anti-aircraft cannon) are included. Zetterling and Frankson (*Kursk 1943*, 18) estimate that figure, on the basis of the German target strength for Ninth Army, at 3,630 barrelled weapons.

<sup>19</sup> Operational Status Report, 30 June 1943, BA-MA RL 2-III/725; edited by Ulf Balke in the light of further documents from his private archive. Air Fleet 6 did not put all its 708 operational aircraft (excl. liaison and transport planes) at the disposal of 1st Air Division for the support of Ninth Army. Instead, Tactical Reconnaissance Groups 3, 5, 10, and 15 (a total of 68 operational aircraft) were assigned directly to the other four armies of Army Group Centre.

cover the threatened flank against attack from the east. In the original formation, Army Group South disposed of five armoured divisions, four armoured infantry divisions, and ten infantry divisions, of which only six were actively involved in the fighting.<sup>20</sup> The ration strength of Fourth Armoured Army was 223,907,<sup>21</sup> while that of Army Detachment Kempf can be estimated at around 100,000.<sup>22</sup> Here too, the actual ‘daily strength of divisions and other units’ must also have been only two-thirds of the ration strength. On 5 July Manstein was in a position to send a total of 1,377 operational fighting vehicles<sup>23</sup> into action, supported by 831 artillery cannon and 303 rocket launchers.<sup>24</sup> Air Fleet 4 (Gen. Otto Dessloch) provided the tried and

<sup>20</sup> In addition, 198th Infantry Division was assigned to the front on 9 July.

<sup>21</sup> Armeeintendant Pz.AOK 4, 532/43 geh. Kdos., 5 July 1943: Ration Strengths at 1 July 1943, BA-MA RH 21-4/422.

<sup>22</sup> This estimate is based on comparative calculations. Zetterling and Frankson (*Kursk 1943*, 18) arrive at a similar figure of 108,000, whereas Gläser in his Master’s dissertation (‘Die Schlacht um Kursk’, 30–1) puts the figure at 80,000 to 90,000.

<sup>23</sup> They consisted of 409 Panzer IIIs, 426 Panzer IVs, 200 Panzer Vs (Panther), 102 Panzer VIs (Tiger), and 240 assault guns. See ‘Panzerlage “S” Zitadelle’: Pz.-Ausgangslage Süd 5.7.1943 (fos. 15 and 23), BA-MA RH 10/64. For details, see also the statistics given in the documentation: RH 10/60–3, 65, 70, 142, 145–7, 149, 156, 209, 220, 246, and 312–14.

<sup>24</sup> Zetterling and Frankson, *Kursk 1943*, 32. The total number of barrelled weapons (artillery cannon, grenade launchers, anti-tank and anti-aircraft cannon) must have been 1,774 for Fourth Panzer Army and 1,073 for Army Detachment Kempf (*ibid.* 18).

tested VIII Air Corps (Maj.-Gen. Hans Seidemann), which had over 732 operational aircraft at its disposal.<sup>25</sup>

Second Army was deployed between Ninth Army and Fourth Armoured Army, and had only the defensive task of tying down enemy units. Its strength can be estimated at a maximum of 120,000 men (ration strength).<sup>26</sup> It had no fighting vehicles of its own, only 100 self-propelled guns.<sup>27</sup> The number of field guns, 242 barrelled weapons, also seems very modest.<sup>28</sup>

In military history Kursk is associated with a ‘tank battle’ in which the legendary Tiger tanks are immediately conjured up. Yet on that occasion they constituted only a fraction of the German tanks. On 5 July only 328 out of a total of 2,465 operational fighting vehicles were modern battle tanks: 128 Tigers and a maximum of 200 Panthers.<sup>29</sup> Although the units deployed at Kursk were the best-equipped of the German army, horses were still predominant in many of them. On 5 July Ninth Army possessed only 26 Tiger tanks<sup>30</sup> but 85,000 horses.<sup>31</sup> This semi-modern state of affairs assumed worrying proportions in front-line units not belonging to elite divisions. At the same time, the Red Army was being supplied by the western Allies with hundreds of thousands of trucks.<sup>32</sup> Soviet industry was thus able to concentrate fully on the mass-production of tanks, which already gave the Soviet forces a decisive advantage at Kursk. Although the Germans deployed 70 per cent of all the tanks located on the eastern front in the battle of Kursk,<sup>33</sup> at the risk of neglecting other sectors, the Red Army nevertheless had a clear quantitative armoured superiority.

### (b) The Soviet Potential in the Kursk Salient

In the Kursk salient two German armies and one army detachment attacked three Soviets fronts (army groups) comprising a total of 18 armies. In the north Germany's Ninth Army had Central Front against it, and in the south Fourth Army and Army Detachment Kempf were faced by Voronezh Front. To the east, directly behind the

<sup>25</sup> Operational Status Report of 30 June 1943, BA-MA RL 2-III/725; calculated by Ulf Balke taking into account documents from his private archives. Air Fleet 4 had a total of 913 operational aircraft at its disposal, excluding the 252 courier, transport, minesweeper, and air-sea rescue planes. For Operation CITADEL it had only 732 operational aircraft in the framework of VIII Air Corps (excluding 41 Hungarian planes stationed in this sector). The remainder were deployed on the southern wing of Army Group South (Sixth Army and First Armoured Army) and with Army Group A (Crimea and the Kuban bridgehead). This figure does not include the 71 operational Romanian aircraft.

Source: Koltunov, 'Kurskaya bitva v tsifrakh', 62.

base line of the Kursk salient, another army group, Steppe Front, was kept ready as a strategic reserve. The three Soviet fronts were made up of the following forces:

- The northern sector of the Kursk salient was defended by Central Front, under the command of General Konstantin Konstantinovich Rokossovsky. It consisted of five general armies, an armoured army, and numerous unattached units. On 5 July it had 711,575 men,<sup>34</sup> 1,607 tanks and assault guns, and 12,453 barrelled weapons and launchers<sup>35</sup> at its disposal.<sup>36</sup> The 16th Air Army, with 1034 aircraft, was assigned to it for air support.<sup>37</sup>

<sup>34</sup> Of these, 510,983 were combat troops.

<sup>35</sup> These included, among other things, 3,140 cannon, 5,792 grenade launchers, and 246 rocket launchers.

<sup>36</sup> These and the following strength statistics are taken from Koltunov, 'Kurskaya bitva v tsifrakh', 61.

<sup>37</sup> Ibid. 63.

- Voronezh Front in the southern sector of the Kursk salient had the same composition. Its commander-in-chief, General Nikolai Fedorovich Vatutin, had 625,591 men,<sup>38</sup> 1,699 tanks and assault guns, and 9,751 barrelled weapons and launchers<sup>39</sup> under his command, as well as the 2nd Air Army with 881 operational aircraft.<sup>40</sup>
- Steppe Front, under General Ivan Stepanovich Konev, was stationed directly behind Central Front and Voronezh Front, ready for action. From its well-established defensive position it was to prevent an operational breakthrough in depth, while its strong armoured units would enable it to launch a massive counter-attack. For those tasks it had five general armies, one armoured army, and numerous unattached units at its disposal, comprising 573,195 men,<sup>41</sup> 1,632 operational battle tanks and assault guns, and 9,211 barrelled weapons.<sup>42</sup> In addition, 5th Air Army, with 470 operational aircraft, was assigned to Steppe Front.<sup>43</sup>

### (c) Ratio of Opposing Forces in Operation CITADEL

We turn now to a fundamental problem that will arise repeatedly in the course of this analysis, namely the calculation of personnel strength. For Operation CITADEL—including Second Army, which was only passively deployed—there were 778,907 men available.<sup>44</sup> However, this figure denotes the ‘ration strength’, not the ‘daily strength of divisions and other units’ (hereinafter ‘daily strength’), which is anyway not given in the archive files.<sup>45</sup> The absurdity of taking ration strength as the yardstick for measuring relative strength is shown clearly by the following example: Army Group North calculated its ration strength at 1 June 1944 as 1,012,000,<sup>46</sup> but its daily strength was 331,025 men and its combat strength only 158,297.<sup>47</sup> The discrepancy is explained by the fact that ration strength included wounded, prisoners of war, construction troops, security units, and so on, as well as the

<sup>38</sup> Of these, 466,236 were combat troops.

<sup>39</sup> These included, among other things, 2,327 cannon, 4,596 grenade launchers, and 272 rocket launchers. See Koltunov, ‘Kurskaya bitva v tsifrakh’, 61.

<sup>40</sup> Ibid. 63.

<sup>41</sup> Of these, 449,133 were combat troops.

<sup>42</sup> Koltunov, ‘Kurskaya bitva v tsifrakh’, 62 f. The number of barrelled weapons includes, *inter alia*, 1,756 artillery cannon and 4,902 grenade launchers. On the other hand, the number of rocket launchers cannot be determined.

<sup>43</sup> Koltunov and Solovev, *Kurskaya bitva*, 76.

<sup>44</sup> This is the sum of the above-indicated ration strengths for Second Army, Ninth Army, Fourth Armoured Army, and Army Detachment Kempf.

<sup>45</sup> For the official definition of these terms, see OKH GenStdH/Org.Abt., No. I/1620/44 geh., 24 Feb. 1944, *re* ‘Festlegung der Stärkebegriffe’, 1–4, BA-MA RH 2/60; see also OKH GenStdH/Org. Abt. (I) No. 25 865/42 geh., 13 Oct. 1942 (fos. 36–7), BA-MA RH 2/1107, as well as the other orders contained in the same file. The problem has also been discussed in the literature; see Zetterling and Frankson, ‘Analyzing World War II’, 176 ff.

<sup>46</sup> OKH Organisationsabteilung (I), No. I, 18280/44 g.Kdos., 23 July 1944 (fo. 29), BA-MA RH 2/1341.

<sup>47</sup> Ibid., 26 July 1944, 31–2.

Wehrmacht's civilian retinue in the hinterland, among which there were numerous local auxiliaries. Moreover, since marching rations and special rations were given out just before an offensive, ration strength was of importance to field cooks, but it can by no means serve as a criterion for historians. In the case of Operation CITADEL the actual daily strength must have been at most two-thirds of the ration strength, that is, around 518,000 men.<sup>48</sup> Not all of these took part in the attack on Kursk, however, since strong forces were deployed in the hinterland to deal with the threat from partisans.

There are detailed discussions of the partisan struggle in the Soviet literature, but whenever a comparison of strength is drawn up, the partisans are non-existent. In reality, partisan units directed by the Red Army played such an influential part that, alongside the army, the Luftwaffe, and the navy, they functioned as a 'fourth branch' of the armed forces. At the height of the battle of Kursk they made a spectacular appearance, when some 100,000 partisans in Operation 'Rail War' paralysed German rail communications throughout the country by blowing up a claimed total of more than 42,000 tracks in a single night.<sup>49</sup>

The statistics on the Soviet side raise the opposite problem. The figures given in official accounts of the operation are mostly too low because they refer only to the first phase of the operation and do not include the squadrons and reserves brought in later. With regard to the defence of Sevastopol, for example, *Grif sekretnosti sniat*, which is the standard Russian work on strength and loss statistics, gives the figure of 52,000 men for 'personnel strength at the beginning of the operation'. Yet in the same statistics the figure for total losses is given as 156,880.<sup>50</sup> In theory this would mean that each Red Army soldier was killed three times in succession.

A comparison of German and Soviet potential with regard to Operation CITADEL shows a striking asymmetry: the attacker was numerically inferior to the defender in every respect. The German front-line units had approximately 518,000 men (daily strength)<sup>51</sup> at their disposal, compared with 1,426,352 men in the combat units of Central Front, Steppe Front, and Voronezh Front.<sup>52</sup> That gave the Soviets a superiority in personnel of 2.8 to 1. For the Germans the most favourable ratio was in tanks, where Soviet superiority was 'only' 2 to 1. The German side (excluding Second Army)<sup>53</sup> had 2,365 battle tanks, assault guns, and tank destroyers ready for combat. But after they managed to break through the anti-tank defences and minefields of the enemy's foremost positions, an armada of 4,938 Soviet tanks

<sup>48</sup> A much lower figure of 300,000 men (excl. Second Army) is given by Gläser, 'Die Schlacht um Kursk', 32. According to his estimate, the deployment strength of the German attacking units amounted to only about half the ration strength. The figure suggested by the present author thus seems by no means too high.

<sup>49</sup> *Geschichte des zweiten Weltkrieges 1939–1945*, vii. 201 and 366–7; Solovev, *Wendepunkt*, 150.

<sup>50</sup> *Grif sekretnosti sniat*, 224.

<sup>51</sup> The combined ration strength of the German armies (Ninth Army, Fourth Armoured Army, Army Detachment Kempf, and Second Army) was 778,907 men.

<sup>52</sup> The total personnel strength of the three Soviet fronts was 1,910,361 men. See Koltunov, 'Kurskaya bitva v tsifrakh'.

<sup>53</sup> The 100 fighting vehicles of Second Army, which was deployed to the west of the Kursk salient, did not take part in the attack.

and assault guns was waiting for them.<sup>54</sup> A comparison of artillery strength is more difficult. On the Soviet side grenade launchers were dominant, whereas they played only a minor role in the German units and were therefore (apart from heavy grenade launchers) counted as infantry weapons rather than artillery. This is further complicated by the fact that in the Soviet units all long-range weapons were included: artillery cannon, grenade launchers, anti-tank and anti-aircraft cannon, and rocket launchers. The three Soviet fronts deployed in the Kursk salient possessed 31,415 weapons in that category.<sup>55</sup> A similar estimate (based on target strengths) gives the German armies a maximum total of 7,417 barrelled weapons,<sup>56</sup> which means an inferiority of 1 to 4.2. This gives some idea of the wall of fire which the attackers had to cross. The German air units had 1,372 aircraft available and were faced with Soviet superiority of 2.5 to 1. Each of the three opposing Soviet fronts had its own air army, in addition to which 17th Air Army on the south-western front (with 735 planes) was also deployed during Operation CITADEL. Including the 320 long-range bombers and 208 fighters<sup>57</sup> of the Kursk air defence zone, this gives a total of 3,648 aircraft.<sup>58</sup>

#### (d) Comparison of Total Potential in the Kursk–Orel Area

The huge battle in the Kursk salient did not consist only of Operation CITADEL. As already mentioned, it was a combination of three operations overlapping in space and time.<sup>59</sup> For that reason some Ninth Army units assigned to CITADEL were not used in that operation but had to be deployed in defence against the Soviet counter-offensive at Orel (Operation KUTUZOV), which began a few days later. In reality the ‘Kursk salient’ was an S-shaped double bulge, with the Soviets enclosed in the southern part at Kursk and the Germans in the northern part at Orel. If the Red Army succeeded in breaking through the German Second Armoured Army’s positions to the north of Orel, it could fall on Ninth Army, which was attacking in the direction of Kursk, in the rear. In view of this operational interdependence, a comparison of strength should logically include the units stationed in the Orel area.

Second Armoured Army was the left-hand neighbour of Model’s Ninth Army and had to cover the northern part of the Orel bulge, which extended far to the east. However, its front-line strength had been considerably reduced to the benefit of the offensive units assembled for Operation CITADEL.<sup>60</sup> The name ‘Armoured Army’ is

<sup>54</sup> Koltunov, ‘Kurskaya bitva v tsifrakh’. This figure refers to fighting vehicles operational on 1 July 1943.

<sup>55</sup> Koltunov, ‘Kurskaya bitva v tsifrakh’, 61 and 63.

<sup>56</sup> A corresponding estimate is given in Zetterling and Frankson, *Kursk 1943*, 18.

<sup>57</sup> Bitva na Kurskoi duge, 124.

<sup>58</sup> Koltunov and Solovev, *Kurskaya bitva*, 76 (5th Air Army), 77 (Table with strength statistics for 2nd, 16th, and 17th Air Armies, as well as long-range aircraft).

<sup>59</sup> In July/August 1943 the following operations took place in the Kursk area: the CITADEL offensive (5 to 16 July) and two Soviet counter-offensives at Orel (12 July to 18 August) and Belgorod/Kharkov (3 to 23 August).

<sup>60</sup> Glantz and House (*The Battle of Kursk*, 283) estimate the ration strength as 160,000 men. By analogy, the daily strength of the front-line units should be put at a maximum of two-thirds, i.e. 107,000.

also misleading since the unit itself possessed no battle tanks, although 5th and 8th Armoured Divisions were subsequently assigned to it in view of the Soviet counter-offensive. Even including those reinforcements, however, Second Armoured Army had only 234 fighting vehicles<sup>61</sup> and 622 field guns.<sup>62</sup> The total number of all barrelled weapons (including grenade launchers, anti-tank cannon, and anti-aircraft cannon) can be estimated at 2,050 on the basis of target strengths. Moreover, this army had no special air unit assigned to it but had to rely extensively on the units of Air Fleet 6, which were already assigned to the support of Ninth Army at Kursk.

Second Army was opposed by a superior force of one-and-a-half Soviet army groups, namely Bryansk Front and the left wing of West Front—a total of five armies, two tank armies, four unattached armoured corps, and numerous other unattached units, comprising 719,074 men (561,111 combat troops),<sup>63</sup> 3,262 tanks and assault guns,<sup>64</sup> approximately 16,000 barrelled weapons and launchers,<sup>65</sup> and 2,317 aircraft.<sup>66</sup>

This massing of forces to the north of the Kursk salient represented no threat to Second Armoured Army but hung like a sword of Damocles over Ninth Army. That also explains Model's apparently strange deployment of forces, since he dared not bet everything on the single card of Operation CITADEL. Instead of advancing on Kursk with all his tanks like a battering-ram, he kept a large part of his armour in reserve so as to be able to respond to a threat to his army's rear from the area north of Orel.

<sup>61</sup> These consisted of 144 battle tanks, 23 assault guns, and 67 anti-tank guns on self-propelled carriages. See 'Panzerlage 11.7.1943 (Stand 30.6)', 58, BA-MA RH 10/60. Command vehicles and Panzer IIs armed only with a 2-cm cannon were not included, since they were not used in tank battles. On the operational status of Assault-Gun Battalion 270, see 'Sturmgeschütz-Lage, 11.7.1943 (Stand 30.6)', 93, BA-MA RH 10/62. With regard to anti-aircraft guns on self-propelled carriages, see the strength statistics for 5th and 8th Armoured Divisions, 25th Armoured Infantry Division, and Anti-Tank Battalion 561 in 'Pak (Sf.)-Lage, 13.7.1943 (Stand 30.6)', fos. 63 and 65, BA-MA RH 10/63.

<sup>62</sup> See the strength statistics of 3 July 1943 for LV Army Corps (incl. 5th Armoured Division), LIII Army Corps, and XXXV Army Corps in 'Pz.AOK 2, Ia: Kriegsgliederungen 1943', BA-MA RH 21-2/v. 444a. On the artillery strength of 8th Armoured Division, see 'Meldung 8. Panzerdivision, 1.7.1943', BA-MA RH 10/147.

<sup>63</sup> Koltunov, 'Kurskaya bitva v tsifrakh', 80. To these must be added 74,000 men of 3rd and 4th Guards Armoured Armies. See Glantz and House, *The Battle of Kursk*, 342.

<sup>64</sup> As at 10 July, Bryansk Front possessed 794 operational fighting vehicles (Koltunov, 'Kurskaya bitva v tsifrakh', 80). These were reinforced by the 731 tanks and assault guns of 3rd Guards Armoured Army (Glantz and House, *The Battle of Kursk*, 342). The left wing of West Front, including 4th Armoured Army and two armoured corps assigned to it, had a total of 1,737 fighting vehicles (Glantz and House, *ibid.* 347).

<sup>65</sup> Bryansk Front had over 6,795 artillery cannon and grenade launchers at its disposal, including 492 belonging to 3rd Guards Armoured Army. In addition, it possessed 160 BM-8 and BM-13 rocket launchers, and 1,582 M-30 rocket launchers. Including anti-tank and anti-aircraft cannon, this gave a total of 10,199 barrelled weapons and launchers; see Koltunov, 'Kurskaya bitva v tsifrakh', 80. The 492 artillery cannon and grenade launchers of 3rd Guards Armoured Army are also included. The two armies of West Front's left wing possessed 4,286 cannon, grenade launchers, and rocket launchers (Koltunov, 'Kurskaya bitva v tsifrakh', 80). Together with anti-tank and anti-aircraft cannon, that gives a total of 5,312 weapons. No data is available concerning the artillery weapons possessed by 4th Armoured Army. Since its other strength statistics are almost identical with those of 3rd Guards Armoured Army, however, an artillery strength of around 490 weapons has been assumed by analogy. The left wing of West Front thus had over 5,802 barrelled weapons and launchers at its disposal.

<sup>66</sup> 15th Air Army, assigned to Bryansk Front, could deploy 995 aircraft. In addition, West Front was supported by 1st Air Army, with 1,322 (operational) planes (Koltunov, 'Kurskaya bitva v tsifrakh', 82–3).

### (e) The Bottom Line: Soviet Superiority and the Impossibility of a Decisive Battle

Previous descriptions of the battle of Kursk generally provide an unrealistic assessment of relative strength since they concentrate on the narrower area of the Kursk salient and leave the Soviet reserves out of the picture. How great the Red Army's superiority in the Kursk–Orel area actually was can be seen from Table II.I.5 and Diagram II.I.3. In reality, however, its superiority was even more overwhelming, since further reserves of strong armoured units were stationed in the depths of the area and were thrown into the battle by the Soviet high command during the two counter-offensives. The 11th Army, for example, was subsequently put into action at Orel, as were 4th Guards Army and 47th and 57th Armies at Belgorod/Kharkov. While the Germans were unaware of the full extent of the Soviet units which were staggered in depth, the sheer numbers of the forces reported by German intelligence in areas near to the front seemed to Maj.-Gen. Reinhard Gehlen, chief of Foreign Armies East, so worrying that he sounded the alarm.<sup>67</sup> The real danger lay in the fact that on the rest of the eastern front the balance of forces was even more unfavourable than at Kursk, since large sections had been emptied of armoured units needed for Operation CITADEL.

It is a mistake to assume that Hitler wanted to force a decision at Kursk in order to give a new turn to a war which looked like being lost.<sup>68</sup> That assumption was already rejected in the first part of the present volume.<sup>69</sup> Further evidence is provided by the sober figures for relative strength, since the factual superiority of the Red Army in the Kursk salient shows such theories to be questionable. Neither the German general staff nor Hitler was aiming at decisive victory in a 'battle of destruction' in Schlieffen's meaning of the term. Besides which, the Red Army was preparing a powerful summer offensive and had concentrated in the Kursk–Orel area an offensive potential unparalleled in military history. Given the inevitability of war on multiple fronts, Hitler and the OKW actually wanted to withdraw forces from the eastern front in order to be able to counter the impending Allied invasions in southern Italy and later in western Europe. This, however, seemed impossible in view of the Soviet summer offensive, which threatened to burst through the German front like an avalanche. The OKH therefore decided to take the bull by the horns and attack the stationary avalanche before it was unleashed. In terms of physics, the aim was to prevent the enemy's superior mass from being multiplied by velocity. For it seemed hardly possible that the Soviet avalanche could be brought to a standstill once it had got under way.

In recent Russian literature there is criticism of Stalin's 'wise' decision to strike on the backhand rather than forestall the German offensive by attacking in the

\* Deployment strength means 'daily strength of divisions and other units'; \*\* total of artillery, anti-tank, and anti-aircraft cannon, grenade launchers, and rocket launchers.

spring of 1943.<sup>70</sup> As a result, it is argued, the Soviet forces unnecessarily let themselves in for a duel with the qualitatively superior German armour at Kursk and suffered horrendous losses. Thus weakened, the subsequent Soviet offensives lacked the necessary impetus and fell far short of the objectives set for 1943. Our

<sup>70</sup> Sokolov, 'The Battle for Kursk', 75–8 and 86–7. The decision to remain on the defensive instead of attacking was also contested within the Red Army leadership. Both front commanders-in-chief, Vatutin and Konev, called for a first strike. Nevertheless, Stalin finally agreed with Zhukov's proposal to strike on the backhand. That decision is criticized by Boris V. Sokolov in retrospect. He argues, among other things, that from April to July the balance of forces had changed qualitatively in favour of the Germans, who had meanwhile been able to bring modern tanks and aircraft to the front. In his view, postponement of the Soviet offensive originally planned for May to 12 July and 3 August had also considerably delayed the liberation of Russia.

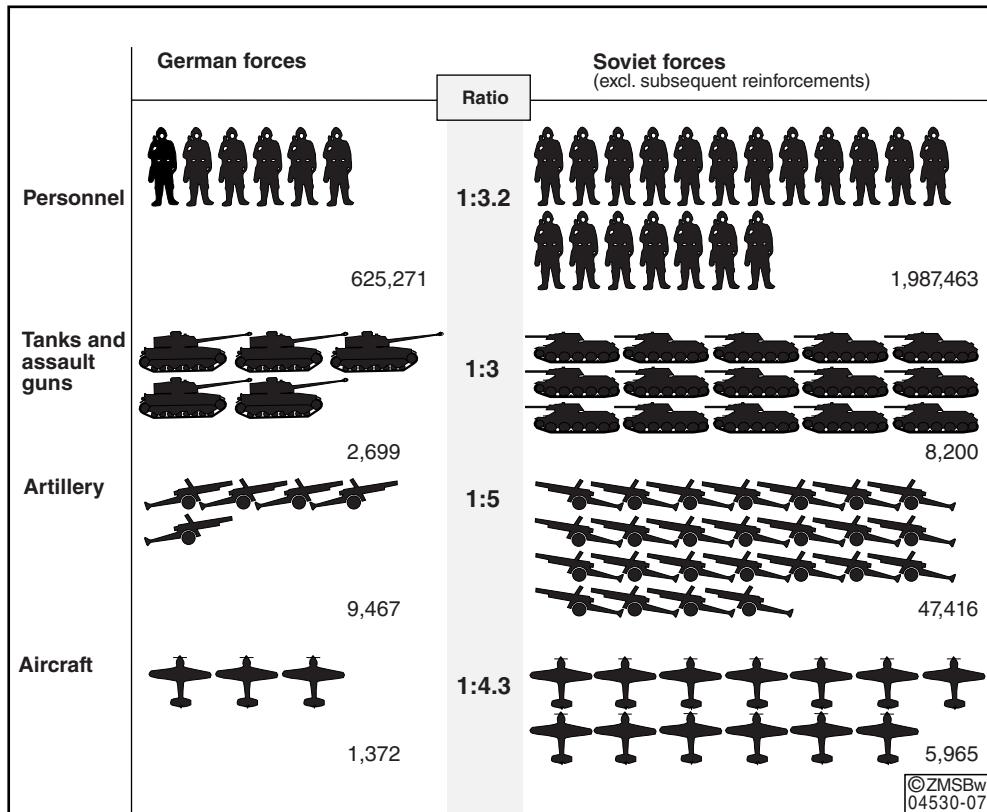

Diagram II.I.3. Ratio of opposing forces in the Kursk–Orel area on 5 July 1943

intention here is not to intervene in this Russian historians' dispute but to clarify the intentions of the German leadership. On the eastern front the Wehrmacht was no longer strategically on the offensive, so that Operation CITADEL constituted only a preventive attack with limited aims within an overall defensive strategy.

### 3. 'FORTRESS KURSK'

The German plan to attack the Soviet concentration of forces at Kursk before the Red Army could launch a concerted offensive with the western Allies seems entirely plausible. However, repeated postponement of the start of the attack gave the enemy sufficient time to develop the Kursk salient into a huge fortress. The code-name 'CITADEL' thus took on an ominous significance. An officer with 503rd Heavy Armoured Battalion, which was equipped with Tiger tanks, reported: 'What took place at Kursk was unbelievable. I've never seen anything like it in the war either before or since. The Soviets had prepared a defensive system of a depth that was

inconceivable to us. Whenever we broke through a position after bitter fighting, we again found ourselves facing a new defensive line.<sup>71</sup> The German attackers encountered a maze of ditches, tank-traps, wire obstacles, anti-tank fronts, minefields, blocking positions, flamethrower barriers, and strongpoints with built-in cannon. Again and again they had to pass through the fire-wall of the enemy artillery, behind which masses of tanks awaited them. In the words of Marshal Georgii Konstantinovich Zhukov, the Soviet defence preparations were 'truly titanic'.<sup>72</sup> The system consisted of eight staggered defensive lines with a total depth of 300 kilometres (including Steppe Front).<sup>73</sup> Inside the Kursk salient the troops of the two Soviet fronts, supported by 300,000 civilians, had worked feverishly on the construction of the defences.<sup>74</sup> In less than three months 500,000 railway wagons loaded with war material had rolled into the salient.<sup>75</sup> In the sector of Voronezh Front alone, 83,912 cannon emplacements and machine-gun positions, 5,322 command and observation posts, 17,505 shelters and earth bunkers had been built, as well as 593 kilometres of wire obstacles. The total length of the gun and communication trenches was 4,240 kilometres.<sup>76</sup> A similarly huge amount of construction work had been done in the sector of Central Front. Most dangerous of all, however, were the Soviet mines. Voronezh Front and Central Front together had laid 503,663 anti-tank mines and 439,348 anti-personnel mines.<sup>77</sup> The most important sectors contained 1,500 anti-tank and 1,700 anti-personnel mines per kilometre,<sup>78</sup> and the single mines scattered between irregularly laid minefields proved particularly treacherous.<sup>79</sup> The German sappers put in a tremendous amount of work, but even after an advance of 60 kilometres they were still faced with minefields.<sup>80</sup>

It turned out, moreover, that the Soviets were surprisingly well informed about the direction of the German attack. As a result, in their very first push forward on 5 July the German tanks ran straight into minefield systems several kilometres deep. In addition, the Red Army had positioned a particularly large mass of forces directly in the anticipated path of the enemy's main thrust. The concentration of artillery in Central Front at the main point of defence was as high as 124 cannon per kilometre.<sup>81</sup> Whereas during its large-scale offensives in the second half of the war the Red Army's artillery strength was often exponentially greater than that of the enemy in the breakthrough sector<sup>82</sup> and literally pulverized the German

<sup>82</sup> For example, in the defeat of Army Group Centre in the summer of 1944: on the German side an average of two to three artillery cannon were deployed per kilometre in the Belorussian salient, whereas the Soviet average in the breakthrough sector was 178. In the second phase of that operation, as many as 356 cannon per kilometre were massed on the left wing of 1st Belorussian Front; see Niepold, 'Die Führung der Heeresgruppe Mitte', 62; 'Belorusskaya operatsiya v tsifrakh', 77 and 80.

positions, at Kursk the German units did not succeed even once in gaining superiority. On the contrary, in the breakthrough sector of Ninth Army, as stressed in the Soviet accounts, the defender's artillery density was one-and-a-half times greater than that of the attacker.<sup>83</sup>

<sup>83</sup> *Geschichte des Großen Vaterländischen Krieges*, iii. 298; see also Heinrici and Hauck, 'Zitadelle', 589.

## II. The Failure of Operation CITADEL

### 1. THE ABORTIVE SOVIET PRE-EMPTIVE STRIKE

Operation CITADEL was ill-starred from the outset. The Red Army had discovered both the direction and the time of the German attack. And so, paradoxically, it was not the attacker but the defender who began the battle, by launching a preventive strike with artillery and air-force units. This is the source of the first myth about the battle of Kursk, which goes as follows: in the night of 4 to 5 July 1943 a group of sappers from 6th Infantry Division was surprised clearing a path through a Soviet minefield. A certain Lance-Corporal Formella had no time to get away and was taken prisoner. Under interrogation he revealed that the German forces would begin the offensive at 02.00 (03.00 Moscow time). Thereupon the commanders-in-chief of the two Soviet army fronts ordered their artillery to open fire on the suspected German marshalling areas 40 minutes earlier than the appointed time, subjecting the Germans to a powerful 30-minute-long artillery barrage which pre-empted the German artillery by ten minutes.<sup>1</sup> The enemy was supposedly taken completely by surprise and suffered ‘enormous losses’. In the northern sector, 90 batteries of Ninth Army were said to have been destroyed, while in the southern sector the artillery of 6th Guards Army is supposed to have wiped out more than 4,000 German soldiers and a large number of tanks and cannon.<sup>2</sup> Moreover, the story continues, the Germans were so disorganized by the pre-emptive strike that they had to postpone the start of the offensive for two hours.<sup>3</sup>

Yet, strangely enough, German war diaries make no mention whatever of such an event. There are only reports from a few divisions of occasional harassing fire on as yet unoccupied marshalling areas. In the area of III Armoured Corps a bridge was hit, somewhat delaying the start of the attack at that location. With that exception, however, all the units on the whole front launched the offensive punctually to the minute. The Soviet ‘artillery counter-strike’ was thus, despite the huge effort, a blow into empty space. Moreover, it seems improbable that a German

<sup>1</sup> Rokossovsky, *A Soldier’s Duty*, 195.

<sup>2</sup> Telpukhovsky, *Die sowjetische Geschichte des Großen Vaterländischen Krieges*, 236.

<sup>3</sup> The crassest exaggeration of all is Martin Caidin’s assertion that the battle of Kursk would probably have turned out differently if the surprise strike by the Soviet artillery had not taken place; see Caidin, *The Tigers are Burning*, 172.

lance-corporal, sent out in advance on a dangerous mission in enemy territory, would have been initiated into secret offensive plans. He probably named a time at random in order to escape the robust Soviet interrogation methods. In any case, it was the wrong time, so the lance-corporal misled the commanders-in-chief of the two Soviet army fronts. In fact the time that had been set for the start of the attack by Ninth Army was 03.30 (04.30 Moscow time), not 02.00.<sup>4</sup> The fact that the pre-emptive artillery strike had no great effect is confirmed by Marshal Zhukov in his memoirs: ‘Observation of the fighting and interrogation of prisoners made me realize that Central and Voronezh Fronts had begun their pre-emptive strike too soon, when the [German] troops were still asleep in the trenches and shelters.’<sup>5</sup> Nevertheless, the failed ‘pre-emptive artillery strike’ was portrayed in Soviet official historiography as a great success.

There is a similar myth concerning the allegedly successful preventive strike by the Soviet air force. On the German side the plan was that the Luftwaffe would not carry out an advance attack on this occasion, in order to avoid undermining the surprise effect, but would go into action only once the army units had begun the offensive. It was also planned to send the bombers in first and the fighters afterwards. In the early hours of the morning the front airfields were overcrowded with planes and would have been an ideal target for the Soviet air force. At that very moment hundreds of approaching enemy aircraft suddenly appeared on the radar screens. Alarm spread in the VIII Air Corps operations staff. Clearly, the Luftwaffe’s plan of attack was known to the Soviet leadership, since the enemy bombers would reach the German airfields at exactly the most unfavourable moment and destroy the German aircraft on the ground. But the wing commanders reacted immediately and changed the deployment plan. Instead of starting with the bombers, they sent the fighters into action first.

Now the element of surprise from which the Soviet side was aiming to benefit was suddenly reversed, as the Soviet bomber squadrons were suddenly faced with German fighters. Those early hours witnessed one of the biggest air battles of the Second World War. Maj.-Gen. Seidemann, the commanding general of VIII Air Corps, reported: ‘Everywhere you could see aircraft burning and crashing: it was a massive spectacle of an air battle such as is very rarely seen [...] Around 120 Soviet aircraft were shot down during the attack. Our own losses were so minimal that we could speak of total victory.’<sup>6</sup> The Soviet air operation was planned with precision and extremely boldly executed. Its failure was a question of a few minutes.

<sup>4</sup> KTB AOK 9, 5 July 1943 (fo. 114), BA-MA RH 20-9/134; BA-MA, Study ZA 1/2071, 121–2. Ninth Army attacked with 1st Squadron at 3.30 a.m. and with 2nd Squadron at 6.30 a.m. As for Army Group South, the advance attack by III Armoured Corps of Army Detachment Kempf began at 02.25 a.m. and Fourth Armoured Army went into action at 4.00 a.m.; on this, see Töppel, *Die Offensive gegen Kursk*, 30–1.

<sup>5</sup> Zhukov, *Erinnerungen* (8th edn.), 167.

<sup>6</sup> ‘Der Einsatz der deutschen Luftwaffe im Osten 1943’, 138, BA-MA, Study ZA 3/746. See also Bekker, *Angriffshöhe 4000*, 383 ff.; Klink, *Das Gesetz des Handelns*, 210.

On 5 July a total of 425 Soviet aircraft were shot down at Kursk,<sup>7</sup> while the Germans lost only 36 planes.<sup>8</sup>

The balance of losses could have been very different, however, if the Luftwaffe had not managed to counter the Soviet surprise attack at the last moment. That it was able to do so was mainly due to superior electronic intelligence. For one thing, German radio surveillance was able to pick up the take-off signals of most of the Soviet air units. The decisive factor, however, was deployment of the Freya long-range radar system. When the approaching Soviet aircraft suddenly appeared on the radar screens, the German officers in charge were able to react in time. The outcome of the air battle at Kursk on 5 July was that the German planes gained command of the air against a quantitatively much stronger enemy. They retained that dominance in the following days during the advance of the German army units, but for the last time in the war.

## 2. THE FAILED ATTACK BY NINTH ARMY (5 TO 13 JULY 1943)

Col.-Gen. Model had five corps at his disposal. He sent three of them into attack in a wedge formation with XXXXVII Armoured Corps at the apex, covered on the left flank by XXXXI and on the right by XXXXVI Armoured Corps, both of which had relatively few tank units. XXIII Army Corps was to carry out holding attacks on the left wing, while XX Army Corps on the right wing was entrusted only with security tasks.

Whereas in Manstein's units the tanks were deployed in the front line for breakthrough, Model sent his units into attack in a deeply staggered formation. The first wave contained only a few armoured divisions, instead of which Model used infantry divisions, mainly supported by assault guns, to achieve an initial breakthrough. In the second wave he intended to send three armoured divisions forward to widen the breach. He did not, however, deploy the especially powerful Esebeck Group, consisting of two armoured divisions and an armoured infantry division, to maintain the momentum of the attack, but kept it in reserve, to be sent forward in the event of a successful breakthrough.

This procedure proved to be a mistake, since in the first phase, when the aim was to reduce Soviet artillery fire, the infantry units had to struggle through wire-encumbered terrain. When they were finally left lying there, the tanks were

<sup>7</sup> Of these, 260 were claimed by VIII Air Corps and 165 by 1st Air Division; see 'Tägliche Einsatzübersichten der Luftflotte 4, 3.7 bis 10.12.1943', BA-MA RL 7/667; on Air Fleet 6, see 'Tagesmeldungen des Flivo 2. Armee, 1.7 bis 30.9.1943', BA-MA RH 20-2/1337; calculated by Ulf Balke in the light of documents from his private archive. According to other calculations, the number of planes downed was 413; see BA-MA, Study ZA 3/746, 141; BA-MA, Study ZA 1/2071, 124; BA-MA Study ZA 3/748, 75.

<sup>8</sup> VIII Air Corps lost 24 planes and 1st Air Division(Air Fleet 6) 12; see the tables of losses in files BA-MA RL 2-III/1191–1193 (Gen.Qu.Mstr., 6. Abt.: 'Flugzeugunfälle und Verluste bei den fliegenden Verbänden'). According to Klink (*Das Gesetz des Handelns*, 337–8), the Luftwaffe units deployed at Kursk on 5 July lost only 26 planes.

launched on a frontal attack on fortified positions, which partly resulted in unnecessary losses. Model chose not to deploy his armoured units in closed formation—a fundamental violation of Guderian's concentration principle. Such half-hearted, timid use of armour must have seemed surprising on the part of a man who had become Hitler's 'favourite general' on account of his determined—not to say reckless—deployment of his troops. How can this contradiction be explained? An initial answer has already been given: Model had to attack the central front with his army in a southerly direction, but he had Bryansk Front to the north, ready to attack his units in the rear. That was why he positioned Esebeck Group so far back, so that it could be deployed not for an advance towards Kursk but as firepower against Bryansk Front. The second reason was that he himself was clearly not convinced that the offensive would succeed.<sup>9</sup> Of all the top generals, Model had the most realistic view of the situation, owing, among other things, to the fact that he was in the very front line more often than all the others. Nevertheless, he never openly opposed Hitler with regard to Operation CITADEL, but constantly put forward new demands for reinforcements which resulted, on each occasion, in postponement of the date of attack. He almost succeeded in putting off the offensive altogether, since only five days remained from its beginning until the western Allies' landing in Sicily.<sup>10</sup>

How right Model was to slip into the unwonted role of 'ditherer' is shown by a comparison of his army with the real potential of Central Front. An unbiased observer would have concluded that the German units were the defender and the Soviets the attacker, if not for the fact that Central Front was entrenched behind such huge defensive installations. The Soviet army front had massed so many forces in the path of the anticipated German main thrust that it seemed as if it itself intended to launch a breakthrough attack. Thus 13th Army had 4,500 men and 45 tanks deployed per kilometre.<sup>11</sup> Model's attack units possessed only 752 artillery cannon (excluding grenade launchers),<sup>12</sup> while Central Front had 3,140 artillery cannon and 5,792 grenade launchers at the ready.<sup>13</sup> A similar imbalance had also existed during earlier successful German offensives, but the Wehrmacht had generally managed to achieve relative superiority by using the element of surprise at the main point of attack. This time, however, the artillery density of the Soviet defender was 50 per cent higher than that of the Germans.<sup>14</sup> In addition, on both sides of the Orel–Kursk railway line where the main thrust of the German attack was anticipated, 13th Army was reinforced by IV Artillery Corps, with over 700 cannon and grenade launchers.<sup>15</sup>

<sup>9</sup> This was confirmed by his son, Bundeswehr Brig.-Gen. (ret.) Hans Georg Model, in a personal communication to the author.

<sup>15</sup> *Geschichte des Großen Vaterländischen Krieges*, iii. 298.

The Wehrmacht's last major offensive on the eastern front began at 03.30 on 5 July. 'It was a laborious and costly process of grinding our way through a huge and seemingly endless defensive system whose intervening spaces were strewn with mines and bristling with weapons of every kind.'<sup>16</sup> Model's aim of saving the precious armoured divisions for the Red Army's imminent summer offensive seemed thoroughly reasonable, but without the penetrative power of armoured units in closed formation it proved impossible to achieve a rapid breakthrough through the enemy's deeply staggered defences. The density of fire from the Soviet direct-fire weapons was so great that eight anti-tank shots per minute, and over 1,000 shots per minute from hand weapons, could be fired on every hundred metres of the front.<sup>17</sup> Moreover, the enemy artillery fire proved so impenetrable that the infantry finally lagged behind the accompanying assault guns. Model's conduct of the attack also proved fatal to some of the 90 Ferdinand tank destroyers, whose thick armour reputedly made them invulnerable. Suddenly these huge vehicles, weighing almost 70 tonnes, seemed lost in the maze of the enemy's defensive system. According to Soviet accounts too, the fighting was 'unimaginably fierce'<sup>18</sup> from the outset. On 5 July Model's troops managed to penetrate 8 kilometres into the Soviet defensive system, but they paid a high price for that success. Casualties at the end of the first day of battle totalled 1,063 dead, 5,921 wounded, and 215 missing.<sup>19</sup>

Konstantin Rokossovsky, the commander-in-chief of Central Front, had so many reserves at his disposal that he was already able to launch an operational counter-attack on the second day of the battle in order to throw the Germans back on their starting position. To this he committed 2nd Armoured Army, plus XIX Armoured Corps and several infantry divisions. The attack was supported by 900 cannon, 637 grenade launchers, and 200 rocket launchers.<sup>20</sup> This counter-strike took place far too early, however, since the German offensive was still far from its culmination. Hasty and uncoordinated, the operation failed from the outset. Moreover, for the Soviet armoured units fighting in the direction of the main thrust, the push ended with a shock. They came up against German Tiger tanks, with which the crews of the Soviet T-34s recklessly sought a duel. Within minutes 107th armoured brigade lost 46 of its 50 tanks, and 164th armoured brigade, which had joined in the attack, lost a further 23.<sup>21</sup> Central Front HQ immediately withdrew the armoured units and ordered the mass of fighting vehicles on that section of the front to dig in so that the enemy could see and attack only the turrets. The remaining tanks were to be deployed only against infantry and light vehicles. Rokossovsky observed in retrospect: 'This order had been prompted by circumstances.

<sup>19</sup> Medical officer AOK 9, 10 July 1943, activity report for the period 4 to 10 July 1943, BA-MA RH 20-9/409.

<sup>20</sup> Zetterling and Frankson, *Kursk 1943*, 87.

<sup>21</sup> Glantz and House, *The Battle of Kursk*, 93; see also Andronikov, 'Gitlerovskii fakel', 8.

I remembered only too well the time when our tankmen had hastily launched a head-on attack against Tigers. They had suffered substantial casualties and been hurled back behind the infantry lines.<sup>22</sup>

The quantitative role of the Tiger is nevertheless overestimated in the Soviet accounts. At the start of the offensive, Ninth Army had available only 505th Heavy Armoured Battalion, comprising two companies with a total of 26 operational Tigers.<sup>23</sup> While the Tigers were generally victorious in all their encounters with Soviet tanks, a far more dangerous enemy awaited them. On 5 July, six Tigers were taken out of battle after driving onto mines. On 6 July no fewer than 12 Tigers fell victim to mines and also needed repairing.<sup>24</sup> All in all, however, Ninth Army HQ considered the second day of the offensive a success. Not only had the German forces managed to fight off Central Front's surprise counter-attack but, above all, new ground had been gained on the wings.

During the next two days too, Ninth Army made difficult but steady progress. It had now reached Central Front's main bastion, the strongly fortified village of Ponyri<sup>25</sup> on the Orel–Kursk railway line and the Olkhovatka upland, a natural barrier 18 kilometres south of the starting line of the offensive. Both sides were conscious of the operational importance of the upland, from which the whole battlefield could be observed as far as Kursk. Hence the saying: 'Whoever holds Olkhovatka holds the gates of Kursk.'<sup>26</sup> Nowhere were the fortifications harder to penetrate, and nowhere was there a greater concentration of strength. Apart from Prokhorovka, this was where the heaviest fighting in the battle of Kursk took place. Many metaphors have been applied to the fighting in the Kursk 'inferno', as the salient later came to be known. The battle has been called 'a second Verdun',<sup>27</sup> with Ponyri figuring as 'a new Douaumont'.<sup>28</sup> Ponyri has also been described as 'the Stalingrad of the Kursk salient'.<sup>29</sup>

Almost all accounts of the eastern campaign make the erroneous assumption that a Soviet infantry division was numerically weaker than a German one. That was true only on paper. Wehrmacht divisions were theoretically stronger, but they normally had at their disposal only units that were hierarchically assigned to them. By contrast, the Red Army had two components: on the one hand, units structured hierarchically from army to company; on the other, a large available mass of unattached units. In deployment both components were mixed, so that a Soviet division was often several times stronger than a German equivalent. However, 307th Infantry Division, the division assigned to the defence of Ponyri, topped them all. The forces in its zone of action included 51st, 103rd, and 129th Armoured Brigades, 27th Guards Heavy Armoured Regiment, 1422nd Assault

<sup>22</sup> Rokossovsky, *A Soldier's Duty*, 198.

<sup>23</sup> The reconstituted 3rd company did not go into action in the Kursk salient until 8 July.

<sup>24</sup> Schneider, *Tiger im Kampf*, i. 271. The following day, 7 July, 14 Tigers were still operational; see 'Panzerlage Heeresgruppe Mitte', 7 July 1943 (fo. 28), BA-MA RH 10/65.

<sup>25</sup> There are in fact two localities with this name. The legendary battle took place at the Ponyri located directly on the Orel–Kursk railway line. Ponyri 2 lies a few kilometres to the south-west.

<sup>26</sup> John, *Kursk*, 72.

Gun Regiment, 13th Anti-Tank Brigade, 5th Artillery Assault Division, 11th Grenade Launcher Brigade, 22nd Guards Rocket Launcher Brigade, and parts of 1st Guards Infantry Brigade.<sup>30</sup> It possessed a total of over 380 barrelled weapons, a concentration never again amassed in the course of the war.<sup>31</sup> What awaited the German tanks at Ponyri can be seen from the enormous density of anti-tank cannon, no fewer than 70 guns per kilometre.<sup>32</sup>

On 7 July, 86th and 292nd Infantry Divisions attacked Ponyri, with support from parts of 18th Armoured Division. After taking control of the place in fierce house-to-house combat, they were driven back by a Soviet counter-attack. There followed a series of German attacks and Soviet counter-attacks, with the centre of the village repeatedly changing hands. Both sides brought in reserves. Finally, the place was shelled by ten Soviet artillery regiments. It was only in the evening of 8 July that the Germans managed to take Ponyri, except for the southern tip. The following day, with the help of the huge 'Ferdinand' tank destroyers, the hotly contested Hill 253.5 was stormed.<sup>33</sup> But that exhausted XXXXI Armoured Corps' attacking strength, whereas the Soviet enemy continued to bring in new forces, such as XVII Guards Rifle Corps and units of III Armoured Corps. There now began a positional battle with high losses on both sides.<sup>34</sup>

The attack on the Olkhovatka upland proved even more difficult.<sup>35</sup> Dug-in tanks and artillery cannon lay in wait, firing directly at the German fighting vehicles. The Soviet XVI and XIX Armoured Corps, which had taken up position on both flanks of the upland, were a further threat. On 9 July Model had to call a pause for the first time to regroup his exhausted units and await the arrival of fresh reserves. The attack was resumed the next day with the support of additional aerial forces from Army Group South. However, Rokossovsky too had regrouped and threw his last reserves, IX Tank Corps, into the battle. Despite its considerable force, the German attack led only to localized breaches, above all at Teploye. The Ninth Army war diary records significantly that the fighting had the 'novel character of a "rolling battle of material attrition"'.<sup>36</sup> Model broke off the attack once again in order to regroup on the following day. He realized that, with the

forces available so far, he would make no progress in the present direction of thrust. But he by no means acknowledged himself beaten and intended to resume the offensive on 12 July. He had not yet played his trump card, 12th Armoured Division, and had also been promised the transfer of 36th Infantry Division and 5th and 8th Armoured Divisions from the reserve forces of Army Group Centre.<sup>37</sup> Above all, Model fundamentally altered his plan of operation. He abandoned the idea of advancing directly towards Kursk, since that meant a frontal attack on the almost untakeable Olkhovatka upland position. Instead, he planned to shift the point of maximum effort from XXXXVII Armoured Corps in the centre to XXXXVI Armoured Corps on the right flank and avoid the fortified upland plateau by advancing in a south-westerly direction. In this offensive his armoured units were to be deployed for the first time in closed formation.<sup>38</sup> They were still surprisingly intact, owing to Model's restrained use of armour, having suffered total losses of only 63 battle tanks, assault guns, and tank destroyers up to 11 July.<sup>39</sup> Ninth Army's total losses of only 77 fighting vehicles<sup>40</sup> during Operation CITADEL were relatively low anyway, compared with 526 on the Soviet side.<sup>41</sup>

At this precise moment, the culminating point of the attack, when the last reserves were thrown into the balance, an event of major importance occurred to the north of Ninth Army's zone of action. It was exactly what Model had feared from the outset. Bryansk Front and the left wing of West Front launched an offensive in the rear of Ninth Army against the hopelessly inferior Second Armoured Army. The preliminary attacks on 11 July still seemed to be only holding attacks, but on 12 July the Soviet units began an offensive on a broad front and immediately achieved deep breakthroughs. If they succeeded in advancing on Orel, Ninth Army would be cut off from its major supply lines and threatened with encirclement. Since Second Armoured Army was unable to close the breaches with its own forces, on 12 July Army Group Centre HQ ordered Ninth Army to detach a number of armoured and infantry divisions and send them to the neighbouring army at forced march. The initial hope was that it would be possible to bring them back after a rapid intervention and resume the offensive against Kursk. However, the critical situation of Second Armoured Army deteriorated further 'at the pace of an avalanche'.<sup>42</sup> It was now clear 'that the enemy's operational objective was to achieve

<sup>37</sup> Zins, *Die Operation Zitadelle*, 58.

<sup>41</sup> From 5 to 15 July Central Front lost 651 armoured vehicles, 526 of which were irreplaceable: 'Spravka o poteryakh voisk frontov, poteryakh, nanesennykh imi protivniku, i vydovy o deistviyah tankovykh voisk protivnika v operatsiakh s 5-go po 15-e iulya 1943 goda' (source: Central Archives of the Ministry of Defence of the Russian Federation, CAMO, doc. 21, 2).

<sup>42</sup> KTB AOK 9, 12 July 1943 (fo. 133), BA-MA RH 20-9/134.

the collapse of the whole Orel bulge by means of a large-scale offensive'.<sup>43</sup> For Ninth Army, after the failure on 10 July of the planned rapid advance on Kursk, this new development meant the end of Operation CITADEL. On the morning of 13 July Model realized that it was pointless to resume the attack. It was finally ended on the same day by Hitler's decision to halt the offensive, taken at his headquarters in Rastenburg, East Prussia.<sup>44</sup> With that, the northern pincer of the overall operation ceased to exist.

### 3. THE ADVANCE OF ARMY GROUP SOUTH UP TO 12 JULY

The attack in Army Group South's sector had much greater penetrative force, owing to various factors. For one thing, the units deployed were better equipped, both quantitatively and qualitatively. While Ninth Army in the north had only 988 tanks and assault weapons, Fourth Armoured Army and Army Detachment Kempf together possessed 1,377, including 102 Tigers and 200 Panthers.<sup>45</sup> But the different way in which armour was employed was also a factor. In the initial phase Model mainly attacked with infantry divisions, endeavouring to save his tanks to widen the breakthrough at a later stage. Manstein, on the other hand, deployed his armoured units at the spearhead of the attack in the manner of earlier 'blitzkrieg' operations.

Army Group South's forces were deployed as follows. Fourth Armoured Army under Col.-Gen. Hoth attacked with two wedge formations next to each other: XXXVIII Armoured Corps on the left and II SS Armoured Corps on the right, with the left flank secured by LII Army Corps. The right flank, however, was to be covered offensively by Army Detachment Kempf. For this General Kempf committed III Armoured Corps and XI Army Corps (the Raus Corps).<sup>46</sup>

Fourth Armoured Army had already carried out preliminary attacks in the afternoon of 4 July to seize possession of the intervening ridge of hills. The main attack began at 04.00 on 5 July. From the outset, attention focused on the performance of the new Panzer V (Panther), from which wonders were clearly expected. Hitler, in his technology frenzy, had postponed the Kursk offensive from June to July to wait for the first models to be ready. Western specialist historians generally consider the Panther to be the most successful tank design of the Second World War.<sup>47</sup> At Kursk it already showed itself far superior to the Soviet battle tanks in duel situations. Nevertheless, its first deployment proved a false start. Col.-Gen. Guderian, the inspector-general of armoured troops, had protested strongly but in vain against hasty front-line deployment of this technically immature model. Although testing had by no means been completed, the factory-new vehicles were

<sup>43</sup> 'Gefechtsbericht der 9. Armee', 2, BA-MA RH 20-9/155.

<sup>44</sup> Zins, *Die Operation Zitadelle*, 63.

<sup>45</sup> 'Panzer-Ausgangslage Süd 5.7.1943' (fo. 15), BA-MA RH 10/64.

<sup>46</sup> Kempf also had XXXXII Army Corps under his command, but it took no active part in Operation CITADEL.

<sup>47</sup> For an analysis of armour deployment at Kursk, see Part II, Chapter III.3 of the present volume.

rushed to the front. Their very first deployment—before the attack had even started—ended in fiasco. During the march to the marshalling area in the night of 4 to 5 July, 45 Panthers, almost a quarter of the total number, dropped out because of technical problems.<sup>48</sup> Among the tanks left standing on both sides of the march route, some had caught fire as a result of leaking fuel-pumps. As if that were not enough, this first deployment was also a failure from the tactical viewpoint. At the beginning of the attack, 10th Armoured Brigade, which included the Panthers, set out in the direction of Cherkasskoye and immediately got stuck in a minefield.<sup>49</sup> With the Panther brigade showered with fire from the Soviet artillery, the sappers began their thankless task. Armoured Infantry Division ‘Grossdeutschland’, to which 10th Armoured Brigade also belonged, had 25 tanks put out of action by mines on the first day of the attack. Most of them were Panthers.<sup>50</sup>

The other attacking units encountered lesser difficulties in general, but everywhere they came up against ‘fortress-like defensive positions studded with dug-in tanks, anti-tank cannon, and flamethrowers’<sup>51</sup> As one Soviet tank commander recalled: ‘The scale of the battle was beyond human imagination. [...] The sun was hardly visible through the clouds of smoke and dust raised by thousands of grenades and aerial bombs exploding almost simultaneously. There was a hellish crunching and crashing of grenades striking armour.’<sup>52</sup> In addition, repeated rainfall had turned the few roads into a morass. Despite everything, the German tanks rolled slowly but inexorably forward. On 6 July, the second day of the offensive, the major communications hub of Yakovlevo was taken. On the same day, II SS Armoured Corps, deployed on the right wing, broke through the second Soviet defensive line and its foremost sections reached Kalinin, south of Teterevino.<sup>53</sup> Its units had thus already advanced 25 kilometres, fighting their way through minefields and other obstacles, and were still 17 kilometres from Prokhorovka. But the operation had not gone according to plan. The original idea had been for XXXXVIII Armoured Corps, deployed on the left wing, to carry the main thrust of the attack. That was why it had been given the 200 new Panthers in addition to its normal contingent. Since more of them were quickly to be found in repair shops than on the battlefield, XXXXVIII Armoured Corps hung back, while II SS Armoured Corps made faster progress, shifting the main thrust of the offensive towards the north-east.<sup>54</sup>

The attack on the right wing by Army Detachment Kempf proved the most difficult. The original intention was that it should also attack towards the north, shoulder to shoulder with II SS Armoured Corps, to cover the latter’s right flank. But Kempf’s III Armoured Corps had problems crossing the Donets. The Soviet positions to the east of Belgorod were so strongly constructed that 6th Armoured

Division, which was supposed to form the connecting link to the Waffen SS units advancing on the left, could make no progress. It had to be detached and deployed further to the right (eastwards) in 7th Armoured Division's zone of action. For that reason, the attack gained ground eastwards rather than northwards. A gap arose, with the two attacking wedges of Fourth Armoured Army and Army Detachment Kempf threatening to move away from each other at right angles. At the same time two (unplanned) open flanks formed on the inner wings of the two formations and had to be covered by units which were supposed to advance at the spearhead of the attack. In the meantime, the shortage of infantry had become so acute that armoured units had to be used to provide some flank protection.

On the Soviet side, however, the situation was becoming much more critical. Clearly, the Soviets had felt too secure behind their apparently impenetrable defences and had trusted to their numerical superiority. When after only one-and-a-half days the SS Armoured Corps had already broken through the second defensive line, the Soviet staffs became greatly agitated. The commander of 4th SS Armoured Infantry Regiment, for example, reported:

Soon after Luchki had fallen, that is at noon on 6 July, one of our tactical radio reconnaissance units picked up Russian radio reports which clearly showed the enemy was completely unhinged. One corps general kept desperately calling for reserves and help from his army. [...] By the second day of the attack, the top leadership was also completely overwhelmed and in total confusion [...] We were surprised and [...] directed our attack towards the closer targeted radio transmitter, overwhelmed the enemy, who was already getting weaker, and towards 19.00 reached a small farmhouse to the west of Kalinin. And there we found a Russian general with his corps staff. The enemy was taken prisoner without resistance. There was not even a guard in front of the command post, since our arrival took them completely by surprise.<sup>55</sup>

The nervousness of the Soviet leadership was due to the results of the first tank duels, almost all of which they lost. In the area of tank technology, it became obvious that the advantage now lay with the modernized German armour: 'The T-34 crews' earlier feeling of superiority over the German tanks now gave way to a kind of panic as soon as they saw Tigers deployed against them.'<sup>56</sup> As well as the Tiger heavy tank, the Panther medium tank also became a nightmare for the Soviet tank crews. It too proved invulnerable to frontal fire from T-34/76s, while its high-speed cannon could pierce the frontal armour of a T-34/76 from a distance of over 2,000 metres.<sup>57</sup> After the battle of Kursk, tank commander Gen. Pavel Alekseyevich Rotmistrov had to admit to Stalin that 'the T-34 is powerless against the T-V [Panther].'<sup>58</sup> In the meantime, however, a new series of Panzer IVs (H version) had been deployed at the front. Their silhouette was somewhat similar to that of a

Tiger, which caused considerable confusion among Soviet tank crews. The majority of German tanks actually consisted of older Panzer III and IV models. But because the modern tank types were always deployed at the spearhead of the attack, the Red Army at first believed that the German armour would largely consist of Tigers, which were virtually invincible, and Panthers, which were also hard to defeat.

Two major decisions were taken by the Soviet operational staffs right at the beginning of the battle. The first was the surprisingly early deployment of the strategic reserve. General Vatutin, the commander-in-chief of Voronezh Front, had sent almost all the operational reserves into action on 6 July. In addition to 1st Armoured Army (VI and XXXI Armoured Corps and III Motorized Corps), they consisted of II and V Guards Armoured Corps and several unattached tank and assault-gun units. The Soviet high command (Stavka) was consequently obliged to throw large parts of the strategic reserve into the balance. Considering that there was almost uninterrupted fighting on the southern half of the eastern front from 5 July 1943 to 6 May 1944, it is astonishing that on 6 July, the second day of the battle of Kursk, the Soviet leadership already called upon the strategic reserve. The intention had been to deploy that reserve only after the defensive battle was over, keeping it for the subsequent summer offensive so as to lend added impetus to the Soviet thrust. II and X Armoured Corps and 5th Guards Armoured Army were already put on the march on 6 July. In the next few days the order was extended to other major formations of Steppe Front, which was stationed in the hinterland, such as 5th Guards Army, 27th and 53rd Armies, and finally 4th Guards Army.<sup>59</sup> This resulted in a huge increase in Soviet strength, especially armour. Voronezh Front, including the reserves which had joined it by 20 July, now had a total of 2,924 fighting vehicles at its disposal.<sup>60</sup>

The second major decision was Vatutin's order to dig in a large part of his armour. The commander-in-chief of Voronezh Front had actually planned an operational counter-attack for the second day of the battle, for which 1st Armoured Army and V Guards Armoured Corps stood ready with total of around 1,000 tanks and assault guns.<sup>61</sup> On the same day, Central Front conducted an operational counter-attack against Germany's Ninth Army in the northern part of the Kursk salient. As already described, this ended in fiasco when the Soviet tanks clashed with the German Tigers. Vatutin, however, called off his own counter-attack on the evening of 5 July because of alarming reports of the first encounters with Tigers and Panthers.<sup>62</sup> Instead, he proposed to dig in most of his tanks up to the turrets so as to form a compact anti-tank front side by side with the infantry. Such static deployment of large armoured units was against all the rules and contrary to the 'cavalier spirit' of the tank forces. But the thinking of the commander-in-chief of the Voronezh Front was based on the conviction that only defensive deployment of

<sup>59</sup> Zetterling and Frankson, *Kursk 1943*, 88 and 92; Shutov and Ramanichev, 'Ognennaya duga', 266–8.

<sup>60</sup> See CAMO Collection, doc. 20, 'Spravka o poteriakh tankov po deistvuyushchim frontam v boyach s 5.7.43 g. po 20.7.43 g.',

<sup>62</sup> Shutov and Ramanichev, 'Ognennaya duga', 266.

the operational armoured reserve could hold back the German advance long enough for the strategic reserve to arrive.

Vatutin's proposal was entirely appropriate to the situation, but it nevertheless met immediately with strong protest. Above all Marshal Zhukov, as representative of the Soviet high command, protested against such a 'preposterous use' of armour and demanded a vigorous counter-attack. This, however, would have led to an open-field battle which, given the Germans' tactical superiority, would have resulted in painful decimation of the Soviet armour. And that would probably have cleared the way for a rapid advance on Kursk. The fact that Stalin dropped his opposition and finally decided in favour of defensive deployment was due not least to the energetic intervention of the man who was later to become his successor, Nikita Sergeyevich Khrushchev, then a member of Voronezh Front's military council. So there was no change to Vatutin's decision to deploy the mass of his tanks statically as a dike against the German armour,<sup>63</sup> which was pushing forward 'like a steel wedge'.<sup>64</sup>

The commander-in-chief of Voronezh Front was unequivocally proved right by the course of battle in the following days, when the impetus of the German attack was slowed appreciably. In the words of a German study: 'Each of these [dug-in] tanks was itself a strongpoint whose destruction or removal was very time-consuming'.<sup>65</sup> The Soviet tanks were mostly buried deep in the earth in reverse slope position, with only the turret showing. That made them a difficult target to hit. The German fighting vehicles had to come very close, thus losing the advantage of their longer range. This would normally have been no problem for the Tigers and Panthers, since their frontal armour could not be pierced by Soviet tank weapons. However, the Red Army deployed a number of tanks as 'concealed weapons'. Their crews let the German tanks roll by their camouflaged positions and then opened fire on them from the side or the rear. In that way they could be dangerous even for a Tiger, since it had weaker armour on the sides and back. Such deployment, however, was usually a death sentence for the crews of the hidden tanks. They gave away their position as soon as they fired their first shot.

Even though Vatutin deployed most of his fighting vehicles statically, the continuous arrival of fresh reinforcements still left him with huge masses for counter-attacks on the German flanks. Nevertheless, the following example clearly shows how dangerous it was to get into a duel with a Tiger, despite numerical superiority. On 8 July a Soviet armoured regiment managed a surprise advance on Teterevino, where there was an important concentration of logistic installations. The German tank units were deployed far away, but there was just one Tiger in the repair shop. Its commander, SS-Unterscharführer (Sergeant) Franz Staudegger, decided to take on the 50 to 60 Soviet tanks with the Tiger, even though it was not yet fully repaired. He and his crew, who belonged to 14th Company, 1st SS

<sup>63</sup> *Geschichte des Großen Vaterländischen Krieges*, iii. 320–1; Glantz and House, *The Battle of Kursk*, 102–3; Carell, *Verbrannte Erde*, 82–3.

<sup>64</sup> Shutov and Ramanichev, 'Ognennaya duga', 267.

<sup>65</sup> BA-MA, Study ZA 1/2071, 126.

Armoured Regiment, began what seemed a hopeless fight, but the Tiger's superior range and better armour prevailed. After 22 T-34s had been shot down, the remaining tank crews fled in panic. For that single action, which he carried out 'on his own initiative', Staudegger, an Austrian Unterscharführer, was awarded the Knight's Cross.<sup>66</sup>

The slowdown of the German attack was not, however, due solely to Vatutin's wise decision to dig his tanks in. Another reason was the sudden drop in air support. As already mentioned, during Operation CITADEL the Luftwaffe enjoyed air superiority for the first time on the eastern front, but this was only occasionally of use to the attacking units of Army Group South. On 7 July VIII Air Corps had to release 30 per cent of its bombers and 40 per cent of its ground-attack aircraft for the support of Model's Ninth Army in the north. But things got even worse. On 10 July VIII Air Corps' bombers were placed entirely at the disposal of Ninth Army, and numerous fighters were sent to the far distant Mius front. This meant that Army Group South was now left with only a third of its original air strength.<sup>67</sup>

Nevertheless, the armies fought their way doggedly forward through minefields and barriers in the face of a much stronger enemy, with the numerical superiority of the Soviet artillery particularly perceptible. Yet in this phase of the battle the German tanks were unstoppable. On 9 July the first units reached the River Psel, the last natural obstacle before Kursk. The next day the infantry succeeded in crossing the river. Meanwhile, despite Vatutin's defensive deployment, the Soviet armour had suffered catastrophic losses. The tank units of 6th and 7th Army were largely destroyed in the first two days. By 10 July, 1st Armoured Army had shrunk from an original 646 to 100 tanks and assault guns.<sup>68</sup> Up to and including 13 July, Voronezh Front (together with the reserves brought in) lost a total of 1,223 tanks and assault guns.<sup>69</sup> A large proportion of those losses were incurred in the first days of the battle. By contrast, up to and including 10 July the attacking units of Army Group South lost only 116 tanks and assault guns in all, although they had to fight their way through the enemy positions under the most adverse conditions.<sup>70</sup>

The 11th of July was the most successful day of the attack so far. Several breakthroughs were made as the resistance of the Soviet defenders gradually weakened.<sup>71</sup> Manstein's main problem till then had been Army Detachment Kempf's failure to advance on the right wing. But that was now where the decisive breakthrough was achieved. That day III Armoured Corps drove a breach in the Soviet defensive system and pushed forward in depth. The following night a

<sup>66</sup> Since the Knight's Cross was awarded seldom and only after painstaking investigations, this gave rise to extensive correspondence. See Agte, *Michael Wittmann*, 63–7; Wendt, *Tiger*, 18–19.

<sup>71</sup> Nipe, *Decision in the Ukraine*, 46 and 356.

combat unit of 6th Armoured Division reached Rzhavets, 10 kilometres away, and seized the bridge over the Donets. The unit consisted of two armoured companies, parts of 503rd Heavy Armoured Battalion (17 Tigers), and an armoured infantry battalion. A special role was played by two captured T-34s deployed at the head of the German tank column. Since they were marked with the German emblem, the *Balkenkreuz* (beamed cross), this measure did not formally contravene the laws of war. In the dark of night, however, the captured tanks were easily mistaken for Soviet T-34s, giving rise to strange scenes in which Soviet and German units advanced in the same direction on the same road. During brief halts, soldiers from the two columns stood next to each other without a shot being fired.<sup>72</sup> Shortly after midnight the German tanks approached Rzhavets, where Soviet fighting vehicles moved out towards them. Only now were they recognized. Fierce fighting ensued until the Germans finally managed to take the bridge. When reinforcements arrived, a bridgehead was established on the far bank of the Donets.

The operational importance of this action was twofold. The Soviet 69th Army was now almost encircled in the Donets triangle between III Armoured Corps and II SS Armoured Corps. Moreover, the spearhead of Army Detachment Kempf was now only 17 kilometres from the southern edge of Prokhorovka and in a position to launch a flanking attack on the units of 5th Guards Armoured Army, which were themselves poised to attack Fourth Armoured Army in the flank. Meanwhile units of II SS Armoured Corps had also swung east to reach the rear of 69th Army and meet the expected Soviet counter-attack.<sup>73</sup> Hill 252.2, some 2.5 kilometres from Prokhorovka, was taken on 11 July—an event which later assumed legendary importance. There was already widespread euphoria on the German side. As Manstein wrote in his memoirs, the success of III Armoured Corps marked ‘the final breakthrough through the last enemy position. The way was clear to engage the enemy’s reserves in battle in unfortified terrain.’<sup>74</sup> Not a single German soldier then suspected that the Soviet high command planned to encircle and destroy Army Group South’s attacking forces on the following day, 12 July, to the south-west of Prokhorovka.

#### 4. THE MYTH OF PROKHOROVKA

##### (a) The Soviet Encirclement Plan

Over the first two years of the war the Red Army had made considerable progress in terms of quality. But the extent of its tactical inferiority to the Wehrmacht was already apparent in the initial phase of the battle of Kursk. At a strategic level, however, it pulled off a master-stroke before the first tactical action had even begun. It managed to hide not just several armies but a whole army group from

<sup>72</sup> Paul, *Brennpunkte*, 311.

<sup>73</sup> On the operational planning of this swing to the east, see KTB OpAbt OKH, 11 July 1943 (fo. 225), BA-MA RH 2/3060; BA-MA, Study ZA 1/2071, 145–7.

<sup>74</sup> Manstein, *Verlorene Siege*, 500.

German intelligence in the depths of the interior. That strategic reserve consisted of Steppe Front.<sup>75</sup> Without a doubt, this was one of the war's most striking examples of 'maskirovka' (camouflage and deception). The original plan was to hold back the strategic reserve until the start of the Soviet summer offensive, and then let it sweep like an avalanche over the German formations defeated in the defensive battle for Kursk. However, when Voronezh Front seemed about to collapse after only a few days, the avalanche had to be launched earlier—in the direction of Prokhorovka. The aim was not to stop the German attacking forces but to 'envelop and destroy' the three German armoured corps that had surged forward.<sup>76</sup> In other words, the Red Army high command was seeking not an 'ordinary' victory but a victorious battle of annihilation, the 'Cannae' which the encirclement strategist Alfred von Schlieffen always had in mind—Stalingrad in the form of a tank battle.

The shape of the front invited a pincer operation, since the attack by Fourth Armoured Army had pushed northwards in the form of an arrowhead. Behind the thick wedge of tanks, however, a narrow corridor with overstretched flanks had formed. Vatutin, who drew up the operational plan in accordance with Stavka directives, intended to attack concentrically with four thrust wedges: one armoured army as the shock group on each flank, so as to close the pincer in the Yakovlevo–Bykovka area in the rear of XXXXVIII Armoured Corps and II SS Armoured Corps, plus two frontal thrusts, each using one general army. The two German armoured corps, advancing unsuspectingly into the trap, were to be attacked from four directions:

- from the west by 1st Armoured Army (VI and XXXI Armoured Corps and III Motorized Corps), including V Guards Armoured Corps and the newly arrived X Armoured Corps, reinforced by infantry and artillery units;
- from the north-west by units of 6th Guards Army;
- from the north-east by 5th Guards Army, newly brought in from Steppe Front;
- from the east by 5th Guards Armoured Army (XVIII and XXIX Armoured Corps and V Guards Motorized Corps), also brought in from Steppe Front, reinforced by II Armoured Corps and II Guards Armoured Corps, plus a number of unattached units.<sup>77</sup>

However, III Armoured Corps of Army Detachment Kempf, which was further to the south-east, was also threatened. According to Vatutin's operational plan, the Soviet 7th Guards Army had the task of breaking through the front on the armoured corps' right flank and advancing in its rear towards Razumnoye (in the direction of Belgorod).

<sup>75</sup> Glantz, 'Soviet Operational Intelligence', 72.

<sup>76</sup> On this, see the Soviet general staff's wartime study of the battle of Kursk in *Sbornik materialov po izucheniiu opyta voiny*, No. 11, 68, quoted in Glantz and House, *The Battle of Kursk*, 159.

<sup>77</sup> The operational plan, which was repeatedly amended, is presented here in outline. See the Soviet General Staff study in the English translation by Glantz and Orenstein, *The Battle for Kursk 1943: The Soviet General Staff Study*, 99, 219 and 223. See also Glantz and House, *The Battle of Kursk*, 159–60 and 179; Rotmistrov, *Tankovoye srazhenie*, 43; Shutov and Ramanichev, 'Ognennaya duga', 268; Markin, *Die Kursker Schlacht*, 113–14; *Geschichte des Großen Vaterländischen Krieges*, iii. 324.

The Stavka envisaged 12 July as the decisive day in the battle of Kursk. To the north of the Kursk salient, Bryansk Front and large parts of West Front launched an offensive against Germany's thinned-out Second Armoured Army. When the front collapsed, Model's Ninth Army would have to halt its advance on Kursk. A destructive strike on the attacking formations of Army Group South was also planned for the same day. The strongest weapon was 5th Guards Armoured Army, whose total of 909 tanks and 43 assault guns<sup>78</sup> were intended to smash the battle-worn II SS Armoured Corps at Prokhorovka.

### (b) Prokhorovka: Legend and Reality

The battle of Kursk is often described as the 'turning point' of the Second World War, in which the 'greatest tank battle' of the war at Prokhorovka on 12 July was the decisive factor. This thesis is found primarily in the Soviet historiography.<sup>79</sup> The outcome of the Second World War was supposedly still balanced on a knife-edge and was, according to that exaggerated narrative, decided at Prokhorovka in a strip of land only 4.5 kilometres wide between the River Psel and the railway line to Belgorod. There, in 'a truly titanic duel between two steel armadas',<sup>80</sup> at least 1,500 tanks are said to have clashed in the narrowest of spaces.<sup>81</sup> According to Soviet accounts, 850 Soviet and 700–800 German tanks rolled towards each other like two steel avalanches.<sup>82</sup> In that encounter on 12 July, 400 German tanks are said to have been destroyed and the units of the SS Armoured Corps crushed.<sup>83</sup> Marshal Konev described the battle melodramatically as the 'swan-song' of the German armoured troops.<sup>84</sup>

The originator of the myth of Prokhorovka must be considered to be Lt.-Gen. Rotmistrov,<sup>85</sup> whose reconstituted 5th Guards Armoured Army suffered losses of unprecedented proportions during its first deployment on 12 July. Subject to an acute need to justify himself to Stalin, he took refuge in the fiction of a crushing victory over II SS Armoured Corps. That myth was also taken over by western historians and persists to this day:

By chance, at exactly the same time, the German tanks moved on the far side of the plain. Two vast armoured forces rushed into head-on collision. [...] The T-34 crews took advantage of the mêlée to attack at point-blank range, blasting the Tigers and

<sup>78</sup> At 17.00 on 11 July, 101 of these were still in transit and 24 under repair; see Zamulin, *Prokhorovka*, 337, Table 23.

<sup>79</sup> As to whether the battle of Kursk really was the decisive turning point of the war, see Part II, Chapter III.4 of the present volume.

<sup>80</sup> Vasilevskii, *Sache des ganzen Lebens*, 308.

<sup>81</sup> See, e.g., *Geschichte des Großen Vaterländischen Krieges*, iii. 325 ff.

<sup>82</sup> Ibid.; see also Rotmistrov, *Tankovoye srazhenie*, 72; Andronikov and Mostovenko, *Die roten Panzer*, 102.

<sup>84</sup> Konev, *Aufzeichnungen eines Frontoberbefehlshabers*, 43.

<sup>85</sup> See Rotmistrov's accounts in his books *Tankovoye srazhenie* and *Stalnaya Guardia*, as well as his article 'Bronetankovye i mekhanizirovannye voiska'.

Panthers at the side and rear, where the ammunition was stored [...] The German failure to seize Prokhorovka marked the end of Citadel [...] Over three hundred German tanks were destroyed on the 12th alone [...] The struggle for Kursk tore the heart out of the German army [...] Soviet success at Kursk, with so much at stake, was the most important single victory of the war.<sup>86</sup>

In German historiography too, the encounter was overdramatized. In the ‘greatest tank battle in world history’, ‘two closely packed tank formations comprising over 1,500 tanks’ supposedly clashed ‘in open battle’ in ‘a section 500 metres wide and 1,000 metres deep’.<sup>87</sup>

So what was the battle of Prokhorovka really like? First of all, there is no way that II SS Armoured Corps could have lost 300 or (according to Rotmistrov)<sup>88</sup> 400 tanks on 12 July. The fact is that during the whole of Operation CITADEL it lost only 33 tanks and assault guns in all, as the German files show beyond any doubt.<sup>89</sup> Nor could it have lost any Panthers or Ferdinands—despite the fact that they are evoked by contemporary Soviet witnesses—simply because it did not possess any. Rotmistrov’s claim to have destroyed 70 Tigers is also a fiction. On the date in question only 15 tanks of that type were operational, and only five of them were deployed at Prokhorovka.<sup>90</sup> On 12 July the whole of II SS Armoured Corps had at its disposal a total of 211 operational battle tanks, 58 assault guns, and 43 tank destroyers (self-propelled anti-tank guns).<sup>91</sup> However, since SS Armoured Infantry Division ‘Totenkopf’<sup>92</sup> was attacking northwards on that date on the far side of the River Psel, there remained only SS Armoured Infantry Divisions ‘Leibstandarte’ and ‘Reich’, with a total of 117 battle tanks, 37 assault guns, and 32 tank destroyers, that is, 186 fighting vehicles in all,<sup>93</sup> which could be deployed against 5th Guards Armoured Army.

On the morning of 12 July Rotmistrov possessed 838 operational fighting vehicles, and a further 96 tanks were brought in.<sup>94</sup> Of his five corps, he kept V Guards Motorized Corps in reserve and deployed around 100 of its tanks to secure his left flank against the German III Armoured Corps approaching from the

<sup>86</sup> Overy, *Why the Allies Won*, 95–6.

<sup>87</sup> Ostertag, ‘Die größte Panzerschlacht’, 424; the quoted source (Zins, *Die Operation Zitadelle*, 114) makes no mention of such a tight concentration in an area measuring 500 by 1000 metres.

<sup>88</sup> Rotmistrov, *Tankovoye srazhenie*, 86.

<sup>89</sup> ‘Geheime Kommandosache: Ausfälle Heeresgruppe Süd, Stand 17.07.1943’ (fo. 74), BA-MA RH 10/64.

<sup>90</sup> As shown by the daily divisional reports (see next note), on 12 July Armoured Infantry Divisions ‘Leibstandarte’ and ‘Reich’ possessed, respectively, four and one operational Tigers. The other 10 Tigers were with SS Armoured Infantry Division ‘Totenkopf’, which was in action on that day in another section of the front.

<sup>91</sup> For a detailed list of the individual tank types possessed by the three SS Armoured Infantry Divisions, see their daily reports on the evening of 11 July: BA-MA RS 2-2/18, pt. 2 (A 255–8). The cross-reference for 10 July (assault guns and anti-tank cannon) is on page A 248 (reverse side). See also the daily report of II SS Armoured Corps, 11 July 1943, 18.35 (fo. 99 and reverse side), BA-MA RH 21-4/118. The four Panzer IIs not available for the tank battle, as well as the command tanks, are not included in this figure.

<sup>92</sup> BA-MA RS 2-2/18, pt. 2 (A 255–8). On the evening of 11 July, SS Armoured Infantry Division ‘Totenkopf’ possessed 94 operational battle tanks, 21 assault guns, and 11 Marder tank destroyers.

<sup>93</sup> BA-MA RS 2-2/18, pt. 2 (A 255–8).

<sup>94</sup> Zamulin, *Prokhorovka*, 611.

south.<sup>95</sup> Thus, 672 Soviet fighting vehicles were effectively engaged that day in action against the 186 tanks and assault guns of Divisions 'Leibstandarte' and 'Reich'.<sup>96</sup> Rotmistrov's operational plan involved thrusts in two directions:

- The main thrust was directed from the north-east frontally against SS Armoured Infantry Division 'Leibstandarte' through the Prokhorovka corridor between the railway embankment and the River Psel. But the riverbank was boggy and there were several ribbon villages along it, leaving a strip about only 3 kilometres wide in which to manoeuvre. In this section of the main thrust, XVIII Armoured Corps was to attack on the right along the River Psel, and XXIX Armoured Corps on the left along the railway embankment. This meant that, in the very first phase of the battle, more than 400 fighting vehicles<sup>97</sup> advanced on Division 'Leibstandarte', which had only 56 battle tanks, 10 assault guns, and 20 tank destroyers at its disposal.<sup>98</sup> The superiority was around five to one.
- Another thrust was to be directed simultaneously from the east at the German flank, against Armoured Infantry Division 'Reich', which was deployed on the right alongside 'Leibstandarte'. Here the attack was to be carried out by II Guards Armoured Corps, supported by II Armoured Corps. Altogether 200 Soviet tanks stood ready,<sup>99</sup> against which the German division could deploy 61 battle tanks, 27 assault guns, and 12 tank destroyers.<sup>100</sup>

Account must also be taken of Voronezh Front formations, especially 69th Army, which were fighting in this sector anyway. In addition, units of 5th Guards Army, which was also part of the strategic reserve, were deployed in the zone of action of 5th Guards Armoured Army, for example 9th Guards Paratroop Division. Vatutin further supported Rotmistrov with five artillery regiments, two grenade-launcher regiments, and, above all, anti-tank artillery units such as 10th Anti-Tank Artillery Brigade.<sup>101</sup> In the Prokhorovka corridor the mass of barrelled weapons produced such a density of fire that in some phases of the battle there was hardly any chance of survival outside armoured protection. The Soviet counter-attack was supported by

<sup>95</sup> Rotmistrov removed 26th Guards Armoured Brigade from the fighting on 12 July and sent it also to the south. This brigade nevertheless took part in the first phase of the battle of Prokhorovka.

<sup>96</sup> Zamulin, *Prokhorovka*, 611.

<sup>97</sup> That day XXIX Armoured Corps sent 192 battle tanks and 20 assault guns into action; see CAMO Collection, doc. 35, 'Otchet o boevykh deistviakh 29 tankovogo korpusa za period s 7.7. po 24.7.43 g.', 8. On the other flank, XVIII Armoured Corps had over 190 fighting vehicles; see Glantz and House, *The Battle of Kursk*, 180; Zetterling and Frankson, *Kursk 1943*, 106.

<sup>98</sup> See the daily report on the evening of 11 July, BA-MA RS 2-2/18, pt. 2 (A 255 and 258). See also the daily report of II SS Armoured Corps, 11 July 1943, 18.35 (fo. 99 and reverse side), BA-MA RH 21-4/118.

two air armies,<sup>102</sup> while at the culmination of the battle the German forces could rely on only sporadic aerial support, since VIII Air Corps had to withdraw two-thirds of its aircraft for deployment on other fronts, mainly in the sector of 9th Army.

The psychological aspect should not be neglected. II SS Armoured Corps was not only showing signs of material attrition. The troops had been in action continuously since 5 July, and they were now facing fresh Soviet forces, the elite formations of 5th Guards Armoured Army, led by Rotmistrov, the Red Army's foremost tank-warfare specialist. What the Germans had always feared about Russian armies was their massive, avalanche-like attacks without regard to losses. It was not only the oppressive numerical superiority that was threatening. The onrushing troops often attacked in a trance-like state, as if totally impervious to danger. That vodka played a part in this was no secret to German combatants on the eastern front, although Russian historiography has broached that subject only recently.<sup>103</sup> In the view of two American military historians, this psychotropic agent was also used to 'inspire' the attacking forces at Prokhorovka on 12 July.<sup>104</sup> That may provide a partial explanation for the incomprehensible events which took place on Hill 252.2. The successful use of the element of surprise also deserves attention. It was a considerable achievement of Rotmistrov and his staff to bring an armada of tanks and other vehicles to the front so quickly and almost unnoticed. It required a march of 330 to 380 kilometres in three days.<sup>105</sup> German intelligence was expecting a counter-attack, but by no means one of such dimensions.

Things had gone very well for SS Armoured Infantry Division 'Leibstandarte' on the previous day, 11 July. During its advance through the steppe it had to overcome a tank ditch which was to play an important role the following day. Beyond it stretched Hill 252.2, 'like an enormous wave'. After managing to capture the heights and the Oktyabrski state farm on the far side against the resistance of 9th Guards Paratroop Division, Leibstandarte was only 2.5 kilometres from Prokhorovka. At the same time, however, it had manoeuvred itself into a very exposed position with open flanks. Only a loose connection remained to its right-hand neighbour, SS Armoured Division 'Reich'. An even more dangerous situation had developed on the left wing, which was hanging in the air. Since SS Armoured Infantry Division 'Totenkopf' had attacked northwards rather than eastwards, the two thrust wedges had drifted apart, leaving a gap which Leibstandarte's reconnaissance battalion could only monitor but by no means secure. At that moment an enemy push along the River Psel would inevitably have disastrous consequences. For that reason Leibstandarte was instructed to halt its advance for the time being. II SS Armoured Corps ordered the attack by Division 'Totenkopf' on the dominating Hill 226.6 in the Psel bridgehead to be pressed forward the next day with 'all the artillery available' to the corps. Only when this upland north of the Psel had been taken in its entirety should the other two divisions resume their attack.<sup>106</sup>

<sup>106</sup> Soldaten, Kämpfer, Kameraden, 379.

Meanwhile the Leibstandarte units had been torn far apart. On the right wing, south of the railway embankment, stood 1st SS Armoured Infantry Regiment, and on the left, far forward in the wake of Hill 252.2, 2nd SS Armoured Infantry Regiment. The Armoured Regiment, on the other hand, was recovering from its exertions in a dip behind Hill 252.2. In reality, this regiment consisted of only one battalion of three companies, to which a heavy armoured company with four operational Tigers had been attached. The other battalion was back in Germany undergoing conversion to Panthers.

It must therefore be stated clearly at this point that in the Prokhorovka corridor between the railway embankment and the River Psel there was by no means a German armoured army with 800 battle tanks, as claimed in the Soviet accounts, but only a single armoured battalion. So it is a myth that on the morning of 12 July two tank armadas, each in a closed phalanx, attacked simultaneously and clashed like knights in armour. When Rotmistrov launched the attack at 07.30 (08.30 Moscow time), most of Leibstandarte's tank crews were still fast asleep: 'Utter silence reigned [...] Since an attack on Prokhorovka seemed unthinkable without catching up with the neighbouring units, everyone was sleeping the sleep of exhaustion. We had seven days of tough offensive combat behind us, during which there is generally very little time for sleep.'<sup>107</sup>

The foremost German unit at that moment was 2nd SS Armoured Infantry Regiment's III Battalion, whose commander, Sturmbannführer Jochen Peiper, became known for his exploits in the later course of the war (the offensive in the Ardennes). The previous day its infantry had taken Hill 252.2 and occupied the captured trenches. On the morning of 12 July the following scene took place on that hill: 'We were all fast asleep when they were suddenly all over us with aircraft and an endless mass of tanks with infantry riding on them. It was hell. They were around us, over us, and among us. We fought man to man.'<sup>108</sup> The first German tank officer to see the Soviet tank avalanche approaching was Obersturmführer Rudolf von Ribbentrop. Looking up at Hill 252.2 that morning he saw violet signal flares, meaning 'tank alarm'. While the other two armoured companies remained behind the tank ditches, he set off up the hill with his company's seven Panzer IVs. Suddenly he saw a huge column of tanks approaching: 'About 100 to 200 metres in front of us there emerged from a slight dip in the terrain 15, 20, 30, 40 Russian T-34s, and then too many to count [...] The wall of tanks rolled towards us. Tank by tank, wave upon wave, an unimaginable mass of armour approaching at top speed.'<sup>109</sup> The seven German tanks stood no chance against such overwhelming odds. Four were hit immediately, but the other three got away.

<sup>107</sup> Ribbentrop, 'Neu geboren—bei Prochorowka', 53.

<sup>108</sup> Report by Untersturmführer Erhard Gühr, quoted in Agte, *Jochen Peiper*, 132. On this fight, see also KTB II. SS-Panzerkorps, 12 July 1943, BA-MA RS 2-2/17; daily reports, 12 July (A 271 ff.), BA-MA RS 2-2/18, pt. 2; *Chronik der siebenten Panzerkompanie*, 43–4; Agte, *Michael Wittmann*, 69 ff.; Lehmann, *Die Leibstandarte*, iii. 262 ff.; Stadler, *Die Offensive gegen Kursk*, 100 ff.; Glantz and House, *The Battle of Kursk*, 180, 182 ff., and 189 ff.; Töppel, *Die Offensive gegen Kursk*, 36 ff. and 42 ff.

<sup>109</sup> Ribbentrop, 'Neu geboren—bei Prochorowka', 54.

The attacking formation which had appeared so suddenly was the mass of XXIX Armoured Corps, led by Maj.-Gen. Kirichenko, consisting of 212 fighting vehicles.<sup>110</sup> The attack at this location was carried out by 31st and 32nd Armoured Brigades and 53rd Motorized Rifle Brigade, supported by a self-propelled gun regiment and 26th Guards Paratroop Regiment. Once the tanks had passed the crest of Hill 252.2, they raced down the incline towards the two German armoured companies, which opened fire on them from the declivity. Mistaking the Germans tanks for Tigers, they wanted to eliminate their range superiority as quickly as possible. According to a German eyewitness report, ‘to anyone seeing the whole thing, it looked like the Russians were carrying out a kamikaze attack’.<sup>111</sup> If the Soviet tanks broke through in depth, it could only result in the collapse of the German front. Then, in a few minutes, the whole picture changed, and the seemingly inevitable victory turned into a catastrophe for the attackers. All because of an incredible Soviet oversight. They had forgotten about their own tank ditch! This 4.5-metre-deep obstacle, which we have already mentioned, had been dug by Soviet infantry and stretched across the declivity of Hill 252.2 at right angles to the German—now the Soviet—direction of attack.<sup>112</sup> The German defenders watched in amazement as ‘more and more T-34s came over the crest, raced down the slope, and overturned in the tank ditch behind which we were positioned’.<sup>113</sup> Ribbentrop had got away by moving along together with the Soviet fighting vehicles in a thick cloud of dust:

Now the T-34s recognized the tank ditch and tried to veer left to the road, in order to get across the ditch via the bridge, which had been repaired. What happened then is indescribable [ . . . ] As they converged on the bridge, the Russians were exposed on the flanks and made easier targets. Burning T-34s ran into and over each other. An inferno of fire, smoke, burning tanks, dead and wounded!<sup>114</sup>

On the other side of the ditch there were only two German armoured companies, who would normally have stood no chance of stopping the avalanche of steel. Now it was simply ‘target practice at moving targets’.<sup>115</sup> Finally, the four Tigers came rushing up and were deployed on the division’s left wing.

By noon 2nd SS Armoured Infantry Regiment had recaptured Hill 252.2 and the Oktyabrski state farm. The front slope of the hill looked like a tank graveyard, covered with the still-burning wrecks of some 100 Soviet tanks and a few infantry fighting vehicles from Peiper’s battalion.<sup>116</sup> On 12 July, according to the logistics files, SS Armoured Infantry Division ‘Leibstandarte’ seized 190 Soviet tanks abandoned in the areas which it had temporarily lost and then recovered.<sup>117</sup>

<sup>110</sup> See CAMO Collection, doc. 35, ‘Otchet o boevykh deistviakh 29 tankovogo korpusa za period s 7.7. po 24.7.43 g.’, 8.

<sup>111</sup> Mutterlose, ‘Artillerie’, 26.

<sup>112</sup> The author was able to take part in a visit to Prokhorovka in April 2005. Today the tank ditch is largely filled in, but its course at the time of the battle is still recognizable with the help of sketches on German situation maps (BA-MA RH 26-1005/47, K-6).

<sup>113</sup> Report by Johannes Bräuer, quoted in Agte, *Jochen Peiper*, 132.

<sup>114</sup> Ribbentrop, ‘Neu geboren—bei Prochorowka’, 55. <sup>115</sup> Ibid.

<sup>116</sup> Ibid. 56; Mutterlose, ‘Artillerie’, 26.

<sup>117</sup> LSAH KTB Ib, 12 July 1943, BA-MA RH 3-1/36.

Most of them were found close together on the front slope of the hill. Yet the figure reported seemed so incredible that SS Obergruppenführer Paul Hausser, the commanding general of II SS Armoured Corps, drove to the front in person to see for himself.<sup>118</sup> According to the most recent Russian information, on 12 July XXIX Armoured Corps alone lost 172 of 219 tanks and assault guns, of which 118 were total losses.<sup>119</sup> Casualties totalled 1,991, including 1,033 dead or missing.<sup>120</sup>

At the same time as Hill 252.2 was being defended against frontal attack, the situation was becoming critical on Leibstandarte's left flank. There Maj.-Gen. Bacharev's XVIII Armoured Corps attacked along the Psel with 170th, 181st, and 110th Armoured Brigades, supported by 32nd Motorized Rifle Brigade and several unattached units such as 25th Guards Armoured Regiment, which was equipped with British 'Churchill' tanks. This sudden thrust occurred at the most unfavourable moment for the Germans, and in the most unfavourable place, that is, right in the gap between SS Armoured Infantry Divisions 'Leibstandarte' and 'Totenkopf' to which we have already referred. The Soviet XVIII Armoured Corps penetrated deep into the gap with almost no opposition. In the left-hand section of 2nd Armoured Infantry Regiment's zone of action, tactical coordination dissolved into chaos. There was no longer any stable front. On both sides the leadership lost control, and the combat disintegrated into a multitude of individual clashes in which it was difficult to see 'which side was attacking and which was defending'.<sup>121</sup>

The Soviet accounts are full of myths, of which the following episode is the theatrical epitome. On the morning of 12 July, II Battalion of 181st Armoured Brigade, part of XVIII Armoured Corps, was advancing along the River Psel at Petrovka when the T-34 of the battalion commander, Guards Captain Skripkin, was hit by shells from a Tiger. The captain was badly wounded, but the tank driver, Aleksandr Nikolayev, managed to get him out of the burning tank. Then the following act of heroism supposedly took place:

As a Tiger rolled straight towards them, tank driver Aleksandr Nikolayev leaped back into his stricken, burning tank and stormed the enemy. The T-34 raced across the field like a blazing fireball. The Tiger stopped, reversed, and tried to turn. But it was too late. The burning T-34 smashed into the German tank at full speed. An explosion shook the earth. The Germans were so struck by the Soviet tank driver's courage in ramming the Tiger that they beat a speedy retreat.<sup>122</sup>

Accounts of this episode have also become commonplace in western literature about the battle of Kursk.<sup>123</sup> Painters have captured the dramatic scene on canvas

<sup>118</sup> Ribbentrop, 'Neu geboren—bei Prochorowka', 56; Lehmann, *Die Leibstandarte*, iii. 268.

<sup>119</sup> Zamulin, *Prokhorovka*, 401 and Table 26. On this, see the combat report of XXIX Armoured Corps (CAMO Collection, doc. 35, 'Otchet o boevykh deistviakh 29 tankovogo korpusa za period s 7.7. po 24.7.43 g', 8). Zamulin's figures differ from this somewhat, but he also drew on other sources.

<sup>120</sup> Zamulin, *Prokhorovka*, 401 and Table 26.

<sup>121</sup> *Geschichte des Großen Vaterländischen Krieges*, iii. 326.

<sup>122</sup> Rotmistrov, *Stalnaya Guardia*, 190; quoted in German translation in *Geschichte des Großen Vaterländischen Krieges*, iii. 326.

<sup>123</sup> For relevant evidence from the literature, see Töppel, *Die Offensive gegen Kursk*, 49 ff.

and film directors have portrayed it on the screen. So what is the truth of the matter? The commander of the Tiger that was allegedly blown to pieces, Sergeant Georg Lötzsch, experienced the event as follows: 'In the morning, the company was on the left wing of II Armoured Battalion when about 50 enemy tanks, from the cover of copses and hedges, came storming towards us in broad wedge formation [...] I shot two T-34s, one of which drove towards me in flames. At the last moment I managed to avoid the burning bomb.'<sup>124</sup> The push by XVIII Armoured Corps failed with considerable losses, including (according to Soviet reports) 55 tanks.<sup>125</sup> After all the attacks had been repelled, the corps was withdrawn in the early afternoon and thereafter essentially deployed only defensively.

The Soviet attacks in the right-hand section of the front to the south-east of the Prokhorovka–Belgorod railway embankment were even less successful. 1st SS Armoured Infantry Division held Leibstandarte's right wing near the Stalinsk state farm, where it had to manage largely without support from battle tanks and was reinforced only by a few Marder tank destroyers.<sup>126</sup> The attacking forces consisted of 25th Armoured Brigade of XXIX Armoured Corps, supported by 1446th Self-Propelled Guns Artillery Regiment and 28th Guards Paratroop Regiment, as well as parts of 169th Armoured Brigade of II Armoured Corps.<sup>127</sup>

The right flank of II SS Armoured Corps, which curved back far to the south, was defended by SS Armoured Infantry Division 'Reich'. In that sector the attacking forces were II Guards Armoured Corps and II Armoured Corps.<sup>128</sup> Their attacks, in the direction of Yasnaya Polyana and Kalinin, were repelled after heavy fighting, after which the German units went on the counter-attack and captured Storozhevoye on the left wing.<sup>129</sup>

<sup>124</sup> Report by Sergeant Georg Lötzsch (13. Kp./Pz.Abt. II), quoted in Wendt, *Tiger*, 19–20. From the German files (see next section) it is quite clear that on 12 July not a single Tiger was reported as written off. Mr Werner Wendt, who fought in this encounter on board a Tiger, told the author that on that day another Tiger was left heavily damaged. It could not be hauled away the following day because of strong enemy fire, and later had to be written off. But in any case the damage had been caused by a shell shot. He said there was definitely no question of a Tiger having been blown up by ramming.

<sup>125</sup> On the losses, see Combat Report No. 38 of XVIII Armoured Corps, 13 July, 08.00, CAMO Collection, doc. 33, 'Boevye donesenia shtaba 18-go tankovogo korpusa za period s 11. iyulia po 15 iyulia 1943 goda'. On the course of the fighting in general, see the report of 5th Guards Armoured Army, CAMO Collection, doc. 30, 'Iz otcheta o boevykh deistviakh 5-i Gvardeiskoi Tankovoi armii za period s 7 iyulia po 24 iyulia 1943 goda', 8 ff.; KTB II. SS-Panzerkorps, 12 July 1943, BA-MA RS 2-2/17; daily reports, 12 July (A 271 ff.), BA-MA RS 2-2/18, pt. 2; Glantz and House, *The Battle of Kursk*, 180 and 188 ff.; Töppel, *Die Offensive gegen Kursk*, 40–1 and 46 ff.

<sup>126</sup> On this fighting, see KTB II. SS-Panzerkorps, 12 July 1943, BA-MA RS 2-2/17; daily reports, 12 July (A 271 ff.), BA-MA RS 2-2/18, pt. 2; BA-MA N 756/107 (Vopersal collection), 'Panzer Schlacht am Kolchos Stalinsk'; Frey, *Ich wollte die Freiheit*, 279 ff.; Lehmann, *Die Leibstandarte*, iii. 262 ff.; Töppel, *Die Offensive gegen Kursk*, 37 ff. and 44 ff.

<sup>127</sup> Glantz and House, *The Battle of Kursk*, 187 and 191.

<sup>128</sup> 26th Armoured Brigade of II Guards Armoured Corps was withdrawn in the course of the fighting and deployed to secure the southern flank. For the Soviet view, see Rotmistrov, *Tankovoye srazhenie*, 85–6; CAMO Collection, doc. 30, 'Iz otcheta o boevykh deistviakh 5-i Gvardeiskoi Tankovoi armii za period s 7 iyulia po 24 iyulia 1943 goda', 9 and 13–14.

<sup>129</sup> Weidinger, *Division Das Reich*, iv. 199 ff.; KTB II. SS-Panzerkorps, 12 July 1943, BA-MA RS 2-2/17; daily reports, 12 July (A 271 ff.), BA-MA RS 2-2/18, pt. 2.

The most significant territorial gains on 12 July were achieved by SS Armoured Infantry Division ‘Totenkopf’.<sup>130</sup> In this connection we must take issue with the Soviet accounts, according to which tanks of the Totenkopf Division were involved on that day in the battle against Rotmistrov’s 5th Guards Armoured Army in the Prokhorovka corridor. In fact, all of Totenkopf’s fighting vehicles were in the bridgehead on the far side of the Psel and attacked from there in a northerly direction. It is true that during the engagement one tank unit received an order to cross the Psel at Mikhailovka and strike the rear of the Soviet tanks that were attacking the Leibstandarte Division. But that attempt failed because of the boggy riverbanks. It was only at Kozlovka that infantry units of 6th SS Armoured Infantry Regiment remained on the south bank to secure the engineer’s bridge. Rotmistrov’s claim that on 12 July he stopped the Totenkopf Division’s advance by deploying his reserve (V Guards Motorized Corps) is also incorrect. He did indeed send 24th Guards Armoured Brigade and 10th Guards Motorized Brigade into the section north of the Psel, but their advance proceeded slowly and they were able to attack only on the following day. Accordingly, he has been accused by American historians of bringing the action forward in his memory.<sup>131</sup>

On the day in question, the Totenkopf Division actually attacked General Aleksei Semenovich Zhadov’s 5th Guards Army, as well as XXXI Armoured Corps and parts of 6th Guards Army.<sup>132</sup> After beating off heavy Soviet attacks in the morning, it succeeded in pushing forward as far as the Prokhorovka-Kartshevka road, which made Rotmistrov very nervous. He was afraid of being outmanoeuvred, since his units were now threatened in the rear as well as on the flanks. Totenkopf’s advance—the northernmost thrust of the offensive—symbolizes the course of events on 12 July. The German units, surprised by the strength of the Soviet counter-attack, were at first forced onto the defensive. But they inflicted such heavy losses on the over-hastily attacking Soviet formations that they were already able to resume their own offensive in the afternoon.

### (c) Balance-Sheet of the Soviet Debacle

General Rotmistrov painted a picture of a colossal battle, in which he described the defeat of II SS Armoured Corps and the destruction of 400 German tanks. This epic inspired many authors, who quoted it extensively. It is nevertheless surprising that there is not the slightest atmosphere of disaster in the German reports. For the day in question, Hausser, the commanding general of the supposedly annihilated armoured corps, mentions only ‘a large-scale tank battle’, and comments laconically: ‘The enemy was unable to break through; many tanks were shot down.’<sup>133</sup> Similarly, a tank commander who was deployed on 12 July on Hill 252.2 writes:

<sup>130</sup> Ibid. (*Akten des SS-Panzerkorps*); see also *Soldaten, Kämpfer, Kameraden*, 381 ff.; Ullrich, *Wie ein Fels*, 240; Sydnor, *Soldiers of Destruction*, 288 ff.

<sup>131</sup> Glantz and House, *The Battle of Kursk*, 195.

<sup>132</sup> Riasanskii, ‘Prokhorovka’, 108; Zhadov, ‘5-ya gvardeiskaya armia’, 64 ff.

<sup>133</sup> Hausser, *Waffen-SS im Einsatz*, 101.

'When I returned to the tank ditch in the evening, we were convinced we had achieved a great victory.'<sup>134</sup> In view of the 100 or so Soviet tank wrecks, mostly still burning, right in front of the hotly contested tank ditch, his subjective impression is entirely understandable.

The files in the German archives, in which historians were strangely uninterested until a few years ago, contain meticulous assessments of Army Group South's tank losses. Examination of those files results in the conclusion—as surprising as it is unequivocal—that, on 12 July, II SS Armoured Corps did not record a single write-off for battle tanks and assault guns.<sup>135</sup> This is also confirmed by the corps' logistics files, for example, an entry in the war diary of the quartermaster's department on the evening of 12 July: 'Dept. V informs the Quartermaster that there are no tank write-offs today'.<sup>136</sup> Admittedly, the evaluation of other sources leads to the conclusion that three tanks left immobilized on the battlefield could not subsequently be recovered because of enemy fire, so that the write-off figures had to be adjusted later.<sup>137</sup> But even if those losses are backdated to 12 July, that still gives a maximum total of three write-offs. There is one plausible explanation for the low loss figures: II SS Armoured Corps remained 'master of the battlefield', and as such it was able to put the enemy's immobilized fighting vehicles out of action and haul its own (except for three) to the repair shops. The latter had a great deal of heavy work to do during Operation CITADEL, but on 12 July the number of losses remained within normal limits as measured by the previous days. Only 41 battle tanks of the Leibstandarte and Reich Divisions were under repair for 'long-term damage', and that figure included several tanks damaged in previous days.<sup>138</sup> Speed of repair gave the German armoured force a decisive advantage. In that respect the successive figures for daily operational strength are particularly telling. On 11 July the two German divisions had over 186 operational tanks, assault guns, and tank destroyers (self-propelled guns),<sup>139</sup> while on 13 July, that is, after the battle of Prokhorovka, the figure was 190.<sup>140</sup> The comparison thus shows an increase of four fighting vehicles, which does not exactly point to the alleged destruction of II SS Armoured Division on 12 July.

<sup>134</sup> Zumpe, 'Unternehmen Zitadelle', 55.

<sup>135</sup> 'Geheime Kommandosache: Ausfälle Heeresgruppe Süd, Stand 12.7.1943' (fo. 48), BA-MA RH 10/64. See also map with tabular overview in appendix RH 10/64, K1 'Panzerlage Süd, Stand: 11–13 July 1943'.

<sup>136</sup> KTB No. 6, Gen.Kdo. II. SS-Pz.Korps Qu.Abt., 12 July 1943, 23, BA-MA RS 2-2/25.

<sup>137</sup> The tanks in question were two Panzer IVs from 6th Company, 1st SS Armoured Regiment (Ribbentrop), and one of the heavy armoured company's Tigers.

<sup>138</sup> 'Geheime Kommandosache: Ausfälle Heeresgruppe Süd, Stand 12.7.1943' (fo. 48), BA-MA RH 10/64. On that day there were also 67 battle tanks undergoing short-term repair, mostly for minor damage, especially to antennas, which could be repaired immediately.

<sup>139</sup> Deployment reports on the evening of 11 July 1943, BA-MA RS 2-2/18, pt. 2 (A 255–258). See also the daily report of II. SS Armoured Corps, 11 July 1943, 18.35 (fo. 99 and reverse side), BA-MA RH 21-4/118. The four Panzer IIs not available for the tank battle, as well as the command tanks, are not included in this figure.

<sup>140</sup> Daily report, 13 July 1943, BA-MA RS 2-2/18, pt. 2 (A 291, reverse side); see also the daily report of II SS Armoured Corps, 13 July 1943, 19.35 (fo. 117 and reverse side), BA-MA RS 2-2/18.

The term ‘apocalyptic’ is more appropriate to the disaster which overtook 5th Guards Armoured Army on that day. Although Rotmistrov wrote several accounts of the battle of Prokhorovka, he was remarkably reticent about his own losses. He gave figures only for the number of damaged fighting vehicles. Thus, in the first phase of the battle, 420 tanks were put out of action owing to ‘damage requiring repair’. Of those, 112 were only slightly damaged and could be repaired immediately.<sup>141</sup> Why, then, did he remain silent on the decisive question of write-offs? As can be calculated from the (albeit incomplete) Russian archive documents that have since become available, on 12 July 5th Guards Armoured Army lost around 235 fighting vehicles as write-offs.<sup>142</sup> The Russian historian Valerii Zamulin comes to the conclusion, partly based on other sources, that at least 207 of Rotmistrov’s fighting vehicles were ‘burned’ on that day.<sup>143</sup> In fact, both figures are probably too low.<sup>144</sup> The Soviet reporting system was decidedly defective. How could it have worked perfectly in the chaotic conditions of 12 July? A frighteningly large number of tank officers had been killed, and the survivors no longer had an overview of the numbers of damaged tanks scattered all over the battlefield. Moreover, the battlefield was in the hands of the Germans, who had succeeded in pushing the Soviet attacking forces back to their starting positions, and some even further back. On the evening of 12 July the damaged Soviet tanks were totally destroyed by special squads. It was only on 17 July, when II SS Armoured Corps was withdrawn from the front, that the approaching Soviet troops were able to see the extent of the debacle that had taken place. Thus the first reliable report of losses also bears that date. It is a statement of fighting vehicles lost from 12 to 16 July, signed by the chief of staff of Fifth Guards Armoured Army, according to which the army had written off 334 tanks and assault guns.<sup>145</sup> However, almost all those losses must have been incurred on 12 July, since immediately afterwards the hard-hit 5th Guards Armoured Army was largely withdrawn and, as is also evident from German reports, took hardly any further part in the fighting. An exception was V Guards Motorized Corps, which was deployed on 12 July, but only as a reserve. In any case it suffered only 73 write-offs, so that 261 were incurred by the remaining four corps.<sup>146</sup>

<sup>141</sup> Rotmistrov, *Tankovoye srazhenie*, 100–1.

<sup>142</sup> See combat report of the Soviet XXIX Armoured Corps, CAMO Collection, doc. 35, ‘Otchet o boevykh deistviakh 29 tankovogo korpusa za period s 7.7. po 24.7.43 g.’, 8; Combat Report No. 38 of XVIII Armoured Corps, 13 July, 08.00, in CAMO Collection, doc. 33, ‘Boevye donesenia shtaba 18-go tankovogo korpusa za period s 11. iyulja po 15 iyulja 1943 goda’. With regard to II Armoured Corps and II Guards Armoured Corps, the author received additional information from the Russian military historian Col. (ret.) Eliseyev (Moscow), based on the following archive files: CAMO F. 332, Op. 4948, d. 51, L. 6, d. 82, L. 2; F. 3400, Op. 1, d. 23, L. 44; F. 3407, Op. 1, d. 108, L. 202 and 207; also ‘Prokhorovskoye pole’, C. 376–81, 384–5. Admittedly, in a few cases it is impossible to be sure whether the figure refers to write-offs or repairable losses. However, as explained below, a number of damaged Soviet tanks had to be written off later since they were destroyed by the Germans on the evening of 12 July.

<sup>143</sup> Zamulin, *Prokhorovka*, 401 (Table 26), 508–9, and 628–9.

<sup>144</sup> As can also be seen from Zamulin’s discussion, *ibid.* 635.

<sup>145</sup> CAMO Collection, doc. 30a, ‘Svedenia o sostoyanii, poteriakh i trofeyakh czastei i soединenii 5 gvardeiskoi tankovoi armii na 16.7.43 g.’ (signed 17 July 1943 by Chief of Staff, Fifth Guards Armoured Army, Maj.-Gen. Baskakov, and his deputy, Lt.-Col. Torgalo), 2.

<sup>146</sup> See *ibid.*

That being so, the author's calculation of 235 write-offs for 5th Guards Armoured Army on 12 July seems by no means too low.<sup>147</sup> In addition, there were 308 fighting vehicles 'in need of repair', not counting the 112 described by Rotmistrov as 'slightly damaged', which could be repaired immediately.<sup>148</sup> A publication by the Military History Institute in Moscow contains the following laconic assessment: 'Despite its [...] numerical superiority, 5th Guards Armoured Army did not manage to give the battle a decisive turn. Towards evening, after losing 500 tanks and assault guns, its units went over to the defensive.'<sup>149</sup>

Rotmistrov's report has many shortcomings, but on one point at least it is possible to agree with him without reservation: 'On 12 July the troops of 5th Guards Armoured Army fought with death-defying heroism.'<sup>150</sup> That is also proven by the figure of 3,563 casualties, of whom over 1,500 dead or missing (not including V Guards Motorized Corps).<sup>151</sup> The corresponding figure on the German side was 522, of whom 97 dead or missing.<sup>152</sup> The casualty figures for Rotmistrov's units as at 16 July (including late reports) are more complete. Total casualties were 7,107, and the figure of 3,597 for dead and missing was higher than that for the wounded.<sup>153</sup> Zamulin comments: 'Our tank losses were enormous, but there was something worse: the crews were burned alive along with their vehicles.'<sup>154</sup> Despite the huge losses, 5th Guards Armoured Army gained no ground at all on 12 July, and Hill 252.2 was lost once again. The only success of the troops of 5th Guards Armoured Army was a moral one. Even the soldiers of the Waffen SS, who often fought fanatically, were shocked by the enemy's readiness for sacrifice. But the tragedy of this 'mass heroism' so frequently conjured up in the Soviet accounts was that it was wasted in a senseless attack. Normally such a mass of armour and fiercely determined troops should have achieved a decisive victory.

Although Lt.-Gen. Rotmistrov was hailed as the victor of Prokhorovka during the Soviet era, there was clear criticism within the Red Army. In a confidential

<sup>147</sup> Another document on 'irreplaceable losses' suffered by 5th Armoured Army gives the figure of 350 tanks for 13 July, which must have been mainly update reports of losses incurred on 12 July; see CAMO Collection, doc. 24, 'Svedenia o bezvozvratnykh poteriakh tankov (vsekh tipov), imevshikhsha na vooruzhenii 5. gvardieiskoi tankovoi armii, pridannoi iz rezerva Stavki VGK Voronezhskomu frontu za period oboronitel'nogo srazheniya Kurskoi bitvy (5.7.43–23.7.43 gg.)'. Given the chaotic situation, update reports played an important part on the German side too. The figure of 244 enemy tanks shot down, given on 12 July in the war diary of II SS Armoured Corps, is described as 'provisional', since it was far from complete (BA-MA RS 2-2/17). On the other hand, the enemy situation report for 13 July gives the surprisingly high figure of 249 tanks shot down, although there were few tank battles compared with the previous day (BA-MA RS 2-2/18, pt. 2, A 295, 3). This gives a total figure of 493 tanks reported destroyed (including those shot down by the Totenkopf Division in the neighbouring combat zone).

<sup>148</sup> Rotmistrov, *Tankovoye srazhenie*, 100–1.

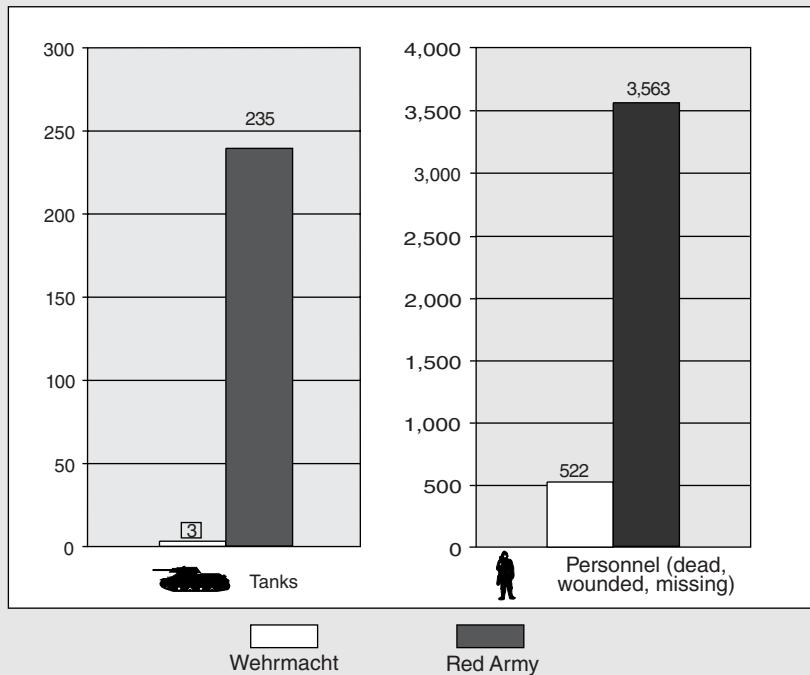

Diagram II.II.1. Losses in the tank battle at Prokhorovka (12 July 1943)

study by the Soviet General Staff drawn up during the war, we find the following judgement: 'On 12 July 5th Guards Armoured Army thus failed to fulfil the task assigned to it.'<sup>155</sup> The newly formed army was torn to pieces on the very first day of battle, so that its commander-in-chief had to come up with an explanation. 'What have you done to your magnificent armoured army?' Stalin demanded.<sup>156</sup> He was so furious that he wanted to sack Rotmistrov and have him court-martialled.<sup>157</sup> Rotmistrov nevertheless persisted in his version of events and created the heroic myth of an epic tank battle on 12 July that supposedly resulted in the annihilation of II SS Armoured Corps and the destruction of 400 German tanks, including 70 Tigers. More accurately, it was a case of a concerted cover-up by a group that included, in addition to Rotmistrov, General Vatutin, the commander in chief of Voronezh Front, and his military adviser Khrushchev, later to be party leader and Soviet head of state. Stalin, meanwhile, took care not to call those responsible to

<sup>155</sup> See *The Battle for Kursk 1943. The Soviet General Staff Study*, 226.

<sup>156</sup> Quoted in Glantz and House, *The Battle of Kursk*, 428.

<sup>157</sup> Zamulin, *Prokhorovka*, 643.

account, since he, after all, was the one mainly to blame.<sup>158</sup> It was he who had originated the abundantly optimistic idea of going over to the offensive on 12 July not only in the north at Orel but also in the south at Prokhorovka. But Manstein's attack had not yet passed its climax, so Stalin sent the newly formed 5th Guards Armoured Army straight into the trap. Had Rotmistrov, a competent tank commander, been free to deploy his troops as he saw fit, such hair-raising mistakes would hardly have occurred. In the event, the battle became a perfect example of how tank formations should never be used. The actual intention was to break through the front at the weakest point and surround the German tank units that had pushed forward. But the Germans did not follow the Soviet scenario: on 11 July they themselves broke through the front and advanced on Prokhorovka. The unintended effect for the Red Army, as correctly described in the revised wording of the *Great Patriotic War*, was that 'the strongest Soviet group attacked the strongest German group, not in the flank, however, but frontally'.<sup>159</sup>

Since the Stavka had underestimated the pace of the forward thrust by the supposedly exhausted German armoured forces, the arrival of German tanks in the marshalling area planned for the Soviet attack came as a complete surprise. This gave rise to a grotesque scene on the eve of the battle. On 11 July Marshal Aleksandr Mikhailovich Vasilevsky had been sent by Stalin to Rotmistrov as a representative of the Stavka and was driving with him south-west of Prokhorovka to the front in the late afternoon. Suddenly a column of tanks came rolling towards them in the distance. Vasilevsky complained to Rotmistrov that the Soviet tanks were supposed to advance undetected, and here they were 'driving about in broad daylight in full view of the Germans'.<sup>160</sup> At that moment the tanks opened fire and both of them realized they were German. Vasilevsky, who was completely under the influence of Stalin's orders, overreacted and ordered the attack to begin that same evening at 20.00 (German time). It was, however, postponed to 02.00 and finally scheduled for 07.30 the next morning.<sup>161</sup> As a result, 5th Guards Armoured Army found itself forced to attack without sufficient intelligence and reconnaissance. Not even the huge tank ditch on the other side of Hill 252.2 was taken into account. As Zamulin comments: 'How it happened that our brigade and battalion commanders were completely unaware of the existence of that ditch is incomprehensible'.<sup>162</sup> The attack was carried out hastily, in a hectic rush. Instead of the properly prepared attack that had been planned, an unnecessary immediate attack was launched in which it was impossible to coordinate the action of the various forces. In a report by XXIX Armoured Corps we read: 'The attack began without artillery fire [...] and with no aerial support'.<sup>163</sup> On the Soviet side it came to

<sup>158</sup> Ibid. 598. <sup>159</sup> Shutov and Ramanichev, 'Ognennaya duga', 269.

<sup>160</sup> Rotmistrov, *Stalnaya guardia*, 182.

'duels between our own tank troops and artillery troops'.<sup>164</sup> Criticism was directed above all at the Soviet air force: 'Coordination between air force units and ground troops was deficient. Bomber pilots frequently bombed their own front-line troops and even the second line and staff HQs'.<sup>165</sup> To be fair to Rotmistrov, he himself was relatively little to blame for the chaos, since he had no alternative but to obey Stalin's absurd order. Nevertheless, his idea of engaging the German tanks 'at close quarters' had disastrous consequences.

An assessment of the tank battle from the Soviet viewpoint shows that:

- *Tactically* it was not only a defeat but a fiasco which became, for many tank crews, a 'flaming inferno'.
- *Operationally* it stopped the advance of the German tanks, at least temporarily. However, what had been planned was not a defensive battle but a breakthrough followed by encirclement and destruction of the enemy. That 'Cannae' failed in all respects.
- At the *strategic* level it was a failure, because Rotmistrov's tanks were supposed to have played the main role in the coming summer offensive. The Stavka had been forced to play its trump card too soon and to no effect.

All this notwithstanding, the myth of Prokhorovka as the 'graveyard of German armour' seems ineradicable. Even today we can read on all sides that at Prokhorovka, thanks to their superior operational expertise, the Soviet tank troops celebrated their greatest triumph of the war. And so Hill 252.2, on which there stands today an enormous monument, is still seen as the legendary place at which the tide of the Second World War turned.

#### (d) Epilogue: The Tank Battle that Never Took Place

Rotmistrov's heroic epic was even surpassed in western historiography, above all by the account of a second tank battle which his units are supposed to have fought at the same time on 12 July against III Armoured Corps to the south of Prokhorovka. The origin of this fanciful embellishment is as follows: during the night of 11 to 12 July, 6th Armoured Division had pushed forward in a 'ghost column' far to the north towards Rzhavets, so that its spearhead was now only 17 kilometres from Prokhorovka. Vatutin feared that III Armoured Corps would strike from the south at the exposed flank of 5th Guards Armoured Army, which was attacking in a westerly direction.<sup>166</sup> So he ordered Rotmistrov to send out a part of his reserve against the supposedly advancing German tanks. This scenario fired the imagination of the German military author Paul Carell, for example, who conceived of a race to Prokhorovka by III Armoured Corps: 'Once again, as so often in the history of war, the outcome of a fateful military encounter which was to determine the

<sup>164</sup> Zamulin, *Prokhorovka*, 392.

<sup>165</sup> CAMO Collection, doc. 35, 'Otchet o boevykh deistviakh 29 tankovogo korpusa za period s 7.7. po 24.7.43 g.', 14. See also Zamulin, *Prokhorovka*, 347, 389, and 392.

<sup>166</sup> Glantz and House, *The Battle of Kursk*, 202.

further course of the whole campaign depended on a race against the clock, on a day or even an hour. The “World Minute of Waterloo” repeated itself at Prokhorovka.<sup>167</sup> Carell was referring to the race to Waterloo between Blücher, the Prussian field marshal rushing to the aid of the British commander Wellington, and Napoleon’s Marshal Grouchy, who was trying in vain to prevent that intervention. General Kempf supposedly arrived at Prokhorovka just as late as Marshal Grouchy at Waterloo.

It is clear from German archive documents, however, that this race on 12 July never took place, and still less did the tank battle south of Prokhorovka described by Rotmistrov.<sup>168</sup> In the sector in question there was only 6th Armoured Division, with 44 tanks at most.<sup>169</sup> After the ‘the ghost column march to Rzhavets’, the other parts of the division had to be brought up. But above all, the night-time advance had further increased the length of the open flanks, exposing them to counter-attacks by the Soviet 59th Army and 7th Guards Army. Because of the course of the front, which resembled a stretched-out finger, III Armoured Corps had to fight in three different directions simultaneously. Hermann Breith, the commanding general, wrote about the situation on 12 July: ‘In the course of the day it became apparent that a swing to the north-west [in the direction of Prokhorovka] was out of the question.’<sup>170</sup> On the German side, therefore, the ‘race’ never took place.

Rotmistrov sent parts of his reserve against the German tanks supposedly advancing from the south.<sup>171</sup> If he is to be believed, on 12 July there was also a battle to the south of Prokhorovka: ‘a bitterly fought tank battle with the enemy’s 6th Armoured Division that lasted until after dark [...] The massed tank attack was repelled with great losses for the enemy.’<sup>172</sup> However, as already mentioned, there is no reference to this in the German files. Instead, the war diary of 11th Armoured Regiment of 6th Armoured Division reports what really happened at the alleged tank battle on the evening of 12 July: ‘Towards 18.00 the Russians tried to attack Rzhavets, but they pulled back again after three T-34s were shot down.’<sup>173</sup>

As in the case of the fighting against SS Armoured Infantry Division ‘Totenkopf’ north of the Psel, which did not take place until 13 July, Rotmistrov also ascribed

<sup>167</sup> Carell, *Verbrannte Erde*, 68. On this, see Stefan Zweig’s miniature ‘Die Weltminute von Waterloo’ in Zweig, *Sternstunden*, 108 ff.

<sup>168</sup> See the entries for 12 July 1943 in the war diaries of Army Detachment Kempf (BA-MA RH 20-8/83) and III Armoured Corps (RH 24-3/78); also Töppel, *Die Offensive gegen Kursk*, 52–5.

<sup>169</sup> In the case of 6th Armoured Division (including 503rd Heavy Armoured Battalion) there are no figures available for 12 July 1943, so the figure for the previous day has been adopted. Since there had been heavy fighting in the meantime, the actual strength of the armour deployed must have been somewhat less. See ‘Panzerlage am 11.07.1943’ (BA-MA RH 20-8/97).

<sup>170</sup> Breith study, BA-MA ZA 1/1601, 9; Paul, *Brennpunkte*, 313.

<sup>171</sup> CAMO Collection, doc. 30, ‘Iz otcheta o boevykh deistviakh 5-i Gvardeiskoi Tankovoi armii za period s 7 iyulia po 24 iyulia 1943 goda’, 10 and 14–15; Rotmistrov, *Tankovoye srazhenie*, 64 ff. While Rotmistrov claims that 26th Guards Armoured Brigade was sent southwards in the morning, Glantz and House (*The Battle of Kursk*, 192–3) reached the conclusion that this measure was not taken until the late afternoon.

<sup>172</sup> Rotmistrov, *Tankovoye srazhenie*, 67–8.

<sup>173</sup> Quoted in Schadewitz, *Panzerregiment 11*, 403. See also Paul, *Brennpunkte*, 312; Töppel, *Die Offensive gegen Kursk*, 52–5.

the fighting in the Rzhavets area to the previous day. By his self-justifying account of events he sought to counter criticism that he had fragmented his forces and not deployed them at the right time in the right place. The conclusion is that on 12 July at Prokhorovka 5th Guards Armoured Army fought only against two SS Armoured Infantry Divisions (each with a single armoured battalion),<sup>174</sup> apart from an insignificant skirmish at Rzhavets.

There is, however, another interpretation, in which the tank battle of Prokhorovka is seen as the sum of all the fighting that took place from 12 to 16 July in the larger Prokhorovka–Rzhavets area.<sup>175</sup> Accordingly, II SS Armoured Corps and III Armoured Corps fought against the following major Soviet formations: 5th Guards Armoured Army, 5th Guards Army, 69th Army, and parts of 6th and 7th Guards Army, supported by numerous unattached units such as XXXI Armoured Corps and 96th Armoured Brigade. Strictly speaking, however, the fighting on 13 July was no longer about Prokhorovka.<sup>176</sup> Rather, Army Group South abandoned its original plan of a swing to the east after the Red Army set up densely staggered anti-tank lines in front of the town.<sup>177</sup> The new objective was to finally close the gap between the SS Armoured Corps and III Armoured Corps, and box in the Soviet 69th Army standing between them. At midday on 15 July the junction of the two armoured corps was successfully achieved at Maloye Yablonovo.<sup>178</sup> In any case, the mass of 69th Army had meanwhile managed to extricate itself, leaving only a few units encircled. Moreover, after 12 July there were no more Soviet tank attacks worth mentioning.<sup>179</sup> 5th Guards Armoured Army was no longer much in action, except for V Guards Motorized Corps, which had been spared on the first day of the fighting. This restraint seems plausible, as Rotmistrov's units incurred a total of 334 write-offs from 12 to 16 July,<sup>180</sup> the vast majority of them on 12 July. In contrast, from 10 to 16 July the SS Armoured Corps suffered only 13 total write-offs.<sup>181</sup>

Finally, the picture must be extended to the whole southern front. Rotmistrov, the 'Lion of Prokhorovka',<sup>182</sup> also met with criticism from within the Red Army about the glorification of his 5th Guards Armoured Army. The claim that his army alone had attacked on 12 July played down the role of the other armies,<sup>183</sup> whereas

<sup>174</sup> In fact, both these divisions normally possessed two armoured battalions. However, during Operation CITADEL each of them had one battalion back in Germany being re-equipped with the new tank.

<sup>175</sup> Thus, e.g., Zetterling and Frankson, *Kursk 1943*, 107 ff., where a fine calculation is made of the forces and losses on both sides.

<sup>176</sup> On the morning of 13 July, Armoured Battalion 'Leibstandarte' attempted one last short push, but broke it off immediately when it encountered an anti-tank gun position.

<sup>183</sup> Rotmistrov, *Tankovoye srazhenie*, 69 and 81.

in fact most of the units of Voronezh Front went on the attack that same morning. To give the whole picture once again: what was planned for the tank units of Army Group South on 12 July was total destruction. In this, 5th Guards Armoured Army was given the main role, in which it was a total failure. Instead of pushing forward more than 30 kilometres to just south of Bykovka and joining up with 1st Armoured Army, which was advancing from the west, it was thrown back even further than its own starting positions. Although 5th Guards Army, deployed north of the Psel, attacked equally unsuccessfully, it was at least able to prevent the Totenkopf Division from striking Rotmistrov's units in the rear. Its southern neighbour, 69th Army, which was literally ground to pieces between two German armoured corps, fought with notable courage. It was 69th Army's few tank units which attacked the German bridgehead at Rzhavets on 12 July and prevented a rapid push forward by III Armoured Corps. The attempt by 7th Guards Army to attack III Armoured Corps in the rear was a failure, but Germany's 7th Armoured Division was tied down and subsequently unable to take part in the northward thrust.

XXXXVIII Armoured Corps advanced in the western sector of Germany's Fourth Armoured Army. On 12 July it had 183 operational battle tanks, assault guns, and self-propelled cannon at its disposal.<sup>184</sup> It was supposed to be attacked in the flank by Mikhail Yefimovich Katukov's 1st Armoured Army, while 6th Guards Army attacked frontally at the same time. The Soviet armoured forces deployed in this sector had been extensively decimated in the last few days and possessed no more than 420 or so fighting vehicles, including recent reinforcements.<sup>185</sup> Unlike the Germans, however, they had more than enough infantry, artillery, and anti-tank guns. What was decisive, in any case, was the fact that, while Rotmistrov attacked frontally at the strongest point, Katukov's 1st Armoured Army struck at the weakest German position. 5th Guards Armoured Corps, X Armoured Corps, and, in reserve, VI Armoured Corps (a total of 270 tanks)<sup>186</sup> attacked deep in the flank of the German XXXXVIII Armoured Corps at Berezovka–Verkhopenye. Their task was to push forward in the rear of the German armoured units eastwards towards Yakovlevo, where they were to join with the pincer arm of 5th Guards Armoured Army. The thrust struck at the seam between XXXXVIII Armoured Corps and LII Army Corps, putting 332nd Infantry Division into difficulties. As a result, 3rd Armoured Division and Armoured Infantry Division 'Grossdeutschland' had to interrupt their advance and send strong armoured units back towards the south to prevent a Soviet breakthrough on the left flank.<sup>187</sup> At the same time, in the north, Germany's 11th Armoured Division was attacked by 6th Guards Army, supported by III Guards Motorized Corps and XXXI Armoured

<sup>184</sup> Daily report of XXXXVIII Armoured Corps, 11 July 1943, 20.45 (fo. 100, reverse side), BA-MA RH 21-4/118. With regard to the (self-propelled) anti-tank guns deployed, it should be noted that no figures are available for Armoured Infantry Division 'Grossdeutschland' for the period 4 to 11 July. For that reason, the number of self-propelled guns on 12 July is given as 17 (*ibid.* 109, reverse side).

<sup>185</sup> Glantz and House, *The Battle of Kursk*, 415, n. 23.

<sup>186</sup> *Ibid.*

<sup>187</sup> KTB 4. Pz.Armee, 12 July 1943 (fos. 153–4), BA-MA RH 21-4/104; Daily report of XXXXVIII Armoured Corps, 12 July 1943, 20.10 (fo. 109), BA-MA RH 21-4/118.

Corps. The Germans nevertheless succeeded in repelling the Soviet attacks along the whole front, and in the evening of 12 July the Soviet forces went back on the defensive.<sup>188</sup> From the tactical viewpoint, such an offensive was questionable. The Voronezh Front formations had to leave their defensive positions and were driven towards the cannon of the more powerful German tanks, where they suffered painful losses. In terms of its operational effects, however, 1st Armoured Army's flanking attack proved more successful than the frontal attack by 5th Guards Armoured Army.<sup>189</sup>

So while Rotmistrov described a tank battle at Rzhavets that never took place, he ignored another that was perfectly real. In the German operations staffs, the battles against 5th Guards Armoured Army at Prokhorovka were considered an 'outstanding success'.<sup>190</sup> On the other hand, the attack by the Soviet 1st Armoured Army led to a temporary crisis which completely disrupted the timing of the operation. News of it also reached the OKH, where Lt-Col. Count Johann Adolf von Kielmansegg, head of the General Staff's operations division, anxiously confided to his diary that the attacking units in the south had 'come to a standstill'.<sup>191</sup> Although the crisis was overcome the same day, the news of this temporary setback reached Führer headquarters just when a decision-making process with major strategic implications was imminent.

## 5. HITLER'S ORDER TO HALT THE OFFENSIVE—'VICTORY THROWN AWAY'?

Whether Kursk was the turning point or even the decisive battle of the war seems very questionable. On the other hand, another event which occurred at the same time was unequivocally a decisive break. On 10 July 1943 the western Allies landed in Sicily.<sup>192</sup> From now on, Germany was forced to fight a multi-front war on the continent of Europe. This event, which took place 3,000 kilometres from Kursk, caused Hitler, almost automatically, to order a halt to Operation CITADEL.<sup>193</sup> As already discussed, the dictator's attitude to that offensive was in any case very ambivalent. Neither its opponents nor its proponents among the generals had really convincing arguments. At the time, Hitler's closest advisors in the OKW, especially Alfred Jodl, had clearly come out against it. Owing to their rivalry with the OKH, they were not willing to see Germany's precious reserves of armour sacrificed in the OKH's eastern theatre for tactical operational purposes, when they would be lacking in the OKW theatres of operations in southern and western Europe for a

<sup>192</sup> See Part VI, Chapter IV, below.

<sup>193</sup> This strategic mechanism was already pointed out by Wegner in the introductory chapter to the present volume. See also his articles 'Das Ende der Strategie', 226, 'Defensive ohne Strategie', 201, and 'Im Schatten', 124 ff.

strategic purpose, namely the prevention of a multi-front war. Unlike the campaigns in 1941/2, in 1943 Hitler was not seeking a 'knock-out blow'<sup>194</sup> on the eastern front, but wanted to make—as he put it—'only small forays'.<sup>195</sup>

Hitler was confirmed in this intention by a new crisis which developed on 13 May 1943 following Army Group Africa's capitulation in Tunis. Now the southern flank was open for an attack on 'Fortress Europe'. The Führer was beset by doubts as to whether his Italian Axis partner was still prepared to fight on. Pressed by Jodl, he seriously considered giving up CITADEL altogether.<sup>196</sup> At the least, as he stated at a conference on 15 May, he was determined to withdraw strong combat units from the eastern front as soon as Italy was threatened. In that event, 'eight good armoured divisions, as well as four infantry divisions', were to be transferred to the southern flank.<sup>197</sup> According to a later account by General (ret.) Walter Warlimont, who at the time was deputy chief of the OKW Operations Staff, they included 'three named SS armoured infantry divisions [II SS Armoured Corps], which Hitler expected to have a strong recruiting effect on the fascist element in the Italian armed forces and civilian population'.<sup>198</sup> However, Hitler feared not only the loss of Italy but also the vacuum that the withdrawal of Italian troops from the Balkans would leave behind, which could lead to a further invasion by the western powers and the adhesion of the Balkan states and Turkey to the western alliance.<sup>199</sup> Within the OKH it was firmly assumed that in the event of a successful Allied landing in Sicily the dictator would immediately put a stop to Operation CITADEL.<sup>200</sup>

This marked a shift of priorities in Hitler's strategy. For the first time since the beginning of the campaign against the Soviet Union, defence in the west took priority over the offensive in the east.<sup>201</sup> During the above-mentioned conference the dictator declared evocatively that 'no front can be allowed to come into being on the borders of the Reich'.<sup>202</sup> A later statement by Hitler on 26 July also tells us much about his worries at the time about launching Operation CITADEL despite the threat of a turnaround in Italy: 'That was the whole reason why I was afraid to start in the east too early, since I always thought that everything would happen immediately in the south.'<sup>203</sup>

<sup>203</sup> *Hitlers Lagebesprechungen*, 369.

On 10 July American and British troops landed in Sicily in what was then the largest combined air, sea, and land operation in military history. That event triggered, almost as a reflex, Hitler's decision to withdraw large armoured units and thereby end the offensive. There was, however, a far more serious reason than the landing itself which caused the German dictator to send troops to the aid of Benito Mussolini. Given the failure of the Italian troops, Field Marshal Albert Kesselring's prognosis that Sicily could be successfully defended proved an illusion.<sup>204</sup> The Italian defence collapsed after only two days.<sup>205</sup> On 12 July (the day of the battle of Prokhorovka) there could no longer be any doubt that Sicily, and Italy as a whole, could no longer be held without effective German support.<sup>206</sup>

The next day the commanders-in-chief of Army Groups Centre and South, Field Marshals von Kluge and von Manstein, were summoned to Führer headquarters. There Hitler informed them that, in view of the critical situation in Italy, he wished to stop Operation CITADEL and transfer II SS Armoured Corps to that country. Manstein protested vigorously, arguing that 'the battle had now reached the decisive point'. Victory was 'within reach. Breaking off action now would be throwing away victory.'<sup>207</sup> As commander-in-chief of Army Group South, he took an optimistic view of the situation and argued that the decisive breakthrough was imminent. The enemy had been forced to deploy a large part of his operational reserve at a very early stage, and the counter-attack could be repelled. Manstein, on the other hand, had not yet committed any of his own reserve, XXIV Armoured Corps. His confidence was based above all on the huge losses sustained by the enemy, who, he said, had already lost 1,800 tanks.<sup>208</sup>

To avoid any misunderstanding, it must be stated that at this point in time Manstein no longer believed in the success of Operation CITADEL as originally conceived. The field marshal by no means wanted to continue the thrust towards Kursk with his tanks alone, when Ninth Army was no longer in place as the second arm of the pincer movement. On the German side it had already been realized that there would be greater difficulties in the northern sector, and the main force of the attack had therefore been switched to Army Group South.<sup>209</sup> On orders from the OKH, that was where the mass of aircraft and tanks had been deployed. As a strict adherent of the concentration principle, Guderian had declared in favour of 'massing all armoured forces in one place, either with [Army Group] South or with Centre, so as to achieve overwhelming superiority'.<sup>210</sup> Manstein now put forward an alternative plan for securing partial success, dubbed Operation

<sup>204</sup> Schröder, *Italiens Kriegsaustritt*, 130 and 151–2.

<sup>205</sup> On the fighting in Sicily and the strategic implications, see *ibid.* 158 ff.

<sup>206</sup> *Ibid.* 165–6. <sup>207</sup> Manstein, *Verlorene Siege*, 502.

<sup>208</sup> This figure was clearly no great exaggeration. According to information from the Russian Military Archive, Voronezh Front had written off a total of 1,223 tanks from 5 to 13 July, to which must be added the damaged fighting vehicles. See CAMO Collection, doc. 23, 'Svedenia o bezvozvratnykh poteriakh tankov, imevshikhsya na vooruzhenii bt i my Voronezhskogo fronta za period oboronitel'nogo srazheniya Kurskoi bitvy (s 5.7.43 goda po 23.7.43 goda)'.

ROLAND.<sup>211</sup> The idea was that his armoured units would no longer attack northwards—and certainly not north-eastwards in the direction of Prokhorovka—but would swing sharply to the west so as to encircle all the Soviet troops positioned in the south-western section of the Kursk salient in a one-armed pincer movement. The direction of thrust which suggested itself was along the east-to-west-flowing River Psel. A precondition, however, was the deployment of Manstein's reserve, XXIV Armoured Corps, so as to be able to intervene against new Red Army forces approaching from the east. The field marshal, however, did not have freedom of action since the dictator had made deployment of the army group reserve subject to his personal authorization. The corps was led by General Walther Nehring, an experienced tank-warfare commander, and consisted of SS Armoured Infantry Division 'Viking' and 17th and 23rd Armoured Divisions. It comprised 181 operational tanks and assault guns,<sup>212</sup> as well as 13 motorized infantry battalions,<sup>213</sup> which was even more important in the given situation. Manstein asked for the immediate deployment of only the first two divisions, which together possessed 115 fighting vehicles, but Hitler refused. What is more, the dictator ordered the withdrawal of a further third of the air-force units, leaving Army Group South with only 250 fighters and ground-attack aircraft, but no bombers or dive-bombers.<sup>214</sup>

From 13 to 17 July a strange war took place on the southern front of the Kursk salient. Following their attempted attack on 12 July, the Voronezh Front formations were so badly hit that they remained passive in most sectors. The Germans, for their part, conducted attacks of dubious legality behind Hitler's back, as it were. Pressed by Manstein, the dictator had agreed to the half-hearted compromise that while Operation Citadel would have to be broken off, Army Group South should continue to strike at the enemy troops, which were partially entangled with its own units, to the extent necessary to create 'the possibility of withdrawing troops from the front'.<sup>215</sup> What now ensued at operational level was conspiratorial collusion between the OKH, which sought to evade Hitler's decision, and Army Group South HQ. The OKH General Staff's operations division deliberately delayed passing on Hitler's order to halt the offensive, in order to give the Army Group time to launch Operation ROLAND.<sup>216</sup> Since attacks in a northerly direction were no longer allowed, the opportunity was taken to encircle and destroy parts of the Soviet forces that had been threatening the flanks. This was successful mainly in the eastern sector. At the same time, the first SS Armoured Corps units were withdrawn from the front to prepare them for Operation ROLAND. In the OKH, Gen.

<sup>216</sup> Communication from General (ret.) von Kielmansegg to the author.

Kurt Zeitzler and Lt.-Gen. Adolf Heusinger still hoped to win Hitler over to a partial operational solution by facing him with accomplished facts. What the generals were doing did not remain hidden from Hitler, however, and on 16 July he issued Special Führer Order No. 100.<sup>217</sup> On 17 July, at 08.55, Fourth Armoured Army received the order to withdraw the SS Armoured Corps and assemble it in the Belgorod area.<sup>218</sup> This decision aroused dismay in the OKH. Von Kielmansegg, then a lieutenant-colonel in the General Staff, wrote despairingly in his diary: 'There's "Roland" finished before it even started. It's enough to make you weep.'<sup>219</sup> The officers of the armoured units, still fully geared to attack, could not see the sense of the order either. They were convinced they remained 'victors over an enemy vastly superior in men and material'.<sup>220</sup>

Like the order to stop before Dunkirk, Hitler's forced halt to Operation CITADEL aroused emotional reactions. It gave rise to a controversy among historians which continues to this day. Manstein wrote in his memoirs that Army Group South 'had been forced to abandon the battle before the outcome was decided, perhaps just before victory, at least on its own front'.<sup>221</sup> He was convinced both that the operation had begun too late and that it had been ended too soon. Some historians agree with him. The offensive against the Kursk salient has been described as 'a battle abandoned half way, a victory thrown away just before the climax'.<sup>222</sup> Since what is at issue here is the fundamental understanding of Operation CITADEL, the 'victory thrown away' thesis will be now be examined from the operational and strategic viewpoints.

### (a) Operation ROLAND's Chances of Success

Considered in isolation, a limited operation of that kind would probably have been successful. That is the view taken, for example, by General (ret.) von Kielmansegg, who was responsible at the time for examining Army Group South's corresponding plan in the operations division of the OKH General Staff.<sup>223</sup> After all, there were only relatively weak Soviet forces in the exposed south-western corner of the Kursk salient, which had so far been overshadowed by events elsewhere. Manstein argued that the Red Army's counter-attack had already been repelled on 12 July. At the following day's conference at Führer headquarters, gripped by a kind of 'Prokhorovka euphoria', he took a thoroughly optimistic view of the situation. However, the field marshal was unaware that more Steppe Front formations were on their way, namely 27th, 53th, and parts of 47th Army. Those forces were actually intended for the Red Army's following summer offensive and could not have been deployed immediately, but the approximately 400 tanks and assault guns of 4th Guards

<sup>223</sup> Communication from General (ret.) von Kielmansegg to the author.

Armoured Corps and I Motorized Corps posed an immediate threat.<sup>224</sup> Manstein would probably not have been greatly impressed by the newly arrived armoured units, however, given that his forces had just succeeded in immediately repelling an attack by the 951 fighting vehicles of 5th Guards Armoured Army. Here it should be noted that although the Red Army's numerical superiority at Kursk was very impressive, the balance of forces was never again so 'advantageous' for the Wehrmacht. Almost all the available German reserves were concentrated in the area—something which would never again be possible in this war, since Germany had henceforth to disperse its military resources over several different theatres of operations. With the help of III Armoured Corps and his Army Group reserve, XXIV Armoured Corps, Manstein would have been in a position to provide protection on the east for the westward-directed Operation ROLAND. He could then have appeared once again as the great victor.

At this point we must take issue with the myth of a 'stab in the back'. It was by no means the case that German armoured forces, 'undefeated in the field', were robbed of victory by Hitler's order to stop the offensive, as had happened in the western campaign of 1940 before Dunkirk. Manstein's thesis of a 'victory thrown away' may have been perfectly correct, but it would have been yet another 'lost victory', to quote the title of his memoirs. He could have aimed only at a temporary partial operational success, which, given the Red Army's imminent summer offensive, would soon have evaporated. With 27 armies concentrated in this section of the front, the enemy enjoyed such superiority that, even if the Germans had had some initial success, Manstein's forces would finally have been overwhelmed.

### (b) The Donets–Mius Offensive

The Red Army had such an abundance of forces that it was superior not only in the Kursk salient but could launch attacks at the same time at other places on the eastern front, such as the Donets–Mius offensive on 17 July against the southern wing of Army Group South. Although that offensive had not yet started at the time of the Führer headquarters conference on 13 July, it had been reported as imminent by German intelligence. Manstein had weakened the southern wing of his Army Group in favour of the northern wing at Kursk. Between Kharkov and the Sea of Azov, over a breadth of 400 kilometres, there were only 483 fighting vehicles in all (223 tanks, 145 assault guns, and 115 self-propelled cannon), even including the three armoured and armoured infantry divisions of the Army Group's reserve,<sup>225</sup> whereas the units of the Soviet South and South-West Fronts facing them possessed more than 1,846 tanks.<sup>226</sup> Such an imbalance of forces was

<sup>224</sup> Glantz and House, *The Battle of Kursk*, 221–3.

<sup>226</sup> CAMO Collection, doc. 20 'Spravka o poteriakh tankov po deistvuyushchim frontam v boyach s 5.7.43 g. po 20.7.43 g.', 2.

not unusual.<sup>227</sup> At this time, for example, Army Group North did not have a single armoured division.

Manstein wanted to take SS Armoured Infantry Division 'Viking' and 17th Armoured Division from his Army Group's reserve for the purposes of Operation ROLAND. In May he had already firmly assumed that the Red Army would launch a relief offensive against the Donets Basin immediately after the beginning of Operation CITADEL in order to force Army Group South to withdraw some of its forces. Determined not to be provoked, however, he declared in advance that, 'in the case of CITADEL the decisive factor is the battle for Kursk, and that battle must be fought out even at the risk of a serious crisis in the Donets area. It must therefore be assumed at the outset that the enemy will succeed in making deep breaches in the Army Group's widely stretched front in the sectors of Sixth Army and First Armoured Army.'<sup>228</sup> Manstein developed the brilliant idea that the battle on the Mius had to be fought at Kursk. There, by tying down and destroying the largest possible amount of enemy forces, the risk of offensives on other sections of the front could be averted. His idea was to force the Red Army to throw so many tanks into the Kursk cauldron that it would be unable to launch its planned summer offensive or would be able to do so only with insufficient forces.<sup>229</sup> That this was by no means absurd is shown by the strikingly high number of Soviet losses. The Soviet colossus was dangerous only if it was able to throw its numerical superiority into the balance—especially its strongest weapon, the artillery—in a properly prepared attack. At Kursk, however, there was a chance of entangling the Soviet armoured units in meeting engagements in which the German tank commanders would be able to exploit their tactical superiority, as on 12 July at Prokhorovka. The Führer, however, considered possession of the Donets Basin as indispensable for reasons of armament strategy. He therefore persisted in his refusal and terminated Operation CITADEL on the evening of 16 July. The next day the Red Army began its offensive in the Donets–Mius sector. This, however, was 'spectacularly unsuccessful'<sup>230</sup> and foundered from the outset. Manstein's risky idea of fighting the battle on the Mius at Kursk by means of Operation ROLAND would probably have succeeded, since never in the course of the war was the balance of armoured forces so favourable.

### (c) The Offensive in the Orel Bulge

Army Group Centre faced an entirely different situation to the north of Kursk. Ninth Army's offensive had quickly got bogged down, but the real problem was that the Soviet counter-attack on Second Armoured Army in the Orel bulge was making rapid headway. Whereas, as later became clear, Army Group South in the Donets–Mius sector had only two small fires to put out, Second Armoured Army

<sup>227</sup> To give a contrary example: at the time of the collapse of Army Group Centre in the summer of 1944, Soviet superiority was 23 to 1 in battle tanks and 3.6 to 1 in assault guns.

<sup>228</sup> KTB HGr Süd, 24 May 1943, 234 (fo. 117), BA-MA RH 19-VI/45.

<sup>229</sup> On this, see Mellenthin, *Panzerschlachten*, 164.

<sup>230</sup> Glantz and House, *When Titans Clashed*, 352, n. 13.

was threatened with a general conflagration. Although Hitler was unable to foresee the further development of the situation clearly at the conference on 13 July, he nevertheless feared that the German defence in the Orel bulge might collapse. In those circumstances he had to decide whether he ought to terminate not only Army Group Centre's offensive in the north but Operation CITADEL as a whole, even if Manstein had success in view. However, the dictator did not immediately renounce any further offensive by Army Group South. Instead, he decided that it should no longer attack in a northerly direction towards Kursk but against the south-western section of the Kursk salient. This meant that Manstein's units would be halted only temporarily. Hitler nevertheless switched the main focus of action by the Luftwaffe clearly to Army Group Centre and also transferred some of Manstein's armoured units to it. It is important to note, however, that he did not put an end to further offensive action by Army Group South until 16 July, when he banned Operation ROLAND.

#### (d) The Allied Landing in Sicily

For Hitler, the imminent crisis in the Orel bulge was thus at first a reason to terminate only the northern wedge of the attack (Ninth Army). On 13 July that development alone, which could not yet be clearly assessed, did not necessarily require halting the whole offensive. Rather, the compromise suggestion of a small-scale operation by the southern wedge of the attack (Operation ROLAND), as proposed by Manstein and the OKH General Staff, seemed thoroughly plausible. Meanwhile, however, a crisis had arisen in the new theatre of war in southern Europe which necessarily led to the termination of Operation CITADEL. Hitler had decided from the outset to break off the operation if an Allied attempted landing in Sicily were successful. At the time, however, the front commanders were unaware of the connection. From their point of view, the withdrawal of II SS Armoured Corps came far too late for Italy and far too soon for the Kursk offensive. In view of the great distance, the units withdrawn could not possibly reach the Sicilian theatre of operations in time to intervene effectively. That, however, was a purely military argument. What Hitler wanted was to give a political signal that would prevent the defection of his Italian Axis partner.

Although Hitler then sent only part of II SS Armoured Corps to Italy, he was 'in the position of a man who had taken a tiger by the tail and dared not let go'.<sup>231</sup> Since the German forces were so closely engaged with the superior forces of the Red Army advancing rapidly from different directions, it seemed scarcely possible to withdraw such a powerful major formation from the fighting immediately without risking the collapse of the front. When taking this decision, moreover, Hitler could not have foreseen that the situation would become so critical at various places on the eastern front simultaneously.

<sup>231</sup> Mellenthin, *Panzerschlachten*, 164.

To summarize: Manstein was right in operational terms (but only with regard to his own army group), while Hitler was right from the strategic and political viewpoint. There was not one but several reasons for his order to stop the offensive, and the decision was predetermined by developments in Sicily. However, the reason given as decisive in Soviet historiography, namely the alleged destruction of the SS Armoured Corps on 12 July, can be definitely ruled out. It was not the supposed German defeat at Prokhorovka but the collapse of Italian defence in Sicily—3,000 kilometres away—that caused Hitler to terminate Operation CITADEL on that day and withdraw the armoured corps. But the disappearance of the SS Armoured Corps from the Kursk sector of the front immediately afterwards, which was simply a chronological coincidence, enabled Rotmistrov to claim that his valiant troops had destroyed the enemy. The situation is similar with regard to a propaganda myth that was subsequently repeated in, for example, the official history of the Great Patriotic War: ‘The German top leadership hurriedly put the blame for this defeat on the commander of the SS Armoured Corps, Obergruppenführer Hausser, and relieved him of his post.’<sup>232</sup> In reality, on the evening of 12 July Field Marshal von Manstein expressed ‘thanks and recognition’ to Hausser,<sup>233</sup> who not only retained command of his corps but was later promoted to commander-in-chief of an army and ultimately of an army group.

# III. Operation CITADEL—A Turning Point?

## 1. CAUSES OF THE GERMAN FAILURE

The termination of Operation CITADEL was pre-programmed, since Hitler had decided from the outset to stop the operation if the Allies landed in Sicily at the same time. But even if there had been no invasion of Sicily, the Wehrmacht would have had no chance of winning the battle of Kursk. It failed to do so for five main reasons:

- The most important reason was the *law of numbers*. The Red Army's numerical superiority was such as to induce an attitude of resignation on the part of some German officers. No matter how many Soviet tanks were destroyed, more and more kept coming. Field Marshal von Manstein had this to say about the enemy's endless regenerative ability: 'We were facing a hydra that seemed to grow two new heads for every one we cut off.'<sup>1</sup> But what the German army lacked was not so much tanks as infantry to secure its flanks following a breakthrough. On the Soviet side, however, manpower seemed superabundant<sup>2</sup> and was thrown onto the battlefield without consideration. The mass deployments of Soviet air power came as a surprise, however, since Soviet planes had been swept from the skies at the start of the Russian campaign and in a very short time the original 20,000 aircraft had been reduced to a few remnants.<sup>3</sup> From then on the Luftwaffe had been in control of Soviet air space; in the spring of 1943 it had still played a decisive role in Manstein's counter-attack on the Donets. Yet by July 1943 the Red Army again had some 12,000 aircraft at its disposal, of which 6,532 (not counting reserves) were directly deployed against the German forces.<sup>4</sup> At the beginning of Operation CITADEL the Luftwaffe managed to regain control of the skies, mainly as a result of the failed Russian preventive strike. But then strong air units had to be redeployed in the Orel bulge and on the Mius, which finally left the attacking units of Army Group South with only 250 fighters and ground-attack aircraft. The lack of aircraft was compounded by the fuel shortage, with the result that CITADEL was the first large-scale operation on

<sup>1</sup> Manstein, *Verlorene Siege*, 509.

<sup>2</sup> See Kroener, 'Der Kampf um den Sparstoff Mensch'.

<sup>3</sup> *Grif sekretnosti sniat*, 350. Of the 20,000 Soviet aircraft available on 22 July 1941, only 9,200 were at the front at that time.

<sup>4</sup> Zetterling and Frankson, *Kursk 1943*, 5.

the eastern front in which the Luftwaffe did not play a decisive role. The Soviet armament industry was able to achieve superiority—mostly many times over—in other areas too, and supplies from the Allies also had an impact. To put the German leadership's main problem in a nutshell: it had no more reserves. The OKH had no operational reserve on the eastern front, nor did the OKW have a strategic reserve that could have intervened in Italy, for example. The individual Soviet army fronts, on the other hand, possessed considerable operational reserves, in addition to which the Stavka had, in Steppe Front, a strategic reserve of the size of an army group. The German potential, however, was exhausted.

- Hitler's *constant postponement of the start of the offensive* had a detrimental effect. Manstein had demanded that the enemy be hit 'as soon as possible, while still in a state of weakness'.<sup>5</sup> He wanted to attack before the Soviet formations had recovered from the defeat at Kharkov. Now, however, every day that passed was a gain for the Red Army, which was able to build the Kursk salient into an ever-stronger fortress. The Wehrmacht lost the race not only against the Red Army, but against the Allies too. General Zeitzler, chief of the OKH General Staff, had called for a strike as quickly as possible to prevent coordinated action by the Allies. So the Allied landing in Sicily—at the very height of the battle—was also a stab in the back of the German eastern front. The date set for the attack by Hitler was thus 'the most unfavourable that could possibly have been imagined'.<sup>6</sup>
- *Forgoing the element of surprise* was a further shortcoming. It turned out that the Red Army knew not only the direction of thrust but also the timing of the offensive. The German tanks ran into deep minefields laid out exactly in the planned direction of attack. They encountered a well-prepared defender.
- The stereotypical attack was directed *frontally* against the enemy's strongest position. Instead of exploiting the tactical superiority of their armour in free combat, the Germans embarked on a *direct trial of strength in a very restricted space*, that is, a 'rolling battle of material attrition', a 'mechanized Verdun'.
- The *Allied landing in Sicily* was the beginning of a war on two fronts for the Wehrmacht. From then on, it had to divide its forces among several different theatres of operations. In reality, however, the multi-front war had already begun much earlier. Germany had long been waging war with the western powers at sea and in the air. For that reason the mass of German fighters and anti-aircraft cannon was concentrated on the 'home front' to counter the strategic air war conducted by British and American bombers. Since March 1943 losses of fighter aircraft deployed in defending Germany had clearly exceeded those on the eastern front. Even at the height of the battle of Kursk, the losses on the home front were considerably greater. For the Luftwaffe, the

<sup>5</sup> Manstein, *Verlorene Siege*, 494.

<sup>6</sup> Magenheimer, *Die Militärstrategie Deutschlands 1940–1945*, 244.

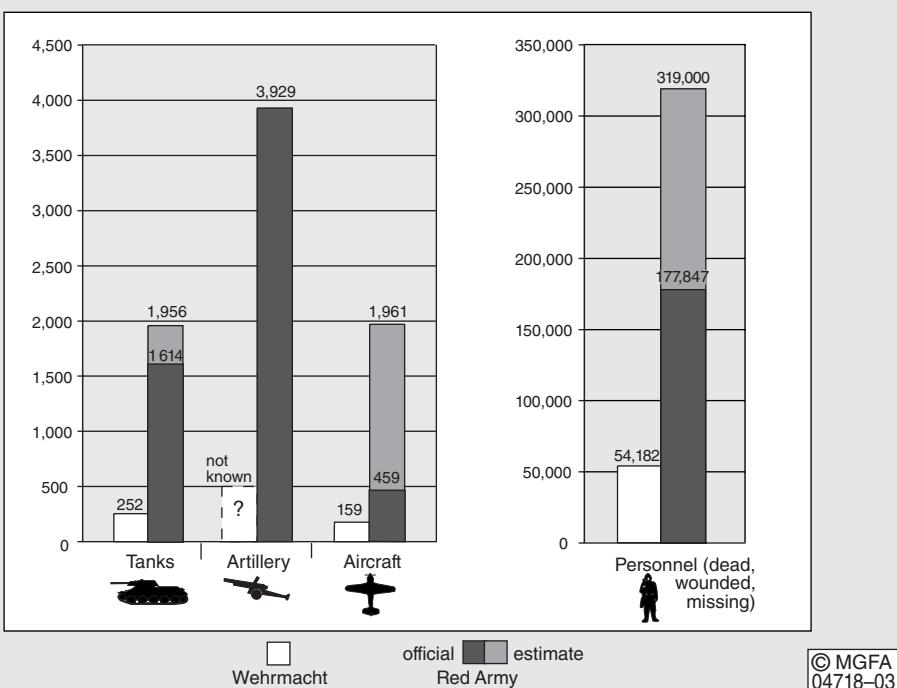

Diagram II.III.1. Total losses in Operation CITADEL (5 to 16 July 1945)

Allied landing in Sicily meant the *opening of a third front* and a concomitant sharp increase in aircraft losses. In July and August, for example, it lost only 702 planes on the eastern front, compared with a total of 3,504 losses on all other fronts (including Germany itself). These figures include heavily damaged aircraft. So, although ‘the greatest battle of all time’ was raging at Kursk, and fighting was taking place at the same time on many sections of the eastern front, the share of total German aircraft losses was only 16 per cent.<sup>7</sup>

<sup>7</sup> Gen.Qu.Mstr., 6. Abt., ‘Flugzeugunfälle und Verluste bei den fliegenden Verbänden’ (see, above all, the reporting days 2 Aug. and 2 Sept.), BA-MA RL 2-III/1191-1192; ‘Monatliche Flugzeugverluste’ (reporting days 7 Aug. and 7 Sept.), BA-MA RL 2-III/1025; ‘10-Tages-Meldungen’, BA-MA RL 2-III/725-726; ‘Monatsmeldungen über Zu- und Abgänge’, BA-MA RL 2-III/877-878; ‘Monatsmeldungen an OKW’, BA-MA RL 2-III/1008; ‘Gesamtübersicht der Verluste 1939–1945’, BA-MA, Study ZA 3/407. Update reports received in the following weeks and months are also taken into account. The calculation was made by Ulf Balke using further documents from his private archive.

## 2. QUANTITATIVE BALANCE-SHEET: ASYMMETRICAL LOSSES

The British military correspondent Alexander Werth was able to visit the Prokhorovka battlefield. Reporting on the inferno, he wrote:

It was a concentrated carnage within a small area more terrible than had yet been seen. [...] I could see how the area to the north of Belgorod (where the Germans had penetrated some thirty miles into the Kursk salient) had been turned into a hideous desert, in which even every tree and bush had been smashed by shell-fire. Hundreds of burned-out tanks and wrecked planes were still littering the battlefield, and even several miles away from it the air was filled with the stench of thousands of only half-buried Russian and German corpses.<sup>8</sup>

The Operation CITADEL offensive against the Kursk salient has been classified by some historians as the turning point of the war mainly because of the irretrievable losses which the Germans allegedly suffered there. According to Soviet sources, the Wehrmacht lost 3,572 tanks<sup>9</sup> (700 of them Tigers),<sup>10</sup> 844 field guns,<sup>11</sup> 1,392 aircraft,<sup>12</sup> and 80,000 to 100,000 men.<sup>13</sup> That indeed would have 'broken the backbone'<sup>14</sup> of the German army, since it had only 3,524 tanks and assault guns available for the whole eastern front,<sup>15</sup> of which 2,465 were deployed for Operation CITADEL.<sup>16</sup> However, there is a great difference between the figures given in the Soviet propaganda fiction and those contained in the German archives. In reality, total German losses were not 3,572 tanks and assault guns, but only 252.

Up to and including 14 July (one day after Hitler halted action by the northern group), Model's Ninth Army lost 41 battle tanks, 17 assault guns, and 19 tank destroyers.<sup>17</sup> The total losses of Army Group South, up to and including 16 July, when Hitler finally terminated the offensive, were 161 tanks and 14 assault guns.<sup>18</sup> Interestingly, only 10 Tigers were lost during the whole of Operation CITADEL.<sup>19</sup> So

<sup>8</sup> Werth, *Russia at War*, 684.

<sup>9</sup> Venkov, 'Archivbestände', 238, according to whom, from 5 to 15 July 1943, the Germans lost 928 tanks against Central Front and 2,644 against Voronezh Front.

it is paradoxical that one of the best-known books about that battle appeared under the suggestive title ‘The Tigers are Burning’.<sup>20</sup>

For many years the Red Army’s losses were a state secret and were made public only after the end of the Soviet era. In the standard work *Grif sekretnosti sniat* the

<sup>20</sup> See the monograph of that name by Martin Caidin.

figure given for irretrievable losses for the period of defence against the German offensive<sup>21</sup> is 1,614 tanks and assault guns.<sup>22</sup> Although that work is a milestone in the historiography of the Second World War, it has since become evident that many of the loss figures are too low.<sup>23</sup> Further assessment of Russian archive materials reveals that Central Front wrote off 526 tanks from 5 to 15 July,<sup>24</sup> while Voronezh Front had already lost 1,223 tanks up to and including 13 July.<sup>25</sup> According to another source, it lost 1,397 battle tanks and 33 assault guns in the defensive phase up to 22 July.<sup>26</sup> The total losses incurred by Central Front, Voronezh Front, and the reinforcements from Steppe Front were thus between 1,614 and 1,956 fighting vehicles. At all events, they far exceeded the 252 losses suffered by the German attacking forces. Interestingly, this balance-sheet tallies with estimates made by American historians, who worked out as a rule of thumb that at Kursk eight Soviet tanks were destroyed for every German tank lost.<sup>27</sup>

According to its own reports, the Red Army lost 3,929 artillery cannon and grenade launchers,<sup>28</sup> but no corresponding loss figures are available on the German side. On the other hand, German aircraft losses can be clearly ascertained. The figure was not 1,392, as claimed by the Soviets,<sup>29</sup> but 159.<sup>30</sup> Soviet losses are given

<sup>21</sup> The Soviet ‘defensive phase’ corresponded to Operation CITADEL. According to the Russian periodization, it lasted from 5 to 11 July for Central Front in the north, and from 5 to 23 July for Voronezh Front in the south. According to the German periodization, Operation CITADEL lasted for the northern group (Ninth Army) from 5 to 13 July, and for the southern group from 5 to 16 July. The southern group then withdrew to its initial starting positions, which it reached on 23 July. During the withdrawal phase there was no longer any heavy fighting or serious losses.

<sup>22</sup> *Grif sekretnosti sniat*, 370.

<sup>23</sup> See, e.g., the criticism by Boris V. Sokolov, to whom reference is made repeatedly in the following discussion. It should be mentioned in this connection that the Research Institute for Military History greeted Krivosheyev’s *Grif sekretnosti sniat* with great euphoria and had it translated into German. It subsequently distanced itself from the intended publication, however, since many loss figures had proved to be clearly too low. The problem lies less with the Russian editor and more with the deficiencies of the Red Army’s reporting system. Discreditable operations involving heavy losses were partly hushed up during the Stalin era, so that no loss figures are available. For some battles, the number of Red Army soldiers taken prisoner by the Germans is higher than the official Soviet figure for total losses.

<sup>24</sup> See CAMO Collection, doc. 21, ‘Spravka o poteriakh voisk frontov, poteriakh, nanesennykh imi protivniku, i vydovy o deistviach tankovykh voisk protivnika v operatsiakh s 5-go po 15-e iyulja 1943 goda’, 2.

<sup>25</sup> See CAMO Collection, doc. 23, ‘Svedenia o bezvozvratnykh poteriakh tankov, imevshikhsya na vooruzhenii bt i my Voronezhskogo fronta za period oboronitelnogo srazheniya Kurskoi bitvy (s 5.7.43 goda po 23.7.43 goda)’. According to another archive document, Voronezh Front incurred 1,708 tank losses up to 20 July, of which 1,254 were write-offs: CAMO Collection, doc. 20, ‘Spravka o poteriakh tankov po deistvuyushchim frontam v boyach s 5.7.43 g. po 20.7.43 g.’.

<sup>26</sup> Report by the C-in-C of Voronezh Front (CAMO, F. 15, Op. 1160, d. 1424, L. 6); for this information the author is indebted to the Russian military historians Col. Vladimir T. Eliseyev, Col. Shabayev, and Lt.-Col. Sergei Lipatov.

<sup>27</sup> Glantz and House, *The Battle of Kursk*, 135 and 274.

<sup>28</sup> *Grif sekretnosti sniat*, 370.

<sup>29</sup> See, e.g., Telpukhovsky, *Die sowjetische Geschichte des Großen Vaterländischen Krieges*, 241.

<sup>30</sup> 1st Air Division (Air Fleet 6) lost 45 aircraft from 5 to 11 July 1943, and VIII Air Corps (Air Fleet 4) lost 114 from 5 to 16 July. See Gen.Qu.Mstr.: 6. Abt., ‘Flugzeugunfälle und Verluste bei den fliegenden Verbänden’, BA-MA RL III/1191–1193; calculated by Ulf Balke, taking into account other documents from his private archive. Klink, on the other hand (*Das Gesetz des Handelns*, 337–8), puts the figure at 193 German losses, although his calculation for the deployment of Air Fleet 6 is based on

in the standard Russian work *Grif sekretnosti sniat* as only 459 aircraft. This, however, is even lower than the figure given in Soviet historiography, which even then put the number of Soviet aircraft shot down in aerial combat at around 1,000.<sup>31</sup> However, there is no information available about other losses due to anti-aircraft fire, crashes, and so on. In this unsatisfactory situation one can only fall back on the relatively reliable estimates of the Luftwaffe Operations Staff's intelligence division (Ic), which reported the destruction of 1,961 Soviet aircraft from 1 to 15 July.<sup>32</sup>

German personnel losses were heavy, even if well below the Russian estimates of 80,000 to 100,000.<sup>33</sup> From 5 to 13 July, Ninth Army lost a total of 23,345 men (4,064 dead, 18,414 wounded, 867 missing). For Army Group South the figure for the period 5 to 16 July was 30,837 (4,999 dead, 24,745 wounded, 1,093 missing).<sup>34</sup> The total number of German troops lost in Operation CITADEL was thus 54,182 (9,063 dead, 43,159 wounded, and 1,960 missing).<sup>35</sup> The numbers of dead and missing nevertheless amounted to only 2.51 per cent of the daily strength of the three German attacking armies, and as little as 1.67 per cent of their ration strength.<sup>36</sup> There can be no question of a catastrophic haemorrhage that left numerous German formations 'bleeding to death' and unable to recover. The numbers are also put into perspective by the fact that the Germans had to attack a prepared system of defensive positions in the face of fire from an enemy several times superior in artillery. By way of comparison, in 1916 the British army lost 60,000 men out of a total of 120,000 on the first day of the battle of the Somme, including 20,000 dead.

Most surprising of all is that the losses incurred by the Soviet troops, as defenders, were considerably higher than those of the German attackers. According

the period 6 to 15 July. In fact, Operation CITADEL ended for Ninth Army on 11 July. From 12 July on, the great majority of Air Fleet 6's aircraft were deployed in resisting the Soviet counter-offensive in the Orel bulge.

<sup>31</sup> Even the official Soviet account, *Geschichte des zweiten Weltkrieges 1939–1945* (vii. 187), mentions 1,000 Soviet aircraft lost in aerial combat. For further sources, see Sokolov, 'The Battle for Kursk', 83.

<sup>32</sup> On this, see Muller, *The German Air War*, 144. Different figures for aircraft shot down are given in 'Luftflotte 4, Tägliche Einsatzübersichten vom 3.7. bis 10.12.1943', BA-MA RL 7/667, and 'Luftflotte 6, Tagesmeldungen des Flivo 2. Armee vom 1.7. bis 30.9.1943', BA-MA RH 20-2/1337. These figures, supplemented by information from Ulf Balke's private archive, result in a total of 1,700 aircraft shot down. However, the BA-MA files in question are documents from the Luftwaffe's operations division (Ia) only, whereas Muller bases himself on intelligence documents (Ic), which are clearly more conclusive with regard to enemy losses. The file quoted by Muller (NARS T971/45/351) is held by an American archive and could not be consulted. The difference of more than 200 in the number of aircraft shot down may possibly be due to inclusion, in the documents consulted by Muller, of additional losses caused by anti-aircraft fire.

<sup>33</sup> Shutov and Ramanichev, 'Ognennaya duga', 271.

<sup>34</sup> Fourth Armoured Army lost 16,168 men in all (2,686 dead, 13,042 wounded, 440 missing) and Army Detachment Kempf 14,669 (2,313 dead, 11,703 wounded, 653 missing).

<sup>35</sup> On this, see the statistics given in the following German documents: BA-MA RW 6/v. 558 and 564; RH 20-8/97; RH 20-9/339; RH 20-9/409; RH 20-9/441; RH 24-52/159; RS 2-2/17. These tables are reproduced in part in Zetterling and Frankson, *Kursk 1943*, 113 ff. and 199 ff.

<sup>36</sup> Not including Second Army, the daily strength on 5 July was 438,271 men and the ration strength 658,907.

to official records, the Red Army lost 177,847 men during the defensive phase,<sup>37</sup> of whom 70,330 dead or missing.<sup>38</sup> That would mean that the defenders, protected by a system of fortified positions, suffered almost seven times as many ‘irrecoverable losses’ as the attackers. In reality, however, the Red Army must have incurred considerably higher personnel losses. As one Russian historian has convincingly demonstrated, the official loss statistics are full of gaps and inherent discrepancies.<sup>39</sup> He estimates that Central Front lost not 33,897 but some 90,000 men, while the losses of Voronezh Front and Steppe Front should be put at 229,000.<sup>40</sup> That would raise the official figure from 177,847 to 319,000 for total personnel losses during the defensive phase. Give the huge Soviet losses, the question arises as to how the Red Army finally emerged victorious. The answer lies in a comparison of the strength and losses of the two sides. As can be seen from Diagram II.III.2, Soviet quantitative superiority was so great that the occurrence of many times more losses than the enemy could make no difference to its supremacy.

A sober analysis of the comparative figures makes nonsense of many clichés. The German losses were by no means so high and irreplaceable as to warrant describing Operation CITADEL as the ‘decisive battle’ or ‘turning point of the war’. They provide even less justification for such a description when compared with Soviet losses that were many times higher. While the German armed forces—as already shown—lost 11,023 dead and missing, as well as 43,159 wounded, a total of 89,480 men were brought to the eastern front in July in replacement.<sup>41</sup> The German divisions had not been ‘bled dry’, nor had ‘the blossoming German army withered once and for all’.<sup>42</sup> The German forces lost 252 tanks and assault guns, but it must be borne in mind that 817 new fighting vehicles were produced in the same month.<sup>43</sup> As can be seen from Diagram II.III.3 ‘Development of the armour situation on the eastern front’, there was by no means a statistical collapse of German armour, a large part of which had allegedly been ‘burnt to cinders’.<sup>44</sup>

<sup>37</sup> As already stressed, the German offensive phase and Soviet defensive phase are not fully congruent in the respective national historiographies. By German reckoning, the fighting in the northern sector lasted from 5 to 13 July, but only from 5 to 11 July according to the Soviet interpretation. Hitler ended offensive operations in the southern sector on the evening of 16 July, while the Soviet view is that defensive operations lasted there until 23 July. In this chronological grey area, however, there was no longer any serious fighting, since the units of Army Group South had voluntarily withdrawn to their starting positions. From 17 to 23 July Fourth Armoured Army recorded only 347 more deaths, mainly of soldiers who succumbed to previously inflicted wounds.

<sup>38</sup> *Grif sekretnosti sniat*, 187–8.

<sup>39</sup> Boris V. Sokolov gives the following calculation as an example: according to official data (*Grif sekretnosti sniat*, 187–9), Central Front had 738,000 men on 5 July and lost 33,897 up to and including 11 July. It would therefore have had around 704,000 men on 12 July. But for that date, the beginning of Operation KUTUZOV, Central Front’s strength is given as only 645,300. That means a further shrinkage of around 60,000 men, despite the fact that Central Front had received considerable reinforcements in the meantime because of its losses (Sokolov, ‘The Battle for Kursk’, 79; id., ‘The Cost of War’, 158).

<sup>40</sup> Sokolov, ‘The Battle for Kursk’, 79–81.

<sup>41</sup> See diagram in file BA-MA RH 2/1343.

<sup>42</sup> Mellenthin, *Panzerschlachten*, 165 and 171. Even some German generals overdramatized the supposedly irreplaceable losses, but closer examination shows that they were decided opponents of Operation CITADEL who sought to prove, with hindsight, how right they had been.

<sup>43</sup> Müller-Hillebrand, *Das Heer*, iii, table ‘Fertigung’ (following 272).

<sup>44</sup> Warlimont, *Im Hauptquartier*, 348.

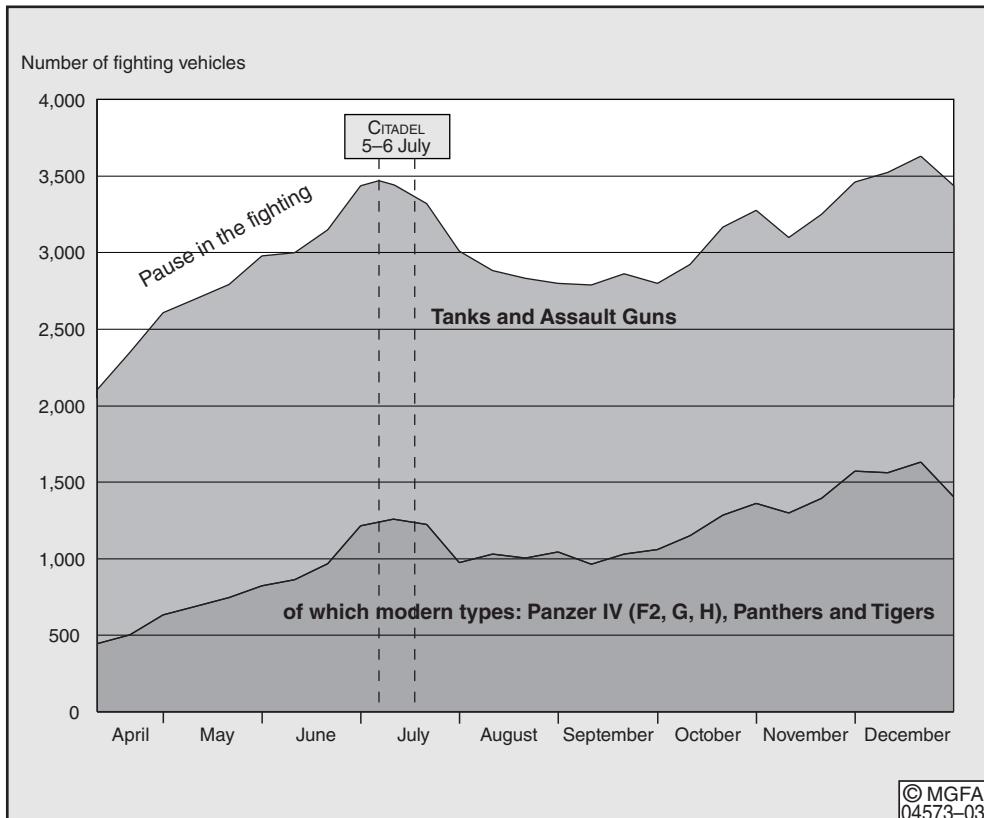

Diagram II.III.3. Development of the armour situation on the eastern front (April to December 1943)

Source: Zetterling and Frankson, *Kursk 1943*, 146.

Instead, the ‘greatest tank battle in history’ took a surprisingly small toll of the German attacking forces. The losses during the ensuing Soviet counter-offensive also lowered the curve of the graph only slightly. In the second half of 1943 the German armament industry produced a monthly average of 908 tanks and assault guns (some of which were, of course, intended for other fronts), so that the number of fighting vehicles on the eastern front in December was higher than at the beginning of July. The percentage increase in modern battle tanks like Panthers and Tigers, as well as the improved-performance Panzer IVs, was particularly important. At the end of the year German armour was stronger than ever before. The thesis of Kursk as a ‘turning point’ can be refuted by statistics alone.

Prokhorovka was not the ‘graveyard of German armour’; instead it became a burial ground for Soviet tanks. Nor was Kursk in any way the ‘swan-song’ of the

German tank forces, as Marshal Konev claimed.<sup>45</sup> On the contrary, as shown in the next chapter, at Kursk they were able for the first time to outperform the hitherto technically superior Soviet tanks.

### 3. TECHNOLOGICAL AND TACTICAL BALANCE-SHEET: THE QUALITATIVE TURNAROUND IN FAVOUR OF GERMAN ARMOUR

#### (a) ‘Tiger Shock’ and Soviet Armour’s ‘Technology Gap’

It seems like an irony of history that an operational German armoured force would hardly have existed at the beginning of the war, had it not been for support from the subsequent Soviet enemy. The restrictive provisions of the Versailles Treaty prohibited Germany from manufacturing tanks, but during the Weimar Republic the German armed forces were able to conduct their first tank tests in secret on Soviet territory thanks to the Rapallo treaty of friendship. In 1935 Hitler initiated a hasty programme of tank construction, which was faced, however, with the task of overcoming a technology gap of one or two generations in comparison with the armies of neighbouring countries. During the western campaign of 1940 it became frighteningly clear that the German fighting vehicles had virtually no chance in duels with the heavy French and British models.<sup>46</sup> Only by adopting revolutionary tactical methods was it possible to outmanoeuvre the tanks of the western powers, which were still deployed in the manner of the First World War.<sup>47</sup>

Hitler’s ‘blitzkrieg’ adventure against the Soviet Union faced the 3,350 attacking German tanks<sup>48</sup> with a superpower which had been building up a huge stock of tanks for many years. The Red Army not only had 22,600 fighting vehicles in its arsenals,<sup>49</sup> but of all the armed forces in the world it had the most experience in the development of technically advanced models. The result was the T-34 ‘supertank’, an ideal combination of mobility, armour, and weaponry. To the German tank officers, elated by their success in the western campaign, the encounter with the Soviet fighting vehicles came as a shock. It was only tactical inefficiency that prevented the Soviet tank troops from turning their technical superiority to proper account on the battlefield. In direct one-to-one combat the German tanks could do little.

The decisive technological turn came at the battle of Kursk, where it became apparent that German armour had not only caught up in the meantime, but was now a generation in advance. This qualitative turnaround was evidenced repeatedly by Germany’s Tiger battle tank. Yet considering that at the start of Operation CITADEL only 128 Tigers were ready for deployment, it is cause for wonder that Soviet reports raised that model to the level of a metaphor for German armour.

<sup>45</sup> Konev, *Aufzeichnungen eines Frontoberbefehlshabers*, 43.

<sup>46</sup> Frieser, *Blitzkrieg-Legende*, 44–52. <sup>47</sup> Ibid. 413 ff. and 424 ff.

<sup>48</sup> See *Germany and the Second World War*, iv. 318.

<sup>49</sup> *Grif sekretnosti sniat*, 350.

The Tiger was a 57-tonne colossus with armour up to 120 mm thick, equipped with a long-range 88-mm cannon. That made it a nightmare for Soviet tank crews. While it was able to pierce the frontal armour of a T-34/76 at a distance of over 2,000 metres, it proved practically invulnerable to frontal fire from Soviet battle tanks. It could be attacked only from the side or the rear at very close range, but in the steppe country around Kursk tank duels were usually fought frontally and at long distance. The Tiger's appearance on the scene also had a considerable psychological impact and repeatedly caused panic.<sup>50</sup> There were cases where Soviet tank crews jumped from their T-34s and ran away as soon as they saw Tigers facing them. The Red Army set up court martials to deal with them.<sup>51</sup> On 12 July alone, 15 Tigers from the SS Armoured Corps put 120 Soviet fighting vehicles out of action at Prokhorovka.<sup>52</sup>

While the Tiger also held the role of 'king of the battlefield' in Anglo-American perceptions,<sup>53</sup> its deployment at Kursk is tainted by the odium of mechanical failure. The new tank was still in the testing stage and not yet considered ready for the front. Hitler, however, ordered deployment despite protests from the tank specialist Guderian and armament expert Albert Speer. He even put the start of the offensive back several weeks so that he could throw the 'wonder tank' into the battle on time. The result was that some of the new tanks—in most cases without any involvement by the enemy—were out of action owing to technical defects. On 9 July only 19 of the 200 Panthers were still operational, and not until 13 July had the number risen to 43.<sup>54</sup> Nevertheless, although the majority were in the repair shops, the few operational Panthers shot down 268 Soviet tanks by 15 July. That was almost as many as were shot down by all the other battle tanks, assault guns, and tank destroyers of XXXXVIII Armoured Corps put together.<sup>55</sup>

Once the technical teething problems had been overcome, the Panther proved to be an excellent fighting machine. Many military historians have described it as the best tank of the Second World War.<sup>56</sup> Unlike the Tiger 'heavy tank', the Panther was actually classified as a 'medium tank'. Its frontal armour, however, was just about as thick as that of the Tiger, although the latter had stronger protection on the sides and back. Both tanks were powered by the same engine, which gave the Panther greater mobility because of its lesser weight. Despite its 43 tonnes (D model), it was the fastest German battle tank. Its silhouette showed that it had been designed as a counter to the T-34, but it clearly outclassed its Soviet model in most respects. The most striking example was its 75-mm long-barrelled gun, whose penetrating power was even slightly greater than that of the Tiger's somewhat

<sup>50</sup> Kleine and Kühn, *Tiger*, 111.

shorter 88-mm gun. With its high muzzle velocity it could penetrate a T-34 frontally at a distance of over 2,000 metres, while the latter could do nothing against the Panther's frontal armour even at a closer distance.<sup>57</sup> The Panther, moreover, was able to penetrate the standard Soviet tank's side armour at a distance of up to 4,000 metres.<sup>58</sup> Although it never attained the legendary status of the Tiger, whose massive shape inspired such fear, it was in fact the more effective of the two tanks.

The Ferdinand tank destroyer has repeatedly been taken as a symbol of the alleged collapse of German armour at Kursk. The 68-tonne steel monster was supposedly a faulty design resulting from German 'giant tank mania'. Here too, however, a distinction between myth and reality is required. The Ferdinand tank destroyer, named after the constructor Ferdinand Porsche, was in fact an improvisation. In the competition for the development of a heavy battle tank, the Porsche Tiger, as it was called, was losing out to the model produced by the Henschel company. It was therefore decided to use the 90 available chassis as the basis for a heavy tank destroyer, to bridge the gap until a proper tank destroyer was introduced. It was equipped with the 88-mm Pak 43/2 L/71, the long-barrelled gun, a modified version of which was later also fitted to the tank destroyer and the famous King Tiger. No other tank gun in the Second World War shot better or more accurately. Its shells, which left the muzzle with an initial velocity of 1,180 m/sec., could penetrate the frontal armour of a T-34 at a distance of 3,500 metres. Moreover, the Ferdinand proved practically invulnerable to fire from Soviet battle tanks. Its frontal armour was 200 mm thick, compared with the 70 mm maximum of a T-34. Nevertheless, these extremely high values could not hide the fact that the Ferdinand was a temporary improvisation, prone to breakdowns. Logistics were the main problem, since not enough spare parts had been produced for these few vehicles.

The first deployment ended in fiasco. Instead of using the Ferdinand defensively as a tank destroyer, it was employed like a battering-ram at the spearhead of the wedge. The huge fighting vehicles immediately attracted enemy fire, which was practically without effect. However, no other vehicles had been able to keep up with them, and the infantry least of all. Suddenly the Ferdinands blundered, 'like helpless giants', into the maze of the defence system. Completely isolated, they were surrounded by enemy close combat troops, who crept up on them with explosives. Since, like the corresponding Soviet assault guns, they had no machine guns, they had to fire at individual infantrymen with their huge cannon. But this required a rotational movement of the whole vehicle, since the gun was built immovably into the turret. That grotesque scene is repeatedly invoked in the literature to show that the Ferdinand was a faulty design. The problem, however, was not the design but the fundamentally erroneous tactical deployment. Whenever this fighting vehicle was used as a tank destroyer, it was outstandingly successful. According to

<sup>57</sup> On this, see Guderian's positive report to Lt.-Col. Zeitzler on experience with the Panther during its first deployment at Kursk, repr. in Jentz, *Der Panther*, 132–4.

<sup>58</sup> Zetterling and Frankson, *Kursk 1943*, 215.

an occurrence report, ‘the Ferdinand has a gun of unprecedented performance. It can reduce any T-34 or KW-1 to rubble at a very great distance.’<sup>59</sup> In a single morning, a Ferdinand hit 22 passing Soviet tanks, one after the other, at a distance of 2,000 to 3,000 metres; the Soviet crews felt perfectly safe, believing they could not be attacked from such a distance.<sup>60</sup> From 5 to 27 July, 653rd Heavy Anti-Tank Battalion, one of the two battalions equipped with Ferdinands, destroyed 320 Soviet tanks for only 13 losses of its own.<sup>61</sup> It may therefore be concluded that, while the Ferdinand was an improvisation, it was by no means a faulty design.

The mass of German fighting vehicles consisted of Panzer IVs, and to a lesser extent of Panzer IIIs, which were no longer produced. The latest version of the Panzer IV (the H model) was equipped with a long-barrelled 75-mm KwK 40 L/48 gun which could penetrate a T-34 frontally at a distance of 1,000 metres. Shells from a T-34, however, were effective only at close range against the frontal armour of a Panzer IV (H), which was up to 80 mm thick. The standard German tank, in its modernized version, was thus superior to the standard Soviet tank of that time.<sup>62</sup> The Panzer IV (H) was rather similar to the Tiger in appearance, which led to some disastrous mistakes. Following the first encounters in the Kursk salient, it was wrongly assumed on the Soviet side that the frontal armour of a Tiger could be penetrated by the cannon of a T-34 if the latter managed to attack at very close range. In the tank battle of Prokhorovka, General Rotmistrov accordingly ordered his armour to advance at full speed so as to nullify the advantage conferred by the enemy’s superior range and seek close combat. That was a fatal mistake, however, since the Tiger was frontally invulnerable even at close quarters. Thus, at Prokhorovka the T-34s voluntarily drove right up to the Tigers’ guns, and some of the German combat reports are gruesomely reminiscent of hunting scenes. The Panzer IV (H) tanks, which had been mistaken for Tigers, also took advantage of the headlong rush. As a result, the Soviet tank attacks repeatedly ended in chaotic disorder.

During the battle of Kursk it thus became apparent that, in terms of quality, Soviet armour was stuck in a technological impasse. At the start of the Russian campaign, in the summer of 1941, the T-34 had still spread fear and terror among the German tank crews. But since then the Soviet fighting vehicles, including the heavy KV-85 (Kliment Voroshilov), had remained at the same technical level. New developments, such as the improved T-34/85, with its 85-mm gun, were still in preparation and could not be deployed until the following year. In the meantime, however, the Germans had thoroughly modernized their armour. In the summer of 1943 they surprised the Red Army by fielding a new generation of fighting vehicles with peak technical performance. It was precisely at Kursk, the ‘greatest tank battle in history’, that Soviet tanks were at their lowest technical level during the war compared with those of Germany.<sup>63</sup> That was also true of Soviet assault guns and

<sup>59</sup> Quoted in Spielberger, Doyle, and Jentz, *Schwere Jagdpanzer*, 106. Despite all the technical problems, crews were ‘by and large, very pleased with the Ferdinand’ (Münch, *Einsatzgeschichte*, 4).

<sup>60</sup> Rendulic, ‘Die Schlacht von Orel’, 135.

<sup>61</sup> Münch, *Einsatzgeschichte*, 45.

<sup>62</sup> See Zamulin, *Prokhorovka*, 662.

<sup>63</sup> Glantz and House, *The Battle of Kursk*, 36.

most anti-tank cannon. The only fundamental new development was the SU 152 assault gun, which was still available only in small numbers. The 152-mm gun, mounted in a rigid turret, proved to be a serious threat to the German tanks, at least at close range. In open field battle, however, this fighting vehicle had little chance against modern high-velocity tank guns. Another disadvantage was its slow firing speed. Loading took much too long because shells and cartridges were stored separately.<sup>64</sup> For that reason the SU 152, which was mostly deployed in a lurking position, had to hit the target at first shot, if at all. This was a general problem for the Soviet tanks, which did not have such high-precision telescopic sights as the German Zeiss scopes. In all tank duels 'first-shot hit probability' proved decisive, and that was precisely a strength of the German fighting vehicles. Most German tank losses in the first days of the battle of Kursk were due to mines, and thereafter to artillery. Artillery had always been the Russians' favourite weapon, and a recent Russian account rightly argues that, at Kursk, 'the real heroes of the battle were the artillerymen'.<sup>65</sup>

A new feature of the battle of Kursk was that for the first time tanks were attacked by aircraft on a large scale. The most dangerous threat from the sky was a special version of the Stuka, the Ju 87 G, which had two 'Flak 38' 37-mm machine cannon fitted under its wings. Capt. Hans-Ulrich Rudel, the commander of Group 1, Stuka Squadron 2, scored the highest number of kills with this 'flying anti-tank cannon', destroying twelve tanks on the first day of his deployment at Kursk. In the course of the war he destroyed a total of 519 Soviet tanks and became the highest-decorated officer in the German armed forces.<sup>66</sup>

The Luftwaffe attacked enemy tanks not only with Stuka dive-bombers but also with Henschel HS-129 ground-attack aircraft, which were armed with a 30-mm cannon. Their great test came on 8 July, when suddenly, from a forested area north of Belgorod, a reinforced Soviet armoured brigade with infantry support thrust into the gap between II SS Armoured Corps and III Armoured Corps. Before the German army units were even aware of the danger, four anti-tank squadron units, each with 16 HS-129s, took off. The ground-attack aircraft, led by Capt. Bruno Meyer, destroyed 84 Soviet tanks and damaged 21 others. The Soviet flanking attack was repelled from the air without the need for any intervention by ground troops.<sup>67</sup>

For its part, the Soviet air force made massive use of the Ilyushin IL-2 Sturmovik as a ground-attack aircraft. It was the most frequently produced aircraft of the Second World War. For anti-tank combat it was equipped with a 23-mm cannon (sometimes also 37-mm), hollow-charge bombs, and rockets. However, the huge

<sup>64</sup> Kleine and Kühn, *Tiger*, 111                    <sup>65</sup> Shutov and Ramanichev, 'Ognennaya duga', 262.

<sup>66</sup> In the Second World War Rudel flew 2,530 combat missions, during which, among other things, he sank a Soviet battleship and two cruisers. He was wounded five times but continued to fly missions in a specially adapted cockpit even after losing a leg; BA-MA, Study ZA 3/746, 150–5; Griehl, *Junkers Ju 87*, 262 ff.; Rudel, *Mein Kriegstagebuch*, 91–2 and 102 ff.; Bekker, *Angriffshöhe 4000*, 388; Carell, *Verbrannte Erde*, 57–8.

<sup>67</sup> BA-MA, Study ZA 3/746, 155–8; Zins, *Die Operation Zitadelle*, 90; Piekalkiewicz, *Unternehmen Zitadelle*, 158; Bekker, *Angriffshöhe 4000*, 387–9.

amount of ammunition which the aircraft consumed was out of all proportion to its effectiveness, since only a tiny number of German tanks were destroyed from the air.<sup>68</sup>

The impact of the technology factor can be summarized as follows. While from 1941 on the Soviet air force was able to reduce the qualitative advance of German aircraft only slightly, German armour not only succeeded in catching up with the Soviet advance but put itself at the forefront of technological progress. Operation CITADEL came as a technological shock for Soviet armour, showing that the superiority it had enjoyed up till then was now a thing of the past. Kursk indeed marked a turning point in tank technology, but the turnaround was in favour of German armour.

### (b) Tactical Efficiency

According to official figures the Red Army, although victorious, lost 96,500 tanks and assault guns as total write-offs from 1941 to 1945.<sup>69</sup> This figure shows that, for the Soviet leadership, tanks were mass-consumption goods in a battle of material. Manpower as a weapons system played a subordinate role. A completely different philosophy of tank warfare arose on the German side, however, because of the permanent shortage of material. The positional battles of the First World War having resulted in a victory of ‘matter over mind’, Guderian, first and foremost, developed ideas on how to use tanks to switch to a war of movement and outmanoeuvre a materially superior enemy by means of superior tactics. The ‘tank philosophy’ of the two armies consequently differed in several respects:

#### Tank turret

The construction of the tank turret was in itself symbolic of the two different ways of thinking. On Soviet fighting vehicles of 1943 it was primarily an armoured platform for operating the cannon, whereas the Germans saw it as the vehicle’s ‘head’, that is, its control centre. The main difference was the dominant role assigned to the tank commander on the German side. For that reason German battle tanks had a five-man crew, which relieved the commander of all technical tasks, whereas the T-34 had a crew of only four.<sup>70</sup> The importance of this is made even clearer by the fact that the German battle tanks were fitted with three-man turrets, while the T-34 models all had very cramped two-man turrets. In combat situations a Soviet tank commander was quickly overstretched, since he also had to perform the function of gunner.<sup>71</sup> He had, at the same time, to observe, give orders to his own crew, possibly also direct other tanks as convoy or company commander,

<sup>68</sup> Zetterling and Frankson, *Kursk 1943*, 81.

<sup>69</sup> *Grif sekretnosti sniat*, 358 and 366.

<sup>70</sup> The T-34/85, introduced in 1944, was the first Soviet tank with a five-man crew on the German pattern, although on the standard version the fifth man’s function was only to fire the on-board machine guns, whereas on German battle tanks he was primarily a radio operator.

<sup>71</sup> Zamulin (*Prokhorovka*, 380) calls this design feature the T-34’s ‘birth defect’.

and, as if that were not enough, also fire the cannon. At the decisive moment in a duel he was often unable to perform any of his tasks to the full. In the German tank turrets, on the other hand, only the gunner was occupied with the shooting process, while the commander had his head free for his tactical tasks, such as indicating targets to the gunner.<sup>72</sup> That also explains why so many German combat reports criticize the poor shooting performance of the Soviet fighting vehicles. As already pointed out in discussion of the technology factor, the German tanks were able to aim better because of their superior telescopic sights and modern high-velocity cannon. The division of tasks among the tank crew also had a positive effect on ‘first-shot hit probability’, which was decisive in duel situations.

### *Radio*

It is significant that the creator of the German armoured forces, Col.-Gen. Guderian, came from the First World War signals troops. His guiding idea was that a multitude of individual tanks could be formed into a tactical or even operational instrument only if all the vehicles were equipped with radios.<sup>73</sup> On the Soviet side, at that time, only the company commander’s tank had a radio. This meant that the Red Army’s tank operations were carried out rigidly according to plan, because the units were unable to react flexibly, and above all quickly enough, to sudden changes in the situation. The consequences could be disastrous, as can be seen, for example, from the ‘kamikaze attack’ by the Soviet XXIX Armoured Corps at Prokhorovka, which ended in front of its own tank trench. The advantage given to German armour by the possession of on-board radio was largely underestimated. Time and again, massed Soviet tanks were outmanoeuvred and onrushing units lured into prepared fields of fire. The encounters usually began with the German company commander using radio to concentrate his company’s fire on the tank of the Soviet company commander. If the latter was eliminated, the crews of the other tanks often reacted helplessly.<sup>74</sup>

### **Mission-type tactics**

The Soviet formations were commanded rigidly according to detailed-order tactics, whereas the German units operated flexibly with mission-type tactics.<sup>75</sup> The latter method, in which military commanders had considerable freedom of manoeuvre and decision, proved itself in the chaos of Prokhorovka. On 12 July the top leadership on both sides temporarily lost control, and the tank battle broke down into a multitude of individual combats. This very much suited the German tank officers and NCOs, who were trained in autonomous operation.

<sup>72</sup> BA-MA, Study ZA 1/1968, 33 (App. 4).

<sup>74</sup> BA-MA, Study ZA 1/1569, 8.

<sup>73</sup> Frieser, *Blitzkrieg-Legende*, 426.

<sup>75</sup> On this, see Manstein, *Verlorene Siege*, 413–14.

### *Combined arms combat*

As already mentioned, task assignment was organized very differently on the German and Soviet sides. A German division seemed numerically superior, at least on paper. But the Red Army had two components: on the one hand hierarchically ordered formations, on the other, unattached formations such as self-propelled-gun regiments, armoured brigades, and artillery divisions. These components were used in mixed deployment, which enabled the Soviet operations staffs to assemble huge masses, especially of artillery. This system proved effective in breakthrough operations prepared well in advance. But as soon as a battle deviated from the scenario and went into free combat, the Red Army was subject to serious friction. The errors in the deployment of 5th Guards Tank on 12 July were so striking that even official Soviet historiography criticized 'the insufficient coordination of action by the infantry and tanks with that of the artillery and air force units'.<sup>76</sup> In contrast, a German division had all the classes of weapons needed for combined arms combat already integrated in organic units. In comparison with the problems of the Red Army, the coordination was almost perfect. This was due not least to the fact that the officers of the various units knew each other personally and were used to working together.

### **Training and group cohesion**

During the Stalin era the Soviet leadership clearly attributed only secondary importance to the value of the human individual and relied instead on the power of mass. Accordingly, it sent most of its soldiers into battle after only a short period of preparation. Casualties were of little concern as long as the objective was achieved. Soviet personnel deployment practice met with astonishment on the German side, since the level of training of many Soviet troops was frighteningly low. Up to the end of 1942 Soviet tank drivers were often given no more than five to ten hours of driving practice, although the necessary minimum was estimated at 25 hours.<sup>77</sup> One of the Soviet Union's greatest achievements during the war was the astonishingly high mass-production of tanks. The negative side, however, was that tanks were produced faster than tank troops and officers could be trained. This repeatedly resulted in ineffective operations with irresponsibly high losses.

The Wehrmacht placed much greater value on the quality of training, in order to compensate for its quantitative inferiority.<sup>78</sup> Considerable attention was paid to the primary group effect. Training was carried out in a team, with the aim of welding it into a close-knit community.<sup>79</sup> In contrast to the Red Army, casualties were not immediately replaced by new soldiers. Units were often left in the front line until they were completely decimated. Only when their combat value fell below a

<sup>76</sup> Posnjak, *Die Schlacht bei Kursk*, 276.

<sup>77</sup> Melnikov, *Marshal Rybalko*, 50–1, quoted in Sokolov, 'The Battle for Kursk', 85.

<sup>78</sup> BA-MA, Study ZA 1/1968, 33–4 (App. 4).

<sup>79</sup> On this, see Fritz, 'We are trying', 683 ff.

minimum level were they withdrawn jointly and reformed with new arrivals. After the necessary cohesion had been achieved through group training, the unit was redeployed. Although this principle could no longer be applied in the late stage of the war, it shows the different attitude of the two armies to the ‘quality through training’ factor, which was decisive, above all, in the case of elite formations such as tank units.

To sum up, the battle of Kursk did not mark a decisive change in the tactical levels of the two armies either, nor did it bring them to the same level. The Red Army had learnt much from the Wehrmacht since the beginning of the war, but in 1941 it had still deployed its huge masses of armour just as erroneously as had the western powers a year before, when their tanks had been outmanoeuvred by the cohesive German armoured formations. The western campaign might as well have taken place on another planet, since the Red Army leadership proved to be so convinced of the superiority of its own armour that it believed it could ignore that outcome. The shock was all the greater in 1941, when, according to official figures, it lost 20,500 tanks in the space of a few months.<sup>80</sup> Since then Soviet tank tactics had undergone some improvements, as shown above all in the battle of Stalingrad. But the resulting euphoria was immediately followed by disillusionment. When the masses of Soviet armour stormed headlong further west, they were caught off guard by Manstein’s tank units. Whole armies fell into the trap. In the end, Soviet losses were considerably higher than those of the Germans at Stalingrad. This resulted in a thorough reform of Soviet armour, involving the formation of five tank armies on the German pattern, supplemented by a large number of unattached armoured and motorized corps, armoured brigades, and armoured regiments.

Strangely enough, the Red Army leadership could not bring itself to create armoured divisions. Instead it skipped over the divisional level of command. Yet it was precisely the armoured division, as the lowest level of command in combined arms combat, that was the real recipe for the tactical success of German armour. The fact was that command of an armoured division required a maximum of flexibility and autonomy. For that reason, it would seem, the Stavka was afraid to risk the experiment. The Soviet armoured corps were constituted far less homogeneously than a German armoured division. Units from the various arms of the service fought alongside each other rather than together. Above all, they lacked a decisive component: armoured infantry. Since the western powers were supplying hundreds of thousands of trucks, the Soviets used them also to transport infantry, but they built no infantry fighting vehicles, as the Germans did so successfully. As a result, infantry was often lacking in an attack during the decisive stage of a breakthrough, because it was held back by enemy artillery fire. The Soviet tanks frequently attacked without infantry support, in the anachronistic manner of a cavalry charge, which led to untold losses at Prokhorovka. In contrast, German armoured infantry was able to accompany such thrusts quickly enough to provide protection for the battle tanks.

<sup>80</sup> *Grif sekretnosti sniat*, 357.

Kursk did not mark a decisive break in the relative tactical efficiency of the two armies. German officers remained superior until the end of the war at the middle and lower levels of command that were so important in armoured combat. That ‘skill superiority’<sup>81</sup> enabled them to compensate for the enemy’s numerical superiority time and again. Even in recent Russian literature the battle of Kursk is not necessarily described as a triumph of the Soviet art of war. The revised edition of *History of the Great Patriotic War*, for example, soberly concludes that, ‘despite the experience of two years of war, the Soviet commanders, staffs, and troops had not yet mastered the necessary military tool’.<sup>82</sup>

It was not until a year later, in the summer offensive of 1944, that the Soviet reforms brought about an improvement in combat tactics. But that qualitative progress came too late to influence the outcome of the war, which was long since decided. During the battle of Kursk the Red Army was still at a relatively modest tactical level, as reflected not least by the horrendous loss statistics.

#### 4. STRATEGIC BALANCE-SHEET: CITADEL—ONLY A VIRTUAL TURNING POINT

In the judgement of one British historian, ‘Soviet success at Kursk, with so much at stake, was the most important single victory of the war. It ranks with the great set-piece battles of the past—Sedan in 1870, and Borodino, Leipzig and Waterloo from the Age of Napoleon. It was the point at which the initiative passed to the Soviet side’.<sup>83</sup> So it was not only Soviet historiography which attributed overriding importance to this battle. In the west too, it became almost standard practice to refer to Kursk as the ‘decisive battle’ or ‘turning point of the war’.<sup>84</sup> The account of the battle was highly dramatized, as if in the summer of 1943 the further course of the war was still balanced on a knife edge.<sup>85</sup> Supposedly, Hitler, faced with the threat of a war on two fronts, acted like a gambler going for broke and threw the last reserves into the balance in an attempt to turn the tide of the war at Kursk. But was Operation CITADEL really the fateful battle that decided the outcome of the war?

Recent historical research attributes decidedly modest importance to this battle. Operation CITADEL is seen as a ‘makeshift operation lacking any strategic objective’.<sup>86</sup> The German summer offensive of 1941 (Operation BARBAROSSA) was a campaign, just like the summer offensive of 1942 (Operation BLUE), which is described as Hitler’s ‘second campaign’.<sup>87</sup> Operation CITADEL in the summer of 1943, on

<sup>81</sup> Zetterling and Frankson, *Kursk 1943*, 136.

<sup>82</sup> Shutov and Ramanichev, ‘Ognennaya duga’, 284.

<sup>83</sup> Overy, *Why the Allies Won*, 96.

<sup>84</sup> See, e.g., the title of Solovev’s monograph *Wendepunkt des Zweiten Weltkrieges. Die Schlacht bei Kursk* [Turning point of the Second World War. The battle of Kursk]. Khrushchev too wrote in his memoirs that the battle of Kursk was the ‘turning point’ of the Great Patriotic War; see *Khrushchev Remembers*, 223.

<sup>85</sup> Zimmern, ‘Unternehmen Zitadelle’, 39. On this, see Alfred Zins’ analysis of the battle of Kursk and its portrayal in literature in Zins, *Die Operation Zitadelle*, 145.

<sup>86</sup> Schreiber, *Der Zweite Weltkrieg*, 102.

<sup>87</sup> See *Germany and the Second World War*, vi. 843 ff.

the other hand, was only a limited offensive operation that was part of a strategic defence. As already pointed out, in 1943 Hitler was not seeking a ‘knock-out blow’,<sup>88</sup> but wanted only to make ‘small forays’.<sup>89</sup> Moreover, the balance of military strength had shifted in the meantime to such an extent that the Wehrmacht no longer had any chance of winning the war with the Soviet Union in one decisive operation—at a single blow, as it were. With Operation CITADEL, Hitler and the OKH generals were in fact pursuing only two limited operational objectives:

- The first was to straighten the front. By cutting off the protruding Kursk salient, a more favourable defensive line would be achieved, enabling troops to be withdrawn from the eastern front for the anticipated two-front war with the western powers.
- The second was to weaken the Soviet forces concentrated in the Kursk area before they could launch an avalanche-like summer offensive in a concerted action with the western powers.

In the present state of research, it seems aberrant to consider the battle of Kursk as the decisive battle of the Second World War, since at that point in time the outcome of the war was long decided. Germany was as little able to endure a long conflict with the western maritime powers, with their inexhaustible raw-material reserves, as it had been in the First World War, especially when the US superpower stood behind the worldwide British Empire. If there was a decisive battle at all, it was the winter battle before Moscow at the end of 1941, which saw the failure of Germany’s ‘blitzkrieg’ strategy, that is, the attempt to defeat the huge Soviet Union by military-operational means.<sup>90</sup> However, Germany could not possibly win a strategic war of erosion, given the enormous resources of the Soviet Union and its powerful allies in the west. This is clear from a simple example: during the war the German armament industry produced a total of only 25,000 battle tanks, compared with an Allied output of well over 200,000.<sup>91</sup> Faced with such numerical superiority, better tanks and superior command skills were of no avail. The Second World War, like the first, was decided not on the battlefields but in the factories. Even if Operation CITADEL had gone according to plan and the two flanks of the pincer attack had joined up at Kursk, it would have been only a temporary operational success, which would soon have proved meaningless in view of the war on two fronts that was then beginning.

The failure of the German attack on Kursk was only a virtual turning point in the war between Germany and the Soviet Union. It was a delayed manifestation on the

<sup>89</sup> Situation conference at Army Group South HQ in Zaporozhye on 18 Feb. 1943, quoted in Schwarz, *Die Stabilisierung im Süden der Ostfront*, 255.

<sup>90</sup> See Reinhardt, *Die Wende vor Moskau*.

<sup>91</sup> Foss, *An Illustrated Guide*, 7; see also Chamberlain and Doyle, *Encyclopedia of German Tanks*, 261. According to these sources, Germany produced 24,242 battle tanks from January 1939 to the end of the war. While the comparative statistics refer only to battle tanks, not assault guns and tank destroyers, the Allies were clearly superior in the latter sector too.

battlefield of what had long been the reality, that is, the fact that Germany had lost the production battle. More than a fight between troops, the battle of Kursk was a clash between the competing outputs of armament factories, in which British and American deliveries played an ever-increasing part. Nor was Kursk the Wehrmacht's last 'strategic' offensive, as so often claimed, because no offensive with a decisive strategic objective was planned. As the chief of the Naval War Staff stated without illusions in May 1943, experience in 1941 and 1942 had shown that belief in the defeat of Russia was 'utopian'.<sup>92</sup> Significantly, Hitler saw Operation CITADEL as no more than a 'limited offensive'<sup>93</sup> of an operational nature. The claim that it was the last major German offensive at operational level is not true either. In August 1944, for example, the armoured Operation DOPPELKOPF re-established the connection with Army Group North, which had been cut off on the Baltic coast. The last German offensive operation was conducted as late as February/March 1945 by Sixth Armoured Army in Hungary. As already discussed in detail, Kursk was not a turning point in favour of the Red Army in the technological or tactical area either. Instead, it became clear that German armour had meanwhile established itself qualitatively at the peak of technological development. Furthermore, at Kursk the Red Army did not achieve a victory of annihilation; it suffered many times more losses than the German attacking forces. Those losses were so serious that they took the force out of the planned summer offensive. Thus, from the viewpoint of German defensive strategy this was no 'catastrophe' but a partial operational success with at least temporary effect.

What, then, was the real importance of this battle? The answer lies mainly in the realm of psychology. The failure of the German offensive had a symbolic impact that is hard to overestimate. For the first time the Red Army had succeeded in repelling a German summer offensive, and had done so despite the fact that the German forces had deployed tanks to which miracles were attributed. The Wehrmacht's aura of invincibility had been finally dispelled. This time, in contrast to the battles of Moscow and Stalingrad, the Germans could not put the blame on 'General Winter'. Although, objectively, German defeat had long been sealed, the infantryman in the front line was now subjectively aware that the war could no longer be won. Kursk can therefore be seen as a virtual turning point with regard to the awareness of defeat. The failure of Operation CITADEL was the writing on the wall for the impending collapse of the eastern front. In another respect, however, July 1943 was a real turning point. The western powers' landing in Sicily conjured up the old German nightmare of a war on two fronts.

## IV. The Soviet Counter-Offensives

According to the German understanding, Operation CITADEL, broken off on 16 July 1943, is synonymous with ‘the battle of Kursk’. In Soviet historiography, however, that battle has wider chronological and geographical dimensions. Three phases are distinguished:

- The ‘Kursk Strategic Defensive Operation’ coincides approximately with the German Operation CITADEL, which began on 5 July.<sup>1</sup> It ended for Central Front on 11 July and for Voronezh Front and Steppe Front on 23 July.
- The Orel counter-offensive (Operation KUTUZOV) was launched on the section of the front to the north of Kursk on 12 July, that is, while Operation CITADEL was still under way. It was directed against the southern wing of Army Group Centre (Ninth Army and Second Armoured Army) and lasted until 18 August. The army groups involved were Central Front, Bryansk Front, and large parts of West Front.
- At the height of Operation KUTUZOV the Red Army launched a further offensive, Operation RUMYANTSEV, to the south of Kursk at Kharkov and Belgorod. It lasted from 3 to 23 August. Voronezh Front and Steppe Front were deployed against the northern wing of Army Group South (Fourth Armoured Army and Army Detachment Kempf).

These three operations were interlocked and partly conducted in parallel, so that the Wehrmacht had constantly to move its few armoured divisions back and forth like a fire brigade. The Red Army’s troop masses exceeded any concentration of forces ever assembled on a battlefield in the history of war. In addition to the units and aircraft squadrons of the three Soviet army fronts fighting in the Kursk salient during the defensive phase, a further 1,008,100 men, 25,500 cannon and grenade launchers, 3,200 tanks and assault guns, and 3,950 aircraft were deployed.<sup>2</sup>

According to the Russian accounts, three army fronts totalling 74 divisions took part in the Stalingrad counter-offensive, whereas at the start of the Kursk counter-offensives five army fronts totalling 132 divisions were deployed. At Stalingrad 720,000 combat troops, 14,000 cannon and grenade launchers, and 1,510 tanks were available for the counter-attack, while the numbers at Kursk were 2,226,000

<sup>1</sup> Operation CITADEL ended for Ninth Army on 13 July, whereas the attacking units of Army Group South were finally halted by Hitler on the evening of 16 July.

<sup>2</sup> *Velikaya Otechestvennaya Vojna 1941–1945*, ii, document attachments, 449.

men (of whom 1,583,000 combat troops), 35,200 cannon and grenade launchers, and over 4,800 tanks and self-propelled guns. In the course of the two Kursk counter-offensives, several additional armies were brought up as second-line forces and reserves. A total of 1,350 aircraft were available for the counter-attack at Stalingrad, while at Kursk almost 5,000 (including long-range aircraft) stood ready.<sup>3</sup>

By then the Red Army had achieved such quantitative superiority that it was able to launch offensives on other sectors of the front at the same time. Soon almost the whole eastern front was in flames, and the Germans were forced to withdraw strong armoured forces from the Kursk area:

- On 17 July, as already mentioned, South Front and South-West Front launched an offensive against the right wing of Army Group South on the Mius and the Donets.
- On 22 July Army Group North was attacked by Leningrad Front and Volkov Front.
- On 7 August Kalinin Front and West Front began an offensive against Army Group Centre, mainly directed against Fourth Army.
- At this time, moreover, the large-scale partisan ‘railway war’ operation was under way in the rear of the German front and tied down further large numbers of German forces.

## 1. THE OREL COUNTER-OFFENSIVE (OPERATION KUTUZOV), 12 JULY TO 18 AUGUST 1943

During Operation CITADEL the Soviet formations were far superior in quantitative terms. Yet, paradoxically, the balance of forces was nowhere else anything like as favourable for the German side as it was at Kursk. It was there that the Wehrmacht had concentrated all its available strong units. The other front sectors had been largely emptied of tanks, which had negative consequences for Army Group Centre. Immediately to the north of the Kursk salient lay the Orel bulge, where Second Armoured Army was deployed as the left-hand neighbour of Model’s Ninth Army. The section concerned was contemptuously referred to as ‘Recruiting District Headquarters 2’ (in line with the army’s numerical designation), since the area had been almost as quiet as in peacetime for an unusually long period.<sup>4</sup> The designation ‘Second Armoured Army’ had also become farcical, as (apart from units subsequently placed under its command) the army in question no longer possessed a single tank. It was attacked by one-and-a-half Soviet army fronts consisting of five (later six<sup>5</sup>) general armies, two armoured armies, five armoured corps, and numerous unattached units.

<sup>3</sup> Koltunov, ‘Kurskaya bitva v tsifrakh’, 77–8 and 80–3.

<sup>4</sup> Görlitz, *Model. Der Feldmarschall*, 151.

<sup>5</sup> The Soviet 11th Army was not brought into the battle until later and is not included in this count.

From the very beginning of the battle of Kursk on 5 July, Second Armoured Army was in a position of clear inferiority. Taking its section of the front in isolation, the balance of forces, including the Soviet reserves close to the front, was as follows:<sup>6</sup> the daily strength of Second Armoured Army's front-line units was approximately 107,000 men, while Bryansk Front and the left wing of West Front had 561,111 combat troops available. On the enemy's side, 3,262 tanks and assault guns were concentrated (including 3rd Guards Armoured Army and 4th Armoured Army), whereas Second Armoured Army, even including the 5th and 8th Armoured Divisions placed under its command, had only 234 tanks and self-propelled guns. The estimated total of all large-calibre barrelled weapons and rocket launchers was 2,050, compared with 16,001 on the Soviet side. While Bryansk Front and West Front could each deploy its own air fleet with a total of 2,317 aircraft, not a single aircraft was assigned specifically to Second Armoured Army. All the units of Air Fleet 6, which was under the command of Army Group Centre, were initially tied down by Operation CITADEL.

The first phase of Operation KUTUZOV began on 12 July with an offensive by Bryansk Front and the left wing of West Front.<sup>7</sup> The extreme fire superiority of the Soviet attacking forces is clear from the following example. In the main directions of thrust, the artillery density was more than 200 guns and grenade launchers per kilometre of front. In the breakthrough section of VIII Guards Rifle Corps, it was as high as 260 guns and grenade launchers per kilometre.<sup>8</sup> Against that, the artillery of the German LIII Army Corps could deploy only 1.7 barrelled weapons per kilometre of front.<sup>9</sup> While the 11th Guards Army assault group massed 59,777 men and 615 tanks and assault guns on a section 16 kilometres wide, that force was opposed by only two German infantry regiments, behind which was a tactical reserve (brought up later) consisting of one combat group of 5th Armoured Division with 40 tanks.<sup>10</sup>

Although a few additional German divisions were transferred to the sector of Second Armoured Army in the further course of Operation KUTUZOV, there was a fundamental difference. The reinforcements on the Soviet side were real reserves brought in from the depths of Russia, while on the German side they were mostly units already involved in the battle at other locations on the front. Each withdrawal of such a unit meant tearing a hole at one place on the front in order to fill a gap elsewhere. Most of the German units brought in as reinforcements came from the neighbouring Ninth Army, which, as a result, was no longer in a position to continue its attack on Kursk.

<sup>6</sup> See the detailed comparison of forces in the Kursk–Orel area in Chapter I.2 above.

<sup>7</sup> Taking into account only the Soviet forces deployed against Second Armoured Army in the initial phase on 12 July (excluding, for example, the two tank armies and 11th army), we still arrive at a figure of 645,074 men (of whom 487,111 combat troops), 1,401 tanks and assault guns, as well as 15,019 barrelled weapons and launchers; see Koltunov, 'Kurskaya bitva v tsifrakh', 80.

10 July 1943	Air Fleet 6	Total strength	962	866	610

The second phase of Operation KUTUZOV began on 15 July, when Rokossovsky's Central Front went over to the attack against Model's Ninth Army in the southern section of the Orel bulge. There were now two-and-a-half Soviet army fronts fighting against two German armies at Orel. The total forces deployed on the Soviet side were as follows: 1,286,049 men, of whom 927,494 in combat units, 26,379 barrelled weapons and launchers, and 2,409 operational tanks and assault guns.<sup>11</sup> Air support was provided by 3,023 aircraft (excluding long-range aircraft).<sup>12</sup> On the other side, the two German armies had around 307,000 front-line troops (daily strength).<sup>13</sup> Including army group reserves, they had 464 battle tanks<sup>14</sup> and 161 assault guns and

<sup>11</sup> Koltunov, 'Kurskaya bitva v tsifrakh', 81.

<sup>12</sup> Ibid. 82–3.

<sup>13</sup> Ninth Army originally had a daily strength of approx. 222,000 men. Up to 13 July it had suffered total personnel losses of 23,345 men, leaving it with around 200,000. The daily strength of Second Armoured Army was around 107,000 men.

<sup>14</sup> 'Panzerlage, Stand 10.7.' (drawn up on 21 July 1943), fos. 126–8, BA-MA RH 10/61. Panzer IIs and command vehicles are not included.

self-propelled cannon at the ready.<sup>15</sup> The number of barrelled weapons and launchers (including anti-tank and anti-aircraft cannon) was around 5,500. After reinforcement by several units previously deployed in the sector of Army Group South, Air Fleet 6 could muster a total of 610 operational aircraft (see Table II.IV.1. ‘Breakdown of Air Fleet 6 at 10 July 1943’).<sup>16</sup> Those aircraft, however, were not only concentrated in the Orel bulge, in the sector of Ninth Army and Second Armoured Army. They had also to intervene in support of Second and Fourth Armies and Third Armoured Army, which meant that they had to cover the whole of Army Group Centre’s huge section of the front from Kursk to Moscow. What made the Soviet attacking forces seem so overpowering was their reserves. In addition to the armies already deployed during the first phase, the Stavka threw the following troops into the battle: 3rd Guards Armoured Army, 4th Armoured Army, five unattached armoured corps, one mechanized corps, and one cavalry corps. 11th Army HQ and a total of eleven additional rifle divisions were also deployed.<sup>17</sup>

The course of the operation was as follows: after preliminary attacks on the previous day, the offensive by Bryansk Front (under Col.-Gen. Markian Mikhailovich Popov) and large parts of West Front (under Col.-Gen. Vasily Danilovich Sokolovsky) against Second Armoured Army began on 12 July. This marked, at the same time, the start of the Red Army’s summer offensive, which the OKH had long been expecting. The advancing wall of artillery fire surpassed all that the German troops had experienced on the eastern front till then. The foremost positions were literally ploughed over. The German defence system was exceptionally deeply staggered, however, and the Soviet attacking forces had clearly underestimated it. After they had broken through the weakly occupied first line, most of their thrusts cost them considerable losses.<sup>18</sup> Nevertheless, by the end of the first day they had already made several deep breaches in the German lines. Since there were no reserves available on the German side, it seemed that the front would collapse in a matter of days.

On 13 July, however, Army Group Centre transferred command of Second Armoured Army to Col.-Gen. Model, the commander-in-chief of Ninth Army, thus putting him personally in command of both armies so as to centralize the direction of operations in the Orel bulge. Events soon proved how right it was to do so. On the second day of the Soviet offensive the critical situation of Second Armoured Army deteriorated ‘with the speed of an avalanche’.<sup>19</sup> There was not only the threat of a frontal operational breakthrough from the east in the direction of Orel, but the much more dangerous threat of a collapse in the northern part of the bulge at Ulyanovo. If that happened, the Soviet attacking units could thrust into the rear of Ninth Army and cut off its retreat to the west. Model, who had

earned the nickname ‘the Lion of Defence’ in the previous winter battles, now faced a great test. Acting decisively, he moved almost all Ninth Army’s armoured units into the threatened section of Second Armoured Army.<sup>20</sup> Once again, the situation was stabilized temporarily. As a result, however, Ninth Army had no option but to withdraw from the ground gained during Operation CITADEL. The Soviet Central Front at first pursued it hesitantly, but on 15 July it too moved onto the attack, with powerful air support. On 18 July the German units were back at their starting position of 5 July.

Meanwhile a bitter battle was raging on a 400-kilometre stretch of front, with the Red Army sending in huge masses of armour with no regard for losses.<sup>21</sup> Nevertheless, as the Soviet tank expert Rotmistrov critically remarked, despite all their superiority the three tank armies deployed in Operation KUTUZOV failed to achieve a single successful operational breakthrough.<sup>22</sup> Yet the attacks were repeated time and again by the same method at the same place. In the battle for Bolkhov, 4th Armoured Army, newly brought in on 26 July, lost 84 per cent of its T-34s and 46 per cent of its light tanks in the first few days.<sup>23</sup> Within two weeks, 3rd Guards Armoured Army, which was also brought in at a later stage, lost half of its 800 tanks.<sup>24</sup> Central Front’s Second Armoured Army was particularly hard hit. It had received full replacements after losing half of its tanks during the defensive phase,<sup>25</sup> but by 30 July it had again lost 60 per cent of them.<sup>26</sup>

Despite noteworthy individual tactical successes, the German defenders could only slow the Soviet steamroller, not stop it. For that reason it was dangerous to defend a given position too doggedly rather than withdraw in depth to a prepared defensive line. Hitler showed a strong dislike for such evasive manoeuvres, but a new chapter of the war was now beginning, that of incessant retreats up to the borders of the Reich. The pendulum swung the other way. At the same time a dispute began in the top operations staffs that ultimately led to permanent conflict. Hitler’s irrational stubborn refusal to retreat repeatedly brought his generals to despair. The aim of the first major evasive operation was to withdraw from the Orel bulge and fall back on the Hagen Line. Aware of Hitler’s obstinacy, Model took matters into his own hands and began to evacuate the foremost positions. The Führer was presented with a fait accompli and had no option but to approve the withdrawal retroactively. Model, however, paid dearly for his audacity. As we shall see, the ambitious general was temporarily put on ice.

<sup>20</sup> Fourth Army, which was deployed further to the north and itself came under attack soon afterwards, sent a few additional reinforcements, mainly 253rd Infantry Division. Armoured Infantry Division ‘Grossdeutschland’, taken from Army Group South, also intervened briefly but had to be ordered back because of the new Soviet offensive at Kharkov. Apart from 5th and 8th Armoured Divisions, which are included in the present comparison of strength, Army Group Centre had scarcely any reserves available.

<sup>21</sup> For an excellent account of the fighting, see John, *Kursk*, 94 ff. The author combines his personal perspective as an officer of 12th Armoured Division with an overall description of the battle.

<sup>26</sup> Shutov and Ramanichev, ‘Ognennaya duga’, 277.

Here we must take issue with the cliché of Model as a ‘Nazi general’ who carried out Hitler’s orders unquestioningly. The Israeli military historian Marcel Stein, author of the most recent biography of Model, paints a differentiated picture:

No other senior military leader contradicted Hitler so often and so clearly as Model [...] Model repeatedly refused to carry out orders which seemed senseless to him, or presented Hitler with a *fait accompli*, explaining that he had indeed acted on his own authority but in line with the Führer’s intentions. One of many examples is his withdrawal to the Hagen Line after the failure of Citadel, which enabled him to save both his endangered armies.<sup>27</sup>

Col.-Gen. Model’s forced evacuation of the Orel bulge, which extended far to the east, took place from 1 to 16 August. It was a four-stage withdrawal over a distance of 100 kilometres, which ended only with taking up position on the Hagen Line, deep in the hinterland.<sup>28</sup> Hitler was pained above all by the loss of the town of Orel, which was evacuated on 5 August.

This evasive manoeuvre against an enemy pushing forward strongly was a complicated operation, because the infrastructure of the area was to be destroyed at the same time, which meant blowing up bridges, railway stations, and so on. The situation was aggravated by two circumstances in particular. The first was that on 7 August the Red Army also launched an offensive against Fourth Army, the neighbouring army to the north. Fourth Army was critically weak at this time, since it had been obliged to give up seven divisions in the last few weeks and now had to cover a 300-kilometre stretch of front with only 14 divisions.<sup>29</sup> It was attacked by the massed forces of Kalinin Front and West Front, comprising 1,253,000 men supported by 1,436 tanks and self-propelled cannon, 20,640 guns and grenade launchers, and 1,100 aircraft.<sup>30</sup> Although the Soviet offensive, after an initial success, stalled on the southern wing at Spas-Demensk,<sup>31</sup> it had an operational side effect. Fourth Army was unable to come to the help of Model’s units; on the contrary, Ninth Army had to send further units to its assistance. The second aggravating factor was an order from the OKH to release Second Armoured Army HQ and several of its units, as from 12 August, for redeployment in the Balkans. This meant that Ninth Army, in addition, had to take over command in what had been Second Armoured Army’s combat zone. The situation became increasingly critical in the face of the onslaught by enemy forces that were continuously reinforced during the operation.

<sup>27</sup> Stein, *Generalfeldmarschall Walter Model*, 2.

<sup>31</sup> Glantz and House, *When Titans Clashed*, 170–1.

A further problem was the ‘second front’ against the partisans in the hinterland. Not only were they tying down almost all the German reinforcements, but further troops needed to be withdrawn from the front to fight them. In the Orel area, partisans blew up railway tracks in almost 7,500 places from 22 July to 1 August.<sup>32</sup> But that was only the beginning. In the early hours of 3 August the Soviet partisans launched Operation ‘Rail War’ throughout the hinterland of Army Group Centre and part of the hinterland of Army Group North, all the way from the front to the western border of the Soviet Union. According to Soviet sources, around 100,000 partisans took part in these centrally coordinated diversionary actions. An entry in the OKW war diary dated 4 August reads: ‘Rail traffic in the east was severely endangered by a sudden outbreak of track explosions (75 large strikes with around 1,800 explosions in the area of Army Group Centre on 3 August). Rail communications in the area of Army Group Centre had to be halted for 48 hours from 4 August.’<sup>33</sup> According to Russian accounts, there were more than 42,000 track explosions in a single night. In the course of this partisan operation the number reached 171,000 by 31 August and 214,705 by 15 September.<sup>34</sup> And the interruption of rail traffic was only one of a range of partisan activities.

Despite all the difficulties, the withdrawal to the Hagen Line was completed by 16 August as planned. All Soviet attempts to push further westward failed at that defence line and involved high losses, so that the Stavka finally broke off Operation KUTUZOV. The new German defence line was a straightening of the Orel bulge, which had protruded far to the east, and thus reduced the length of the front considerably. As a result, apart from Second Armoured Army HQ, a total of 19 divisions (five armoured, five armoured infantry, and eleven infantry divisions) and numerous independent units were freed for deployment on other front sectors. The Luftwaffe played an important part in the defensive withdrawal operation in the Orel bulge, during which 1st Air Division flew a total of 37,421 missions (from 5 July).<sup>35</sup>

The Soviet counter-offensive (Operation KUTUZOV) lasted from 12 July to 18 August. It is largely identical with what the Germans called ‘the battle in the Orel bulge’, in which Ninth Army and Second Armoured Army took part. The two German armies incurred a total of 86,064 casualties (14,215 dead, 60,549 wounded, and 11,300 missing).<sup>36</sup> On the Soviet side, according to official sources, the casualties numbered 429,890 (112,529 dead or missing, 317,361 wounded).<sup>37</sup> Those figures, however, must be taken with a high degree of scepticism. One Russian historian estimates Soviet personnel losses at around 860,000, almost twice as many.<sup>38</sup> That would give a proportion of 1 to 10 and would confirm German combat reports, which assumed similarly high losses by the Red Army. The Soviet

<sup>32</sup> *Geschichte des zweiten Weltkrieges 1939–1945*, vii. 201.

<sup>33</sup> *KTB OKW*, iii/2, 891 (4 Aug. 1943).

<sup>35</sup> ‘Gefechtsbericht über die Schlacht im Orelbogen’, 11, BA-MA RH 20-9/155.

<sup>36</sup> Based on the 10-day reports of 10 July to 20 Aug. 1943 (see the statistics of the OKW medical officer in BA-MA RW 6/v. 558). In the case of Ninth Army, the calculation was made as from 13 July (see BA-MA RW 9/564), since casualties before that date were attributed to Operation CITADEL.

<sup>37</sup> *Grif sekretnosti sniat*, 189.

<sup>38</sup> Sokolov, ‘The Battle for Kursk’, 82.

units also lost 2,586 tanks and assault guns (total write-offs).<sup>39</sup> German tank losses, according to the fragmentary surviving documents, were a fraction of that amount. Total write-offs by Army Group Centre from 5 July to the beginning of August, including Operation CITADEL, were only 343 battle tanks, tank destroyers, and assault guns.<sup>40</sup> The number of losses fell in August, when the breakthrough battles of the previous month gave way to planned withdrawal (1 to 16 August). According to Russian sources, the Soviet forces lost 892 artillery guns and grenade launchers,<sup>41</sup> but no comparable record of losses exists on the German side. The official Soviet figure of 1,014 for aircraft losses<sup>42</sup> is called into doubt in recent Russian literature and is estimated at approximately 2,000,<sup>43</sup> which ought to be nearer the truth. According to the relatively reliable German calculations, Air Fleet 6 shot down a total of 1,705 Soviet planes from 12 July to 18 August,<sup>44</sup> but that figure includes neither aircraft shot down by army units nor losses by the Soviet air force over its own territory due to accidents or technical defects. In the same period (12 July to 18 August) Air Fleet 6, deployed over the whole front sector of Army Group Centre, lost a total of 218 planes.<sup>45</sup>

Despite massive deployment at the cost of great losses, the Red Army failed to achieve a decisive breakthrough at any point. It managed only to force the enemy back, slowly and laboriously. Model let the Soviet troops advance time and again, and gave the order to pull back just at the right moment. When the Soviet forces let loose dense artillery fire in preparation for a breakthrough, using up large amounts of ammunition, the shells fell on trench systems that had already been evacuated, and the attackers, pushing forward, unexpectedly ran up against deeply staggered German defensive lines. The German tanks played a decisive part in these encounters, but were finally overcome by the ‘sheer weight of Soviet armour’<sup>46</sup> and forced to abandon the battlefield.

Given that the task of Soviet historiography was to glorify the Red Army, it is noteworthy that Operation KUTUZOV was described in such a critical tone. The massive deployment and horrendous losses were out of all proportion to the laborious success. The memoir literature also contains noticeably critical remarks by former military leaders. The criticism is mainly directed at the plan of operations, which, instead of a battle of encirclement and annihilation (in Schlieffen’s meaning of the term), envisaged an advance on a broad front. Marshal Rokossovsky, then

<sup>39</sup> *Grif sekretnosti sniat*, 278.

<sup>44</sup> Daily reports by the Second Army flight liaison officer, 1 July to 30 Sept. 1943, BA-MA RH 20-2/1337; edited by Ulf Balke in the light of further documents from his private archive. The figure of 1,705 aircraft shot down is by no means too high, as is proved by other file documents; see, e.g., ‘Gefechtsbericht über die Schlacht im Orelbogen’, 11, BA-MA RH 20-9/155, according to which 1st Air Division made 1,733 kills, of which 1,671 were attributed to fighters, while losing only 64 of its own planes. In addition, 12th Anti-Aircraft Division shot down 383 planes.

<sup>45</sup> Gen.Qu.Mstr., ‘6. Abt: Flugzeugunfälle und Verluste bei den fliegenden Verbänden (3.7.–2.8. sowie 3.8.–2.9.1943)’, BA-MA RL 2 III/191-193, calculated by Ulf Balke in the light of further documents from his private archive.

<sup>46</sup> Glantz and House, *The Battle of Kursk*, 237 and 273.

commander-in-chief of Central Front, observed that ‘instead of surrounding and destroying the enemy we were, in effect, pushing and jostling him out of the Orel salient. It could have been quite a different story had we begun the operation a little later, concentrating our forces in two powerful pincer movements closing at Bryansk’.<sup>47</sup> After the war Marshal Zhukov also criticized the fact that the Soviet units had ‘clashed with the enemy’s main concentration of forces on a broad front’ in ‘a frontal attempt to break through the enemy’s deeply staggered defences’.<sup>48</sup> But Stalin did not want another Stalingrad, where the Red Army had suffered considerably more losses than the Wehrmacht in a battle of encirclement that had tied down large forces for a long time. Instead, he declared that ‘our task is to drive the Germans from our territory as quickly as possible. We shall encircle them when they are weaker’.<sup>49</sup>

Stalin was not entirely wrong. Another year went by before the Red Army, in the 1944 summer offensive, to some extent mastered the operational deployment of armoured armies in deep thrusts and concentric encirclement manoeuvres. At all events, Operation KUTUZOV showed that the Soviet operations staffs were then still far from having done so. A Stavka directive of 13 August 1943 to the commander-in-chief of Central Front reads:

According to the information possessed by the General Staff, on 10 August the 110-strong tank group of 3rd Guards Armoured Army lost 100 tanks in the fight for Hill 264.6, which means that it was in fact annihilated by the enemy. This extraordinary incident occurred under the conditions of a general enemy retreat [...] The loss of such a large number of tanks in the space of a few hours shows not only the total lack of coordination between 3rd Guards Armoured Army and 13th Army, but also the inaction of the commanders-in-chief of those armies, who left the tanks to their fate without any support.<sup>50</sup>

In the view of present-day Russian military historians, operational encirclement of the numerically inferior German forces should at least have been attempted.<sup>51</sup> Instead of which, Stalin and some of the generals preferred the risk-free Soviet steamroller tactics, whereby an enemy was to be forced back, rather than beaten. In the course of the war this stupid but ‘dead certain’ method cost millions of Red Army troops their lives.

## 2. THE BELGOROD–KHARKOV OFFENSIVE OF 3 TO 23 AUGUST (OPERATION RUMYANTSEV)

In fact, Operation KUTUZOV in the Orel bulge was the only real counter-offensive. Its aim was to relieve Central Front, which had been put into considerable difficulties during the German CITADEL offensive. But by the time the second

<sup>47</sup> Rokossovsky, *A Soldier’s Duty*, 204.

<sup>48</sup> Zhukov, *Erinnerungen* (8th edn.), 188.

<sup>49</sup> Ibid. 189.

<sup>50</sup> Quoted in Andronikov, ‘Gitlerovski fakel’ (pt. 2), 4.

<sup>51</sup> Shutov and Ramanichev, ‘Ognennaya duga’, 273 and 277.

'counter-offensive' (Operation RUMYANTSEV) began on 3 August, Operation CITADEL was long over. The Stavka had planned this operation by Voronezh Front and Steppe Front, directed at the Belgorod-Kharkov area, as a major component of the Soviet summer offensive. As such, its aim was no less than the defeat of Fourth Armoured Army and Army Detachment Kempf, which had already been weakened by the preceding battles of Operation CITADEL. This was to be followed by an assault on Manstein's First Armoured Army and Sixth Army, which were deployed on the southern wing of Army Group South and had already been under attack by South Front and South West Front since 17 July. The aim was to enclose them by a thrust to the Black Sea coast, and then annihilate them.<sup>52</sup>

Voronezh Front and Steppe Front had been considerably reinforced for Operation RUMYANTSEV against Fourth Armoured Army and Army Detachment Kempf. In the first phase the attacking forces already consisted of eight armies, two armoured armies, four unattached armoured corps, and a mechanized corps. At their disposal were more than 1,144,000 men,<sup>53</sup> 2,418 tanks and assault guns,<sup>54</sup> 12,866 cannon and grenade launchers, and 767 rocket launchers.<sup>55</sup> They were supported by two air armies with 1,311 planes<sup>56</sup> (not counting long-range aircraft and fighters belonging to Air Defence).<sup>57</sup> South-West Front's 17th Air Army also attacked during the first phase of the offensive. In the course of the operation, 4th Guards Army, 47th and 57th Armies, as well as an armoured corps and a mechanized corps, were also deployed,<sup>58</sup> bringing the number of tanks and assault guns to over 2,800.<sup>59</sup> On 3 August, moreover, exactly at the beginning of the RUMYANTSEV offensive, partisans in the hinterland launched the 'rail war' operation.<sup>60</sup>

Faced with this concentration of Soviet forces, the German defenders were in a hopelessly inferior position. Fourth Armoured Army and Army Detachment Kempf bore little resemblance to the armoured formations that had attacked in the Kursk salient in July. Immediately after the termination of Operation CITADEL the following units, among others, had been withdrawn: II SS Armoured Corps with SS Armoured Infantry Divisions 'Leibstandarte', 'Totenkopf', and 'Reich', 3rd and 7th Armoured Divisions, Armoured Infantry Division 'Grossdeutschland', III Armoured Corps General HQ, as well as XXIV Armoured Corps with 23rd Armoured Division and SS Armoured Infantry Division 'Viking', which had been kept in readiness as reserves.<sup>61</sup> As a result, Fourth Armoured Army and Army Detachment Kempf now had only 138 operational battle tanks<sup>62</sup> and 99 assault

<sup>52</sup> Glantz and House, *The Battle of Kursk*, 241.

<sup>53</sup> *Grif sekretnosti sniat*, 190. Koltunov, however, gives the figure of 980,588 men (of whom 656,201 in combat units); see Koltunov, 'Kurskaya bitva v tsifrakh', 81.

<sup>62</sup> 'Panzerlage, Stand 31.7.' (drawn up on 12 Aug. 1943), BA-MA RH 10/61. The 3rd and 7th Armoured Divisions are not included in this figure, since they were still on their way.

guns and self-propelled cannon,<sup>63</sup> against 2,400 Soviet fighting vehicles (2,800 including reserves). However, this constant transfer of German armoured units had become typical of the eastern front. While the Red Army drew on its ample reserves and constantly sent reconstituted armoured corps onto the battlefield, the few German armoured divisions had to keep shifting from one conflagration to another, like a fire brigade, leaving dangerous gaps that could barely be covered.

The Soviet offensive launched on 3 August created a crisis that set the rotation roundabout in motion once again. A large part of the armoured units which had been withdrawn now had to be sent back to the Belgorod–Kharkov area. On 10 August Fourth Armoured Army and Army Detachment Kempf, including the newly arrived units, again had at their disposal more than 353 battle tanks,<sup>64</sup> as well as 214 assault guns and self-propelled cannon.<sup>65</sup> Including the new divisions assigned to it, the ration strength of Fourth Armoured Army amounted to 156,433,<sup>66</sup> which must have given a daily strength of around 115,000 men in the front-line units. The personnel strength of Army Detachment Kempf was not even half as much, and it had only a few dozen tanks at its disposal.<sup>67</sup> Air Fleet 4, with only 796 operational aircraft (see Table II.IV.2), was also clearly inferior.<sup>68</sup> Above all, it was not only deployed on defence against the Soviet RUMYANTSEV counter-offensive at Kharkov, but also had to intervene on the whole front sector of Army Groups South and A on the Donets and Mius, as far as the Kuban bridgehead on the Black Sea. That meant that it not only had the 2nd and 5th Air Armies of Voronezh and Steppe Fronts against it, but also the 17th, 8th, and 4th Air Armies of South-West Front, South Front, and North Caucasus Front.

The Soviet counter-offensive at Belgorod began with seemingly impossible force. To the German troops, who had just inflicted enormous losses on the Red Army at Prokhorovka, it seemed as if ‘their beaten opponent had risen from the grave with renewed strength’.<sup>69</sup> The Soviet 5th Guards Armoured Army and 1st Armoured Army had lost almost all their tanks, and the Germans had considered them totally destroyed. In fact, the remnants had been transferred to the hinterland and rebuilt as armoured armies. Suddenly they reappeared on the scene with brand-new tanks and rapidly trained crews. These two armoured armies, with 1,112 fighting vehicles between them,<sup>70</sup> were used to form a ‘mobile force’ to carry out a deep operational

<sup>67</sup> David M. Glantz estimates Army Detachment Kempf at 80,000 men (evidently the ration strength) and 60 tanks; see Glantz, *From the Don to the Dnepr*, 225–6.

<sup>68</sup> Operational status reports of 30 July and 10 Aug. 1943, BA-MA RL 2-III/725; edited by Ulf Balke in the light of further documents from his private archive. Courier, liaison, transport, minesweeper, and air-sea rescue aircraft are excluded from the strength figure.

<sup>69</sup> Glantz and House, *The Battle of Kursk*, 247.

<sup>70</sup> Ibid. 425; Shutov and Ramanichev, ‘Ognennaya duga’, 280.

thrust after the tactical breakthrough. Thus the Red Army had now adopted a procedure which the Wehrmacht had been applying since the blitzkrieg against the western powers in 1940.

The concentration of forces exceeded even the mass assembled at the beginning of the counter-offensive at Orel (Operation KUTUZOV). Along Voronezh Front's 6-kilometre-wide breakthrough section, 230 guns and grenade launchers, as well as 178 tanks and self-propelled cannon, were deployed per kilometre of front. The artillery density was even greater in the 7-kilometre breakthrough section of Steppe Front, where for every kilometre of front there was a reinforced rifle division supported by 300 guns and grenade launchers.<sup>71</sup> The offensive started in the early hours of 3 August with a preparatory artillery barrage lasting 170 minutes. At the same time, 2nd and 5th Air Armies began intensive attacks, supported by long-range aircraft and South-West Front's 17th Air Army. By 8 August the Soviet planes had flown a total of 13,000 sorties.<sup>72</sup> The defending German infantry units in the front line were virtually swept aside, and the few tanks had no chance of withstanding the avalanche. On the very first day, a tactical breakthrough was achieved between Belgorod and Tomarovka, during which some Soviet tank spearheads pushed forward as far as 25 kilometres. On the evening of 5 August Belgorod, the mainstay of the German defence system, had to be abandoned. By massing several armies, Voronezh and Steppe Fronts had formed a shock troop which pushed forward exactly along the border between Fourth Armoured Army and Army Detachment Kempf. By the evening of 7 August a gap over 50 kilometres wide had opened up between the two German formations. A decisive part in this success was played by the two armoured armies of the 'mobile force' brought in at a later stage. As Rotmistrov, the commander-in-chief of 5th Guards Armoured Army, later summed it up, it was the first time in the history of the Red Army that an operational breakthrough had been achieved by deploying armoured armies. A similar attempt had failed shortly before, during the Orel offensive (Operation KUTUZOV), despite the deployment of three armoured armies.<sup>73</sup>

As already mentioned, the German leadership reacted by progressively ordering back most of the armoured units which had been withdrawn after the termination of Operation CITADEL. Army Detachment Kempf received as reinforcements 3rd Armoured Division and III Armoured Corps, with SS Armoured Infantry Divisions 'Viking', 'Reich', and 'Totenkopf', while Fourth Armoured Army received the newly formed XXIV Armoured Corps, consisting of 7th Armoured Division, 10th Armoured Infantry Division, and Armoured Infantry Division 'Grossdeutschland'. Meanwhile the Red Army had advanced as far as Bogodukhov and Kotelva. The subsequent course of events is described as follows in a Soviet account: 'Things then took a surprising turn [...] The command of the Voronezh Front underestimated

<sup>71</sup> Shutov and Ramanichev, 'Ognennaya duga', 280.

<sup>72</sup> *Geschichte des zweiten Weltkrieges 1939–1945*, vii. 209.

<sup>73</sup> Rotmistrov, 'Bronetankovye i mekhanizirovannye voiska', 20–1; Rotmistrov, 'The Role of Armoured Forces', 173–4.

the imminent danger or simply overlooked it altogether. Our advance continued without sufficient consolidation of our gains and covering of flanks. The enemy took advantage of this and launched powerful counter-attacks.<sup>74</sup> On 12 August, III Armoured Corps began its counter-attack, in which it was able to deploy only SS Armoured Infantry Divisions 'Reich' and 'Totenkopf'.<sup>75</sup> A series of meeting engagements ensued to the south of Bogodukhov in which individual units of the Soviet 6th Guards Army and 1st Armoured Army were enclosed and destroyed. On 13 August the strength of 1st Armoured Army was down from an original 569 tanks to 134, and that of 5th Guards Army from 543 to 100.<sup>76</sup>

However, the two German armies were still separated by a gap between Akhtyrka and Krasnokutsk. That gap was now to be closed by means of a pincer attack. For a thrust from the north, Fourth Armoured Army deployed XXIV Armoured Corps, which had 79 tanks and 54 assault guns and self-propelled cannon at its disposal.<sup>77</sup> Army Detachment Kempf (later renamed Eighth Army) was supposed to deploy III Armoured Corps at the same time in an attack from the south. However, the corps was under such pressure from the enemy that SS Armoured Infantry Division 'Totenkopf' had to move forward on its own. With 71 operational fighting vehicles, it was nevertheless the corps' strongest unit.<sup>78</sup> The action began on 18 August, and the northern pincer arm, XXIV Armoured Corps, rapidly gained ground. The Totenkopf Division, however, had first to achieve a crossing of the Merla river at Kolontayev. After breaking through the Soviet lines, its troops pushed northwards through the enemy's hinterland. On the evening of 20 August they suddenly saw a column of tanks coming towards them at Lopukhavaty (to the east of Kotelva). To their relief, the tanks turned out to be German. They belonged to a unit of Armoured Infantry Division 'Grossdeutschland' commanded by Col. (Res.) Count Hyazinth Strachwitz. The pincer had closed. Large parts of 6th Guards Army and 27th Army, including 4th and 5th Guards Armoured Corps, were now trapped in an encirclement around Kotelva. However, the lines of the encircling forces were much too thin, and the weak German formations were unable to take tactical advantage of their skilful operational manoeuvre. Several Soviet units managed to break through the German lines and reach safety. Nevertheless, the German operation was by no means without effect. The Red Army forces, which had been on the attack up till then, had suffered considerable losses and were in a state of shock. Despite their superiority at that location, they refrained from continuing the offensive. The

most important result of the German counter-attack, however, was that the dangerous gap between the two armies had been closed.<sup>79</sup>

Meanwhile, the whole eastern front was in flames. Ten Soviet army groups were attacking simultaneously. In addition to Voronezh Front and Steppe Front, deployed to the south of Kursk, the attacking forces included Leningrad Front, Volkhov Front, Kalinin Front, West Front, Bryansk Front, Central Front, South-West Front, and South Front. The central point of the Soviet summer offensive was nevertheless Operation RUMYANTSEV, conducted by Voronezh Front and Steppe Front. In the course of the offensive the centre of gravity shifted increasingly towards Kharkov, in the sector of Army Detachment Kempf (Eighth Army). Here the German XI and XXXXII Army Corps were deployed, but they were in an alarming condition. On 6 August the two infantry regiments of 168th Infantry Division, for example, had a combat strength of 95 and 160 men respectively. 6th Armoured Division too, with only six operational tanks, could hardly be considered a respectable reserve.<sup>80</sup> Several Soviet armies were moving simultaneously on the prestigious target of the industrial metropolis of Kharkov. They were 53rd, 57th, and 69th Armies, 7th Guards Army, and Rotmistrov's 5th Guards Armoured Army, which operated as the spearhead. General Konev, the commander-in-chief of Steppe Front, planned an encirclement operation and launched an attack on the city's outer defensive ring on 12 August.

<sup>79</sup> KTB OpAbt OKH, 20 Aug.1943, BA-MA RH 2/3061; A.Gr. Centre, 'Lage der Nachbararmeen: Lage vom 20.8.' <sup>80</sup> BA-MA, Study ZA 1/2075, 22, app. 15.

Consequently, General Kempf warned of the imminent danger of enclosure and ordered the evacuation of the city, which could not be defended in any case owing to lack of forces. Field Marshal von Manstein concurred with that view.<sup>81</sup> But Hitler ordered that Kharkov ‘must be held at all costs’,<sup>82</sup> fearing that its fall could have an unfavourable political effect on the attitudes of Turkey and Bulgaria.<sup>83</sup> This provoked the opposition of the OKH General Staff. On 13 August Lt.-Col. Kielmansegg recorded in his diary: ‘Today yet another typical Führer order that makes me see red: Kharkov must be held at all costs!’<sup>84</sup> There ensued another dispute between Hitler and the generals. The Führer repeatedly issued orders to hold out that conflicted with the operational reality. Manstein, however, was not prepared to ‘sacrifice six divisions for questionable political considerations’, and declared he ‘would rather lose a city than an army’.<sup>85</sup> On 14 August Kempf reported that the overstretched front could no longer be held. The weak 161th Infantry Division, for example, had to defend a section 52 kilometres wide with no reserves available at all. The order to hold Kharkov would therefore result in the encirclement of two army corps and a new Stalingrad.<sup>86</sup>

Thereupon Hitler relieved General Kempf of his command and replaced him by General Otto Wöhler. On 16 August he ‘promoted’ Army Detachment Kempf to Eighth Army, though without being able to strengthen it accordingly. Several components of a full army were still lacking. It is also interesting to see the different yardsticks which Hitler applied to his generals. A few months earlier, in February 1943, a Waffen SS general, SS Obergruppenführer Hausser, had dared to evacuate Kharkov on his own authority despite an explicit Führer order. Yet Hitler had ignored that blatant disobedience, for which he would scarcely have forgiven a general of the ‘conventional’ army.

However, the new commander-in-chief, General Wöhler, took exactly the same line as his predecessor. Declaring that Kharkov could definitely not be held, he demanded its evacuation. In response, Hitler gave permission on 18 August to abandon the city ‘in the event of extreme emergency’.<sup>87</sup> At the same time—which was typical of him—he ordered Wöhler to hold out for a few more days to conceal the fact that he had given way. On the morning of 22 August, Eighth Army HQ reported: ‘There is no doubt that Kharkov must be abandoned [...] The munitions situation is catastrophic. The artillery is already fighting on foot.’<sup>88</sup> Immediately afterwards Manstein gave permission to evacuate the city that night. On 23 August the Soviet units streamed into the Ukrainian industrial metropolis, much of which was totally in ruins. The city had changed hands several times in the space of 22 months. The Red Army had repeatedly suffered bitter defeats in this very city, but the fourth and final battle of Kharkov was now over. According to the

official Russian account: ‘With the liberation of Kharkov [...] Operation RUMYANTSEV, and along with it the battle in the Kursk salient, came to an end.’<sup>89</sup>

The victorious Belgorod–Kharkov offensive demonstrated impressively that the Red Army had now gained the upper hand in the years-long struggle. Yet measured against the high expectations in the face of an enemy so blatantly inferior in strength, the result was very modest. The thirteen Soviet attacking armies did not succeed in smashing the two German armies, let alone in creating the conditions for the destruction of the southern wing of Manstein’s army group, which was the planned follow-up. The result is all the more sobering when one considers the excessive losses that were the price of victory. According to official figures, personnel losses during the 20 days of battle amounted to 255,566 men, of which 71,611 were classified as ‘irrecoverable’.<sup>90</sup> As almost always, however, the official figures seem far too low, given the wretched Soviet reporting system. Moreover, unusually high loss figures were readily concealed. Filling in the gaps in the figures, which he described as ‘totally incorrect’, a Russian historian arrived at estimated losses of around 500,000 men.<sup>91</sup> Even Stalin, not noted for his excessive sensitivity to ‘human sacrifice’, was enraged this time and accused Vatutin, the commander-in-chief of Voronezh Front, of incurring ‘large, totally unjustified losses’.<sup>92</sup> The personnel losses of Fourth Armoured Army and Eighth Army (Army Detachment Kempf)—at just under 30,000, of whom around 10,000 dead or missing—were astonishingly low in comparison with those on the Soviet side.<sup>93</sup>

The Red Army’s tank losses in this operation were also frighteningly high, though nowhere near as catastrophic as in the Orel counter-offensive. The official figure was 1,864 total write-offs.<sup>94</sup> The exact number of German tank losses is impossible to determine from the fragmentary surviving records, but the rule of thumb, born out by the statistics, that in the battle of Kursk eight Soviet tanks were lost for every German tank destroyed can also be applied with some certainty to the Belgorod–Kharkov operation.<sup>95</sup> Katukov’s 1st Armoured Army had already lost 80 per cent of its fighting vehicles in the defensive phase (Operation CITADEL), and had to be reconstituted. In the following offensive, Operation RUMYANTSEV, it

<sup>89</sup> Shutov and Ramanichev, ‘Ognennaya duga’, 283.

<sup>90</sup> *Grif sekretnosti sniat*, 190.

<sup>91</sup> Sokolov notes astonishing contradictions when comparing the official figures for Operation RUMYANTSEV with those for the operation immediately following at Chernigov–Poltava. If those figures were correct, the huge reinforcements which had arrived in the meantime must have compensated for a large part of the loss of personnel; see Sokolov, ‘The Battle for Kursk’, 81–2.

<sup>92</sup> Stemenko, *Im Generalstab*, 193.

<sup>93</sup> See the statistics of the OKH medical officer in BA-MA RW 6/v. 558. According to the 10-day reports for the two periods 1 to 10 August and 11 to 20 August, the total losses of the two German armies amounted to exactly 25,068 men, of whom 8,933 dead or missing. Over the almost identical duration of Operation RUMYANTSEV, i.e. 3–23 August, total Soviet losses must have been around 30,000, of whom 10,000 dead or missing.

<sup>94</sup> *Grif sekretnosti sniat*, 370.

<sup>95</sup> As Diagram II.IV.1 shows, 1,331 German and 9,294 Soviet tanks were destroyed on the eastern front in July/August 1943. At all events, the ratio of Soviet to German tanks lost in the Kursk salient was disproportionately high.

(together with the units attached to it) lost a further 1,042 vehicles, while continuously being supplied with new tanks in the course of the fighting.<sup>96</sup> The same thing happened to 5th Guards Armoured Army, which had also been newly reconstituted: despite massive tank reinforcements, its strength fell from 543 to only 50. In the course of those 20 days Rotmistrov also lost 60 to 65 per cent of his staff officers and 85 per cent of his company and battalion commanders.<sup>97</sup> Thus, once again, within one-and-a-half months, 5th Guards Armoured Army was almost torn to shreds. It suffered a second 'Prokhorovka' during the advance on Kharkov, when it stormed forward at Hill 252.2 without any reconnaissance and rushed straight into a trap. This time, however, General Rotmistrov was not to blame. Once again the fault lay with Stalin, who had already informed the military attachés of the western Allies that Kharkov had been liberated.<sup>98</sup> Instead of correcting that misrepresentation, he gave orders that Kharkov must be taken without delay, regardless of losses. Paradoxically, in so doing he became the Germans' best ally. A slower but better-considered attack could have caused the front to collapse. As it was, the defending forces were able to repel the uncoordinated attacks with huge losses on the Soviet side, and themselves withdraw in good order.

The official figure of 153 Soviet aircraft lost must be considered an absurd understatement.<sup>99</sup> According to the Luftwaffe's relatively reliable kill reports, the Red Army lost 942 aircraft in the Kharkov sector from 3 to 24 August 1943.<sup>100</sup> The Luftwaffe's losses were low in comparison, with a reported total of 147.<sup>101</sup>

If the military efficiency of a troop unit is judged by the ratio of its losses to those of the enemy, the German defending forces appear in a positive light. In reality they were on the verge of collapse, as is revealed by a status report drawn up by General Wöhler on 2 September:

While we are forced to adopt the most stringent munitions tactics, the enemy has unlimited artillery and grenade-launcher ammunition at his disposal. He [...] is thinning our ranks to such an extent that the main battle line is no longer maintained, and only security units, linked by patrols, can be formed. [...] This morning 39th [Infantry Division] had 6 officers and around 300 men left in battle [...] The commanders report that as a result of exhaustion there is such apathy among the troops that draconian measures are no use and only 'coaxing' has any effect.<sup>102</sup>

<sup>96</sup> Glantz and House, *The Battle of Kursk*, 252.

<sup>97</sup> Ibid. 252 and 425, n. 48.

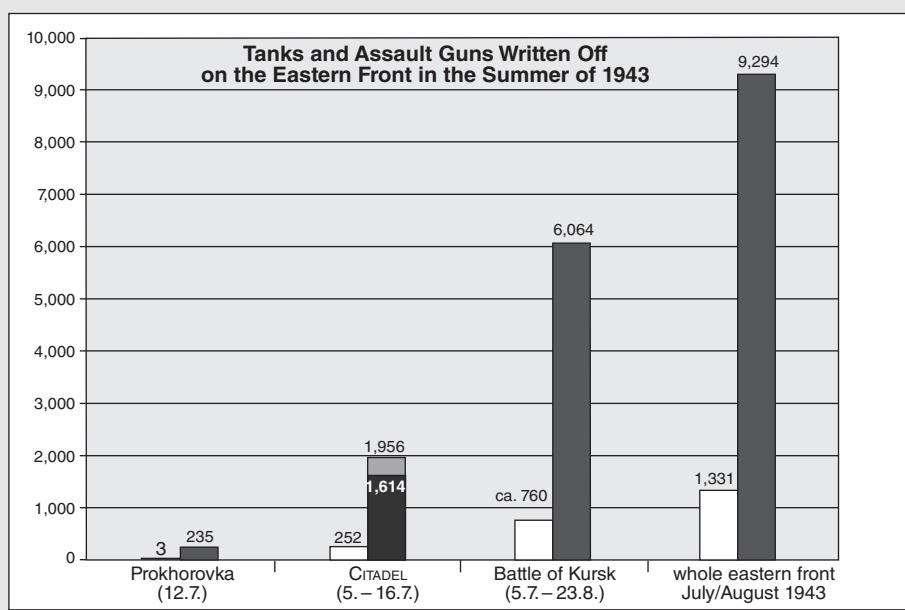

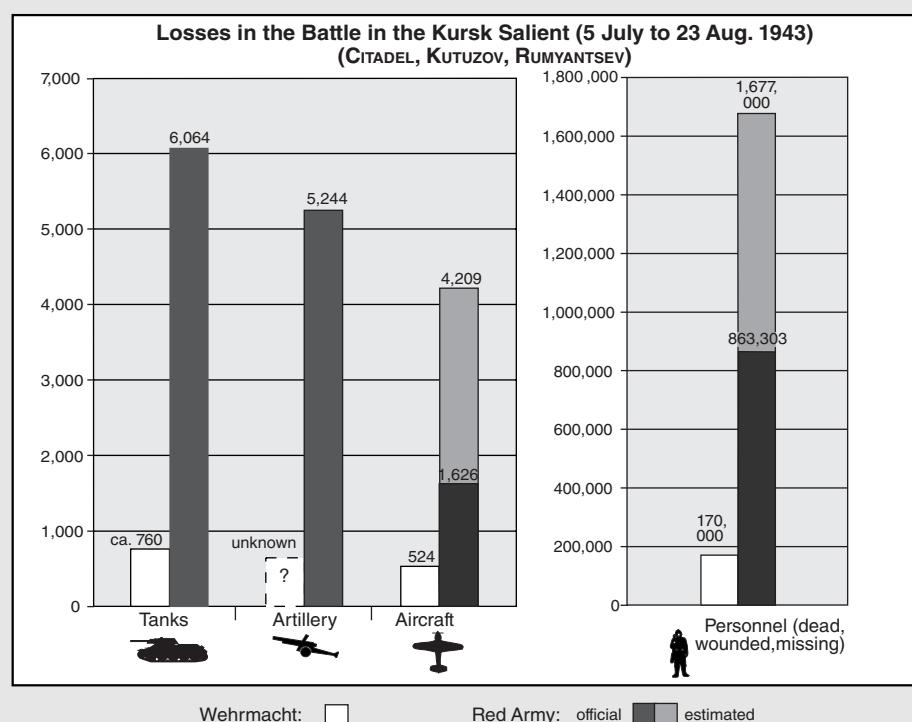

<sup>98</sup> Carell, *Verbrannte Erde*, 275–7.

<sup>99</sup> *Grif sekretnosti sniat*, 370.

<sup>100</sup> 'Tägliche Einsatzübersichten der Luftflotte 4 vom 3.7. bis 10.12.1943', BA-MA RL 7/667; edited by Ulf Balke in the light of further documents from his private archive. As can be seen from the mission reports, in this phase Air Fleet 4 was deployed almost exclusively in the Kharkov area, to the dangerous neglect of other sectors of the front. The real number of Soviet aircraft losses was perhaps even higher, since no records of planes shot down by German ground troops (mainly army anti-aircraft units) nor reports of Soviet losses on their own territory (e.g. accidents) are available.

Diagram II.IV.1. Losses in the Summer of 1943

### 3. BALANCE OF LOSSES IN THE 'GREATEST BATTLE IN HISTORY'

In view of the multi-front war now beginning, the summer of 1943 was the last time the Wehrmacht was able to concentrate the mass of its forces on the eastern front. As the Red Army had massed a large part of its forces in the Kursk salient, the outcome was the greatest land battle of the Second World War, indeed the greatest in all the history of war. The German offensive, Operation CITADEL, together with the two Soviet counter-offensives, lasted for some 50 days. During that short period of time the Red Army, according to Russian sources, lost 863,303 men, of whom 254,470 dead or missing.<sup>103</sup> These figures, however, appear to be clearly understated. Boris V. Sokolov demonstrates a number of contradictions in the official account and estimates the losses at 1,677,000 men.<sup>104</sup> German losses in the course of these three operations (over the period 5 July to 23 August) amounted to approximately 170,000 men, of whom 46,500 dead or missing.<sup>105</sup>

Kursk was not the 'graveyard of German armour'. Rather, according to official statistics, the Soviet formations lost a total of 6,094 battle tanks and assault guns.<sup>106</sup> On the German side, owing to incomplete records, only the total losses of 252 fighting vehicles during Operation CITADEL can be clearly determined.<sup>107</sup> It is possible, however, to make a comparison of total Soviet and German tank losses on the whole eastern front for the months of July and August. In that period the Red Army lost 9,294 battle tanks and assault guns,<sup>108</sup> while the Wehrmacht lost only 1,331.<sup>109</sup> That gives a German loss ratio of 1 to 7. In the fighting in the Kursk salient, however, the proportion of Soviet losses was much higher. On the one

<sup>103</sup> *Grif sekretnosti sniat*, 188–90. Of these personnel losses, 177,847 were incurred in the defensive phase, 429,890 during the Orel counter-offensive, and 255,566 during the Belgorod–Kharkov counter-offensive.

<sup>104</sup> Sokolov, 'The Battle for Kursk', 83.

<sup>105</sup> As detailed above, the Germans incurred the following losses during the individual operations: CITADEL: 54,182, of whom 11,023 dead or missing; Orel offensive: 86,064, of whom 25,515 dead or missing; Belgorod–Kharkov Offensive: just under 30,000, of whom approx. 10,000 dead or missing. Even if the losses of all German armies (Second Armoured Army, Ninth Army, Second Army, Fourth Armoured Army, Army Detachment Kempf/Eighth Army) in the Kursk area for the whole period of July/August 1943 are added to those for the three above-mentioned operations, we still arrive at a total of only 203,000 men. On this, see the tables in Zetterling and Frankson, *Kursk 1943*, 117, as well as 116 and 129, n. 18.

<sup>106</sup> *Grif sekretnosti sniat*, 370. The breakdown for total write-offs of tanks and assault guns was 1,614 during the defensive phase (Operation CITADEL), 2,586 during the Orel counter-offensive, and 1,864 during the Belgorod–Kharkov counter-offensive. Sokolov, however, estimates the number of tanks and self-propelled guns destroyed during the three operations in the Kursk area at 7,700; see Sokolov, *Tsena pobedy*, 159.

<sup>107</sup> On this, see Chap II.4 above.

<sup>108</sup> The author is grateful for the assistance of the Institute of Military History in Moscow. According to information conveyed by Lt.-Col. Sergei Lipatov and Col. Shabayev, head of the Statistics Department, total Soviet losses in July and August were 9,061 battle tanks and 233 assault guns. The source given is CAMO, F. 38, Op. 11353, d. 1169, 339 and 351. These figures from the Soviet files are very close to the total losses of 9,400 Soviet fighting vehicles calculated by Zetterling and Frankson (*Kursk 1943*, 126).

<sup>109</sup> 'Panzerverluste Ost (5.7.–31.8.1943)', BA-MA RH 10/77 (K 18).

hand, that was where the Germans had concentrated almost all their modern fighting vehicles, such as Panthers and Tigers. On the other, the actions of the Soviet leadership, which committed some grotesque errors, resulted in unnecessarily high losses. The frequently quoted rule of thumb that in the battle of Kursk eight Soviet tanks were lost for every German tank destroyed is by no means an exaggeration. It thus seems realistic to put the German tank losses at an eighth of the Soviet total, that is, at about 760 tanks.<sup>110</sup> It should be emphasized that, in the case of the modern German tanks, only a small proportion of write-offs were due to direct hits on the battlefield. During the withdrawal fighting some of these heavy vehicles which had dropped out for technical reasons could no longer be recovered. In some cases it was no longer even possible to evacuate repair shops near the front line before the advancing enemy arrived.<sup>111</sup> As for artillery weapons, the Red Army lost a total of 5,244 guns and grenade launchers in the Kursk salient,<sup>112</sup> but no figures for German losses are available.

The most difficult puzzle is the number of aircraft losses. The official Soviet data, according to which only 1,626 planes<sup>113</sup> were lost during the three operations, seems completely unbelievable. Sokolov estimates the losses at a minimum of 3,300.<sup>114</sup> Since the official Soviet figures for their own aircraft losses must be deemed irrelevant to scholarly research, one has to turn to the German kill reports.<sup>115</sup> The fact is that in the Luftwaffe the conditions for recognition of a kill were decidedly strict,<sup>116</sup> and a comparison shows that the real number of kills was usually much higher than the official Soviet figure.<sup>117</sup> According to the kill reports recognized by the German services, Air Fleets 4 and 6 shot down at least

<sup>110</sup> This figure is also suggested by the partially surviving German files.

<sup>111</sup> Manstein, *Verlorene Siege*, 518.

<sup>112</sup> *Grif sekretnosti sniat*, 370. The Soviet artillery losses are broken down as follows: defensive phase (CITADEL) 3,929, Orel counter-offensive 892, Belgorod–Kharkov counter-offensive 423.

<sup>113</sup> Ibid. 370; the breakdown given there is as follows: defensive phase (CITADEL) 459, Orel counter-offensive 1,014, Belgorod–Charkov counter-offensive only 153!

<sup>114</sup> Sokolov, 'The Battle for Kursk', 83–4.

<sup>115</sup> How unrealistic the official Soviet loss figures are is shown *inter alia* by the following report from the Air Fleet 6 flight liaison officer to Second Army: 'Today [24.8.] the air units and anti-aircraft artillery of Air Fleet 6 reached a total of 2,500 kills since the beginning of heavy defensive combat in the Orel area on 5 July 1943'; see Flivo–AOK 2, 26 Aug 1943, BA-MA RH 20-2/1337. Moreover, this report refers to only one of the two air fleets deployed in the Kursk area.

<sup>116</sup> See the account in Obermaier, *Die Ritterkreuzträger*, 241: 'For every kill a statement by a witness in the air or on the ground was required if the wreckage of the plane in question or captured crew member did not constitute clear proof. The kill report was endorsed by the hierarchical superior or rejected at that level. It was then transmitted to the wing staff and finally to the relevant department of the commander-in-chief of the Luftwaffe.'

<sup>117</sup> According to Obermaier (*ibid.*), German fighters shot down 25,000 British, American, and French aircraft, which means that was the number of kills recognized on the German side. After the war, however, it transpired that, according to official figures, British and American losses amounted to 40,000 aircraft. The discrepancy is even more striking on the eastern front. While German fighter aircraft recorded only 45,000 recognized kills (see *ibid.*), the Soviet air force lost a total of 106,400 planes (*Grif sekretnosti sniat*, 360). Nor can this huge gap be filled by the considerably lower number of planes shot down by anti-aircraft artillery.

4,556 planes from 5 July to 24 August.<sup>118</sup> Of these, 4,209 were attributed to the three operations in the Kursk salient.<sup>119</sup> In any event, these figures do not include aircraft shot down by independent units or Soviet losses on their own territory (due to accidents or technical failure). Such losses 'behind the front' should not be underestimated, since in the Second World War they sometimes accounted for almost a third of total losses. On the German side, the two air fleets lost a total of 609 aircraft on the whole front from 5 July to 24 August.<sup>120</sup> If only the three above-mentioned operations are taken into account, the total comes to 524.<sup>121</sup>

The Red Army's horrendous losses during the battle of Kursk are only the tip of the iceberg. In the course of the war, according to its own figures, it lost 96,500 tanks and assault guns,<sup>122</sup> 106,400 aircraft,<sup>123</sup> and 317,500 cannon and grenade launchers.<sup>124</sup> The number of personnel losses is rather vague. It oscillates between the official figure of 11,285,057 'irrecoverable losses'<sup>125</sup> and estimates of up to 26,400,000 dead (military personnel).<sup>126</sup> As a Russian historian concluded at the end of the Soviet era, Stalin drove his armed forces 'from victory to victory, but at the cost of unimaginable losses that weigh heavily on the population to this day'.<sup>127</sup> The German officers were unable to understand why, when an unsuccessful attack had come to a halt, the Soviet commanders continued and repeated it with unbelievable obstinacy. This resulted in battles of attrition in which the German defenders inflicted 'not infrequently twenty times as many losses as they themselves incurred'.<sup>128</sup> In Basil Liddell Hart's judgement:

Such abortive assaulting is a common tendency in armies [...] but it was naturally accentuated in the Red Army by Soviet conditions, Russian traditions, and Russia's resources. Under such a system only the best established commanders could venture to exercise a sense of the limits of the possible, while the abundance of human material encouraged lavish expenditure. It was easier to be ruthless in sacrificing men than to risk the wrath of the man above.<sup>129</sup>

With regard to these mass attacks, another British author wrote: 'There was little finesse about these tactics. They relied on mass, and succeeded mainly because the

Germans were forced to concede ground because of the pressure of sheer weight of numbers against them.<sup>130</sup>

Unlike the Wehrmacht, which set great store by good training and sought to integrate new soldiers in a 'tight-knit community', the Red Army treated its human resources at times like mass-consumption material. In the second half of the war the male population of the liberated areas was frequently dispatched to the front without any training worth mentioning. Tractor drivers straight from work on collective farms suddenly found themselves deployed as tank drivers or even tank commanders.<sup>131</sup> If, however, as German officers reported, such 'cobbled-together, untrained' units came up against a still-intact German formation, 'their losses were horrendous, beyond all imagining'.<sup>132</sup> Yet the system succeeded: 'More Russians kept coming, like waves from the sea.'<sup>133</sup>

In the extreme circumstances of 1941, when the Soviet system was fighting for survival, such ruthless behaviour towards its own population was perhaps understandable. But the regime continued that practice throughout the war. It was still manifest 'at five minutes to midnight' in the 'Berlin Operation', when the outcome of the war was no longer in doubt. Daily tank losses in that offensive were even greater than in the battle of Kursk.<sup>134</sup> The concept of a 'pyrrhic victory' was apparently unknown to the Soviet leadership. As the American tank general George Patton—himself known for his 'gung-ho' attitude—once declared: 'No bastard ever won a war by dying for his country. He won it by making the other poor dumb bastard die for his country.'<sup>135</sup>

In fact, American commanders were astonishingly economical in their use of the troops entrusted to them. During the Second World War, in all the theatres of operations, the US armed forces suffered 405,399 fatal casualties, of which only 291,577 were 'battle deaths'.<sup>136</sup> Such striving for efficiency, however, was decidedly foreign to the Red Army leadership system. Losses were irrelevant as long as the objective was achieved.

One of the most telling analyses of the phenomenon was made by the Russian military historian Nikolai M. Ramanichev:

Where lie the causes of such high Soviet losses? First and foremost, in the Stalinist regime. Even before the war, Stalinist repression had created an atmosphere in the armed forces that made independent action by commanders a mortal danger. The Red Army disciplinary regulations of 1942 state that: 'For a subordinate, an order from a commander and superior is law. It must be obeyed unconditionally, to the letter, and promptly.' In the event of disobedience [...] the commander was duty bound to take all coercive measures, including the use of weapons. In so doing, he bore no

<sup>134</sup> Solovev, 'Kutuzov', 11. <sup>135</sup> *The Greenhill Dictionary*, 130.

<sup>136</sup> The author is grateful to his American colleague, Dr John T. Greenwood, Chief Historian for the Office of the Surgeon General, US Army, Falls Church (Virginia), for supplying these figures.

responsibility [...] for the consequences of his actions. On the contrary, if he failed to implement that regulation he was court-martialled.<sup>137</sup>

The consequences of this attitude are described by Boris Sokolov as follows:

The Stalinist system created not only the habit of carrying out any order without objection, but also—and more frighteningly—that of issuing orders without thinking. The tragic paradox was that the pursuit of victory at all costs—with soldiers falling in the belief that they were bringing victory closer—only further delayed the end of the war. Had our losses been fewer, and the ratio to those of the Germans more favourable [...] our superiority in human resources would have enabled us to smash the German war machine and achieve victory quicker than actually happened.<sup>138</sup>

That was the main reason why the Soviet summer offensive of 1943 fell so far short of its objectives. The Red Army had planned to advance to the border of East Prussia in 1943,<sup>139</sup> but managed to do so only a year later. Although the Soviet leadership was in the stronger position, it had decided not to attack first but to let the German forces run up against the Kursk bulwark. The idea was to ‘bleed’ the enemy until he was decisively weakened, and then destroy him in a counter-offensive.<sup>140</sup> But things turned out differently. The defenders suffered considerably more losses than the attackers. When the counter-offensive started, the armoured units, eroded in pointless frontal attacks, were too weak to impart the necessary momentum. Moreover, the counter-attacks took place too soon, in the wrong place, that is, at the enemy’s strongest position, and were uncoordinated. Following the battle of Kursk, all five Soviet armoured armies had to be withdrawn from the front and transferred to the Stavka reserve for rehabilitation.<sup>141</sup> The declared aim of destroying the enemy had not been achieved. Instead, the German forces were able to withdraw in good order to the other side of the Dnieper.

It is significant that, despite the enormous forces deployed, the battle of Kursk at first played a relatively subordinate role in Soviet historiography. The reason must have been that a number of painful leadership errors had been made and the success seemed rather modest in relation to the enormous losses incurred. Not once, for example, did the Soviet forces succeed in enclosing large enemy formations. It was not the battle of Kursk, but the operation following, the crossing of the Dnieper, which was accounted as one of the major battles of the Great Patriotic War. While at Kursk only 180 officers, NCOs, and other ranks were awarded the title of Hero of the Soviet Union, 2,438 men received that distinction in connection with the crossing of the Dnieper.<sup>142</sup>

<sup>137</sup> Ramanichev, ‘Die Schlachten bei Kursk’, 62–3, where we also find another important statistic: more than 900,000 members of the Red Army were sentenced during the war, of whom 365,000 in the first year alone.

<sup>140</sup> Ibid. 161; Shutov and Ramanichev, ‘Ognennaya duga’, 254 ff. As already mentioned, Boris Sokolov is highly critical of the renunciation of a preventive strike; see Sokolov, ‘The Battle for Kursk’, 74 ff. and 86–7.

<sup>141</sup> Pronko, ‘Die sowjetische Strategie’, 322.

<sup>142</sup> Sokolov, ‘The Battle for Kursk’, 72.

The judgement changed with the seizure of power by Nikita Khrushchev, who had been a member of the Voronezh Front's military council at the time of the battle. In the 1960s the tendency to rank Kursk as the third decisive battle of the war, after Moscow and Stalingrad, came to dominate.<sup>143</sup> The Kursk operation was not only intensively documented but was paraded as a shining example of the invincibility of the Red Army and the superiority of the Soviet system. General Sergei Matveyevich Shtemenko, for example, wrote of the preparatory phase in the spring of 1943: 'The high moral virtues displayed by the members of our armed forces from the first days of the war were further strengthened. Our men matured. Their trust in the wisdom of the Party and the indestructibility of the Soviet order grew firmer by the day.'<sup>144</sup> The judgement of the historian Boris Solovev was particularly pathos-ridden. He celebrated the battle of Kursk as not only an outstanding example of the 'logical nature of Soviet victories'<sup>145</sup> but a 'triumph of the Soviet art of war'.<sup>146</sup> For him, the battle expressed the military and economic superiority of socialism. The tank battles at Kursk were portrayed, and increasingly idealized, in books, films, and paintings. Prokhorovka, above all, became legendary.

Only after the end of the Soviet era was it possible to call the iconic status of Kursk into question. A decisive role in the reappraisal was played by *Grif sekretnosti sniat*, a work which we have frequently had occasion to quote. Although, as has since become clear, many of the loss figures it contains are far too low, publication of that book caused a sensation at the time. What then became apparent, as many veterans had always suspected, was how horrendously high the 'price of victory' had been.<sup>147</sup> Seen in that light, the battle of Kursk was not so much a proof of the superiority of the Soviet system as a demonstration of its defects.<sup>148</sup> Sokolov went further, showing that even those shocking loss figures are still far too low and need substantial upward correction.<sup>149</sup> He draws the following conclusion: 'At the tactical level, and partially at the operational level too, the Wehrmacht won the battle of Kursk. But the Red Army's superiority in human and material resources was so overwhelming that the Germans were unable to achieve a full operational or strategic victory.'<sup>150</sup>

From the German perspective, it had already been clear before the battle of Kursk that the war could no longer be won. It was now obvious that the German forces were no longer even strong enough to achieve a major operational success. In the ironic words of an American historian, 'Blitzkrieg was at an end'.<sup>151</sup> A feeling of despair spread through the German operations staffs. On 12 August 1943, Lt.-Gen. Heusinger, chief of the OKH operations division, already knew that

<sup>145</sup> Solovev, *Wendepunkt*, 13. <sup>146</sup> Ibid. 93 and 112.

<sup>147</sup> On 12 July 1993, the 50th anniversary of the tank battle of Prokhorovka, the author took part in a military history conference in Moscow on the battle of Kursk, at which it became clear that by no means all veterans of the battle agreed with the official Soviet version.

<sup>148</sup> See also Töppel, *Die Offensive gegen Kursk*, 80 and 85.

<sup>149</sup> See Sokolov, 'The Battle for Kursk'. <sup>150</sup> Ibid. 88.

<sup>151</sup> Glantz and House, *The Battle of Kursk*, 254.

'the war has entered a more critical stage'.<sup>152</sup> That feeling was expressed even more dramatically in the Naval War Staff's overall situation report of 20 August 1943: 'Since last year Germany, at the strategic level, has become the anvil rather than the hammer.'<sup>153</sup>

Yet the German strategists and operators were not the only ones staring helplessly at their situation maps. Ordinary troops at the front were also seized by despair. Antonius John, a soldier in an armoured unit who had lived through the Kursk inferno, found himself, in his own words, on a 'battlefield where every tree and bush was in shreds, and the ground was strewn with broken guns, burnt-out tanks, and wrecked aircraft'.<sup>154</sup> In a chapter of his autobiography entitled 'Hell', he concludes 'that events were on an apocalyptic scale. Scenes like the end of the world threatened to drive a person witnessing them to despair unless he had nerves of steel. Verdun, the Somme, and Stalingrad are comparable dates from history [...] The visibly apocalyptic dimensions seem to warrant the term "hell". Its use is justified when the presence of extreme fear and the absence of any escape combine in collective metaphysical despair'.<sup>155</sup>

# PART III

## THE PERPLEXITIES OF WAR

*The Soviet Theatre in German Policy and Strategy  
from the Summer of 1943*

Bernd Wegner

# I. The Soviet Theatre of War in German Policy and Strategy from the Summer of 1943

After it was shown in July and August that the German front was no longer able to withstand the counter-attacks of an increasingly superior enemy, it became clear to the commander-in-chief and dictator in the course of the late summer that his hope of ‘imposing our will’ on the Allies through unyielding defence of the Reich’s strategic forefield would not be fulfilled. He who, through all the preceding weeks and months, out of concern for his prestige and the morale of the troops and the civilian population had shunned any admission that the situation was untenable and rejected the recommendation of his operational advisers to withdraw the exhausted troops to a shortened front line further to the rear, was now forced to realize that for Germany the war was irrevocably lost. In view of the extremely unfavourable balance of manpower and material resources between the warring parties, the United States’ massive intervention in the war, the failure of the U-boat campaign, and the collapse of Germany’s allies, German conduct of the war, as the commander-in-chief himself later admitted, had increasingly assumed ‘the character of an irresponsible game of chance’. Against that background he finally declared at the end of September that tactics and the army itself were ‘at an end’, that ‘final defeat was inevitable’, and that Germany must now seek an immediate armistice. ‘The fate of the German people’, he explained, ‘was for me too high a stake. The war had to be ended.’<sup>1</sup> The commander-in-chief of whom we are speaking was not Hitler but Erich Ludendorff. His demand for an armistice was dated 28 September 1918 and signalled the end of the First World War.

Twenty-five years later the memory of that end to the war was fresher than ever in the minds of friend and foe alike. In Vienna the date ‘1918’ was found painted on the walls of houses after Stalingrad. In Berlin it was invoked in leaflets.<sup>2</sup> From the beginning to the end of the war, Hitler himself repeatedly intoned that the traumatic days of November 1918 would never recur.<sup>3</sup> The fatal comparison between 1918 and 1943 seems to have impressed itself all the more strongly on his contemporaries as, sensitized by the daily terror of the bombing campaign and

<sup>1</sup> Foregoing quotes from Ludendorff, *Meine Kriegserinnerungen*, 551, and Thaer, *Generalstabsdienst*, 233 (30 Sept. 1918). <sup>3</sup> On this, see the numerous quotations in Binion, *Hitler among the Germans*, 101 ff.

the no-longer-concealable German setbacks on all fronts, they became increasingly conscious of the Allies' superior resources. Summarizing the mood of parts of the population, the Security Service (SD) wrote: 'Then [in 1918] as now, America was at the back of people's minds. The United States had hardly got going, and Germany was already fagged out.'<sup>4</sup>

In the late summer of 1943 the governments in London and Washington also had reason to recall those events. Faced with the question whether the German government was likely to sue for peace in the present situation as in October 1918, the intelligence experts of the two countries made interesting but different assessments.

On the British side, above all, an optimistic view was taken. There was particular concern to avoid a repetition of the erroneous estimation of German intentions that had been made in August 1918, when the prime minister, David Lloyd George, told the Imperial War Cabinet to expect the war to last for a long time yet, and the German offer of an armistice came a few weeks later as a total surprise. That erroneous analysis, as the Joint Intelligence Sub-Committee concluded 25 years later,<sup>5</sup> had been the result of a situation assessment which focused too narrowly on the purely *military* balance of forces. If Germany's overall political and economic situation was taken into account, the picture was quite different, both in 1918 and in 1943. Notwithstanding the undoubted differences in Germany's internal and external situation in the two wars, the assumption must be that, all in all, Germany was in a worse position now, at the beginning of September 1943, than it had been in the same month a quarter of a century earlier. The conclusion was obvious:

[W]e may see the defection of the rest of Germany's European allies and, even before the end of this year, convince the German people and military leaders that a continuation of the war is more to be feared than the consequences of inevitable defeat. With the German people no longer willing to endure useless bloodshed and destruction, and the military leaders convinced of the futility of resistance, there might be, as in Italy, some sudden change of regime to prepare the way for a request for an armistice.<sup>6</sup>

The American Joint Intelligence Staff considered that events could conceivably develop in accordance with the foregoing scenario, but were unlikely to do so. In Washington much greater emphasis was placed than in London on the differences from the situation in 1918. In particular, the following arguments were adduced:<sup>7</sup>

- (1) The material and nutritional conditions of the German population were decidedly better than in 1918, and a comparable collapse of morale was hardly to be expected despite the stress caused by the bombing. Furthermore, the German government had quite different means at its disposal

<sup>4</sup> *Meldungen aus dem Reich*, xii, No. 359, 4800 (15 Feb. 1943).

<sup>5</sup> War Cabinet/Joint Intelligence Sub-Committee, 'Probabilities of a German Collapse', J.I.C. (43) 367 Final, 9 Sept. 1943, NA, ABC 381 Germany, 29 Jan. 1943, Sec. 1-A.

<sup>6</sup> *Ibid.* 3 (para. 11).

<sup>7</sup> 'Probabilities of a German Collapse', J.I.C. 112/2, 21 Oct. 1943, NA, ABC 381 Germany, 29 Jan. 1943, Sec. 1-A.

today than in the First World War for preventing a political articulation of demoralization trends at home from spreading to the fighting troops, whose morale, unlike in the late summer of 1918, was largely intact.

- (2) In terms of war objectives and policy, the Allied camp was less cohesive than in 1918. This time, moreover, it was harder for the Anglo-Saxon powers to provide logistic support for the operations of their main ally on the continent of Europe—in 1918 France, now the Soviet Union. All of this was likely to strengthen Germany's expectation that, even in a seemingly hopeless situation, continued resistance would pay in the long term.
- (3) In the event of capitulation, Germany had much more reason to fear retaliation measures by the Allies than at the end of the First World War. For that reason, the Allied demand for unconditional surrender constituted a much higher psychological barrier than President Woodrow Wilson's 'fourteen points', particularly as it had been hammered into the German people that the peace conditions of 1918/19 were responsible for all their misfortunes, and that another capitulation would have similar consequences, only much worse.
- (4) It was hardly conceivable that the present National Socialist leadership would ever accept the demand for unconditional surrender. But even if that leadership were to lose political control as a result of growing war-weariness and a mounting desire for peace on the part of the population, it could scarcely be assumed that the transition to a leadership more flexible on the peace question would take place as rapidly and smoothly as in 1918.<sup>8</sup>

With hindsight it is, of course, easy to see the defectiveness of the British assessment of the situation and the comparatively greater realism of the American analysis.<sup>9</sup> More noteworthy is the fact that *both sides* left out of consideration factors whose full weight can be appreciated only at a historical distance. What at once seems significant in this connection is the great difference between Hitler's position and that of Ludendorff. The latter, whose personal responsibility was confined, at least formally, to the *military* conduct of the war, had in the German government a civilian leader to whom he could address his armistice demand—a leader who assumed responsibility for its political implementation and consequences, and even—as the success of the 'stab in the back' legend shows—took upon itself the responsibility for military defeat. In contrast, the lone and solely responsible Führer of 1943 had no other authority to which he could shift blame for defeat. In a situation where political and military leadership were vested in a single person, an opposition no longer existed, and full control of all areas of life had become the

<sup>8</sup> A JIC study of 21 Sept. 1943 entitled 'Possible Patterns of German Collapse' also deemed the likelihood of a revolutionary overturn in Germany relatively small, whereas the machinery of totalitarian control was found to be highly effective.

<sup>9</sup> A discussion of the reasons for such differing British and American assessments of the situation would take us too far from our subject. It would nevertheless be an interesting exercise, since it would probably reveal very different perceptions of the European totalitarian regimes on the part of Washington and London.

hallmark of the regime, its representative had, from the outset, scarcely any chance of surviving the foreseeable military and political collapse, as the representatives of the top military leadership had managed to do after 1918.

Hitler thus had very good reason to engage in the irresponsible game of chance with the fate of the Reich which Ludendorff had rejected in his day.<sup>10</sup> As he never tired of stressing, this war—especially its central component, the fight against the Soviet Union—was totally different from all previous wars. This time it was not a battle in which ‘the stakes could be recovered later’, but an ‘existential struggle’.<sup>11</sup> This, so it appears, was no propaganda cliché but Hitler’s deepest conviction. He had embarked on his genocidal war against ‘Jewish Bolshevism’ as precisely that—an existential struggle. The idea—indeed, the certainty—that such a war would now inevitably be waged against its instigator and his regime, left the dictator no room for any kind of armistice.<sup>12</sup> Imagining the ‘Jewish extermination squads already advancing behind the oncoming Soviet divisions’,<sup>13</sup> Hitler and the staunch propagator of his world-view saw no alternative to further radicalization of Germany’s conduct of the war.

That radicalization became the hallmark of all the political and strategic efforts of the ‘Thousand-Year Reich’ during the barely two years left to it. The consequences are everywhere perceptible. Thus, the Holocaust, as shown above all by the examples of France, the Ukraine, and Hungary, was stepped up even further,<sup>14</sup> while at the same time Germany’s own war losses, although long since unbearable, rose to dizzy heights. Under increasing pressure, German occupational rule now quite openly imposed a regime of exploitation and terror in western and northern Europe too, and intensified its hand-in-hand cooperation with the most extreme collaborationist elements.<sup>15</sup> People within the Reich now felt the consequences of the move to ‘total war’ in everyday life, though remarkably late and less drastically than beyond its borders.<sup>16</sup> At the same time, under the pressure of seemingly unending setbacks, the framework conditions for the military conduct of the war changed at a strategic level. Hitler’s tendency to strategic and operational dogmatism increased as his options for action diminished, while the readiness of wide circles of the military leadership to accept his orders weakened as the spectre of German defeat began to take concrete shape. This tension resulted, at first under the surface, in a permanent crisis of leadership that finally erupted in the events of 20 July 1944.

<sup>10</sup> Ludendorff, in his time, had also been called a ‘brilliant gambler’ by Scheidemann. Hans Delbrück, who justifiably doubted Ludendorff’s ‘brilliance’, defended him with the significant comment: ‘Every commander-in-chief must be to some extent a gambler and dare to tempt providence. Frederick the Great is said to have called the outcome of every battle a “gamble”, and Clausewitz attributed Blücher’s prowess as a military commander to his gambler’s nature’ (Delbrück, *Ludendorffs Selbstporträt*, 40).

<sup>11</sup> Meeting with Ion Antonescu on 10 Jan. 1943, quoted in *Staatsmänner und Diplomaten*, ii. 202.

<sup>12</sup> ‘A life-and-death struggle cannot be resolved by diplomatic trickery,’ Hitler declared to the Hungarian regent on 16 Apr. 1943 (*ibid.* 248). On the connection between German conduct of the war and the Holocaust, see Jersak in *Germany and the Second World War*, ix/I. 325–32.

## II. From the Setbacks in the Summer of 1943 to a Permanent Crisis of Leadership

July 1943 was a cruel month for the German leadership. The balance-sheet for those few weeks was disastrous. The carefully planned Operation CITADEL attacks had failed, the western Allies had landed in Europe, two of Germany's biggest and most splendid cities, Cologne and Hamburg, had been largely reduced to ashes, and fascism had been swept away in Italy, its country of origin. As the month drew to a close, Orel in the east and Sicily in the south, were about to fall, and Italy, Germany's most powerful European ally, was about to leave the war. Each of these disasters had worrying features of its own. In the case of CITADEL, there was the realization that for the first time in the war a German summer operation had stalled from the outset and the units involved had been forced onto the defensive. 'That was something we had not been used to before in summer,' Joseph Goebbels noted resignedly.<sup>1</sup> Also in the case of the British air raids on Hamburg in the last weeks of July, the propaganda minister could only admit that the destruction of the metropolis 'lacks all historical precedent. It is raising almost insuperable problems [...] I think most of Hamburg has to be written off.'<sup>2</sup> In the space of a few days Operation GOMORRAH had claimed 30,000 victims and destroyed a third of the Hanse city's housing stock. Hundreds of thousands left homeless had fled in panic or been evacuated.<sup>3</sup>

The fear, not to say expectation, that a comparable firestorm would soon or later be unleashed on the German capital was now ever present. Particularly worrying from the strategic viewpoint was the fact that, as in the case of the air raids on Cologne a few weeks earlier, the German anti-aircraft defences had managed to shoot down very few enemy planes (barely 2 per cent in all). Fortress Europe, even at its very heart, was thus revealed as a fortress without a roof. That impression was strengthened by further heavy air raids in the same month on Duisburg, Essen, Saarbrücken, Remscheid, and Düsseldorf. The Anglo-American air war against Germany took on a new dimension in those months. In 1943 close on 230,000 tonnes of bombs fell on the German Reich and the bordering territories, far more

<sup>1</sup> Goebbels, *Tagebücher*, pt. 2, ix. 126 (19 July 1943).

<sup>2</sup> Ibid. 190 (29 July 1943).

<sup>3</sup> In another respect the air raids had failed, since only five months later Hamburg's armament production was back to 80% of its original level. It was only the air raids of 1944 which led to permanent collapse; see *Germany and the Second World War*, ix/I. 385–90 and vii. 43–55.

than twice as many as in the whole of the war until then. Yet compared with the figures for 1944 and 1945 it was only the beginning.<sup>4</sup>

Hitler himself seemed not directly affected by all this. Unlike Winston Churchill, who liked demonstrative visits to heavily bombed areas of London, the German dictator was noticeably concerned to keep his distance from the everyday suffering both of his troops and of the civilian population. More than any other politician, he owed his rise and success to direct contact with the masses, but now he sought to barricade himself against them. He avoided any contact with victims of the war, took refuge in the virtual world of his headquarters, and even resisted his propaganda minister's urgent pleas to address his people over the radio in their hour of greatest need.<sup>5</sup> It was not until the end of June, after a few comparatively restful months at Obersalzberg, that Hitler returned to the East Prussian 'Wolf's Lair' in which he had spent most of his time since the beginning of the war against the Soviet Union. He hardly left it again until February 1944. The fact that within the already heavily guarded Security Zone I, inhabited by only a few hundred staff and servants, a further special security zone was now established around the Führer bunker<sup>6</sup> seems an act of symbolic importance in this context.<sup>7</sup>

The dictator's self-imposed isolation not only reflected his deep concern about his popularity and security. It was also an essential precondition for relentless continuation of the war, regardless of the consequences. 'Here we see the major divisions and stages of the air war,' a perceptive observer of the atmosphere in Führer headquarters remarked, 'but we are rather shy of the details. There is no room here for the suffering of individuals.' Thus details of the air raids were no longer discussed at the 'Führer conferences', 'only really far-reaching production shortfalls, transport disruptions, etc.'. The result was 'a paralysis of feeling as a natural defence mechanism. The heart simply no longer fully responds.'<sup>8</sup> Invited to dinner in the company of Wilhelm Keitel, Alfred Jodl, and Hans-Heinrich Lammer, a secretary working in Security Zone II who had just come back from heavily bombed Berlin also realized that in those circles 'they have no idea what life is like in a bombed city'.<sup>9</sup> She found behaviour in the central military staffs wholly unnatural: 'People become so restricted and one-sided. Of course there are exceptions. But this "elite staff", always together, always outside real life, concerned only with situation maps and strategic problems!'<sup>10</sup>

That distance was precisely what Hitler needed in order to be able—regardless of the increasingly bad news on the political and military fronts—to continue projecting the optimism on whose effect he had always been able to count. That

<sup>4</sup> For details, see Friedrich, *Der Brand*, and *Germany and the Second World War*, vii. 7–453.

<sup>5</sup> Not until 10 Sept. 1943 did Hitler feel 'able to speak to the German people again without having to lie to myself or to the public' (radio address of 10 Sept. 1943, quoted in Domarus, *Hitler. Reden und Proklamationen*, ii. 2035). From 1944 Hitler no longer appeared in public as a speaker.

<sup>6</sup> See Seidler and Zeigert, *Die Führerhauptquartiere*, 205 and 345 ff.

<sup>7</sup> On Hitler's withdrawal from the public eye, see also *Germany and the Second World War*, ix/II. 238–42.

<sup>10</sup> Ibid. 162 (16 Mar. 1944).

optimism, which many people deeply internalized, was much more than just a propaganda trick. During the second half of the war it became nothing less than the state ideology of the declining regime. Germany's 'total war' was a war of total rhetoric. Its main purpose was to reinterpret defeats as victories, setbacks as opportunities, and sadness as pride. Immediately after the strategically disastrous collapse of Germany's U-boat campaign in the Atlantic, for example, Karl Dönitz announced a 'new U-boat war'. On 8 June he informed the divisional and departmental heads of his high command that '1943 is proving a hard nut to crack. 1944, 45, 46, and 47 will be better.'<sup>11</sup>

In the same way, as Hitler tried to tell his propaganda minister in all seriousness, 'our military setbacks in the east are to be equated with political victories', since they laid bare Stalin's aims and 'the inner tension in the enemy camp'.<sup>12</sup> Italy's withdrawal from the war now also appeared less as a strategic disaster than a necessary act of purification. It meant only that the half-hearted and lazy had been eliminated. However regrettable the personal fate of Benito Mussolini, 'a leopard can never change its spots', and fascism had always been 'a superficial phenomenon' which had never taken roots in the Italian people, which consisted 'only of idlers and cowards'.<sup>13</sup> The Allied air raids on Berlin, which had been increasing since the autumn of 1943, were now also seen as an act of providence. The Reich capital had to 'suffer wounds' for the sake of its future.<sup>14</sup> They were 'the great prelude to its historic destiny'. While the material damage would soon be repaired after the end of the war ('the Führer has already drawn up great plans for the reconstruction of Berlin'), the 'glory won by Berlin' in this time of destruction would never be lost.<sup>15</sup> Moreover, as Goebbels asserted not without reason, aerial terror strengthened the morale of the civilian population and welded the nation more closely together. The bombed-out civilians were, 'so to speak, the proletarians of the air war'. As such, they experienced National Socialism 'more as givers than as takers'.<sup>16</sup> Hitler welcomed the fact that the bombed-out population included generals and admirals, since it only made them 'tougher and more unyielding'. This bizarre perception of the suffering of millions caused by the bombing war is matched by the fact that the dictator apparently considered himself 'fortunate' to see his Reich chancellery and Munich residence hit by Allied bombs.<sup>17</sup>

Despite all his outward optimism, Hitler had few illusions about the real situation. The war could be won 'only if I can inflict more destruction on the enemy than he on us'. But that required more than simply the strength of will and nerves of steel which Hitler propagated as the recipe for victory.<sup>18</sup> Convinced that

<sup>11</sup> Quoted in Salewski, *Die deutsche Seekriegsleitung*, ii. 294.

<sup>12</sup> Goebbels, *Tagebücher*, pt. 2, xi. 157 (25 Jan. 1944). <sup>13</sup> Ibid., x. 518 (20 Dec. 1943).

<sup>14</sup> Ibid. 399 (1 Dec. 1943). At the same time, Roland von Hösslin, a young officer who witnessed the heavy British night-time air raids of 22 to 23 November, wrote to his parents that 'in the last few nights Berlin has become a wilderness' (letter dated 25 Nov. 1943, quoted in Kageneck, *Zwischen Eid und Gewissen*, 85).

<sup>15</sup> Goebbels, *Tagebücher*, pt. 2, x. 513 (20 Dec. 1943).

'the Englishman' would cease his terror bombing of Germany only if 'his own cities are destroyed, and only then',<sup>19</sup> he repeatedly demanded retaliation strikes against the British Isles. But he knew very well that the Luftwaffe's forces were insufficient. 'The fact is, we now count ourselves lucky if we manage to find London,' he observed mockingly during a situation conference. He himself, however, had no remedy for that 'shameful' state of affairs.<sup>20</sup> Hitler was not exaggerating. At around 3,000 tonnes of bombs in 1943, German 'counter-terror' against Britain amounted to just over 1 per cent of the tonnage dropped on 'Fortress Europe' by British and American pilots. This, however, did not prevent the Führer from enthusing about the coming destruction of London well into 1944. The V1s and V2s, to be followed by a V3 and a V4, were going to reduce the British metropolis to a heap of rubble.<sup>21</sup> As Albert Speer confided to his diary a few years after the war, he recalled:

Hitler's ordering showings in the Chancellery of the films of burning London, of the sea of flames over Warsaw, of exploding convoys, and the rapture with which he watched those films. I never saw him so worked up as toward the end of the war, when in a kind of delirium he pictured for himself and for us the destruction of New York in a hurricane of fire. He described the skyscrapers being turned into gigantic burning torches, collapsing upon one another, the glow of the exploding city illuminating the dark sky.<sup>22</sup>

What agitated the dictator in the summer of 1943 even more than his own impotence with regard to the devastation of German cities was the fall of his closest ally. The circumstances in which fascism simply 'expired' in Italy, its country of origin, 'undramatically' from one day to the next<sup>23</sup> were eminently suited to arouse concern about his own future. The reports from the SS Security Service on the mood of the population strengthened that concern. Nor had anyone forgotten that the end of the last great war had been initiated by the collapse of a German ally. Goebbels considered 'the fact that enemies of the regime believe an authoritarian state can be overthrown in such manner' to be in itself 'extremely dangerous'.<sup>24</sup> Heinrich Himmler also thought the arrest of the Duce and the fall of fascism could give rise to a 'very serious psychological situation' in Germany too, which could encourage defeatist elements to take similar action.<sup>25</sup> The unexpected appointment of the Reich Leader SS as the new minister of the interior shortly before, on 20 August 1943, showed more emphatically than any words how critical the Nazi leadership considered the internal situation of the Reich to be.

<sup>19</sup> Ibid.      <sup>20</sup> Ibid. 295.      <sup>21</sup> See Speer, *Spandau: The Secret Diaries*, 43 (18 Mar. 1947).

<sup>24</sup> Goebbels, *Tagebücher*, pt. 2, ix. 184 (28 July 1943).

<sup>25</sup> Thus in an address to Reichs- and Gauleiters on 6 Oct. 1943, Himmler, *Geheimreden*, 171; see also Goetzinger, 'Italien', 157 ff.

Although Hitler had long shown concern about the threatening destabilization of fascism in Italy, he was unquestionably surprised and deeply shaken, both personally and politically, by the news of the fall of his long-standing role model and closest personal ally. At noon on 25 July 1943 (the day the air raids on Hamburg began), when the first rumours about the events in Italy began to filter through, Hitler's opinion of Pietro Badoglio's new government was already firmly established: 'They declare, they fight, but it's treachery! Let's be clear about it: it's naked treachery'<sup>26</sup> Hitler still hoped to restore fascism in Italy with German support. The efforts to do so<sup>27</sup> are particularly noteworthy in this context as a further exemplary illustration of the unbridgeable contradiction which had developed between strategic and operational thinking or, to put it another way, of the regime's diminishing ability to solve political problems by military means.

A conference between Hitler and Field Marshal Hans Günther von Kluge, the commander-in-chief of Army Group Centre, on 26 July is highly instructive in this respect. On the face of it, the meeting was about the situation on the eastern front, especially in the Orel bulge, but in fact it was Mussolini's resignation the previous day which determined the course of the discussion. The dictator made it abundantly clear to his field marshal that, for him, Italy took absolute priority and that he was determined to 'intervene like lightning here too, just as I did in the case of Yugoslavia [in the spring of 1941 – B.W.]'. The Italian resistance was 'next to nothing', the fascists would 'come over to our side', and Mussolini himself would be 'freed immediately by paratroops'.<sup>28</sup> But, as Hitler sought to make clear to his visitor, he could act 'only if I can transfer some more units from east to west'.<sup>29</sup> The troops Hitler had in mind were the SS divisions deployed with Army Group South, which seemed to him predestined for intervention in Italy, not only because of their striking-power<sup>30</sup> but also because of their political orientation. To be able to withdraw them from the front as soon as possible, the dictator, otherwise so reluctant in matters of retreat, was now ready to give up the whole Orel bulge without further ado and, if necessary, effect 'other minor shortenings of the front'.<sup>31</sup>

For Kluge, whose troops were engaged in a desperate defensive struggle in the central sector,<sup>32</sup> the evacuation of Orel could be considered, but not the withdrawal of powerful combat units: 'My Führer! I must point out that nothing can be withdrawn at the moment. It is completely out of the question at the present time'<sup>33</sup> Hitler's continued insistence ('but it has to be possible, nevertheless') finally rebounded on him when the discussion turned to one of the fundamental shortcomings in the conduct of the war in the east for which Hitler was personally responsible, namely the lack of well-fortified rear positions. Kluge pointed out that

<sup>33</sup> *Lagebesprechungen im Führerhauptquartier*, 374.

a transfer of troops for deployment in Italy would be possible in the event of withdrawal to the Hagen Line, a shortened defensive line to the east of Bryansk. That line, however, was still under construction and, in the field marshal's opinion, would be ready for occupation in three to four weeks at the earliest—much too late for the dictator's 'lightning intervention' in Italy.

In this case, as in others, it proved impossible to resolve the tension between what Hitler saw as strategic necessity and what his generals considered operationally feasible. This contradiction had been characteristic of the regime's conduct of the war from the outset, but during the first two war years it had mostly been overcome because decisions of the dictator which were worrying from the professional military viewpoint could be mitigated at operational level—though often at the cost of high risk-taking—thanks to the Wehrmacht's superiority in materials, personnel, and operational skill. Since the winter crisis of 1941/2 it had been more seldom possible to surmount the contradiction in that manner. The cases of Moscow, Stalingrad, North Africa, and Kursk had demonstrated emphatically that political-strategic decisions taken without regard to actual operational possibilities necessarily resulted in military disasters. If those events had not yet led to an open systemic crisis of the Nazi state, it was primarily because Hitler's 'seizure of military power',<sup>34</sup> that is, his step-by-step appropriation of ever-more military leadership functions, had deprived his potential critics in the army and Wehrmacht of all leadership responsibility of their own. In that respect Hitler rightly regarded the break-up of a unified Wehrmacht command as a specific achievement and, particularly at the present time, a 'major facilitation' of his rule.<sup>35</sup>

Even the events of the summer of 1943, devastating as they were in every respect, did not lead to open conflict between the political and military leadership. They nevertheless contributed to the increasing estrangement between Hitler and his generals. The Führer now complained more and more frequently that the generals had no confidence in him.<sup>36</sup>

The loss of trust was mutual. Since Stalingrad, so it seems, more and more generals had already begun to have serious doubts about the prospects for German victory, despite all the assurances from the leadership.<sup>37</sup> Such doubts were common above all among the Army General Staff, whose chief, General Kurt Zeitzler, was finding it harder and harder to reconcile personal loyalty and professional insight since the failure of Operation CITADEL, and increasingly regretted 'not chucking it all in after Stalingrad'.<sup>38</sup> In fact, Zeitzler was 'probably the most loyal chief of the

<sup>34</sup> The expression comes from Stumpf, *Die Wehrmacht-Elite*, 303.

<sup>35</sup> File note by Himmler's secretary, Rudolf Brandt, concerning a comment made by Hitler to the Reich Leader SS on 7 Sept. 1943, NA, Washington, Microfilm Series T-175/Roll 88/Image 1418.

<sup>36</sup> Goebbels, *Tagebücher*, pt. 2, ix. 137 (21 July 1943).

<sup>37</sup> See Krechel, 'Die Bewertung der Kriegsniederlage', 44 ff.

<sup>38</sup> Thus Zeitzler's former adjutant, Lt.-Col. Günther Smend, in a report dated 1 Aug. 1944 on the attitude of younger officers in the General Staff to the top leadership, repr. in Kageneck, *Zwischen Eid und Gewissen*, 175–81, here 177. The report, written in prison after 20 July, is problematic from the viewpoint of source criticism but gives a good idea of the changing climate in the Army General Staff.

General Staff [...] the Führer could have wished for,<sup>39</sup> and not only in the opinion of his own adjutant. But at the same time he was the direct hierarchical superior of all the officers in his staff who—like Eduard Wagner, Erich Fellgiebel, Hellmuth Stieff, Rudolf Gercke, and Adolf Heusinger<sup>40</sup>—expressed their criticism of the dictator's command decisions ever more bluntly in their growing awareness that the war was hopeless. As heads of department in the central headquarters for conduct of the war in the east, they thus helped, deliberately or not, to create a climate in which 'the officer corps of the operations departments, influenced by the attitude of their superiors, no longer fully believed in the Führer and his military competence'.<sup>41</sup>

Notwithstanding individual variations in the reaction of members of the military elite to the increasingly apparent perplexities of the war, four typical patterns of behaviour can be identified, as a rough simplification. By far the most frequent reaction seems to have been resigned, often fatalistic, 'internal flight'. Conscious of being anyway unable to influence the overall course of the war, the individual retreated into the kernel of his own area of responsibilities and confined himself to doing, under increasingly difficult conditions, what he considered to be his duty. For Germany's strategic position, the behaviour of this group was significant in that, deliberately or inadvertently, it helped to prolong a war that had long become hopeless and a National Socialist rule that was bankrupt in every respect. The opposite reaction of the few officers who, through 'external flight' into military resistance, sought to destabilize the National Socialist system and shorten the war<sup>42</sup> will not be discussed in detail here, but it should be noted that a whole year would pass before the 'liberating act' of 20 July.

For the second half of 1943 the behaviour of another group of generals was of greater significance. We refer to those front-line commanders-in-chief who, like Erich von Manstein first and foremost,<sup>43</sup> were not prepared to give the war up for lost, but hoped to put German military operations on a new footing before it was too late by means of organizational reforms that would disentangle the political from the military conduct of the war. Convinced that Hitler would rather give up supreme military command than face total defeat, the commander-in-chief of Army Group South made repeated attempts to have his ideas on reorganization discussed at the highest level. He first took the opportunity to confront Hitler with his proposals directly on 3 September 1943, when he and Field Marshal von Kluge went to the 'Wolf's Lair' to discuss the distribution of forces on the eastern front. The outcome is described as follows in his memoirs:

I am sorry to say that the talk von Kluge and I had with Hitler proved quite profitless. Hitler declared that no forces could be spared either from other theatres or from Army

<sup>39</sup> Ibid. 177. Goebbels testifies repeatedly to a similar appreciation of Zeitzler by Hitler; Goebbels, *Tagebücher*, pt. 2, ix. 265 (10 Aug 1943) and 581 (23 Sept. 1943).

<sup>40</sup> On Heusinger's attitude in detail, see Meyer, *Adolf Heusinger*, 214 ff.

<sup>41</sup> See Kageneck, *Zwischen Eid und Gewissen*, 176.

<sup>42</sup> On military resistance in detail, see *Germany and the Second World War*, ix/1. 771–925 (Heinemann).

<sup>43</sup> On Manstein's strategic optimism, see also Stahlberg, *Die verdammte Pflicht*, 310, 315, and 339, and Wrochem, *Manstein*, 95 ff.

Group North. His reaction to the idea of creating a unified command by transferring responsibility for all theatres of war to the Chief of the General Staff was equally negative, his contention being that even the latter's influence could make no difference or improvement to the overall conduct of the war. Hitler, of course, was fully aware that the ultimate object of proposing a chief of staff who would be responsible for all theatres of operations was that he (Hitler), while continuing to have the final say, should relinquish the conduct of operations as such. He was just as much opposed to this as he was to renouncing the command in the east by appointing an actual commander-in-chief for that theatre.<sup>44</sup>

In the following months Manstein repeatedly brought up his proposals in personal discussions with Hitler, but never met with anything other than icy rejection.<sup>45</sup> While Manstein's pressing insistence was proof of personal courage, it also showed his considerable naivety in many respects. That applies not only to his hope—which appears wholly unfounded, at least in retrospect—that German defeat could still be averted and that the Allies could be fought to a draw,<sup>46</sup> but also to his conviction that he had found the key to success in the appointment of a chief of staff with overall responsibility. Manstein was well aware of Hitler's fatal tendency to compensate for the lack of an overall strategy by ever-more individual, often questionable, operational decisions: he had experienced it far too often to overlook it. What he did fail to understand, however, was the specific 'grammar' of a National Socialist Führer state, which rendered impossible the organization of warfare by society as a whole, that is, as a rational balance of civil and military, political, economic, and operational interests.

For this reason, not least of all, his attempts at intervention had the opposite effect to that intended. What Manstein saw as a system-inherent last-minute attempt to save the situation appeared to Hitler and his paladins as unsolicited interference by an overambitious, ideologically unreliable field marshal. The star of Germany's uncontestedly most gifted military commander began to fade rapidly. Hitler, as Goebbels noted gleefully, now likened Manstein to Hjalmar Schacht.<sup>47</sup> Unlike Field Marshals Kluge and Küchler, who were considered 'loyal and reliable' despite their age, as well as Ewald von Kleist, who also stood 'on firm intellectual

<sup>44</sup> Manstein, *Verlorene Siege*, 525. Other commanders made proposals similar to those of Manstein and Kluge. Thus Field Marshal von Kleist, the C-in-C of Army Group A, in an undated draft of a proposal to Hitler, evidently from late autumn 1943, to 'create a Chief Quartermaster-General of the Wehrmacht who, at one and the same time, is your permanent representative as Commander-in-Chief of the Army, works in accordance with your instructions and is in charge of operations in the east, has advisory powers with regard to all other theatres of war, is responsible to you for organization of the army and manpower deployment, and to whom the Commander of the Replacement Army is consequently also subordinated, etc. Under him there is a Chief of the Wehrmacht General Staff and the Chief of the Army General Staff.' BA-MA RH 19 V/2, fos. 31–5, here 34–5.

<sup>45</sup> See Manstein, *Verlorene Siege*, 572 ff., and Stahlberg, *Die verdammte Pflicht*, 354.

<sup>46</sup> See Manstein, *Verlorene Siege*, 474.

<sup>47</sup> Goebbels, *Tagebücher*, pt. 2, x. 177 (27 Oct. 1943). Schacht, the former Reich minister of finance and president of the Reich bank, was removed from office before the war as politically unreliable.

and spiritual ground', Manstein was 'an exceptionally skilful and versatile tactician, a clever professional, but lacking any world-view and any inner firmness or strength of character'.<sup>48</sup> It is hardly surprising that 'the weak and militarily questionable leadership of Field Marshal von Manstein' was 'getting on the Führer's nerves', so that in October—far too late, in Goebbels' opinion—he was already thinking of putting Walter Model in command of Army Group South instead of Manstein.<sup>49</sup>

Only a few months later Hitler's relations with Manstein suffered further owing to an incident that was harmless in itself, but is, for that very reason, particularly significant for the Führer's relationship with his generals. In an address to field marshals and commanders-in-chief on 27 January 1944, Hitler called for the unconditional loyalty of his listeners. 'If I should ever be deserted as supreme Leader,' he declared, 'I must have as the last defence around me the entire officer-corps, who must stand with drawn swords rallied round me.'<sup>50</sup> Manstein's interjection at that point—'And so it will be, *mein Führer*'—probably sprang from the field marshal's irritation at the implication of latent disloyalty on the part of himself and his colleagues.<sup>51</sup> The icy exchange left the listeners irritated and the speaker furious. On 30 March, two months after the incident and a year after his operational triumph in restabilizing the eastern front, Manstein was relieved of his command and not used further till the end of the war.<sup>52</sup> 'That finally settles the Manstein problem, the most critical problem in our conduct of the war,' Goebbels commented.<sup>53</sup>

The propaganda minister was wrong. The most critical problem in the conduct of the war was not Manstein but the continuing crisis of confidence between the political and military leadership. The latter served increasingly as a buffer between Hitler's criticism, inflamed by constant military setbacks on the one hand, and on the other, the discontent felt among the troops themselves as the physical and

<sup>48</sup> Ibid.      <sup>49</sup> Ibid. 165 (25 Oct. 1943).

<sup>50</sup> Quoted in Kershaw, *Hitler 1936–1945: Nemesis*, 618–19, which gives the most accurate account of the incident in terms of source criticism. See also the slightly different wording in Domarus, *Hitler. Reden und Proklamationen*, ii. 2080. Consistent with the image he employed here, in the last days before his suicide Hitler actually considered going out to meet the Russian enemy weapon in hand and falling on the steps of the Reich chancellery; see Fest, *Der Untergang*, 81.

<sup>51</sup> Quoted in Kershaw, *Hitler 1936–1945: Nemesis*, 619; see also in detail the not entirely reliable account in Manstein, *Verlorene Siege*, 579 ff., as well as Stahlberg, *Die verdammte Pflicht*, 354 ff. Goebbels spontaneously assumed that Manstein's interjection was due to 'his need to clear himself from some suspicion' (Goebbels, *Tagebücher*, pt. 2, xi. 189, 28 Jan. 1944). Opinions also differ as to the effect of Manstein's interruption on the other listeners. While Manstein in his memoirs (*Verlorene Siege*, 580) speaks of relief on the part of his comrades 'who found Hitler's words just as provocative as I did', the propaganda minister, informed by Schmundt, noted that Manstein's interjection was 'received rather negatively' by the other generals (Goebbels, *Tagebücher*, pt. 2, xi. 196, 29 Jan. 1944). That must have been true of Heusinger at least; the chief of the Army General Staff's operations department found Manstein's intervention incomprehensible. For him, as he wrote to his wife, it showed how the field marshal 'was clinging to his position and almost betrayed himself in the process. I was once again very disappointed' (letter dated 19 Jan. 1944, quoted in Meyer, *Adolf Heusinger*, 256).

<sup>52</sup> That this manifestation of insubordination and Manstein's subsequent dismissal were by no means coincidental is attested by a diary entry by Schmundt dated 27 Jan. 1944. See also Manstein, *Verlorene Siege*, 614 ff. On Manstein's continued impact in German memoir literature, see Wrochem, *Manstein*.

<sup>53</sup> Goebbels, *Tagebücher*, pt. 2, xi. 589 (31 Mar. 1944).

psychological pressure on the units at the front became permanent. It was therefore no isolated incident when front-line commanders and staff officers pressed for 'the soldier's work to be left to trained soldiers in all its aspects, i.e. the creation, maintenance, and employment of the soldier's tool. The soldiers in charge should be assigned their tasks,' wrote a staff chief from the area of Army Group A,<sup>54</sup> 'and the execution of those tasks should be left to them. Obviously, the tasks must correspond to existing possibilities and not derive from wishful thinking. In this way, I believe, we will be able to sort out the mess. But it's high time! If we don't re-establish sustainable, stable relations, confidence in the top leadership will disappear, and that will be the end.'

These fears were by no means imaginary, as is shown clearly by the dispute that broke out in the autumn of 1943 over the evacuation of Crimea. In the last weeks of October, General Erwin Jaenecke, the commander-in-chief of Seventeenth Army, openly threatened to ignore the orders from above and, in the absence of sufficient defence forces, to evacuate the peninsula on his own authority. The term 'Fortress Crimea', he declared, was 'a pure fiction'. Significantly, he justified his determination to disobey orders on the grounds that 'he had already experienced at Stalingrad how a commander-in-chief had tortured himself with self-accusations in front of his five commanding generals, and had no wish to go through that a second time'.<sup>55</sup> Only with difficulty was Kleist, the commander-in-chief of Army Group South Ukraine, able to talk the general out of his intended insubordination. Although the principle of obedience to orders won out,<sup>56</sup> the lack of confidence in the political leadership was unmistakable. The commander of Seventeenth Army was not the only one who found the Führer order to hold the Crimea incomprehensible. Kleist too, who as field marshal and commander-in-chief of an Army Group was one of the highest-ranking officers on the eastern front, was unable to defend the substance of the decision in the absence of more detailed background information. 'I am not aware of your intentions and do not know, *mein Führer*, how you envisage the continuation of operations on the eastern front,' he complained. 'I even have only a rough idea of the situation on the fronts of the other Army Groups.' All the civilian agencies and firms in the zone of operations, and apparently even the enemy, knew more than he.<sup>57</sup>

For Hitler and the National Socialist potentates who surrounded him, it was quite clear who was responsible for the crisis of confidence. If the troops were 'assailed by the spirit of doubt', it was simply because of 'the moral failure of our generals in the face of the crises in the east'. With some exceptions, they 'cannot

<sup>54</sup> This and the following quotation come from the undated draft of a letter, apparently from the late autumn of 1943. It was probably written by an unnamed Seventh Army general staff chief and addressed to his commander-in-chief, BA-MA RH 19 V/2, fo. 39.

<sup>55</sup> Thus in a telephone conversation with the commander-in-chief of Army Group A on the evening of 28 Oct. 1943, according to an undated memo plus Annexes 24 and 29, BA-MA RH 19 V/2, fos. 4, 14, and 16.

<sup>56</sup> 'The *only* issue here is obedience,' the chief of staff of Army Group A told the staff chief of Seventeenth Army in a telephone conversation on the evening of 28 Oct. 1943, BA-MA RH 19 V/2, fo. 18.

<sup>57</sup> Undated notes for a Führer address in late autumn 1943, BA-MA RH 19 V/2, fo. 31.

cope with the pressure'.<sup>58</sup> Once again it was Goebbels who called things by their name: 'The Führer, as he has frequently told me, considers the generals a disgusting bunch. They have no inner attachment to him; they keep their distance and are, for the most part, always in a hurry to make difficulties. Stalin has an easier time of it. He had the obstructive generals shot in good time, so they no longer get in his way'.<sup>59</sup>

It was no accident that conflict between the political and military leadership, hardly visible from the outside, grew extremely acrimonious long before the events of 20 July. Neither the outright rejection which the pragmatically intended 'reform' efforts of Manstein and others encountered, nor the massive suspicion which the army generals felt they were under, can be explained only by the increasingly desperate war situation and the sensitivity which it induced in all parties. In this situation the activities of the National Committee for a Free Germany (*Nationalkomitee Freies Deutschland*, or NKFD), formed in Moscow in July, and the League of German Officers (*Bund Deutscher Offiziere*, or BDO), founded two months later, contributed considerably to the unease of the German leadership. The NKFD manifesto, published to great propaganda effect on 13 July 1943, not only called for the overthrow of Hitler but sketched the outlines of a democratic post-war Germany. Basic rights of the individual and economic liberalism were to be restored, race laws abolished, and war criminals punished—under a flag coloured not black, red, and gold but, significantly, black, white, and red. The Wehrmacht's task was to prepare for Germany's rebirth by an orderly withdrawal to the borders of the Reich.<sup>60</sup> More worrying in its propaganda effect than the signatures of high-ranking KPD functionaries on the manifesto, which was thereby vitiated from the outset, was the fact that, in General Walther von Seydlitz-Kurzbach, an army commander highly decorated in two world wars, the BDO had the representative of a distinguished Prussian officer family at the very top.<sup>61</sup> As such, Seydlitz appeared as the very epitome of the class of national conservative army generals who, despite their long-standing political affinity with the Nazi regime, were only partially receptive to its ideology. 'It speaks very strongly against the German officer class', Goebbels commented, 'that such persons once had a place in its ranks'.<sup>62</sup>

One of the main reasons for the great fury directed at Seydlitz ('an out-and-out unpatriotic, treacherous swine'<sup>63</sup>) was that Hitler and his particularly challenged propaganda chief were quite helpless against the activities of the BDO. Convinced of the ideological unreliability of the top generals, as well as that of some of the troops and other sectors of the population, they tended to overestimate the impact of the calls for insurrection and revelations (especially about Stalingrad) disseminated over the radio, in Russian and British leaflets, and in personal letters to former comrades. According to an activity report of the chief of the Army's personnel department dated

<sup>62</sup> Goebbels, *Tagebücher*, pt. 2, xi. 240 (5 Feb. 1944).

<sup>63</sup> Ibid.

12 September 1943, thanks to the ‘devilish skill’ of the Soviets and their ‘highly sophisticated methods’, ‘the activities of this League have gradually given rise to a danger that has to be taken seriously’.<sup>64</sup> Nevertheless, Hitler and Goebbels were reluctant to react offensively to the attacks since, as the Führer put it, ‘if we confront them publicly we will have to polemicize against the generals’.<sup>65</sup> This resulted in the paradoxical situation that, while the BDO made little impact on the officer corps of Germany’s eastern army which was its actual target,<sup>66</sup> it was not entirely unsuccessful with regard to the Nazi leadership, whose growing mistrust of its own military elite it permanently strengthened.

The rift could not be healed, as became clear in the course of the winter of 1943/4, but it could be patched over by cosmetic measures. Typical of these was the idea of a declaration of loyalty signed by all the army’s field marshals, which was thought up and implemented jointly by Hitler’s chief adjutant, Rudolf Schmundt, and Goebbels. The declaration was read out to the Führer by Gerd von Rundstedt, the longest-serving field marshal, at a reception arranged for all the top generals at Obersalzberg on 19 March.<sup>67</sup> The purpose of the document, which Manstein later described as ‘quite unnecessary from a soldier’s point of view’,<sup>68</sup> was to demonstrate that ‘the army distanced itself from General Seydlitz in the harshest possible manner and severed the ties between them’. Otherwise the danger would remain ‘that even well-meaning observers would see the Seydlitz case as a crisis of the whole army’.<sup>69</sup>

The greater the estrangement between sections of the military elite and the political leaders, the more decisive was the role of a fourth group of officers—those who, despite all the military setbacks, and indeed strengthened by them, were determined to follow their Führer unconditionally. Their motives varied greatly: ideological fanaticism, an understanding of the role of the military marked by the traumatic experience of 1918, and not infrequently careerism, opportunism, and corruption<sup>70</sup> were all determining factors. The typical representatives of this group were men like Eduard Dietl and Ferdinand Schörner, front-line generals of the middle or younger generation. Schörner joined the Nazi Party demonstratively at the beginning of 1943, was awarded the Golden Party Badge only a few weeks later, and in March 1944 was swiftly appointed ‘Chief of the Army’s National Socialist

<sup>64</sup> Schmundt, *Tätigkeitsbericht*, 96.

<sup>65</sup> Quoted in Goebbels, *Tagebücher*, pt. 2, xi. 403 (4 Mar. 1944). In the spring of 1944, however, when it became generally known that senior officers were also members of the NKFD/BDO, the tactics were changed to exemplary punishment in order to deter others from imitating them. In April 1944 Seydlitz was sentenced to death *in absentia* by the Reich court martial. This was followed by sentences against other leading members of the NKFD/BDO (incl. Hadermann, Korfes, and Lattmann), which were then made public.

<sup>66</sup> See in detail Heider, ‘Reaktionen’.

<sup>67</sup> On its impact, see Goebbels, *Tagebücher*, pt. 2, xi. 514–15 (20 Mar. 1944).

<sup>68</sup> Manstein, *Verlorene Siege*, 602–3. Goebbels, on the other hand, claimed that ‘it was Manstein, above all, who had pressed for the declaration to be signed and for it to be read out to the Führer in the presence of all the field marshals’. See Goebbels, *Tagebücher*, pt. 2, xi. 455 (11 Mar. 1944).

<sup>69</sup> Goebbels, *Tagebücher*, pt. 2, xi. 368–9 (29 Feb. 1944).

<sup>70</sup> On the long-underestimated importance of Hitler’s financial grants as an instrument for the political disciplining and corruption of his generals, see Ueberschär and Vogel, *Dienen und Verdienen*.

Guidance Staff at the OKH'.<sup>71</sup> Dietl, who had long been a loyal follower of Hitler, closed ranks with the Party even more strikingly than Schörner. Known for his affable nature and common touch, he spoke on public platforms in Bavaria and Austria in the autumn of 1943. On the steps of Munich's Hall of the Marshals, on the occasion of the twentieth anniversary of Hitler's attempted putsch, he proclaimed: 'The soldier at the front knows that in this battle the fate of the German people is at stake, that the Jews of the whole world have united to destroy Germany and Europe [...] the war is a merciless providential purifier. I solemnly declare: I believe in the Führer!'<sup>72</sup>

The dictator's preference for seasoned commanders of the younger generation who were both political believers and military go-getters would probably have had relatively little impact on the strategic conduct of the war if the enthusiasm for Hitler's genius had not also been shared at the highest staff levels. General Schmundt, for example, in his capacity as chief of the Army's personnel department, saw his task as reorganizing the promotion of officers on grounds of 'performance' according to Hitler's meaning of the word. The effects of this strongly ideological 'manipulation of the elite'<sup>73</sup> were discussed in an earlier volume.<sup>74</sup> More important in the present context is the OKW's disastrous role in shaping German defeat. The word had long got around that the chief of the OKW, Field Marshal Keitel, was by reason of his personality totally unsuitable as an independent adviser to his supreme commander. Hitler's treatment of the field marshal is typified by Keitel's complaint during the Stalingrad crisis. Asked about the current military situation, he admitted he was totally in the dark. Hitler told him nothing: 'He only spits at me!'<sup>75</sup> His uncritical compliance, indeed dog-like devotion to Hitler, earned him the nickname 'the little lackey' and had long lost him his credit in both military and political circles. Goebbels was surely not alone in considering him 'a dimwit and, furthermore, utterly devoid of character and purpose'.<sup>76</sup> Hitler nevertheless considered him indispensable<sup>77</sup> because, although 'incapable of taking any decisions on his own',<sup>78</sup> he had proved himself a competent and relatively unscheming administrator. His determination to shield the Führer against all unwelcome solicitations, defeatist memoranda, and other disagreeable attempts to influence him was the best conceivable guarantee of

<sup>71</sup> For an assessment of Schörner, see the two short critical biographies by Schönher, 'Ferdinand Schörner', and Steinkamp, 'Generalfeldmarschall Ferdinand Schörner'; on his activity in the National Socialist guidance staff, see *Germany and the Second World War*, ix/I. 623–5.

<sup>74</sup> See *Germany and the Second World War*, v/II. 918–42.

<sup>75</sup> Quoted in Hassell, *Vom andern Deutschland*, 251.

<sup>76</sup> Goebbels, *Tagebücher*, pt. 2, xi. 368 (29 Feb. 1944). See the similar judgement by Speer in *Alles was ich weiß*, 196–7. Material for an assessment of Keitel is available in the biographical sketches by Mueller, 'Wilhelm Keitel', and Mitcham, 'Generalfeldmarschall Wilhelm Keitel'.

<sup>77</sup> On Hitler's appreciation of Keitel, see Goebbels, *Tagebücher*, pt. 2, ix. 578 (23 Sept. 1943).

<sup>78</sup> Thus Speer in *Alles was ich weiß*, 195.

the absolute ‘calm in the eye of the storm’ which Hitler needed for his style of military leadership.

In addition, the chief of the OKW allowed himself to be instrumentalized unresistingly for the political purposes of the Nazi leadership. How willingly Keitel let himself be involved in the programme of reinforced ideological education of the officer corps<sup>79</sup> by which Hitler sought to overcome the growing criticism in the armed forces<sup>80</sup> was shown in spectacular fashion at a commanding officers’ conference in Bad Schachen in October 1943. In a programmatic introduction,<sup>81</sup> the Reich’s top-ranking soldier emphasized that in the present ‘battle of ideologies’, in which there was only ‘victory or downfall’, every soldier had to be ‘a political-ideological warrior’. Insisting on ‘fanatical dedication to the National Socialist idea’, he condemned ‘with the utmost severity, malicious criticism of the top leadership, its leading figures [...] especially when the criticism does not even stop at the person of the Führer himself. Such criticism and arrogance is nothing else than subversion of our fighting strength and national resilience.’ As ‘treachery’, it should be punished only by ‘court martial and the harshest sentences’. What must be expected of soldiers, and especially officers, was not criticism but optimism, confidence, and a ‘positive view of the situation and events’, as well as ‘political activism’, ‘unquestioning trust in the top leadership’, and the fight ‘against unfavourable interpretations’. ‘An officer’, Keitel concluded, ‘for whom belief in the Führer is not the supreme innermost duty has lost the right to be an officer and wear epaulets.’

What Keitel called for in such harsh terms at that conference, and repeatedly on subsequent occasions, went far beyond an optimism specific to the military profession, which was perhaps essential for convincing leadership. Much more than that, he demanded the renunciation of all criticism. And that was precisely what Hitler himself demanded quite explicitly shortly afterwards. On 27 January 1944, in an address to more than a hundred generals to which we have already referred, the Führer forbade all criticism. Criticism could exist only when directed by a superior at a subordinate, and never in the opposite direction.<sup>82</sup> A communication addressed to his commander-in-chief almost at the same time by a general staff chief in the area of Army Group A reads like a reply to Hitler and Keitel’s ultimately useless appeals, which ignored the needs of the troops. ‘Criticism already exists,’ he wrote. ‘And in my view it can be silenced only by deeds, not words, and cannot be ignored.’ Otherwise there was ‘a great danger that the troops will gradually lose confidence in their leadership and no longer obey orders’.<sup>83</sup>

<sup>79</sup> On this subject, see *Germany and the Second World War*, ix/I. 479–669 (Fürster).

<sup>80</sup> The most significant factor in this connection was Hitler’s order of 22 Dec. 1943, aimed at centralizing and radicalizing political and ideological work within the Wehrmacht; see *ibid.* 614–26.

<sup>81</sup> The following quotations are taken from the manuscript keyword notes for Keitel’s speech, 11 Oct. 1943, CAMO/Moscow, 500/12450/292.

<sup>82</sup> See Meyer, *Adolf Heusinger*, 864, n. 352.

<sup>83</sup> Undated document, probably from late autumn 1943, written by an unnamed general staff chief (Seventeenth Army), BA-MA RH 19V/2, fos. 38 and 37.

The prohibition on calling mistakes by their name, handed down from the very top, was nothing less than a demand to put professional considerations and needs after personal loyalty to the Führer. What was going on at this late stage in the war was thus no longer simply political incapacitation but politically motivated de-professionalization of the top military leadership. This renunciation of professionalism was internalized by the top leadership of the Wehrmacht to an unprecedented extent. A characteristic example is a note which Karl Dönitz, the commander-in-chief of the navy, added to his record of a conference held at Führer headquarters on 9 to 11 August 1943:

The enormous force which the Führer radiates, his unerring confidence, his foresighted assessment of the situation in Italy, made it very clear during these few days that we are all miserable specimens compared to him, and that our knowledge, our view of things from our limited perspective, are a patchwork. Anyone who thinks he can do better than the Führer is stupid!<sup>84</sup>

Alfred Jodl is perhaps a more tragic case than Keitel or Dönitz. Although hardly less in thrall to Hitler, General Jodl<sup>85</sup> was nevertheless a man of an entirely different cut. As chief of the Wehrmacht Operations Staff he was still Hitler's primary strategic adviser, but at the latest after the heavy setbacks of 1942,<sup>86</sup> which were accompanied by gruelling personal conflicts, he no longer played any noteworthy role as an independent strategic thinker. Esteemed, nevertheless, for his professional judgement, he clearly had few illusions about the outcome of the war for Germany. In the summer of 1943 he also maintained an essentially sober view. He was highly sceptical about Operation CITADEL, which Zeitzler favoured and Hitler half-heartedly supported. Soon after the Allied landing in Sicily, he realized that the island, and shortly afterwards the whole of southern Italy, could no longer be held. Long before Hitler, he saw that Mussolini's downfall was the end of fascism.<sup>87</sup> In fact, there are numerous indications, not least of all the notes Jodl himself kept in the Nuremberg prison, that Percy Ernst Schramm was correct in his early supposition that 'Alfred Jodl, at the bottom of his heart, no longer believed in final victory after the winter campaign of 1941/42, and certainly not after Stalingrad the following winter'.<sup>88</sup>

In a Wehrmacht leadership which operated on professional lines, such recognition would have led inevitably to the realization that the war was hopeless and thus to efforts to end it as soon as possible. However, there is not a single official document

<sup>84</sup> *Lagevorträge*, 538 (15 Sept. 1943). Also characteristic is Dönitz's concluding address at the meeting of naval commanders in Weimar on 17 Dec. 1943, BA-MA RM 7/98.

<sup>85</sup> Promoted to colonel-general on 30 January 1944 and decorated with the Golden Party Badge. The most thorough biographical treatment remains that by Scheurig, *Alfred Jodl*; Davidson's earlier account in *The Trial of the Germans* is also by no means obsolete. The more recent biographical sketches by Wilt, 'Alfred Jodl', and Macksey, 'Generaloberst Alfred Jodl', add little that is new, apart from varying assessments of Jodl's personality.

<sup>86</sup> See *Germany and the Second World War*, vi. 1048–59.

<sup>87</sup> See Scheurig, *Alfred Jodl*, 256 ff.

<sup>88</sup> Schramm, *Hitler als militärischer Führer*, 145. The relevant passages from Jodl's post-war notes are reproduced in *ibid.* 147–55.

of the Wehrmacht leadership which shows that such a conclusion had been drawn. What we see instead is a rapidly growing readiness, in comparison with the earlier war years, to repress reality. Perhaps the most shattering example from 1943 is the detailed lecture which the chief of the Wehrmacht Operations Staff gave to Reichs- and Gauleiters on 7 November of that year.<sup>89</sup> It was no accident that he began by alluding to November 1918, when Germany was 'broken not at the front, but at home'. The decidedly sombre picture of the overall military situation which Jodl went on to paint might well have led critical listeners to the conclusion that this time it was the other way round: it was the front, rather than the homeland, which gave cause for alarm.<sup>90</sup> At all events, Jodl was unable to offer his listeners a single strategically justifiable prospect of overcoming the crisis he had described. Instead, he invoked the superior 'ethical and moral foundations of our struggle', and ended with the following lofty declaration of faith, not inadvertently reminiscent of Carl von Clausewitz:<sup>91</sup>

At this hour I want not to speak from the mouth but to acknowledge from the deepest recesses of the heart that our trust and our faith in the Führer is limitless, that for us there is no higher law and no more sacred duty than to fight to the last breath for the freedom of our people, that we want to rid ourselves of everything soft and disloyal, that all the threats of our enemies will only make us even tougher and more determined, that we will not surrender to the cowardly hope that others could save us from Bolshevism, which will sweep everything away if Germany falls, that we would defend even the ruins of our homeland to the last bullet, because it is a thousand times better to live in ruins than to live in slavery, *that we shall win because we must win, for otherwise world history will have lost all meaning.*

Even allowing for the psychological and oratorical considerations which must have lain behind the way in which the chief of the Wehrmacht Operations Staff formulated the end of his speech,<sup>92</sup> his concluding declaration, quoted above, which deviated so sharply from the preceding situation analysis, shows the extent of military de-professionalization in the German dictator's environment. In 1943

<sup>89</sup> 'Vortragsunterlagen für Generaloberst Jodl, Die strategische Lage am Anfang des fünften Kriegsjahres', 7 Nov. 1943, BA-MA RW 4/v. 38, quoted here from *KTB OKW*, iv. 1534–62.

<sup>90</sup> Goebbels too found the picture of the war situation which Jodl painted 'very realistic'; it had had 'a sensational effect' on the assembled Gauleiters (Goebbels, *Tagebücher*, pt. 2, x. 254, 8 Nov. 1943).

<sup>91</sup> *KTB OKW*, iv/2, 1562 (author's emphasis).

<sup>92</sup> See also the editor's notes to *KTB OKW*, iv. 1712–13. On 25 Feb. 1946, in the Nuremberg prison, Jodl himself wrote the following—in essence subjectively credible—explanation of his speech of 7 Nov. 1943 in his own defence: 'In 1914–18 I experienced how front and homeland, soldiers and workers, leadership of the state and leadership of the people by the political parties, moved further and further apart in their thinking, until the state in the homeland finally broke down and dragged the Wehrmacht into defeat and revolution. That experience had such a strong impact on me that in this second world war I made it a principle to do everything in my power to combat every split, every manifestation of disintegration, in short, all internal conflicts insofar as they affected the Wehrmacht. Any such internal conflict would necessarily create a fertile breeding ground for enemy propaganda and reduce our external effectiveness. [...] So it is understandable that in this war I never expressed criticism except to a few trusted close associates [...] and took every opportunity to work for understanding and unity. They were the precondition for victory, and working for victory was for me a sacred duty.' (quoted in *ibid.* 1713).

no officer any longer sought to bear the overall military responsibility to which the chiefs of the Great General Staff had constantly laid claim and assumed, whatever the results, since the time of Helmuth von Moltke. The permanent state of crisis since the summer of 1943 was thus, in terms of system structure, indeed a crisis of leadership, but not yet a 'Führer' crisis. Rather, the power of the dictator and the party he represented appeared to grow as the leaders of the Wehrmacht and its constituent parts lost all independence. Beneath the surface of the limitless Führer cult, however, the erosion of power induced by the regime itself had long since set in, and would soon afterwards, in the summer of 1944, shake the foundations of Nazi rule. Admittedly, before Claus von Stauffenberg's bomb shattered Führer headquarters on 20 July, hardly anyone had their eyes on the fragility of the regime. General attention was focused on the question of how, and if at all, Germany could still ward off the dangers threatening it on all sides.

### III. The Abandonment of Foreign Policy and the Isolation of Germany

If war, as Clausewitz argued with good reason, is a continuation of politics by other means, then it was to be expected that with the realization that those means were inadequate, the traditional instruments of foreign policy, especially diplomacy, would regain importance. The fact that this did not happen in the case of Germany was one of the most striking characteristics of German warfare in the last years of the Second World War. Hitler had always regarded foreign policy as his classic domain, and during the few years of his pre-war rule he had celebrated a series of exceptional successes in that field. So his extensive renunciation of foreign-policy opportunities in the following years seems, at first sight, all the more surprising. The declaration of war against the United States in December 1941 had been the last eminently political decision of overall strategic importance.<sup>1</sup> As we have seen,<sup>2</sup> the German government was interested neither in serious exploration of existing possibilities for peace nor in a constructive alliance policy. The chances of politically secured coalition warfare were not even explored systematically, let alone taken up. In contrast to the Allies, multilateral meetings of foreign ministers or heads of state were anxiously avoided on the side of the Axis powers. There was no joint agreement on the strategic conduct of the war beyond bilateral operational consultations, nor any definition of common war aims or a jointly agreed European post-war order. Throughout the war there were not even the beginnings of a counterpart to the Atlantic Charter, which the Allies had announced as early as August 1941. In no other sector, as it appears in hindsight, had the German leadership learned so little from the disastrous experience of the First World War as in the area of foreign and alliance policy.<sup>3</sup>

Nothing symbolizes the abandonment of German diplomacy better than the dramatic decline in the role of the foreign ministry, aptly described as a transformation ‘from engine to transmission’.<sup>4</sup> Since the beginning of the war against the Soviet Union, as a well-informed observer concluded in retrospect, it had been ‘no

<sup>1</sup> Later decisions of limited importance mainly concerned the German occupation of allied countries; on this, see in detail *Germany and the Second World War*, v/II, 75–107. It is no accident that in all surveys of Nazi foreign policy the last years of the war receive only cursory treatment; see, e.g., Hildebrand, *Deutsche Außenpolitik 1933–1945*, and Recker, *Die Außenpolitik des Dritten Reiches*.

<sup>2</sup> See Part I, Chapter II of the present volume.

<sup>3</sup> The same conclusion is reached by DiNardo and Hughes, ‘Germany and Coalition Warfare’, 166.

<sup>4</sup> See Michalka, ‘Vom Motor zum Getriebe’.

more than a secretariat of Hitler's for dealing with routine matters. A dummy, so to speak.<sup>5</sup> In this case too, as so often in Hitler's state, personality played a significant part in the elimination of a traditional authority. Thanks to his 'downright masochistic' submissiveness,<sup>6</sup> foreign minister Joachim von Ribbentrop did not entirely lose the confidence of his Führer even in 1943/4,<sup>7</sup> but he no longer had any formative influence on German foreign policy. From the outset an outsider in the dictator's retinue, Ribbentrop had repeatedly got into struggles for position with somewhat more powerful satraps, especially Goebbels, Bormann, and Rosenberg, and finally Himmler too. Intrigues in his own ministry,<sup>8</sup> as well as the foreign minister's support for a separate peace with Russia,<sup>9</sup> also helped to undermine his standing in Hitler's circle. 'The so-called second Bismarck in the foreign ministry', Goebbels mockingly observed, 'seems not quite up to the demands of the present time'.<sup>10</sup>

The fairly incompetent foreign minister was of course only a symptom, not the cause, of what the German propaganda chief rightly (though not without ulterior motives) criticized as 'the total lack of an active foreign policy'.<sup>11</sup> The main reason for that lack was the inherent Nazi approach to politics. There is now general agreement in the research literature that Hitler was 'wholly incapable of partnership and dialogue, of admitting equally entitled interests, of limiting his own demands, or of establishing any meaningful arrangement', and that he understood foreign policy solely 'as an instrument of domination rather than partnership'.<sup>12</sup> Hitler had 'no intention of giving up appreciable parts of the empire that had been won by force of arms'.<sup>13</sup> Nor did he have the slightest doubt that Germany's relations with its neighbours in the future greater European area<sup>14</sup> would be based on German

<sup>5</sup> Thus Theodor Eschenburg, quoted in *ibid.* 259, n. 25.

<sup>6</sup> Kley, *Hitler, Ribbentrop und die Entfesselung*, 342. Göring mockingly referred to Ribbentrop, the eternal yes-man, as 'Germany's No. 1 parrot' (quoted in Overy, *Interrogations*, 162).

<sup>7</sup> Much to the chagrin of the envious and ambitious propaganda minister, as is clear from Goebbels' diary entry for 6 June 1944: 'The Führer is still only partly in agreement with Ribbentrop; however, he considers him a cool-headed tactician and an intelligent expeditor who knows exactly what he wants, only sometimes too rigid and inflexible in his methods. The favourable opinion which the Führer has formed of Ribbentrop is in my view rather rare. At least, it is not shared by anyone who has any say in the state or Party.' Goebbels must have been particularly pained by Hitler's confession that 'he had often toyed with the idea of relieving Ribbentrop of his post but could find no one anywhere to replace him. I am appalled that the Führer should even mention Rosenberg as a possible successor. Replacing Ribbentrop by Rosenberg would be jumping out of the frying pan into the fire' (Goebbels, *Tagebücher*, pt. 2, xii. 411).

<sup>8</sup> 'Crazy things are going on there,' Goebbels commented gleefully in February 1943 on Ribbentrop's conflict with his state secretary, Luther (*ibid.* vii. 325, entry for 12 Feb. 1943). See in detail Michalka, 'Vom Motor zum Getriebe', 255–6, and Bloch, *Ribbentrop*, ch. 21.

<sup>9</sup> On this, see Part I, Chapter II of the present volume.

<sup>10</sup> Goebbels, *Tagebücher*, pt. 2, vii. 325 (1 Feb. 1943).

<sup>11</sup> *Ibid.* 455 (2 Mar. 1943), quoting Göring. Goebbels doubtless considered himself the right man to formulate German foreign policy.

<sup>12</sup> Krüger, 'Rückkehr zum internationalen Faustrecht', 187 and 183. Similarly Gruchmann, *Nationalsozialistische Großraumordnung*, 119.

<sup>13</sup> *Germany and the Second World War*, v/II.10.

<sup>14</sup> On the international law and policy foundations for this concept, see in detail Schmoekel, *Die Großraumtheorie*.

hegemony rather than cooperation. Even before the war began, the German government, in anticipation of final victory, had avoided any treaty or contractual obligations that would bind it beyond the duration of the war, and exercised its rule, wherever possible, at its own sole discretion. Purely as a method of rule, this policy had been unproblematic as long as German power on the continent of Europe remained unchallenged. Now that the military balance had begun to shift against Germany, however, it seriously impeded the search for political-strategic ways out of the crisis. In 1943 and 1944 anyone in Germany who was in any way involved with issues of foreign or occupation policy (the boundary between the two was becoming increasingly blurred) was faced with the same dilemma: Germany's need of the countries under its rule or control as a strategic forefield, source of raw materials, or labour reservoir was growing stronger and stronger as its own force and resources waned, but for that very reason it was less and less able to impose its authority. What was needed most of all, therefore, was political measures which, in the words of a senior foreign ministry official, would 'make it possible to: (a) weaken the enemy's fighting spirit; (b) undermine the resistance movements from within; (c) strengthen the trust of the supporters of a European order in the justice and sustainability of the solution pursued by Germany and thus increase their commitment and their appeal to their own people; (d) neutralize wavering elements; and (e) above all, spare German blood'.<sup>15</sup>

In that context, more and more of the many ministries, departments, and official agencies seeking to assert themselves in the field of foreign policy argued for a reorientation of German policy or, at least, its propaganda image. The basic direction of change was already determined: since the attack on the Soviet Union, Germany's imperialistic war for 'living-space' had been reinterpreted as a European defensive struggle against Bolshevism. For many observers inside and outside Germany this interpretation, originally no more than a crude cloak for Germany's own war of aggression, became increasingly plausible as the Wehrmacht's eastern army was really forced onto the defensive and left the way open for a western advance by the Red Army. The propagandists, first and foremost Hitler,<sup>16</sup> hoped that the resulting fears of the 'Bolshevization' of Europe, if skilfully exploited, would strengthen the German war effort. The concrete manifestation of the 'Red Peril' would help to bring insecure allies, from Finland to Romania, into line. With their backs to the wall, collaborationist circles throughout German-controlled Europe would be forced to step up their efforts. And with the Stalinist danger literally drawing closer, even the neutral powers, and the wait-and-see majority in the occupied countries, might finally see Germany as a protector, or at least the lesser of two evils. Nor was it out of the question that, on the side of the western Allies, fears of the Bolshevikization of Europe might one day lead to a rift between London and Washington on the one hand and Moscow on the other. Significantly, this hope became the major justification for continuing the long-since futile

<sup>15</sup> Memorandum of 19 Aug. 1943 by Rudolf Rahn, *ADAP*, Series E, vi, doc. 235, 414.

<sup>16</sup> See, e.g., Goebbels, *Tagebücher*, pt. 2, xii. 406 (6 June 1944): 'The Führer tells me that for us every military defeat is a political opportunity.'

struggle,<sup>17</sup> despite the fact that, through its agent ‘Cicero’,<sup>18</sup> the German leadership was well informed of the course and outcome of the Allied war conferences in Moscow and Teheran in the autumn of 1943, which largely disappointed such expectations. In point of fact, in the inner circle of the German leadership there were few illusions about relations between the Allies. A meeting of naval commanders held on 11 November, less than two weeks after the conference of Allied foreign ministers in Moscow, reached the following sobering conclusion: ‘Even if possibilities for the outbreak of conflict in the enemy camp do exist, they will have no effect on military developments for the time being. Russia, because of its great losses, and the British and Americans because of their plans in East Asia, have a common interest in finishing the war in Europe quickly.’<sup>19</sup>

In line with the considerations outlined above, German propaganda in 1943 and 1944 was concerned above all to boost resurgent fears of Bolshevization wherever possible. Spectacular military successes of the Red Army were no longer simply denied or played down, but were announced in measured tones. Even the possibility of German defeat was now presented as a real threat that would necessarily result in the Bolshevization of the continent and the end of all European culture and civilization. A similar interpretation was applied to the bombing campaign unleashed by the western Allies, which—as well as costing countless civilians their lives within and beyond the borders of the Reich—was destroying cultural goods on a hitherto unimaginable scale.<sup>20</sup> In such circumstances the German propaganda thesis that the western powers were only the minions of Stalin’s planned Sovietization of Europe struck home in many circles. All the more so, if the long-term planning behind the Soviet intentions could be made clear. It was no coincidence that in 1943 specific efforts were undertaken under the auspices of the propaganda ministry to gather all existing information in the foreign ministry and the military operations staffs which appeared to support the thesis that the German attack on the Soviet Union in 1941 had been a preventive strike.<sup>21</sup>

<sup>17</sup> For the period under discussion here, see, e.g., Hitler’s statements to Dönitz, quoted in *Lagevorträge*, 537 (9–11 Aug. 1943). See also the discussion in Part VII, Chapter II of the present volume.

<sup>18</sup> ‘Cicero’ was the cover name of Elyesa Bazna, the Albanian valet of the British ambassador in Ankara, who passed important information to the representative of the German security service in Turkey. See Ludwig Moyzich’s memoirs, *Der Fall Cicero*, and, above all, Wires, *The Cicero Spy Affair*.

<sup>19</sup> Minutes of the meeting of commanders of 11 Nov. 1943, 2, BA-MA RM 7/98, fos. 158–64, here fo. 159. See also the assessment of the Moscow conference in KTB (Teil C/VIII) der 1. Skl, 8 Nov. 1943, 475–80, BA-MA RM 7/214, and, on the part of the army, a memorandum of Abt. FHO (IIa), ‘Die Ergebnisse der Moskauer Konferenz’, 17 Nov. 1943, BA-MA RH 2/2113. The naval command’s scepticism was fully justified, as is clear from a key memorandum of 10 Aug. 1943 from the American general staff urging the US government, on the assumption that the Soviet Union would be the dominant power in post-war Europe, to do everything in its power to ensure friendly relations with Moscow: ‘every effort must be made to obtain her friendship’ (quoted in Sherwood, *Roosevelt and Hopkins*, 748; see also Hillgruber, *Der Zweite Weltkrieg*, 6th edn., 130).

<sup>20</sup> For a comprehensive, if somewhat polemical, account, see Friedrich, *Der Brand*.

<sup>21</sup> See, e.g., FHO (II), ‘Belege für russische Angriffsabsichten gegen Deutschland, 9.9.1943’, and Gehlen’s file note of 10 Sept. 1943, BA-MA RH 2/2092. The fact that the thesis of a German preventive war in 1941 is historically untenable and served exclusively propaganda purposes has been repeatedly demonstrated by historical research, notwithstanding the occasional outbreak of public

The pan-European defensive war was also the leitmotif of Hitler's radio address on 30 January 1944. According to the dictator, the basic question in the present conflict was 'no longer the maintenance or restoration of the old balance of forces, but who will emerge from this war as the dominant power—the European family of nations represented by its strongest state or the Bolshevik colossus?'<sup>22</sup> There could be 'only one victor in this struggle—either Germany or Soviet Russia! German victory will mean the preservation of Europe; Russian victory will mean Europe's annihilation.' If Germany did not win, 'no other state in Europe will be capable of mounting an effective resistance against this new invasion by the Huns,' and 'the fate of the states of northern, central, and southern America [*sic!*] will be sealed in a matter of months'. Pronouncements of this sort were nothing new in themselves, but the timing was surprising. At the very moment when the dictator was preparing, in accordance with his Directive No. 51, to concentrate all his military efforts on the fight against the western powers, he proclaimed more emphatically than ever that his real concern was the war against the Soviet Union. 'The time has long passed when anyone could imagine this was merely another of those wars which Britain has incited time and again,' Hitler declared. 'In London the drivers have become the driven.' The spirits which the government 'sought to conjure up in accordance with the old British tradition have got beyond the control of their masters', and whatever the outcome of the struggle, the old world power had 'finally lost its position on the continent'.<sup>23</sup> The message behind the dictator's words was clear: the war against the west was of no value in itself but was part of the existential struggle against Bolshevism. This interpretation, which was subjectively wholly sincere, served first of all to shift the blame for the forthcoming battle for western Europe onto the western powers in anticipation of the invasion, and secondly to make it clear to the German population that Germany's fight against the western powers was also a life-and-death struggle.

Whatever the importance of the efforts to foster a negative legitimization of the war based on the increasingly tangible Bolshevik threat, there was a widespread view in German leadership circles that in the second half of the war they were no longer sufficient. What was needed in order to achieve the urgently necessary mobilization of the population was an overriding positive vision of how the future of Germany and Europe would take shape after the war was won. Uncertainty about this had grown considerably since the Stalingrad events. In his address on the tenth anniversary of the takeover of power, read out by Goebbels at the Berlin Sports Palace, the Führer himself had let it be known that 'in this war there will be neither victors nor vanquished, but only survivors and annihilated'.<sup>24</sup> According to an SD report of March 1943:

debate on the subject. See above all the anthologies *Der deutsche Angriff auf die Sowjetunion 1941* and *Präventivkrieg?*, and Wegner, 'Präventivkrieg 1941?'

<sup>22</sup> This and the following quotations are taken from Domarus, *Hitler. Reden und Proklamationen*, ii. 2082–3.

<sup>23</sup> Ibid.

<sup>24</sup> Ibid. 1978–9.

No one can form an accurate picture of how the Reich will look after the war with regard to internal politics, external politics, and economic conditions. The war has wrought such radical changes in all areas of life that it will be impossible to restore the former situation. The only thought propagated by the leadership at the present time is life-or-death struggle, but our *Volksgenossen* would also like to know what their life will be like if they emerge from this war as ‘survivors’, as the Führer puts it.<sup>25</sup>

For obvious reasons, this question also agitated—even more than the German population—those millions of foreigners who were collaborating more or less voluntarily with the German occupying power as civilians or soldiers and who expected in return future prospects that were more than just vague hints.

The crucial question of the future of Europe, which the Nazi regime had always wisely avoided, was now being raised with increasing insistence. Before the war the term ‘Europe’ had barely been part of Nazi vocabulary,<sup>26</sup> and since 1939 it had been completely overshadowed by the vision of the ‘Greater German Reich’. A few propaganda initiatives had taken place since 1941, such as the organization of ‘European poets’ conferences’ in Weimar in connection with the creation of a ‘European writers’ association’,<sup>27</sup> invitations to foreign artists, sessions of the International Journalists’ Conference, or the foundation of a European youth association.<sup>28</sup> However, despite the assiduous courting of individual western, northern, and central Europeans willing to collaborate,<sup>29</sup> all these and similar events and organizations were never more than ‘Potemkin villages’ behind whose propaganda façade the deep mistrust of the German leadership was clearly visible. In German foreign-policy guidelines formulated at the beginning of September 1942, Ribbentrop still insisted that the idea of Europe could ‘at the present time be treated by us only in very general terms, e.g. using the slogan of European solidarity against Bolshevism and Jewry. Any specific reference to European reconstruction or a new European order’ was accordingly to be ‘avoided for the time being, since it would not make our life-or-death struggle any easier, but only more difficult’.<sup>30</sup> Goebbels similarly polemicized ‘very sharply against talk of the “New Europe”. He thinks it wrong for us to make such a fuss about it. Nobody in the world will believe we are going to fight for a New Europe without any material interests.’<sup>31</sup> A few weeks later Hitler declared the field of foreign policy ‘unsuitable for experiments’, and forbade his party to ‘plan, prepare, or carry out any international initiatives such as congresses, conferences, meetings, the foundation of associations, etc.’<sup>32</sup>

Hitler's prohibition made no difference to the fact that in the course of 1943, that is, during the period of Germany's large-scale military withdrawals and in parallel with the decline of the foreign ministry, even more consideration was given to diplomatic and propaganda initiatives that could incite the peoples living within 'Fortress Europe' to give Germany voluntarily the support that was increasingly difficult to obtain by compulsion. In order to mobilize 'all the forces of the European continent' for 'the fight against Jewish Bolshevism', Goebbels found it necessary, in mid-February 1943, to ban any disparaging reference to the peoples of Europe under German control, especially in the east. According to the propaganda minister's belated realization, 'one cannot describe the eastern peoples as animals, barbarians, etc. and then expect them to be interested in German victory'. Equally inappropriate was 'a portrayal of the future New European Order that could give members of foreign peoples the impression that the German leadership intends to keep them in a permanent subordinate relationship'.<sup>33</sup> The minister's decree was warmly welcomed by the military leadership. The Army General Staff saw it as a 'suitable basis' for 'winning over the mass of the Russian population to our side as convinced fellow combatants'.<sup>34</sup> It addressed one of the main concerns of combat formation staff officers in the east, where army group commanders were repeatedly complaining about the declining work performance of the local population and their efforts to avoid the auxiliary duties imposed on them. Political uncertainty and fears for the future were seen as major causes: 'In the eastern countries the question "what will become of me?" has been replaced by the question "what will become of my country?" All the hunting for manpower, all the propaganda, all the efforts of heads of agricultural administrations, all the army's attempts to recruit fighters or auxiliaries, will remain a patchwork as long as no *political* objective is assigned to those countries'.<sup>35</sup>

The spring of 1943 also saw a change of tone with respect to the peoples of western and northern Europe. Goebbels had no inhibitions about assuring representatives of the Danish press, for example, that present German repression was only a temporary wartime necessity: 'The New European Order will essentially be based on voluntary action, not dictatorship. Germany intends to uphold the individual character of the European nations'.<sup>36</sup> Although such statements by Goebbels probably went beyond what his Führer would have wished,<sup>37</sup> ideas

<sup>36</sup> Interview of 13 Mar. 1943 with representatives of the Danish newspaper *Berlingske Tidende*, quoted in Neulen, *Europa und das 3. Reich*, 105, doc. 9.

<sup>37</sup> This time too, as almost always, Goebbels had safeguarded his position with Hitler. In a conversation on 9 March he had tried in vain to get the dictator to make a proclamation in favour of the eastern peoples. An entry in the propaganda minister's diary following that meeting reads: 'The Führer is already more open to the idea of a rough programme for Europe. Even if he doesn't want to go into details—which I never planned to do either—he is giving me permission to mention the subject in my Sports Palace speech and indicate the general outlines. Given that permission, I can already get started' (Goebbels, *Tagebücher*, pt. 2, vii. 509). A few days after the propaganda minister's

aired by other, less influential protagonists went even further. Thus, at the same time, Ribbentrop proposed the formal proclamation of a 'European confederation' which, in addition to Germany and Italy, would immediately include France, Denmark, Norway, Finland, Slovakia, Hungary, Romania, Bulgaria, Croatia, Serbia, Greece, and possibly Spain, and could be extended, in the event, to occupied areas which the Führer subsequently wished to declare independent states. The members of the federation would, in the words of the draft founding statement, be 'sovereign states and guarantee one another's freedom and political independence. The organization of their internal relations is a matter for the sovereign decision of each of them.' They would 'conclude an alliance for the defence of Europe' and, with the progressive abolition of customs barriers, the European economy would be 'organized on the basis of a uniform plan arrived at by mutual agreement'.<sup>38</sup> The 'guidelines' put forward in September 1943, after several months' preparatory work, by a 'European committee' set up in the foreign ministry, sounded no less promising.<sup>39</sup> Germany's fight against Britain was described as 'the war of European unification', which was to culminate in 'the unification of Europe on a federative basis'. While the Axis powers would have 'special internal and external responsibilities' in the resulting 'community of sovereign states', 'because of their location in the centre of Europe and their political weight', that would mean only leadership, not control, and the 'imperialistic methods of the past' would be rejected.<sup>40</sup>

What the top officials in the foreign ministry—men like Rudolf Rahn, Cecil von Renthe-Fink, and Carl August Clodius—were trying to achieve was in fact nothing less than the squaring of the circle. Without the slightest weakening of the demand for 'fully implemented primacy of the Greater German Reich',<sup>41</sup> they were attempting to conceal the true nature of that primacy so as to render it acceptable to the nations which were to be integrated. Since substantive political or military promises were considered inadvisable in that context, the main concessions contemplated were in the area of economic and financial policy. The proposals included

interview with the Danish press, Blücher, the German envoy in Helsinki, asked whether he should sustain the principles formulated in that interview at diplomatic level. Significantly, Ribbentrop forbade him to do so: he was to avoid the subject of the New European Order as far as possible in his conversations and, in response to any inquiries, to qualify Goebbels remarks as an unofficial expression of opinion (see *ADAP*, Series E, v, doc. 211, 409–10).

<sup>38</sup> Quoted in *ADAP*, Series E, v, doc. 229, 437–41. See also Drechsler, Dress, and Hass, 'Europapläne', 921, doc. 2, and 927 ff.

<sup>39</sup> For details concerning this committee and its deliberations, see Neulen, *Europa und das 3. Reich*, 41–2.

<sup>40</sup> Guidelines of the foreign ministry's European committee, 9 Sept. 1943, quoted in *ibid.*, 125, doc. 14. Similar ideas were expressed around the same time in a memorandum by Ernst Jünger (published only after the war), who also interpreted the conflict as a war of European unification, at the end of which former enemies could, though only with their consent, be integrated in a larger Reich; see Jünger, *Der Friede*.

<sup>41</sup> On 5 April 1943, in his guidelines for the work of the Europe committee, Ribbentrop had already indicated that the future could 'have substance only if based on the fully implemented primacy of the Greater German Reich. The securing of that primacy must therefore be seen as the core of the future New Order'; PA, Inland II/geheim R 100673.

the establishment of a permanent 'European economic congress', as well as plans for a European internal market and the long-term goal of European monetary union.<sup>42</sup> Partly similar, though mostly completely different, ideas about the economic future of Europe were mooted in sectors of heavy industry and the Reich Bank, in the ministry of economic affairs, and in Speer's circle. If all these proposals, which will not be discussed in detail here,<sup>43</sup> were largely uncoordinated and had no significant lasting effect, it was above all because they were not the outcome of an overall political plan, but were rather intended 'as a substitute for such a plan',<sup>44</sup> that would provide something positive with which to counter enemy propaganda.

The tone of some statements emanating from SS circles at the same time is also surprising at first sight. 'We cannot build Europe', said Franz Riedweg, the chief of staff of the 'Germanic' department of the SS Main Office, 'as a police state protected at the point of the bayonet, but must shape the life of Europe from the Greater German viewpoint'.<sup>45</sup> Frank statements of that kind were not untypical of a 'pan-Germanic' line of thought that had developed mainly around the SS Main Office. Without calling German hegemony into question in any way, such concepts differed both from the crudely nationalistic occupation mentality of other Party circles and from the traditional thinking of many diplomats in the foreign ministry, who were imbued with the idea of the nation state. The ideologues in the SS Reich leadership saw their aim neither as the destruction of the non-German 'Germanic' states and the political disempowerment of their elites, nor as the restoration of the pre-war system of states, but as the integration of the peoples concerned in the Reich on the basis of racial equality. In that connection, the unification of the German Reich in 1871 was readily invoked as a model. Just as Prussia had forged the Second Reich under the leadership of Otto von Bismarck, so Germany, under Hitler's leadership, would now weld the European states into the 'Greater German Reich'.<sup>46</sup> 'The future European order will therefore be built,' according to an SS manual of that period, 'not on the basis of compulsion and repression, but on the unconditional equality of Germanic blood. The incorporation into the SS of Norwegians, Danes, Dutchmen, and Flemings, as well as many other volunteers from Switzerland, Liechtenstein, and Sweden, cannot and should not be understood in any other way'.<sup>47</sup>

<sup>42</sup> See Eichholtz, *Geschichte der deutschen Kriegswirtschaft*, iii. 510–11. Clodius' pamphlet of 20 Aug. 1943 on the new European economic order was characteristic in this respect; see ADAP, Series E, vi, doc. 237, 419–21.

<sup>44</sup> Herbst, *Der totale Krieg*, 251.

<sup>45</sup> 'Germanisch-völkische Reichspolitik', manuscript of a lecture by Franz Riedweg, n.d. (probably summer 1943), BA-MA RS 5/310.

<sup>46</sup> See, along these lines, Himmler's speech as early as 9 June 1942 (Himmler, *Geheimreden*, 157 ff.), and his later speeches of 28 Jan. 1944 (NA, Microfilm Series T-175/94/4821-2) and 24 May 1944 (*ibid.* 4609 ff.) According to Smith and Peterson (Himmler, *Geheimreden*, 299, n. 29), Himmler addressed the issue of winning over 'Germanic peoples' in at least eight of his speeches.

<sup>47</sup> SS manual, probably from 1943, 68, NA, Microfilm Series T-175/Film 232. See also, along the same lines, a draft scenario for the film *Germanische Waffenbrüderschaft* [Germanic comradeship in arms], Junkerschule Tölz, 7 Dec. 1942, BA, Schumacher collection/238 II.

In 1943 and 1944 the growing fear of possible German defeat led to a veritable flood of confidential or published 'reform' projects and proposals for the future that went far beyond the above-mentioned examples.<sup>48</sup> Civilians and military men, ideologues, academics, economists, private individuals, official agencies, ministries, Party branches, and foreign allies all felt called upon to come up with proposals. Such proposals were generally motivated (as in the case of Goebbels, Bormann, or Ribbentrop) purely by considerations of political tactics, but in individual cases—especially when the originators were far enough removed from the centre of power—by the genuine conviction that a fundamental change in German policy was urgently needed. Behind all the proposals, however, stood the shared conviction that, insofar as military weapons proved insufficient for German victory, politics and propaganda must themselves be deployed more forcefully as a weapon in the clash of nations. As a first step in this direction, internal coordination of the partially conflicting, not to say contradictory, ideas about the new European order would have been an urgent requirement. Instead, as previously in the matter of a possible separate peace,<sup>49</sup> the National Socialist regime, with its incurably splintered power structure, proved to have lost the structural preconditions for the formulation of a coherent foreign policy. The decline of the foreign ministry, mentioned earlier, was not the cause but a symptom of that process of disintegration.

What may appear in retrospect as a serious structural shortcoming of the Nazi state was at the time thoroughly suited to consolidating the dictator's personal position. The fact was that Hitler, regardless of the worsening war situation, remained deeply sceptical of most of the proposals for a new order that were put to him with greater or lesser discretion. In this, his personal distaste for the hated national conservative mode of thought of many diplomats must have played a part, and likewise his concern that any reorientation of German policy could be interpreted as a sign of weakness on his part. More questionable, however, is the widespread assumption that Hitler was concerned to avoid hampering his post-war policy by premature promises to his Axis partners.<sup>50</sup> Anyone who had exploited the interplay between promise and default so often and so successfully as Germany's Führer had no need to fear the binding effect of promises. In all likelihood, the most decisive reason for Hitler's rigid attitude was the fact that the dictator was more aware than many of his advisers of the extent to which he had long since become the prisoner of his own policy. He had always taken the view that a union of the peoples of Europe could be achieved only by way of violent subjugation: 'community can be created and maintained only by force', and 'true world

<sup>48</sup> On this, see the wide-ranging discussion in Salewski, 'Ideas', here above all 116–72, and the numerous documents in Neulen, *Europa und das 3. Reich*, 105–77.

<sup>49</sup> See Part I, Chapter II of the present volume.

<sup>50</sup> This argument was already opposed with remarkable frankness by the deputy head of the foreign ministry's information department, Rudolf Rahn, in a minute dated 19 August 1943: 'Fine gestures are cheap and can be extremely effective. So why aren't we using them? Why aren't we drawing up future programmes which reassure, seduce, or least neutralize? They say it's because we would be committing ourselves to promises that we wouldn't be able to keep. Since when have we been so self-conscious and prissy?'; ADAP, Series E, vi, doc. 235, 415.

domination can only be founded on one's own blood'.<sup>51</sup> The practices of years of German occupation, coupled with an alliance policy unilaterally geared to German interests and at times downright extortionate, had turned these convictions into a self-fulfilling prophecy. Hitler's view that Germany was basically surrounded only by enemies<sup>52</sup> must therefore have been entirely realistic in the second half of the war. At all events, Hitler viewed the growing resistance in the occupied countries with just as little illusion as the discreet efforts by the neutral countries and Axis partners to distance themselves from Germany. When the statesmen of the Axis partners arrived one after another at Klessheim Castle in the spring of 1943, their host was well aware that 'all the guests came mistrustfully and departed mistrustfully'.<sup>53</sup> Significantly, the conclusion which Hitler drew from that experience and announced to his Reichs- and Gauleiters a few weeks later was that 'the hotchpotch of small states existing in Europe to this day must be liquidated as soon as possible'.<sup>54</sup> Unlike those who were now recommending him to change his policy, the dictator did not believe—and probably rightly so—that Germany's position could be improved other than by military successes. The condition for those urgently needed successes, however, was not that Germany go easy on the areas of Europe still under its control, but that it exploit them even more severely. And none of the peoples concerned was prepared to accept such further exploitation willingly, however seductive the proposals for the future put forward by German propaganda might appear.

The most striking result of this conviction was the increasing replacement of diplomacy by force. Not only in the east, but almost everywhere, Germany's occupation policy in the second half of the war was built almost exclusively on the power of its arms. The moderately collaborationist regimes in western and northern Europe increasingly gave way to rule by radical collaborators who had tied their fate, come what may, to that of the Nazi state.<sup>55</sup> German alliance policy was marked by comparable tendencies to radicalization, and by 1944 the borderline with occupation policy had become increasingly blurred. Thus, following the successful occupation of Italy, military planning began in November 1943 for the occupation of Hungary (Operation MARGARETHE I), and preparations for the occupation of Romania (MARGARETHE II) started in January 1944. While the latter preparations were halted a few weeks later, German troops marched into Hungary on 19 March 1944. Occupation of the country without a fight, agreement to which had been extracted from the aged regent, Admiral Miklós Horthy, during a visit to

<sup>51</sup> Picker, *Hitlers Tischgespräche* (1963), 270 (11 Apr. 1942) and 168 (27 Jan. 1942). See, in similar vein, Hitler, *Hitlers zweites Buch*, 129–30.

<sup>52</sup> See Weizsäcker, *Die Weizsäcker-Papiere*, 337 (2 May 1943): 'The reason given by the Führer internally, why we were not to get involved in discussions about a "new European order", was that our neighbours were all our enemies. We had to squeeze them dry, but could not nor should not promise them anything.'

<sup>53</sup> Thus Below, *Als Hitlers Adjutant*, 335.

<sup>54</sup> Quoted in Goebbels, *Tagebücher*, pt. 2, viii. 236 (8 May 1943).

<sup>55</sup> See in detail the chapters by Umbreit in *Germany and the Second World War*, v/II.

Klessheim the day before,<sup>56</sup> was in many respects a triumph for Hitler's policy. Although Hungary formally retained its sovereignty, the superficially legal overturn made the country directly dependent on German policy, whose implementation in Hungary was assigned to an SS ranking Reich plenipotentiary with the title of 'envoy'.<sup>57</sup> All further efforts by Hungary to withdraw from the Axis Pact were thus blocked in advance. The occupation of Hungary also served as a warning to the governments of other powers allied with Germany, especially Finland and Romania, of the risks of pursuing an all-too independent policy. No less important for Hitler was the prospect of now being able to achieve, in Hungary too, one of his central war aims: the elimination of European Jewry. Probably no other action of those months is a more striking demonstration of the dictator's unbroken determination to continue the war uncompromisingly than the deportation of some 430,000 Hungarian Jews to Auschwitz in the period from March to Horthy's intervention in July 1944.<sup>58</sup>

The growing violence of German foreign policy in the last years of the war was one thing; its extent was quite another. However 'strongly determined' Hitler was to 'put the screws on' his allies,<sup>59</sup> it was becoming increasingly obvious that Germany could apply pressure with any prospect of success only where it was also in a position to impose economic or military sanctions. The possibilities of doing so were shrinking from month to month. German diplomacy was hard put to exert pressure even on an allied but distant small state like Finland.<sup>60</sup> Faced with divergence on the part of Japan, which had been perceptible since the autumn of 1943,<sup>61</sup> it was practically helpless.<sup>62</sup> Vis-à-vis the neutral powers, too, German policy was losing influence as its military foundation proved brittle. It could do as little against the strongly increasing British pressure on Turkey as it could to oppose the new emphasis in Sweden's neutrality policy, apparent since the late summer of the same year, when Stockholm began to retreat from its hitherto pro-German course.<sup>63</sup>

With historical hindsight, there is little to support the assumption that in the second half of the war Germany still had any serious alternative to its foreign, alliance, and occupation policy—with the possible exception of the option of a separate peace, which was never seriously mooted. At all events, whatever proposals

were put on the table were well out of touch with reality. That applied both to the 'European' policy proposals of the national conservative German diplomats and to the ideas of a 'greater economic area' put forward by the social market economists. Both these groups, pushed to the fringes of the regime's power structure, overestimated the rationality of National Socialist rule and underestimated the primacy of ideological dogma.<sup>64</sup> Even the Germanization plans formulated within the SS in line with Nazi dogma, although implemented only symbolically,<sup>65</sup> mostly proved counter-productive, as exemplified by developments in the Waffen SS. The tendency of the SS Reich leadership to combine the Waffen SS's national volunteer legions, which originally operated autonomously, in large multinational formations under German leadership with predominantly German cadres, aggravated the already conflictual situation in which foreign volunteers found themselves. Above all, membership of their separate national formations had allowed them the illusion that they were pioneers of a better future for their own peoples, rather than traitors. Inevitably, the incorporation of foreign legions fighting in the framework of the SS into what were ultimately German units seriously undermined the possibility of national identification and the fighting motivation of the volunteers. In those circumstances it is not surprising that by mid-1943 more than a fifth of all mercenaries recruited in Flanders, Holland, Denmark, and Norway had left the service of the Waffen SS.<sup>66</sup> At the beginning of 1943 the Finnish liaison officer with SS Division 'Viking' already informed the SS Main Office that almost the whole battalion of Finnish volunteers wanted to be released, and the unit was dissolved in the summer of that year without replacement. The manifold difficulties within the volunteer units, and the political fragmentation of the 'Germanic' movement as such, ultimately rebounded on the success of SS recruitment efforts in the occupied countries. In February 1943 the head of the SS Main Office, Gottlob Berger, wrote to Himmler that 'the current dispersal of Germanic combat volunteers is [...] having a very bad effect on the recruitment of replacements'. Barely half a year later he considered the situation so disastrous as to write: 'In the Germanic countries we are at our wits' end.'<sup>67</sup> In 1944/5 this crisis was overcome in appearance only. Although the numbers of non-German SS volunteers again rose appreciably in the last 15 months of the war, this was ultimately not due to the SS's 'Germanic' efforts but the result of the increasingly desperate situation in which all national collaborationist movements now found themselves in view of the prospect of German defeat.

<sup>64</sup> Thus it was only after German defeat that some of the ideas referred to here found their way back into the debate on European policy in an entirely different framework. See also Salewski, 'Ideas', 53–4.

<sup>65</sup> In this connection, see above all the formation of 3rd ('Germanic') SS Armoured Corps; details in Wegner, 'Auf dem Wege zur pangermanischen Armee'.

<sup>66</sup> On this and the following, see Wegner, *Hitlers Politische Soldaten*, 292–3.

# IV. Withdrawal from the East? ‘Fortress Europe’ and the Dilemma of Interconnected War

## 1. FÜHRER DIRECTIVE NO. 51

The overriding aim of all German war efforts in 1943 and 1944 was to consolidate and secure Germany’s strategic defensive position, already known to contemporaries as ‘Fortress Europe’.<sup>1</sup> In the autumn of 1942 the Naval War Staff was already talking about the need for rapid consolidation of a ‘European hedgehog position’ and warning of the danger of strategic encirclement of the German sphere of power—a danger which it perceived as a continuation of the enemy powers’ attempts at encirclement, which had been thwarted by the Wehrmacht’s military successes of 1939 and 1940.<sup>2</sup> Germany’s offensive war was thus reformulated as a defensive struggle on a continental scale, laying the theoretical basis for a defensive form of warfare conceived only as a means of gaining time. This reformulation nevertheless became a strategic principle only after the shocks of the Allied landing in North Africa and the Stalingrad disaster, and irrevocably after the failure of Operation CITADEL. But it was a strategic principle backed by no overall concept: ‘In the summer and autumn of 1943, the high command’s only aim and only plan’, Jodl admitted with disarming frankness a few weeks after the end of the war, ‘was to hold out on some line or other.’ And with regard to the plan of operations for 1944, all he could say was: ‘There wasn’t any.’<sup>3</sup>

A few figures will give an idea of the scale of the problems raised by the defence of ‘Fortress Europe’ in autumn 1943. They are based on calculations made by the relevant Wehrmacht and army agencies in October 1943 in preparation for Jodl’s address to Gauleiters. Table III.IV.1 shows the length of the front and coast sections at that time, together with the number of troops available for their defence.

What is striking is the enormous size of the defence area still controlled by Germany, despite the fact that it had already been considerably reduced by the loss of North Africa, the Allied advance in Italy, and the more recent setbacks on the eastern front. Although the total length of around 15,000 kilometres consisted

<sup>1</sup> See the discussion in Part I, Chapter I.3 of the present volume.

<b>Total</b>	<b>15,250</b>	<b>6,815,000</b>	<b>450</b>

(a) Calculation basis: 'Materialien zum Vortrag des Chefs des Wehrmachtführungsstabes', *KTB OKW*, iv.1534 ff. (7 Nov. 1943); (b) the figures in this column are notional and intended only to give an idea of the density of forces; (c) the figures in brackets include the Finnish combat forces of roughly 450,000 men; (d) of which 150 km of fighting front; (e) including Crete and Rhodes.

predominantly of (as yet) uncontested coastline, the second front, expected to be opened by the spring of 1944 at the latest,<sup>4</sup> had long been casting its shadow.<sup>5</sup> Particularly under threat was the western, that is, French–Belgian–Dutch, area, whose over 2,500 kilometres of coastline, in the opinion of the Wehrmacht Operations Staff, permitted enemy landings almost everywhere and at almost any time of year. In addition, the terrain of western Europe, its extensive traffic network, and its well-developed infrastructure made it particularly suitable for a landing by operational armoured formations. It was also clear that for such an undertaking the enemy disposed of possible jumping-off points 'in an almost full circle from eastern England to the United States and North Africa, as far as Corsica and Sardinia, with some of the shortest access routes to the mainland': 'The enemy has superior forces locally available in all areas. The enemy units are still fresh and have accumulated experience in the campaign in Africa, Sicily, and Italy. Landing tactics and technique are exceptionally well developed, so that a large-scale landing must be reckoned with everywhere and at any time.'<sup>6</sup> If such a landing succeeded, not only would the U-boat bases on the Atlantic be cut off, but the whole industrial region of Belgium, northern France, and western Germany could also be taken out in very short order, with 'fatal' consequences for the defence of Germany.<sup>7</sup>

The experts in the Wehrmacht Operations Staff were sceptical about Germany's chances of defence against the threatening danger. It was absolutely necessary to repel and destroy the enemy at an early stage in his attack, if possible even before he reached the coast, but it was doubtful whether German had the ability to do so, and

<sup>7</sup> *Ibid.*, as also the following quotations.

not only because of the Allies' huge air superiority. The Atlantic Wall, which had long been systematically consolidated,<sup>8</sup> was no guarantee either, although 'in the number of bunkers and built-in weapons it surpasses any previous fortified line, including the West Wall and the Maginot Line'. Quite apart from the impossibility of securing the whole 2,600 kilometres of the coastal front with a deeply staggered belt of fortifications, the increasing dispersion of ever greater numbers of German forces over its whole length meant that, in the event of an attack, 'only a small part could be brought to bear on the disembarking enemy at any point'. The Wehrmacht Operations Staff consequently called for 'strong, mobile, well-equipped reserves in the west for the formation of points of concentration', while pointing out in the same breath that even if such reserves were deployed the 'available forces would be insufficient' in the event of a large-scale enemy offensive. In such an event, which would 'finally decide the outcome of the war', it would be necessary to 'deploy every German bearer of arms [...] leaving the homeland extensively depleted'.

German defence plans were complicated by the fact that—while the Allied invasion was expected in the western European theatre of operations, with the Channel coast and the Netherlands considered particularly under threat<sup>9</sup>—a landing in Scandinavia could not be ruled out. In this respect, Jodl and Hitler thought Denmark was at risk above all, since its occupation by the Allies would not only mean the loss of German control of the Baltic and the blockage of Swedish ore and Finnish nickel supplies, and might possibly draw Sweden into the war, but would also directly threaten the whole of northern Germany.<sup>10</sup> Although the Wehrmacht Operations Staff thought such a development rather unlikely for the time being, it had to be admitted that, with the increasing deterioration of the German situation in the east, there would be a growing likelihood of an Allied attack on Scandinavia, especially in the area of Denmark and southern Norway (i.e. probably on Oslo, with side attacks on Jutland and the German bases to the south of Bergen).<sup>11</sup> Moreover, the fact remained that, given their enormous transport capabilities, the Allies would be perfectly able to carry out several landing operations in parallel at different locations in 'Fortress Europe'.

Jodl's stubborn insistence on the threat to Germany in the west derived not least from his fear that the western theatres of operations could remain a secondary concern in Germany's conduct of the war, as they had been since 1941. However, Hitler's own interest in events on the eastern front, which in late June 1943 he had

<sup>8</sup> On this, see *Germany and the Second World War*, vii. 511–16.

<sup>9</sup> The Cherbourg peninsula and Brittany, however, were considered target areas 'for landings with limited aims and ancillary operations'; WFSt/Op. (M): 'Betrachtung der feindlichen Angriffsmöglichkeiten von Westen her gegen den Westraum', 4 Nov. 1943, BA-MA RM 7/260, fos. 352–7.

<sup>10</sup> In a handwritten letter of 25 Oct. 1943 to 1. Skl, Capt. Assmann reported Jodl's fears in this respect, with which Hitler had 'strongly' agreed; BA-MA RM 7/260. See KTB Skl, pt. A, l. 553–4 (27 Oct. 1943).

<sup>11</sup> WFSt/Op., 'Betrachtung der feindlichen Angriffsmöglichkeiten gegen den Nordraum', 3 Nov. 1943, BA-MA RM 7/260, fos. 338–46.

still seen as, 'of course, the decisive front for us',<sup>12</sup> had waned noticeably since the failure of Operation CITADEL. Just as after the failure of Operation BLUE and the defeat at Stalingrad he had resigned himself to the fact that the time for *strategic* offensives was past, he now realized that *operationally* significant victories in the east were no longer possible. As a result, his attention turned more strongly to the emerging developments in southern, south-eastern, and western Europe. 'The danger in the east remains,' he proclaimed in Directive No. 51 of 3 November 1943:<sup>13</sup>

but a greater danger now appears in the west: an Anglo-American landing! In the east, the vast extent of the territory makes it possible for us to lose ground, even on a large scale, without a fatal blow being dealt to the nervous system of Germany. It is very different in the west! Should the enemy succeed in breaching our defences on a wide front here, the immediate consequences would be unpredictable. Everything indicates that the enemy will launch an offensive against the western front of Europe at the latest in the spring, perhaps even earlier.

Directive No. 51 was provoked directly by the outcome of the meeting of Allied foreign ministers which had ended in Moscow a few days earlier.<sup>14</sup> Information from the intelligence services<sup>15</sup> led Hitler to believe that, 'in exchange for Russian alignment with their political position, the Anglo-Americans must have decided to make military promises, i.e. the rapid opening of a second front in western Europe'.<sup>16</sup> The dictator's view that Denmark and the 'coastal strips directly opposite England', including regions directly bordering on core areas of the Reich, were 'especially threatened' by this development<sup>17</sup> increased the pressure on him to act quickly. The Wehrmacht Operations Staff did everything it could to step up that pressure and urge Hitler to take a far-reaching decision in favour of the west. At the situation conference of 30 October Jodl insisted strongly that the western Allies long-awaited large-scale offensive against continental Europe would begin in the spring of 1944 at the latest. Irrespective of possible parallel operations against Denmark, southern Norway, or the Balkans, the enemy would in all probability be 'simply forced' to make his main landing on the Channel coast whether he wanted to or not, since only the shortest sea route would enable him to deploy the strongest possible force.<sup>18</sup> If that landing was successful, it could easily be expanded into a large-scale operation against 'the indispensable Ruhr district'

<sup>12</sup> Goebbels, *Tagebücher*, pt. 2, viii. 532 (25 June 1943).

<sup>13</sup> Hitlers Weisungen, 233.

<sup>14</sup> This is clear from the minutes of the meeting of naval commanders on 11 Nov. 1943, BA-MA RM 7/98.

<sup>15</sup> In this connection, special mention should be made of 'Cicero', a spy operating for the Germans in Turkey; on his role, see Wires, *The Cicero Spy Affair*.

<sup>16</sup> Minutes of meeting of commanders on 11 Nov. 1943, 1, BA-MA RM 7/98.

<sup>17</sup> Ibid. The particular threat to Denmark too was raised by Jodl, with strong agreement from Hitler, at the situation conference of 25 Oct. 1943; see handwritten letter of 25 Oct. 1943 from Capt. Assmann to 1. Skl/Ia, BA-MA RM 7/260.

<sup>18</sup> All quotations, except where otherwise indicated, are from Capt. Assmann's handwritten letter of 31 Oct. 1943 to 1. Skl/Ia, BA-MA RM 7/260. On this, see KTB Skl, pt. A, li. 61–4 (3 Nov. 1943). On the thematic context, see also *Germany and the Second World War*, vii. 498–508.

and become a ‘deadly threat to Germany’. The German fortifications along the Atlantic coast and the English Channel were not sufficient to avert the danger. In any case, Jodl insisted, from the German side the Allied landing could ‘never be prevented on a purely defensive basis, but can only be repulsed by strong, fresh, and fully equipped *offensive* forces, that is to say the enemy must be forced back and driven from the continent by us through offensive action’.<sup>19</sup>

Hitler saw the enemy’s impending large-scale landing in the west as ‘the decisive hour of the war that *must* under all circumstances be turned to our advantage by ruthless employment of the very last forces which Germany can muster’. He agreed ‘fundamentally’ with Jodl’s analysis of the situation and instructed the chief of the Wehrmacht Operations Staff to take the necessary measures in agreement with the army leadership. The main task was obvious: countless new divisions had to be built from scratch<sup>20</sup> and more units had to be withdrawn from the east as needed. Furthermore, as Jodl demanded, the transfer of forces from the west to the eastern front had to ‘cease immediately’.<sup>21</sup> Hitler and his advisers undoubtedly saw the transfer of the strategic focus to western Europe that was now beginning as the sole remaining possibility of continuing the war for any length of time. It was by no means ‘continuity of strategic vision’<sup>22</sup> that led Hitler at the end of 1943 to return to the starting point of his European great-power war of 1939/40, but rather strategic hopelessness. The initiative, which still lay with the dictator at the beginning of the war, had long since passed to the Allies. And as to the question of *how* to react appropriately to the actions of the enemy, the German leadership had been deprived of all choice in the matter.

As in many similar cases, and whatever its specific cause, Hitler’s Directive No. 51 did not initiate a new process but simply sanctioned a reorientation of German conduct of the war that had long been under way. In May, as a result of the surrender of Tunis, a shift in strategic priorities had already been mooted in the event of crisis in western or southern Europe.<sup>23</sup> On 25 July the OKW, resolutely exploiting the debacle of the battle of Kursk, which had been broken off shortly before, announced the number of major formations it needed by the autumn for the theatres of operations for which *it* was responsible. Instead of the 84 units hitherto available, it now demanded that 116 major formations be put at its

<sup>19</sup> Jodl’s thinking was taken into account in the wording of Directive No. 51, which called for ‘the rapid concentration of adequate forces and material, as well as intensive training, to transform the large units available to us [in the west, B.W.] into first-rate, fully mobile reserves suitable for offensive operations. The counter-attack by these units will prevent the enlargement of the beachhead, and throw the enemy back into the sea’ (*Hitlers Weisungen*, 234).

<sup>20</sup> See Führer Order of 27 Nov. 1943 (BA-MA RW 4/v. 474), in which Hitler ordered the services to release ‘at least a million men’ from their own ranks to serve at the front. For details, see *Germany and the Second World War*, v/II, 1031–59.

<sup>21</sup> Assmann’s handwritten letter of 31 Oct. 1943, 2, BA-MA RM 7/260.

<sup>22</sup> Thus Hillgruber, *Der Zweite Weltkrieg*, 134. Hillgruber develops his ‘continuity’ thesis through a comparison of the overall situations in 1940 and 1943/4. A necessary precondition for that thesis would, of course, be the existence of comparable room for manoeuvre in both situations. But that is precisely what was lacking in the case at issue. Hitler took his decision because he had no alternative worth considering.

<sup>23</sup> See Part I, Chapter I.3 of the present volume.

disposal. Since the extra requirement could not be met by the formation of new units alone, no fewer than nine or ten divisions (including six or seven motorized units) were to be taken from the eastern front.<sup>24</sup> In the ensuing intensified struggle between the Wehrmacht and the army leadership over the divisions still available, the OKW had repeatedly to defend itself against the ‘wrongheaded notion’ that forces were needlessly being withheld from the heavily embattled eastern army.<sup>25</sup> Thanks to the change in Hitler’s priorities, however, the OKW finally gained greater leverage. Although the Soviet Union still remained the most important theatre of war for Germany in purely quantitative terms, the head-count of German troops deployed there now stood at its lowest level since the beginning of the war against the Soviet Union. Whereas in June 1941 the Wehrmacht and the Red Army were still more or less evenly matched in numbers, with about 3.3 million men on each side, the figure for the Red Army had since doubled, and that for the Wehrmacht had fallen to barely 78 per cent of its original level.<sup>26</sup> In the theatre of operations where, according to the casualty figures, around 90 per cent of all battles were taking place,<sup>27</sup> only 57 per cent of all German combat forces (3.9 million men out of a total of 6.9 million) were now deployed. And in October 1943 not even two-thirds of the field army’s approximately 4 million men were deployed on and behind what was by far the longest land front.<sup>28</sup> Since the high point of Operation CITADEL, the actual strength of the eastern army had fallen by over half a million to barely 2.6 million men.<sup>29</sup> In view of the exorbitantly high casualty figures, now averaging 150,000 men per month, that might still seem a large number. In comparison with the estimated 5.5 million men (in reality probably 6.4 million) deployed by the Red Army on that same front, it was alarmingly small.<sup>30</sup> In those weeks and months, moreover, worrying comparisons were made between the current situation of the eastern army and that of the German western army in the final phase of the First World War. They showed that in July 1918 a division had to cover on average 3.5 kilometres of front, whereas 25 years later the average on the eastern front was nearly 16 kilometres. In other

<sup>24</sup> KTB OKW, iii. 827 (25 July 1943); see also Hubatsch’s comment, *ibid.* 1629.

<sup>25</sup> Chef WFSt, accompanying letter of 14 Sept 1943 to his memorandum of 8 Sept. 1943 ‘Entspricht die Verteilung der Gesamtkräfte auf den einzelnen Kriegsschauplätzen der strategischen Lage?’, BA-MA RM 7/260. The purpose of the memorandum was to show that the transfer of German forces to northern, western, and southern Europe was indispensable.

<sup>26</sup> See Diagram VII.I.1. ‘Comparison of actual strength of the German Eastern Army and the Soviet army on the European front’.

<sup>27</sup> According to the figures reported by the OKH medical officer, field army casualties (dead, wounded, and missing) in the period from 22 June 1941 to 31 May 1944, i.e. from the beginning of the war against the Soviet Union to the eve of the Normandy invasion, totalled 4.48 million men, of which around 92% (4.12 million) were incurred on the eastern front. See ‘Personelle blutige Verluste des Feldheeres. Berichtigte Meldung für die Zeit vom 1.6.1944 bis 10.1.1945’, BA-MA RW 6/v. 560.

<sup>28</sup> See Table III.II.3 in *Germany and the Second World War*, v/II. 1030.

<sup>29</sup> See Diagram III.II.10, *ibid.* 1020.

<sup>30</sup> See Table III.II.1, *ibid.* 1018. According to more recent Russian data (*Grif sekretnosti sniat*, 152), in 1943 the Red Army deployed a monthly average of 6.39 million troops (excl. partisans).

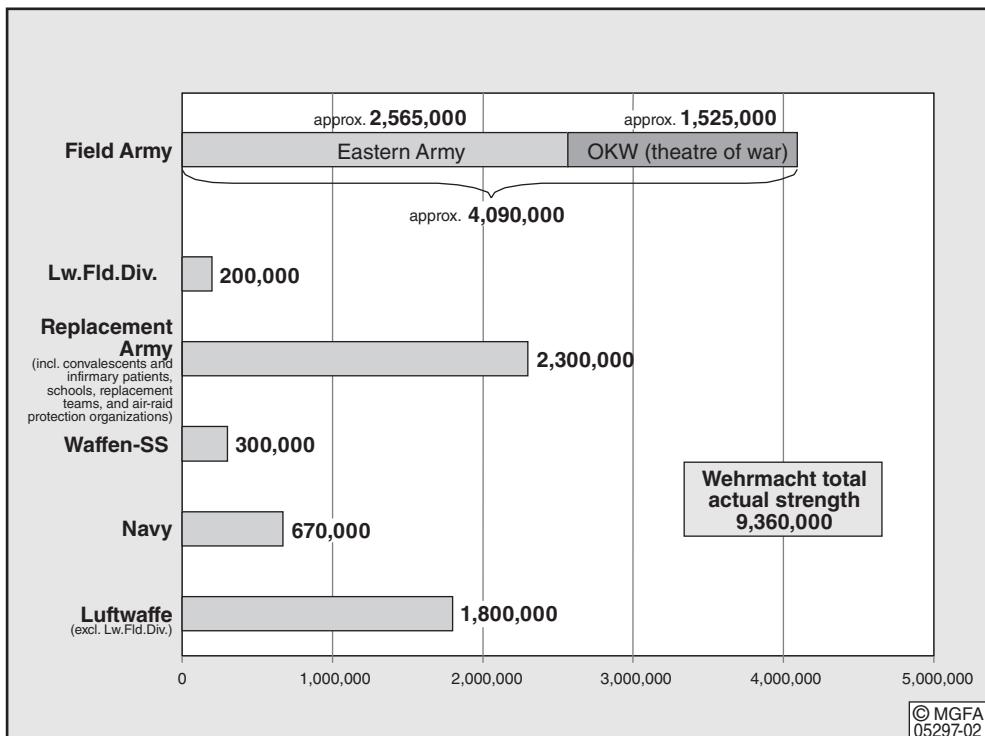

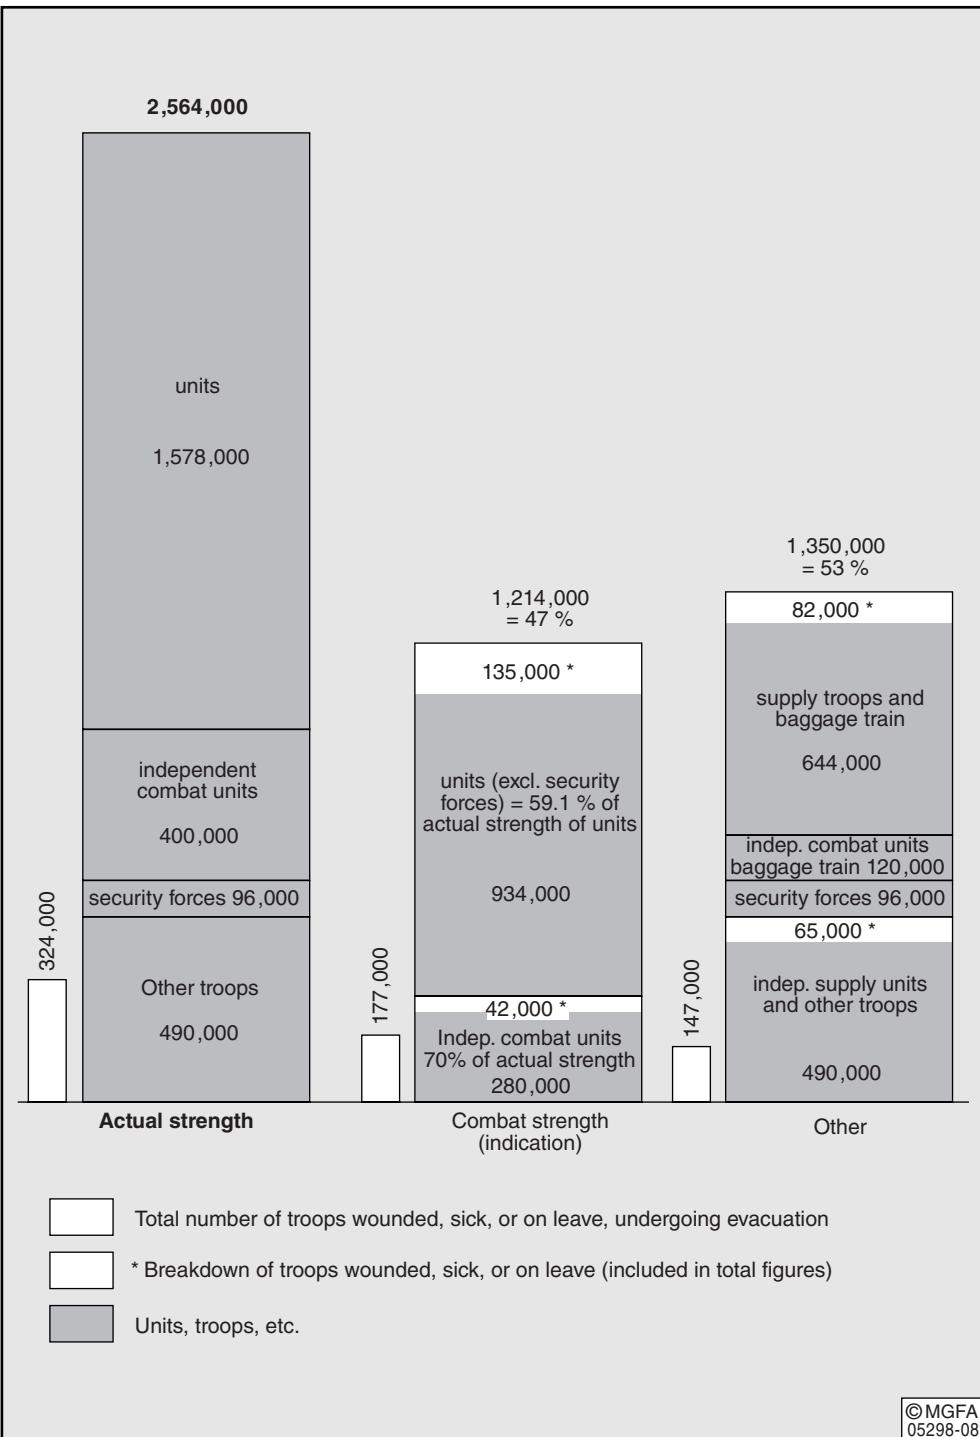

Diagram III.iv.1. Breakdown of Wehrmacht actual strength at 1 October 1943 (excl. birth year 1926)

words, where one division had stood in 1918, there stood in the autumn and winter of 1943/4 only one battalion.<sup>31</sup>

Unlike in the first twelve months of the war in the east, the German leadership was by no means surprised by the development outlined above. If the memoirs of his adjutant are to be believed, Hitler himself perceived ‘the future threatening developments on the eastern front sooner and more clearly than his advisers’.<sup>32</sup> In October 1943, that is, even before Directive No. 51 was issued, Foreign Armies East had already set out in detail the increase in the strength of the Red Army which would have to be reckoned with in the coming months. Although the enemy’s casualties in terms of dead, wounded, and prisoners had risen during the summer (June to August) by a total of 900,000 from the figures in the previous months, the

<sup>31</sup> See FHO, undated table, BA-MA RH 2/2598; ‘Kräftegegenüberstellung für die Ostfront mit Stand vom 13.1.1944’, BA-MA RH 2/1897 K.

<sup>32</sup> Below, *Als Hitlers Adjutant*, 352.

**Source:** Fremde Heere Ost (IIc), BA-MA RH 2/2602.

actual strength of the Russian army on the European front had increased over the same period by 300,000 men, from 5.8 to 6.1 million.<sup>33</sup>

Thus, in contrast to Germany's eastern army, the Red Army's strength in the European theatre of war was again at its highest level. Furthermore, the call-up of new birth years (1926, 1888–92) which had meanwhile proved necessary had brought its human reserves to some 2.5 million men. Foreign Armies East estimated that, over and above the ongoing replacement and rehabilitation of hard-hit units, this would permit the formation of 27 new rifle divisions, while a similar number could be formed from the remnants of dissolved units. It could therefore be assumed that by the end of the current year the Soviet Union would be in a position to form another 54 rifle divisions and some 25 rifle or armoured brigades. Around half of these divisions would be ready before the end of the autumn, and deployment of the remainder could be expected in the winter months.<sup>34</sup>

In fact, in the five months from July to November 1943 the new units reported by Foreign Armies East on the Soviet Union's European front numbered no fewer than 52 rifle divisions, one cavalry division, 39 brigades (including 19 armoured brigades), and 86 armoured regiments.<sup>35</sup> While these figures were considerably lower than those for the previous year, they were alarming enough, especially as the Red Army could be assumed to have withdrawn an appreciable number of units from the front for rehabilitation with a view to the winter hostilities. The total amount of these reserves, some of which were near the front while others needed to be brought up from the hinterland, was estimated by Foreign Armies East towards the end of 1943 at 163 rifle units and 220 armoured units, plus a further 40 to 50 rifle divisions assumed to exist in new formations.<sup>36</sup>

The evaluation of the Red Army's equipment was no less sobering than the assessment of its capacity for regeneration of its human resources. With regard to armour, the enemy had indeed suffered enormous losses in the east: for 1943 alone the Germans estimated total Soviet losses at over 18,000 armoured vehicles, and over 56,000 for the whole duration of the war in the east up to the end of 1943.<sup>37</sup> Nevertheless, in mid-October 1943, that is, only a few months after the summer battles in which so many losses were incurred, it was estimated that the Soviet Union, mainly thanks to its own high output and because of supplies from the Allies, still (or once again) possessed a total of 9,320 tanks, around half of which

<sup>33</sup> These and the following figures are taken from FHO (IIa), 'Entwicklung des personellen Kriegspotentials und die Menschenreserven der Sowjet-Union/Stand 1.9.43, 12.10.1943', BA-MA RH 2/2092. On that basis, the Soviet Union's total losses in prisoners, dead, and wounded from the beginning of the war on 22 June 1941 to 1 Sept. 1943 have been estimated at 13.3 million.

<sup>34</sup> Ibid.

<sup>35</sup> See FHO (IIc), 'Bedarf an Menschen zur Aufstellung der in der Zeit vom 1.7. bis 30.11.43 an der Europafront neu aufgetretenen sowjetrussischen Verbände', 28 Dec. 1943, BA-MA RH 2/2602.

<sup>36</sup> FHO (IIa), 'Vortragsnotiz über den möglichen Kräfteeinsatz bei den russischen Winteroperationen', 29 Dec. 1943, BA-MA RH 2/2092.

<sup>37</sup> This estimate agrees almost exactly with recent Russian data, which is based on a total of 59,100 losses up to the end of 1943; see FHO (IIc), 'Sowjetrussische Panzer- und Sturmgeschütz-Verluste, 1941–1943', n.d. [Jan. 1944], BA-MA RH 2/2589, fo. 51, and *Grif sekretnosti sniat*, 357.

had been detected on or near the German front.<sup>38</sup> As for the front-line aircraft at the enemy's disposal, Foreign Armies East was able to detect 'no decisive inroads into the total stock' following the summer hostilities. The losses incurred during the summer had already been made good by the end of September, and at the end of October the total number was 'already higher than at the beginning of the summer battles'. Worse still: by the spring of 1944 the stock of front-line aircraft, thanks to largely undisturbed production, would reach 28,000, that is, 'the same level as at the beginning of the war'. However, as a result of modernization, which had been completed on schedule, its combat value would be far greater than in 1941.<sup>39</sup>

In the run-up to the final decision on Directive No. 51, Galen's department came to the hardly surprising conclusion that the trend shown by the findings outlined above was 'much more worrying' for Germany than for the Soviet Union, and that 'in the future the Soviet Russian enemy [would] continue to be superior to Germany in human and material resources and propaganda': 'To expect a slackening on the part of the enemy would be to take refuge in a false judgement. Soviet Russia is *with certainty* capable of a strong winter offensive at least equal to that of the summer in terms of the quantity of men and material deployed.'<sup>40</sup> This was simply a roundabout way of saying that further German setbacks were to be expected in the east unless the human and material basis for Germany's conduct of the war was improved considerably in the short term. That, however, was precisely what the Reich leadership was incapable of doing. Despite the loud proclamation of 'total war', the attempt to achieve manpower management geared to the needs of the front had more or less misfired.<sup>41</sup> While the efforts to increase armaments production were more successful,<sup>42</sup> they made no difference to Germany's hopeless inferiority in the arms race with the Allies.<sup>43</sup> When Hitler, against this background, decided to shift the focus of his future military efforts from the eastern to the supposedly more endangered western front, he had some good reasons for doing so. But neither he nor the OKH and Wehrmacht Operations Staffs could have failed to realize that this decision would necessarily have disastrous consequences for the situation of the eastern army. Hitler's directive of 3 November was, moreover, an admission that the war in the east had entered a new phase. What those responsible had up till then endeavoured to portray as an operational feint or a circumstantial

<sup>38</sup> FHO (IIc), 'Panzer-Bestand am 14.10.43, 15.10.1943', BA-MA RH 2/2589.

<sup>39</sup> The 'number of outdated aircraft' had fallen from 84% at the beginning of the war to 20% in the autumn of 1943. See FHO (I), 'Vortragsnotiz Russische Luftwaffe nach Angabe des Luftlageberichts Ost/Stand: 1.11.1943', 12 Nov. 1943, BA-MA RH 2/2115. According to *Grif sekretnosti sniat*, 360, the total number of Soviet front-line aircraft at the beginning of 1944 was around 32,500.

straightening of the front line would now, notwithstanding all the rhetoric about holding fast, assume the character of a long strategic retreat. There were considerable differences of view within the German leadership concerning the duration and extent of that retreat, as is shown by the East Wall debate discussed in section 3 of the present chapter. It was nevertheless clear from the outset that, given the ubiquitous adoption of a scorched-earth policy, the retreats taking place in 1943 and 1944 would lend a new quality to the growing escalation of violence in the eastern theatre of war. Even more than during the months of the German offensive, the civilian population became the main victim of a labour of destruction which, while it might perhaps delay the advance of the Red Army in places, conjured up apocalyptic visions of the future facing the German people in the event of defeat.

## 2. SCORCHED EARTH

The scorched-earth tactic employed extensively from 1943—from the beginning of the Wehrmacht's large-scale retreats from Russia—was a form of behaviour characteristic of German warfare in the east. Military necessity, professionally organized devastation, individual delight in destruction, and politically and ideologically motivated annihilation all blended in an almost indissoluble symbiosis. The scorched-earth principle was, of course, by no means an invention of Nazi warfare. The inclination of retreating armies to leave systematically devastated terrain in their wake has long been evident in history and has repeatedly left its traces in Europe in the modern age, as, for example, during the Thirty Years War and the wars of Louis XIV. Carl von Clausewitz described the phenomenon as follows:

All that the country yields will be taken for the benefit of the retreating army first, and will be mostly consumed. Nothing remains but wasted villages and towns, fields from which the crops have been gathered, or which are trampled down, empty wells, and muddy brooks. The pursuing army, therefore, from the very first day, has frequently to contend with the most pressing wants. On taking the enemy's supplies he cannot reckon; it is only through accident, or some unpardonable blunder on the part of the enemy, that here and there some little falls into his hands.<sup>44</sup>

As a means of delaying an enemy advance, this tactic proved effective mainly where armies operated far from their starting positions and were especially reliant on the resources of the countryside. So it is not surprising that it was precisely Russian tsars who employed scorched-earth tactics in defence against foreign invaders, like Peter the Great against Charles XII or Alexander I against Napoleon. It was this policy which Stalin saw himself as continuing when, on 3 July 1941, two weeks after the start of the German offensive, he ordered the evacuation or destruction of all goods that could be of use to the enemy in the areas threatened by him.<sup>45</sup>

<sup>44</sup> Clausewitz, *Vom Kriege*, 684.

<sup>45</sup> Radio address of 3 July 1941; see also *Germany and the Second World War*, iv. 854–5 and 906.

The Soviet scorched-earth measures in the summer of 1941 contributed decisively to the Soviet Union's survival in the Second World War, less by the destruction they wrought than by the evacuation of economic infrastructure.<sup>46</sup> They served as a welcome precedent for the German dictator when, in the same year, the winter crisis of the eastern army made the first retreats necessary. Immediately after the launch of the Soviet winter offensive at the beginning of December, Hitler ordered the general staffs of the army groups concerned 'to destroy unreservedly all possible living accommodation in the abandoned areas'. The troops were to be informed that 'all concern for the situation of the local population [...] must be set aside in the interests of the military operations'.<sup>47</sup> A Führer order issued shortly after the defeat at Stalingrad summarized once again the principles governing the clearance, evacuation, and destruction operations, and stated, as if in justification: 'The Russian has shown us what to do.' The troops were not only warned against letting weapons and equipment fall undestroyed into enemy hands, but were expressly ordered to burn or destroy, during the clearance operations, any valuable installations, living accommodation, and so on that could quickly be made usable. Furthermore, the troops were to take away with them 'all men between 15 and 65 years of age', to serve as 'heavy labourers'. In the case of large-scale clearance operations, 'the mass of the civilian population was to be taken away and the villages destroyed'.<sup>48</sup>

Hitler's demands were described in advance as being 'in the vital interests of the heavily embattled troops'.<sup>49</sup> What they meant in practice was already seen during the evacuation of the Rzhev–Vyazma salient in March 1943. The systematic planning of the evacuation was matched by systematic destruction, after Army Group Centre HQ had called for the evacuated area to be turned into a 'wasteland' and had ordered the troops, among other things, to 'destroy all dwellings, wells, and bridges during their withdrawal, and to sow mines throughout the area'.<sup>50</sup> What followed was widespread destruction of the infrastructure in the areas of both Ninth and Fourth Armies. In a report dated 11 March, the commander-in-chief of Fourth Army gave an idea of its extent when, referring to Vyazma, he stated that 'all installations important for the war effort have been completely destroyed', and that 'owing to the location of those installations in the town [...] the destruction of the

<sup>47</sup> War diary of Army Group North (Ia), 8 Dec. 1941, BA-MA RH 19 III/769, fo. 42. Further incisive instructions and reports in *Europa unterm Hakenkreuz*, v. 237–8 (doc. 67), 240–1 (doc. 70), and 328–9 (doc. 124); see also Wrochem, *Manstein*, 93 (n. 265). The fact that the corresponding instructions did penetrate downwards is shown by the example of 253rd Infantry Division, which on 13 December 1941 was ordered by XXIII Corps HQ to 'prepare a total "wasteland" in front of its positions, to a depth of at least 20 and if possible 30 kilometres'. The division passed this order on to its units on 16 December. For this division alone, the destruction of an area of 1,000 to 1,500 km<sup>2</sup> was planned. According to the order, the indigenous population was to be forced, regardless of the winter, into the no-man's-land between the main battle lines, in order to serve as a 'human barrier' against the advancing Red Army; Rass, *Menschenmaterial*, 379–80.

<sup>48</sup> Führer Order No. 4 of 14 Feb. 1943, quoted in *Europa unterm Hakenkreuz*, v. 390, doc. 157.

<sup>49</sup> *Ibid.*

<sup>50</sup> Army Group Centre HQ directive of 11 Feb. 1943, repr. in *Ibid.* 385, doc. 154. See also Rass, *Menschenmaterial*, 381–2.

town itself could not be avoided'. All that had been spared were 'buildings of cultural value' and two 'infirmaries containing Russian soldiers and civilians'.<sup>51</sup>

The picture was similar after the abandonment of the Orel bulge in July 1943. The Orel garrison commander's report on the destruction of the town contains a five-page list of destroyed buildings and installations. As proof of the effectiveness of the measures taken, Army Group Centre subsequently circulated a report by a British journalist who visited the town after it was retaken by the Red Army: 'The Orel province is no more than a smoking, exploding heap of rubble [...] After the retreat, Orel simply no longer exists.'<sup>52</sup> The picture is confirmed by German troops' letters from the front. 'Orel', a 30-year-old ordinary soldier wrote to his fiancée in August, 'has been completely razed to the ground [...] and left to the Russians'; the inhabitants had 'fled to the hinterland'.<sup>53</sup> Six weeks later the same writer, referring to another town, 'on whose outskirts we are positioned', reported that 'in 5 days it will no longer exist. The Russians will find only the rubble of blown-up houses and bridges [...] People and livestock from a huge area abandoned to the enemy are all streaming west. The Russians will find an empty wasteland. Every village and every hut are going up in flames.'<sup>54</sup>

Time and again, division commanders found it necessary to issue specific directives on the implementation of the destruction measures. At the beginning of August, the commander of 296th Infantry Division ordered as follows:

Everything stands and falls on destruction of the harvest, followed by that of all other goods, especially living accommodation. The main method of destruction must be burning. Explosives should be used only on things which cannot be burnt. [...] All resources must be mobilized [...] Every soldier behind the main battle line must be assigned the daily task of uprooting 100 potato plants in the early hours of the morning [...] By the evening of 9 Aug. 1943 I do not want to see a single grain or potato field left standing [...] By 17 Aug. at the latest: [...] destruction of unripened grain and buckwheat fields by mowing or grinding. Burning to the ground the listed villages and settlements, where not already done.<sup>55</sup>

In September 1943 a young infantryman wrote a letter to his wife containing his impressions of the retreat on the Dnieper: 'On the opposite bank of the river everything has been ablaze for days, for I have to tell you that all the towns and villages in the areas we are now evacuating are being set on fire; even the smallest house must be burnt down. All large buildings are blown up. The Russians must find nothing but a field of rubble, with no possible lodgings for troops. So it's a horribly beautiful picture.'<sup>56</sup>

<sup>51</sup> Report by Oberbefehlshaber AOK 4, 11 Mar. 1943, quoted in *Europa unterm Hakenkreuz*, v. 399, doc. 164. The following account is based in its choice of examples, except where otherwise indicated, on Klingenberg's unpublished Master's dissertation 'Strategie und Politik'.

<sup>52</sup> Quoted in Klingenberg, 'Strategie und Politik', 32.

<sup>53</sup> Letter from Kolbenhoff dated 10 Aug. 1943, quoted in Latzel, *Deutsche Soldaten*, 155.

<sup>54</sup> Letter from Kolbenhoff dated 24 Sept. 1943, quoted *ibid.*

<sup>55</sup> Directive of 5 Aug. 1943, quoted in Klingenberg, 'Strategie und Politik', 33.

<sup>56</sup> Letter from Pretzel dated 21 Sept. 1943, quoted in Latzel, *Deutsche Soldaten*, 155.

The ‘intensification of annihilation thinking’<sup>57</sup> among the troops which such directives sought to achieve proved a two-edged sword. As could hardly be otherwise expected, it encouraged savagery, even to the point of putting tactical and operational aims at risk. Higher command authorities increasingly found it necessary to intervene against ‘burning which has become a custom’,<sup>58</sup> and to warn against vandalism. ‘Regrettable scenes. Soldiers are losing control of themselves, etc., etc.,’ wrote a young rank-and-file soldier, commenting on the destruction operations of his own troops.<sup>59</sup> ‘We too’, another soldier later recalled, ‘moved teams through the villages firing phosphorus rounds into the dry straw roofs, which immediately burst into flames. In this way we managed to burn down whole villages in a short time. The Russians used to call us “the incendiary division”’.<sup>60</sup>

Apart from troop discipline, the destruction operations were also a source of major concern to the leadership because of their effect on military tactics. Most seriously, they made it harder, or even impossible, to conceal German intentions, since burning houses all too easily alerted the enemy to the timing and direction of planned withdrawals. According to a report from 56th Infantry Division to XII Army Corps HQ:

During the recent withdrawal movements, as confirmed in statements by prisoners, the enemy was always alerted to the further course of the withdrawal by the partially needless burning of buildings. In certain cases, marches through villages were impeded by fires which had been started arbitrarily. Above all, the resulting night-time illumination made it particularly easy for enemy aircraft to attack the withdrawing forces.<sup>61</sup>

There is no evidence to suggest that either the Wehrmacht units which were obliged to withdraw, or their corps HQs, rejected ‘scorched earth’ on principle or sabotaged its application. Nevertheless, testimony of various kinds shows that the two issues referred to in the above-mentioned report—the tactical effectiveness of the destruction measures in general, and concern about the growing savagery of the troops in particular—caused the divisions in question serious problems. If they were to serve their main military objective of delaying the enemy advance, systematic destruction operations required a great deal of time and personnel that in some cases were simply not available. This often resulted in constant switching between withdrawal movements at night, hasty construction of defensive positions in the morning, and more or less systematic destruction activities during the day.<sup>62</sup>

<sup>57</sup> Wording adopted in the directive of 5 Aug. 1943 to 296th Infantry Division; see Klingenbergs, ‘Strategie und Politik’.

<sup>58</sup> This was the phrase used in a directive from the relevant corps HQ to 56th Infantry Division, quoted in Klingenbergs, ‘Strategie und Politik’, 36.

<sup>59</sup> Letter from Pretzel dated 21 Oct. 1943, quoted in Latzel, *Deutsche Soldaten*, 155.

<sup>60</sup> Schneider, *Aus der Hölle*, 32–3. (The reference here is to 15th Infantry Division.)

<sup>61</sup> Quoted in Klingenbergs, ‘Strategie und Politik’, 35–6.

<sup>62</sup> See *ibid.* 63. In the case of 253rd Inf. Div., in many respects a typical large infantry formation, this led during the 1942/3 withdrawals, according to estimates by Rass (*‘Verbrecherische Kriegsführung’*, 86), to the devastation of a total area of approx. 5,000 km<sup>2</sup>.

In those circumstances, impairment of the German forces' own operations was unavoidable. Communication connections, transport links, and living quarters used by the Wehrmacht itself fell victim to the destruction. According to a directive issued in the area of Second Armoured Army at the beginning of August 1943, the divisions had to cope with the fact 'that they are often quartered in particularly difficult terrain. Many of the places shown on the map no longer exist.'<sup>63</sup>

Divisional staffs and corps HQs reacted to all these difficulties by endeavouring to carry out the destruction orders they received in a manner adapted to the local situation. In general, this must have involved not so much the curbing of destruction measures as their control, regulation, and channelling. Fully consistent with that approach were the repeated reminders that the destruction of whole villages was 'a tactic which required an order from the leadership'. All burning down was to be restricted to buildings and installations 'of economic or military importance to the enemy'.<sup>64</sup> Sometimes, out of concern to preserve winter quarters for the division's own troops, all vandalizing and destruction of villages was wholly forbidden. In other cases, orders were issued not to burn down buildings, as was usually done, but to dismantle them instead, so as to obtain materials for the construction of defensive positions. In order to control destructive frenzy on the part of the troops going beyond what was justifiable on military grounds, some divisional commanders finally resorted to threatening those guilty of arbitrary vandalism with court martial for undermining combat efficiency.<sup>65</sup>

The troops' growing inclination to arbitrary requisitioning also gave cause for alarm. Under the conditions of a withdrawal governed by the scorched-earth principle, the already delicate distinction between the imperative of self-supply and the prohibition of plundering was increasingly absent. 'We had a cattle wagon with us, in which there were four cows, two calves, a few hens, rabbits, etc.', an older rank-and-file soldier reported in a letter to his wife. 'Now you'll ask me where we got it all from. Well, the population is retreating before the Russians, so you can buy things *cheap*'.<sup>66</sup> And a few weeks later: 'Yesterday around twenty trucks were out in the surrounding area getting potatoes for the section. It's a military operation [...] An interpreter goes with the men to a village and asks for so and so many potatoes. Now, there are real partisan villages which give nothing voluntarily. So there we have to organize things. Chickens, pigs, geese, change hands.'<sup>67</sup> The euphemistic phrasing cannot hide the fact that the borderline between buying and stealing had long since disappeared, and spontaneous 'organizing' was increasingly turning into 'organized robbery'.<sup>68</sup> In 20th Armoured Division too, 'reports of illegal requisitioning of livestock and seizure of vegetables and potatoes by troops from the division have recently increased to an intolerable extent'.<sup>69</sup> Things were clearly very similar in many other divisions. An NCO taken prisoner at Stalingrad

<sup>63</sup> Quoted in Klingenberg, 'Strategie und Politik', 38.

<sup>64</sup> Directives to 56th and 296th Inf. Div., quoted *ibid.* 36.

<sup>65</sup> For examples of such directives, see *ibid.* 35 ff.

<sup>66</sup> Letter from Bauer dated 17 Sept. 1943, quoted in Latzel, *Deutsche Soldaten*, 144.

<sup>67</sup> Letter from Bauer dated 12 Oct. 1943, quoted *ibid.* <sup>68</sup> *Ibid.* 144.

<sup>69</sup> Quoted in Klingenberg, 'Strategie und Politik', 37.

recalled 'the fond habits, from the times of deployment in enemy territory, of helping yourself wherever and whenever the opportunity arose'.<sup>70</sup>

Commanders increasingly felt obliged to threaten tough action against military plundering, including court martial if necessary. How often such threats were followed by action, which might have had a deterrent effect, has not been sufficiently investigated so far, but it is likely to have been seldom the case.<sup>71</sup> In the given situation there were too many factors inducing the commanders responsible to refrain, in the end, from initiating inherently urgent court-martial proceedings. For one thing, there were the external difficulties dictated by the conditions of the withdrawal itself: a dramatic shortage of personnel, the extreme time pressure under which the withdrawal movements often had to be carried out, and the particularly difficult evidential situation resulting therefrom, which often rendered the reconstruction and criminal assessment of the acts committed barely possible. For another, the overall situation in terms of orders from above made it difficult for commanders to invoke *jus in bello*. In the context of a scorched-earth policy that was highly questionable under international law, the provisions of the Decree on Military Jurisdiction,<sup>72</sup> which were in themselves an incitement to criminal acts, naturally had particularly devastating effects. At the beginning of August, Fourth Armoured Army HQ (Hoth) had already ordered the troops to 'take advantage of every opportunity to seize livestock' and to 'take it from the population by force of arms, if necessary'.<sup>73</sup> Similar orders were issued in the area of Army Group Centre. With winter approaching, concern to build up adequate stores for one's own troops came to the fore. Orders to carry out the compulsory purchase of livestock and to secure the population's grain harvests for the use of the troops were on the agenda.<sup>74</sup> For an army in the throes of withdrawal, this opened the floodgates for plunder.

Those who suffered most from the type of withdrawal outlined above were the civilian population, ground once again between the millstones of the opposing armies. An early, striking example is the fate of the city of Kharkov, which had to be evacuated by the German troops at short notice in February 1943 but was retaken the following month.<sup>75</sup> According to a German intelligence report of April that year, the city 'gives the impression of total destruction. Around a third of all buildings have been completely destroyed—some blown up by German troops during the withdrawal and others bombed by German aircraft. Two-thirds of the houses are more or less badly damaged and need repair before they can be lived in.'

<sup>70</sup> Meyer, *Kriegsgefangener in Stalingrad*, 112. On this and other examples, see also Hilger, *Deutsche Kriegsgefangene in der Sowjetunion*, 292–3.

<sup>71</sup> Klingenberg, 'Strategie und Politik', 38, has been able to confirm no more than three cases of court martial for military plundering in the area of 383rd Infantry Division during the second half of 1943.

<sup>72</sup> The decree (repr. in 'Unternehmen Barbarossa'. *Der deutsche Überfall auf die Sowjetunion 1941*, 306–7, doc. 6) abolished court-martial proceedings for offences and crimes committed by members of the Wehrmacht against 'enemy civilians'.

<sup>73</sup> Quoted in Friedrich, *Das Gesetz des Krieges*, 513.

<sup>74</sup> For examples, see Klingenberg, 'Strategie und Politik', 40.

<sup>75</sup> On the context, see *Germany and the Second World War*, vi. 1182–4 and 1191–2.

Houses with their window-panes intact are few and far between.<sup>76</sup> Nevertheless, around 200,000 of the former 300,000 inhabitants remained in the city. The German intelligence unit estimated that, of the other 100,000, some 35,000 had left the city in search of better living conditions in the countryside, while around 10,000 in each case had left together with the German or Soviet units. Apart from these, the Red Army had recruited some 20,000 men and women as soldiers or intelligence staff, and a further 4,000 had been shot in the course of the first Soviet purges. ‘The rest, around 21,000, must have died as a result of combat operations.’<sup>77</sup>

The plunder, exploitation, evacuation, and deportation of the civilian population was an integral part of the scorched-earth principle, according to which human as well as material resources were to be seized from the enemy and used for one’s own purposes. The procedure whose beginnings were discernible in Kharkov was put into practice on a large scale in the following months. In September 1943, Army Group North HQ ordered the evacuation of around 900,000 people ‘from the area between the present forwardmost line and the Panther Line’.<sup>78</sup> In the area of Army Group Centre, over half a million civilians had been systematically uprooted by October 1943.<sup>79</sup> For January 1944 alone, Army Group South reported the forced evacuation of 143,000 local inhabitants and Army Group A that of 105,000.<sup>80</sup> Unless they voluntarily joined the evacuation, the elderly, infirm, sick, and mothers with infants remained and were left to their own resources, or—as in the area under the command of Ninth Army—were expelled ‘in the direction of enemy or bandit territory’ as ‘useless mouths to feed’.<sup>81</sup> Men of arms-bearing and working age, and often women too, were either deported to Germany for labour service or grouped together in work camps or work battalions for menial and navvying tasks. Exactly who was affected, and how, largely depended on local circumstances and military developments. In mid-November, for example, 383rd Infantry Division ordered all able-bodied men aged 16 to 65, and all women aged 15 to 45 who did not have children under 15 years of age, to be assembled in labour squads. Those affected were treated essentially like prisoners of war and had to reckon on being shot for resisting or attempting to escape. According to the order issued by 296th Infantry Division, ‘the separation of families must be accepted’ in order to secure a sufficient number of labourers. Furthermore, any civilian found after an announced deadline in an area designated for total evacuation was under threat of being shot.<sup>82</sup>

Evidently, individual troop units or local HQs often ordered evacuation measures on their own initiative, without or against orders from the commanding

<sup>82</sup> Quotation and examples in Klingenberg, ‘Strategie und Politik’, 42.

staffs. This meant additional hardships for the population concerned, since in such cases neither march routes nor supply points and reception areas had been established and prepared. The military units were primarily interested in the civilian population as a labour force, since the deployment of civilians on the construction of roads and defensive positions helped to compensate for the ubiquitous shortage of their own manpower and of able-bodied prisoners of war.<sup>83</sup> Thus, at the end of April 1943, in addition to 1,381 Russian soldiers employed as paramilitary auxiliaries, 253rd Infantry Division also had at its disposal—as was by no means unusual—835 civilians, the greater majority of them female forced labourers, who were assigned to a ‘civilian labour battalion’ consisting of several companies.<sup>84</sup> In addition to such labourers, who were housed in barracks and counted as part of a division’s personnel strength, the units resorted, when necessary, to the local civilian population. The extent which such forced labour could attain is shown by an order of 6 October 1943 from 56th Infantry Division, which, for the purpose of constructing the Panther Line, imposed compulsory piecework of 12 hours per day on the whole available civilian population aged 12 to 55.<sup>85</sup>

For obvious reasons, the divisions were little inclined to deport forced labourers to Germany in accordance with the wishes of the higher command authorities,<sup>86</sup> since that necessarily meant a reduction of the local labour force. On that point at least, the interests of the troops must have coincided with those of the local population. According to numerous reports, the threat of deportation gave rise to ‘feverish unease among the civilian population’, great enough to ‘push all other events into the background’.<sup>87</sup> Above all, the obligation on young women to present themselves, and the resulting fear of humiliation and enslavement, led to rage and desperation: ‘There are more and more cases of self-mutilation and infection (scalding of hands and feet, infection with scabies and trachoma) intended to induce rejection by the medical boards.’<sup>88</sup> According to another report, labour deployment in Germany, which was likened to ‘deportation to Siberia’, was ‘strongly rejected even by local inhabitants who were employed by the troops or

<sup>83</sup> Mainly from 1943 onwards, hundreds of thousands of Soviet POWs working in construction battalions were either incorporated into eastern battalions or deployed as paramilitary auxiliaries in regular front-line divisions, where they freed German soldiers for combat duties. In the latter case alone, there must have been around 400,000 Soviet citizens active in German units in May 1943; see *Germany and the Second World War*, v/II. 1057. In either case, they were no longer available as a labour force and had to be replaced by civilians.

<sup>84</sup> See Rass, *Menschenmaterial*, 368.

<sup>85</sup> See Klingenberg, ‘Strategie und Politik’, 45. On the increasingly radical procedures for selection of the labour force, see the detailed discussion of the case of 253rd Infantry Division in Rass, *Menschenmaterial*, 369 ff.

<sup>86</sup> Nevertheless, as a result of intensified recruitment and compulsory measures, the number of ‘eastern workers’ deported to Germany from the former Soviet territories rose from a few tens of thousands at the beginning of 1942 to around 1.8 million at year end 1943 and over 2.1 million by the late summer of 1943; see *Germany and the Second World War*, v/II. 234–42.

<sup>88</sup> Ibid. 3.

the German agencies and thus less exposed to the many rumours circulating among the population'.<sup>89</sup>

Irrespective of the gain in manpower, the mass evacuation and deportation of civilians under the scorched-earth policy placed a considerable burden on the troop units involved. The organizational problems were essentially similar to those that had arisen in previous years in taking prisoners of war back to Germany, but the framework conditions had worsened considerably in the meantime. Time and again, tens of thousands of civilians were put on the march westwards without assigning the military personnel needed to conduct them, guard them, and ensure their provisioning and billeting. For the troops fighting their retreat, care of the civilian population came more or less at the bottom of their list of priorities. In the words of a divisional order issued by 56th Infantry Division in October, the evacuation of civilians was 'an administrative measure' which 'had to take second place to all tactical requirements'.<sup>90</sup>

At the same time, and perhaps for that very reason, the fate of the civilian population was for some soldiers clearly a psychological as well as an organizational burden. Fighting an armed enemy was one thing; hounding helpless old people, women, and children was for some ordinary soldiers something else again. Command staffs repeatedly found it necessary to justify the cruelties they had ordered and to enforce execution by means of threats. A directive from Ninth Army HQ dated 30 March 1944 read: 'It must be made clear to the troops that the complete removal of labour resources has become essential to the conduct of this war. How much more cruel and brutal would be the fury directed by the Soviets against the German people if they got into our country because, out of humanitarian sentimentality, we had neglected to organize all labour resources to enforce final victory.'<sup>91</sup> Whoever, 'out of inappropriate human softness', failed to carry out the orders 'relentlessly and to the letter', would be regarded as 'a traitor to the German people'. 'Traitors will be dealt with by court martial—this is to be communicated to every soldier immediately before deployment.'

A minority of the indigenous population—by no means insignificant but hard to put a figure on—scarcely needed forcing to leave for the west. It mainly consisted of all those who, in the months or years of the German occupation, had cooperated with it willingly or under compulsion, or indeed profited from it. In addition to groups like the clergy or the kulaks, who had been persecuted by the Stalinist system from the outset, it included all those who had been in local self-administration or the auxiliary police during German rule, as well as the not entirely insignificant number of farmers who had benefited from the land reform finally initiated by the occupation authorities<sup>92</sup> in a last desperate attempt to give the occupation regime some popularity where it could no longer be maintained by force alone.<sup>93</sup>

<sup>89</sup> Monthly report of 221st Rifle Division, June 1943, quoted in Klingenberg, 'Strategie und Politik', 46.

<sup>93</sup> See details in *Germany and the Second World War*, v/II. 220 ff.

Those who feared retaliation by the Red Army less than forced labour for or in Germany joined the partisans, whose zones of influence, military role, and impact had naturally increased as the position of the eastern army grew shakier. The 'counter-terror' measures taken in response, though applied only sporadically, were themselves increasingly radical. As a result, burning down villages, rounding up livestock, and deporting, if not shooting, the population had long been common practice among front-line troops too.<sup>94</sup> The practices pursued from the summer of 1943 under the scorched-earth policy were not so very different, except for the extent of the shootings.<sup>95</sup> So it was not surprising that the two forms of military action very quickly fused in a symbiosis in which the distinction between partisans and non-partisans was made ever less frequently, and was perhaps no longer even possible to make.

In point of fact, the close connection between anti-partisan warfare, 'scorched earth', and the confiscation of resources had been established well before the start of the large-scale withdrawals. In an order of 26 October 1942, Göring had stipulated that in 'bandit-infested' areas, all livestock and food stores were to be requisitioned, and all available male and female labour resources were to be 'seized by force'.<sup>96</sup> Against that background, the measures introduced a year later under the scorched-earth policy appear simply as a continuation of long-standing devastation practices. While the motives had changed, inasmuch as the punitive and deterrent approach characteristic of anti-partisan warfare was now supplemented by increasing concern to optimize the security of the military withdrawal, that must have made little difference to the troops charged with carrying out the work of destruction or to the population affected. Whether perpetrators or victims of the devastation, they were generally neither capable of, nor indeed interested in, looking for the underlying reasons for their actions or suffering.

This constellation of circumstances gave rise to an essentially insoluble dilemma for middle- and lower-level troop commanders. Mostly young men rapidly promoted to positions of responsibility under the pressure of war, they had to command troops whose overwhelming majority had experienced the exceptional nature of the war in the east to the full in years of bitter fighting, and had willingly or reluctantly internalized the 'annihilation thinking' which dominated it.<sup>97</sup> The practices required by the scorched-earth policy placed no fundamentally new demands on them. What was new for many soldiers was the unaccustomed circumstances of an ongoing retreat, which made it doubly difficult for commanders to keep the devastation within militarily 'reasonable' bounds. Although the

<sup>94</sup> See *Germany and the Second World War*, vi. 1005–21.

<sup>95</sup> As Gerlach rightly stresses ('Verbrechen deutscher Fronttruppen', 106), 'a broad-based investigation of crimes committed by front-line troops' is still a research desideratum. On the basis of his own studies of Belorussia, he sees a difference between the crimes of 1941 and those of 1943/4, not in quantity but in kind. During the offensive phase such acts had preferably been directed at the military enemy, whereas later on they were applied on principle to the whole civilian population (see ibid. 104 ff.).

<sup>96</sup> See *Europa unterm Hakenkreuz*, v. 340 f., doc. 133.

<sup>97</sup> In this connection, see also the imaginative observations of Latzel, 'Tourismus und Gewalt'.

directives from the top leadership, which were often impossible to apply owing to dynamic developments in the local situation, left the divisions some room for manoeuvre, the shift in the balance of forces that was evident on all sides created its own constraints. In particular, the naturally declining authority of an army of occupation on the retreat, coupled with the partisan activity that was gaining the upper hand in certain areas, made it increasingly difficult for commanders to ensure the security of their units other than by rigorous measures. The implementation of those measures, however, conditioned by the time and place constraints of the evacuation and withdrawal movements, increasingly escaped the commanders' control, leading to the forms of vandalism already mentioned and thereby driving ever larger sections of the population into the arms of the partisans. Such contradictions are the main explanation for the striking frequency of clearly conflicting orders on the part of individual divisions. Depending on the commander's intentions, the subjectively perceived threat, and considerations of discipline, orders were issued which, in the event of incidents, either left troops free to commit any kind of measures of collective violence, mostly the burning of houses and villages, or else strictly forbade precisely such measures except in specifically defined individual cases.<sup>98</sup> All in all, the mass of the troops, as well as the population affected, must have gained the impression—and perhaps were intended to do so—of an area of lawlessness in which what happened was determined only by considerations of expediency. The ground was thus prepared for excesses of every kind, whether commanded or not; all the more so as troops who were militarily hard hit and condemned to retreat were given cause and opportunity—by an order from their supreme command to destroy all means of life in their wake—to vent their pent-up aggression largely without risk.<sup>99</sup>

It is striking that in the orders and directives regarding scorched earth, as in those on anti-partisan warfare, there are generally no references to provisions of international law. Of course, the fact that the responsible command authorities and agencies did not consider it advisable to mention them does not in itself mean that considerations of international law played no part, or that the orders in question were contrary to international law from the outset. What, then, was the formal legal position of the scorched-earth tactic applied by the eastern army? The relevant international legislation on the matter, though not ratified by the Soviet Union, was the Hague Convention of 1907 respecting the Laws and Customs of War on Land. On the one hand, its provisions made it quite clear that 'requisitions in kind and services' could be demanded of the population of an occupied country (Art. 52), and that 'all kinds of munitions of war' could be seized (Art. 53). On the other, it stipulated that an army of occupation was to regard itself 'only as administrator and usufructuary of public buildings, real estate, forests, and agricultural estates', and

<sup>98</sup> See the numerous examples in Klingenberg, 'Strategie und Politik', 49–58.

<sup>99</sup> There is some plausibility about Bartov's thesis ('Von unten betrachtet', 326 ff.) that the troops of the eastern army were deliberately given a safety-valve in the form of the toleration of excesses against the civilian population so that even more rigorous discipline could be demanded of them within their units, but it remains speculative pending better empirical evidence.

was obliged to safeguard them (Art. 55), and in particular to abstain from ‘all seizure of, destruction or wilful damage’ to buildings dedicated to religion, art, science, and the like. Belligerents were by no means free in their choice of means of injuring the enemy (Art. 22), but were entitled to destroy or seize enemy property only where such destruction or seizure was imperatively demanded by the necessities of war (Art. 23). ‘The attack or bombardment, by whatever means, of towns, villages, dwellings, or buildings which are undefended’ was specifically prohibited. (Art. 25), and all necessary steps were to be taken to spare religious, historic, cultural, and medical buildings, provided they were not being used for military purposes (Art. 27).<sup>100</sup>

It is obvious that general provisions of that kind permitted considerable room for interpretation in individual cases, and indeed could be adhered to only to a limited extent under the conditions of a total war of annihilation whose ultimate form was quite inconceivable at the beginning of the century. On the other hand, the common purpose of all the relevant provisions was unequivocal: to limit the extent of destruction and devastation to what was unavoidable on military grounds. Devastation out of malice or to terrorize the population, or for reasons of war economy, is, as Friedrich Berber aptly observed,<sup>101</sup> ‘always inadmissible; rather there has to be an immediate threat to troops in action who cannot be protected against destruction or capture by any other means’. But although some front-line commanders may perhaps have been concerned to exercise such restraint, there was no question of it in the directives and proclamations of the top leadership. On the contrary, in an address to SS leaders in Kharkov in April 1943, Reich Leader SS Heinrich Himmler summarized, more openly than on many other occasions, what he and his Führer actually wanted: ‘How can we take the most men from the Russians—dead or alive? We shall do it by killing them or taking them prisoner and really putting them to work, by endeavouring to gain as much control as possible over any territory we occupy, and by leaving empty of people any territory we dispose of, any areas we make over to the enemy.’<sup>102</sup> However unpalatable such views may have been to many Wehrmacht front-line commanders (and sometimes even Waffen SS commanders), they determined the ‘strategic’ line adopted during the retreat of 1943/4, just as they had already done during the advance of 1941.

The accusation that the devastation effected in the course of the German retreat was illegal under international law,<sup>103</sup> which the Allies raised immediately and which was examined in detail above all in Nuremberg in the ‘subsequent trials’—in particular in the trial of the Wehrmacht high command—later led to repeated attempts at justification by the German generals involved, who were nevertheless very little inclined to reveal the real motives for their actions. Manstein, for

<sup>100</sup> All quotations are taken from the Hague Convention respecting the Laws and Customs of War on Land.

<sup>101</sup> Berber, *Lehrbuch des Völkerrechts*, ii. 176.

<sup>102</sup> Speech of 24 Apr. 1943, quoted in Himmler, *Geheimreden*, 186.

<sup>103</sup> From the historical viewpoint, see above all the broad-ranging, seminal, though sometimes polemically coloured treatment of the subject in Friedrich, *Das Gesetz des Krieges*, ii.

example, in his account of the retreat on the Dnieper, argued that while ‘scorched earth’ had caused the Russian population a great deal of misfortune and hardship, ‘it bore no comparison to the terror-bombing suffered by the civilian population in Germany or to what happened later in Germany’s eastern territories’.<sup>104</sup>

In accordance with the need to ‘balance accounts’ that was all-too-characteristic of West Germany in the post-war period, Manstein invokes two large sets of crimes, one of which—the behaviour of the Red Army following its advance into Germany—need not be discussed here<sup>105</sup> since, having occurred much later, it cannot help to explain German behaviour in 1943. At most, the fear of Soviet mass crimes in the event of German defeat may have increased troop commanders’ readiness to radicalize their own conduct of the war. Such fears were not infrequent among German participants in the war, irrespective of rank and function, and were by no means unfounded. With every day that the front moved further west, many Germans became increasingly worried that their own nation could one day itself fall victim to the forms of warfare which Germany had adopted in Russia.<sup>106</sup> Stirred up by propaganda for obvious reasons, these fears were associated with long-standing stereotypes of ‘Russian bears’, ‘Asiatic hordes’, or ‘Jewish-Bolshevik subhumans’, which must have strengthened the conviction that all means were justified in order to ward off a danger of that kind.

The Allies’ strategic bombing war invoked by Manstein, however, was definitely a source of tangible justification for that conviction. The destructive air raids on Hamburg, Berlin, and other German cities immediately preceded the large-scale German withdrawals in the east and accompanied them without interruption. The horrors of those air raids and their consequences were reported in millions of letters from home. Many soldiers had experienced them personally while in Germany on convalescent leave or on special home leave to visit their bombed-out families.<sup>107</sup> Whatever they saw, heard, or read needed no propaganda exaggeration to convince every soldier that the enemy was not prepared to exercise any restraint with respect to the German civilian population. Such convictions only played into the hands of Hitler and the Nazi leadership. The German dictator could now be more certain than ever that his decision to fight the war with all means (including ‘scorched earth’)—taken long before, and without regard to, the Allies intensified bombing campaign—would scarcely encounter any fundamental resistance among the front-line staffs of the eastern army.

There, and in the army’s central operations staffs, the overriding concern was whether the Red Army’s advance could still be halted and, if so, how. Everyone in the army leadership at least had long been convinced that a total German collapse could be prevented only by means of a radically new defence concept.

### 3. THE EAST WALL DEBATE

The increasingly serious problem facing the German leadership—that of lacking sufficient forces, in both the west and the east of the continent, to oppose the threat of major Allied offensives—had already impelled the Army General Staff to press Hitler for the construction of prepared defensive positions well in the rear, with a view to saving troops. Fundamentally opposed to large-scale withdrawals, the supreme commander had ordered only the construction of prepared rear positions close to the front, that is, a few dozen kilometres behind the main battle line.<sup>108</sup> It was not until 12 August 1943, after the failure of Operation CITADEL, that Hitler finally—though essentially much too late—issued Führer Order No. 10, on ‘immediate construction of the East Wall’ along the Dnieper and the Desna (‘Panther Line’), thus returning more or less to the plans which the Army General Staff had put forward six months before.<sup>109</sup> The same performance took place only a few weeks later at the beginning of October, after the Dnieper too had been crossed by the Red Army, when the dictator again banned the establishment of a ‘permanently constructed’ rearward defence line.<sup>110</sup> In December 1943 Hitler found out that Manstein had ordered the construction of a defensive position on the Bug on his own authority, and that Zeitzler had acceded to it. He immediately forbade the enterprise, which he described it as further proof of his field marshal’s defeatist attitude.<sup>111</sup>

Shortly afterwards, in a one-to-one discussion, Guderian too failed to persuade his Führer of the need for systematic construction of defensive zones in the east.<sup>112</sup> While the inspector-general of armoured troops at least managed to keep the dictator’s trust despite his unsolicited proposals, the commander-in-chief of Army Group North, Field Marshal Georg von Küchler, was quickly relieved of his command after arguing all too insistently, during a visit to Führer headquarters on 22 January 1944, for withdrawal of his army group to the Panther Line.<sup>113</sup> On all these and other occasions, Hitler insisted that ‘any rearward defensive position draws the troops backwards’. Clearly, what he feared was a kind of ‘domino effect’, that is, an irreversible process of step-by-step withdrawal, ‘since

<sup>108</sup> Deployment of the Reich Labour Service to construct positions further in the rear was indicated as a possibility, but was made subject to further directives. See Führer Order No. 8, 5 Mar. 1943, BA-MA RH 2/412. On the course of the positions ordered, see OKH/GenStdH/Op.Abt. (II) to Army Groups Centre and North, 18 Mar. 1943, plus annexed maps, BA-MA RH 2/747a and RH 2/747a K-2.

<sup>109</sup> See *KTB OKW*, iii. 933 (12 Aug. 1943).

<sup>110</sup> Quoted in Speer, *Erinnerungen*, 554 (n. 3).

<sup>111</sup> See *ibid.* 282. Kleist had also called for the southern front to be re-established behind the Bug, from where it should extend to ‘the Zhitomir area’ and connect up with the Pripet marshes. At the same time, a ‘strong operational reserve’ should be kept in the ‘Rovno–Dubno–Lutsk fortified triangle’; undated note from C-in-C Army Group A for a presentation to the Führer in the autumn of 1943, 3, BA-MA RH 19 V/2, fo. 33.

<sup>112</sup> See Guderian, *Erinnerungen eines Soldaten*, 295, and *id.*, ‘The Interrelation between the Eastern and Western Fronts’, 27–9, BA-MA, Hist.Div., Study T-42. Only after the collapse of Army Group Centre in the summer of 1944 did Hitler again prove open to the idea of an East Wall; see Noble, ‘The Phantom Barrier’.

<sup>113</sup> See Ziemke, *Stalingrad to Berlin*, 255–6.

news of the construction of such a position would reach the front even before the new position was ready. The troops would abandon their old position too soon, placing all their hopes in the new one.<sup>114</sup> The fact that the dictator did not hesitate to use that argument in a psychologically effective and personally insulting manner even against his field marshals was shown during a meeting at Führer headquarters on 20 May 1944, when the commander-in-chief of Army Group Centre pressed for withdrawal of the front to the Dnieper or Berezina line. Hitler dismissed the proposal with the disparaging remark that he had previously been unaware that he, Ernst Busch, 'had now joined the ranks of those generals who are always looking backwards'.<sup>115</sup>

The idea of an East Wall repeatedly put forward by the generals nevertheless made very good sense from the military viewpoint, since it promised relief from particularly serious difficulties weighing upon German conduct of the war in the east. The main problem, as Manstein explained with reference to his own army group, was that the troops 'were forced, without sufficient reserves, to defend a front that far exceeded their own strength, so that the Russians were able to mass their forces at any point at which they wanted to attack, without ever having to fear leaving a weak position where the enemy might achieve an operational breakthrough'.<sup>116</sup> In addition to the resulting 'total operational dependency' of his own units, their fighting power had been so eroded by incessant deployment that the enemy, 'however bad the condition of his own troops, was able to break through at any point where he could muster sufficient forces, simply because of our insufficient occupation of the front'. Manstein's own troops had 'nothing nearly sufficient' with which to oppose such a concentration of forces; the 'constant over-demand' had so undermined their mental and physical power of resistance that 'they were no longer capable of strong artillery fire and the deployment of armour, so that successes for which the enemy had previously not dared to hope simply fell into his lap'.

In view of the problems facing the eastern army, which were invoked by other commanders in a similar form,<sup>117</sup> one might think no general staff training was necessary in order to see the attractiveness of the East Wall proposals. It is therefore not surprising that in the summer of 1943 the security service reported that even 'anonymous *Volksgenossen*' were asking why there was no equivalent to the West Wall in the east to shatter the attacking waves of the Red Army with the use of comparably fewer German defence forces.<sup>118</sup> Hitler's stubborn rejection of the project seems all the more in need of explanation. It surely cannot be attributed solely to his undoubted antipathy to all primarily defensively oriented thinking,

<sup>114</sup> Thus Speer, shortly after the end of the war; see *Alles was ich weiß*, 204.

<sup>115</sup> Gackenholz, 'Der Zusammenbruch der Heeresgruppe Mitte', 451–2.

<sup>116</sup> This and the following quotations are taken from a letter of 27 Oct. 1943 from the naval liaison officer with the OKH General Staff to the Naval War Staff's chief of staff, based on a discussion with Manstein, BA-MA RM 7/260.

<sup>117</sup> e.g. by Field Marshal von Kleist, commander-in-chief of Army Group A, in an undated note for a presentation to Hitler from the autumn of 1943, BA-MA RH 19 V/2.

<sup>118</sup> See Noble, 'The Phantom Barrier', 2.

which he sweepingly imputed to his army generals. After all, Hitler had already had fortifications built in the east against Poland—mainly in East Prussia and Brandenburg—and subsequently the West Wall and the Atlantic Wall in the west. His coquettish self-description as ‘the greatest builder of fortifications of all time’<sup>119</sup> may have been an exaggeration, but there was a grain of truth in it. The key to Hitler’s attitude was not a principled aversion to fortified forms of defence but his conviction about the specific nature of the war in the east. As recent research has repeatedly demonstrated,<sup>120</sup> Hitler’s real war was the war against the Soviet Union, which was thus the *raison d’être* of all other German war efforts. Hitler believed the historical significance of ‘his’ war would be decided in the east alone. If the battle in and against the west was again at the centre of his strategic thinking for the time being, it was only because the outcome in western Europe would decide, in the foreseeable future, whether Germany would actually be able to continue its mission in the east. Moreover, the defence of gains was the most suitable form of battle in the west—as also in the north and south—of ‘Fortress Europe’, whereas in the east Germany had to maintain its vision and not abandon its future potential. Not for nothing were Germany’s future prospects in the east invoked time and again in Hitler’s milieu, and by Hitler himself, in the second half of the war. Anyone prepared to admit it knew that the war in the east was a war of conquest. What else could be its justification, if not conquest? Restricting it to pure defence, made obvious by large-scale withdrawals and the construction of an East Wall far to the west, threatened to rob it of all meaning.

This shows once again that in the last years Hitler increasingly became the prisoner of the ideas and concepts under whose sign he had once begun his war. As in the planning and offensive phase of Operation BARBAROSSA, his ideological and strategic concepts again overlapped in such a way that the strategic concepts appear, to some extent, ideologically stringent. Thus Hitler’s antipathy to all plans for an East Wall, though scarcely comprehensible from a purely military-operational viewpoint, appears not entirely unfounded in terms of strategy when his ideological fixed point, that is, his adherence to the racial-imperialistic concept of ‘living space’, is taken as a given. Just how serious were the potential strategic consequences of even a moderate withdrawal of the eastern front was made clear by Führer Order No. 10 of 12 August 1943. At the same time, it is clear that the constantly recurring differences of view about the East Wall cannot be interpreted, as has been repeatedly claimed,<sup>121</sup> simply as a conflict between generals who thought in military-professional terms and an ideologically rigid dictator. Serious reservations about the course of the planned defensive line were also expressed by the naval and air commands, and by the Wehrmacht Operations Staff.<sup>122</sup> Dönitz, for example, supported by Jodl, drew attention to the problems which the planned East Wall

<sup>119</sup> Thus Guderian, *Erinnerungen eines Soldaten*, 295.

<sup>120</sup> The state of recent research is summarized in Müller and Ueberschär, *Hitlers Krieg im Osten*, 30–5.

<sup>121</sup> Thus Guderian in *Erinnerungen eines Soldaten*.

<sup>122</sup> These reservations are summarized in a briefing note by Jodl in *KTB OKW*, iii. 983, 21 Aug. 1943.

line on Lake Peipus would create 'for the naval warfare situation in the Baltic in general, for warfare in the Gulf of Finland, and by endangering the Estonian oil shale area'. Hitler could only agree completely with the objections raised by the commander-in-chief of the navy and console him with the explanation that 'construction of the East Wall on Lake Peipus would only be a precautionary measure, without any intention from the outset of withdrawing the northern front to that line'.<sup>123</sup> For his part, the commander-in-chief of the Luftwaffe pointed out that the shift of the front envisaged in Führer Order No. 10 meant the loss of 35 airfields that had been constructed,<sup>124</sup> and would have a major impact on the possibilities for action by the German and Russian air forces: 'The consequences of the front withdrawal for aerial warfare are that we shall no longer be able to reach not only Russian industry in the Urals but also targets such as Grozny, Saratov, and Gorky, whereas Berlin and Upper Silesia will be within range of the mass of Russian units'.<sup>125</sup> For the area of the Donets Basin and central Ukraine, as the Wehrmacht Operations Staff pointed out, withdrawal to the planned East Wall would cause serious problems, *inter alia*, for the food sector (above all, the loss of around 1.5 million tonnes of bread and feed grain) and for coal supply. The resulting coal shortage would 'directly affect supplies to the troops, railways, and industry, particularly iron and steel production, and thus also munitions production (the Ivan programme) and the manufacture of other German armaments', and even indirectly affect the supply of coal throughout the German sphere of power. The loss of other raw materials, the expected energy shortages, and the almost total absence of manganese ore extraction would be no less serious.<sup>126</sup> Account had also to be taken of the not inconsiderable changes and restrictions which the planned measures would involve for the German civil administration, especially in the Reich commissariat of the Ukraine, and—more importantly still—the unfavourable foreign-policy consequences. In the north, the planned 'abandonment of the Leningrad area and the inner Gulf of Finland' threatened to weaken the position of Finland and Sweden, while negative repercussions on Turkey, Romania, and Bulgaria were to be expected in the south. In the opinion of the Wehrmacht Operations Staff, Romania and Bulgaria in particular would have to reckon with a considerably increased threat to their Black Sea coasts. In addition, the German presence in Crimea would be much more precarious in future owing to the reduced possibilities of sea transport.<sup>127</sup>

<sup>123</sup> Minutes of situation conference at Führer HQ, quoted in *Lagevorträge*, 544 (28 Aug. 1943). In fact, the Army Group North units withdrew to the Panther Line (Narva–Lake Peipus–Pleskau–OPOCHKA-area to the west of Nevel) only on 18 Feb. 1944 and held it until 12 July 1944.

<sup>124</sup> See WFSt/Op (L), briefing note of 3 Sept. 1943, 'Ausbau der Fliegerbodenorganisation im Osten', BA-MA RW 4/v. 708.

<sup>125</sup> KTB OKW, iii. 983 (21 Aug. 1943). For a more detailed argument, see also WFSt/Op, 'Vortragsnotiz zur Linienführung des Ostwalls', 21 Aug. 1943, BA-MA RW 4/v. 708.

<sup>126</sup> WFSt/Op, 'Vortragsnotiz zur Linienführung des Ostwalls', 21 Aug. 1943, 4–5. BA-MA RW 4/v. 708.

<sup>127</sup> Ibid. 2, 6. In fact, plans leading to the evacuation of Crimea were already being contemplated in the operations division of the Army General Staff in mid-September; see Meyer, *Adolf Heusinger*, 235–6.

In the present context, the objections and problems outlined above are noteworthy in two respects. First, they show that Hitler was by no means alone in his scepticism about large-scale changes to the eastern front, but received at least occasional and partial support from supreme commanders of the armed forces other than the army, not to mention representatives of the war economy and the armaments industry. ‘I am an advocate of not giving up anything in the east when not absolutely necessary’—that statement was made, significantly, not by Hitler (who might have said it) but by Dönitz, who was arguing in favour of maintaining control of the Crimean peninsula, which was already cut off by land.<sup>128</sup> Second, the example discussed here shows once again the nature of the military (as well as the political) decision-making process in the Führer state. All the above-mentioned objections and reservations about the planned course of the East Wall defensive line were expressed only after the Führer order of 12 August had been issued. They were aimed not at its revision but only at securing an advantageous position for the objector’s own arm of the Wehrmacht or civilian agency with respect to the changed circumstances. As usual, there had been no broad-based coordination of interests among the military and civilian authorities concerned prior to the Führer order. Nor could there have been, since the decision-making process at Führer headquarters made no provision for such consultations. The most that could happen was that Hitler, before committing himself on an important issue, might seek the opinion of individual officers or officials entirely at his own discretion. Notwithstanding all Keitel’s obvious efforts to deny personal responsibility, he was by no means untruthful when he said: ‘The Führer always made the important decisions himself [ . . . ] but then there was no more discussion. Discussions took place only when he asked for them. When he decided, the generals concerned were called, and none of them knew what the results would be. Neither did I.’<sup>129</sup>

## PART IV

# THE SWING OF THE PENDULUM

*The Withdrawal of the Eastern Front from  
Summer 1943 to Summer 1944*

## Prologue: The ‘Forgotten Year’

Despite the dramatic nature of the events and the monstrous losses incurred, there is scarcely a chapter of military history that has received as little attention as the period from the summer of 1943 to the summer of 1944 on the eastern front. What took place between the battle of Kursk and the collapse of Army Group Centre has largely remained in the dark, although the fighting was even fiercer than during the battles of the first war years. The operations between the Baltic and the Black Sea, in the course of which the Red Army forced the Wehrmacht back from the Kursk salient to the Carpathians, were on a huge geographical scale. Almost the whole Ukraine was reconquered. Although almost always victorious, Stalin’s troops nevertheless suffered enormous losses. Soviet casualties were mostly five to ten times as great as those of the Germans, and even more in some individual operations, even if we accept the (much too low) official Soviet figures. This was one of the most eventful periods of the war, mainly because the superiority of the Red Army had increased to such an extent that it was able for the first time to conduct large-scale offensives simultaneously along the whole front. The specific weather conditions were also a major factor. Up to then the icy winter had imposed a static war of position for weeks and months on end, but now the winter weather turned unusually warm. In the southern sector especially, the fighting went on almost without interruption.

Yet although this period of the war in the east saw a torrent of dramatic and tragic events, military historiography has so far shown a remarkable lack of interest in it.<sup>1</sup> On the German side it largely consisted, after all, in inglorious withdrawal battles, and on the Soviet side in inglorious victories achieved at far too great a cost. The Red Army was still employing remarkably ineffective fighting methods and resorting to the massive deployment of troops to overcome the enemy without regard to its own losses. The fact that the learning process was so painfully long was due to the weaknesses of the Stalinist system. As in civilian life, innovative thinking and independent action were highly risky activities. Not until the summer of 1944 was there major progress in transforming the Red Army into an operationally effective war machine, and the resulting victories received more attention in the history books. The following chapters describe what happened in the ‘forgotten year’ of July 1943 to June 1944.

<sup>1</sup> One exception is the third volume of the post-Communist edition of the ‘Great Patriotic War’: *Velikaya Otechestvennaya Voina 1941–1945 gg.*

# I. The Withdrawal of Army Group North from Leningrad to the Baltic

*Karl-Heinz Frieser*

The lightning campaign of 1941 had brought Army Group North to the outskirts of Leningrad in less than two months. On 8 September it reached Lake Ladoga at Shlisselburg, cutting off the second-biggest Soviet city's land links to the rear. Then began the long siege of Leningrad, known to the Germans as 'the 900-day battle'. As the Red Army tried time and again to break through the encirclement from the east, the fighting was concentrated in the Shlisselburg bottleneck, only 15 kilometres wide. Not until January 1943 did Leningrad Front and Volkhov Front manage to retake the strategically important locality, together with a narrow strip of land along the southern bank of Lake Ladoga. After 506 days, they had thus achieved at least a partial breach in the blockade.<sup>2</sup> But it was no more than a narrow corridor, only 8 to 10 kilometres wide, which lay within range of the German artillery and was considered to be seriously threatened. While the positional battles, reminiscent in many respects of the western front in the First World War, continued with undiminished ferocity, no spectacular operations took place, so events in the northern sector of the eastern front fell increasingly into the shade. All the same, the Red Army massed enormous forces in the area, forcing more and more fresh troops and vast amounts of war material into the besieged city of Leningrad and the Oranienbaum bridgehead to the west, whereas on the German side Army Group North was seen rather as an available mass of troops from which more and more units could be withdrawn. The military situation had changed into its opposite. It was no longer the besieger who threatened the besieged, but the converse. It has become a cliché in the literature that Army Group North was almost exclusively engaged in the siege of Leningrad. One glance at the map, however, is enough to make nonsense of that view. In actual fact, Army Group North had to cover a 900-kilometre stretch of front. While the length was reduced to 750 kilometres in the spring of 1943 by the evacuation of Demyansk, the army group, comprising only two armies, was hardly sufficient to withstand the increased Soviet forces.

<sup>2</sup> See *Germany and the Second World War*, vi. 1202.

## 1. DEFENCE AGAINST SOVIET OFFENSIVES IN THE SECOND HALF OF 1943

On 20 July 1943 Field Marshal Georg von Küchler had more than 44 front-line divisions and independent brigades at his disposal, but not a single armoured division.<sup>3</sup> Including the Wehrmacht retinue in the hinterland, the personnel strength was 710,000 men,<sup>4</sup> but only about 360,000 of them (the daily strength of the divisions and independent combat units) were front-line troops.<sup>5</sup> The infantry combat strength of Eighteenth Army, in which almost two-thirds of the army group's front-line units were concentrated, was only 96,164 men.<sup>6</sup> The total number of cannon was 2,407.<sup>7</sup> Above all, the number of weapons systems enabling those units to wage a modern operational war of movement was frighteningly small. At that time, despite the vast area it had to defend, Army Group North possessed only 40 operational tanks and assault guns.<sup>8</sup> The Luftwaffe was even worse off. Apart from a few reconnaissance planes, Air Fleet 1 had only six fighters available for daily deployment (see Table IV.I.1. 'Army Group North: order of battle').<sup>9</sup> Motor vehicles of all kinds were also in very short supply. Their place had once again been taken by horses. The Army Group North formations increasingly resembled those of the First World War. In comparison with reality on the rest of the eastern front, the German armoured units concentrated near Kursk in July 1943 gave the impression of a mirage. The two depleted armies making up Army Group North were faced by more than three Soviet army fronts, namely Leningrad Front, Volkov Front, North-West Front, and the right wing of Kalinin Front.

The third battle of Lake Lagoda (also known as the battle of the Sinyavino Heights) took place from 22 July to 22 August 1943. Soviet historians refer to it as the Mga Offensive, after the town of Mga, which lies to the south of the Sinyavino Heights. The plan was for the two pincers of the Soviet offensive to join up at Mga in the rear of the German defending forces. The offensive was directed against the northernmost and most exposed position of Army Group North, that is, the 'bottleneck' which sealed off Leningrad to the east and extended to the outskirts of Shlisselburg. The section under threat was defended only by XXVI Army Corps. On 22 July the Red Army launched its new offensive using massive artillery fire.<sup>10</sup>

<sup>3</sup> This figure does not include the three security divisions or 388th Field Training Division; see BA-MA, Study ZA 1/2045, 407 and 543–4.

<sup>4</sup> Ibid.

<sup>5</sup> By comparison, on 1 June 1944 the ration strength of Army Group North was 670,000 men (in the army formations), while the daily strength of the divisions and independent combat units amounted to only 331,025. See OKH, Organisationsabteilung (I), No. I/1820/44 g.Kdos, 23 July 1944, 'Stärke der H.Gr. Nord' (fo. 29), BA-MA RH 2/1341; ibid. (fos. 31-2), Organisationsabteilung (I), 26 July (status at 1 June): 'Stärken der Verbände sowie fechtenden Heerestruppen'.

20 July 1943	Air Fleet 1 Total strength		205	224	163

*Note:* In addition, Air Fleet 1 had several courier, liaison, and transport squadrons available, with a total target strength of 51 aircraft, as well as a minesweeper squadron (Ju 52) and two air-sea rescue units with their own aircraft. Also located in the area of Air Fleet 1 were IV/KG 1 (training group) and Combat Flying School 101, from which a few crews could be obtained for missions from time to time.

*Source:* Operational status reports, 20 July 1944, BA-MA, RL 2-III/725, and documents from the Ulf Balke collection.

In the first phase, Leningrad Front's 67th Army attacked from the north-west and Volkhov Front's 8th Army from the east.

At the outset, 253,300 men were deployed in the attack.<sup>11</sup> They were supported by 13th and 14th Air Army and some aircraft from the Baltic Red Banner Fleet. Against them the Germans could deploy only six fighters belonging to Air Fleet 1.

<sup>11</sup> Gurkin, 'Liudskie poteri Sovetskikh Vooruzhennykh Sil', Table 1.

Not until the fifth day of the battle, and then only for a short time, were they reinforced by a fighter group.<sup>12</sup> The units of XXVI Army Corps were hopelessly outnumbered and had also to fend off attacks by partisans in their rear. Yet although the Red Army brought up further reserves, its efforts were unsuccessful.<sup>13</sup> In one German account, the stubbornly repeated Soviet assaults are summed up as follows: 'All in all, no new ideas or objectives, no large-scale surprise planning; instead, a continuation of the second battle of Ladoga, as the German leadership had been expecting since June.'<sup>14</sup> Another analysis is even more critical of the procedure adopted by the Soviet leadership: 'Instead of disrupting the operational concept of the enemy, who is always on the backhand, by continuously changing the point of concentration, it drilled away time and again at the same places, regardless of losses.'<sup>15</sup> The Red Army broke off its offensive on 22 August.<sup>16</sup> In the space of four-and-a-half weeks the two Soviet armies had lost 79,937 men, of whom 20,890 dead or missing.<sup>17</sup> The losses of Germany's XXVI Army Corps over the same period were 26,166 men, of whom 5,435 dead or missing.<sup>18</sup> In addition, troops from 54th and 55th Armies also took part in the final phase of the offensive against the Mga bottleneck. At the same time, X Army Corps, belonging to Germany's Sixteenth Army, was attacked by North-West Front's 34th Army to the south of Lake Ilmen.

Soviet military historiography tends to keep quiet about or minimize unsuccessful operations.<sup>19</sup> It describes the Mga offensive as an insignificant relief operation designed to prevent the Germans from withdrawing reserves for the battle in the Kursk salient, which was taking place at the same time. That judgement, however, is contradicted by two arguments. On the one hand there are the enormous losses, which had to remain secret during the Soviet period. On the other, the direction of thrust of the two armies attacking at the point of concentration testifies to an operation with a strategic objective. Finally, the two points of concentration of the offensive by Leningrad and Volkov Fronts marked the launch of a pincer operation in which the spearheads of 67th and 8th Armies were supposed to meet in the rear of the German units. The Soviet leadership was clearly out to eliminate the bottleneck blocking the besieged city of Leningrad, and for that purpose used considerably more forces than would have been required for a relief offensive.

The autumn of 1943 saw the beginning on the eastern front of the planned German withdrawal to the 'East Wall', also known as the 'Panther Line', which ran from the Black Sea across the Dnieper to the Baltic. Only Army Group

North remained in its previous positions, and it found itself in a difficult situation when its neighbour to the south, Army Group Centre, abandoned Smolensk on 24 September and withdrew westwards, depriving it of the protection afforded by the latter's staggered forward position.<sup>20</sup> Furthermore, Army Group North's border was shifted to the south by order of the OKH, which also meant taking over responsibility for XXXXIII Army Corps. As a result, it 'gained' an additional 80-kilometre-long stretch of front including the transport node of Nevel. In that section of the front, three weak German divisions faced two Soviet Armies ready to attack. But since the rest of the eastern front was even more threatened, Army Group North was obliged to give up 13 divisions between July and the end of November, mainly to the hard-pressed Army Group Centre,<sup>21</sup> so that its front became still further overstretched. The situation was made even worse by the fact that the partisan areas in the rear of the front were gradually developing into a new theatre of war.<sup>22</sup>

On 6 October Kalinin Front (renamed '1st Baltic Front' on 20 October) launched an offensive exactly at the interface between Army Groups North and Centre.<sup>23</sup> Sixteenth Army, positioned on the southern flank of Army Group North, now also found itself in great difficulty.<sup>24</sup> In the first phase of the Nevel–Gorodok Operation, the attacking forces consisted of 3rd and 4th Shock Armies, 11th Guards Army, and 43rd Army, totalling around 200,000 men.<sup>25</sup> The breakthrough occurred in the sector of a German infantry division which had to hold an 18-kilometre-long stretch of front with six battalions of 200 men each, that is, only 66 men per kilometre.<sup>26</sup> The Soviet offensive could be only insufficiently reconnoitred, since only ten operational reconnaissance aircraft were available to cover the whole enormous front sector of Army Group North.<sup>27</sup> In contrast, the Soviet offensive in the narrow breakthrough sector was supported by 3rd Air Army.<sup>28</sup> The superior attacking forces were able to take Nevel and open up a 20-kilometre-wide breach between Army Groups North and Centre. Hitler ordered strong counter-attacks, although no sufficient troops were available. Thus all attempts to close the front failed. Instead, more and more Soviet units poured through the gap. Meanwhile, the Red Army brought up further forces—6th Guards Army, for example—which were mainly incorporated in the newly formed 2nd Baltic Front.

The second phase of the Nevel–Gorodok Operation began on 2 November. The point of concentration shifted to the south and the attack was directed against

Third Armoured Army, which formed the northern wing of Army Group Centre. Third Armoured Army had to give up Gorodok on 24 December, but was able to hold its important cornerstone, Vitebsk. With the southern wing of Army Group North also in great difficulty, withdrawal of the front appeared inevitable. On 5 January Sixteenth Army evacuated Novosokolniki and took up a new defensive position, at which point the Red Army's offensive also came to a standstill. Meanwhile, the German forces had formed a more or less stable front to the west of Nevel, surrounding the 90-kilometre-wide and up to 90-kilometre-deep breakthrough area over a length of some 200 kilometres.<sup>29</sup> The fact that the Red Army's rather stereotypical offensive could not be stopped earlier was due to disastrous intervention by Hitler, who repeatedly forbade withdrawal to a more favourable rear position when that was still possible. Their frontal assault cost the Soviet troops considerable losses. The official figures put the casualties during the fighting at Nevel at 180,597 men, of whom 46,125 dead or missing.<sup>30</sup>

## 2. WITHDRAWAL TO THE PANTHER LINE IN THE BALTIC (14 JANUARY TO 1 MARCH 1944)

At the beginning of January 1944 Army Group North was in an alarmingly weak condition, whereas the Soviet potential had increased to menacing proportions. Whenever the eastern front flared up and other sectors were threatened with collapse, more troops were withdrawn from Army Group North. It had been obliged to give up 40 per cent of its front-line units (18 divisions) in the previous six months alone.<sup>31</sup> At the same time, however, its front line had been repeatedly extended southwards. On 10 January 1944 it was also made responsible for the Polotsk sector (near Vitebsk), so that it now had to defend almost 1,000 kilometres of front. For that it had only 40 infantry divisions, and not a single armoured or armoured infantry division. Moreover, some of its units were of doubtful quality, such as the six Luftwaffe field divisions, mockingly referred to by army troops as 'Luftwaffe rejects'. Most of the army units were also in poor shape. In mid-January, for example, 14 of Sixteenth Army's infantry battalions had fewer than 100 men.<sup>32</sup>

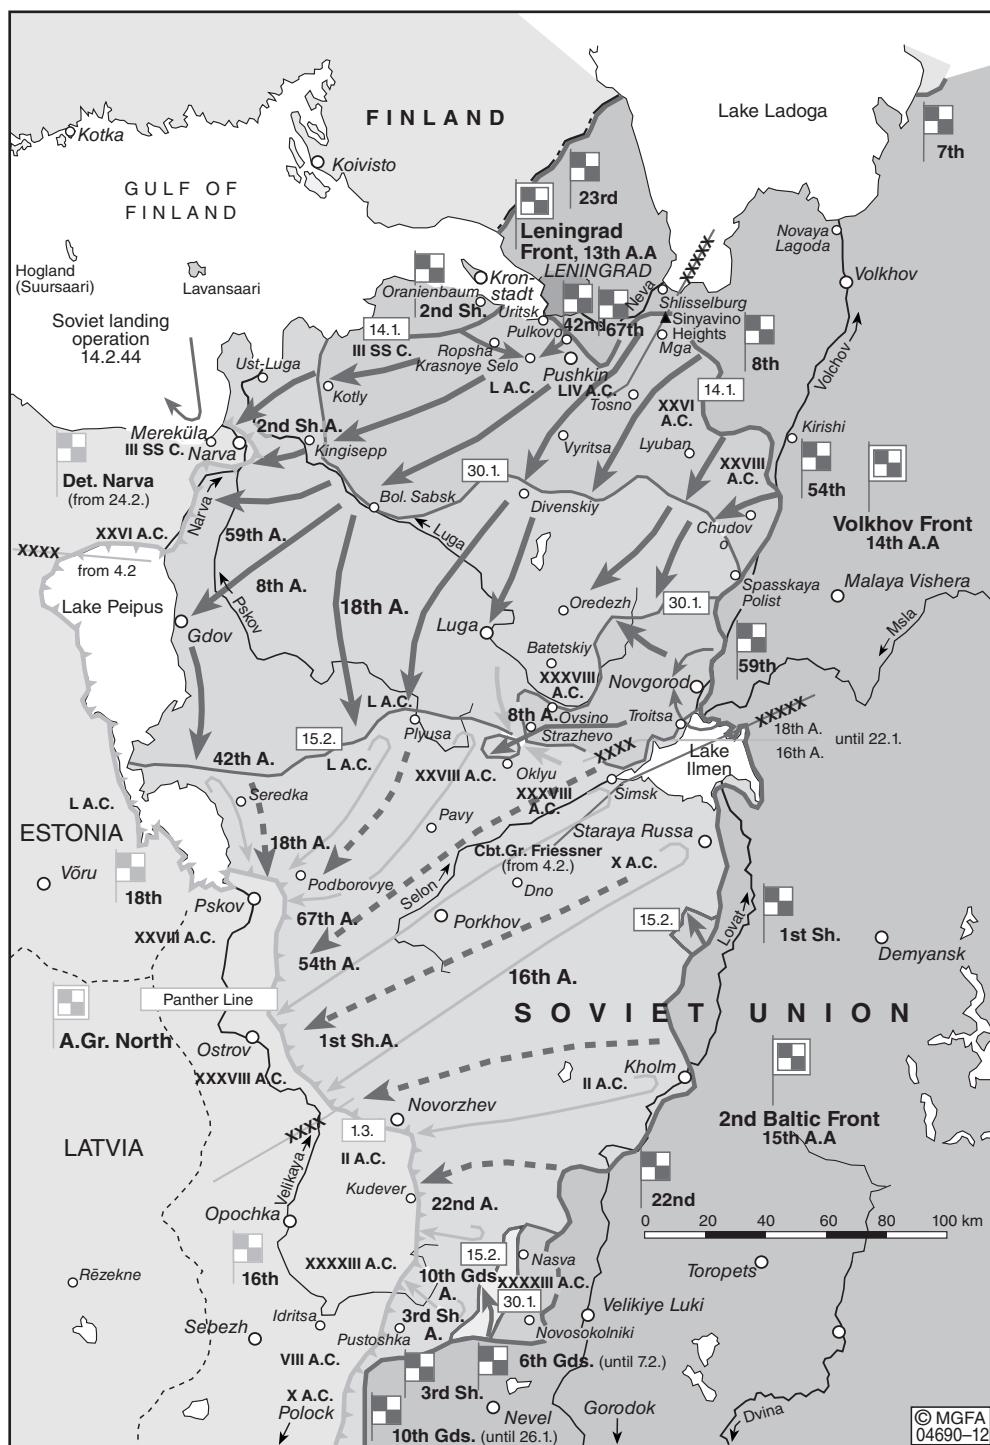

Field Marshal von Küchler had no illusions about the fact that his army group was no longer capable of holding the overstretched front in the event of a massive Soviet attack. In his view, the only correct decision was withdrawal to the far more defensible Panther Line, to which all the other German army groups had already retreated in the autumn of 1943. In the area of Army Group North, the Panther

<sup>29</sup> BA-MA, Study ZA 1/2045, 430.

<sup>30</sup> A total of 168,202 losses were incurred in the Nevel–Gorodok offensive (6 Oct. to 31 Dec. 1943) and a further 12,395 in the Novosokolniki follow-up operation (30 Dec. 1943 to 8 Jan. 1944). See Gurkin, 'Liudskie poteri Sovetskikh Vooruzhennykh Sil', Table 1. Corresponding figures are not available for the German side since the relevant files have not survived.

**MAP IV.I.1.** The withdrawal of Army Group North from Leningrad to the Panther Line (14 January to 1 March 1944)

Sources: OKH situation maps for given dates, BA-MA, Kart RH-2, Ost/919, 934, 939, 942

Line stretched from the Gulf of Finland along the Narva and Lake Peipus to Pskov, and then southwards as far as Polotsk. Its decisive advantage was that it would reduce the length of the front from almost 1,000 to 400 kilometres (land front). There would also be an additional 'water front' along the coast and the 180-kilometre-long bank of Lake Peipus, but that could be guarded with relatively few forces. Shortening the front in that way would have saved eight divisions, which were urgently needed in other sectors. Army Group North HQ had therefore long been making plans to withdraw.<sup>33</sup> At a meeting at Führer headquarters on 30 December 1943, Field Marshal von Küchler tried in vain to obtain permission for withdrawal,<sup>34</sup> following which the OKH chief of staff, Col.-Gen. Kurt Zeitzler, had a 'sharp debate' with the Führer on the evening of 1 January 1944. In view of the convincing arguments, Hitler at first seemed prepared to give in, but in the end he refused to allow the withdrawal. Zeitzler informed the Army Group that 'all his proposals had been firmly rejected and the issue had been pushed to the side'.<sup>35</sup> The order to defend all positions remained in force.

By mid-January, on the eve of the Leningrad–Novgorod Offensive, Soviet superiority had increased dramatically. Arrayed against the two German armies were three Soviet army groups, namely Leningrad Front,<sup>36</sup> Volkov Front, and 2nd Baltic Front, comprising eleven armies with a combined strength of 1,252,000 troops, 20,183 cannon and grenade launchers, 1,580 tanks and assault guns, and 1,386 aircraft.<sup>37</sup> According to Soviet figures, there were also 43,000 partisans fighting in the hinterland who were tying down many German units.<sup>38</sup> In contrast, the actual strength of Army Group North, including the Wehrmacht retinue in the hinterland, was 397,763 men,<sup>39</sup> which corresponded to a daily strength of approximately 250,000 men in front-line units.<sup>40</sup> The units were miserably armed. For a front of almost 1,000 kilometres they had only 16 tanks, including four captured T-34s, and 109 assault guns.<sup>41</sup> At that time Air Fleet 1 had a total of 45 fighters and 26 ground-attack aircraft available for daily deployment, but not a single bomber (see Table IV.1.3. 'Breakdown of Air Fleet 1 at 10 January 1944').<sup>42</sup> Almost all the tanks and aircraft on the eastern front were concentrated with Army Groups Centre and South, where the front was threatened with collapse as a result of extremely heavy battles.

Source: Operational status report, 10 Jan. 1944, BA-MA, RL 2-III/728, and documents from the Ulf Balke collection.

The Soviet high command had long been preparing the ‘Leningrad–Novgorod Strategic Offensive’ (14 January to 1 March 1944).<sup>43</sup> A conference with the commanders-in-chief of the three army fronts involved had been held in Moscow, where it was decided that Leningrad Front and Volkov Front would smash Eighteenth Army on the northern wing, while 2nd Baltic Front tied down Sixteenth Army in the south. The aim was not only to break the blockade of Leningrad once and for all, but to push forward to the borders of the Baltic republics.<sup>44</sup> The major role was assigned to Leningrad Front, which had mustered 417,600 men for the offensive.<sup>45</sup> Its troops were concentrated both in the southern forefield of the metropolis and in the Oranienbaum bridgehead on the south bank of the Gulf of Finland, a bitterly defended strip of land to the west of the famous Peterhof Palace, which the exhausted German troops had no longer been able to capture in the autumn of 1941. The strategic importance of the bridgehead was that it faced and covered Kronstadt Island, where the Baltic Red Banner Fleet had its main base. The fleet’s ships were not only important as sea-based artillery but carried large numbers of troops into the bridgehead in the preparatory phase, especially 2nd Shock Army, as well as massive amounts of war material, including, for example, 211 tanks, 2,400 motor vehicles, and 677 cannon.<sup>46</sup> The Oranienbaum coastal strip had thus become the springboard for the offensive.

On 14 January 2nd Shock Army began its attack on the positions of the Luftwaffe field division deployed in the area. This operation formed the western arm of a pincer movement aimed at Ropsha, the eastern arm of which was to be launched from the Pulkovo Heights south of Leningrad. The following day, 42nd Army attacked from the east in order to join up with 2nd Shock Army and encircle the German units on the coast. The advance was supported by 366 tanks and assault guns.<sup>47</sup> On 17 January the Soviet forces broke through between Krasnoye Selo and Pushkin, leading to a crisis in the headquarters of Army Group North. There were hardly any reserves, and Hitler refused to allow a withdrawal. On 18 January Field Marshal von Küchler nevertheless gave the order to retreat in the sector between Oranienbaum and Leningrad, without waiting for Hitler’s permission.<sup>48</sup> It was just in time, since Leningrad Front and 2nd Shock Army closed the pincer at Ropsha the very next day.

Volkov Front launched its assault simultaneously with Leningrad Front on 14 January, but its attacks were so slow and routinely systematic that it made hardly any progress at first, despite its great superiority. At the southernmost end of the front, however, it carried out a successful surprise attack. Two battalions of 59th Army crossed frozen Lake Ilmen under cover of darkness, partly using motor sledges.

<sup>48</sup> KTB H.Gr. Nord, 18 Jan. 1944, BA-MA RH 19-III/269.

It was a bold move, carried out with great daring. The defenders were not expecting such a risky undertaking, since the ice of the lake was relatively thin, and they were also hampered by poor visibility due to the bad weather. On the morning of 14 January the attackers managed to establish a 5-kilometre-wide and 4-kilometre-deep bridgehead on the far bank near Troitsa, and two or three divisions moved in after them. The Soviet troops pushed on northwards in the rear of 1st Luftwaffe Field Division, bypassing Novgorod.

When Hitler heard this, he demanded an immediate investigation to determine whether to initiate court-martial proceedings.<sup>49</sup> In response, Army Group North HQ asserted that, after the removal of 18 divisions in the last few months, the front was completely overstretched and could not be sufficiently guarded. Not satisfied with that response, the dictator sent a special plane to the front to fetch the officer responsible for the Lake Ilmen sector and bring him back to Führer headquarters for interrogation. Field Marshal von Küchler wanted to prevent the situation from escalating and was at first supported by Col.-Gen. Zeitzler in the OKH. Soon afterwards, however, Zeitzler changed his mind and expressly welcomed the fact that the officer concerned 'would be able to explain to the Führer how the situation looked in practice'. To Hitler's astonishment, the shortage of personnel at the front was shown to have been so serious that the west bank of Lake Ilmen had been guarded by only one Estonian and one Lithuanian battalion—an average of eight men per kilometre.<sup>50</sup>

Meanwhile the 59th Army main force had also broken through the German positions to the north of Novgorod with massive artillery support. Veering to the south with its armoured units, it joined up with the shock group advancing from Lake Ilmen on 19 January, 10 kilometres west of Novgorod. Hitler then had no option but to allow the enclosed German units to break out. On 20 January Novgorod was retaken by Soviet units, thus creating a dangerous breach exactly at the interface between Eighteenth and Sixteenth Armies. Sixteenth Army, deployed to the south, was unable to intervene since it was attacked at the same time by 2nd Baltic Front. Meanwhile, the withdrawal of the front on both flanks of Eighteenth Army had left the northward salient on the Sinyavino Heights even more exposed. This was the 'bottleneck', referred to earlier, which blocked Leningrad to the east and was therefore heavily contested in the three battles of Lake Lagoda. On 19 January Hitler gave permission to withdraw to the 'Rollbahn' (Highway) Line, a little further to the south, at the base of the previously existing salient. Mga was evacuated on 21 January, and on 26 January the Red Army regained possession of the railway line to Moscow.

That marked the final liberation of Leningrad after almost 900 days of siege. It was celebrated on 27 January by a massive artillery salute. According to recent

<sup>49</sup> H.Gr. Nord, Ia, 20 Jan. 1944, 14.45 hrs: call from Major Schall, OKH/GenStdH/OpAbt. (fo. 127), BA-MA RH 19-III/275.

<sup>50</sup> KTB H.Gr. Nord, 21 (and 14) Jan. 1944, BA-MA RH 19-III/269. See also telegram from H.Gr. Nord, Ia, 21 Jan. 1944 to OKH/GenStdH/OpAbt (fos. 133–4), BA-MA RH 19-III/275.

Russian accounts, 800,000 civilians lost their lives during that period,<sup>51</sup> of whom 642,000 perished within the besieged city.<sup>52</sup> The military losses totalled 3,437,066 men, of whom 1,017,881 dead or missing. If, taking an operational view, the sectors on both sides of Leningrad are included, the losses of the two army fronts involved amount to 3,964,193 men, of whom 1,146,258 dead or missing.<sup>53</sup> As the American military historian David Glantz points out, estimates of total civilian and military human losses in the defence of that one city vary from 1.6 to 2 million. Since Red Army losses are usually assumed to have been much greater than the official figures, the latter estimate is more likely. At any rate, Glantz concludes that Soviet human losses in the battle of Leningrad were as high as the total number of United States deaths in the Second World War.<sup>54</sup>

For the German side, the breaking of the blockade of Leningrad meant the collapse of a front that had remained stable for years. Not only were the defence lines torn apart, the 'second front' in the hinterland was aflame on all sides. In January alone, some 40,000 partisans blew up 58,000 railway tracks and destroyed 300 bridges and 133 troop trains.<sup>55</sup> Field Marshal von Küchler had already demanded immediate withdrawal to the Panther Line on Lake Peipus on 20 January and had convinced the OKH chief of staff that it was necessary. But when he put this to Hitler at Führer headquarters on 22 January, the dictator categorically refused. Hitler even rejected a compromise proposal to withdraw the particularly hard-hit Eighteenth Army to an intermediate position on the Luga river. At that meeting, which took a 'dramatic turn',<sup>56</sup> Küchler was treated to more of Hitler's tirades: 'There are crises everywhere. The A.Gr. is spoilt. The A.Gr. hasn't had any crises for a year now [...] I'm against any withdrawal. Let's have the crisis where we stand. There's no guarantee that we won't be broken through on the Panther Line either [...] The fighting must be kept as far away from the borders of the Reich as possible.'<sup>57</sup> The Führer also invoked his usual political and economic arguments, such as consideration for Finland as an Axis partner and the importance of German control of the Baltic for the transport of iron ore from Sweden. The shale-oil deposits in Estonia at Narva were also important, as was control of the eastern Baltic as a training area, especially for U-boats. In this, Hitler was strongly under the influence of the commander-in-chief of the navy, Grand Admiral Karl Dönitz, who feared that the Soviet Red Banner Fleet, enclosed in the bottleneck of the bay of Leningrad, could break out into the Baltic if the coastal strip were given up.<sup>58</sup> With that in mind, Hitler closed himself to all the operational arguments of the army generals. Instead of giving permission for withdrawal, he announced the posting of 12th Armoured Division to Army Group North.

<sup>51</sup> Kovalchuk, 'Die Verteidigung Leningrads', 123. Because the catastrophic civilian losses had to be concealed on Stalin's orders, exact calculation of the number of victims is impossible. There is a whole range of widely varying estimates. Ganzenmüller (*Das Belagerte Leningrad*, 239) assumes a figure of over a million.

<sup>58</sup> Grier, 'Hitler's Baltic Strategy', 19–50; Salewski, *Die deutsche Seekriegsleitung*, ii. 454–5.

All strategic arguments were pointless, however, since the operational preconditions were lacking. The enemy forces were too superior for that section of the coast to be defended successfully. Eighteenth Army was threatened with envelopment from both flanks. One of the two gaps had developed in the north, on the Baltic coast, where Soviet units were pushing westwards from the Oranienbaum area, threatening the left wing of the still-unoccupied Luga Line at Narva, as well as the Panther Line behind it. Developments on the right wing of Eighteenth Army at Lake Ilmen were even more threatening. A gap had formed at the interface with Sixteenth Army, through which strong enemy forces were streaming west in the direction of Luga (on the river of the same name). But the front was about to collapse in Eighteenth Army's centre too, where Soviet units were also advancing towards Luga from the Leningrad area. The only remaining chance was to pull back to the proposed, but still-unfortified, Luga Line before the enemy crossed it. In the next few days the commander-in-chief of Army Group North repeatedly requested permission to withdraw but, despite the insistence of Col.-Gen. Zeitzler, Hitler remained intransigent. On 27 January, when Küchler was again able to speak to him personally, the Führer once more refused. Meanwhile, the German units were crumbling. In January Eighteenth Army had suffered a total of 52,000 losses.<sup>59</sup> But the decisive factor was the fall in its infantry combat strength from around 58,000 men on 10 January to 17,000 men on 28 January.<sup>60</sup>

Events now proceeded apace. On 28 January Lt.-Gen. Eberhard Kinzel, Army Group North's chief of staff, initiated Eighteenth Army's withdrawal to the Luga Line on his own authority, though in agreement with Col.-Gen. Zeitzler. Field Marshal von Küchler, however, who had returned in the meantime and was still wholly under the impression of his talk with the Führer, countermanded the order.<sup>61</sup> Yet he too finally decided to organize the withdrawal. On 29 January he reported to the OKH that 'Eighteenth Army is split in three. It is no longer capable of establishing a continuous front on the present line. That is now possible only with the mass of the army along the general line of the Luga position.' In the same telex, he said he 'intended' to let Eighteenth Army withdraw to the Luga in order to 'save it from destruction'.<sup>62</sup> Whereupon the field marshal was summoned to Führer headquarters. Hitler had no alternative but to accept Küchler's decision as operationally correct. But on the following day, 31 January, he relieved him of his command and replaced him by Col.-Gen. Walter Model, the commander-in-chief of Ninth Army.

Model was known as a 'Steher', a man who held his ground. His defensive prowess had earned him the nickname 'Lion of Defence'. Exceptionally tough and energetic, he was considered for some time to be Hitler's 'favourite general'. Immediately after his appointment he sent the following telex from Führer headquarters

<sup>59</sup> AOK 18, Ia, No. 703/44 g.Kdos., 2 Feb. 1944, (fos. 92–3), BA-MA RH 19-III/284.

to Army Group North: 'There will be not a step backward without my express permission.'<sup>63</sup> To prevent the spread of the 'Panther complex', as he called it, among troops obsessed with withdrawal, he forbade use of the term 'Panther Line' and replaced it by 'lock and bolt position'. But that could not halt the collapse of the front. The German forces now paid the price for Hitler's refusal of Field Marshal von Küchler's request to withdraw while there was still time. In any case, Küchler had proposed, as a compromise, only that Eighteenth Army withdraw to the intermediate position of the Luga Line. By now, however, the enemy had crossed that new line on both wings before the German troops were able to occupy it. Eighteenth Army was split into separate groups attempting to withdraw under constant threat of encirclement. Meanwhile the thaw had set in, favouring the Soviet attackers, with their numerous US-produced off-road vehicles, over the wholly unmotorized German troops. The terrain had become 'one big swamp' and afforded scant cover from shells and bombs.<sup>64</sup> The German units struggled forward along the few roads and corduroy tracks, constantly under threat from enemy ground-attack aircraft. Many German soldiers had not seen a German aircraft for weeks. The fact that the front did not collapse completely was due solely to the methodically slow advance of the Soviet attackers. Time and again, gaps opened up in the German front which a decisive military commander could have pushed through to attack the defenders in the rear. But the command tactics of the Soviet officers involved were marked by an astonishing reluctance to take swift autonomous decisions.

Crises developed on both wings of Eighteenth Army, however, where the German troops were no longer able to withstand the many times superior enemy. The point of concentration of the Soviet offensive was on the north wing, where Leningrad Front was advancing along the coast. Its main forces—2nd Shock Army, 59th Army, and 8th Army—focused on the Narva Isthmus. On 1 February they already succeeded in crossing the Luga at Kingisepp before German forces could fully occupy the position—a fatal consequence of Hitler's refusal to allow withdrawal in good time. By 3 February Soviet advance troops had already reached the still scarcely occupied Panther Line. That same evening they crossed the River Narva to the south of the town of that name, where they were finally able to establish a bridgehead with a width and depth of 15 kilometres. The Narva Isthmus was of strategic importance.<sup>65</sup> It was considered the 'gateway to the Baltic'. At first, the only unit available for the defence of this importance sector of the front was III SS Armoured Corps, which had fought its way back to the Narva from the Oranienbaum area. Despite its name, it possessed almost no tanks at that time and was a conglomeration of SS units (mainly Baltic volunteers), splintered army units, and Luftwaffe and naval troops. After further reinforcements were

<sup>63</sup> Ibid. (KTB H.Gr. Nord, 31 Jan. 1944).

<sup>64</sup> Haupt, *Heeresgruppe Nord*, 189.

<sup>65</sup> On this, see Seekriegsleitung B. No. 1. Skl. 950/44 g.Kdos. Chefs., 27 Mar. 1944: 'Denkschrift des Ob d M über die Bedeutung der Narwa-Stellung für die Gesamtkriegsführung' (fos. 90–6), BA-MA RH 19-III/15; first version printed in BA-MA RM 7/161 (fos. 295–304). See also Salewski, *Die deutsche Seekriegsleitung*, ii. 458–9.

brought up, the troops in the isthmus were removed from the responsibility of Eighteenth Army and grouped together in a new large formation designated Army Detachment Narva. In any case, Eighteenth Army HQ was no longer in a position to control action on its previous northern wing, from which it was separated by the long stretch of Lake Peipus.

In the night of 13 to 14 February, during heavy fighting in the battle for Narva, a Soviet landing operation took place in the rear of the German troops.<sup>66</sup> Parts of two naval infantry brigades landed on the coast near Mereküla. Although they initially achieved a surprise effect, the advancing commando troops came under frontal fire from the 100-mm cannon of a German coastal battery. That was followed immediately by a counter-attack by Waffen SS units and naval troops, supported by three Tigers from 502nd Heavy Armoured Battalion and Stuka dive-bombers. The landing operation collapsed within hours, leaving behind the corpses of many killed or drowned Red Army soldiers on the shore.<sup>67</sup> In the end, the situation in that sector was stabilized. The Germans managed to form a stable front along the Narva and constrict the Soviet bridgehead.

Meanwhile, between Lake Ilmen and Lake Peipus the 'battle on the Luga' was taking place. In fact, the 'battle' consisted of numerous separate, operationally unconnected actions, often without any recognizable front line. By his long hesitation, Hitler had plunged the troops of Eighteenth Army into such a difficult situation that even as energetic a commander as Model was able to restore order only with great difficulty. The other focal point near Narva was on the south wing at Lake Ilmen, where the front had largely disintegrated. Sixteenth Army, deployed to the south of the resulting gap, also found itself very hard-pressed. Moreover, the sections assigned to the individual divisions were alarmingly overstretched, since units had repeatedly been transferred to other fronts. 21st Luftwaffe Field Division, for example, had for some time to defend a stretch of 118 kilometres.<sup>68</sup> In the gap between Sixteenth and Eighteenth Armies, the Soviet 8th Army was attempting to advance on Pskov. If it succeeded, the German front would be completely split. In this situation, the transfer of 12th Armoured Division to Army Group North at the end of January proved to be a great advantage. Although the division was exhausted on arrival and had only 36 operational tanks left,<sup>69</sup> it was Model's only remaining trump card. On 1 February he launched the armoured division on a counter-attack from the south-east into the gap between Sixteenth and Eighteenth Armies. At the same time, a Sixteenth Army unit made a push in the opposite direction. By the following day the two wings were able to join up to the north of Strazhevo, cutting off the overhastily advancing Soviet troops. This operation halted the dangerous

<sup>66</sup> KTB H.Gr. Nord, 14 Feb. 1944, BA-MA RH 19-III/270; H.Gr. Nord Ia, daily reports, 14/15 Feb. 1944, BA-MA RH 19-III/299; AOK 18, Ia reports, 14 and 15 Feb. 1944, BA-MA RH 20-18/741; KTB Marineoberkommando Ostsee, 14 and 15 Feb. 1944, and app. 31 (fos. 138–9), BA-MA RM 31/3215.

<sup>67</sup> According to Haupt (*Leningrad*, 245–6), a total of 460 Soviet soldiers were killed or drowned during the landing operation. That figure is clearly exaggerated, as the regional leader responsible for Mereküla explained to the author during a military history trip to the Baltic States in November 2004.

<sup>68</sup> Grier, 'Hitler's Baltic Strategy', 16.

<sup>69</sup> BA-MA, Study ZA 1/2046, 630.

advance of the Red Army at that point and closed the gap between the two German armies.<sup>70</sup>

Although the German forces thus managed to stabilize the situation on Eighteenth Army's wings, the enemy continued to push forward in the centre. Luga fell on 12 February, whereupon Zeitzler pressed Hitler to authorize withdrawal to the Panther Line. The Führer finally allowed the German units to begin the retreat. The planned withdrawal which now began (from 17 February) concerned first and foremost Sixteenth Army, which was still far to the east. On 1 March withdrawal from Lake Ilmen to Lake Peipus was completed, with the army group on the Panther Line on the Estonian and Latvian borders.<sup>71</sup> From then on the fighting abated. The Red Army made one more attempt to take Narva and Pskov, which again led to heavy losses,<sup>72</sup> but then abandoned its fruitless efforts.<sup>73</sup>

### 3. SUMMARY: THE BEGINNING OF THE END IN THE NORTH

Despite their crushing human and material superiority, the Red Army troops paid for their victory with disproportionately high losses. According to Soviet sources, from 14 January to 1 March Leningrad Front and Volkov Front together lost 313,953 men, of whom 76,686 dead or missing,<sup>74</sup> as well as 1,832 cannon, 260 aircraft, and 462 tanks and assault guns.<sup>75</sup> However, those are official figures which cannot be verified. Here too we may assume that the real numbers were higher still.<sup>76</sup> The Soviet forces lost a further 200,000 men in the attempt to break through the Panther Line.<sup>77</sup> Human losses on the German side from 10 January to 1 March totalled 98,921 men, of whom 17,772 dead, 69,995 wounded, and 11,154 missing.<sup>78</sup>

<sup>70</sup> KTB H.Gr. Nord, 2 Feb. 1944 (fo. 40), BA-MA RH 19-III/270; H.Gr. Nord reports, 2 Feb. 1944, BA-MA RH 19-III/298; Eighteenth Army summary reports, 2 Feb. 1944 (fo. 184), BA-MA RH 20-18/739; AOK 18, Ia reports, 2 Feb. 1944, BA-MA RH 20-18/741; KTB 16. Armee, 2 Feb. 1944, BA-MA RH 20-16/352.

<sup>71</sup> KTB H.Gr. Nord, 1 Mar. 1944, BA-MA RH 19-III/272.

<sup>72</sup> The attack on Pskov from 9 March to 3 April 1944 was carried out by Leningrad Front's 42nd, 54th, and 67th Armies, plus 13th Air Army. At the outset, 173,210 Red Army troops were deployed. In that short space of time the Soviet forces incurred 42,133 human losses, of which 10,453 were 'irrecoverable'; see Gurkin, 'Liudskie poteri Sovetskikh Vooruzhennykh Sil', Table 1.

<sup>73</sup> On this, see Loch, 'The Defensive Battle of the Eighteenth Army', and Reichelt, 'The Battles of Armeeabteilung Narva'.

<sup>74</sup> *Grif sekretnosti sniat*, 199.

<sup>75</sup> Ibid. 371.

<sup>76</sup> According to German sources, 1,218 Soviet tanks were destroyed during that period, for example, 544 of which by Eighteenth Army in the first two weeks. See BA-MA, Study ZA 1/2046, 667; KTB 18. Armee, 31 Jan. 1944, BA-MA RH 20-18/734. Other documents give the number of Soviet tanks lost as 1,172; see OKH Nord, Ia No. 38/44 g.Kdos. Chefs, 1 Mar. 1944 (fo. 29), BA-MA RH 19-III/15.

<sup>77</sup> This figure refers to the months of March and April; see Glantz, *The Battle for Leningrad*, 413.

<sup>78</sup> See the ten-day statistics of the OKH medical officer in BA-MA RW 6/559.

Hitler had long shown little interest in Army Group North. Nevertheless, when the first crisis arose at the beginning of 1944 the military commanders found that, on all major operational issues, they were no longer masters of their own decisions. The dictator's interventions were alarming not only because of his military diletantism. What worried the generals most of all was that, far away at Führer headquarters, he had largely lost sight of the operational reality at the front and was instead setting utopian strategic objectives. In the fateful days of January and February 1944 Hitler risked the destruction of Eighteenth Army. It owed its survival to the unauthorized action of its commander-in-chief, Field Marshal von Küchler, which nevertheless cost him his command. The Führer's senseless orders to hold firm repeatedly faced the officers in charge at the front with conflicts of conscience. This gave rise to what the sources refer to as an 'orders dialectic',<sup>79</sup> meaning the art of formulating orders in such a way that subordinate commanders could interpret them as tacit permission for flexible combat and withdrawal, while avoiding direct contradiction of the instructions from the top leadership. As emphasized in a study of Army Group North, the following order, issued by Hitler on 8 September 1942, was still in force: 'As a matter of principle, no army group commander or army commander has the right to undertake a so-called tactical withdrawal movement on his own authority without my express permission.'<sup>80</sup>

Army Group North had to cope with an enemy many times superior, and mostly without aerial or armoured support. Its situation was rendered even more difficult by Hitler's wrong operational decisions, which made him the unwilling ally of the Soviet leadership. Despite all, the army group managed to prevent the seemingly inevitable catastrophe and restabilize the front. That success was due not only to the skill of the German officers, but even more to astonishing tactical incompetence on the Soviet side. A telling German assessment of the enemy reads as follows:

Advancing after a long war of position, their troops clearly lacked independence, decisiveness, and flexibility at the intermediate, lower, and lowest command levels. One had the impression that their many favourable passing opportunities were not recognized, that their superiority in infantry, armour, and aircraft, like the high winter mobility of the Russian troops, was not sufficiently exploited. Their abundant armoured forces were expended simply in supporting infantry combat operations. Armoured units capable of independent combat were lacking.<sup>81</sup>

The Soviet attacks were mechanical and transparent, like a steamroller advancing in slow motion. They simply forced the German units back instead of encircling them.<sup>82</sup> For that reason, present-day Russian accounts also stress that 'the Leningrad–Novgorod operation did not achieve its aim'.<sup>83</sup> The attacks were repeatedly directed frontally into the enemy fire, resulting in senseless losses. The commander-in-chief of the Leningrad Front, General Leonid Aleksandrovich

<sup>79</sup> BA-MA, Study ZA 1/2046, 638.

<sup>80</sup> BA-MA, Study ZA 1/2045, 486.

<sup>81</sup> BA-MA, Study ZA 1/2046, 697–8.

<sup>82</sup> Glantz and House, *When Titans Clash*, 193. For criticism of Soviet operations command, see also Glantz, *The Battle for Leningrad*, 467–8.

<sup>83</sup> Daines, 'Srazhenie pod Leningradom i Novgorodom', 22.

Govorov, was also heavily critical, since the assaults were taking place over much too wide a front with no clear point of concentration. He enjoined the army commanders to drop their linear tactics and ‘manoeuvre in the main directions of thrust’.<sup>84</sup>

It seems remarkable that some of the relevant ‘manoeuvres’ had meanwhile been regularly rehearsed by Soviet troops in the southern sector (Ukraine), whereas in the northern sector they were still mismanaged as late as the beginning of 1944, and sometimes in a thoroughly amateurish fashion. On closer consideration, however, that is in no way surprising. How could Soviet troops who had spent almost 900 days in the trenches outside Leningrad have acquired experience of combined-arms combat and operational war of movement? Even if criticism of their tactically inefficient military commanders seems objectively justified, other virtues of the Soviet troops should not be forgotten. The soldiers of the Red Army mostly fought with utter fearlessness and proved themselves masters of winter warfare and improvisation, for example in crossing swamps. They showed themselves capable of enduring and fighting under extreme climatic and hygienic conditions that troops of their western Allies would have considered unacceptable. That made them an extremely unpleasant enemy. Moreover, Soviet officers learned from their tactical mistakes and gradually gained assurance precisely at the higher level of command.

From the beginning of March 1944, fighting continued only in a few places. On 30 March Col.-Gen. Model relinquished command of Army Group North in order to take over Army Group South, which was engaged in heavy combat. In mid-April quiet returned to the whole of the northern sector. But it was a deceptive calm, since the Wehrmacht had long since lost the war strategically and, above all, in terms of war economy. It could keep the quantitatively superior Red Army in check only with difficulty, by superior command skill. But the enemy was getting stronger by the day, as more and more new weapons and vehicles reached the front. Many of them were manufactured by the Allies and were brought in through the nearby port of Murmansk. There could be no doubt that Army Group North, treated with little consideration when it came to equipment, had no chance of withstanding a new major offensive. Yet it was not until July that the Red Army launched a new attack in the northern sector, although it had been obvious since the beginning of 1944 that Army Group North’s collapse could no longer be prevented. Even if an early conclusion was once again forestalled, the battle between Leningrad and Lake Peipus was already the beginning of the end.

<sup>84</sup> See *ibid.* 26. The inexperienced military commanders of 2nd Baltic Front and Volkov Front also made serious mistakes, as can be seen from several critical statements by the Stavka in Moscow. See *Russkii Arkhiv: Velikaya Otechestvennaya. Stavka VGK. Dokumenty i materialy 1944–1945*, pt. 16(5–4), 32, Doc. No. 10; *ibid.* 34, Doc. No. 14; *ibid.* 38, Doc. No. 20.

## II. The Withdrawal of Army Group Centre to Belorussia up to the Spring of 1944

*Karl-Heinz Frieser*

### 1. DEVELOPMENTS UP TO MID-SEPTEMBER 1943

In the summer of 1943 it became quite clear that Army Group Centre was no longer capable of withstanding the growing pressure from the enemy. The balance of forces shifted increasingly in favour of the Red Army. In July 1943 Operation CITADEL was launched to eliminate the Kursk salient, which extended dangerously far to the west, and thus save forces by shortening the front. For that purpose Army Group Centre had concentrated the mass of its armoured units with Ninth Army, which was supposed to advance on Kursk as the northern arm of a pincer movement. This attack, however, got stuck in the depths of the Soviet defence system. Furthermore, the Red Army launched a counter-offensive at Orel even before the German attack on Kursk had come to an end. The outcome was indeed a shortening of the front, but not the one which the Germans had intended. The new Soviet offensive forced the German troops to evacuate the Orel bulge and withdraw to the Hagen Line, a withdrawal which was complete by 16 August. At the same time, 2nd Armoured Army HQ, together with a number of smaller units, was transferred to the Balkan theatre, which meant a further weakening of Army Group Centre.

German inferiority was clear from the fact that each of Army Group Centre's four armies was faced by a whole Soviet army front.<sup>1</sup> It was compounded by the opening of the 'second front'. On 3 August approximately 100,000 partisans (according to Soviet figures) began the operation known as the 'rail war', which covered the whole hinterland up to the western border of the Soviet Union and was mainly aimed at the disruption of rail transport. In mid-September some 120,000 partisans launched Operation CONCERT, which also caused great damage and tied down a number of German units urgently needed at the front.<sup>2</sup>

<sup>1</sup> The composition and names of the Soviet army fronts changed several times. Thus, on 20 October 1943 Central Front and Bryansk Front were merged and designated Belorussian Front. On 24 February 1944, after additional forces had been brought up, Belorussian Front was in turn divided into 1st and 2nd Belorussian Fronts.

<sup>2</sup> *Geschichte des zweiten Weltkrieges 1939–1945*, vii. 366–78; Solovev, *Wendepunkt*, 150.

Since the course of the fighting in the area of Army Group Centre differed greatly from army to army, each battle needs to be discussed separately. All in all, a division can be made into the following stages:

- On 26 August and 1 September the Red Army resumed its offensive on most sectors of the front.
- On 16 September the German forces began their withdrawal to the Panther Line rearward position.
- By 2 October the units of Army Group Centre had largely occupied the Panther Line.

Third Armoured Army, deployed in the North, was the furthest from the epicentre at Kursk and had been affected only by offshoots of the Red Army's summer offensive. For that reason it had been obliged to give up several units. It still had three army corps<sup>3</sup> with horse-drawn infantry divisions, but, despite its name, it no longer possessed any tanks. The average length of front per division was 25 kilometres, so that some units had only one man per 50 to 80 metres. There were practically no reserves.<sup>4</sup> It was therefore to Third Armoured Army's advantage that it was touched only on its right wing by an offensive whose main thrust was directed against the neighbouring sector to the south.<sup>5</sup>

Its southern neighbour, Fourth Army, had been obliged to give up seven divisions in the last few weeks and had to cover a 300-kilometre-long stretch of front with only 14 remaining divisions.<sup>6</sup> Precisely in that period of weakness it was attacked by West Front and large sections of Kalinin Front in the 'Smolensk Strategic Offensive Operation', also known as the 'Suvorov Offensive', which lasted from 7 August to 2 October. In the initial phase the Red Army deployed 1,253,000 men, supported by 1,436 tanks and assault guns, 20,640 cannon and grenade launchers, and 1,100 aircraft. Additional forces, including two armoured corps, were also brought up afterwards.<sup>7</sup> Against this crushing superiority Fourth Army could muster only 66 assault guns.<sup>8</sup> The battle-hardened German defenders had never experienced such massive attacks. The reckless manner in which the offensive was conducted can be seen from the number of victims. Soviet losses totalled 451,466 men,<sup>9</sup> compared with 49,477 on the part of Fourth Army.<sup>10</sup> The Red Army also lost 863 tanks and assault guns, and 303 aircraft.<sup>11</sup> Nevertheless, the mood on the German side was one of crisis, as can be seen from a situation analysis by the commanding general of XII Army Corps, Gen. Kurt von Tippelskirch:

<sup>3</sup> On 14 September Army Group North's XXXIII Army Corps, which had previously belonged to Third Armoured Army, was assigned to it, and its border was moved correspondingly further to the south.

<sup>11</sup> *Grif sekretnosti sniat*, 370.

If the enemy continues to attack in the same manner, the outcome may be catastrophic. The combat strength of our units has fallen dramatically. There are great shortages of material [...] Some of the companies are led by very young officers, some by sergeants [...] Nowhere are local reserves available. The Russians attack in dense swarms and replenish them from the rear. Their combat value is not high in itself, but the massive deployment is crushing [...] Our position is stretched to breaking-point. Resumption of the Russian attacks must result in a breakthrough.<sup>12</sup>

The offensive achieved only initial success on the southern wing, after which the Soviet forces got stuck and suffered heavy losses.<sup>13</sup> There were, nevertheless, major consequences for the drawn-out battles taking place at the same time further south in the Kursk salient, where the Soviet counter-offensive at Orel was just reaching its peak. As already explained, Model's Ninth Army had been left on its own without any hope of support from Fourth Army, which was also under attack. On 26 August the Soviet units resumed their offensive after the first assault had come to a halt, but failed in their attempt to advance on Smolensk in the first half of September.

The situation of Ninth Army, deployed to the south, also appeared critical. It had been in action since 5 July, almost without interruption. After the unsuccessful attack on Kursk as part of Operation CITADEL, it had to fend off the Soviet counter-offensive, Operation KUTUZOV. By 16 August Col.-Gen. Model evacuated the Orel bulge and pulled his troops back to the Hagen Line. For a few days there was a short pause in the fighting, but then Bryansk Front, with 530,000 men, launched the 'Bryansk Independent Offensive Operation' (1 September to 3 October 1943). It cost the Soviet side 56,657 men, of whom 13,033 dead or missing,<sup>14</sup> while the Germans lost 13,300 (3,779 dead or missing).<sup>15</sup> Ninth Army had to withdraw to the other side of the Desna but managed to fend off the main thrust of the Soviet attack on Bryansk.<sup>16</sup> The new defensive line proved untenable, however, since the front had been broken through on the right, in the sector of Second Army, in mid-September.

In the spring of 1943 Second Army was away from the main course of events. It took no active part in Operation CITADEL, nor was it attacked during the Red Army's two counter-offensives in the Kursk salient. This meant, however, that it was repeatedly required to give up troops, leaving its front dangerously undermanned. In the end, it was left with only two weak army corps whose mobility depended mainly on the use of horses. Reinforcements, especially tanks, arrived only when it was already too late. It is therefore not surprising that the decisive breakthrough occurred in this sector, with repercussions on almost the whole eastern front. The Red Army attacked on 26 August, directing its main thrust at the interface between the two army groups, mainly against Second Army on the

southern wing of Army Group Centre and Fourth Army on the northern wing of Army Group South. This was the 'Chernigov–Poltava Strategic Offensive Operation' (26 August to 30 September 1943). It deployed troops from Central Front, Steppe Front, and Voronezh Front, which attacked in the first phase with 1,581,300 men, supported by 30,245 cannon and grenade launchers, almost 1,200 tanks and self-propelled guns, and 1,700 aircraft.<sup>17</sup> In the course of the operation three army HQs, 3rd Guards Armoured Army, a mechanized corps, and two cavalry corps, plus 14 divisions and five brigades, were also brought in. The three army fronts, which had suffered painful losses shortly before during the battles in the Kursk salient, now incurred huge losses once again. According to official figures, they totalled 427,952 men, of whom 102,957 dead or missing. The attacking forces also lost 1,140 tanks, 916 cannon, and 269 aircraft.<sup>18</sup>

In the framework of this operation, three army fronts were deployed in the sector of Second Army. The leading role was played by Central Front, commanded by Gen. Konstantin Konstantinovich Rokossovsky, which had defended the northern sector of the Kursk salient in July during Operation CITADEL and had then taken part in the recapture of the Orel bulge (Operation KUTUZOV). Rokossovsky had five general armies at his disposal, plus 2nd Armoured Army, 9th Armoured Corps, and 7th Guards Mechanized Corps.<sup>19</sup> Central Front launched the attack on 26 August with 579,000 men.<sup>20</sup> However, Second Army, led by Gen. Walter Weiss, had accurately identified the point of concentration and positioned its troops accordingly.<sup>21</sup> The Soviet units managed to take Sevsk, but could advance only with difficulty in the well-built-up German defence system. Then, on 1 September, came the decisive breakthrough on the southern wing near Glukhov. Now the Soviet armoured units could push forward into the river delta between the Desna and the Seym. XIII Army Corps, deployed on Second Army's southern wing, was split off and had to be assigned to Fourth Armoured Army on the northern wing of Army Group South.<sup>22</sup> This meant that the right wing of Second Army was left hanging in the air, and a dangerous gap had opened up between the two army groups. Finally, Second Army was withdrawn to the other side of the Desna, where its task was to secure a 170-kilometre-long front with only six divisions.<sup>23</sup> But as the commander-in-chief of Second Army, General Weiss, reported, the remaining combat strength of all of his infantry divisions together was only 6,981 men.<sup>24</sup> That gave only 40 men per kilometre of front.<sup>25</sup> And in that situation Second Army was also ordered to carry out a counter-attack to the south so as to close the gap. LVI Armoured Corps, which had meanwhile been assigned to it, had been so weakened

by the constant pressure that it had been necessary to merge the fighting vehicles of its two armoured divisions in an ‘armoured corps under unified command’.<sup>26</sup> On the evening of 13 September the corps possessed only four operational battle tanks.<sup>27</sup> Second Army accordingly applied for ‘the supply of 60 battle tanks by express delivery’,<sup>28</sup> pointing out that it had the necessary crews at its disposal. Its request could not be met, however; there were no longer any reserves of fighting vehicles.

Meanwhile, the attacking units of Central Front had breached Second Army’s new defence line on the Desna. On 12 September they were able to establish a bridgehead to the north of Korop that was 18 kilometres wide and 6 kilometres deep.<sup>29</sup> Most alarmingly of all, the northern wing of neighbouring Army Group South was also in danger of collapse at Konotop. The gap was widening. In an attempt to prevent a debacle, the commander-in-chief of Army Group Centre, Field Marshal Günther von Kluge, ordered the retreat of Second and Ninth Armies to a new defensive position on his own authority, despite the fact that Hitler had expressly forbidden any withdrawal without his permission.<sup>30</sup> But it was no use. The dam could no longer be prevented from bursting.

## 2. WITHDRAWAL TO THE PANTHER LINE (16 SEPTEMBER TO 2 OCTOBER 1943)

Zeitzler, the OKH chief of staff, had long nursed plans to withdraw Germany’s eastern army to a favourable line of defence protected by wide stretches of water. Moreover, the resultant shortening of the front would make it possible to gather some reserves and thus withstand the assault by the superior forces of the Red Army. The ‘East Wall’ he had in mind, later dubbed the ‘Panther Line’, would run from Melitopol on the Sea of Azov, along the Dnieper and the Sozh, to Lake Peipus, and then on to Narva on the Gulf of Finland. By mid-August Zeitzler had succeeded in extracting Hitler’s agreement to build the planned defence line. For the time being, however, only inadequate preparations could be made since Hitler was still insisting on a sustained defence forward of the Dnieper. On 3 September a meeting took place at Führer headquarters at which Kluge and Manstein, the commanders-in-chief of Army Groups Centre and South, called urgently for withdrawal to the Panther Line. They both emphasized that the withdrawal movement had to begin without delay if the troops were to be brought behind the water barrier more or less intact. Nevertheless, Hitler refused, and was only willing to allow a few shortenings of the front.<sup>31</sup>

<sup>31</sup> Philippi and Heim, *Der Feldzug gegen Sowjetrußland*, 215–16.

The breakthrough at the interface between the two army groups had occurred two days earlier. Field Marshal von Kluge showed himself to be worried not only by the open right flank, but also by the increasingly critical situation of the neighbouring army group to the south, whose defence lines were under attack by even greater masses of enemy troops. For that reason, over the period from 4 August to 8 September Army Group Centre had to transfer eleven divisions to its southern neighbour (including two armoured divisions and two armoured infantry divisions), as well as one HQ for each army corps or armoured corps.<sup>32</sup> But these reinforcements were to no avail against the enemy's superiority. Despite the thinned-out front, a further five divisions (including one armoured division and one armoured infantry division) had to be transferred to Army Group South.<sup>33</sup> Now Lt.-Gen Adolf Heusinger, chief of the operations division of the OKH General Staff, seized the initiative. On 14 September he declared, in a talk with the chief of staff of Army Group Centre, that 'it was in his view necessary for Army Group Centre to take far-reaching decisions [...] Perhaps the major withdrawal to the Panther Line had to begin before the muddy season. A.Gr. South's Fourth Armoured Army had been shattered into three groups. Fld. Mar. von Manstein had ordered the army to withdraw immediately to the Dnieper Line. The same decision had to be taken for A.Gr. Centre, and taken today.'<sup>34</sup>

The following day witnessed the decisive situation conference at Führer headquarters. Field Marshal von Kluge declared that immediate withdrawal to the Panther Line was the only remaining way to restore stability. Field Marshal von Manstein's analysis of the situation was even more pessimistic. In any case, he had reported on the previous day that he would, if necessary, order the withdrawal on his own authority in order to save Fourth Armoured Army from destruction. Faced with his generals' arguments, Hitler had no alternative but to give permission for withdrawal. He nevertheless watered it down immediately by ordering a slow, 'section by section' retreat, and specifying that each separate withdrawal movement required 'his express permission'.<sup>35</sup> In this connection, a former Wehrmacht general wrote scathingly of Hitler's 'hold-on' strategy: 'Instead of command skill, we were offered the impossible expedients of obstinacy and rigidity'.<sup>36</sup> How disastrous the situation of the fighting troops really was is clear from an analysis by Army Group Centre HQ for the second half of September. In theory, the following formations were available for the defence of the 700-kilometre-long front: 42 infantry divisions, two armoured infantry divisions, six armoured divisions, and four Luftwaffe field divisions. But some of them were in shreds and had to be split into other, equally rudimentary divisions. Only 11 infantry divisions, one armoured division, and four Luftwaffe field divisions were fully operational.<sup>37</sup>

<sup>37</sup> KTB H.Gr. Mitte, 30 Sept. 1943, 1682–3, BA-MA RH 19-II/154.

In his denial of reality, however, Hitler refused to accept such facts. On his situation maps he operated with units some of which existed only on paper.

In the area of Army Group Centre, the Panther Line ran along the Dnieper in the southern sector, along the Sozh in the centre, and in the northern sector eastwards past Vitebsk to Nevel. The plan was to begin the 'Panther movement' on 16 September and complete it by 2 October. In parallel with the military withdrawal, Army Group Centre had to evacuate 535,000 civilians and transport huge amounts of economic goods.<sup>38</sup> Abandonment of the hitherto defended area went hand in hand with systematic destruction of its infrastructure, in order to make the advancing enemy's military operations more difficult. Fearing that the destruction could get out of control, the higher command authorities issued restrictive orders, such as the following from General Weiss, commander-in-chief of Second Army: 'I forbid the senseless burning of villages. Arsonists are to be court-martialled, and shot if trying to escape. The destruction of villages is justified only in battle with the enemy at the front and in the fight against partisan bands, and then only in the 40 km area forward of the Panther Line designated as a wasteland zone.'<sup>39</sup>

The operational withdrawal manoeuvre was a rotational movement around the axis of Third Armoured Army, stationed on the northern wing, which largely remained in its previous positions. Only Sixth Army Corps, defending the southern sector, was to withdraw, although more slowly than the army group's other large formations.<sup>40</sup> This manoeuvre was considerably more complicated in the case of the neighbouring Fourth Army, where the enemy was pushing forward strongly.<sup>41</sup> Since most of the Wehrmacht units were poorly equipped with motor vehicles, in many places it came to a grotesque race between German horse-drawn wagons and Soviet tanks, followed by all-terrain lorries (mostly manufactured in the United States). Despite the arrival of a few reinforcements in the meantime, the total number of operational fighting vehicles possessed by Fourth Army was 29 tanks and 37 assault guns.<sup>42</sup> But the situation of the other armies was no better. On 25 September the German forces lost Smolensk und Roslavl, 'the sites of the auspicious successes of the summer of 1941', as General von Tippelskirch put it. On 17 September the retreating Ninth Army had already had to evacuate Bryansk, a little further to the south. In 1942 this area had been the scene of the Vyazma-Bryansk battle of encirclement, in which the Red Army lost 673,000 men

<sup>38</sup> Müller, *Die deutsche Wirtschaftspolitik in den besetzten sowjetischen Gebieten*, 378.

<sup>39</sup> KTB 2. Armee, 21 Sept. 1943, 187, BA-MA RH 20-2/723. On the scorched-earth tactic, see Part III, Chapter IV of the present volume.

<sup>40</sup> Sixth Army Corps withdrew to the Panther Line only on 11 October, whereas the northern wing of Third Armoured Army remained in its previous positions forward of that line. This was because of its attachment to the neighbouring Army Group North, which did not withdraw to the Panther Line until February 1944.

<sup>41</sup> On this, see BA-MA, Study ZA 1/2154, 'Der Rückzug des XXVII. A.K. an der Autobahn Smolensk-Orscha im September und Oktober 1943'.

<sup>42</sup> AOK 4, Ia, Stopa No. 35/43 geh., 'Wochenmeldung über Panzer- und Sturmgeschützlage vom 30.9.1943', BA-MA RH 20-4/494.

as prisoners alone.<sup>43</sup> That success too had long faded from memory. Now the sarcastic slogan was: 'Forward, Comrades. We must retreat!'

Despite all these difficulties the Panther movement was completed by 2 October, according to plan.<sup>44</sup> On the southernmost wing, however, where Second Army was deployed, the disaster which the higher military authorities had been warning about occurred at Chernobyl. There, in the 'wet triangle' north of the confluence of the Pripet and the Dnieper, the eastern front suffered a first crack that later led to the bursting of the dam. As we have seen, the breakthrough by Central Front at Glukhov broke the connection between Army Groups Centre and South. Soviet tanks pushed through the gap south of Chernigov to the Dnieper. On 22 September, at the exact interface of the two German army groups, troops of 13th Army became the first to cross the river. According to a Soviet account, the following days saw an 'exceptionally bitter' and 'relentless' battle for Chernobyl, which was protected by the water obstacles of the Pripet and Uzh rivers.<sup>45</sup> This important town fell on 1 October. To the south and north of it, units of 60th and 61st Armies poured through the gap and widened the bridgehead.

This failure is one of many examples of Hitler's unprofessional command of operations. Once again it became clear that, despite his wealth of operational ideas, he lacked the technical skills of a general staff officer. His operational orders for execution of the Panther movement were marked by an inherent contradiction: on the one hand, he ordered the retreat to be carried out 'as slowly as possible'; on the other, armoured divisions were to be withdrawn 'as quickly as possible' in order to close the gap between the two army groups.<sup>46</sup> Yet in that almost obstacle-free terrain it was impossible to fight a slow, delaying retreat without sufficient armoured units. Moreover, withdrawal of the armoured divisions opened gaps in the front through which the Soviet tanks could advance. Manstein and Kluge, and the OKH chief of staff himself, protested strongly but in vain against this fundamental tactical error. By the time the armoured divisions were available for the counter-attack it was too late. The enemy had won the race to the Dnieper. In fact, the German units could have reached their positions on the western bank of the Dnieper without problems if they had been allowed to withdraw quickly enough. But that was precisely what Hitler had forbidden. As a result, the enemy had already established bridgeheads on the far bank while the German units were obliged to halt east of the river. Although Fourth Armoured Army, from the northern wing of Army Group South, managed to retake Chernobyl on 4 October, the Soviet bridgehead remained 60 kilometres wide and 30 kilometres deep. Army Group Centre was now in position on the Panther Line, as ordered, but there was an 'open wound' on its southern wing. When, on 14 October, its front had to be extended to

<sup>43</sup> Glantz and House, *When Titans Clashed*, 337, n. 18. The reference is to the double battle of Vyazma and Bryansk.

<sup>44</sup> Third Army and the northern wing of Fourth Army had at first remained forward of the Panther Line.

<sup>45</sup> Kobrin and Abaturov, 'Sokrushenie vostochnogo vala', 297–8.

<sup>46</sup> KTB H.Gr. Mitte, 16 Sept. 1943, 1551–2, BA-MA RH 19-II/154; BA-MA, Study ZA 1/2052, 88–9 and 104–5.

the area south of Chernobyl, it had to assume sole responsibility for the whole sector. The problem of the open right flank continued to occupy Second Army, which was deployed there, in the weeks and months following.

### 3. THE WINTER BATTLES OF 1943–1944: AN ‘UNKNOWN WAR’

What took place on Army Group Centre’s front in the winter months of 1943–4 was one of the bloodiest episodes of the Second World War. It was a drama that surpassed some of the war’s far better-known battles. Nevertheless, very little is said about it in the specialist literature. In Soviet historiography those battles are cloaked in exceptional darkness, all the more surprising in view of the enormous losses. The leadership of the Red Army became increasingly enraged at the setbacks in that sector of the front and threw more and more troops into frontal assaults on the German defence positions. Since its huge efforts and the sacrifice of countless army units met with no great success, the battles were later ignored, as if they had never taken place. This suppression of historical facts was particularly striking in Stalin’s speech on the 27th anniversary of the October Revolution. In his assessment of the winter campaign of 1943–4, the Soviet leader mentioned only the operations at Leningrad and Novgorod, in the western Ukraine, and in Crimea. Not a word about the fighting in the central sector on Belorussian soil. The normally uncritical *Geschichte des Großen Vaterländischen Krieges der Sowjetunion* has this to say on the subject: ‘The Supreme Commander was loath to admit that the high command had made mistakes in the planning of operations in the central sector and had failed to supply the fronts with the necessary forces and material.’<sup>47</sup>

In the front sector held by Army Group Centre, the Stavka was actually pursuing a far-reaching goal, namely the liberation of Belorussia before the end of the winter of 1943–4. That was the reason for the ‘Belorussian Strategic Offensive’ which it launched in November and had to abandon in February 1944 without success.<sup>48</sup> Looking back, Soviet marshal Ivan Khristoforovich Bagramyan remarked: ‘Had this plan succeeded, it would have taken our troops to the Baltic and the borders of East Prussia and Poland.’<sup>49</sup> The basic operational concept was a pincer attack on Minsk, consisting of a weaker thrust from the north-east via Polotsk or Vitebsk and a stronger thrust from the south-east via Bobruisk. It was thus an—albeit unsuccessful—anticipation of the opening phase of Operation BAGRATION, which in the summer of 1944 led to the battle of encirclement at Minsk and the collapse of Army Group Centre. The northern arm of the pincer was formed by 1st Baltic Front, as the former Kalinin Front had been called since mid-October. Its most important task was to smash the German Third Armoured Army near Vitebsk.

<sup>47</sup> *Geschichte des Großen Vaterländischen Krieges*, iv. 116.

<sup>48</sup> Glantz, ‘The Failures of Historiography’, 795–7. The sketch on p. 796 is particularly telling since it brings out the clear associations with Operation BAGRATION (Minsk battle of encirclement).

<sup>49</sup> Bagramyan, *So schritten wir zum Sieg*, 222; see also 226.

For a while the Stavka was even planning a supporting airborne operation, but eventually abandoned the idea.<sup>50</sup> The southern pincer arm was to be formed by Belorussian Front, created on 14 October by the merger of Central Front and Bryansk Front. Its mission was to attack the positions held by the German Ninth Army and, in the words of the Stavka directive of 1 October 1943, 'smash the enemy grouping at Zhlobin–Bobruisk and take possession of Minsk, the Belorussian capital'.<sup>51</sup> In the centre, West Front was to launch a frontal attack from the east against Fourth Army, which was positioned in the middle of Army Group Centre.

Soviet historiography, however, says hardly anything about the outcome of these ambitious operations. On this, the American military historian David M. Glantz comments:

Soviet historians have written about the series of operations west of Nevel, the Gorodok operations of November and December 1943, the Gomel–Rechitsa operation of November, and the Rogachev–Zhlobin operation of February 1944. They have been utterly silent, however, concerning subsequent operations by 1st Baltic and Belorussian Fronts during the period and, until recently, have ignored entirely operations by Western Front.<sup>52</sup>

Soviet reference works on military history are also silent about the operations in question. What seems particularly serious is that even *Grif sekretnosti sniat*, a work published in the post-Soviet period, passes over these operations in silence, as if they never took place. Apparently the losses were so horrendous that they were hushed up during the Stalin era.

Given the desolate state of the sources, it is noteworthy that, in the revised edition of *Velikaya Otechestvennaya Voina*, Makhmut Akhmetovich Gareyev cast light on the subject, taking West Front as an example.<sup>53</sup> After the end of Soviet Communism, articles dealing with this gloomy chapter appeared for the first time in the Russian press. One such article, published in *Komsomolskaya Pravda*, was a report by V. Diatlov, who had been deployed as a train driver in December 1943 during an offensive in Belorussia. Diatlov described how mercilessly the masses of Red Army soldiers were sent to their death. His account of an assault by a penal battalion directly into the German fire makes a particularly strong impression. In that single action, only seven out of 307 men remained alive.<sup>54</sup> A German general gave the following description of the Red Army's offensive tactics from the opposite viewpoint: 'A Russian infantry attack is an awe-inspiring spectacle. The long grey waves come pounding on, uttering fierce cries, and the defending troops require nerves of steel.'<sup>55</sup> But because of the 'brutal use of masses of troops in attack',<sup>56</sup> the cost in human lives was horrendously high. According to a British military historian, 'they attacked the same front positions again and again without

regard for losses, until either the German defence gave way or their own forces were completely used up'.<sup>57</sup> In the winter of 1943–4 the latter was usually the case in the central sector of the front.

The following chapters describe the battles from the viewpoint of the individual German armies, each of which was faced with an attacking Soviet army front. First, however, we shall consider the situation of the army group as a whole in regard to the Red Army's imminent winter offensive. On 14 October Field Marshal von Kluge, the commander-in-chief of Army Group Centre, wrote to the Führer stressing that, 'as the senior officer of the eastern army', he felt obliged to turn to him 'in confidence'.<sup>58</sup> Nevertheless, the content of his communication seemed so bold that, as he confessed privately, he feared it would cost him his post.<sup>59</sup> He described the hopeless situation of his army group, whose units, in their present condition, were no longer capable of fending off a strong Soviet offensive:

The foremost trenches, however, are frighteningly empty, and it is no wonder that soldiers feel alone and abandoned at the prospect of a mass attack by Russian infantry [...] In recent days I have personally been at artillery posts where the batteries were unable to fire on the most profitable targets imaginable because there was no more ammunition [...] Army Group Centre alone is short of 200,000 men. Recent losses have been so great that the combat strength of the units under the strongest attack has declined to a frightening extent. Without men, weapons, and reserves, no commander, however skilful, can command. To those who may claim that things are the same for the Russians, I have to say that is not the case. Where the Russians attack, they have everything we lack.<sup>60</sup>

That prophecy of doom long remained the last attempt to alert Hitler to the extremely critical situation of the army group. Two-and-a-half weeks later, on 28 October, Field Marshal von Kluge was involved in a serious traffic accident on the Orsha–Minsk road. Hitler's subsequent appointment of Field Marshal Ernst Busch as the new commander-in-chief of Army Group Centre met with little enthusiasm among the officer corps. While Kluge's autocratic manner had earned him some enemies, he was one of the few generals who dared contradict Hitler, and his involvement in the 20 July plot later cost him his life. Busch, on the other hand, was known as one of the Führer's unconditional yes-men. A study by Rudolf Hofmann, a retired infantry general, contains the following assessment of Busch's appointment: 'The change of commander-in-chief [...] weakened the leadership of the army group appreciably. Whereas Kluge had repeatedly striven to oppose Hitler's interventions and impositions in matters of command, his successor Busch was a submissive executive instrument of Hitler's command methods.'<sup>61</sup>

The accuracy of Field Marshal von Kluge's situation analysis in his letter to Hitler is confirmed by a calculation of the army group's strength carried out at the same time. The number of its four armies' operational fighting vehicles had fallen

to 216, and the artillery possessed only 2,577 cannon.<sup>62</sup> In the first half of the war the Luftwaffe had repeatedly been able to compensate for the army's weakness, but Air Fleet 6, assigned to Army Group Centre, was now left with only 434 operational aircraft.<sup>63</sup> Personnel strength is shown as 914,500 men,<sup>64</sup> but that figure includes the civilian and military Wehrmacht retinue in the hinterland, among which were numerous German and local auxiliaries employed on the construction of field fortifications, especially for the Panther Line.<sup>65</sup> In contrast, the daily strength of the combat units must have been only around half that number. Besides this, more and more troops had to be withdrawn from the front to protect the hinterland from partisans, whose numbers rose to 150,000 men in the winter of 1943–4, according to Soviet sources.<sup>66</sup> There are no suitable figures for the opposing Red Army units for October. They are available again only for the beginning of 1944, by which time Soviet strength had fallen appreciably owing to the Red Army's high losses. At that point the three army fronts attacking from the east had at their disposal 1,580,000 men, 24,041 artillery cannon and large-calibre grenade launchers, 1,159 tanks and assault guns, and 2,443 aircraft.<sup>67</sup> Deployed on a stretch of front 650 kilometres long were 135 rifle divisions, nine cavalry divisions, four armoured corps, six rifle and 17 independent armoured brigades, and six fortified areas (defensive troops).<sup>68</sup> Against them Army Group Centre could theoretically align 45 infantry and Luftwaffe field divisions and five armoured divisions, many of which had been merged in rudimentary 'combat groups' (see Tables IV.II.1 and IV.II.2).<sup>69</sup> With such weakened units it had to try to assert itself against 'a permanent conjunction of adjacent Russian attacking thrusts'.<sup>70</sup>

In the autumn the positions occupied by Army Group Centre extended over a width of 700 kilometres. In the following winter the front was stretched dramatically to 1,100 kilometres because the southern wing had to be moved back. While the army group was able to hold its positions mainly in the centre, the neighbouring Army Group South was forced back far to the west, leaving the southern flank open over a length of 350 kilometres.<sup>71</sup> As a result, Second Army could no longer be deployed against the three Soviet army fronts attacking from the east but had to occupy a new defensive line along the Pripet marshes to secure the southern flank. Here its main adversary was the newly formed 2nd Belorussian Front. In the sector of Army Group Centre, four German armies now faced four Soviet army fronts.

### (a) Third Armoured Army in the Winter Battles of Vitebsk

Third Armoured Army, led by Col.-Gen. Hans Reinhardt, was defending the northern wing of Army Group Centre. After giving up an army corps on 19 September, it was left with only two corps: VI Army Corps and II Luftwaffe Field Corps. The latter was deployed on the left wing at the border with Army Group North. It constituted a weak point in the front, since it had at its disposal only four Luftwaffe field divisions with insufficient front-line experience. The combat value of those units was so low that they were classified as of only limited suitability even for defensive tasks. It was precisely against this sector that the Soviet forces directed the main thrust of their Nevel–Gorodok Offensive, which lasted from 6 October to 31 December 1943. Large parts of Kalinin Front (from 20 October ‘1st Baltic Front’) attacked at the interface between Army Groups Centre and North. They consisted of 4th Shock Army, 11th Guards Army, 39th and 43rd Armies, and the aircraft of 3rd Air Army. In addition, 3rd Shock Army and other units attacked at the same time. According to Soviet sources, the total force of 198,000 men engaged in the first phase of the offensive suffered 168,202 losses, of whom 43,551 dead or

missing.<sup>72</sup> This was one of those operations which had to be abandoned in the end because the combat units had almost run out of men.

The great numerical superiority of the attacking forces nevertheless resulted in some successes for the Nevel–Gorodok Offensive. On the first day, 6 October, the Soviet troops broke through at the interface between the two army groups and took the town of Nevel. A breach almost 20 kilometres wide was opened in the German front. Since Third Armoured Army had no tanks but only five operational assault guns,<sup>73</sup> Army Group Centre HQ sent an intervention group including 20th Armoured Division and 505th Heavy Armoured Division to the northern wing. Its task was to drive back the onrushing attacking forces, but it only managed to establish a provisional stop-line. For a time the OKH even considered moving Seventeenth Army from Crimea and deploying it at the interface between Army Groups Centre and North.<sup>74</sup> The crisis continued to escalate, especially after the Red Army opened a second offensive phase at the beginning of November and pushed new troops into the breakthrough area. The width of the breach became increasingly dangerous, stretching Third Armoured Army's front to 360 kilometres.<sup>75</sup>

Hitler's interventions in operational command now had disastrous consequences. Instead of establishing a new line of defence in the rear, the dictator had ordered the reinforcement of the front on both sides of the breach with the few remaining reserves in preparation for a counter-offensive. From there he wanted to launch a concentric attack by both army groups so as to close the breach in the front and encircle the enemy units which had broken through. However, the commanders-in-chief of the army groups in question had hardly enough troops left to fill the numerous gaps, not to mention conducting a counter-attack of major operational proportions. The only serious attempt at an attack by Army Group Centre was made on 8 November by 20th Armoured Division and 252nd Infantry Division. The German units immediately broke through the enemy positions in the Lobok pass and advanced 6 kilometres northwards. This initial success substantially boosted the morale of the attacking German troops: 'high spirits everywhere, at last we're moving forward again!'<sup>76</sup> Then came the startling news that the attack by the northern pincer arm, scheduled for the following day, had been called off by Army Group North HQ.<sup>77</sup> Hitler's plan to close the gap in the front by attacking had proved an illusion. Meanwhile, more and more new Soviet units had pushed through the breach. Stretching out behind the breach on both sides, they formed a broad new front, some sections of which could be defended by the Germans only by deploying construction battalions as a last reserve. Army Group Centre HQ tried desperately to persuade Hitler to pull back the northern wing, which was threatened with encirclement, but in vain.

On 8 November, in addition to the failure of the counter-attack on the northern wing, a new crisis arose on Third Armoured Army's southern wing: VI Army Corps was attacked frontally from the east in a Soviet thrust aimed at Vitebsk. The Soviet III Guards Cavalry Corps made a breach in the German front that was sealed off only with extreme difficulty. In the course of this action it became clear that Third Armoured Army scarcely had enough strength for a counter-attack. Its strongest unit up till then, 20th Armoured Division, shrank in November to a combined combat strength of 500 men and 19 tanks.<sup>78</sup> That was symptomatic of the whole army, whose remaining combat strength on 17 November was only 21,500.<sup>79</sup> As can be seen from a glance at the situation map, the state of Reinhardt's armoured army was so critical that the encirclement and destruction of a large part of its units seemed inevitable. However, 1st Baltic Front had suffered such huge losses that its troops were ultimately also incapable of further action. On 19 November Stalin dismissed its unsuccessful commander-in-chief, Gen. Andrei Ivanovich Yeremenko, and replaced him by Bagramyan, a much more skilful general.<sup>80</sup>

Under Bagramyan's leadership 1st Baltic Front immediately launched a new offensive, known in the German sources as the first winter battle of Vitebsk (13 December 1943 to 17 January 1944). Bagramyan received reinforcements which brought about a turnaround, although his more efficient operational command also had an effect. From the outset he deployed I Armoured Corps with 11th Guards Army at the point of concentration, while V Armoured Corps and III Guards Cavalry were to split the German front through additional thrusts. In the first phase of the battle the fighting was concentrated on the Gorodok corridor, which stretched from Vitebsk via Gorodok northwards to the Lobok lake district. In October the Soviet forces had managed to break through the front to the north of Lobok and push forwards, fanning out on both sides, but, unable to penetrate the Lobok pass between two lakes, they had failed in their attempt to widen the breach southwards. Nevertheless, the long northward-stretching front salient had been increasingly narrowed by the Soviet attacks on its flanks, and the Gorodok corridor constituted an obvious temptation to cut it off by means of a pincer attack. Col.-Gen. Reinhardt had already called for withdrawal from the northern section of the salient several times, arguing that the exposed Lobok defensive position could all too easily be circumvented by the enemy. He received little support from Field Marshal Busch, however, who retorted: 'That is for the Führer to decide, not you!'<sup>81</sup> The commander-in-chief of Third Armoured Army had even threatened to resign his post: 'In my position, I cannot simply stand by and watch disaster approaching. That is impossible. Someone else will have to do it.'<sup>82</sup> In all controversies, however, Busch took refuge in Hitler's instructions: 'I have no alternative. I am under orders from the Führer, and so are you. And an

<sup>82</sup> Ibid.

order from the Führer must be obeyed.<sup>83</sup> In this phase it became clear that it was extremely detrimental for the army group to be led by Field Marshal Busch, who carried out Hitler's orders more uncritically than probably any other commander. Busch reduced himself and his staff to a mere instrument for the execution of the Führer's instructions. That was extremely dangerous, however, given Hitler's increasing denial of the reality at the front. The dictator still retained the vision of a 'great solution', that is, closure of the Nevel-Lobok gap by means of a concerted attack by both army groups. His manic obsession with not evacuating front salients and bridgeheads that were hard to defend, but instead holding on to them as a springboard for possible future offensives, now became increasingly strong. More and more frequently, strategic utopia collided with operational reality.

When the Red Army launched its new offensive on 13 December, the directions of thrust were precisely those predicted by Col.-Gen. Reinhardt. The upper section of the Gorodok corridor was attacked simultaneously from the east, north, and west. The resulting situation was especially dangerous for the exposed German forces at Lobok. The second day already saw the German front breached on the flanks of the corridor by 11 Guards Army from the east and 4th Shock Army from the west. The pincer attack threatened to encircle several divisions of IX Army Corps, which was deployed on the northern wing. As the defensive positions could no longer be held, the only solution was to retreat southwards as quickly as possible to escape from the trap. That was what the commanding general of the army corps demanded: 'We are faced with the following decision: either let ourselves be beaten to death where we stand, which would mean a great loss of men and material, or else pull back while there is still the hope of withdrawing tonight in an orderly fashion.'<sup>84</sup> When Reinhardt, in 'an excited argument with the field marshal', requested permission to withdraw, Busch once again invoked Hitler's 'great solution'.<sup>85</sup> However, the idea of defending the Lobok pass as the springboard for a counter-attack was by now completely illusory. Much too late, the commander-in-chief of the army group summoned up the courage to apply, via the OKH, for Hitler's permission to withdraw. And much too late, at 14.00 on 15 December, the dictator gave his permission.<sup>86</sup> There now began a race against the concentrically advancing Soviet attackers.

While other units managed to escape, 87th Infantry Division was boxed in. The following day, 16 December, it broke through the enclosing ring with the courage of despair.<sup>87</sup> Third Armoured Army's war diary reported euphorically: 'With division commander Col. [Mauritz] Baron von Strachwitz at their head, the infantrymen overran everything with hand weapons and cries of hurrah!'<sup>88</sup> In the last phase of the breakthrough, moreover, several Soviet artillery batteries were put

<sup>88</sup> KTB 3. Panzerarmee, 17 Dec. 1943, 64, BA-MA RH 21-3/245.

out of action. But then came disillusionment. Although a total of 4,780 men and 1,000 horses out of the enclosed 7,200 men and 2,900 horses managed to escape,<sup>89</sup> all the heavy weapons, including the whole artillery, were left behind. In a later analysis Lt.-Gen. (ret.) Otto Heidkämper, Third Armoured Army's chief of staff at the time, declared bitterly: 'The army's strongest division is in ruins. Another "too late"? The division would certainly have escaped in battle-worthy condition if the order to retreat so urgently requested by the armoured army's commander-in-chief had been given 24 hours earlier.'<sup>90</sup> General (ret.) von Tippelkirch described the episode as 'an example of an unbroken chain of sacrifices and losses caused by Hitler's orders to hold out'.<sup>91</sup>

Without 87th Infantry Division's heavy weaponry it appeared impossible to hold at least the southern section of the salient. On 24 December Gorodok too was lost. The fighting now shifted to the centre of Third Armoured Army, where the Soviet attackers were attempting to advance on Vitebsk from the east. In the end, however, they abandoned their offensive after suffering massive losses. On 17 January 1944 the first winter battle of Vitebsk came to an end. The success of the defence repeatedly hung by a thread, so impressive was the superiority of an enemy which sent its troops into action with ruthless disregard for losses. Four Soviet armies with 33 rifle divisions and 17 armoured units had attacked to the east of Vitebsk, while to the north and north-west of the city two armies with 23 rifle divisions and 11 armoured units had been deployed to encircle the German forces.<sup>92</sup> Third Armoured Army's war diary records: 'The intensity of the fighting is shown above all by the figure of 1,205 tanks shot down in the course of the battle (1,114 totally destroyed).'<sup>93</sup>

Vitebsk, on the River Dvina, was considered the gateway to the Baltic, and the Red Army therefore mustered all its available forces to retake the city.<sup>94</sup> Early February saw the beginning of the second winter battle of Vitebsk (3 to 17 February 1944), known in Soviet historiography as the Vitebsk Offensive Operation (3 February to 13 March). The city was encircled from three sides and attacked concentrically by six armies. According to statements by Soviet prisoners of war, a 'second Stalingrad' was planned.<sup>95</sup> Third Armoured Army faced an assault by two Soviet army fronts, whose mass threatened to overwhelm it. 1st Baltic Front, supported by 3rd Air Army, deployed 4th Shock Army, 11th Guards Army, and 43rd Army, while West Front attacked from the south-east at the same time with 5th, 33rd, and 39th Armies, and interventions by the aircraft of 1st Air Army. In the initial phase of the offensive the attacking forces already numbered 436,180 men.<sup>96</sup> They attacked Vitebsk not frontally but on both flanks, to cut the city off. Meanwhile, the German front formed an arc 70 kilometres long round the Vitebsk 'fortress'. The salient resembled a head which the attackers were attempting to sever

<sup>96</sup> Gurkin, 'Liudskie poteri Sovetskikh Vooruzhennykh Sil', Table 1, No. 47.

from the trunk. As in the final phase of the first winter battle of Vitebsk, the Soviet attacks were concentrated on two dents in the front to the north-west and south-east of the city. The operational objective was to break through concentrically at the narrowest place on the base of the salient so that the two pincer arms joined up west of Vitebsk in the rear of the German defending forces. The war diaries accordingly refer to the 'double battle of Vitebsk', since the fighting was focused on those two points.<sup>97</sup> North-west of the city, on Lake Saronovskoye, the mass of 1st Baltic Front attacked at the narrowest place, while three West Front armies attacked from the south-east on the opposite side, on the Luchesa river.

If one looks only at the marks on the situation maps, the fighting seems rather undramatic, since the attackers were aiming at only minimal territorial gains. In truth, however, what took place on those two narrow sections of the front in the space of a few days was a bloodbath. The Soviet units stormed the German positions repeatedly in dense waves. As reported in Army Group Centre's war diary, 'the ratio of our own to the enemy's infantry combat strength was 1:8 overall, and as much as 1:16 at the points of concentration'.<sup>98</sup> The enemy tried to force a breakthrough using 'a concentration of artillery never seen before'.<sup>99</sup> The front was stretched to breaking-point. Time and again collapse seemed imminent. But the Soviet losses grew to such an extent that, fortunately for the already beaten defenders, the attacks were broken off each time at the height of the crisis. After almost two weeks the Soviet onslaught appeared to have exhausted itself. On the German side, hope was spreading that the murderous conflict was at an end. The two Soviet fronts gathered their forces for one more massive blow, but the Germans were ready for them. They had learned from an intercepted radio message that the enemy was about to throw everything into the balance in one last attempt to force a breakthrough. On 16 February the defenders had to beat off fierce attacks, but managed to hold the front. The next day the second winter battle of Vitebsk was finally at an end.<sup>100</sup> Although fighting broke out again here and there in the following weeks, it was only of minor tactical importance.

Third Armoured Army's losses in this battle were relatively high, given its low infantry combat strength of 19,150 men.<sup>101</sup> They totalled 2,128 dead, 1,071 missing, and 8,489 wounded.<sup>102</sup> But, as usual, the Red Army's losses were many times greater. In the 'Vitebsk Offensive Operation', according to official Soviet figures, the six attacking armies lost a total of 135,012 men, of whom 27,639 dead or missing.<sup>103</sup> It was noticeable in the second winter battle of Vitebsk that the Red Army deployed its numerically superior armour with unusual reserve. The German

<sup>97</sup> e.g. KTB H.Gr. Mitte, 4 Dec. 1944, 322, BA-MA RH 19-II/193.

<sup>98</sup> Ibid., 11 Feb. 1944, 367, confirmed by Heidkämper, *Vitebsk*, 121. According to those sources, the three German corps had an infantry combat strength of 19,150 men, while that of the six attacking Soviet armies was estimated at 152,500.

<sup>101</sup> Heidkämper, *Vitebsk*, 121.

<sup>102</sup> See casualty tables of the OKH medical officer, 1 to 20 Feb. 1944, BA-MA RW 6/559.

<sup>103</sup> Gurkin, 'Liudskie poteri Sovetskikh Vooruzhennykh Sil', Table 1, No. 47. The Soviet figures refer to the period from 3 Feb. to 13 Mar., although the Vitebsk offensive actually ended on 17 Feb., after which there was only insignificant sporadic fighting.

staff officers attributed this to the fact that in the previous winter battle, as already mentioned, the enemy had lost over 1,000 fighting vehicles. Nevertheless, according to German figures, 332 enemy tanks were destroyed in the second winter battle and a further 31 immobilized.<sup>104</sup> Moreover, the Germans noted with astonishment that throughout the months of fighting the enemy never once combined its far superior armoured units operationally to achieve a breakthrough. Instead, as reported in an analysis of the Soviet offensive tactics, ‘The enemy did not deploy compact armoured formations with more than 50 tanks. In general, tanks were used in support of infantry in groups of 15 to 25.’<sup>105</sup> That must have been astonishing in view of the great progress in operational deployment which Soviet armour had made during the battle in the Kursk salient. Finally, there remains the question of how the German defenders were able to withstand such vastly superior forces. One of the secrets of their success was the flexibility of the operations staffs, who constantly shifted their few troops to and fro so as to oppose each Soviet attack with a defensive concentration at the decisive point. Lt.-Gen. (ret.) Heidkämper commented in retrospect:

Moltke’s aphorism that strategy is a system of expedients is uncommonly applicable to our conduct at that time. Each night troops were moved around in columns of trucks. Battalions which yesterday were still engaged in heavy fighting to the north or north-east of Vitebsk, were today already in action east of the city. Others which today had repelled all enemy attacks on a sector of the south-eastern front would tonight be transported to another part of the front where new attacks were expected tomorrow. Only constant recourse to expedients was of any use.<sup>106</sup>

On the German side, the successful defence against a far superior enemy was celebrated as a great victory. Col.-Gen. Reinhardt, as commander-in-chief of Third Armoured Army, was awarded the Knight’s Cross of the Iron Cross with Oak Leaves and Swords. But both he and his troops knew it had been a shaky victory, in which the outcome had repeatedly hung on a knife edge. The disastrous consequence was that Hitler drew the wrong conclusions from the successful defence at Vitebsk. It supposedly confirmed the rightness of his strategy of holding out. Although at the end of February he authorized withdrawal to a more favourable defensive position around Vitebsk which shortened the front by 25 kilometres, he made clear at the same time how important the city was to him as an object of prestige. Vitebsk, he stressed, was ‘the last major Russian city on the eastern front which is still held near the front line, and it must therefore continue to be held in the future’.<sup>107</sup> Finally, he declared Vitebsk a ‘stronghold’ and appointed Gen. Friedrich Gollwitzer as its commanding officer. Heidkämper describes the reaction: ‘We are outraged by this demand. Prestige is taking precedence over reason! It is demanded [...] that, in the event that Vitebsk is enclosed, three

<sup>104</sup> KTB 3. Panzerarmee, 17 Feb. 1944, fo. 125, BA-MA RH 21-3/284.

<sup>106</sup> Heidkämper, *Vitebsk*, 82–3.

<sup>107</sup> BA-MA, Study ZA 1/2053, 123.

divisions of the armoured army are to be left enclosed in the city.<sup>108</sup> In retrospect it can be seen that the successful defence in the winter battles of Vitebsk contained the seed of defeat in the following summer, when the Red Army managed to surround Vitebsk and the defenders had no chance to escape the trap. That was the beginning of the end for Army Group Centre.

### (b) Fourth Army in the ‘Highway Battles’ near Orsha

Anyone seeking an example of senseless operational command, combining incompetent leadership with ruthless mass deployment of human resources, need look no further than the battles which raged in the area of Orsha in the winter of 1943–4. The Soviet West Front attacked with overwhelming superiority, mainly along the Moscow–Minsk highway. Time and again, the same units attacked the same places on the German front in exactly the same manner. By the beginning of April, West Front had lost more than half a million dead or wounded, and achieved almost nothing.<sup>109</sup> In the first 52 days West Front’s seven armies already lost 104,420 men in combat against Germany’s Fourth Army.<sup>110</sup> This was a saga that ought to have fascinated military historians. Official Soviet historiography, however, ignored these battles—not although, but precisely because an immeasurable tragedy had taken place.<sup>111</sup>

By the beginning of October 1943 Fourth Army had withdrawn from the area of Smolensk to the Panther Line, although its left wing at first remained in a forward staggered position to preserve the link with Third Armoured Army, which was deployed to the north near Vitebsk. The last sections of Fourth Army took up position on the Panther Line only on 10 October.<sup>112</sup> The new front sector was 120 kilometres wide and was covered by three army corps with a total of 11 divisions.<sup>113</sup> XII Army Corps was deployed on the southern wing near Chausy, at the interface with Ninth Army, but the main point of concentration of the defence was on the northern wing, in the area of Orsha, where XXVII Army Corps was positioned. Through this section ran the Moscow–Minsk highway, which was the main axis of the Red Army offensive now beginning. The German divisions were in poor shape. They were short of weapons and equipment, and their personnel strength was scarcely greater than that of regiments.<sup>114</sup> While the actual strength of Fourth Army (as at 1 November 1943) was 193,510, including 14,231 paramilitary auxiliaries,<sup>115</sup> not all of them belonged to combat units at the front. The infantry, above all, had suffered enormous losses, for which hardly any replacements had

<sup>108</sup> Heidkämper, *Vitebsk*, 124–5.

<sup>109</sup> Gareyev, ‘Neudakhi na zapadnom napravlenii’, 11. The mass of West Front was deployed against the German Fourth Army, while the units on the right wing were also temporarily engaged in attacks on Third Armoured Army near Vitebsk.

<sup>110</sup> Gurkin, ‘Liudskie poteri Sovetskikh Vooruzhennykh Sil’, Table 1, No. 41.

<sup>111</sup> In the post-Communist era, Gareyev was the first to broach the subject.

<sup>112</sup> KTB 4. Armee, 10 Oct. 1943, BA-MA RH 20-4/501.

<sup>113</sup> BA-MA, Study ZA 1/1220, 64. <sup>114</sup> Ibid.

<sup>115</sup> ‘Iststärke des Feldheeres—Stand 1.11.1943’, BA-MA RH 20-4/506.

arrived. Fourth Army did not have a single armoured division, and on 10 October it possessed only nine operational tanks and 71 assault guns.<sup>116</sup> Facing it, West Front aligned seven armies, supported by 1st Air Army. Its total strength was given as only 310,900 men,<sup>117</sup> which is surprising since, according to a later publication, West Front lost 530,537 dead and wounded in the ensuing attacks.<sup>118</sup> This illustrates once again the problems with Soviet strength statistics, which usually refer only to the number of men deployed in the first body of troops on the first day of a given operation, and take no account of the huge reserves.

In the space of half a year West Front launched eight offensives against Fourth Army. Five of them, the ‘highway battles’, took place on the northern wing near Orsha, and two others on the southern wing, while the middle section was subjected to only one major attack, the last of all.

#### *The Defensive Battle of Lenino–Bayevo (12 to 18 October 1943)*

During its withdrawal to the Panther Line, Fourth Army was pursued by units of West Front and attacked at Lenino, where the first defensive battle took place. The Soviet side deployed 19 rifle divisions, supported by an armoured corps, a cavalry corps, twelve artillery brigades, 20 artillery regiments from the high command’s reserve, three independent armoured brigades, and six tank and self-propelled-gun regiments.<sup>119</sup> This mass of forces was directed against the combat sectors of two divisions of XXXIX Armoured Corps, which was thereupon reinforced with all available reserves. The German defenders benefited from the fact that the enemy had advanced in great haste, and were able to repel the attack immediately despite the opposing forces’ enormous superiority. The Soviet forces had advanced 1,500 metres at most, but had suffered 23,336 casualties, including 5,858 dead.<sup>120</sup>

#### *The First Highway Battle (21 to 26 October 1943)*

Only a few days later West Front opened a new offensive in the sector which was from now on to be the unambiguous point of concentration of its attack, that is, both sides of the Moscow–Minsk highway. The target of its constantly repeated thrusts was Orsha, in the combat sector of XXVII Army Corps, one of the most important traffic nodes in European Russia. The town was at the crossroads of the two major north–south and east–west highways, running from Leningrad to Kiev and from Moscow to Minsk. In addition, Orsha controlled the southern access to

<sup>116</sup> AOK 4, Ia No. T 283/43 geh., daily report of 10 Oct. 1943, BA-MA RH 20-4/502.

<sup>118</sup> Gareyev, ‘Neudakhi na zapadnom napravlenii’, 11. The reference period is 12 Oct. 1943 to 29 Mar. 1944. Gareyev gives his source as Archive of the Central Committee of the CPSUS, d. 2.1, 87–116.

<sup>119</sup> ‘Doklad Komissii GKO’ (report subheaded ‘Unsatisfactory combat performance by West Front in the past half-year’), 442.

<sup>120</sup> Ibid. 441. For the German perspective, see BA-MA, Study ZA 1/1220, 72–3; Study ZA 1/2053, 80.

the ‘Smolensk gate’, the land bridge between the Dnieper and the Dvina through which marches on and from Moscow had always passed. The Red Army massed large concentrations of artillery, as many as 260 cannon per kilometre of front,<sup>121</sup> to smash the German defences. The amount of ammunition used was ‘almost inconceivable in the conditions of the eastern theatre of war and reminiscent of the large-scale defensive battles on the western front in the First World War’.<sup>122</sup> It also impressed itself on the commander-in-chief of Fourth Army, Col.-Gen. Gotthard Heinrici, who had been a front-line officer in the previous war. Fourth Army’s war diary records that ‘the C-in-C was at the front for hours today and had the impression of a continuous artillery barrage no less heavy than at Verdun. The aerial photographs showed battery next to battery’.<sup>123</sup> Heinrici now adopted the tactic that had proved itself in the First World War and enabled him, to the surprise of Marshal Zhukov, to stop the Soviet steamroller one last time just before Berlin. Realizing that the foremost positions could no longer be held in the face of the enemy’s destructive artillery bombardment, he adopted the ‘major battle procedure’. For that purpose he had established a ‘major battle line’, termed the ‘Panther West Line’, a few kilometres to the rear. The units under attack withdrew to the Panther West Line at the crucial moment, so that the enemy’s heavy artillery barrage fell on empty ground. When the Soviet infantry divisions advanced against what they believed to be already beaten German defenders, they ran up against the new defensive positions. Once again, the lack of mobility of mass concentrations was decisive, since the densely concentrated Soviet artillery units were unable to change position fast enough. The Red Army’s attacking formations had advanced beyond the range of their own artillery and found themselves instead within optimum range of the German guns. As a result, the defenders were able to repel the attack by the superior enemy forces and inflict huge losses.

#### *The Second Highway Battle (29 October 1943)*

This battle, which began immediately afterwards, was the shortest of all. It failed from the outset and lasted only one day. According to Fourth Army’s war diary, on that day a ‘major attack on both sides of the highway, preceded by an enormous artillery barrage, was repelled in its entirety’.<sup>124</sup> The main thrust, supported by ‘unbelievably heavy artillery’, was accompanied by diversionary attacks along almost all the remaining army front.<sup>125</sup> The Soviet accounts make no mention of this debacle. The previous offensive had failed because the artillery was unable to catch up, but by now the cannon had been repositioned. Clearly, however, the infantry units had suffered such great losses in the meantime that they were no longer capable of a powerful advance. The German officers also wondered why the major Soviet offensives followed so closely upon each other, allowing the attackers insufficient time to prepare for the next action.

<sup>121</sup> ‘Doklad Komissii GKO’, 442.

<sup>122</sup> BA-MA, Study ZA 1/1220, 74.

<sup>124</sup> Ibid., 29 Oct. 1943.

<sup>125</sup> BA-MA, Study ZA 1/1220, 76.

### *The Third Highway Battle (1 to 19 November 1943)*

After receiving substantial reinforcements, the units of West Front again attacked in a closely confined area with a total of 32 rifle divisions, supported by 410 tanks and powerful artillery.<sup>126</sup> Although Fourth Army, which had been obliged to transfer several units to other sectors of the front, was in an increasingly critical situation,<sup>127</sup> the Soviet offensive failed once again, owing to inefficient combined arms action. With the Soviet operations staffs unable to bring their human and material superiority to bear, the combat operations were uncoordinated. The outcome was a gross disproportion between effort and effect. In less than a week the Soviet forces lost 38,756 men, including 9,167 dead, and managed to advance 1 to 4 kilometres at most.<sup>128</sup> Once again, the real objective—a breakthrough—eluded them.

### *The Fourth Highway Battle (30 November to 2 December 1943)*

The next battle was a repeat of the previous one, except that the outcome was even more negative for the Soviet side. The attacks were carried out mechanically, always according to the same scenario, with predictable results. The point of concentration was also on the same section where several frontal attempts at a breakthrough had already failed. The German defenders were therefore able to concentrate their forces on that narrow section in the area of XXVII Army Corps. Reinforcement of the left wing, however, involved a high risk for all other sections of the army front. Had the Soviet point of concentration been shifted further south to the area of XXXIX Armoured Corps, it would have inevitably led to a serious crisis, since that formation had been obliged to give up so many troops that its positions could often be covered only by stand-by units: ‘There were no more than 20 men per kilometre. Even a light attack could have broken through the front. Thank God it never came.’<sup>129</sup> Although the Soviet thrusts were so stereotypical in their method, they were carried out ‘with the enormous toughness for which the enemy is known and without regard for losses’.<sup>130</sup> One particularity was the incredible brutality with which the troops of the penal battalions, each containing up to 1,200 men, were driven into the German fire. On 1 December a captured Soviet captain from a penal battalion reported that the previous day the first wave had suffered 90 per cent losses and the second wave 60 per cent.<sup>131</sup> ‘When we entered the battlefield, we felt like we were being led to execution,’ said another Soviet prisoner, commenting on those mass attacks.<sup>132</sup> One reason for the ruthless use of manpower may lie in a

<sup>126</sup> ‘Doklad Komissii GKO’, 442.

directive from Stalin, who allegedly ordered that on 5 December, ‘Soviet Constitution Day’, he was to be informed that Orsha had been taken.<sup>133</sup>

An interim balance shows that in the first phase of the battles alone, from 12 October to 2 December 1943, West Front lost a total of 104,421 men, of whom 24,553 dead or missing.<sup>134</sup> For the German Fourth Army, the corresponding figures cover the period 21 October to 10 December: its losses amounted to 17,662 men, of whom 5,628 dead or missing.<sup>135</sup> After the fourth highway battle there was a long pause. Although the Red Army continued to attack, at Christmas for example, the assaults had only tactical significance. Fourth Army HQ, which had been obliged to give up even more units, awaited a future offensive with great foreboding. So far the Soviet large-scale attacks had failed, mainly because the enemy had never taken the time to prepare them carefully. In February, however, there were more and more signs that a new, long-planned offensive was imminent.

### *The Major Offensive against the Southern Wing (22 to 25 February 1944)*

Meanwhile a threatening situation had arisen on the right wing, where the neighbouring Ninth Army was suffering heavy attacks by Belorussian Front. For that reason its former northern wing was assigned to Fourth Army. In February Belorussian Front nevertheless managed to break through Ninth Army’s positions to the north of Rogachev and establish a bridgehead on the western bank of the Dnieper. The aim of the operation was to push forward in the direction of Bobruisk. From 22 February the offensive was backed up by a simultaneous large-scale attack by West Front against the former southern wing of Fourth Army. This action, however, ended in failure. A secret ‘Report of 11 April 1944 to Comrade Stalin by the Commission of the State Defence Committee’ contains the following assessment: “The partial operation of 22 to 25 February in the direction of Orsha achieved nothing at all. In the course of the operation, parts of 52nd Fortified Area<sup>136</sup> were themselves surrounded. The original situation was restored at the cost of great losses.”<sup>137</sup>

### *The Fifth Highway Battle (5 to 9 March 1944)*

Immediately afterwards came a new highway battle, which was problematic in forcing Fourth Army to shift the point of concentration rapidly from the right to the left wing. This time the attacks were carried out with greater force. Furthermore, the main thrust was accompanied by several feints, to induce the defenders to

<sup>133</sup> ‘Gefangenenernehmung des Schützen Viktor Trifonow am 1.12.1943 durch XXVII. AK, Ic’, 3, BA-MA RH 20-4/517.

<sup>136</sup> In the Red Army, a ‘fortified area’ was a fairly immobile formation especially strong in artillery (mostly of divisional strength).

<sup>137</sup> ‘Doklad Komissii GKO’, 441–2.

disperse their forces. Despite this new finesse, the offensive failed once again. That concluded the fifth and last highway battle between Smolensk and Orsha.

### *The Defensive Battle on the Southern Flank (25 to 31 March 1944)*

At the end of the winter battles Fourth Army had to shift the point of concentration once again, this time back to the right wing. Following the withdrawal by Ninth Army, the front line on the far side of the Dnieper was bowed out like a balcony to the east, so that the southern flank was under threat. At the end of March, units of West Front and Belorussian Front attempted a breakthrough in that sector. The attacks took place between Chausy and the Dnieper, with the aim of dislodging Fourth Army and forcing it back in a north-westerly direction towards Mogilev. However, this last offensive also failed.

For the Soviet West Front, the ratio of losses was disastrous. From 12 October 1943 to the end of March 1944 it had conducted eleven operations against the German Fourth Army, and occasionally against Third Armoured Army. In not one of those operations did it achieve any noteworthy success, while its losses amounted to 530,537 dead or wounded.<sup>138</sup> In contrast, the Fourth Army's losses totalled only 10,566 dead or missing, and 24,490 wounded.<sup>139</sup>

### *The Balance-Sheet from the German Perspective*

In the space of half a year Fourth Army had fought eight successful defensive battles. It was the only German army on the eastern front to have largely maintained its positions. It had even been able to hold a largish bridgehead east of the Dnieper. In the following weeks there was a long pause in the fighting, which gave the operational staffs enough time to complete occurrence reports. Clearly, success was mainly due to three factors:

*Early reconnaissance:* Faced with forces that were many times superior, it was absolutely necessary to ascertain the enemy's intentions at an early stage. Not only the place, but also the likely time of the enemy attack had to be known, so as to be able to withdraw at the right moment to a prepared position in the rear and concentrate all the defensive strength there. In general, the combination of all reconnaissance methods worked very well, with radio reconnaissance playing a decisive role. In any case, the Soviet enemy made the task of the German reconnaissance and counter-intelligence departments very easy by its ponderous, stereotypical conduct of operations.

<sup>138</sup> Gareyev, 'Neudakhi na zapadnom napravlenii', 11. Gareyev gives his source as Archive of the Central Committee of the CPSU, d. 2.1, 87–116. This figure for losses is thus considerably higher than the 383,870 given in the 'Report of the Commission of the State Defence Committee' of 11 April 1944; see 'Doklad Komissii GKO', 442.

<sup>139</sup> See the meticulous ten-day reviews by the OKH medical officer over the period 21 Oct. 1943 to 31 Mar. 1944, BA-MA RW 6/558 and 559.

*Defensive points of concentration:* The point of concentration of the enemy attack had to be met by an opposing concentration of defence forces. To that end, the front lines were manned extremely thinly and forces were withdrawn from them as reserves to be used to reinforce the sector under attack. Above all, it was there that the mass of artillery and anti-tank systems were positioned. This defensive concentration nevertheless entailed a considerable risk, since large stretches of the rest of the front could be guarded only symbolically.

*Staggered defensive positions:* Col.-Gen. Heinrici, an expert in ‘mobile defence’, favoured the ‘major battle procedure’ already developed in the First World War. The defenders’ surprise withdrawal to a prepared rear position saved them from destruction by the massive Soviet artillery barrage and prevented a breakthrough. As one analysis rightly observes: ‘The existence of further defensive positions in their rear gave both commanders and troops a feeling of security. What Hitler feared, and the reason why he forbade even the construction of rearward defence positions—namely that the troops would always be looking over their shoulders—never happened. [...] The army therefore constructed rearward defence positions partly against explicit orders from the top leadership and without its knowledge.’<sup>140</sup>

The assessment of the Soviet rank and file is also interesting: ‘The Russians showed themselves to be exceptionally weather-resistant. Snow, rain, cold, and ice did not bother them. Their winter clothing could be considered excellent. [...] All in all, the Russians were adversaries deserving full respect for their toughness, courage, and endurance.’<sup>141</sup> The assessment of the Soviet staffs, however, was less flattering. The lower leadership was deemed ‘rather ponderous in many respects’. The judgement regarding the upper leadership was even more damning: ‘During the highway battles the enemy mostly attacked time and again at the same, almost traditional places, as if trying once again to force a breakthrough there. The cost was a secondary consideration, given the huge reserve of manpower at its disposal.’ And again: ‘In wave after wave, the seemingly inexhaustible mass of men rose from the trenches, pushed forwards, slid back, and then came on again.’<sup>142</sup>

### *The Balance-Sheet from the Soviet Perspective*

West Front’s failed offensives in the winter half-year of 1943/4 were hardly mentioned in official Soviet historiography. A long-unpublished key document, kept secret until now, namely the ‘Report of 11 April 1944 to Comrade Stalin by the Commission of the State Defence Committee’,<sup>143</sup> is therefore all the more interesting. The commission was headed by a member of the State Defence Committee, Georgii Maksimilianovich Malenkov (later president of the Council of Ministers), and consisted of several generals, such as Colonel-Generals Aleksandr Sergeevich Shcherbakov and Sergei Matveyevich Shtemenko. The report in

<sup>140</sup> BA-MA, Study ZA 1/1220, 87.

<sup>141</sup> Ibid. 90–1.

<sup>142</sup> Ibid. 89.

<sup>143</sup> ‘Doklad Komissii GKO’.

question contains the following judgement of the eleven offensives carried out from 12 October 1943 to the end of March 1944: ‘All these operations ended without success, and the army front failed to fulfil the tasks assigned to it by the Stavka. In none of the listed operations was the enemy defence broken through, not even in tactical depth; at best, the operation ended in an insignificant penetration of the enemy defences whereby our troops incurred great losses.’<sup>144</sup> Nor did the members of the commission accept the excuse that West Front had received too little material support. On the contrary, it had received more ammunition than any other army front.<sup>145</sup> Its failure was due ‘solely to unsatisfactory leadership by the front’s HQ. In all the operations, West Front was considerably superior to the enemy in personnel and material, which gave every reason to hope for victory’.<sup>146</sup>

As a result of the commission’s report to Stalin, West Front’s commander-in-chief, General Vasily Danilovich Sokolovsky,<sup>147</sup> and several other senior officers were relieved of their posts. Strangely enough, the chief of staff, Lt.-Gen. Aleksandr Petrovich Pokrovsky, came through entirely unscathed, although he is described in the report as an officer ‘unsuited’ to his function ‘who fights shy of responsibility and is unable to take decisions independently, even on trivial matters’.<sup>148</sup> His staff seemed to the members of the commission ‘actually a kind of statistics office, which merely collects information about the situation, and is even late in doing that’.<sup>149</sup> With regard to the use of armour, the report criticized its repeatedly premature deployment against defensive positions that were still intact. As a result of those useless attempts to force a frontal breakthrough with tanks alone, II Armoured Corps was finally left with only two fighting vehicles.<sup>150</sup> Most surprising of all is how poorly the collection of enemy intelligence was carried out. After all, the Soviet intelligence service, the Razvedka, has a legendary reputation with western historians. According to the commission’s report, ‘West Front’s intelligence gathering is wholly unsatisfactory. The information is frequently false’.<sup>151</sup> From 1 January to 14 February, for example, 174th, 192nd, and 247th Rifle Divisions sent shock troops on hundreds of missions with the aim of taking prisoners for interrogation. They resulted in the capture of not a single German soldier. Instead, losses were incurred on the Soviet side, for example when shock troops stumbled into minefields of which they had not been informed. The report also criticized the performance of secret agents infiltrated by West Front, especially as some of them already drew attention to themselves by their clothing: ‘There are particularly serious defects in regard to the collection of intelligence by agents. West Front entrusts this task to dubious individuals, and it is carried out in a primitive and stereotypical fashion’.<sup>152</sup>

According to the Russian military historian Makhmut Gareyev, however, the basic mistake was made by the Stavka itself. It underestimated the defensive strength

<sup>144</sup> Ibid. 441.      <sup>145</sup> Ibid. 442.      <sup>146</sup> Ibid.

<sup>147</sup> After the war Sokolovsky, promoted to the rank of marshal of the Soviet Union, was appointed commander-in-chief of Soviet troops in Germany and head of Soviet military administration in that country.

<sup>148</sup> ‘Doklad Komissii GKO’, 447.

<sup>149</sup> Ibid.

<sup>150</sup> Ibid. 446–7.

<sup>151</sup> Ibid. 447.

<sup>152</sup> Ibid. 448.

of Army Group Centre and held the enemy to be so weakened in the central direction (meaning Fourth Army) as to be no longer capable of withstanding a Soviet offensive. Instead of directing the operations of Baltic Front, West Front, and Belorussian Front at a joint strategic objective, it had each of those fronts carry out independent offensives.<sup>153</sup> It assigned West Front eleven offensive operations in less than six months, ‘which meant an average of 15 days for each operation, whereas experience shows that at least 30 to 40 days are needed for the preparation of a single major offensive operation’. Gareyev concludes that ‘if, instead of the eleven operations, two or three well-organized offensives had been carried out, the outcome might have been more positive’.<sup>154</sup>

Nevertheless, Gareyev’s criticism is also directed at West Front’s HQ: ‘Strangely enough, they had not even planned one combined operation by the whole West Front; all the operations were conducted by individual armies in isolation.’<sup>155</sup> Under the service regulations in force, as already explained, Soviet officers could not be held responsible for the consequences of an action if they adhered strictly to an order from a superior. Only those who dared to deviate from orders were punished.<sup>156</sup> In this case, such responsibility-avoidance behaviour was displayed even at the very top, by West Front’s commander-in-chief, Gen. Sokolovsky, and his chief of staff, Lt.-Gen. Pokrovsky. Both of them belonged to the ‘old school’ of army officers, who confined themselves to executing prior orders. Eschewing all personal initiative, they launched attack after attack in the same direction, without any element of surprise. The enormous losses of command personnel are therefore by no means surprising. In the space of half a year West Front lost (dead or wounded) 12 divisional commanders or their deputies/heads of staff, 33 regimental commanders or their deputies, and 174 battalion commanders. And the rank and file also paid a heavy price.<sup>157</sup>

There was, of course, another reason for the excessive losses (not only by West Front). Red Army had never placed a high premium on the qualitative training of its troops, since it had almost inexhaustible quantities at its disposal. But from the summer of 1943 the level of training in many units declined to a frightening degree. To put it cynically, many soldiers were of use only as ‘cannon fodder’ and were exploited accordingly. The German intelligence services established that they were frequently young men from the reconquered territories who were sent straight into combat units with insufficient preparation.<sup>158</sup> This is confirmed by Gareyev from his own experience: ‘I recall that from January to March 1944 our brigade several times received reinforcements of 100 to 200 men from reserve regiments, who were sent directly onto the battlefield. Often the unit commanders did not know their men, and vice versa.’<sup>159</sup> The inestimable importance of basic training was seen the following summer, after the Soviet units had used the break in hostilities

since the spring—sometimes as long as several months—to prepare for the new operation (BAGRATION). The German defenders, who were again expecting frenzied, uncoordinated attacks by hordes of Red Army soldiers, were in for a surprise.

### (c) Ninth Army in the Defensive Battles to the East of Bobruisk

Of all four armies of Army Group Centre, it was Ninth Army which had fought the most battles in the summer of 1943. During Operation CITADEL it attacked from the north in the direction of Kursk. After that, it had to defend against the Soviet counter-offensive at Orel, and withdrew to the Hagen Line. By 2 October heavy defensive engagements in the Bryansk area were followed by the major withdrawal movement to the Panther Line. For a while Ninth Army was away from the main course of events, while heavy attacks were directed against the neighbouring Second Army. It was, nevertheless, affected when Second Army was forced back and its own right wing came under threat. As the gap between Army Group South and Second Army widened in the months following, the latter's southern flank extended increasingly to the west. As a result, Ninth Army had to take over more and more sectors from Second Army, so that its border on the right also shifted substantially westwards. There is thus a close connection between the defensive operations of the two major formations.

The war diary records nothing spectacular for a while, with the exception of 5 November, when Col.-Gen. Walter Model was wholly unexpectedly removed from his post as commander-in-chief of Ninth Army.<sup>160</sup> For almost three months, until 31 January 1944, he was not given another command. His dismissal met with astonishment, since Model was known as Hitler's 'favourite general'. The Führer, however, proved very resentful. He was apparently unable to forgive Model for initiating withdrawal to the Hagen Line on his own authority weeks before at Orel.<sup>161</sup> Although Model had fallen temporarily into disfavour, his open disobedience had saved numerous units of Ninth Army. He was succeeded as commander-in-chief of Ninth Army by Gen. Josef Harpe. Harpe was reputed to be a capable commander, but he certainly did not have the exceptional leadership qualities of his predecessor.

The weaknesses caused by the constant transfer of units to other armies weighed more heavily in the balance. Less than a week after withdrawal to the Panther Line, Ninth Army was obliged to give up the following forces: two infantry divisions, one armoured division, 25 per cent of its artillery battalions, 50 per cent of its rocket-launcher regiments, 40 per cent of its assault guns, and 50 per cent of its sapper and construction units.<sup>162</sup> Its three army corps were left without a single armoured division. On 8 October 1943 its remaining complement of operational fighting vehicles consisted of 16 tanks, 41 assault guns, and 33 anti-tank cannon on self-propelling carriages.<sup>163</sup> Yet the reduction of personnel and material still continued.

<sup>163</sup> 'Panzer-Abwehrwaffen, Stand 8.10.1943, 18.00 Uhr', BA-MA RH 20-9/172.

Hardly a day went by without Ninth Army having further troops withdrawn, so that 'its already overstretched front was further weakened time and again'.<sup>164</sup> In his first briefing with Field Marshal Busch, Gen. Harpe stressed that 'the Army had already taken more bloodletting than it could stand'.<sup>165</sup> At that point in time, Ninth Army's remaining combat strength was 19,360 men.<sup>166</sup>

In the second half of November the situation of its neighbour to the right became even more critical. On 10 November 1943 Belorussian Front launched the Gomel–Rechitsa Offensive Operation, which was at first directed primarily against Second Army's northern wing. On 13 November it achieved a breakthrough south of Rechitsa. The Soviet units then pushed further and further northwards on the west bank of the Dnieper to the Berezina estuary at Gorval. Since Ninth Army's front extended to a bridgehead east of the Dnieper, its commanders viewed developments on the right flank and in the rear with great concern. Second Army failed to close the gap, with the result that XXXV Army Corps, positioned on its northern wing, was split off. The corps withdrew to the east bank of the Dnieper and tried to form a new front line on the ruptured right flank, whereupon Army Group Centre HQ ordered it to be placed under the command of Ninth Army. XXXV Army Corps, in an exposed position in the Gomel salient stretching far to the south, came under a pincer attack by Soviet forces on two sides: from the east at Gomel and from the south-west against the newly established Dnieper front at Rechitsa. But given its overstretched front and depleted units, Ninth Army considered itself unable to provide its neighbour with any support. 'Whoever tries to cover everything, covers nothing' was the sarcastic comment from its HQ.<sup>167</sup> Instead, it called for the immediate evacuation of the Gomel salient—a request that was also put forward by Second Army and the Army Group Centre HQ. Once again, however, Hitler was intractable, which proved to be a serious mistake.

On 22 November an additional Soviet attack began against Ninth Army's northern wing at Propoysk. At the same time, on the southern wing, new Soviet forces pushed forward along the Berezina in a north-westerly direction in the gap between Ninth and Second Army.<sup>168</sup> On 24 November Hitler finally gave permission to evacuate the untenable Gomel salient.<sup>169</sup> Most of the units withdrew to a bridgehead on the Dnieper near Rogachev. However, the situation further north had also become so critical that a partial withdrawal to the Dnieper had to be ordered. That freed up forces for the counter-attack that had long been called for to close the gap between the two armies. This operation, code-named 'NIKOLAUS', was planned as a concentric pincer attack in which Ninth Army would advance southwards along the Berezina from Parichi and Second Army northwards from

Ozarichi.<sup>170</sup> Ninth Army's attack group consisted of 134th and 293rd Infantry Divisions, an SS brigade, and 16th Armoured Division, which was being brought up from Italy. Second Army's attack group was considerably weaker. All it could muster were parts of 4th Armoured Division, a reinforced infantry regiment, and an armoured reconnaissance battalion.<sup>171</sup> Since 16th Armoured Division was late in arriving, Operation NIKOLAUS began only on 20th December. The two pincer arms nevertheless joined up on the following day, closing the gap between the two armies.<sup>172</sup> The second phase of Operation NIKOLAUS was planned as a continuation of the attack to the east, with the aim of regaining as much ground as possible. This action was only moderately successful, however, and it was broken off on 26 December when 16th Armoured Division had to be withdrawn once again and sent urgently to the assistance of Army Group South.

On 8 January 1944 Belorussian Front, led by Gen. Rokossovsky, launched a new offensive aimed at the interface between Second and Ninth Armies. In response, Army Group Centre HQ shifted the boundary between the two armies southwards again to ensure unified operational command, assigning the former northern wing of Second Army at Ozarichi to Ninth Army.<sup>173</sup> The move to the right was completed by attaching Ninth Army's former left wing at Stary Bykhov to Fourth Army, positioned to the north. Renewed attacks against Ninth Army's southern wing finally forced a tactical withdrawal to the north-west on both sides of the Berezina. Right into March, Soviet armies repeatedly tried to break through in the direction of Bobruisk, but without success.

The northern wing also came under enormous pressure on 21 February,<sup>174</sup> when Belorussian Front launched the Rogachev–Zhlobin Offensive Operation, deploying 3rd, 48th, and 50th armies, with support from 16th Air Army. The initial attacking force numbered 232,000 men.<sup>175</sup> Although it succeeded in establishing a bridge-head west of the Dnieper and advancing as far as the Drut river, this time too, as with previous offensives, no operational breakthrough was achieved. Here the decisive factor was the timely withdrawal by the German units to a prepared position in the rear. At the beginning of March the fighting abated, and in the period following further forces, in particular LVI Armoured Corps, were transferred to Second Army, whose right wing stretched increasingly further westwards. At the same time, Second Army gave its eastern wing to Ninth Army,<sup>176</sup> whose positions finally reached as far as the Pripet river west of Petrikov.

<sup>176</sup> BA-MA, Study ZA 1/2053, 64.

To sum up: in the autumn of 1943 Ninth Army engaged in a continuous drift to the south and west. The following spring, as a result, it found itself occupying the front sector previously occupied by Second Army (though slightly further to the west). Second Army, on the other hand, had been constantly obliged to extend its right wing westwards, as it had proved impossible to close the gap with Army Group South. The dynamics and dramatic events of the battle on the ever-lengthening right flank are described in the following chapter.

#### (d) Second Army and Protection of the Open Southern Flank

Of all the army groups on the eastern front, only Army Group Centre still held some of its positions in the winter half-year of 1943/4. In the centre it was even able to hold the Panther Line east of the Dnieper, to which it had withdrawn at the beginning of October. However, by the spring of 1944, when the neighbouring Army Group South had been forced back 400 kilometres to the west, the southern flank was exposed along that length, and Second Army had to be deployed to cover the opening. During withdrawal to the Panther Line, as discussed earlier, a breakdown occurred at the interface with Army Group South. Since Hitler refused permission for early withdrawal behind the Dnieper, Soviet units were able to cross the river at the Pripet estuary near Chernobyl and form a bridgehead. When the boundary of Army Group Centre was shifted to south of Chernobyl on 14 October, Second Army became responsible for this problematic sector too.

In August 1943 Second Army, with four army corps, was the Army Group's strongest major formation. Of its 15 infantry and armoured divisions, however, nine were classified as 'combat groups' or 'remnants' and existed primarily as flags on the situation maps. Second Army's total combat strength on 11 October was only 21,129 men.<sup>177</sup> In LVI Armoured Corps, deployed on the southern flank, four of the five armoured divisions had been merged. Nevertheless, at that point in time Second Army had only 21 tanks and 31 assault guns available.<sup>178</sup> On 20 October Central Front, positioned opposite Second Army, was merged with Bryansk Front and renamed Belorussian Front. It had at its disposal 761,300 men,<sup>179</sup> 7,560 cannon and grenade launchers, 247 tanks and assault guns, and 526 aircraft.<sup>180</sup> Further reinforcements, mainly tanks, arrived in the course of the fighting. However, danger also threatened from the direction of Chernobyl through the northern wing of Voronezh Front (likewise renamed 1st Ukrainian Front on 20 October). The following section deals first of all with events in Second Army's central and northern sectors.

From 10 to 30 November Belorussian Front, commanded by Gen. Rokossovsky, conducted the Gomel–Rechitsa Offensive Operation,<sup>181</sup> in which it lost 88,206

<sup>177</sup> AOK 2. Armee, 'Gefechtsstärken Stand 11.10.1943, 0.00 Uhr', BA-MA RH 20-2/768 (b).

<sup>181</sup> Rokossovsky, *A Soldier's Duty*, 223 ff.

men, of whom 21,650 dead or missing.<sup>182</sup> Soviet superiority was enormous, especially to the south of Gomel, where the attacking units pushed relatively easily through the weakly manned German front.<sup>183</sup> On 13 November Second Army already had to report that ‘the dam is now broken’.<sup>184</sup> After the Soviet troops had taken Rechitsa, they pushed further along the Berezina in a north-westerly direction. That gave rise to a critical situation for Second Army’s left (northern) flank, which had been split off and was still deployed east of the Dnieper near Gomel, since Hitler categorically refused to allow a withdrawal behind the river. On 15 November General Weiss, the commander-in-chief of Second Army, had already recorded a sober assessment of the situation: ‘If the army remains bound by the existing instructions, it will very shortly be incapable of combat owing to lack of ammunition and supplies, and will face destruction. If a second Stalingrad is demanded of it, it will sacrifice itself. But in my view that is not an operational necessity.’<sup>185</sup> Zeitzler, the OKH chief of staff, shared that view, but that put him at odds with Hitler, who was absolutely determined to keep Gomel for reasons of prestige.<sup>186</sup> Meanwhile XXXV Army Corps, deployed on the northern wing, had been split off, and Army Group Centre HQ accordingly put it under the command of Ninth Army. That solved a difficult problem for Second Army, but the situation continued to escalate. In the end, the connection between the two armies was also broken, and the Soviet wedge pushed deeper and deeper along the Berezina. On 24 November, when Hitler, much too late, gave permission to evacuate the Gomel salient, Ninth Army was at last able to release forces for a concerted attack with Second Army in order to close the gap. As we have seen, this action (Operation NIKOLAUS) resulted on 21 December in the junction of the two pincer arms and re-establishment of the front.<sup>187</sup>

At the beginning of 1944 Belorussian Front launched a new attack, the Kalinkovichi–Mozyr Offensive Operation, which lasted from 8 to 30 January. It deployed 61st and 65th Armies, supported by 16th Air Army, with an initial attacking force of 232,600 men.<sup>188</sup> Against such strength the German defenders had little to muster. In October Second Army had still possessed a nominal 15 divisions, but only six were left.<sup>189</sup> Despite a desperate German defence, the Soviet units broke through the front and pushed forward in depth. Second Army HQ wanted to withdraw and take up a new position along the Ipa, a tributary of the Pripet. But Field Marshal Busch, the commander-in-chief of Army Group

<sup>182</sup> Gurkin, ‘Liudskie poteri Sovetskikh Vooruzhennykh Sil’, Table 1, No. 43.

<sup>183</sup> Kobrin and Abaturov, ‘Sokrushenie vostochnogo vala’, 322.

<sup>184</sup> BA-MA, Study ZA 1/2053, 29.

<sup>186</sup> Tippelskirch, *Geschichte des Zweiten Weltkrieges*, 346.

<sup>187</sup> Operation NIKOLAUS has already been discussed in the previous section concerning Ninth Army. For the Second Army perspective, see the KTB entries for 6 Dec. (order for Operation NIKOLAUS) and 20 to 26 Dec., BA-MA RH 80-2/780. The file entitled ‘Unternehmen Nikolaus’, BA-MA RH 20-2/718, is particularly informative. See also the daily reports of LVI Armoured Corps in BA-MA RH 20-2/796.

<sup>188</sup> Gurkin, ‘Liudskie poteri Sovetskikh Vooruzhennykh Sil’, Table 1, No. 46.

<sup>189</sup> Order of battle of Army Group Centre at 30 Dec. 1943: BA-MA, Study ZA 1/2053, 145.

Centre, was not prepared to risk a conflict with Hitler. On 11 January he instructed his troops to 'keep their chins up; here too the Russians will probably exhaust their forces, as so often in the past. We have to hold out, if necessary till five minutes past midnight.'<sup>190</sup> Instead of approving withdrawal to the Pripet–Ipa position, he relieved Second Army only, by moving the dividing line with Ninth Army further to the south. The following day, however, the situation had escalated so far that the order to withdraw, which Hitler had 'flatly refused' that same morning,<sup>191</sup> had to be given around noon. As a result, the important towns of Kalinkovichi and Mozyr were given up. Although the new position along the Ipa could be held at first, the problem of the open southern flank now made itself felt. Second Army stood to the north of the Pripet, while to the south of the river a large gap had opened up with Army Group South. With the Soviet forces pushing westwards unimpeded through the gap, Second Army had no alternative but to withdraw its defensive positions to the west again—from the Ipa to the Ptich, another tributary of the Pripet. There, in the area east of Petrikov, the front was restabilized and held until the Red Army's subsequent summer offensive in June 1944.

From 8 to 30 January, the two Soviet armies involved in this operation lost 56,157 men, of whom 12,359 dead or missing.<sup>192</sup> On the German side, Second Army's total losses over a comparable period were only 4,040 men, of whom 720 dead or missing.<sup>193</sup> But bare figures alone cannot convey the harshness of those winter battles. Here is what Second Army HQ had to say in a corps-level status report dated 15 January:

The troops are enduring uninterrupted deployment for days on end in extremely fierce large-scale battle conditions and without any shelter. In their present position, with no shelter whatsoever, and with clothing which was drenched from fighting in the marshes and is now frozen stiff, the troops are completely exhausted, physically overstretched, and have reached the limit of their endurance. In their present unfortified position, they are out in the open day and night without any means of warming themselves. Given the very low combat strengths, no replacements are possible. The partially elevated enemy bank makes it impossible to move around during the day, so that food and hot drinks can mostly be distributed only at night, and navvying work on the hard frozen ground can also be done only at night.<sup>194</sup>

The following section describes operations on the southern wing, which were even more dramatic. Second Army actually put up an effective defence, managing to stabilize the front in the face of superior attacking forces until the end of January. At that time the right cornerstone of its defence line was the town of Petrikov on the Pripet river. On the open southern flank, however, the situation became so critical that, in the course of the spring, Second Army's whole sector of the front had to be moved to the west. As a result, Second Army was deployed west of

<sup>190</sup> KTB 2. Armee, 11 Jan. 1944, 68–9, BA-MA RH 20-2/810.

<sup>191</sup> BA-MA, Study ZA 1/2053, 50.

<sup>192</sup> Gurkin, 'Liudskie poteri Sovetskikh Vooruzhennykh Sil', Table 1, No. 46.

<sup>193</sup> Statistics of the OKH medical officer, 11 to 31 Jan. 1944, BA-MA RW 6/559.

<sup>194</sup> KTB 2. Armee, 15 Jan. 1944, 103, BA-MA RH 20-2/810.

Petrikov, so that the town now formed the right cornerstone of the neighbouring Ninth Army. At the same time, Second Army's front line was rotated 90 degrees. Whereas it had originally run north–south along the Dnieper, in the spring it stretched east–west along the Pripet.

The reason for this contortion of the front was that the neighbour on the right, Army Group South, was under even heavier attack than Army Group Centre. Ranged against it were 1st, 2nd, and 3rd Ukrainian Fronts, in which the Red Army's strongest armoured units were concentrated. This was undoubtedly the Soviet point of concentration. Army Group South's forced withdrawal gave rise to a problematic forward staggering of the right wing of Army Group Centre, whose southern flank was increasingly thrown open by the westward-advancing Soviet units. This was already apparent at the beginning of November, when Fourth Armoured Army, deployed next to Second Army, had to abandon the Dnieper Line and withdraw in the direction of Korosten. Chernobyl, Second Army's southern cornerstone, was left hanging in the air and in danger of being circumvented. In response, Army Group Centre HQ wanted to pull the southern wing back, but the OKH chief of staff declared that 'in Hitler's view, Chernobyl can be held. The gap with Army Group South must be taken on board'.<sup>195</sup> But 1st Ukrainian Front, whose northern wing was attacking at the boundary between the two German army groups, was pushing further and further westwards. The date of 17 November was marked by crucial developments. On that day the Soviet 60th Army took Korosten and 13th Army entered Ovruch.<sup>196</sup> Chernobyl also had to be abandoned. The southern flank stretched further and further, soon reaching a length of 120 kilometres.<sup>197</sup>

At the same time, the gap between the two army groups grew to more than 100 kilometres in length. This no-man's-land, in which two Soviet cavalry corps were advancing, could be guarded only by a few security units and, over large stretches, only by reconnaissance patrols. There was a constant danger that Red Army units would penetrate the 'soft belly' of Army Group Centre from the south. Although the vast expanse of the Pripet marshes on Second Army's right flank constituted a barrier, their value as an obstacle was less in winter, when they were partly frozen over. 1st Ski Brigade proved a valuable reinforcement. Its task was to conduct 'offensive defence in the deep flank'.<sup>198</sup> There were also several units of Royal Hungarian VIII Army Corps in the area of the Pripet marshes, but they could not be assigned to protection of the deep flank because of a commitment given to the Hungarian government that, in view of their light weaponry, they would be deployed only against partisan bands and not against Soviet front-line troops.<sup>199</sup> At that time, large parts of the Pripet marshes were considered 'partisan-infested areas', controlled by partisan bands who had withdrawn into the difficultly accessible

terrain. Luckily for the Wehrmacht, however, the various Soviet, Ukrainian, and Polish partisan groups fought not only against the German occupying forces but also among themselves.<sup>200</sup> German troops who were obliged to cross the rough terrain could never consider themselves safe. The constant threat of partisan attacks made the swamps and virgin forests of the Pripet marshes seem even eerier. In places, the transfer of Hungarian units and the German troop shortage left a vacuum which the enemy could penetrate almost unimpeded. On 12 January 1944 Sarny, an important transport node in the area to the south of the Pripet marshes where there were few roads, was also lost.

Fourth Armoured Army, deployed on Army Group South's northern wing, was even less able to react to the threat posed by the open flank. It was under frontal attack by 1st Ukrainian Front, whose right wing conducted the Rovno–Lutsk Offensive Operation, lasting from 27 January to 11 February,<sup>201</sup> which was implemented by 13th and 60th Armies with support from I and VI Guards Cavalry Corps. The operational approach was dangerous, since the thrust was directed not only at the northern wing of Fourth Armoured Army, but also at the gap between the two German army groups. On 2 February both Rovno and Lutsk had to be abandoned. This had consequences for Second Army, whose overstretched front now extended even further to the west.

At the end of February 1944, Second Army's chief of staff, Maj.-Gen. Henning von Tresckow,<sup>202</sup> proposed closing the gap between the two army groups by means of a pincer attack. His plan was supported by Lt.-Gen. Hans Krebs, the chief of staff of Army Group Centre, but Lt.-Gen. Heusinger, the head of the OKH operations department, poured cold water on the idea. For him it was 'pie in the sky', since, for the foreseeable future, the hard-pressed Fourth Armoured Army would be unable to provide units for a joint concentrated attack. In response, von Tresckow proposed withdrawal to a new line of defence in the rear running from Kovel to Pinsk (on the Pripet river), making use, along the River Stokhod, of a position known from the First World War.<sup>203</sup>

The town of Kovel, an important transport node in difficultly accessible marshland, played a major role in all the German and Soviet plans that now followed. Its strategic significance was its location at the south-western end of the 400-kilometre-long Pripet marshes. Anyone who wanted to circumvent that enormous obstacle had to gain possession of Kovel. The Soviet leadership therefore concentrated its operational thinking on that key location. Above all, it sought to exploit the fact that the sector in question lay in the gap between German Army Groups Centre and South. On 26 February 1944 it established a special formation,

<sup>203</sup> BA-MA, Study ZA 1/2053, 61–2 and 152–3.

designated 2nd Belorussian Front, for the purpose of advancing into the breach. The new army front was inserted between 1st Ukrainian Front and the former Belorussian Front (now renamed 1st Belorussian Front). Its newly appointed commander-in-chief, Col.-Gen. Pavel Alekseyevich Kurochkin, was given the task of taking Kovel and then swinging north-west and advancing to the Bug at Brest-Litovsk.<sup>204</sup> Had that offensive succeeded, the Soviet attacking forces would have stood 500 kilometres west of the Dnieper in the rear of Army Group Centre, some of whose units were still engaged in defence to the east of the river. The German eastern front would have been outmanoeuvred at a stroke, and the Red Army could have pushed forward towards Warsaw.

The offensive was launched by 2nd Belorussian Front on 15 March. While 61st Army attacked in the north on the Pripet river, 47th and 70th Armies pushed directly westwards and enclosed Kovel on 19 March. The German defenders, a disparate body of around 4,000 men, held out with difficulty and had to be supplied by air drops.<sup>205</sup> Now the higher German operations staffs were also alarmed. Kovel was considered a cornerstone of the German defences and had to be held at all costs. For several days the Kovel stronghold, commanded by SS Obergruppenführer Gille, who had been flown in on Hitler's orders, became the focal point of the eastern front. The OKH reacted by putting the whole of that important sector of the front in a single pair of hands. On 27 March the boundary of Army Group Centre was moved further to the south, so that the Kovel garrison, including XXXXII Army Corps deployed in the area, was transferred from Fourth Armoured Army to Second Army.<sup>206</sup> Meanwhile LVI Armoured Corps, a valuable reinforcement, was transferred from Ninth Army to the western wing of Second Army. It was followed by more of the army group's divisions, withdrawn from the front covered by the army to which they belonged. Nevertheless, the attempt to relieve the stronghold was unsuccessful at first, owing not only to the German numerical weakness but also to a thaw which made the marshy terrain impractical. On 30 March, however, a combat group from SS Armoured Division 'Viking', consisting of seven Panthers and about 100 infantrymen, pulled off a surprise coup. It forced its way along the railway embankment into the besieged town,<sup>207</sup> where the fighting vehicles were urgently needed to fend off the Soviet tanks. Meanwhile Gen. Friedrich Hossbach, the commanding general of LVI Armoured Corps, had assembled a powerful combat group of 50 tanks from 4th and 5th Armoured Divisions, reinforced by infantry units.<sup>208</sup> On 4 April, taking advantage of a new period of frost, the group advanced on Kovel in a narrow wedge,<sup>209</sup> and on 5 April

it broke through the encirclement.<sup>210</sup> The Soviet high command then called off the offensive, and the same day ordered the disbandment of 2nd Belorussian Front and the assignment of its units to 1st Belorussian Front.<sup>211</sup> The unsuccessful army front commander, Col.-Gen. Kurochkin, was relieved of his command and took over 60th Army, which he led till the end of the war. At the same time, Lt.-Gen. Vitali Sergeyevich Polenov was dismissed as commander-in-chief of 47th Army and given command of a corps.<sup>212</sup> In the following days German units succeeded in widening the narrow corridor, eventually freeing the whole area west of Kovel, and continued the counter-attack in a southerly direction. During these operations Kovel had to be supplied from the air once more because the thaw had resumed and the terrain was again swampy.<sup>213</sup>

The thaw made the Pripet marshes completely impassable for a while, in addition to which the Dnieper had overflowed its banks over several kilometres. As a result, the fighting on Army Group Centre's front gradually died down and finally came to almost a complete standstill for several weeks, right into the summer. In the winter half-year 1943/4 Army Group Centre had managed to assert itself much more forcefully than its neighbours. Its positions still extended across the Dnieper and far to the east. But although the number of its divisions had fallen from 77 to 44 since the previous spring, its front had lengthened continuously, from 700 kilometres at the beginning of December 1943 to 1,100 kilometres in the spring of 1944.<sup>214</sup> Almost 500 kilometres were accounted for by the newly formed southern flank, covered by Second Army.<sup>215</sup> Air Fleet 6, which was deployed in support of Army Group Centre, also proved increasingly incapable of intervening at all focal points on the overstretched front. On 29 February, for example, it possessed only 322 operational front-line aircraft.<sup>216</sup> While Army Group Centre had at least managed to avert the greatest danger, that is, a Soviet breakthrough at Kovel, the successful relief offensive proved a dangerous precedent. It was counter-productive in the long term by reinforcing Hitler's intention to declare important towns 'strongholds' that had to be defended to the last by commanders appointed by him personally. In his view, the battle of Kovel

was an example showing that such ‘strongholds’ could be held despite enemy encirclement. By tying down significant enemy forces, the strategy would inevitably lead to the abandonment of enemy offensives. From then on, the ‘strongholds’ chimera determined Hitler’s rigid defensive thinking—with disastrous consequences, as the Soviet offensive against Army Group Centre the following summer was to show.

### III. Army Group South's Withdrawal Operations in the Ukraine

*Karl-Heinz Frieser*

#### 1. IN THE SHADOW OF KURSK: DEFENCE AGAINST THE TWO SOVIET RELIEF OFFENSIVES ON THE SOUTHERN WING (17 JULY TO 2 AUGUST 1943)

In some accounts of the Second World War, Army Group South is simply said to have formed the southern pincer of the German offensive during the battle of Kursk. This suggests that all of Field Marshal Erich von Manstein's units took part in Operation CITADEL *en bloc*. In fact, in the summer of 1943 Army Group South had to cover a huge section of the front, 950 kilometres long, stretching from the south-western edge of the Kursk salient to the Sea of Azov. Only Fourth Armoured Army and Army Detachment Kempf, which were stationed on the northern wing, took part in the fighting in the Kursk salient. Army Group South's other two armies had to defend more than two-thirds of the front, a good 660 kilometres. First Armoured Army was deployed in the centre, on the middle Donets, while Sixth Army formed the southern wing on the Mius. The southern half of the salient protruded far to the east, not least because of the need to protect the Donets industrial area, since Hitler considered possession of the Donets Basin indispensable for the German war economy.

On 16 July 1943, the day on which Operation CITADEL was finally broken off and the day before the Soviet offensive in the Donets–Mius sector, the situation of Army Group South gave cause for concern. The group's four armies (including Army Detachment Kempf) were faced by four Soviet army fronts, four to five times superior in strength.<sup>1</sup> Furthermore, each of the Soviet fronts had an air army under its command, whereas since 14 July Army Group South had been supported by only 250 operational fighters and ground-attack aircraft.<sup>2</sup> Air Fleet 4 had to release more and more planes to stop the Soviet breakthrough at Orel. Manstein's units consisted of 41 divisions, 13 of which were armoured and armoured infantry divisions. In the summer of 1943 Maj.-Gen. Carl Wagener judged their condition

<sup>1</sup> BA-MA, Study ZA 1/2073, 6.

<sup>2</sup> BA-MA, Study ZA 1/2071, 174–5; Study ZA 1/2341, 80 and 86.

as follows: 'The armoured divisions were still motorized battalions with a few tanks; the infantry divisions were reinforced regiments which had many teams of horses missing and therefore lacked mobility.'<sup>3</sup> The uneven distribution of the units was another problem. In the deployment of massed armour for Operation CITADEL, a concentration of forces unparalleled in the eastern campaign, almost all the mechanized formations were assigned to the northern wing. As a result, First Armoured Army and Sixth Army were left without a single armoured division.<sup>4</sup> Moreover, the sections assigned to the divisions of those armies were critically overstretched. On 17 July the Stavka launched two simultaneous offensives, involving a total of 474,220 men<sup>5</sup> and 1,864 tanks and assault guns,<sup>6</sup> against the two armies.<sup>7</sup>

The Soviet attacks were nevertheless 'spectacularly unsuccessful'.<sup>8</sup> In the Middle Donets, South-West Front launched the Izyum-Barvenkovo Offensive Operation (17 to 27 July 1943) against First Armoured Army. The formations taking part were 1st, 3rd, and 8th Guards Armies, totalling 202,430 men, with 1,109 tanks and assault guns.<sup>9</sup> Air support was provided by 17th Air Army.<sup>10</sup> On 17 July the Soviet forces succeeded in establishing bridgeheads on the far side of the Donets to the north of Slavyansk and near Izyum.<sup>11</sup> However, the German defenders stopped the attack after a few kilometres,<sup>12</sup> and followed up with a counter-attack by 17th Armoured Division and SS Armoured Infantry Division 'Viking', which belonged to the army group reserve (XXIV Armoured Corps) and deployed 84 operational tanks and assault guns.<sup>13</sup> Although they were unable to drive the enemy forces back, they managed to seal them off, thus preventing any danger of an operational breakthrough. The Soviet command broke off the offensive on 27 July, after South-West Front had lost 38,690 men, of whom 10,310 dead or missing, in the space of ten days.<sup>14</sup>

The River Mius Offensive Operation (17 July to 2 August 1943) against Sixth Army seemed likely to prove more dangerous.<sup>15</sup> South Front deployed 2nd Guards Army, 5th Shock Army, and 28th and 51st Armies, totalling 271,790 men,<sup>16</sup> with 737 tanks and assault guns at their disposal,<sup>17</sup> and support from 8th Air Army. Sixth Army,

<sup>3</sup> Wagener, *Heeresgruppe Süd*, 248.

<sup>4</sup> 17th Armoured Division, which was anyway part of the army group's reserve, was kept ready in First Armoured Army's rear area. Sixth Army had 16th Armoured Infantry Division in reserve.

under Gen. Karl Hollidt, had to cover a combat zone 250 kilometres wide with only 11 divisions. A further unit, 23rd Armoured Division, was assigned to it from the army group reserve, but only after the crisis had become apparent. The Red Army units managed to establish a bridgehead 20 kilometres wide and 15 kilometres deep on the west bank of the Mius at Dmitrievka before they were stopped in a few days.

As we know, Hitler had announced the termination of Operation CITADEL on 13 July and, invoking the Allied landing in Sicily, he had withdrawn II SS Armoured Corps from the front in order to send it to Italy. He nevertheless hesitated to give the order for its departure in view of the new crises arising on the eastern front. In addition to the counter-offensive at Orel, which had already begun, the Red Army was preparing a huge counter-offensive in the Belgorod–Kharkov area to the south of Kursk. In view of that threat, immediate withdrawal of the strong, battle-worthy SS armoured corps seemed a risky proposition. Meanwhile, Voronezh Front and Steppe Front, hard hit in the fighting at Prokhorovka, needed a few more days to prepare for the offensive. That opened a window in which the SS armoured corps could be sent to the army group's southern wing as a 'fire brigade' to smash the Soviet advanced armies and then withdraw immediately to the Kharkov area. Manstein had originally been willing to accept loss of ground on the southern wing of his army group in order to fight the battle on the Mius at Kursk, as it were. However, after Hitler decided otherwise, he strove to make the best use of the forces now available for a counter-strike and to 'put the fire out' for both endangered armies. Although the situation of Sixth Army on the southern wing was the most critical, the armoured units to be sent there had first to pass through the combat zone of First Armoured Army, which was deployed in the centre. It therefore made sense for them also to attack the advanced Soviet units in that area—on the way through, so to speak. Moreover, not all of the four armoured or armoured infantry divisions envisaged for an operational counter-attack in the area of Sixth Army were ready yet. Manstein therefore drew up a two-phase plan. He would first deal a short but sharp blow to the advanced Soviet armies in the area of First Armoured Army, using the two SS armoured infantry divisions, 'Leibstandarte' and 'Reich', that were already available. Those two divisions, joined by the two others, ('Totenkopf' and 3rd Armoured Division), would then carry out a concentrated attack in the area of Sixth Army.<sup>18</sup>

On 24 July, just when these troops were moving into the marshalling areas, Hitler banned the attack in First Armoured Army's combat zone 'at the last moment'.<sup>19</sup> Instead, only an attack in the area of Sixth Army was to be carried out. Although it was known precisely that the order had been given by the Führer in person, First Armoured Army's war diary contains very frank criticism of the decision:

The great opportunity to take advantage of the enemy's moment of weakness in the major defensive battle by attacking ourselves was lost to the army because of the order

<sup>18</sup> Manstein, *Verlorene Siege*, 516; BA-MA, Study ZA 1/2073, 16.

<sup>19</sup> BA-MA, Study ZA 1/2073, 17. See also Study ZA 1/2075, 8; Study ZA 1/2342, 10; KTB Op. Abt. OKH, 23 July 1943, BA-MA RH 2/3060.

to stop and turn away the SS armoured corps. That order was all the more painful for the army as the forces of the SS armoured corps were not immediately thrown into attack in Sixth Army's combat zone but were first halted at the interface between the two armies. Those crucial days were wasted for our army, while nothing was gained for an attack in the area of Sixth Army.<sup>20</sup>

Field Marshal von Manstein was so furious at Hitler's interference in the orders to his army group that he offered to resign. This is what he wrote to Col.-Gen. Kurt Zeitzler: 'If the Führer thinks he can find any army group commander or headquarters staff with better nerves than we had during the past winter [ . . . ], I am fully prepared to hand over to them! As long as I remain at this post, however, I must have the chance to use my own head.'<sup>21</sup> The confusion among the troops was compounded two days later, on 26 July, when Hitler ordered SS Armoured Infantry Division 'Leibstandarte' to be transported to Italy. Had he transferred the division to Sicily directly from Prokhorovka, it would at least have made sense in strictly logical terms. As it was, the division had been sent to the southern wing of Army Group South to no purpose, where it had been unable to act to the advantage of either Sixth Army or—as a result of Hitler's surprising order to withdraw—First Armoured Army.

Meanwhile, the available armoured units had proved too weak for Sixth Army to undertake an operational attack on the Soviet bridgehead. Such an operation made sense only if the tanks could be deployed *en bloc*, not in dribs and drabs. So deployment was delayed, and the troop units which could actually have given First Armoured Army temporary support had to stand idle, waiting for the additional forces to arrive. The attack on the Soviet bridgehead on the Mius began only on 30 July. Five armoured divisions or armoured infantry divisions with a total of 258 tanks had been mustered for the operation, and the flanks were secured by parts of three infantry divisions.<sup>22</sup> The operational plan was as follows:

- XXIV Armoured Corps, together with 23rd Armoured Division and 16th Armoured Infantry Division, was to carry out a holding attack on the southern section of the bridgehead.
- The main concentration group, consisting of II SS Armoured Corps with SS Armoured Infantry Divisions 'Reich' and 'Totenkopf' plus 3rd Armoured Division, was to be deployed in the northern section and push forward towards Dmitrievka on the River Mius.

When the attack began on 30 July, with support from IV Air Corps, the weaker XXIV Armoured Corps made good progress, whereas II SS Armoured Corps got stuck at Hill 213.9, the Soviet key defensive area.<sup>23</sup> Faced with densely staggered anti-tank artillery secured by minefields, there seemed to be no way through for the German attackers, who were subjected to a hail of fire and repeated counter-blows

<sup>20</sup> KTB 1. Pz.Armee, 25 July 1943, BA-MA RH 21-1/94.

<sup>21</sup> Manstein, *Verlorene Siege*, 516 ff.

<sup>22</sup> 'Die Juli-Abwehrschlacht der 6. Armee am Mius', BA-MA RH 20-6/302, 32.

<sup>23</sup> On the attack by II SS Armoured Corps, see Nipe, *Decision in the Ukraine*, 181 ff.

by Russian tanks, with massive intervention by the Soviet air force. On the second day of the attack the southern group (XXIV Armoured Corps) managed to encircle and smash five Soviet divisions, whereas in the northern sector the advance came almost to a complete halt. Field Marshal von Manstein seriously considered calling off the attack in that area, but the following day, 1 August, after shifting the point of concentration, the northern group achieved the decisive breakthrough. SS Armoured Infantry Division 'Totenkopf' stormed the hotly contested Hill 213.9 and the Soviet resistance collapsed. The units of South Front, some of them in wild flight, made for the few river crossings. On 2 August, the fourth day of the attack, the German troops reached the Mius at Dmitrievka, thereby regaining their former defensive position.<sup>24</sup>

Despite enormous superiority, South Front's Mius offensive failed all along the line. According to Russian accounts, losses from 17 July to 2 August 1943 totalled 61,070 men, of whom 15,303 dead or missing.<sup>25</sup> As so often, however, those official figures must be considered far too low. According to German Sixth Army statistics, over the same period the number of Red Army soldiers taken prisoner (and thus missing) alone amounted to 17,762 men, of whom 955 had defected. The material booty included 732 destroyed or immobilized tanks, 522 anti-tank cannon, 197 artillery cannon, and 438 grenade launchers.<sup>26</sup> On the other side, German losses were 3,298 dead, 15,817 wounded, and 2,254 missing.<sup>27</sup>

In short, the German counter-attack on the Mius against superior Soviet attacking forces was a real operational and tactical success. However, a fundamental observation is called for at this point. Anyone looking at the history of the Second World War through the prism of the chronicles of the German armoured divisions might assume that the goddess of victory was knocking on the wrong door. The armoured divisions seemed to rush from one success to another, at least in tactical terms. From the strategic viewpoint, however, the picture is often quite different, as the Mius–Donets offensive shows. Although the superior Soviet armies failed miserably, they undoubtedly achieved an indirect success by the very fact that the battle took place. Army Group South HQ was unable to transfer forces to the Kursk salient. Instead, it had to move armoured units from the Kursk sector to the southern wing, thereby smoothing the way for the RUMYANTSEV offensive in the Belgorod–Kharkov area, which the Soviet forces launched on 3 August. Now most of the German armoured units had to be brought back to the northern wing immediately to deal with another emergency. There were, nevertheless, too few of these powerful battle-worthy mechanized units. While they were successfully dealing with problems at their point of deployment, the Red Army frequently broke through elsewhere with its masses of troops. This constant shifting of armoured divisions to cope with crises attained a new dimension in the summer

of 1943. Until then they had only been shifted linearly along the eastern front, but after the western Allies landed in Italy, they were shifted diagonally throughout Europe from one theatre of war to another. On the evening of 2 August, just when the battle on the Mius was coming to a successful conclusion, Hitler still wanted to transfer II SS Armoured Corps to Italy, and SS Armoured Infantry Division 'Leibstandarte' was already on its way there. However, the new Soviet offensive against the northern wing of Army Group South forced him to leave the two SS Armoured Infantry Divisions 'Reich' and 'Totenkopf' on the eastern front for the time being. Only the corps staff and a few units such as the reconnaissance battalion were sent off to Italy immediately. This constant toing and froing clearly shows the growing helplessness behind the decisions of the top leadership.

## 2. THE COLLAPSE OF THE FRONT TO THE EAST OF THE DNIEPER (16 AUGUST TO 15 SEPTEMBER 1943)

In the summer of 1943 the German offensive at Kursk, Operation CITADEL, had failed and the Germans had been forced back by two Soviet counter-offensives in the areas of Orel and Belgorod-Kharkov. The Red Army then began large-scale reconquest of the territories occupied by Germany. Launching a series of offensives along almost the whole front, it continually changed the point of concentration. Nevertheless, the main strategic direction was south-west, which meant that the Soviet high command was directing its efforts mainly against the four armies of Army Group South. For that purpose it concentrated an enormous mass of five army fronts, that is, Central Front, Voronezh Front, Steppe Front, South-West Front, and South Front. This concentration of forces comprised 27 general armies, three armoured armies, and five air armies, 22 armoured or mechanized corps, and two cavalry corps. A total of 2,633,000 troops, over 51,200 cannon and grenade launchers, more than 2,400 tanks and self-propelled guns, and 2,850 combat aircraft were to be deployed in the main direction of thrust. Of the Red Army's forces at the front, this grouping comprised almost 50 per cent of the soldiers, 40 per cent of the artillery, some 70 per cent of the armour, and over 50 per cent of the aircraft.<sup>28</sup> Additionally, according to Soviet figures,<sup>29</sup> around 500,000 partisans were deployed in the hinterland in the 'battle of the Dnieper' which now followed.

In view of this enormous superiority, it is hard to understand why the Soviet high command did not attempt to encircle large parts of Army Group South, but again attacked on a broad front by its usual 'steamroller' method. Marshal Georgii Konstantinovich Zhukov and General Aleksei Innokentevich Antonov, the deputy chief of staff, did in fact suggest forming a point of concentration in the Izyum-Kharkov area in order to push forward from there in a southward pivoting movement towards Dnepropetrovsk-Zaporozhye. It would then have been possible to cut off a large number of German units from withdrawal to the Dnieper

and encircle them. However, the attempt to enclose the German southern wing had failed disastrously on two previous occasions during the campaign. In the spring of 1943, immediately after Stalingrad, Manstein had entrapped and shattered the seemingly unstoppable Soviet troops streaming towards the Dnieper. Stalin therefore rejected the proposed manoeuvre and ordered his forces to push the German troops frontally out of the eastern Ukraine.<sup>30</sup> The war thus took a paradoxical course. In the first half, when the Wehrmacht was still capable of hitting back dangerously, the Soviet leadership overestimated its capabilities and took some adventurous risks aimed at bringing the war to a sudden end. In the second half, however, when the German units were sometimes barely capable of resistance, the Soviet high command proved strangely loath to take risks. The result was a wholly unnecessary prolongation of the war.

### (a) The Soviet Advance into the Donets Basin

First Armoured Army and Sixth Army, deployed on Army Group South's over-stretched southern wing, had successfully fended off the Soviet Mius–Donets offensive (11 July to 2 August 1943). But then the armoured units sent to reinforce them had to be transferred back to the northern wing, where a dangerous Soviet offensive operation was beginning in the Belgorod–Kharkov area. This resulted in exposure of the southern wing, against which South and South-West Front were preparing the Donbas Strategic Offensive Operation. At the start of the offensive the two army fronts had at their disposal over 1,053,000 men, 21,000 cannon and grenade launchers, 1,257 tanks and self-propelled guns, and 1,400 combat aircraft.<sup>31</sup> In the course of the operation they were reinforced by XI Armoured Corps, V Guards Cavalry Corps, and four more divisions.<sup>32</sup> The offensive lasted from 16 August (preliminary attacks from 13 August) until 22 September, and the official losses totalled 273,522 men, of whom 66,166 dead or missing.<sup>33</sup> A total of 886 tanks and self-propelled guns, 814 cannon and grenade launchers, and 327 aircraft were also lost.<sup>34</sup>

On 16 August the first attack, directed by South-West Front against First Armoured Army near Izyum on the Donets, was not very successful. Two days later, however, South Front launched an offensive on the Mius and achieved a breakthrough at Kuibyshev.<sup>35</sup> The German Sixth Army deployed in that sector consisted of only three weak army corps and, since the departure of the SS armoured corps, no longer possessed a single armoured or armoured infantry division. It thus had no chance of withstanding the attack by South Front, which was supported by 800 tanks.<sup>36</sup> Consequently 13th Armoured Division was brought up from Army Group A in the Crimea, but it turned out to consist of only one

<sup>36</sup> Wagener, *Heeresgruppe Süd*, 249.

armoured infantry regiment reinforced by seven tanks.<sup>37</sup> It had as little effect as 9th Armoured Division, which also arrived too late. Soviet units which had broken through swung south towards the Sea of Azov and reached it at the end of August. As a result, the German XXIX Army Corps was enclosed on the coast, but it managed to break out after heavy fighting. Army Group South HQ then ordered withdrawal to the Tortoise Line near Stalino. This position was taken up by Sixth Army on 4 September, but the Soviet attacking forces quickly broke through the new defence line and took Stalino on 8 September.

At the same time, because of Sixth Army's withdrawal to the Tortoise Line, its neighbour to the north, First Armoured Army, had also been forced to withdraw. It was pursued by South-West Front, which broke through its southern wing near Konstantinovka on 6 September.<sup>38</sup> With that, a gap opened up between the two German armies, finally attaining a width of 60 kilometres.<sup>39</sup> The way was now clear for rapid Soviet advance forces to push forward towards the Dnieper. They passed Pavlograd and reached the Sinelnikovo rail node, just before Dnepropetrovsk, on 10 September. Meanwhile, Army Group South HQ had ordered its troops to withdraw to in-depth resistance lines while engaging in 'mobile defensive combat'. At the same time, the gap between the two armies was to be closed by means of a pincer attack. While 16th Armoured Infantry Division and 23rd Armoured Division advanced from the north, 9th Armoured Division attacked from the south. The two wedges met at Znamenka on 12 September, encircling the Soviet units which had broken through.<sup>40</sup> But although the gap between the two armies had been closed, the temporary stabilization could not disguise the fact that the front could no longer be held.

### **(b) The Crisis on the Northern Wing**

Following the failure of Operation CITADEL, Fourth Armoured Army and Eighth Army (formerly Army Detachment Kempf) had had to face the Soviet RUMYANTSEV counter-offensive. With the loss of Kharkov on 23 August, the third and last phase of the battle of the Kursk salient came to an end. This operation was the spring-board for a powerful new summer offensive, the Chernigov–Poltava Strategic Offensive Operation (26 August to 30 September 1943), in which three Soviet army fronts took part. Steppe Front attacked Eighth Army, while Voronezh Front was deployed to the north against Fourth Armoured Army. The advance of Central Front was also threatening, especially because the point of concentration was at the boundary between Army Groups South and Centre. It thus affected not only Second Army, stationed in the neighbouring sector, but the northern wing of Fourth Armoured Army as well. In the first phase the three Soviet army fronts

<sup>37</sup> 'Die Abwehrschlachten der 6. Armee vom 18.8. bis 3.11.1943', 11, BA-MA RH 20-6/326; KTB 6. Armee, 27 Aug. 1943, 53, BA-MA RH 20-6/315.

attacked with 1,581,300 men, supported by 30,245 cannon and grenade launchers, almost 1,200 tanks and self-propelled guns, and 1,700 aircraft.<sup>41</sup> In the course of the operation a further three armies, 3rd Guards Armoured Army, a mechanized corps, and two cavalry corps were brought in. Within five weeks, according to Soviet official figures, they suffered total losses of 427,952 men, of whom 102,957 dead or missing. The attackers also lost 1,140 tanks, 916 cannon, and 269 aircraft.<sup>42</sup>

On 26–7 August, despite the strain of the preceding battles, Fourth Armoured Army carried out a pincer attack. Units of XXIV Armoured Corps and LII Army Corps linked up at Vebrik, thus shortening the front.<sup>43</sup> The army's situation eased somewhat at the end of August, although its front was still only a 'thinly occupied security line'. The infantry was 'totally exhausted and physically and mentally at the end of its tether'.<sup>44</sup> At the end of August Eighth Army also reported that its troops were 'exhausted to the point of apathy'.<sup>45</sup> The greatest danger, however, lay on the northern wing of the neighbouring Second Army, where Central Front achieved a breakthrough at the beginning of September. The corps on Second Army's right wing (XIII Army Corps) was forced back towards the south and had to be reassigned to Fourth Armoured Army on 3 September. Strong Soviet units pushed through the gap towards the Dnieper, giving rise to a new, north-facing defensive front for Army Group South which stretched further and further to the west. After the Soviet 13th and 60th Armies, supported by armour, had advanced via Konoptop to the area around Nezhin, Fourth Army was threatened with encirclement from the north. At the same time, its front was breached from the east at Lebedin and Terny, splitting the army into three parts. However, it received only scant reinforcements such as 8th Armoured Division, which consisted of only one strengthened regiment without any tanks.<sup>46</sup> Eighth Army, deployed to the south, was exposed to less enemy pressure, but when Fourth Armoured Army had to withdraw, it too was allowed to go over to 'mobile combat' and pull back westwards.<sup>47</sup> By mid-September, Army Group South's front was threatened with collapse, above all on the northern wing.<sup>48</sup> Defence east of the Dnieper no longer appeared possible. It is therefore not surprising that a mood of crisis reigned in the higher operations staffs. Lt.-Col. Count Johann Adolf von Kielmansegg, head of the OKH General Staff's operations division, had already confided to his diary at the end of August: 'One sometimes believes downfall will come before this year is out.'<sup>49</sup>

<sup>49</sup> During an interview on 20 April 2001 Count von Kielmansegg allowed the author to look at his diary of that period.

The disastrous developments, above all in the southern part of the eastern front, appeared to confirm his pessimism.

### 3. THE WITHDRAWAL TO THE DNIEPER UP TO THE END OF SEPTEMBER 1943

#### (a) The Dispute over Withdrawal

Maj.-Gen. Wagener was highly critical of Hitler's defence concept, which he summarized as 'defend and hold every square metre of ground'. Regarding the German withdrawal operations from the summer of 1943, he wrote:

The official combat designations refer only to defensive and positional battles fought with disciplined senselessness. The fighting was devoid of any idea on the German side. Holding some little village with an unpronounceable name was more important than properly planned withdrawal [...] Space, the strategic dimension of prime importance, disappeared from use! There could no longer be any talk of operations.<sup>50</sup>

In contrast, the generals, first and foremost Manstein, had repeatedly called for mobile defence and free combat so as to avoid being crushed in static defence by a far superior enemy. Their idea was to employ evasive manoeuvres to allow the enemy to advance repeatedly, and then inflict heavy losses on him by counter-attacking on the flanks. But the supreme commander clung to an anachronistic concept of static defence. In the First World War, as Heinz Guderian wrote, Hitler 'had experienced only positional warfare. The principles of mobile warfare had remained a mystery to him and he found them scary. He shied away from any large-scale movement. This timidity in the conduct of mobile operations [...] rendered the German command rigid and static at the very time when only extreme mobility and boldness, and the timely shortening of overstretched fronts, could have prevented collapse.'<sup>51</sup> Given the vast area concerned, it was only by shortening the fronts that the Wehrmacht could build up the reserves needed for flexible reaction. In that respect, even the propaganda minister Joseph Goebbels was more clear-sighted than Hitler, the 'commander-in-chief'. On 23 September 1943 he noted in his diary that the line on the Dnieper could 'save around 350 km of front. That would free up the divisions we need for the establishment of a new central operational reserve. In my opinion, the central operational reserve is the alpha and omega of our present warfare.'<sup>52</sup>

In May 1943 Col.-Gen. Zeitzler had already called for the construction of a 'fall back position' (designated 'East Wall' or 'Panther Line') between the Sea of Azov and the Gulf of Finland, so as to take advantage of the obstacle value of strong water barriers such as the Dnieper. But Hitler 'blew his top' when that proposal was put to him. Asked how he intended to meet the impending danger, he retorted: 'First of

<sup>50</sup> Wagener, *Heeresgruppe Süd*, 245–6.

<sup>51</sup> Guderian, 'Wechselwirkungen zwischen Ost- und Westfront', 28, BA-MA, Study ZA 1/2386.

<sup>52</sup> Goebbels, *Tagebücher*, pt. 2, ix. 566 (23 Sept. 1943).

all, we're not there yet! Second, hold, hold, hold!'<sup>53</sup> 'If the troops hear about that position,' he reproached Zeitzler, 'they will want to pull back to it. Their defensive determination will be undermined. They must see no other possibility than to stand to the fore and hold fast.'<sup>54</sup>

It is noteworthy that Hitler invoked economic grounds, that is, the supposedly crucial importance of the Donets Basin industrial region for Germany's conduct of the war. Zeitzler reports an outburst by the Führer at a conference in the summer of 1943 as follows: 'My generals always think only of military reasons and rearward manoeuvres. They never consider economic reasons, of which they have absolutely no understanding. If we give up the Donets region, we won't have its coal. We need that coal for our armaments. And then [now furious] the war will be over in eleven months.'<sup>55</sup> Thereupon Zeitzler phoned the armaments minister, Albert Speer, and asked him whether evacuation of the Donets region would have any consequences at all for the German war economy. Speer's answer was: 'Hardly any. We didn't take the coal from that area into account in our calculations at all. It was too uncertain. Transport to Germany is too difficult.'<sup>56</sup> Hitler responded by forbidding the army chief of staff to contact the armaments minister on his own initiative. 'All I need is him telling me what to do as military commander,' was the Führer's caustic comment.<sup>57</sup> Despite all, Hitler stuck to his own opinion and rejected withdrawal from the Donets region. His failure to authorize the construction of the 'East Wall' (Panther Line) which the generals were demanding until the middle of August also had disastrous consequences. And even then he initially allocated few resources to it.

The onset of the Red Army's summer offensive showed how right Zeitzler and the front commanders-in-chief had been in their pessimism. Yet although several sections of Army Group South's front were threatened with collapse in this phase, there is hardly any mention of combat operations in Manstein's memoirs.<sup>58</sup> It is as if his real enemy was Hitler. Conflicts between him and the Führer are almost all he talks about. At a meeting with Hitler in Vinnitsa on 27 August, Manstein pointed out that his troops had lost a total of 133,000 men and received only 33,000 replacements. Without substantial reinforcements, he insisted, the Donets area could not be held. Yet Hitler was neither able to provide additional forces nor willing to authorize withdrawal.<sup>59</sup> A meeting at Führer headquarters in East Prussia on 3 September was equally fruitless. At that time Col.-Gen. Zeitzler fully supported

<sup>53</sup> Zeitzler, 'Das Ringen um die großen Entscheidungen', BA-MA, Study ZA 1/1734, 91–2.

<sup>54</sup> Heusinger, *Befehl im Widerstreit*, 253.

<sup>55</sup> Zeitzler, 'Das Ringen um die großen Entscheidungen', BA-MA, Study ZA 1/1734, 91–2. This outburst of Hitler's is reported in similar words in Heusinger, *Befehl im Widerstreit*, 266.

<sup>56</sup> Zeitzler, 'Das Ringen um die großen Entscheidungen', BA-MA, Study ZA 1/1734, 91–2.

<sup>57</sup> Heusinger, *Befehl im Widerstreit*, 266. See also Zeitzler, 'Das Ringen um die großen Entscheidungen', BA-MA, Study ZA 1/1734, 100.

<sup>58</sup> Unfortunately, from 5 July 1943 on, all of Army Group South's war diaries and the important volumes of annexes to them are missing. That leaves Manstein's memoirs, *Verlorene Siege*, as a major source. They are supplemented by reports from Army Group South in the war diary of the OKH General Staff's operations division (BA-MA RH 2/3061 and 3062).

<sup>59</sup> Manstein, *Verlorene Siege*, 522–3.

Manstein's demands. He put the following argument to the supreme commander of the Wehrmacht: '*Mein Führer*, the question is no longer whether they can hold the Donets region or not. The only question now is whether to abandon the Donets region by itself or to lose an army group along with it.'<sup>60</sup> On 8 September Hitler flew to Manstein's headquarters in Zaporozhye. It was his last visit to the eastern front—on a day which was overshadowed by the capitulation of Germany's Italian ally. The commander-in-chief of Army Group South explained once again that defence east of the Dnieper was no longer possible, but Hitler persisted in refusing a general withdrawal and was willing to authorize only a partial pull back on the extreme southern wing.<sup>61</sup>

Manstein, however, repeated his demand for the rapid withdrawal of his Army Group behind the Dnieper in a letter to the Führer. The concluding sentence is particularly worthy of note: 'Had the reinforcements which the situation demanded been brought in with foresight in good time [...] the present crisis, which can ultimately decide the whole outcome in the east and thus the outcome of the war itself, would have been avoided.'<sup>62</sup> Seldom had a general dared to criticize Hitler's mistaken operational decisions in such clear terms and, what is more, in writing. But Manstein went even further. On 14 September he informed the OKH that, 'on 15 Sept. in the morning', he would 'order the withdrawal of Fourth Armoured Army to the Dnieper in order to prevent it being encircled in small groups and destroyed'.<sup>63</sup> This was risky high-handedness, since Manstein was facing the supreme command with a fait accompli in defiance of an explicit order. The next day, 15 September, Hitler summoned the commanders-in-chief of Army Groups South and Centre, Manstein und Günther von Kluge, to Führer headquarters. The dictator was unable to counter Manstein's arguments, especially when the latter declared that it was no longer a matter of holding the Dnieper Line or any economically important areas, but of the fate of the eastern front.<sup>64</sup> Hitler admitted defeat and authorized withdrawal to the Panther Line.

### (b) The 'Panther' Withdrawal to behind the Dnieper (16 to 29 September)

The next day, 16 September, a wide-ranging withdrawal operation began on the whole eastern front, with the exception of Army Group North. In addition to Army Groups Centre and South, the operation included Army Group A, which evacuated the Kuban bridgehead and pulled back to the Crimean peninsula.<sup>65</sup> On 17 September Sixth Army was placed under the command of Army Group A and had to pull back to the Wotan Line, which ran from Melitopol on the Sea of Azov to the bend in the Dnieper at Zaporozhye. Its northernmost corps, XVII Army

<sup>60</sup> Verbal communication from Gen. (ret.) Count von Kielmansegg.

<sup>64</sup> Manstein, *Verlorene Siege*, 530.

<sup>65</sup> On Army Group A, see Part IV, Chapter 4 of the present volume.

Corps, nevertheless remained with Army Group South and was incorporated into First Armoured Army, where its task was to cover the Zaporozhye bridgehead. According to Manstein, this withdrawal 'probably represents the most difficult operation performed by the army group throughout the 1943–44 campaign'.<sup>66</sup> The Dnieper is the second-longest river in European Russia and over 300 metres wide—in places as much as 3.5 kilometres wide. Army Group South's three remaining armies had to cross it in the 700-kilometre stretch between Chernobyl and Zaporozhye, where there were only five practicable crossing places. The problem was that only a few units were able to pull back along an axis perpendicular to the Dnieper.

The bulk of them had to converge on the crossing places in a funnel-shaped manoeuvre involving cumbersome lateral movements which carried a constant risk of outflanking by the advancing armoured units of the Red Army. Having once crossed the Dnieper, they had to spread out immediately and take up their recommended positions before Soviet advance troops could gain a foothold on the west bank.

A particular organizational difficulty was the evacuation of 200,000 wounded, plus hospitals and medical personnel, in 387 hospital trains.<sup>67</sup> A total of 520,500 civilians also had to be evacuated, although only 375,000 of them were registered as having reached the west bank.<sup>68</sup> Although technical experts and able-bodied men who would otherwise have been immediately recruited by the Red Army were deported by force, the great majority of the civilians on the westward march had joined the retreating German forces voluntarily.<sup>69</sup> Many Ukrainians feared the return of Stalin's commissars. Some 85,000 ethnic Germans also followed the military columns, mostly whole families with their few possessions and their livestock. A total of 2,942 railway trains were used to carry off salvaged goods.<sup>70</sup> It says much for the Wehrmacht's military efficiency, especially the organizational skill of its staffs, that this complicated operation went off almost without a hitch. Moreover, it should not be forgotten that every withdrawal operation went along with the systematic destruction of Soviet infrastructure in a strip 20 to 30 kilometres wide east of the Dnieper.

Although the complicated Dnieper withdrawal was professionally planned and executed militarily, it was once again Hitler who ruined the concept. During the withdrawal behind the Dnieper his rigid insistence on forward defence had two negative consequences in terms of the time factor.

The first was that, despite the urging by his generals, he gave permission to construct the rearward Panther Line, or East Wall, much too late. The wide Dnieper, with its higher west bank, would have been very favourable to defence,

<sup>66</sup> Manstein, *Verlorene Siege*, 537.

on condition that sufficient defensive installations had been prepared.<sup>71</sup> Instead of which—and contrary to experience so far—the dictator put too much trust in the natural obstacle value. As a result, the defensive wall proved illusory in many places, as can be seen from a letter sent from the front by a soldier in Army Group South: ‘We expected to find the “East Wall” behind the Dnieper. There wasn’t even a trench.’<sup>72</sup>

Even more disastrous were the consequences of Hitler’s refusal to order the withdrawal in good time, despite the fact that the front had already been breached east of the Dnieper and Soviet armoured spearheads were advancing in depth. Once again, permission to withdraw was given only at ‘five minutes past midnight’. The German troops had to pit their horse-drawn vehicles in a race against Soviet tanks and lorries; yet instead of authorizing them to withdraw at top speed, the Führer declared there was ‘nothing to be gained by swift movement’. Instead, he ordered the withdrawal to be carried out ‘section by section, avoiding any haste’.<sup>73</sup> The last troops (apart from the Zaporozhye bridgehead) crossed the river on the evening of 29 September. In the meantime, however, advance troops of the Red Army had already got across in several places. By the end of the month they had established 23 small bridgeheads on a 700-kilometre-wide section of the west bank.<sup>74</sup> As a result of Hitler’s refusal to give ground in good time, the race to the Dnieper was lost.

### (c) The Soviet Airborne Operation at Bukrin on 24–25 September

The race to the Dnieper was particularly disastrous for Eighth Army on the loop of the Dnieper at Bukrin. The only large crossings available to it were at Kremenchug and Cherkassy, on which the troops were converging from various directions. Since the battle order within the army group was threatened with disarray, the southern wing of the neighbouring Fourth Armoured Army, including XXIV Armoured Corps, was placed under the command of Eighth Army. The crossing place envisaged for XXIV Armoured Corps had been the Kanev bridge to the south of the Dnieper loop at Bukrin. In the meantime, however, a gap had opened between the previous northern wing of Eighth Army and XXIV Armoured Corps, through which Soviet tanks were advancing towards the Dnieper via Pereyaslav.<sup>75</sup> The tanks were an advance detachment of Third Guards Armoured Army, which belonged to Voronezh Front. On 22 September the first troops crossed the river in the Bukrin loop (80 kilometres south of Kiev).<sup>76</sup> Within four days the Soviet forces had taken Bukrin and established a bridgehead 12 kilometres wide and up to 6 kilometres deep in the Dnieper loop.

<sup>71</sup> Mellenthin, *Panzerschlachten*, 176, 178.

<sup>72</sup> Quoted from a letter from the commander-in-chief of Fourth Army (Ia No. 073/43 g.Kdos., 16 Nov. 1943), BA-MA RH 20-4/515.

<sup>76</sup> KTB 8. Armee, 22 Sept. 1943 (fo. 146), BA-MA RH 20-8/85; Kobrin and Abaturov, ‘Sokrushenie vostochnogo vala’, 299.

When the first Soviet troops crossed the river on 22 September there were no German units securing the west bank, only isolated observation posts. XXIV Armoured Corps, which was supposed to take over this sector, was still fighting east of the Dnieper and gradually beginning to withdraw to the Kanev bridge. The first of its troops would not be able to cross the river until the afternoon of 23 September. Thus the only emergency troops that could be mustered to contain the Soviet bridgeheads were 120 NCO cadres from a neighbouring service school. This improvised force was dispatched in lorries in the morning of 22 September. The river crossing took place a little earlier further north near Kiev, in the combat zone of Fourth Armoured Army. The reconnaissance battalion of 19th Armoured Division set out from there fairly quickly, but the mass of the division was not expected to arrive until sometime on 24 September.

No one on the German side had any idea that the largest Soviet airborne operation of the war would take place that same day to the west of the Dnieper loop,<sup>77</sup> with the ambitious aim of establishing an operational bridgehead from which Soviet armoured units could advance in depth before all the German troops had withdrawn behind the Dnieper. That would have had disastrous consequences for Army Group South, since the Dnieper Line would have been destroyed before it had even been occupied. Voronezh Front originally planned to deploy two squadrons to transport 1st and 5th Guards Airborne Brigades in the evening of 23 September and 3rd Guards Airborne brigade the following night, using a total of 245 transport planes and gliders.

However, the operation got out of control and ended in fiasco. For reasons of secrecy, the orders were not made known until the last minute, so proper preparation was impossible. When the operation was due to start, only part of the paratroops were assembled on the airfields. The Soviet air force performed no better, since only eight aircraft arrived on time. Thereupon General Nikolai Fedorovich Vatutin postponed the operation by a day until the evening of 24 September, and decided that, since not all the troops had arrived yet, only 3rd and 5th Guards Airborne Brigades would be deployed. This last-minute change of plan resulted in chaos. All the orders and repartition of troops had to be revised. The landing places were not announced, let alone marked. There was not even any time left for reconnaissance. Above all, the brigade commanders were able to issue their orders only an hour-and-a-half before boarding the aircraft, company commanders had only 15 minutes, and platoon leaders had to instruct their men during the flight. The pilots were also highly agitated. The paratroopers were often dropped far from the planned dropping zones and completely dispersed. Some landed in the bridgehead behind their own lines, and many even came down east of the Dnieper. Those who fared worst of all landed in the river.<sup>78</sup>

<sup>77</sup> For the Soviet perspective, see Glantz, *The Soviet Airborne Experience*, 91–111. For the German viewpoint, see above all BA-MA, Study ZA 1/2082: Gen. (ret.) Walther Nehring, ‘Der Einsatz russischer Fallschirmjägerverbände am 24./25.9.1943’, 35–86; BA-MA, Study ZA 3/750, app. 26, ‘Sowjetrussische Luftlande-Unternehmen Ende September 1943’.

<sup>78</sup> Glantz, *The Soviet Airborne Experience*, 100.

The airborne operation stirred up a hornets' nest,<sup>79</sup> since those Soviet paratroopers who were dropped over the recommended zones mostly landed in positions or deployment areas occupied by a defensively prepared enemy. The one-day postponement of the operation thus had fatal consequences. On 23 September XXIV Armoured Corps was still engaged in heavy fighting east of the Dnieper. But when the Soviet paratroopers landed on the 24th, the corps' divisions were already in position or were moving, as luck would have it, right into the Soviet dropping zones. The German troops immediately opened fire on the transport planes and the descending paratroopers. Others were attacked at their most vulnerable moment, immediately after landing. Moreover, the Soviet soldiers were so widely scattered that there was scarcely any tactical deployment *en bloc*.

The inefficiency of the airborne operation is clear from the following figures. Of the airborne corps' 10,000 or so soldiers, only 6,592 arrived at the airfields. And of that number, only 4,575 men were actually deployed, while the others had to be left behind owing to lack of air transport capacity.<sup>80</sup> Many of the paratroopers who landed were killed or taken prisoner right away.<sup>81</sup> Around 2,300 fled into the woods, where they splintered into 43 separate groups.<sup>82</sup>

An American expert describes the Soviet operation as 'a classic case of how not to conduct an airborne operation', and reproaches the higher command with 'planning failures of criminal proportions'.<sup>83</sup> 'In short,' he concludes laconically, 'the airborne assault was a disaster.'<sup>84</sup> In a study of the operation, a former Wehrmacht general also concludes that the whole action 'bore the stamp of dilettantism'.<sup>85</sup> At the same time, he stresses that 'the Soviet command's great moment had come'.<sup>86</sup> In point of fact, the Red Army had the chance to completely disrupt Army Group South's Dnieper defence during the German river crossing, which lasted until 29 September. The fact that the catastrophe did not happen is due less to a series of remarkable coincidences than to some fundamental Soviet errors:

- (1) *Wrong time*: The withdrawal of XXIV Armoured Corps to the west bank of the Dnieper did not begin until 15.00 on 23 September. On that day the Soviet paratroops could have occupied the recommended objectives until the late afternoon almost without resistance. By postponing the operation by a day, from 23 September to the evening of 24 September, the Soviet operations staffs missed a great opportunity.
- (2) *Wrong place*: The main objective should have been the Dnieper bridge at Kanev. Had that bridge been taken or destroyed, XXIV Armoured Corps would have been cut off on the east bank of the river. The Dnieper loop would then have fallen into Soviet hands almost without a battle.

<sup>79</sup> Erickson, *Stalin's War*, ii. 128.

<sup>80</sup> Glantz, *The Soviet Airborne Experience*, 100.

<sup>81</sup> KTB 8. Armee, 2 Sept. 1943, fo. 176, BA-MA RH 20-8/85.

<sup>82</sup> Glantz, *The Soviet Airborne Experience*, 100, 103, 108.

<sup>83</sup> Ibid. 109.

<sup>84</sup> Ibid. 100.

<sup>85</sup> Nehring, 'Der Einsatz russischer Fallschirmjägerverbände am 24./25.9.1943', in BA-MA, Study ZA 1/2082, 59.

<sup>86</sup> Ibid. 60.

- (3) *Pilot errors*: The pilots sometimes missed the dropping zones by dozens of kilometres. Instead of being dropped in the planned area of 10 by 14 kilometres, the paratroopers ended up scattered over an area of 30 by 90 kilometres.<sup>87</sup>
- (4) *A leap in the dark*: The German officers wondered why the airborne operation took place at night rather than during the daylight hours. According to the principles governing German airborne operations, the action should have been carried out at dawn so that the paratroops could assemble in daylight after landing. At Bukrin, however, the Soviet paratroops did exactly the opposite. After being dropped in the late evening, they wandered about in the darkness, scattered and disoriented, and incapable of any concerted action.
- (5) *Tactical passivity*: In the resulting chaos, the weakness of Soviet command tactics became apparent. After landing, several groups proved completely helpless and confined themselves to passive defence.

Finally, the operation in the Dnieper loop at Bukrin was not only the Red Army's biggest airborne operation, but also its last. From then on, Stalin refrained from such risky undertakings. Although spectacular by reason of the massive deployment of forces, the Bukrin operation was for long passed over by official Soviet historiography in total silence.<sup>88</sup>

#### 4. THE BATTLE OF THE DΝIEPER LINE (29 SEPTEMBER TO 23 DECEMBER 1943)

After taking up position on the Panther Line on 29 September, Army Group South had to defend 700 kilometres of front with three armies against several Soviet army fronts. These were Voronezh Front, Steppe Front, and South-West Front, renamed 1st, 2nd, and 3rd Ukrainian Front respectively on 20 October. In addition, the army group's northern wing was attacked by parts of Central Front (from 20 October 'Belorussian Front'), and its southern wing by several armies of South Front (4th Ukrainian Front). On paper, Manstein's HQ had 60 divisions at its disposal, including reserves.<sup>89</sup> However, about half of them were 'combat groups', that is, division remnants of roughly regimental strength, although some of the 'combat groups' were not even that strong.<sup>90</sup> In all, Army Group South (including the Wehrmacht retinue) had a total of 719,000 men, 271 operational tanks and assault guns, and 2,263 artillery cannon.<sup>91</sup> Each division had to cover a front

<sup>87</sup> Glantz, *The Soviet Airborne Experience*, 100.

<sup>88</sup> In the new post-Communist version of the 'Great Patriotic War' (Kobrin and Abaturov, 'Sokrushenie vostochnogo vala', 300), it is described briefly but in very critical terms.

<sup>91</sup> 'Kräftegegenüberstellung Stand 14.10.1943', BA-MA RH 2/2543.

section of some 20 kilometres, with only about 1,000 soldiers per division still available ‘for front-line combat’.<sup>92</sup> Air Fleet 4 had a total of 562 operational aircraft at its disposal, but they had to be used at the same time in support of both Army Group South and Army Group A (see Table IV.III.1).<sup>93</sup> In the course of the withdrawal Field Marshal von Manstein moved his headquarters to Vinnitsa, where Führer headquarters had earlier been temporarily located. In a situation assessment for his army group, he noted that ‘the combat strength of our divisions—engaged as they are in heavy combat without a break (whereas the Russians can repeatedly withdraw, rehabilitate, and replenish their troops at the front)—is now so low in terms of men and weapons that the enemy, however bad his troops, can break through wherever he is able to muster enough forces, simply because of our insufficient coverage of the front’.<sup>94</sup> The only possibility of sustainable resistance to the assault by four Soviet army fronts would have been to dig in on the Dnieper Line. But the pursuing attackers had got through first in many places. Therefore, the urgent task now facing Manstein’s three armies was to eliminate the Soviet bridgeheads before the enemy could use them to continue his offensive.

#### **(a) Fourth Armoured Army in the Kiev Sector**

Fourth Armoured Army, led by Col.-Gen. Hermann Hoth, was defending Army Group South’s northern wing on both sides of Kiev with VII, XIII, and LIX Army Corps. On 22 September the Red Army had already managed to cross the Dnieper at Chernobyl, opening up a gap exactly at the interface with Army Group Centre.<sup>95</sup> Although Fourth Armoured Army succeeded in retaking Chernobyl, the bridgehead remained, with a width of 60 kilometres and a depth of 30 kilometres. In the further course of the campaign a dangerous gap arose between the two army groups. However, after the sector in question was assigned to Army Group Centre on 14 October, Army Group South HQ was able to concentrate on other critical points on the front.

#### *The Soviet Bridgehead at Lyutezh*

By the end of September advance units of Voronezh Front had crossed the Dnieper in several places, but the German defenders had managed to repel the still-weak Soviet forces almost everywhere. The Lyutezh bridgehead to the north of Kiev,

however, grew into a threat of operational proportions.<sup>96</sup> It was from there that the right wing of Voronezh Front launched the Lyutezh Offensive Operation (1 October to 2 November 1943), deploying 13th, 38th, and 60th Armies, as well as 2nd Air Army. A total of 253,830 troops took part in the offensive, in which the attackers lost 85,064 men, of whom 24,422 dead or missing.<sup>97</sup> By 10 October Voronezh Front had, nevertheless, established a bridgehead 15 kilometres wide and 5 to 10 kilometres deep.<sup>98</sup> An important role in this fighting was played by V Guards Armoured Corps, led by Lt.-Gen. Andrei Grigorevich Kravchenko, the bulk of which had been carried across the Dnieper on ferries. The corps, nevertheless, lost many tanks, together with their crews, in crossing river branches and swamps.<sup>99</sup> Voronezh Front HQ had originally planned to use the Lyutezh bridgehead for only a diversionary or relief attack. The main attack was planned to start further south, from the Bukrin bridgehead near Kanev, and to be directed against the northern wing of the German Eighth Army. On 24 September, as already described, a major airborne operation took place in the Dnieper loop running through this area, but failed completely. The following offensive, in which 3rd Guards Armoured Army was deployed, was also unsuccessful.

There then occurred something that was most unusual for Soviet operations command. Whereas an attack which had already begun was normally continued stubbornly until either a breakthrough was achieved or the Soviet potential was exhausted, this time the operations plan was stood completely on its head. Gen. Vatutin, the commander-in-chief of Voronezh Front, decided to shift the point of concentration to the Lyutezh bridgehead and to carry out only a feint attack from the bridgehead at Bukrin.<sup>100</sup> The Stavka in Moscow also agreed to the plan. What followed next was one of the most impressive examples of an ability which the Red Army repeatedly demonstrated in the course of the war, that is, that of moving masses of troops unnoticed over great distances by means of 'maskirovka' (camouflage and deception). In the night of 25 to 26 October a large part of the Soviet units were moved from the Bukrin bridgehead to the east bank of the Dnieper. The plan was to march north parallel to the front for almost 200 kilometres, cross the Desna, and then cross back over the Dnieper into the Lyutezh bridgehead. The formations involved in this manoeuvre were 3rd Guards Armoured Army, VII Artillery Breakthrough Corps, XXIII Rifle Corps, and numerous other units. They reinforced the forces already massed in the bridgehead. The troop movements were mostly carried out under cover of darkness, and bad weather made the Luftwaffe's reconnaissance task even more difficult. A Russian speciality was the construction of underwater bridges just below the surface,<sup>101</sup> which were hard for German aircraft to detect and attack. At the same time, a series of measures were adopted to

simulate the continued presence of the withdrawn formations in the Bukrin bridgehead. For example, radio stations were left in place of the staffs and continued the previous radio traffic. Dummies were put in place, fake bridges erected, and feint attacks conducted.<sup>102</sup> The German enemy intelligence services may indeed have been misled by those measures for a short time, but Soviet historians' claim that the attack from the Lyutezh bridgehead took the Germans by surprise seems greatly exaggerated.<sup>103</sup> On the contrary, Fourth Armoured Army's war diary entry for 3 November refers to 'the major offensive we have been expecting for days'.<sup>104</sup> For that reason the Germans had already sent in several armoured units as reinforcements. Nevertheless, as Field Marshal von Manstein admits in his memoirs, it was not clear 'whether it was an offensive with far-reaching objectives or whether the enemy initially intended to gain the necessary assembly area west of the Dnieper'.<sup>105</sup>

### *The Soviet Breakthrough at Kiev*

In the ensuing Kiev Strategic Offensive Operation (3 to 13 November), 1st Ukrainian Front (formerly Voronezh Front) deployed 671,000 men.<sup>106</sup> The attacking formations were supported by some 7,000 cannon and grenade launchers, 675 tanks and self-propelled guns, and 700 front-line aircraft.<sup>107</sup> A major problem from the outset was how to transport such a mass of weapons and vehicles across the Dnieper. A total of 26 bridges, as well as 66 large and 21 small ferries, were installed for the purpose.<sup>108</sup> An exceptionally large number of cannon and grenade launchers were assembled for the breakout from the bridgehead. In the area of L Rifle Corps, for example, there were 416 barrelled weapons per kilometre of front. Never in the course of the war had there been such a concentration of artillery.<sup>109</sup>

Two days in advance, on 1 November, 27th and 40th Armies launched the Soviet diversionary attack from the Bukrin bridgehead. On the same day the combat zone of Germany's Fourth Armoured Army was extended southwards to Kanev, so that it took over responsibility for the Bukrin sector and for XXIV Armoured Corps, which was deployed there. Despite the deployment of considerable forces, however, the Soviet troops managed to advance 1.5 kilometres at most and were beaten back from the outset.<sup>110</sup> Then, on 3 November, the main attack

from the Lyutezh bridgehead began to the north of Kiev. The first wave consisted of 38th and 60th Armies but, despite massive artillery support, they were unable to make a decisive breakthrough. That was achieved the following day with the introduction of 3rd Guards Armoured Army and I Guards Cavalry Corps. The German VII Army Corps was forced to withdraw and evacuate Kiev, and on 6 November the Red Army marched into the Ukrainian capital. There now began the second phase of the Soviet offensive, in which 13th Army was to attack northwards towards Ovruch and 60th Army westwards towards Korosten. The Soviet 38th Army advanced in two diverging directions: south-westwards towards Zhitomir and southwards towards Belya Tserkov. It was followed from the bridgehead by 27th and 40th Armies, and by I Guards Cavalry Corps, while 3rd Guards Armoured Army led the main thrust towards Fastov. On 7 November the Soviet armoured units were already able to take the important Fastov railway node 50 kilometres south-west of Kiev.

That same day Field Marshal von Manstein flew to Führer headquarters to put through a decision of fundamental importance for the eastern front. On the surface it was simply a shift of the point of concentration from his army group's right wing on the lower Dnieper to its left wing near Kiev, where it was threatened with an operational breakthrough. However, the redisposition of the reserves coming in from the Reich was bound to have major consequences, since Manstein was determined to give up the eastward-protruding Dnieper bulge at Zaporozhye, where 1st Armoured Army was threatened with encirclement. He also demanded evacuation of the Crimea, where 17th Army had been cut off by a Soviet advance. It seems remarkable that this proposal should have come from Manstein, the man who had made his name as the conqueror of the Crimea and the legendary fortress of Sevastopol. In the present situation, however, he soberly concluded that this bastion could no longer be held. Above all, he refused to accept that Army Group A's Seventeenth Army should be stationed there to no purpose when it constituted the operational reserve so urgently needed to stabilize the eastern front. Hitler opposed the proposal with economic and political arguments. He invoked the manganese ore deposits near Nikopol on the Dnieper and also feared that loss of the Crimea would give the Soviet air force a base from which to attack the Romanian oilfields near Ploieşti. Evacuation of the Crimea would also result in an important loss of political prestige with the neighbouring Turks, Romanians, and Bulgarians.<sup>111</sup> Manstein countered with operational logic that was hard to refute: a Soviet breakthrough on the northern wing of Fourth Army 'would sooner or later seal the fate of Army Group South and Army Group A'.<sup>112</sup> It would give the Red Army leadership a chance to achieve the encirclement which they had already twice attempted without success. They would be able to swing south and advance to the Black Sea, enclosing the whole German southern wing. Manstein's assessment was confirmed by Col. Reinhard Gehlen, head of the General Staff's Foreign

Armies East division, who concluded the same day, in a 'summary assessment of the enemy situation', that the Soviet point of concentration lay unambiguously in the area of Army Group South. The Red Army had assembled the mass of its operational armoured units in that sector in order to decide the issue.<sup>113</sup> In conclusion, he went so far as to evoke the 'danger of a collapse of the eastern front'.<sup>114</sup> Hitler admitted that Manstein's arguments were plausible, but declared that he would take the risk. His only concession was to permit 1st Armoured Division and 1st SS Armoured Division 'Leibstandarte', which had been brought back from Italy, to be deployed in the area of Fourth Armoured Army rather than on the lower Dnieper, as had been planned.<sup>115</sup>

In the following days the situation of Fourth Armoured Army 'took a rapid turn for the worse'. Almost all of its eleven infantry divisions were now down to regimental strength.<sup>116</sup> Indeed, 208th Infantry Division had only 165 men.<sup>117</sup> Most serious of all was the lack of fighting vehicles in the face of the armoured masses of 1st Ukrainian Front. On 10 November the already decimated 8th Armoured Division lost its last tank at Zhitomir.<sup>118</sup> Two days later, when that important transport node fell into the hands of the Red Army, a mood of crisis gripped Army Group South headquarters. The only reason why the situation at Zhitomir did not escalate was that, upon entering the city, the troops of I Guards Cavalry Corps plundered Fourth Army's alcohol stocks.<sup>119</sup> Meanwhile, the German units were everywhere on the retreat. They were under frontal attack and constantly threatened on the flanks. In ten days 1st Ukrainian Front advanced up to 150 kilometres westwards and then was stopped only with difficulty. Fourth Armoured Army found itself split into three groups: VII Army Corps had been forced back from Kiev 50 kilometres to the south, and the only way of stabilizing the front was to bring up units of the newly assigned XXIV Armoured Corps, which was still holding the Dnieper Line further to the right. XIII Army Corps had been thrown back to the south-west in the Zhitomir area. LIX Army Corps, stationed in the north-west, seemed particularly isolated. It tried in vain to defend Korosten, which fell to the Soviet 60th Army on 17 November. North of Korosten a huge gap opened up between it and Army Group Centre, since after the evacuation of Chernobyl Second Army withdrew to the middle reaches of the Pripyat river. This breach finally attained a width of around 100 kilometres.

When the Soviet armoured units rolled west out of the Lyutezh bridgehead, there were only a few fighting vehicles on the German side. On the crucial day of 6 November, 25th Armoured Division, which had arrived from France, seemed the

<sup>119</sup> Glantz and House, *When Titans Clashed*, 174. The alcoholic excesses of some Red Army troops also facilitated the recapture of Zhitomir on 19 November; see Scheibert, *Die Gespenster-Division*, 126–8.

only formation that could possibly be used for a counter-attack. Yet this newly constituted unit had been sent to the eastern front 'in an unfinished state'.<sup>120</sup> Major components of weaponry and equipment were lacking. The troops had received emergency individual training, but no unit training in combined-arms combat. For that reason Col.-Gen. Guderian, as inspector-general of armoured troops, had protested against such premature deployment. In his view, at least four more weeks were needed to equip the division fully and train the men. But Hitler took no account of this. In deciding to commit 25th Armoured Division, the German command departed from one of its hitherto most important principles. In contrast to the Red Army, the Wehrmacht normally waited until a front-line unit had achieved internal cohesion before sending it into battle. Moreover, once the inexperienced division had been rushed to the front, it ran into a morass of hitches, misunderstandings, and unfortunate coincidences. It had originally been intended for deployment on the army group's right wing, where the tracked vehicles were just arriving by rail. But then it was decided to deploy it on the left wing. At the same time, the rail transport of the wheeled vehicles, which had started later, was switched to the right wing. The sections which arrived first in the area south-west of Fastov were an armoured division without armour. The Soviet battle tanks rolled towards them across open terrain. At that decisive moment the divisional commander was out of action, since he had been enclosed with parts of his staff and had to fight his way back on foot. When the division's tracked vehicles finally arrived two days later, the units already deployed had suffered so many casualties that it was no longer possible to recapture Fastov.<sup>121</sup> Hitler was furious and wanted to hold the divisional commander responsible. Nevertheless, the incomplete and inexperienced 25th Armoured Division had at least made an important defensive contribution. By halting the advance of 3rd Guards Armoured Army, it created the precondition for Manstein's planned counter-blow.<sup>122</sup> The failure of this offensive operation, however, was the writing on the wall. Up till then, the deployment of a newly brought-in German armoured division had always led to at least temporary offensive success. Hitler had already found a scapegoat for the failure of Fourth Armoured Army and dismissed its commander-in-chief. Col.-Gen. Hoth, one of the Wehrmacht's most capable tank commanders, was removed from his post and replaced on 15 November by Gen. Erhard Raus.

### *The German Counter-Attacks*

From the Soviet viewpoint, the Kiev Strategic Offensive Operation was over. It was now followed by the Kiev Defensive Operation (13 November to 22 December 1943), in which 1st Ukrainian Front committed 730,000 men and suffered, according to official figures, a total of 87,473 casualties, of whom 21,650 dead

or missing.<sup>123</sup> Meanwhile, on the German side, Fourth Armoured Army had been restructured. The three corps engaged in heavy defensive fighting (VII, XIII, and LIX Army Corps) had been merged as 'Army Detachment Mattenkrott'. The counter-attack in the direction of Kiev was to be led by XXXXVIII Armoured Corps, which had been transported in from neighbouring Eighth Army and comprised six armoured divisions.<sup>124</sup> This major formation, equipped with 280 battle tanks and assault guns, was commanded by General Hermann Balck.<sup>125</sup> The German counter-attack began on 15 November with two shock groups.<sup>126</sup> The main forces advanced to Brusilov (north-west of Fastov), where they were able to enclose several units of 3rd Guards Armoured Army.<sup>127</sup> A counter-thrust from the east by Soviet tanks ended in failure. At the same time, the left (western) shock group attacked Zhitomir with support from parts of XIII Army Corps, and on 19 November the town was retaken. Meanwhile, heavy fighting for Korosten had flared up on the northern wing. After an attack by LIX Army Corps, the town was recaptured by the Germans on 27 November.<sup>128</sup> For the last phase of the German counter-attack a westward push by XXXXVIII Armoured Corps in the direction of Kiev was planned, with the aim of cutting off the enemy forces positioned to the south of the city. Although that attack got stuck in the mud, the crisis was overcome by 30 November and a united front was established in the endangered sector south-west of Kiev. From 9 to 28 November, according to German figures, more than 20,000 enemy soldiers were killed and 4,800 taken prisoner. The Soviet forces also lost 603 tanks and 1,505 cannon.<sup>129</sup>

Once the ground had frozen over again, the German counter-attack was resumed on 6 December with Operation ADVENT.<sup>130</sup> Hitler, however, who saw the point of concentration as being in the lower reaches of the Dnieper, had ordered the withdrawal of several units, and XXXXVIII Armoured Corps was left with a total of 201 operational tanks and assault guns.<sup>131</sup> Meanwhile, in the expanded Kiev bridgehead, 1st Ukrainian Front had assembled nine armies, two of them armoured, as well as an armoured corps, a cavalry corps, and numerous other units. The Soviet air units were also continuously reinforced, while German aircraft were rarely seen in the skies. Given the enemy superiority, it seems surprising that the German troops achieved some further successes and were able to cause concern in the enemy's hinterland. Radomyshl was taken on 13 December,<sup>132</sup>

and by 22 December this had been followed by two attacks on Korosten and Malin in which the Soviet formations, especially 60th Army, suffered heavy losses. General Balck's recipe for success consisted in surprise armoured thrusts deep into the enemy's rear. As tank-warfare specialist Maj.-Gen. (ret.) Friedrich Wilhelm von Mellenthin later wrote: 'The Russians were certainly flabbergasted by these uncanny thrusts, which seemed to come from nowhere, and their wireless traffic provided abundant evidence of their bewilderment and anxiety.'<sup>133</sup> Although the German tank commanders were proving far superior to their Soviet adversaries in tactical manoeuvring, a turnaround had taken place on the eastern front. While the Germans still succeeded in carrying out daring tank raids and encirclement movements, at the decisive moment they lacked the two or three additional armoured units needed for operational exploitation of their tactical successes. The enclosure of strong Soviet forces in the Meleni pocket south-east of Korosten was a striking example. On 18 December three German armoured divisions (1st, 7th, and 'Leibstandarte') broke through the front between Meleni and Amlin and pushed forward in depth. This seemed set to result in a classic encirclement operation, a 'miniature Tannenberg', as Mellenthin calls it in an allusion to the famous encirclement battle of 1914.<sup>134</sup> The German officers were nevertheless surprised by the strength of the enemy's counter-attacks. On 22 December, when 1st and 7th Armoured Divisions were making ready to close the pocket, a map was found on the body of a Soviet major which alarmed the German operations staffs. It showed that in the 'pocket to the east of Meleni' there were no fewer than three Soviet armoured corps and four rifle corps. That was too large a prey, especially as it turned out that the German advance had penetrated the assembly area for a strong Soviet offensive. So the Germans had to leave it at that, contenting themselves with the psychological shock effect instead of putting the encircled enemy out of action. The promising pincer attack was broken off.

Although the counter-attacks begun on 15 November in the sector of Fourth Armoured Army had resulted in considerable territorial gains, the real aim of throwing the enemy back to the Dnieper was not achieved. In the Kiev area there was still an operational bridgehead that could be used as a springboard for a new Soviet offensive. The failure of the attack by a reinforced German armoured corps on the main forces of 1st Ukrainian Front was due not only to the Soviet multiple numerical superiority but also to Hitler's operational incoherence. On 7 November Manstein had proposed concentrating all the armoured forces available on the southern wing of the eastern front for a short but powerful counter-strike in the Kiev area. That was the only chance of eliminating the bridgehead, especially if combined with the element of surprise. But once again Hitler wanted to defend everything at the same time and even dreamed of an armoured thrust on the lower Dnieper to reconnect with Seventeenth Army (Army Group A), which

<sup>133</sup> Mellenthin, *Panzerschlachten*, 207. The latest official Russian publication on the 'Great Patriotic War' has this to say on the subject: 'The wrong calculations by the front's HQ were a heavy burden for the troops.' See Kobrin and Abaturov, 'Sokrushenie vostochnogo vala', 321.

<sup>134</sup> Mellenthin, *Panzerschlachten*, 210.

was cut off in Crimea. In his approach, strategic wishful thinking overrode operational necessity. At Führer headquarters on 9 November, that is, two days after Manstein's fruitless discussion there, Guderian too put forward a proposal along the lines suggested by Manstein. Acting in agreement with Col.-Gen. Zeitzler, he proposed to Hitler that he 'give up the idea of numerous small-scale counter-attacks and that he concentrate all our panzer divisions available south of Kiev for the planned operation through Berdichev towards Kiev'.<sup>135</sup> Full of irony, Guderian noted in his memoirs: 'I used my favourite old expression, *Klotzen, nicht Kleckern* [roughly: "Boot 'em, don't spatter 'em!"]'. Hitler paid attention to what I said but did not make his arrangements accordingly.'<sup>136</sup> With that, Hitler passed up the only remaining chance, which proved to be a serious operational mistake. The fact remains that a possible successful counter-attack would have had only local effect, since the Red Army's superiority was by then so great that German operational successes could only postpone the outcome.

### (b) Eighth Army in the Lee of the Wind

At first it had seemed that events were coming dramatically to a head in Eighth Army's sector. The most dangerous Soviet bridgehead had been established in the Dnieper loop at Bukrin, where Red Army advance troops had already managed to cross the river on 22 September. That was also where a Soviet airborne operation had been carried out, albeit unsuccessfully. In any case, the bridgehead could not be eliminated, which gave Voronezh Front, with its 908 tanks,<sup>137</sup> the opportunity for an operational breakthrough. The onslaught came in the form of the Bukrin Offensive Operation, conducted from 12 to 24 October.<sup>138</sup> The formations which took part were 27th, 40th, and 47th Armies, and 3rd Guards Armoured Army, with air support from 2nd Air Army. At the start of the operation 185,960 troops attacked at close quarters, and their number was continuously increased.<sup>139</sup> In addition, Voronezh Front's right wing launched a relief offensive from the Lyutezh bridgehead further to the north (near Kiev), so that the German command was unable to withdraw any units from the neighbouring Fourth Armoured Army. On 12 October alone, the first day of the offensive, the Soviet troops at Bukrin were supported by 1,054 air sorties.<sup>140</sup> The German front was threatened with collapse, especially when more and more Soviet tanks arrived via bridges which had meanwhile been erected over the Dnieper. The fact that Eighth Army had been obliged to give up several armoured units now had a negative effect.<sup>141</sup> Nevertheless, the superior enemy forces were unable to break through. On the

<sup>137</sup> Kobrin and Abaturov, 'Sokrushenie vostochnogo vala', 299.

<sup>138</sup> For the German perspective, see KTB 8. Armee (fos. 73 ff.), BA-MA RH 20-8/86.

<sup>139</sup> Gurkin, 'Liudskie poteri Sovetskikh Vooruzhennykh Sil', Table 1, No. 40.

<sup>140</sup> Kobrin and Abaturov, 'Sokrushenie vostochnogo vala', 303.

<sup>141</sup> BA-MA, Study ZA 1/2074, 274, 276.

contrary, their losses grew to huge proportions.<sup>142</sup> On 22 October General Vatutin had to admit that the offensive had failed.

As described earlier, the commander-in-chief of 1st Ukrainian Front then changed the plan of operations entirely, shifting the point of concentration from the Bukrin bridgehead to the bridgehead at Lyutezh.<sup>143</sup> For the German Eighth Army, 1st November marked a turning point, as the Bukrin sector was now assigned to Fourth Armoured Army, positioned to the north. On the same day a new Soviet offensive began from the Bukrin bridgehead. It was actually only a relief attack for the major offensive from the Lyutezh bridgehead, but the Soviet forces were so superior that serious danger threatened. Despite this, the attack was beaten off, and the Bukrin sector was quiet for a long time afterwards.

Eighth Army's withdrawal across the Dnieper had taken place in September 1943, in the centre at Cherkassy and on the right wing at Kremenchug, where Eighth Army units had been the last of Army Group South's troops to cross the river.<sup>144</sup> Some of them, however, were no more than remnants of divisions. One armoured division, for example, which had crossed the Dnieper at Kremenchug, was supposed to secure an 80-kilometre-wide section, but it had only four tanks left, and the superfluous tank crews were deployed as 'armoured infantry'.<sup>145</sup> On the opposite bank stood Steppe Front, with 463,500 men.<sup>146</sup> Meanwhile, the first Soviet advance troops were attempting to cross to the west bank. A bridgehead established to the south of Kremenchug at the beginning of October, on the northern wing of the neighbouring First Armoured Army, was looking dangerous. On 15 October Steppe Front launched an offensive at the interface of the two armies and pushed forward in depth towards Krivoy Rog. As described in the following section, the two German armies managed to close the gap at the beginning of November by means of a pincer attack. The same thing happened in December at Novgorodka, where Eighth Army and First Armoured Army again succeeded in stopping the Soviet advance and stabilizing the front through a combined attack.<sup>147</sup> In the meantime, however, a crisis had arisen in Eighth Army's centre. On 13 November the Soviet 52nd Army, attacking on the right wing of 2nd Ukrainian Front, had crossed the Dnieper at Cherkassy and established a bridgehead.<sup>148</sup> Soon afterwards 4th Guards Army, which was already on the west bank in the Kremenchug bridgehead, pushed north towards 52nd Army to unite the two bridgeheads.

<sup>142</sup> More than 200,000 Soviets troops are said to have been killed in September and October 1943 in the battles on the Dnieper at Bukrin. Such is the figure put forward by Korol ('The Price of Victory', 421) on the basis of Red Army documents.

<sup>143</sup> See above, section (a) 'Fourth Armoured Army in the Kiev Sector'.

<sup>144</sup> BA-MA, Study ZA 1/2073, 125. <sup>145</sup> Görlitz, *Der Zweite Weltkrieg*, 222.

<sup>146</sup> *Grif sekretnosti sniat*, 195–6. From 26 Sept. to 20 Dec. Steppe Front (= 2nd Ukrainian Front) lost 303,617 men, of whom 77,400 dead or missing.

<sup>147</sup> See below, section (c) 'First Armoured Army at Zaporozhye'.

<sup>148</sup> For a German perspective, see KTB 8. Armee, 13 Nov. 1943 (fos. 36 ff.), BA-MA RH 20-8/87.

The Cherkassy salient would again play an important role at the beginning of the next year, when it was the launch pad for the southern arm of the Soviet pincer attack in the Korsun–Cherkassy encirclement battle.

### (c) First Armoured Army at Zaporozhye

While Voronezh Front was fighting for the bridgehead at Kiev, three Soviet army fronts were engaged in an even more powerful offensive further to the south. This was the Lower Dnieper Offensive Operation (26 September to 20 December), in which 1,550,000 men, 1,160 tanks and self-propelled guns, 24,437 cannon and grenade launchers, and 2,000 combat aircraft were deployed.<sup>149</sup> How bitter the fighting was can be seen from the human losses, which totalled 754,392 men, of whom 173,201 dead or missing.<sup>150</sup> The material losses are even more striking: they totalled 2,639 tanks and assault guns, that is, more than twice as many as were available when the operation started at the beginning of October.<sup>151</sup> That figure not only shows the intensity of the fighting and the brutal mass deployment, but also testifies to the output achieved by the Soviet industrial giants. A huge number of additional fighting vehicles were delivered to the front in the course of the battle. What worried the Germans most was that the mass of those huge resources was concentrated against a single German army: First Armoured Army at Zaporozhye was attacked frontally from the east by the whole of South-West Front (from 20 October renamed 3rd Ukrainian Front), harried from the north by most of the units of Steppe Front (2nd Ukrainian Front), and attacked from the south in the Nikopol sector by several armies of South Front (4th Ukrainian Front).

### *The Zaporozhye Bridgehead*

In August 1943, because of the unfavourable course of the front, First Armoured Army found itself in the most dangerous position of all the major German formations. It had to defend the Dnieper salient at Zaporozhye, which protruded far to the east. Since the ‘untenable bulge’ tied down far too many forces, withdrawal to a shortened defensive line further to the west would have been preferable.<sup>152</sup> But Hitler overstretched First Armoured Army’s exposed front even further by having a bridgehead established on the east bank at Zaporozhye, at the apex of the Dnieper loop. The bridgehead, over 40 kilometres wide and up to 20 kilometres deep, was defended by units of XXXX Armoured Corps and XVII Army Corps, although First Armoured Army, with its five cobbled-together corps, was actually in no condition to defend such an endangered bridgehead. From 17 July to the end of September it suffered 48,000 casualties and received only 8,400 reinforcements.<sup>153</sup> Despite this, following

<sup>149</sup> *Geschichte des zweiten Weltkrieges 1939–1945*, vii. 316.

<sup>150</sup> *Grif sekretnosti sniat*, 195–6.

<sup>151</sup> *Ibid.* 371.

<sup>152</sup> Philippi and Heim, *Der Feldzug gegen Sowjetrussland*, 219, 224; Tippelskirch, *Geschichte des Zweiten Weltkrieges*, 340.

<sup>153</sup> KTB 1. Panzerarmee, 29 Sept. 1943 (fo. 130), BA-MA RH 21-1/112.

withdrawal to the Dnieper Line at the end of September it had to cover a 255-kilometre stretch of front. The combat strengths of its units had fallen dramatically, resulting in very asymmetric coverage. While there were 118 infantrymen per kilometre of front in the Zaporozhye bridgehead, the average density in the rest of the army's combat zone was only 56 per kilometre.<sup>154</sup>

From the operational point of view, the bridgehead did not seem too important. It served as 'flank protection' for the neighbouring Sixth Army (Army Group A), which had to defend the Wotan Line between the Dnieper and the Sea of Azov. But Hitler justified his decision mainly on war-economy grounds. Zaporozhye was the site of the Dnieper dam and the Lenin hydroelectric power station. Hitler argued that the electricity generated by the power station was indispensable for the West Ukrainian industrial area, although its importance had diminished considerably as a result of falling production. The dictator was also moved by considerations of prestige, since the gigantic dam was a showpiece of Soviet industrialization policy. Hitler's arguments met with great unease on the part of Field Marshal Manstein, however, since defending the dam deprived him of XXXX Armoured Corps, his one and only mobile reserve.<sup>155</sup>

It very soon became apparent how important the troops tied down east of the Dnieper would have been for the conduct of operations. In the case of First Armoured Army too, Hitler had given permission for withdrawal to the Panther Line much too late, and it was not until the evening of 29 September that the last German units were able to take up their new positions on the west bank. Once again, German underestimation of the Russian soldier backfired. The Red Army had striking weaknesses in free and combined-arms combat, but in overcoming terrain obstacles such as marshes or water courses the Soviet troops displayed an astonishing ability to improvise. On 25 September they had already managed to cross the Dnieper, in some places using fishing-boats and self-built rafts, and gain a foothold on the west bank.<sup>156</sup> Most of these bridgeheads were eliminated or contained, but on the northern wing of First Armoured Army, south-east of Kremenchug, 7th Guards Army and 37th Army established an operational bridgehead on both sides of the Vorskla estuary that could serve as a springboard for an offensive by Steppe Front.<sup>157</sup>

First Armoured Army HQ's main immediate concern, however, was an offensive against the Zaporozhye bridgehead launched by the left wing of South-West Front on 10 October, in which 3rd and 8th Guards Army, plus 12th Army, attacked at very close range with 150,500 men, supported by aircraft from 17th Air Army.<sup>158</sup> As Manstein stresses in his memoirs, this was the first appearance of massed artillery. The enemy laid down 'a barrage of shellfire bigger than anything we had seen to date'.<sup>159</sup> In contrast, First Armoured Army's war diary recorded its own

<sup>154</sup> Ibid., 27 Sept., fo. 121.

<sup>158</sup> *Grif sekretnosti sniat*, 226. From 10 to 14 Oct. 1943 the Soviet side lost 17,708 men, of whom 3,443 dead or missing, in the Zaporozhye Offensive Operation.

<sup>159</sup> Manstein, *Verlorene Siege*, 547.

'chronic shortage of ammunition'.<sup>160</sup> The Soviet attackers broke through and entered Zaporozhye on 14 October. The following night the Germans evacuated the bridgehead after blowing up the bridges and the dam.<sup>161</sup> Field Marshal von Manstein later commented on this episode: 'In any case, we had been made to pay far too dearly for Hitler's insistence on holding the bridgehead.'<sup>162</sup> Once again the dictator had meddled in the business of the military experts, with the result that neither his utopian strategic aims nor the realistic tactical objectives of his generals were achieved. Since XVII Army Corps and XXXX Armoured Corps had senselessly been obliged to cover the untenable bridgehead east of the Dnieper, there were no sufficient forces available to eliminate the Soviet bridgeheads on the west bank of the river.

### *The Breakthrough in the Area of the Neighbouring Sixth Army*

Meanwhile, there were dangerous developments on First Armoured Army's right flank.<sup>163</sup> Sixth Army, which had been assigned to Army Group A since 17 September, was deployed there on the Wotan Line between the Dnieper bend south of Zaporozhye and the Sea of Azov. In that sector the Soviet South Front (4th Ukrainian Front) launched the Melitopol Offensive Operation (26 September to 5 November). Of the 555,300 men deployed in the first phase of the attack, a total of 198,749 were lost, of whom 42,760 dead or missing.<sup>164</sup> Sixth Army faced an assault by five Soviet armies, supported by 8th Air Army, and in the course of the battle the Soviet forces were joined by 3rd Guards Army and several independent units. Moreover, the Nogai Steppe, lacking trees and bushes, afforded no cover and hardly any natural obstacles. The German troops felt as if they were served up to the enemy fire on a platter. Even the much-mentioned Wotan Line was no more than a hastily dug anti-tank ditch and a few trenches. On that flat terrain South Front deployed 800 tanks, against which Sixth Army could pit only 65 battle tanks and 98 assault guns.<sup>165</sup>

The advance on Melitopol began on 9 October. It was characterized by the Red Army's typical obstinacy, with many attacks repeated as many as thirty times in the same place.<sup>166</sup> Since the Soviet side paid no regard to losses and clearly possessed sufficient reserves, the 'law of numbers' finally decided the outcome. After Melitopol fell on 23 October, the Soviet units were able to push forward in depth. At the beginning of November they reached the approaches to the Crimea at Perekop and cut off Germany's Seventeenth Army on the peninsula, splitting Army Group A in two.

<sup>160</sup> KTB 1. Panzerarmee, 11 Oct. 1943, fos. 47–8, BA-MA RH 21-1/113.

<sup>161</sup> BA-MA, Study ZA 1/2074, 277.

<sup>162</sup> Manstein, *Verlorene Siege*, 547.

<sup>163</sup> The operations of Army Group A are dealt with in a special chapter; see Chapter IV, 'The Withdrawal of Army Group A through the Crimea to Romania'. Since Sixth Army was temporarily assigned to Army Group South and its combat operations were closely interconnected with those of the neighbouring First Armoured Army, that subject is also discussed here.

<sup>164</sup> *Grif sekretnosti sniat*, 226.

<sup>165</sup> 'Abwehrschlachten der 6. Armee', 31, BA-MA RH 20-6/326.

<sup>166</sup> BA-MA, Study ZA 1/2073, 213.

Meanwhile another Soviet shock group had pushed forward south of the Dnieper as far as its estuary. The attempt to subject Sixth Army to a 'second Stalingrad' was nevertheless unsuccessful. Its units escaped the threatened enclosure on the north bank of Dnieper. The left wing, consisting of IV and XXIX Army Corps, remained largely intact and was able to form a stable bridgehead on the south bank at Nikopol. On 3 November both army corps were placed under the command of First Armoured Army and assigned to the defence of its newly formed right flank. Hitler was strongly fixated on the bridgehead and rejected all demands from his generals for its evacuation. He saw it as an advanced bastion protecting the Nikopol manganese district and hoped to use it as the springboard for a renewed push on Crimea to re-establish the connection with Seventeenth Army.<sup>167</sup> To the contrary, the commanders-in-chief of Army Groups A and South, Ewald von Kleist and Manstein, both demanded the withdrawal of all German troops from the Crimea. As already discussed, Field Marshal von Manstein had also demanded evacuation of the exposed Dnieper salient at Zaporozhye to release reserves for a counter-strike in the army group's northern sector.<sup>168</sup> In his view, pushes from the Soviet bridgeheads that had arisen there constituted the greater danger.

#### *The Soviet Advance on Krivoy Rog and the German Counter-Attack*

The situation was getting very critical on First Armoured Army's left wing to the south of Kremenchug. By the beginning of October the Soviet 7th Guards Army and 37th Army had crossed the Dnieper on both sides of the Vorskla estuary at Mishurin Rog, creating an operational bridgehead which Steppe Front (from 20 October '2nd Ukrainian Front') could use for a new offensive. First Armoured Army HQ reacted by attaching LVII Armoured Corps and LII Army Corps to the 'Kirchner Group' on its endangered left wing. This group nevertheless consisted only of remnants of individual infantry divisions and 23rd Armoured Division, which was why 6th and 9th Armoured Divisions, as well as Armoured Infantry Division 'Grossdeutschland', had been assigned to it until mid-October.<sup>169</sup> In the meantime, however, 57th Army and 5th Guards Army had been added to the forces in the expanded Soviet bridgehead. In addition, 5th Guards Armoured Army and other reserves, including an armoured corps and a mechanized corps, were stationed in readiness on the east bank of the Dnieper. Altogether, some 900 armoured fighting vehicles were available.<sup>170</sup>

On 15 October, Steppe Front, with support from 5th Air Army, opened an offensive to break out of the bridgehead. The attack, aimed at the interface of First Armoured Army and Eighth Army, drove a wedge between the two German armies. In the second wave, the Soviet armoured units pushed forward as far as 12 kilometres and reached Krivoy Rog on 24 October. That day LVII Armoured

<sup>167</sup> BA-MA, Study ZA 1/2074, 289–91.

<sup>168</sup> See above, section (a) 'Fourth Armoured Army in the Kiev Sector'.

<sup>170</sup> Manstein, *Verlorene Siege*, 549.

Corps reported that there was no longer any chance of halting the advance of the superior enemy forces:

The troops are now so exhausted that they cannot cope with a powerful Russian attack. Should they be subjected to one, a breakthrough must definitely be expected. The only possibility of preventing it is to withdraw 3 to 5 km a day when strong preparations have been detected. That distance, by and large, makes little difference to the army's operations, but it forces the enemy each time to bring his artillery up again, change his force deployment, and conduct time-consuming reconnaissance.<sup>171</sup>

In response, the commander-in-chief of First Armoured Army reported to Army Group HQ that same day: 'The mass of the troops, who have been confronting the enemy in heavy fighting since July without a break, have reached the end of their physical and mental endurance [...] They will again be capable of defence only if they are released from the battlefield for at least a short period of rehabilitation. As things stand, they are worn to shreds.'<sup>172</sup> On 25 October, to make the inevitable catastrophe complete, 3rd Ukrainian Front (formerly South-West Front) also opened an offensive. It attacked from its bridgeheads on either side of Dnepropetrovsk and joined them up with those of 2nd Ukrainian Front to form a 'strategic' bridgehead.

The situation had become so threatening that Hitler waived his usual static defence concept (establishment of a holding line and defence to the last extremity). The gap in the front between First Armoured Army and Eighth Army had widened so much that it could no longer be closed with the forces available. The generals were thus faced with the task of closing the breach at Krivoy Rog by means of 'free combat' attacks. That was to be accomplished through a pincer attack by two German armoured corps in the flanks and rear of the Soviet armoured units which had broken through. The right pincer arm consisted of LVII Armoured Corps, already stationed on First Armoured Army's northern wing, but Eighth Army, standing opposite, was in no condition to provide armoured units for the left-hand pincer arm. Consequently, XXXX Armoured Corps HQ was moved in a sweeping 'castling manoeuvre' from the right wing of Army Group South at Zaporozhye straight through the hinterland of First Armoured Army to the right wing of Eighth Army. SS Armoured Infantry Division 'Totenkopf', 24th Armoured Division (brought up from Italy), and 14th Armoured Division (rushed in from the west) were also moved to that position. On 28 October XXXX Armoured Corps began its attack in a south-easterly direction towards Krivoy Rog. Taking advantage of the element of surprise, the three mechanized divisions thrust into the rear of 5th Guards Army. Two days later LVII Armoured Corps, with 11th and 23th Armoured Divisions, attacked in the opposite direction from the reconquered city of Krivoy Rog. The two pincer arms met on the Ingulets river, cutting off the Soviet armoured units which had forged ahead.<sup>173</sup> By 2 November the gap between the two German armies had been closed. In addition to numerous prisoners, the

<sup>171</sup> KTB 1. Panzerarmee, 24 Oct. 1943, fo. 118., BA-MA RH 21-1/113.

<sup>172</sup> Ibid., fo. 120.

combined attack yielded booty of 350 tanks, 95 cannon, and 263 anti-tank and anti-aircraft guns.<sup>174</sup>

On 4 November the leadership of First Armoured Army changed. Col.-Gen. Eberhard von Mackensen handed over command to Gen. Hans Hube. In the weeks before Christmas the fighting in the army's sector ebbed and flowed. The Soviet side seemed wholly unimpressed by the defeat at Krivoy Rog and the losses it had suffered there. It rapidly resumed its attacks at the interface of First Armoured Army and Eighth Army and on 5 December achieved a breakthrough at Novaya Praga. The units of 2nd Ukrainian Front pushed further west and took Novgorodka on 10 December. There followed a repeat of the German pincer attack which had succeeded at Krivoy Rog in November. On this occasion the right pincer arm consisted of First Armoured Army's 13th and 17th Armoured Divisions, while the left was formed by Eighth Army's 11th and 14th Armoured Divisions. The enemy was beaten again, and Novgorodka was retaken on 21 December. The gap between the two armies was closed by 2nd Paratroop Division, which had been rapidly brought in.<sup>175</sup> This time the Soviet attackers lost 274 tanks and assault guns, and 306 cannon.<sup>176</sup> Meanwhile, several armies of 4th Ukrainian Front attacked the German bridgehead at Nikopol from the south, but failed to achieve a breakthrough. The situation in the Dnieper salient was getting more and more critical, however, as 3rd Ukrainian Front not only enlarged its bridgehead north of Zaporozhye but also managed to form another bridgehead on the west bank. Despite this, Hitler refused to listen to all his generals' requests that the Dnieper salient be evacuated in order to free units for the constitution of a reserve. Instead, he persisted with the illusory plan to use Nikopol as the starting point for reconquest of the approach to the Crimea. As a result, First Armoured Army's overstretched front extended far to the east in the shape of a wedge, with Zaporozhye as its exposed tip. To hold such an unfavourable front line against a far superior attacking force must have seemed a hopeless proposition.

## 5. THE START OF THE SOVIET DNIEPER–CARPATHIAN OFFENSIVE AT THE TURN OF 1943/4

By 23 December the Red Army had lost 1,687,164 men in the Battle of the Dnieper, of whom 417,323 dead or missing.<sup>177</sup> Yet its human and material reserves seemed inexhaustible. The state of Army Group South's units, however, can be judged from a report by Col. Oldwig von Natzmer, a general staff officer from Armoured Infantry

<sup>174</sup> KTB Op.Abt. OKH, 2 Jan. 1943, BA-MA RH 2/3062; Manstein, *Verlorene Siege*, 550.

<sup>175</sup> BA-MA, Study ZA 1/2074, 317–20; 'Gefechtsbericht des LII. AK über die Abwehrschlacht im Raume Nowaja Praga–Werbljushka–Nowgorodka vom 5.12. bis 21.12.1943', fos. 145–50), BA-MA RH 21-1/120.

<sup>176</sup> 'Gefechtsbericht des LII. AK', 11, fo. 150.

<sup>177</sup> Kobrin and Abaturov, 'Sokrushenie vostochnogo vala', 323.

Division 'Grossdeutschland', which was one of the Wehrmacht's elite units. In December 1943 Natzmer described the condition of those troops as follows:

In all sections, up to and including the regimental staffs, an unsurpassable degree of exhaustion has been reached [...] The result of these incessant battles is that most of the officers and almost all the NCOs are out of action [...] Almost all the men are in such a state of apathy that it is all the same to them whether they are shot by their own officers or by the Russians [...] I have no idea how we are supposed to hold our present or any other positions against the further attacks to be expected [...] Actual trench strengths are so low that, in most cases, a man in his hole cannot see his neighbour [...] This morning our strongest battalion, 1st Infantry Rgt., deployed in the trench: 4 NCOs and 17 men from miscellaneous branches (emergency supply units, and the like), 2 NCOs and 18 men from the recon. btl., and the division's sapper btl., with a strength of 2 NCOs and 22 men. The whole bunch is called 1st Infantry Rgt. G.D. [= Grossdeutschland] and has to hold a position 2.3 km long with its 8 NCOs and 57 men. Enough said.<sup>178</sup>

As a result of the lack of replacement personnel, Army Group South had only 328,397 men available at the end of December 1943, plus 109,816 men serving in Allied and foreign units.<sup>179</sup> Although Manstein's army group numbered as many as 14 armoured divisions, it had only 199 operational battle tanks ready for action.<sup>180</sup> On 20 January Air Fleet 4 had a total strength of 625 aircraft (see Table IV.iii.2), but those planes had to support both Army Group South and Army Group A.<sup>181</sup> According to an assessment by a German general, the enemy appeared 'to have grown bolder, since his massed attacks against thin German lines lacking ammunition were almost without risk. Even if the Russian infantry increased its numbers with people rounded up in the reconquered territories and put straight into uniform, the decisive factor was that their mass finally overwhelmed the German defenders.'<sup>182</sup>

The new course of the front was also very unfavourable to Army Group South. Almost everywhere the German defenders had been forced back westwards from the Dnieper. Only in the centre, at Kanev, was there a salient reaching as far as the river, where the German forces had managed to hold a 40-kilometre stretch of riverbank. On the southern wing, however, the lower reaches of the Dnieper were still in German hands. There, in the Dnieper salient at Zaporozhye protruding far to the east, units of First Armoured Army were deployed in an exposed position. The situation on the northern wing at Korosten had become even more critical. Along the Pripet river there was a yawning 100-kilometre gap from Army Group Centre that could not be closed. It gave rise to what was, from the operational viewpoint, a remarkable asymmetry in the distribution of forces. Field Marshal von Manstein did not see why he should have to contend with an enormous hole, while

<sup>178</sup> Communication of 1 Dec. 1943 from Gen. Staff Col. Natzmer to Laegeler, BA-MA RH 21-1/120, fos. 20-6; BA-MA, Study ZA 1/2075, 193-4.

<sup>180</sup> Müller-Hillebrand, *Das Heer*, iii. 135. This figure applies to 20 Nov. 1943.

<sup>181</sup> Operational status reports for 20 Jan. 1944, BA-MA RL 2-III/728, calculated by Ulf Balke in the light of additional documents from his private archive.

<sup>182</sup> BA-MA, Study ZA 1/2074, 326. The analysis is based on a statement by Gen. (ret.) Theodor Busse, former chief of staff of Army Group South (see *ibid.*)

units he needed urgently were deployed on the southern wing in defence of a salient that was in any case untenable. But Hitler repeatedly refused evacuation of the Dnieper salient or the Crimea. For the sake of unrealistic strategic objectives, he placed the point of concentration in the south, whereas Manstein was demanding that the point of concentration of his Army Group be shifted to the endangered northern wing. The commander-in-chief of Army Group South was convinced ‘another heavy storm was brewing’, and the operation that began on 24 December proved him right.

That day Army Group South was subjected to one of the most powerful offensives of the war. Four Soviet army groups—1st, 2nd, 3rd, and 4th Ukrainian Fronts—were ranged against it. Not counting the troops deployed against the Crimea, the four army fronts started the offensive with 2,230,000 men, 28,654 cannon and grenade launchers,<sup>183</sup> 2,015 tanks and assault guns, and 2,600 combat aircraft.<sup>184</sup> In the course of the operation the following units were brought in and added to the forces deployed: 2nd Belorussian Front HQ; the operations staffs of 47th, 61st, and 70th Armies, and of 2nd, 4th, and 6th Armoured Armies; six armoured corps, two mechanized corps, and 33 divisions, as well as 6th Air Army.<sup>185</sup> The enormous scale of the reinforcements is shown by the fact that while 2,015 fighting vehicles were available at the start of the offensive, the number lost in the course of the operation was 4,666.<sup>186</sup> In this phase of the war the Red Army’s point of concentration lay unambiguously in the sector of Army Group South, against which all six armoured armies were temporarily deployed. Also important was the deployment of some 50,000 partisans, who caused great damage in the hinterland and tied down large numbers of German troops.<sup>187</sup> The ensuing offensive to liberate the Western Ukraine was designated ‘Dnieper–Carpathian Strategic Offensive Operation’.<sup>188</sup> It began on 24 December 1943 and lasted, depending on how the end point is defined, until 17 April or 6 May.<sup>189</sup>

### (a) Fourth Armoured Army’s Withdrawal and First Armoured Army’s Counter-Attack

The first action, known as the Zhitomir–Berdichev Offensive Operation (24 December 1943 to 14 January 1944), was carried out by 1st Ukrainian Front under General Vatutin. Seven general armies and two armoured armies attacked the northern wing of Army Group South, which was defended by Fourth Armoured Army. A total of 831,000 troops were committed from the outset, and within three weeks personnel

<sup>184</sup> *Geschichte des zweiten Weltkrieges 1939–1945*, viii. 84.

<sup>185</sup> *Grif sekretnosti sniat*, 197.

<sup>186</sup> Ibid. 371.

<sup>187</sup> Eliseyev and Mikhalev, ‘Osvobozhdenie’, 51.

<sup>188</sup> Also designated ‘Dnieper Right-Bank Operation’.

<sup>189</sup> According to the latest edition of the standard work *Velikaya Otechestvennaya Voina*, ‘The date given in Soviet historiography for the end of the strategic operation (17 April) is wrong, since on that day, on orders from the Stavka, only 1st Ukrainian Front went over to the defensive. That dating avoids investigation of the unsuccessful combat operations of two army fronts which were supposed to achieve their previously assigned tasks within 19 days (after which they too went over to the defensive).’ See Eliseyev and Mikhalev, ‘Osvobozhdenie’, 33.

losses amounted to 100,018 men, of whom 23,163 dead or missing.<sup>190</sup> The attacking forces had at their disposal 1,125 tanks and self-propelled guns, 11,387 artillery cannon and grenade launchers, and 529 combat aircraft.<sup>191</sup> Soviet superiority was so great that the German defenders were scarcely able to pit anything against it.<sup>192</sup> In a short time the attacking wedges of 1st Ukrainian Front were pushing towards Korosten, Zhitomir, and Berdichev, splitting the Germany Fourth Armoured Army front into several parts that fought a difficult retreat westwards. By the end of December the Soviet advance troops had gained almost 100 kilometres in some places.

In this critical situation Field Marshal von Manstein conceived a plan which was tantamount to a repeat of his famous 'castling manoeuvre' in the spring of 1943. On that occasion, faced with the entirely inevitable collapse of the front, he had switched Fourth Armoured Army from the left to the right wing of his army group and inflicted a heavy defeat on the advancing Soviet armies by means of a flanking attack. Manstein had obtained the forces for that counter-offensive by shortening the front on the right wing, despite Hitler's opposition.<sup>193</sup> However, the dictator had since become even more stubborn in his insistence on static defence and was now spellbound by the Nikopol bridgehead and its supposedly indispensable ore deposits. Commenting on this fixation of Hitler's, Lt.-Gen. Max Bork, then chief of staff of Sixth Army, later remarked: 'Neither the commanders nor the troops took Hitler's constantly repeated "Nikopol" argument seriously, since the extraction of manganese ore had already stopped in the winter of 1943/4 and the stocks at the mine could not be moved owing to the transport situation in the Romanian region, which had been difficult since the beginning of hostilities in the sector and was by then beyond repair.'<sup>194</sup> In Hitler's imagination, moreover, Nikopol was the springboard for re-establishing the connection with the Crimea.<sup>195</sup> He rejected Manstein's demand to abandon terrain so as to free up troops for 'operations'. Hitler reacted allergically to the term 'operation', calling it a 'pompous expression'.<sup>196</sup> 'Operating and ripping out are the same thing,' he declared.<sup>197</sup> In any case, Manstein was no longer aiming at a repeat of his brilliant victory at Kharkov in the spring of 1943. Rather, he wanted to move the point of concentration from the right to the left wing of his army group in order to remedy the situation by means of offensive defence, that is, counter-blows in the open flanks of the Soviet attacking forces. Col.-Gen. Zeitzler also had no illusions about the Russian offensive: 'If we can manage to halt this onslaught by the enemy, we can count it a victory. But defeating him is out of the question.'<sup>198</sup>

Source: Operational status reports, 20 Jan. 1944, BA-MA, RL 2-III/728, and documents from the Ulf Balke collection.

As Hitler would only accept some marginal adjustments to the front at Zaporozhye, Manstein decided to execute a castling manoeuvre on his own authority. He ordered First Armoured Army to pull back from the front and move to the north between Fourth Armoured Army and Eighth Army. In so doing, he took advantage of the fact that, as from 1 January 1944, Sixth Army was going to be transferred from Army Group A to Army Group South and take over First Armoured Army's combat zone in addition to its own. First Armoured Army left a few infantry divisions in the old positions, while its HQ and two armoured divisions, an armoured infantry division, and an infantry division, were moved to what had been the right wing of Fourth Armoured Army, and the units already positioned there were placed under its command. Hitler was informed of this after the event, but nevertheless approved Manstein's action because it did not involve any relinquishment of the Dnieper salient.

That, however, was precisely what the field marshal wanted to achieve in order to gain more divisions for the northern wing, where the two Soviet shock groups had made dangerous breaches in the front through which armoured units were advancing in depth. Moreover, an offensive by 2nd Ukrainian Front against Kirovograd was imminent. On 4 January Manstein flew to Führer headquarters with the firm intention of getting Hitler to give up Nikopol and thus the Crimea too. Withdrawal from the Dnieper bend alone would shorten the front for Sixth and Eighth Armies by 900 kilometres to about half its length. Bringing Seventeenth Army from the Crimea to the mainland would mean that Manstein could at last form a new point of concentration on his army group's northern wing, where a new army could be assembled in the Rovno area to meet the threat of wide-ranging envelopment by the enemy. He adjured Hitler that if the position was not stabilized once and for all, the entire southern wing of the eastern front would be 'in mortal danger', and Army Groups A and South would ultimately meet their end in Romania or on the Black Sea. But the attempt to get Hitler to change his mind was, in Manstein's view, 'quite futile'.<sup>199</sup>

The dilemma was that two huge gaps had been opened up on Army Group South's northern wing, with the inevitable result that Fourth Armoured Army would be cut off. On one side, a 100-kilometre breach had arisen between Army Groups Centre and South along the Pripet marshes, through which Soviet units were advancing past the northern wing of Fourth Armoured Army towards Sarny. On the other, there was a breach 75 kilometres wide on Fourth Armoured Army's southern wing. Since Hitler refused evacuation of the Dnieper bend, Manstein could at best plug one of the gaps with the forces available. He therefore decided to accept the risk of an open northern flank for the time being, even if that meant a far-flung outflanking movement round Fourth Armoured Army's northern wing. The field marshal calculated that a continuation of the enemy's advance on the army group's northern flank would not constitute a 'direct threat to our existence' until later on.<sup>200</sup> The immediate danger, as he saw it, was the gap on Fourth

<sup>199</sup> Manstein, *Verlorene Siege*, 569–72.

<sup>200</sup> Ibid. 576.

Armoured Army's southern wing, since from there the enemy could enclose the German units positioned further east in the salient on the Dnieper to the west of Cherkassy. The Red Army would then be able to carry out an encirclement operation in the direction of the Black Sea coast, which, if successful, would mean the end of Army Groups South and A. For that reason, as already discussed, Manstein ordered First Armoured Army, with its strongest units, to move into position between Fourth Armoured Army and Eighth Army to the south. Nevertheless, it seemed hardly possible, at first, to stem the advance of the Soviet forces streaming through the gap, which were mainly units of 1st Armoured Army, with some 600 tanks,<sup>201</sup> and 38th and 40th Armies.<sup>202</sup> On 9 January a Soviet wedge pushed forward to within 20 kilometres of Uman, which was First Armoured Army's new supply base, and a second wedge could not be stopped until just before Zvenigorodka. The most dangerous advance, however, threatened Vinnitsa, where Army Group South HQ had been located until a few days previously. Soviet tanks crossed the Bug to the south of the city on 10 January and pushed forward to Zhmerinka.

Army Group South proceeded on the assumption that the 'Uman gap' could not be closed by forming a static front in accordance with Hitler's views. Soviet superiority seemed too great. Above all, the onward-rolling masses of the enemy forces could no longer be stopped by frontal opposition. The only chance was to 'stake everything on one card' and 'resort to offensive defence'.<sup>203</sup> The counter-strike was to be directed mainly at the flanks and rear of the enemy's advanced wedges. Manstein assembled three shock groups, which were to attack concentrically from three directions: from the east VII Army Corps, from the south III Armoured Corps, and from the west XXXXVI Armoured Corps, which had been brought in from France.<sup>204</sup> Operational command was assigned to First Armoured Army.<sup>205</sup> In the first phase of the counter-attack large parts of the Soviet 40th Army were smashed in the east of the gap. On 15 January the Soviet units which had advanced on Zvenigorodka and Uman were cut off from their connections in the rear.<sup>206</sup> However, there was not enough infantry available to exploit the victory to the full, and the encircled units had numerical superiority. An entry in the war diary reads: 'In the combat area of 17th Armd.Div., it is not quite clear at present "who is encircling whom".'<sup>207</sup> Only after more troops were brought in could possession finally be taken of the area, and some of the encircled units had meanwhile fled in disarray. In the second phase of the counter-attack, several units of the Soviet 38th Army and First Armoured Army were destroyed in the west of the gap. The pincer attack by III and XXXXVI Armoured Corps began on 24 January, and the spearheads of the two corps joined up at Oratove four days later.<sup>208</sup> An important

role in this attack was played by Heavy Armoured Regiment Bäke, consisting of one Tiger and one Panther battalion, which had only been formed in mid-January and had already knocked out 268 Soviet tanks and assault guns within a week.<sup>209</sup> Large parts of seven out of eight Soviet divisions were encircled, but this time too several units managed to escape, leaving their material behind.<sup>210</sup> According to German sources, around 700 enemy tanks and 680 cannon were captured or destroyed during the second phase of the attack alone.<sup>211</sup> Given the threatening operational situation overall, it would nevertheless be wrong to describe this as a German victory. It was simply an offensively conducted defensive success which prevented or at least delayed a major disaster.

### (b) Eighth Army at Kirovograd

As Manstein feared, it was the centre of his army group that was most strongly threatened. There the front stretched far to the east and ran further along the Dnieper to the north of Cherkassy. It had been possible to hold onto a 40-kilometre-wide stretch of riverbank near Kanev, where the German front line formed, in Manstein's words, 'a sort of sack, of which the top was hitched to the Dnieper in the north' and the two sides constituted exposed flanks facing east and west respectively. If the enemy mounted a successful pincer attack, it would be only too easy for him 'to isolate this "sack" in the south'.<sup>212</sup> The commander-in-chief of Army Group South therefore insisted that it was necessary to give up the exposed salient, especially as forces were tied down there to no purpose. Hitler, however, categorically rejected voluntary evacuation. He persisted in hoping that this bulge in the front could one day be used as the starting point for reconquering the eastern part of the Dnieper bend. So the 'sack' remained, later to become the Cherkassy–Korsun encirclement.

At the beginning of January the Red Army already attempted to enclose the German units in the bulge through a pincer manoeuvre by 1st and 2nd Ukrainian Fronts.<sup>213</sup> The thrust by Vatutin's 1st Ukrainian Front, which failed to achieve an operational breakthrough because of the German counter-attack, has already been described above. Ivan Stepanovich Konev's 2nd Ukrainian Front was even less successful at Kirovograd. It had huge armoured forces at its disposal and had been further reinforced by two mechanized corps. In addition, 2nd Ukrainian Front received approximately 400 more tanks and self-propelled guns at the end of December.<sup>214</sup> The attack began on 5 January, with the point of concentration

directed at Eighth Army's right wing.<sup>215</sup> By 8 January Kirovograd had already been taken, but the main aim of encircling the defenders was not achieved. Instead, the German forces were able to pull back and establish a new defence line.<sup>216</sup> In this critical situation a German counter-attack spearheaded by Armoured Infantry Division 'Grossdeutschland' was decisive. According to a more recent Russian account, the Kirovograd operation was 'too hastily prepared'. Once again it was 5th Guards Armoured Army, thrown into action on the first day, which paid the price. Although a tactical breakthrough was achieved right away against the weak German defence, Pavel Alekseyevich Rotmistrov's units lost almost half their combat strength.<sup>217</sup> On the German side, the battle of Kirovograd was accounted a 'great success', given the enemy's overwhelming superiority.<sup>218</sup> The use of that expression shows how modest the operational objectives had since become. All the same, the enemy had lost 623 tanks and assault guns according to German sources, and had failed to achieve an operational breakthrough.<sup>219</sup> On 16 January, after several further unsuccessful attacks on the 'flexibly fighting'<sup>220</sup> Eighth Army, 2nd Ukrainian Front went over to the defensive.

## 6. THE BREAKOUT FROM THE CHERKASSY–KORSUN POCKET (24 JANUARY TO 17 FEBRUARY 1944)

### (a) The Encirclement (24 to 31 January)

'Defending in Russia means losing.'<sup>221</sup> This aphorism, coined by Lt.-Gen. Nikolaus von Vormann, who commanded XXXXVII Armoured Corps in the battle of Cherkassy–Korsun,<sup>222</sup> aptly sums up Hitler's failed strategy of 'holding on'. Yet, paradoxically, some decisions to defend certain sectors of the front to the last extremity sprang less from rigid defensive thinking than from reckless offensive strategy. At the beginning of 1944 Hitler was fixated on the Kanev salient northwest of Cherkassy, which was the only sector in which the German front still extended to the Dnieper. He planned to use it in the spring as the launch pad for an offensive in the direction of Kiev which would throw the Red Army back over the

<sup>215</sup> KTB 8. Armee, 5 Jan. 1944, BA-MA RH 20-8/124; Vormann, *Tscherkassy*, 29 ff.; Konev, *Aufzeichnungen eines Frontoberbefehlshabers*, 86 ff.; BA-MA, Study ZA 1/1220, 156 ff.

<sup>219</sup> A total of 93 of the Soviet fighting vehicles destroyed were knocked out by the Luftwaffe; *ibid.* fo. 14 (= appendix).

<sup>220</sup> BA-MA, Study ZA 1/2074, 388.

<sup>221</sup> Vormann, *Tscherkassy*, 62.

<sup>222</sup> The German designation 'Kesselschlacht von Tscherkassy' ('Cherkassy Encirclement Battle') is geographically incorrect, since the town of Cherkassy was outside the encirclement and was not involved in the fighting. Soviet literature speaks of the battle of Korsun or Korsun Shevchenkovsky, a town which lay at the centre of the encirclement. The event is also referred to as the 'Cherkassy–Korsun Encirclement Battle', and this last term has been adopted in the following discussion as a compromise between the two designations.

Dnieper. Army Group South HQ tried in vain to dissuade him from his ‘entirely unrealistic’ intention.<sup>223</sup> The trapeze-shaped salient was 140 kilometres wide at the base, tapering at Kanev to a width of 70 kilometres, and about 90 kilometres long. The western half was held by XXXXII Army Corps (First Armoured Army) and the eastern half by XI Army Corps (Eighth Army).

At the beginning of January the Red Army had already attempted to cut off the salient by means of a broad pincer movement. The plan had been for the two wedges to push forward in depth to the Bug. As already discussed, First Armoured Army managed to stop the thrust by 1st Ukrainian Front at Uman and in turn enclose the Soviet pincer forces. The attack by 2nd Ukrainian Front, aimed at Pervomaysk on the Bug, was even less successful, resulting only in the capture of Kirovograd. But although Eighth Army had managed to hold its positions, it was now facing a major threat on its flanks. ‘The last moment’ had come when the exposed troops could be ‘saved from inevitable disaster by swift withdrawal to the south-west’.<sup>224</sup> Despite all the warnings, however, Hitler stuck by his intention to defend the salient.

After the ambitious attempt at wide-ranging encirclement had led to nothing, Red Army high command decided on a simpler approach. The new plan was to cut the Kanev salient off directly at the base. To that end, strong armoured forces were to push forward by the shortest route from the west and east and join up at Zvenigorodka. The western pincer arm was formed by 1st Ukrainian Front, where General Vatutin concentrated 27th and 40th Armies, plus 6th Armoured Army as the spearhead, supported by 2nd Air Army. The attack from the east was to be conducted by 2nd Ukrainian Front under General Konev, which had 5th Guards Armoured Army, 52nd and 53rd Armies, 4th Guards Army, and the air units of 5th Air Army at the ready. In the initial phase of the offensive the two army fronts already deployed a total of 336,700 men,<sup>225</sup> 524 tanks and assault guns,<sup>226</sup> 5,300 cannon and grenade launchers,<sup>227</sup> and 1,054 combat aircraft.<sup>228</sup> During the three-and-a-half weeks of the operation, numerous reinforcements were brought in. For its part, 1st Ukrainian Front received in addition 2nd Armoured Army, large parts of 1st Guards Armoured Army, 47th Army, V Mechanized Corps, and VI Guards Cavalry Corps. Between 22 January and 3 February alone, 400 new T-34s were delivered.<sup>229</sup> On the eastern side, 2nd Ukrainian Front was reinforced by V Guards Cavalry Corps and other large formations. The aerial forces also received reinforcements, including an additional ground-attack corps, a fighter corps, two independent ground-attack divisions, and an independent fighter division.<sup>230</sup> Apart from this, the Red Army launched a large-scale operational feint which, as

<sup>223</sup> BA-MA, Study ZA 1/2074, 399.

recent Russian historiography admits, did not achieve its aim.<sup>231</sup> Army Group South HQ saw clearly in advance that a Soviet pincer operation against the Kanev salient was coming but, given the overwhelming Soviet superiority, it had no means of preventing that manoeuvre.

On 24 January, 2nd Ukrainian Front attacked from the east and achieved a breakthrough at Kapitanovka. According to Lt.-Gen. von Vormann, the thrust was carried out directly into the German fire 'without regard to losses', but it succeeded: 'An astonishing scene, shattering in its drama! No other epithet will do. The dam burst, and the great unending flood poured across the flat terrain, past tanks which, surrounded by a few infantrymen, rose like rocks out of the surf.'<sup>232</sup> On 26 January 1st Ukrainian Front launched a symmetrical offensive from the west and broke through the German defences at Boyarka. The Soviet 6th Armoured Army pushed forward to Zvenigorodka, where its vanguard met up with the spearhead of 5th Guards Armoured Army on 28 January. The pincer had closed round the German XI and XXXXII Army Corps, but it was not until 31 January that 1st and 2nd Ukrainian Fronts were able to bring up infantry units and complete the stranglehold. The two German corps were now trapped in an encirclement 70 kilometres in diameter and 250 kilometres in circumference. Moreover, a gap of around 100 kilometres had opened up in the German front. The way was now open for the Soviet attackers to advance across the Bug to Romania, since there were no units in the German hinterland that could have prevented them from doing so. The big question now facing Army Group South HQ was whether the Soviet command would exploit its success for an advance in depth in an attempt to shatter the eastern front. That was precisely what the German armoured units had done successfully in 1941 in the opposite direction. Contrary to expectations, however, the Red Army stayed put, giving Army Group South the possibility of forming an emergency front over the next few days. Marshal Zhukov, who was coordinating the operations of 1st and 2nd Ukrainian Fronts on behalf of the Stavka, put in place an inner enclosing ring of three armies and one cavalry corps around the two trapped German corps. The remaining two armies, as well as 6th Armoured Army and 5th Guards Armoured Army, did not continue to attack at all but were deployed passively to form a new line of defence in the gap of more than 100 kilometres in the German front. In agreement with the Stavka, Zhukov proceeded very cautiously. He would first liquidate the encirclement, and only then risk continuing the advance.

Since then many people have puzzled over the reason why the Red Army high command passed up that great opportunity and stopped halfway, as it were. It was probably influenced to some extent by painful past experience. Whenever the Red Army allowed the German generals to switch to 'free combat' and pushed forward in depth, there was usually an unpleasant surprise, especially when Manstein was the adversary. In this case, however, wrong assessment of the enemy situation also played a part. The success stories emanating from General Konev's HQ about the

<sup>231</sup> Eliseyev and Mikhalev, 'Osvobozhdenie', 35.

<sup>232</sup> Vormann, *Tscherkassy*, 60.

'booty' in the encirclement led to great overestimation of the forces involved. At the time, the number of German troops encircled was estimated at 130,000.<sup>233</sup> In reality, the number was somewhere between 53,000<sup>234</sup> and 58,000 men,<sup>235</sup> although the latter figure apparently includes around 5,000 Soviet paramilitary auxiliaries.<sup>236</sup> Konev claimed later in his memoirs that 10 divisions and a brigade had fallen into the trap, with a total of 1,600 cannon and grenade launchers, and 230 tanks and assault guns.<sup>237</sup> In fact, the encirclement contained only six divisions, in part highly decimated (57th, 72nd, 88th, 112th, and 389th Infantry Divisions, 5th SS Armoured Division 'Viking', and Corps Detachment B),<sup>238</sup> plus SS Brigade 'Wallonia'.<sup>239</sup> Equally unrealistic are the Soviet figures of 1,600 German artillery cannon, of which there were in fact only 242 (including self-propelled guns).<sup>240</sup> Similarly, the number of fighting vehicles at the beginning of the encirclement was not 230 but only 26 operational tanks and 14 assault guns.<sup>241</sup> It must be borne in mind that by no means all the units of XI and XXXXII Army Corps fell into the trap. In fact, several rear formations remained outside the encirclement.<sup>242</sup> Furthermore, it took from 24 to 31 January for the Soviet troops to form a complete encircling ring. During that time several German units managed to break out.

### (b) The Relief Attacks (1 to 16 February)

Army Group South HQ's reaction to formation of the encirclement was relatively relaxed. After all, such situations had repeatedly been rectified by tried and tested methods, and a dangerous encirclement operation by 1st and 2nd Ukrainian Fronts had just been thwarted at Uman and Kirovograd. Thus, when the spearheads of 5th Guards Armoured Army and 6th Armoured Army joined up at Zvenigorodka on 28 January to form the Cherkassy-Korsun encirclement, that same day the German pincer arms of III and XXXVI Armoured Corps closed round the advanced units of the Soviet 1st Armoured Army further to the south at Lipovets. Only a few days later, III Armoured Corps stood ready for a counter-attack in the

<sup>233</sup> For previous criticism of these wholly exaggerated figures, see Nash, 'No Stalingrad', 73.

<sup>234</sup> Heeresarzt, Az.: 1335 (II b), No. I/5214/geheim, 1 Mar. 1944, fo. 13, BA-MA RW 6/559.

<sup>235</sup> An entry for 11 Feb. 1944 in the war diary of the quartermaster-general of 1st Armoured Army puts the strength at 54,000 men. Furthermore, 4,154 had been flown out up till then; see BA-MA RH 21-1/366, fo. 20.

<sup>236</sup> Jahnke, *Der Kessel von Tscherkassy*, 30, 118.

<sup>237</sup> Konev, *Aufzeichnungen eines Frontoberbefehlshabers*, 105.

<sup>238</sup> Corps Detachment B, in particular, was greatly overestimated by Soviet enemy intelligence. The German army had gone over to combining the remnants of beaten divisions into 'corps detachments', each of which had the strength of a single infantry division.

<sup>239</sup> Jahnke, *Der Kessel von Tscherkassy*, 23.

<sup>240</sup> 'Gruppe Mattenkrott, Ia: Geschütz-Bestand der Gruppe Stemmermann. Meldung vom 17.2. für Stichtag 1.2.1944', fo.74, BA-MA RH 21-1/140 a.

<sup>241</sup> Jahnke, *Der Kessel von Tscherkassy*, 29.

<sup>242</sup> According to Manstein (*Verlorene Siege*, 586), the ration strength of the two corps before the encirclement was 54,000 men. However, some of the rear units had not been enclosed. Obviously, Manstein's calculation of ration strength includes only German military personnel, and not foreign auxiliaries.

direction of Korsun. The usual tactic was for the enclosed units to break out of the pocket and join up with the oncoming relief forces. Once again, however, Hitler lost sight of what was operationally feasible. Manstein and the commanders-in-chief of Eighth Army and First Armoured Army had called for evacuation of the Kanev salient several times in the preceding weeks, but Hitler refused it even now when the two army corps in the salient were enclosed. He was intent on retaining the Cherkassy–Korsun pocket as a ‘fortress on the Dnieper’.<sup>243</sup> Nor was the relief attack to be carried out by the quickest and shortest route. Instead, Hitler ordered a wide-ranging operation aimed at encircling a large part of the Soviet encircling forces in their turn by means of an attack to the north. His idea was to exploit the momentum of this presumed success with a further attack in the direction of Kiev to trap the Soviet units west of the Dnieper.<sup>244</sup> Instead of facing up to the grim reality of the spring of 1944, the dictator lost himself in the conceptual world of 1941, where such encirclement operations were still possible on the German side. The real situation is summed up by Maj.-Gen. Wagener as follows: ‘A new Stalingrad on a smaller scale had arisen, with the Volga replaced by the Dnieper and the same orders from Hitler to the encircled troops: “hold out, supplies from the air, relief offensive, no breakout”’.<sup>245</sup>

Field Marshal von Manstein protested against the utopian plan to extend the operation as far as Kiev,<sup>246</sup> but the concept of a concentrated relief assault on the pocket was in line with his own ideas. He wanted to deploy two wedges in an encirclement operation: Eighth Army’s XXXXVII Armoured Corps would advance directly on the pocket from the south-east, while First Armoured Army’s III Armoured Corps would drive north through Medvin before turning west to the pocket, thus cutting off the enemy’s connections to the rear. That would also enclose the segment of the Soviet encircling ring positioned on the south-western edge of the pocket.<sup>247</sup> On paper, the armoured forces envisaged for the relief assault looked very impressive. A concentration of no fewer than nine armoured divisions was to be assembled for the purpose:<sup>248</sup>

- XXXXVII Armoured Corps, with 3rd, 11th, 13th, 14th, and 24th Armoured Divisions;
- III Armoured Corps, with 1st, 16th, and 17th Armoured Divisions, 1st SS Armoured Division (*‘Leibstandarte Adolf Hitler’*), 198th Infantry Division, and Heavy Armoured Regiment Bäke.

In reality, however, not one of the armoured units was able to attack immediately, since all the divisions envisaged for the counter-offensive were tied up at other crisis spots on the eastern front and had first to be brought in. Moreover, the first thing

which needed to be done was to occupy the 100-kilometre gap in the front with new units so as to form some sort of obstacle line. III Armoured Corps was in the midst of the battle at Lipovets, where it was in the process of encircling strong Soviet forces in a pincer movement. Its first units were not ready for a counter-attack until 4 February, so XXXXVII Armoured Corps under Lt.-Gen. von Vormann had to begin the relief offensive on its own. However, its exhausted armoured divisions had been reduced to combat-group strength and ought first to have received sufficient logistic supplies. When the relief assault began on 1 February, only 11th and 13th Armoured Divisions were available, with a total of 36 operational tanks and assault guns.<sup>249</sup> That day they managed to establish a bridgehead at Iskrennoye, but a sudden overnight thaw brought all movements to a stop. Only tanks and heavy tractors were able to 'grind their way extremely slowly through the viscous mud'.<sup>250</sup> Both 3rd Armoured Division (14 tanks and assault guns) and 14th Armoured Division (eight tanks and assault guns)<sup>251</sup> arrived only in the following days and were unable to play a direct part in the planned relief offensive. Instead, they were deployed defensively to plug gaps in the front. How weak those four armoured divisions were in any case is shown by their combined infantry strength: no more than 97 officers and 3,698 NCOs and other ranks.<sup>252</sup>

In that situation, hopes rested mainly with 24th Armoured Division, which was deployed 300 kilometres away with Army Group A's Sixth Army.<sup>253</sup> After it had made its way from the Nikopol bridgehead to the new deployment zone in extremely difficult road conditions, Hitler ordered it to turn round immediately and go back the way it had come, because a Soviet offensive had just begun in its previous sector of the front.<sup>254</sup> In the meantime, however, the thaw had made the roads muddy, so the division arrived too late. The bizarre outcome was that 24th Armoured Division was unable to intervene in either its northern or its southern deployment zone. This episode laid bare the dilemma facing the German command. The Red Army had attained such superiority that it was able to launch several offensives simultaneously. As a result, Army Group South was not only engaged in heavy fighting at the centre, in the Cherkassy-Korsun area. At the same time its northern wing was threatened by the Soviet Rovno-Lutsk Operation (27 January to 11 February) and its southern wing had to face the Nikopol-Krivoy Rog Operation (30 January to 29 February). Without the relatively strong 24th Armoured Division, however, the relief assault by XXXXVII Armoured Corps lacked the necessary impetus. By 12 February, 11th Armoured Division had advanced only as far as the hills south of Zvenigorodka. There, 27 kilometres from the pocket, the attack had to be abandoned. In the further course of operations XXXXVII Armoured Corps could do no more than tie down superior enemy forces.

<sup>253</sup> Sixth Army had been assigned to Army Group South in January 1944, but on 2 February it was placed back under the command of Army Group A.

<sup>254</sup> Manstein, *Verlorene Siege*, 583.

The main thrust of the relief offensive was to be carried out by the considerably stronger III Armoured Corps, which in theory possessed 201 operational tanks and assault guns,<sup>255</sup> although not all were available for the attack since some had to be deployed defensively to cover gaps or secure the flanks.<sup>256</sup> In addition, the units arrived only gradually. III Armoured Corps nevertheless had a trump card in Heavy Armoured Regiment Bäke. Led by Lt.-Col. Franz Bäke, the regiment consisted of 503rd Heavy Armoured Battalion and II Btl./23rd Armoured Regiment. When it was established in January 1944, it possessed 34 Tigers und 46 Panthers. To these was added an infantry, artillery (armoured howitzers), and sapper component enabling the unit to be deployed independently. This regiment combined strike- and fire-power never seen before in a small unit of that kind. In the encirclement battle to the west of Uman which had just ended it had knocked out 268 Soviet tanks and assault guns in less than a week, with only four losses of its own.<sup>257</sup> Despite the Cherkassy–Korsun encirclement, the German command showed no nervousness and planned the relief offensive in a calm and relaxed fashion. The extent of its self-confidence is shown by the fact that the relief offensive was planned as a 'wide-ranging' operation aimed at enclosing the enemy forces positioned between III Armoured Corps and the pocket, for which purpose it was counting on the apparently irresistible force of Heavy Armoured Regiment Bäke.

Yet the operation did not go at all according to plan. What Clausewitz called 'friction' came into play. While the winter of 1941/2 had been Russia's coldest for 140 years, the winter of 1943/4 was 'the shortest and mildest in living memory'.<sup>258</sup> In the night of 1 to 2 February an astonishing burst of warm air turned the terrain into a sea of mud. The dreaded Russian 'rasputitsa'—the thaw which usually began gradually, and not until the spring—put a sudden stop to troop movements. Many wheeled vehicles could no longer move forward at all. The soldiers of 37th Armoured Sapper Battalion, who were specialists in overcoming terrain obstacles, took twelve hours for a 'mud march' of 8 kilometres.<sup>259</sup> Even tanks got stuck in the morass, and floundered with their hulls emerging while their tracks churned the mud, unable to get a grip on the ground. The steel monsters of Heavy Armoured Regiment Bäke were particularly affected. In the attack now beginning, the regiment had to make a long march, during which almost all its fighting vehicles broke down owing to mechanical damage: 'The last tanks struggled forward a few metres at a time with the mud reaching up to their track covers. A Panther needed almost a full tank (approx. 730 litres) to move 3.5 to 4 kilometres. Barrels of fuel were dropped in the mud by low-flying Ju-52s often 200 to 300 metres from the tanks. The barrels

<sup>255</sup> III Panzerkorps: divisional daily reports [16th and 17th Armd. Div. and Bäke], 5 Feb. 1944 (fos. 362, 364), BA-MA RH 24-3/110; divisional daily reports [1st Armd. Div. and 'Leibstandarte'], 6 Feb. 1944 (for 5 Feb.), BA-MA RH 24-3/111. Since only fragmentary data is available for 4 February, when the relief attack began, the strength figures reported for 5 February are given. Moreover, some of the subordinate units only arrived on 4 February.

<sup>256</sup> This applies above all to 1st Armoured Division and 1st SS Armoured Division 'Leibstandarte', which provided only 'combat groups' in most phases of the operation.

<sup>257</sup> Schadewitz, 'Einsätze des schweren Panzerregiments Bäke', BA-MA MSg 2/4396, 7; Rubbel, *Tiger-Abteilung 503*, 196; Jahnke, *Der Kessel von Tscherkassy*, 76.

<sup>259</sup> Stoves, *1. Panzer-Division*, 492.

then had to be towed in with steel cables by those tanks that still had a little fuel left.<sup>260</sup> Often the fuel could only be supplied in cans, which had to be dragged forward through the mud by the tank crews in an extremely time-consuming fashion, because the fuel-lorries kept getting stuck. During these few days the threat from the Soviet air force grew considerably, since the slow-moving vehicles were an easy prey for enemy low-flying aircraft. Some nights it began to freeze again, so that the next morning the tanks were embedded in concrete, so to speak, and had to be freed painstakingly with pickaxes or blowlamps. In this viscous sea of mud the wide-tracked Soviet T-34, built specially for extreme terrain conditions unknown in central Europe, came into its own. The aid deliveries of hundreds of thousands of American lorries also had an effect, especially as the Studebaker's off-road capability was superior to that of the German trucks, which were not very numerous anyway.

The infantry suffered particularly badly, often sinking knee-deep in the mud. First Armoured Army's war diary records that 'some of the infantrymen had to take their boots off and struggle through the morass in their bare feet'.<sup>261</sup> Troops marching on foot could cover at most 1 kilometre in an hour.<sup>262</sup> The infantry attached to the encircled units lay unprotected in open terrain. Their damp uniforms and wet felt boots sometimes froze at night. They were exhausted, filthy, and hungry. Hot food was a great exception, and often all they had to drink was melted snow. The number of soldiers out of action through cold-related illnesses and frostbite gradually overtook the number of wounded. 'Once again,' wrote General von Vormann, 'the Russian climate seemed to have defeated the intruders.'<sup>263</sup>

The relief attack by III Armoured Corps, designated Operation WANDA, had been due to start on 3 February but had to be put off to the following day because of adverse weather conditions, which gave the enemy more time to make his defensive preparations. On 4 February, however, only 16th and 17th Armoured Divisions and Armoured Regiment Bäke, with a total of 85 tanks and assault guns,<sup>264</sup> were ready for action, and had to attack on their own. In the course of the following days they were joined by parts of 1st Armoured Division and a regimental-strength combat group from 1st SS Armoured Division 'Leibstandarte'. Thus the attack was carried out in dribs and drabs, in total contradiction to Guderian's motto : 'Boot 'em, don't spatter 'em!' The individual units arrived one after the other, since they could only gradually be released from other sectors of the front where there was also fierce fighting. Their arrival was also delayed by the wretched state of the roads and by logistic problems.

On 4 February the German tanks achieved a breakthrough at the outset, but the attack soon got bogged down in the mud. In the following days the Red Army assembled four armoured or mechanized corps in the sector, and they used their

numerical superiority mainly for attacks on the flanks of the German spearhead. The tank duels again resulted in an impressive German knock-out rate, but the decimated Soviet units nevertheless achieved their aim of slowing the enemy attack. On 8 February, 16th Armoured Division crossed the Gniloy Tikich river and formed a bridgehead to the west of Boyarka. With that, however, the impetus of the attack was spent. Meanwhile, Manstein had been forced to recognize that it had been a mistake to stick to the idea of a 'wide-ranging' operation. The detour via Medvin had proved to be the wrong approach. Now the simple plan originally proposed by Eighth Army HQ was adopted, namely a direct relief attack by the shortest and quickest route to the pocket.<sup>265</sup> That, however, meant changing the direction of thrust from north to north-west. On 9 February the units of III Armoured Corps had to turn back and assemble in a new marshalling area 15 kilometres south of Boyarka in order to attack from there in the direction of Lisyanka. The new attack could start only on 11 February, so seven days had been lost to no purpose in the previous unsuccessful operation. That had been without doubt a serious error of command and was to have even more disastrous consequences.<sup>266</sup>

For the second attempt at a relief attack, the following formation was adopted: 16th and 17th Armoured Divisions plus Heavy Armoured Regiment Bäke formed the central wedge, while the southern flank was covered offensively by 1st Armoured Division and the northern flank by a combat group from 1st SS Armoured Division 'Leibstandarte'. Although all the assigned units had arrived in the meantime, the numerous mechanical breakdowns left only 149 operational tanks and assault guns available.<sup>267</sup> On the first day of the attack, 11 February, the German forces managed to surprise the enemy and form a bridgehead on the Gniloy Tikich. Then, however, this tank attack also got bogged down,<sup>268</sup> and logistic bottlenecks began to have an effect. With almost all wheeled vehicles stuck in the mud, it was nearly impossible to get supplies forward to the tank spearheads. For that reason, on 13 February for example, 61 cubic metres of fuel and 24 tonnes of ammunition were delivered to III Armoured Corps by air drop.<sup>269</sup> Deployment of the air force was nevertheless prevented for some time by foggy weather. Despite these difficulties, more than 100 Soviet tanks were knocked out on 13 February alone.<sup>270</sup> Yet the number of Red Army fighting vehicles seemed to be constantly increasing. III Armoured Corps had not only to contend with the combined mass

<sup>265</sup> Buchner, *Ostfront 1944*, 18.

<sup>266</sup> Whether this wrong decision is to be blamed on Army Group South HQ or on Hitler, who even wanted to extend the operation as far as Kiev, can no longer be ascertained. No operational documents of Army Group South dating after 5 July 1943 have survived. Regrettably, the last volume of the war diary of the OKH Operations Division (BA-MA RH 2/3062) ends on 12 January 1944, a few days before the relief attack.

<sup>267</sup> Pz.AOK 1, Ia daily report, 10 Feb. 1944, 21.25, fo. 137, BA-MA RH 21-1/128.

<sup>268</sup> As already mentioned, XXXXVII Armoured Corps was to attack at the same time with two divisions further to the east. On 12 February 11th Armoured Division got as far as the area to the south of Zvenigorodka before the attack had to be called off.

<sup>269</sup> KTB 1. Panzerarmee, 13 Feb. 1944, BA-MA RH 21-1/122.

<sup>270</sup> KTB III. Panzerkorps, 13 Feb. 1944, BA-MA RH 24-3/107.

of 5th Guards Armoured Army and 6th Armoured Army; it was also attacked on the left flank by 2nd Armoured Army and units of 1st Guards Armoured Army. In addition, it was in danger from Soviet anti-tank fronts and artillery cannon built into blocking positions. Above all, Lisyanka, which was taken after bitter fighting, proved to be a 'veritable anti-tank hornets' nest'.<sup>271</sup> Most of the German losses, however, resulted from mechanical damage caused by the difficult terrain conditions. On 15 February the 1st SS Armoured Division 'Leibstandarte' combat group had only three operational tanks and one assault gun left, but these could be not used in the fighting because they were busy day and night hauling away damaged tanks.<sup>272</sup>

That day Army Group South HQ was obliged to recognize that the relief forces were exhausted and that the enclosed units could break out only 'with their own forces'. Field Marshal von Manstein therefore decided to give the order for the breakout.<sup>273</sup> The same day Eighth Army relayed the order and sent the following message to the enclosed units ('Stemmermann Group'): 'III. Armd. Corps' intervention capability limited by weather and supply difficulties. Stemmermann Group must carry out decisive breakthrough to Zhurzhintsy-Hill 239, 2 kilometres to the south, with its own forces. Link up there with III Armd. Corps.'<sup>274</sup> The breakout was to take place in the night of 16 to 17 February. Meanwhile, III Armoured Corps had the task of pushing the wedge further east to Hill 239, the intended point of rendezvous with the Stemmermann Group.<sup>275</sup>

A place of almost uniquely momentous significance in the German-Soviet war now entered the picture. The units breaking out of the encirclement had to pass the 'fateful Hill 239',<sup>276</sup> surrounded by deep ravines, in order to join up with their own troops. The Soviets, however, had recognized its importance. There 5th Guards Army had erected the main bulwark of a blocking position consisting of strong field fortifications and, above all, deeply staggered anti-tank defences. The forest immediately south of the road-fork at Point 239.0 had been fortified by a series of strongpoints and was particularly important in what followed. It concealed packs of Soviet tanks, which sprang out time and again in surprise attacks.

On 16 February 1st Armoured Division had the task of taking Hill 239 from the direction of Lisyanka. All the troops still usable for the attack were combined in 'Combat Group Frank'. The hill was also subjected to an assault by ground-attack aircraft as well as a dive-bomber attack by Ground-Attack Wing 'Immelmann'. On that day, however, the attacking forces managed only to take the intermediate locality of Oktyabr. The advance came to a stop barely 2 kilometres from the target. By the evening Combat Group Frank was completely exhausted and its armoured

infantry battalion was left with company strengths of 10 to 12 men. All its company and convoy commanders were dead or wounded. It had only 12 operational Panthers left to deploy against the numerically superior T-34s and Joseph Stalin tanks.<sup>277</sup> So on that day the last hope lay with Heavy Armoured Regiment Bäke, which still had nine operational Tigers and the same number of Panthers.<sup>278</sup> It advanced from the north in a flanking movement and at first seemed to be succeeding. Then, only a few hundred metres west of Point 239.0, Lt.-Col. Bäke suddenly went over to a secured halt. That is all the more surprising as his Tigers would most probably have been capable of taking Hill 239 the next day and pushing further to the south-east. The explanation for the sudden halt to the attack on that decisive 16 February lay in the logistics: the tanks were running out of fuel. In his combat report, Bäke wrote: 'There were great difficulties with supplies. The troops had been without food for several days and the tanks were short of fuel and ammunition.'<sup>279</sup> Not until the next day was it possible to get hold of some more petrol. Bäke fetched it in person with his command tank from Lisyanka, where it had been carried over the Gniloy Tikich river in buckets. The result of this action was felt too late, however, since the breakout from the encirclement had already taken place.

To sum up: by the evening of 16 February the German relief forces had managed to fight their way forward to within 8 kilometres of the Cherkassy–Korsun pocket. But the crucially important Hill 239, where the rendezvous with the units that had broken out was to take place, was still in Soviet hands. The foremost German tanks were only a few hundred metres away—a matter of a few barrels of petrol. And so fate took its course.

### (c) The Conflict about the Pocket and the Decision to Break Out

Hitler had at first vehemently refused permission for a breakout, insisting instead that the two encircled army corps were to defend the pocket as a fortress. For that purpose it was necessary to establish a unified command, since XXXXII Army Corps (Lt.-Gen. Theobald Lieb) was assigned to First Armoured Army, while XI Army Corps (Gen. Wilhelm Stemmermann) was under the command of Eighth Army. On 28 January, when the Soviet pincer arms closed, Hitler placed XXXXII Army Corps under the command of Eighth Army and then appointed General Stemmermann 'commander in the pocket'. The geographical centre-point of the pocket was the town of Korsun, where the only airfield was located. That airfield was to become even more important in the days that followed. Despite the failure at Stalingrad, which should have served as an example, Hitler was once again convinced that a pocket could be supplied from the air. Although Korsun was only about 100 kilometres from the Luftwaffe's nearest airfield at Uman, the German

<sup>277</sup> Jahnke, *Der Kessel von Tscherkassy*, 71; Stoves, *1. Panzer-Division*, 517, 522.

<sup>278</sup> Scherf, 'Die Tigerabteilung 503', 223; BA-MA Msg 2/4691, 26.

<sup>279</sup> Heavy Armoured Regiment Bäke, Ia (24 Feb. 1944), 'Bericht über die Verbindungsaufnahme der westlich von Tscherkassy eingeschlossenen Korps am 17.2.1944', fo. 70, BA-MA RH 21-1/141.

aircraft would have to fly over the Lisyanka corridor between the foremost sector of the front and the pocket, where they would come within range of Soviet anti-aircraft fire. Besides which, the Soviet air force had control of the skies. In those circumstances an air bridge to supply the encircled units must have seemed a bold gamble. As it turned out, on certain days it was hardly possible to deploy aircraft anyway because of thick fog. Another problem was the sudden thaw, which made use of Korsun's un-tarmacked airfield difficult and from 10 February almost impossible. Either the aircraft got stuck in the mud on landing and turned over, or they could no longer take off for the return flight. As a result, on some days supplies could be delivered only by air drop from low-flying planes. On 28 January VIII Air Corps began its support of the Stemmermann Group with 832 Ju 52 transport planes, 478 bombers (for air drops), 58 ground-attack aircraft, and 168 fighters. Of those, 32 transport planes, 13 bombers, and five fighters were lost.<sup>280</sup> Eighth Army HQ had calculated that at least 150 tonnes of supplies (including fuel) would have to be flown in daily, but that requirement was far from fulfilled. The total amount of supplies (including fuel) landed or dropped for the Stemmermann Group from 28 January to 15 February was 1,490 tonnes. The daily average of 78 tonnes was thus only about half of the minimum tonnage required.<sup>281</sup>

Eighth Army HQ quickly realised that defence of the pocket was hopeless. On 5 February it already requested permission to break out and made all the necessary preparations. Army Group South's chief of staff responded favourably, stating that the army group would if necessary 'give the order for the breakout on its own responsibility. There can be no question of leaving the two corps sitting in the pocket'.<sup>282</sup> The next day, 6 February, he was nevertheless obliged to admit that the army group had 'not received permission for the breakout'.<sup>283</sup>

The desperate situation in the pocket was no secret to Soviet enemy intelligence either. On 8 February a Soviet negotiator appeared under a flag of truce and demanded surrender. He handed over an ultimatum signed by Marshal Zhukov and Generals Konev and Vatutin guaranteeing 'the lives and security of all officers and men who ceased resistance and, at the end of the war, return to Germany or another country according to the personal wish of the prisoner of war'.<sup>284</sup> This call, however, had as little effect as the propaganda of the National Committee for a Free Germany (NKFD) and the League of German Officers (BDO). General Walther von Seydlitz and Otto Korfes, both in Soviet captivity, wrote personal letters to the German divisional commanders in the pocket, but received no answer.<sup>285</sup> Nor did massive Soviet propaganda over loudspeakers or in leaflets have any results.<sup>286</sup> An account of the battle of the Cherkassy–Korsun pocket contains the laconic

<sup>280</sup> Jahnke, *Der Kessel von Tscherkassy*, 80.

comment that 'no German soldiers believed those promises, and later events fully justified their mistrust'.<sup>287</sup>

Stalin, who had prematurely announced the liquidation of the pocket, grew increasingly impatient. He was keen to present the world public with the spectacle of a new Stalingrad, but all Soviet attempts to split the pocket had failed so far. As a result, he was drawn into an overreaction which led to a crisis of command on 12 February. Early that morning he phoned Zhukov, who was coordinating the operations of 1st and 2nd Ukrainian Fronts. Most unusually, Zhukov proved to be unaware of the latest developments. In his memoirs he gives as an excuse that he had gone to bed with a cold and been rudely woken by Stalin's phone call.<sup>288</sup> The confused situation was exploited by General Konev in such a scheming way as to 'poison his relationship with Zhukov until their deaths decades later'.<sup>289</sup> In a telephone conversation with Stalin, Konev accused Vatutin, the commander-in-chief of 1st Ukrainian Front, and also indirectly Zhukov, of clearly not having the situation in hand. He suggested to the Soviet dictator that he himself could resolve the crisis if responsibility for liquidation of the pocket was transferred to him alone, going so far as to promise that not a single German would escape from the trap. Stalin reacted no later than 12 February by issuing a directive with the following key sentence: 'Command of all troops engaged in action against the Korsun grouping is transferred to the commander-in-chief of 2nd Ukrainian Front, with the task of destroying the Korsun grouping without delay'.<sup>290</sup> For that purpose he ordered all 1st Ukrainian Front troops involved in the encirclement, above all 27th Army, to be placed under Konev's command. At the same time, Zhukov was 'relieved of supervision of the liquidation of the Korsun grouping'.<sup>291</sup> He was to concern himself henceforth only with defence against the forces of III Armoured Corps attacking from the west.

Zhukov refers to this only vaguely in his memoirs, but in reality it was one of the most shameful humiliations he had ever had to endure. The latest official Russian account has this to say: 'In other words, Stalin sidelined Zhukov when it came to coordinating the efforts of the two operationally strategic units on the external and internal front, although that task was particularly important in the destruction of the encircled enemy grouping'.<sup>292</sup> The only task left to him was to hold a single German armoured corps in check—a decidedly subordinate role for a marshal who had been sent to the front as a representative of the Stavka, the highest military command authority. General Vatutin was not only relieved of command of his troops in the Korsun area, but was even required to move his headquarters and take responsibility only for the Rovno–Lutsk Operation by the right wing of 1st Ukrainian Front. This measure proved pointless, however, since the operation in question had been abandoned owing to the complete exhaustion of both attacking armies. Zhukov protested to Stalin, warning him that such a drastic change in the command structure would lead to confusion.

<sup>287</sup> Jahnke, *Der Kessel von Tscherkassy*, 50.

<sup>290</sup> Konev, *Aufzeichnungen eines Frontoberbefehlshabers*, 122.

<sup>292</sup> Eliseyev and Mikhalev, 'Osvobozhdenie', 37.

Seen from today's viewpoint, Zhukov and Vatutin's approach was correct. They had planned to concentrate as many units as possible in the Lisyanka corridor so as to establish a blocking position between the German troops in the pocket and III Armoured Corps. Konev, on the other hand, had promised Stalin rapid liquidation of the enclosed German forces. He therefore distributed his units around the pocket for a concentric attack. However, some of the Soviet troops found themselves thrusting into empty space, because the soldiers of the Stemmermann Group had pulled back into the south-western part of the pocket in order to break through the Lisyanka corridor. Moreover, the change of command was carried out at a critical point in the operation, which only added to the difficulties.<sup>293</sup> Unintentionally, Konev helped considerably to make the Stemmermann Group's breakout possible. He also played into the hands of a German special unit working in the background which created the preconditions for German success, namely radio intelligence.<sup>294</sup> The complicated regrouping movements ordered by Konev resulted in a perceptible increase in Soviet radio traffic, which was intercepted by the Germans. Manstein's headquarters was thus very well informed of Konev's intentions.

The fate of the German troops caught in the Cherkassy–Korsun trap seemed already sealed, when suddenly the Soviet stranglehold loosened for a moment. Konev's regrouping movements briefly gave rise to a gap in the Lisyanka corridor itself, between Khilki and Komorovka, when the troops positioned there were moved northwards on the evening of 16 February<sup>295</sup> to participate, together with other Soviet units assembled in the area, in the final assault to liquidate the pocket. In the light of intercepted radio messages, the Stemmermann Group was in a position to effect a breakout in the right place at exactly the right time. Field Marshal von Manstein wanted to exploit that advantage at all costs. Well aware of Hitler's hesitant attitude, he refrained from requesting permission from Führer headquarters and gave the order for the Stemmermann Group's breakout on his own authority. The decisive radio message was worded: 'Watchword freedom, objective Lisyanka. Set out at 23.00 on the 16th.'<sup>296</sup>

Meanwhile the Stemmermann Group had been obliged to abandon Korsun. In the final phase the pocket had shrunk to an oval-shaped area 8 kilometres long and 5 kilometres wide. The remaining 45,000 troops<sup>297</sup> crammed into it were exposed to wet weather by day and frost by night, and were constantly threatened by enemy

<sup>293</sup> Nash, 'No Stalingrad', 126.

<sup>294</sup> On 20 April 2001 the author conducted an interview on this subject with Gen. (ret.) Count von Kielmansegg, who based his replies on notes from his diary of the time. Kielmansegg pointed to the decisive role of German radio intelligence as the basis for Army Group South's operational planning at Korsun. Numerous intercepted Soviet radio messages (in German translation) are collected in a special III Armoured Corps file entitled 'NAZ-Sprüche vom 5.1. bis 26.2.1944', BA-MA RH 24-3/121.

<sup>295</sup> Kielmansegg interview; see also Jahnke, *Der Kessel von Scherkassy*, 87.

<sup>296</sup> Buchner, *Ostfront 1944*, 37. The watchword 'freedom' had been proposed by the Stemmermann Group as a general designation for rendezvous with the relief troops of III Armoured Corps.

<sup>297</sup> This figure refers to the actual troop strength as opposed to the ration strength, which included the civilian Wehrmacht retinue and the paramilitary auxiliaries. A total of 4,154 wounded had been evacuated by air.

artillery and aircraft fire. They had hardly any food or medical supplies left. General Stemmermann put the breakout order into effect. The attack was to be made between Khilki and Komorovka. Stemmermann himself took command of the rearguard and appointed Lt.-Gen. Lieb, the commanding general of XXXXII Army Corps, as leader of the breakthrough group.<sup>298</sup> As for supporting armoured vehicles, they had only seven tanks, three assault guns, two self-propelled anti-tank cannon, and 12 armoured howitzers available.<sup>299</sup> Ammunition was available only in small quantities and, above all, there was very little fuel, so that it was questionable whether some of the armoured vehicles would be able to reach the German troops at Lisyanka. On the way to the marshalling areas all the units had to pass through the bottleneck of Shanderovka, later dubbed 'hell's gate',<sup>300</sup> the starting place for the breakout which sealed the fate of so many.

The first drama occurred even earlier, however, at the main assembly area for the wounded in Shanderovka,<sup>301</sup> where there were some 2,150 sick and wounded who could no longer be flown out. Only 700 of them were classified as capable of walking. So the question now was what to do with the 1,450 non-walking wounded.<sup>302</sup> General Stemmermann was faced with an extreme conflict of conscience. The action had to be carried out as quickly as possible under cover of night. But transporting the non-walking wounded would delay it considerably and could even jeopardize it. Stemmermann therefore ordered that those unfortunate soldiers should be left behind in Shanderovka and handed over to the Red Army, 'according to the procedures and rules of the Geneva Convention',<sup>303</sup> and that four medical corps officers and 12 medical corps other ranks should remain with them.<sup>304</sup> This, however, as an originally designated doctor later put it, would have meant a death sentence for all those left behind.<sup>305</sup> Only too often, Red Army troops killed non-walking German prisoners, sometimes even in a cruel manner.<sup>306</sup> Medical personnel left behind were usually also liquidated as witnesses. For that reason

<sup>305</sup> Report by NCO Dr Peter Dohrn (2nd Medical Company 172 of 72nd Infantry Division), quoted in Schwarz, *Chronik des Infanterieregiments 248*, iii. 53–4.

<sup>306</sup> The author repeatedly encountered this unpleasant fact during research on his dissertation 'Krieg hinter Stacheldraht' in oral and written accounts by former POWs. See also Friedrich, *Das Gesetz des Krieges*, 580–1.

Col. Schulze, the medical officer of XI Army Corps, protested against the order, invoking a decision of the German medical inspectorate which stated that: 'In view of repeated experience that medical officers and medical personnel left behind with the wounded have been murdered by the Russians, it is hereby decided that, in the east, leaving medical officers and medical personnel behind must be avoided on principle'.<sup>307</sup> Stemmermann took note of the protest but insisted that his order, for which he took personal responsibility, be carried out.

Despite this, the general's order was largely disregarded, since his troops could not bring themselves to leave their wounded comrades in the lurch. They loaded the non-walking wounded onto horse-drawn carts, mostly driven by Soviet para-military auxiliaries.<sup>308</sup> No more than 600 non-transportable, seriously wounded soldiers were left behind in Shanderovka.<sup>309</sup> Accordingly, by independent decision of a staff medical officer, only part of the medical personnel ordered to remain by General Stemmermann stayed behind with the wounded. SS Armoured Division 'Viking', for example, carried 300 wounded with it during the breakout, of whom 110 were saved despite the most adverse circumstances.<sup>310</sup> But a cruel fate awaited the non-transportable wounded who were left behind. They were 'shot en masse at the western exit from Shanderovka or run over by Russian tanks'.<sup>311</sup> Since that time, the troops left in the pocket have been classified as missing. A report by the deputy medical officer of XXXXII Army Corps merely states: 'Nothing is known as to their further fate'.<sup>312</sup>

#### (d) The Breakout on 16–17 February

When the breakout to the west began, at 23.00 on 16 February, the German troops were gripped by euphoria.<sup>313</sup> The watchword 'freedom' fully described their mood. The temperature had fallen to minus 5, making the previously muddy terrain once again passable. In addition, a snowstorm blowing from the east was reducing visibility for the Soviet guards. The breakthrough group consisted of three wedges:

Corps Detachment A on the northern wing at Khilki, 72nd Infantry Division in the centre, and SS Armoured Division 'Viking' (mostly fighting on foot) on the southern wing. The initial phase of the attack was carried out noiselessly and without artillery support, taking the enemy by surprise. The very first assault breached the Soviet positions over a width of 4.5 kilometres, partly by means of bayonet attacks. The Soviet positions were manned by units of 27th Army, which, together with 52nd Army and 4th Guards Army, formed the inner ring of encirclement. The German troops were surprised by the weakness of the resistance, as in many places they encountered only a thin chain of guard-posts. The fact that the Soviet troop movements had given rise to a gap in this very sector was, from the Soviet viewpoint, an unpardonable error on Konev's part.

Under cover of night, the German attack made rapid progress. Individual anti-tank and artillery positions were taken out in close combat. At around 03.30, 105th Infantry Regiment, belonging to 72nd Infantry Division, was the first unit to reach the outer Soviet encirclement ring at the road from Zhurzhinksy to Point 239. This sector was occupied by the reinforced XX Armoured Corps of 5th Guards Armoured Army, whose troops were facing in the opposite direction, looking west towards the German III Armoured Corps.

Suddenly the German vanguard detected the silhouettes of several T-34s and saw that the Russians were mostly fast asleep in their foxholes. The German troops swept through the enemy positions in a lightning attack. Immediately afterwards the vanguard came upon another four tanks, but found to their delight that they belonged to Armoured Regiment Bäke.<sup>314</sup> The breakout had succeeded. Around 04.10 the troops of 105th Infantry Regiment were received by 1st Armoured Division in Oktyabr.<sup>315</sup> It was the only major formation to break through as a single unit, almost without losses.<sup>316</sup>

Meanwhile, most of the Stemmermann Group units in the centre of the breakthrough sector were pushing straight towards Hill 239. This hill exerted a magical force of attraction, since it was designated as the place where the troops of III Armoured Corps would be waiting for the units which broke out of the pocket. To the escaping troops, Point 239 seemed like the gateway to freedom. But suddenly the noise of tanks was heard, spotlights blazed, and the German soldiers ran straight into fire from Soviet tank cannon and machine guns. The hill was in enemy hands! At first there was sheer terror; then the escaping troops surged forward in a desperate attempt to reach the German front lines, only a kilometre away. The assault with small arms failed, and in next to no time the terrain was covered with dead soldiers. Those who survived the fire barrage threw themselves to the ground, but the Soviet tanks rolled forward and crushed them where they lay.<sup>317</sup>

<sup>317</sup> Jahnke, *Der Kessel von Tscherkassy*, 88, 103, 137.

Since that time a great deal of ink has been spilt puzzling over the reasons for the disaster. The germ actually lay in the wording of the radio message which Eighth Army HQ sent into the pocket on 15 February: ‘Stemmermann Group must carry out decisive breakthrough to Zhurzhintsy—Hill 239, two kilometres to the south, with its own forces. Link up there with III Armd. Corps.’<sup>318</sup> General Stemmermann therefore assumed that Hill 239 was already in the hands of the relief troops. Later there was wild speculation that Lt.-General Hans Speidel, the Eighth Army chief of staff, had deliberately concealed the truth so as not to undermine motivation for the breakout. That supposedly led to the bloodbath at Hill 239. Those accusations, however, do not fit the facts.<sup>319</sup> In reality, on the afternoon of 16 February the German operations staffs were firmly convinced that ‘the area of Point 239.0 can be reached by the evening’, as can be seen from III Armoured Corps’ war diary.<sup>320</sup> Heavy Armoured Regiment Bäke was gaining ground and was only a few hundred metres from the point in question. How could the operations command at corps and army level have foreseen that the tanks would run out of fuel just before the objective? When a few barrels of petrol were brought up the next morning, a preparatory attack by three Tigers at around 09.00 sufficed to take Point 239, but the Tigers withdrew soon afterwards from their exposed position. In the late morning Heavy Armoured Regiment Bäke attacked again with eight Tigers and six Panthers, and took the hill without any problem.<sup>321</sup> This was followed by a push from Point 239 in the direction of Pochapintsy, but it was broken off because the Stemmermann Group was not in sight.

On the German side there had been a combination of several unfortunate circumstances. III Armoured Corps had been late in learning that Heavy Armoured Regiment Bäke’s attack on Point 239 had been delayed by logistic problems, and it then made repeated attempts to inform the Stemmermann Group accordingly. However, the radio link with the troops in the pocket was broken, so that radio messages, as the war diary records, had to be sent ‘blind’.<sup>322</sup> Meanwhile, General

<sup>318</sup> KTB 8, Armee, 15 Feb. 1944, 11.05, BA-MA RH 20-8/125.

<sup>319</sup> That these speculations are untenable is shown by the following sources. More details are contained in the Speidel papers, which are kept temporarily at the Research Institute for Military History (MGFA) (see: A. Militärisches und Militärpolitisch: II. Weltkrieg, Files 24). The MGFA also holds the following statements of position: Dr Ina Saame, Dr Christa Brunner, Brig.-Gen. (ret.) Hans H. Stemmermann had met a tragic fate. His death is recounted below, but it meant that the troops breaking out of the pocket were left leaderless at a crucial stage.

The Soviet side had had enough time to react since the beginning of the German breakout.<sup>323</sup> The major role fell to 5th Guards Armoured Army, which was deployed directly in the corridor. XX Armoured Corps blocked the sector on both sides of Point 239, having been reinforced for that purpose by a number of other units, including an anti-tank artillery regiment. The escaping German troops were enclosed in a pincer movement from the north by XVIII Armoured Corps, supported by 27th Army, and from the south by XXIX Armoured Corps, supported by 4th Guards Army and V Guards Cavalry Corps. In addition, they were harried in the rear by 52nd Army, advancing from the east. On the German side, in contrast, III Armoured Corps was unable to continue the relief attack at the decisive moment, since it was forced onto the defensive by massive attacks on its flanks by 6th and 2nd Armoured Armies and 1st Guards Armoured Army.<sup>324</sup>

Meanwhile, the disaster on the eastern slope of Hill 239 was running its course. The German troops tried in vain to break through. They threw themselves into battle, as Konev later wrote, 'with the desperation of the doomed'.<sup>325</sup> But they had to attack tanks with small arms. The few fighting vehicles left to them were engaged in combat with the pursuing Soviet armoured units, and some of them had already run out of fuel and been blown up. Only a few soldiers managed to break through between the tanks that were firing on them.<sup>326</sup> Most of the units that had failed in the frontal attack fled southwards past Pochapintsy, gripped at times by collective panic. General Stemmermann had driven forward around 04.00 to try and get an overall view of the situation, but his vehicle took a direct hit and he was killed instantly. Radio traffic was also cut off, leaving the German units leaderless at the decisive moment. The loss of General Stemmermann was not noticed until much later. In the end, Lt.-Gen. Lieb took over command. He described the situation as follows:

There was no longer any effective control; there were no regiments, no battalions. Now and then small units appeared alongside us. [ . . . ] Behind and alongside me, thousands of men were struggling south-west [ . . . ] The entire area was littered with dead horses, and with vehicles and guns that had either been knocked out by the enemy or simply abandoned by their crews [ . . . ] Despite the general confusion and complete lack of control, one could still recognize the determination in the minds of the troops to break through toward the south-west, in the direction of III Armoured Corps.<sup>327</sup>

<sup>323</sup> On the Soviet side, see *The Battle for the Ukraine* (English translation of the Soviet General Staff study), 29–30, 63, 105–6, 124–5; Konev, *Aufzeichnungen eines Frontoberbefehlshabers*, 124 ff., 130 ff; Nash, 'No Stalingrad', 129 ff.

<sup>324</sup> 6th Armoured Army had V Mechanized Corps and V Guards Armoured Corps at its disposal; 2nd Armoured Army had III Guards Armoured Corps and XVI Armoured Corps; and 1st Guards Army had, above all, XI Guards Armoured Corps. In addition, strong infantry units had been assigned to them as support.

<sup>325</sup> Konev, 'Die Kesselschlacht von Korsun-Schewtschenko', 85–6.

<sup>326</sup> The combat reports of the individual divisions are contained in BA-MA RH 21-1/141 and RH 24-42/111. See also the reports and documents reprinted in Jahnke, *Der Kessel von Tscherkassy*, 125 ff.

<sup>327</sup> BA-MA, Study ZA 1/2346; Lieb: 'Die Kesselschlacht von Tscherkassy', 21, fo. 96.

With the onset of daylight, the fleeing troops were fully exposed to fire from the Soviet tanks, anti-tank cannon, artillery, and machine guns. In columns or smaller groups, they tried to advance in the shelter of woods or ravines. Now all hell broke loose against the seriously wounded, who were mostly carried on wooden carts and were attended selflessly by their comrades and Russian paramilitary auxiliaries. Although the carts were marked with red crosses visible from afar, the Soviet tanks began ‘target-shooting’ at them and simply rolled over some of them.<sup>328</sup> A summary report by Army Detachment B reads: ‘We have irreproachable reports that enemy tanks have rolled over horse-drawn carts carrying the wounded.’<sup>329</sup> That is also confirmed by survivors: ‘A cry went up from hundreds of voices. I turned and saw a horrifying scene I shall never forget as long as I live. The tanks drove at a group of wooden carts loaded with wounded soldiers, overturned them, and crushed them to pulp together with all the wounded.’<sup>330</sup> A member of 5th Armoured Artillery Regiment reported: ‘The tanks push whole horse carts before them—some loaded with wounded—and shove them over the edge of a ravine [...] We look on in helpless rage, unable to intervene.’<sup>331</sup> A seriously wounded soldier who was still able to walk managed to escape the slaughter: ‘I had to watch as the enemy tanks crushed the columns of wounded, and Soviet infantry dragged the helpless, unarmed men from the carts and beat them with their rifle butts.’<sup>332</sup>

These excesses increased the general panic. The mass streamed south past Pochapintsy and Point 222.5 to the Gniloy Tikich river. On the far bank freedom beckoned. But the river, swollen by the floods, was now 25 metres wide and had risen to over 2 metres. The banks were covered in jagged ice, and ice floes were carried by the current. Many soldiers met their fate at the river crossing, where more lost their lives than anywhere else during the breakout, only a few metres from safety on the opposite bank. Although a life-saving team was organized for non-swimmers, many drowned. The steep, smooth west bank, eroded by the current, proved treacherous. Some thought they had already reached safety but slid back into the river and were swept away. Thousands of German soldiers piled up on the east bank, offering a target for the enemy guns and grenade launchers. Suddenly several Soviet tanks arrived from the north and fired on the crowd from a distance of a few hundred metres, until they were driven off by two Panthers rapidly deployed on the west bank. Anyone who managed to swim across the river, in a temperature of minus 5 degrees and an icy wind from the east, had to walk another 2 kilometres in stiffly frozen clothing to Lisyanka, where 1st Armoured Division had its command post. Paradoxically, the disastrous river crossing was quite

<sup>330</sup> Quoted in Jahnke, *Der Kessel von Tscherkassy*, 96.

<sup>331</sup> Diary entry by August Roddewig (2nd battery/I Battalion/5th Armoured Artillery Regiment), quoted *ibid.* 101.

<sup>332</sup> Report by Hermann Gutmann (platoon leader, II Platoon, SS Brigade ‘Wallonia’), quoted *ibid.* 100.

unnecessary, since the fleeing troops could have reached the German forces without getting their feet wet. Further to the north the Gniloy Tikich bends westwards, and just behind the bend, in Lisyanka, where the troops breaking out of the pocket were awaited, the sappers of 1st Armoured Divisions had built a bridge. But most of the men in the Stemmermann Group had drifted far to the south, to the crossing place at Point 222.5.

By no means all officers, however, were infected by the general panic. Maj.-Gen. Kurt Kruse, the commander of 389th Infantry Division, and his chief of operations, Lt.-Col. Hans Meier-Welcker,<sup>333</sup> assembled their units in a gorge and analysed the situation calmly. They sent out several officer reconnaissance patrols, one of which discovered a crucial gap at the bend in the Gniloy Tikich.<sup>334</sup> By that route they reached Lisyanka relatively unhampered, together with other units which had followed their example. In the course of the afternoon, when the rearguards arrived, the situation stabilized. In the meantime, sappers had built a makeshift bridge at the crossing place south-west of Point 222.5 where so many had lost their lives, and Heavy Armoured Regiment Bäke had liberated Hill 239. Relatively orderly conditions had been restored, so that units which had started out later made a relatively undramatic withdrawal. Nevertheless, the last groups from the pocket did not arrive until the morning of 19 February.

The cruelty perpetrated by some Red Army troops against unarmed wounded soldiers is described above. The men of Stemmermann Group were furious on learning that, according to Soviet accounts, they themselves had allegedly committed similar acts. Marshal Konev, for example, referred in his memoirs to 'reports by the Soviet Bureau of Information' claiming that, 'at the order of the German high command, wounded soldiers and officers were killed and their bodies burnt'.<sup>335</sup> This disinformation stemmed from 2nd Ukrainian Front HQ, as confirmed by an interview with Major Kampov, one of Konev's staff officers: 'The order to kill the wounded was strictly carried out [...] in many cases they [the Germans] set fire to the ambulance vans with the dead inside. One of the oddest sights were the charred skeletons in those burned-out vans, with wide bracelets of plaster-of-Paris round their arms or legs. For plaster-of-Paris doesn't burn.'<sup>336</sup> A striking detail in this account is the statement that most of the wounded were shot through the back of the head, a particularly Soviet method of execution. Elsewhere in his account, Major Kampov makes matters clearer: '[The Soviet cavalry] massacred the Fritzes [...] There was no time to take prisoners. It was a kind of carnage that nothing could stop till it was all over.'<sup>337</sup> Milovan Djilas, a comrade-in-arms of the Yugoslav

The British journalist and historian Alexander Werth was the only western correspondent to visit Konev's headquarters immediately after the battle. The man assigned there to accompany him was Major Kampov, with whom he remained friendly after the war.

<sup>337</sup> Ibid. 781.

Communist leader Marshal Tito, visited 2nd Ukrainian Front HQ shortly after the battle, where the foregoing course of events was confirmed by Marshal Konev in person:

He described, somewhat gleefully, Germany's latest catastrophe: some eighty, or even a hundred, thousand Germans had refused to surrender and had been forced into a narrow space, then tanks smashed their heavy equipment and machine-gun posts while the Cossack cavalry finally finished them off. 'We let the Cossacks cut them up for as long as they wished. They even hacked off the hands of those who raised them to surrender!' the Marshal said with a smile.<sup>338</sup>

Notwithstanding all the justified indignation of former members of the Wehrmacht,<sup>339</sup> it must not be forgotten that similar wild 'hunting scenes' took place on Ukrainian soil a few years earlier, in the area of Kiev. At that time the victims were several hundred thousand Red Army soldiers who were trying to escape encirclement. It is true that the German front-line troops generally respected the international laws of war and spared the lives of those who surrendered. Nevertheless, in September 1941 alone 665,000 Soviet troops were taken prisoner in the battle of the Kiev pocket.<sup>340</sup> In the camps behind the front lines, however, living conditions were so horrific that large numbers died of hunger and epidemics. The Red Army troops storming forward in the spring of 1944 were not unaware of those misdeeds. They took excessive revenge and so further accelerated the spiral of violence.

#### (e) Summing Up: 'No Stalingrad on the Dnieper'

The American military historian Douglas E. Nash rightly entitled his work on the Cherkassy–Korsun battle 'No Stalingrad on the Dnieper',<sup>341</sup> taking issue with historians like Sergei S. Smirnov, the author of *Stalingrad na Dnepre*.<sup>342</sup> The propaganda of the Stalin era created the picture of a second Stalingrad, to which Konev above all, the victor of the battle, was particularly attached.<sup>343</sup> As late as 1972 he claimed in his memoirs that 'not a single German soldier [...] got through anywhere on the external or internal front'.<sup>344</sup>

In reality, Cherkassy–Korsun ultimately failed as a battle of encirclement. On 16–17 February as many as 36,262 men were still able to break out,<sup>345</sup> and 4,161 wounded had already been flown out by 11 February.<sup>346</sup> This means that at

<sup>338</sup> Djilas, *Conversations with Stalin*, 46.

<sup>339</sup> Thus Günter Jahnke, a survivor of the battle of Cherkassy–Korsun pocket: 'Particularly reprehensible is the fact that the Soviet leadership was apparently still proud of the murder which its troops had committed' (Jahnke, *Der Kessel von Tscherkassy*, 122).

<sup>340</sup> KTB H.Gr. Süd, 26 Sept. 1941, fo. 132, BA-MA RH 19-I/73.

<sup>341</sup> This frequently cited work was published as a dissertation in 1995 in Fort Leavenworth, Kansas.

<sup>343</sup> Konev, *Aufzeichnungen eines Frontoberbefehlshabers*, 140, 142; Djilas, *Conversations with Stalin*, 46.

<sup>344</sup> Konev, *Aufzeichnungen eines Frontoberbefehlshabers*, 134.

<sup>345</sup> Final report of the Mattenklotz Group, 2 Mar. 1944, fo. 23, BA-MA RH 21-1/140 a.

<sup>346</sup> Ibid.; the entry for 11 Feb. 1944 in the war diary of the 1st Armoured Army's quartermaster-general confirms that 4,154 wounded had been flown out by that date; see BA-MA RH 21-1/366, fo. 20.

least 40,423 men were rescued. According to the final report of the army medical officer, Stemmermann Group's losses in the fighting in the pocket and during the breakout amounted to 3,000 'counted dead' and around 10,000 missing.<sup>347</sup> Konev's claim that 130,000 men were caught in the trap thus belongs in the realm of fantasy.<sup>348</sup>

From 1 to 20 February, in the course of its relief attack against the superior forces of several Soviet armoured armies, III Armoured Corps lost 559 dead, 347 missing, and 2,252 wounded.<sup>349</sup> The number of tanks and assault guns lost in February seems unusually high at 156,<sup>350</sup> especially as the figure given in the original reports was much lower. The explanation is that only around 30 per cent were knocked out by enemy fire (including mines), while most were blown up by the Germans themselves, often days later, since it had proved impossible to salvage them either because of technical defects or because they were stuck fast in the mud.<sup>351</sup>

As emphasized in a communication from the staff officer responsible for anti-tank combat, almost all the damaged vehicles would 'not necessarily have been write-offs if enough haulage resources had been in place in good time'.<sup>352</sup> Heavy Armoured Regiment Bäke, deployed at the spearhead of the breakthrough wedge, lost 23 Panthers, of which only four were knocked out by enemy fire, as well as seven Tigers, only one of which was destroyed by a Soviet cannon.<sup>353</sup> At the same time, this regiment, deploying on average a dozen Tigers or Panthers on each occasion, destroyed a total of 268 Soviet fighting vehicles.<sup>354</sup> As far as can be judged from the fragmentary surviving documentation, the losses incurred by XXXXVII

<sup>347</sup> Der Heeresarzt, Az.: 1335 (II b), No. I/5214/geheim, 1 Mar. 1944, fo. 13, BA-MA RW 6/559 (losses from 6 to 18 Feb.) However, this figure does not include losses of around 4,000 Soviet paramilitary auxiliaries. Originally numbering around 5,000, only 1,063 were left in the German units after the battle; see Gruppe Mattenklotz: Abschlußmeldung, 2 Mar. 1944, fo. 23, BA-MA RH 21-1/140 a. When the danger of encirclement loomed, the paramilitary auxiliaries left and blended with the civilian population. Though normally considered reliable, they were panic-stricken at the thought of being taken prisoner since they, even more than the German troops, could expect no mercy.

<sup>348</sup> On this, see the criticism in Nash, 'No Stalingrad', 73.

<sup>349</sup> Pz.AOK 1, IIa: 'Verlustübersicht vom 1. bis einschließlich 20.2.1944', fo. 10, BA-MA RH 21-1/198.

<sup>350</sup> Panzerarmee-Oberkommando 1, Stabsoffizier f. Panzer-Bek., 3 Mar. 1944, 'Panzerausfälle', fo. 42, BA-MA RH 21-1/130. Missing from the figure of 138 write-offs given here is the data for SS Armoured Division 'Leibstandarte', which suffered 19 write-offs (of which 10 assault guns), as noted in an earlier report: Pz.AOK 1, 28 Feb. 1944, 'Totalausfälle', fo. 253, BA-MA RH 21-1/129.

<sup>351</sup> Attached to a 1st Armoured Army file is a map on which all write-offs in the Lisyanka area are marked. However, all armoured vehicle losses are shown (incl. infantry fighting vehicles, armoured reconnaissance vehicles, armoured transport vehicles, etc.) Of all the vehicles written off, 75 were lost owing to enemy action, whereas 142 had to be blown up by the German troops themselves: appendix to Gen.Kdo. III. Pz.Korps Ia No. 363/44 g., 28 Feb. 1944, BA-MA RH 21-1/130.

<sup>352</sup> Panzerarmee-Oberkommando 1, Stabsoffizier f. Panzer-Bek., 3 Mar. 1944: 'Panzerausfälle', fo. 42, BA-MA RH 21-1/130.

<sup>353</sup> 'Verluste und Bergung von Panzern und Großwaffen (22.2.1944)', fo. 138, BA-MA RH 21-1/129; Pz.AOK. 1, 28 Feb. 1944: 'Totalausfälle', fo. 253, BA-MA RH 21-1/129; 'Ausfälle' (table), appendix to Stopak No. 349/44 geh., 3 Mar. 1944, fo. 44, BA-MA RH 21-1/130.

<sup>354</sup> For that exploit Lt.-Col. Bäke was awarded the Iron Cross with Oak Leaves and Swords; see Rubbel, *Tiger-Abteilung 503*, 195. From 24 January to 21 February 1944, Heavy Artillery Regiment Bäke reportedly destroyed some 500 Soviet tanks and assault guns; see Schadewitz, 'Die Rettung der 35 000', 1, BA-MA Msg 2/4396.

Armoured Corps, positioned further to the west, were minimal. In any case, it had few fighting vehicles and was mostly deployed in static combat.

In the battle of the Cherkassy–Korsun pocket the Red Army, according to its own figures, lost 80,188 men, of whom 24,286 dead or missing.<sup>355</sup> Here again, as always when heavy losses of armoured vehicles were incurred, no Soviet figures were recorded. Resort must therefore be had to the German reports, which were astonishingly reliable in this phase of the war because of the restrictions on hit recognition. From 4 to 19 February, according to the German reports, 728 Soviet tanks and assault guns were destroyed, as well as 600 anti-tanks guns and 150 cannon.<sup>356</sup> III Armoured Corps alone accounted for 606 fighting vehicles, 336 anti-tank guns, and 71 cannon.<sup>357</sup>

On the Soviet side, it should be noted that at the time of this battle the operational and tactical skill of the Red Army was far from having reached the level it attained by the following summer, for example during Operation BAGRATION. Nevertheless, the battle of the Cherkassy–Korsun pocket showed clear progress compared with earlier Soviet operations, reflected specifically in the role of 5th Guards Armoured Army. Normally, large-scale operations were always conducted in conjunction with general (infantry) armies. In this case, however, the tactical breakthrough was achieved by the armoured units alone. The ensuing advance was also an exclusively armoured operation. Once the connection was made with the spearhead of 6th Armoured Army, the pincer had closed. The Soviet forces had succeeded in trapping two German corps and opening up a 100-kilometre-wide breach in the front. At that point, however, the Stavka made a decisive mistake. Instead of pushing forward in depth and forcing the German troops back, the Soviet armoured units went over to the defensive. From the operational viewpoint, this was clearly a retrograde step compared with Stalingrad. At Stalingrad the forward thrust had been continued, and the front had been pushed back 150 kilometres to the west, with the result that, later on, the German relief troops could get no closer than 50 kilometres. At Cherkassy–Korsun, in contrast, III Armoured Corps was only 40 kilometres from the pocket at the beginning of the relief attack and, despite very adverse terrain conditions, it was able to get within a few kilometres of the encircled troops, thereby making the breakout possible.<sup>358</sup> The Stavka's mistake was compounded by a serious error on the part of Konev, the commander-in-chief of 2nd Ukrainian Front. The realignment which he ordered, conflicting with

<sup>358</sup> Nash, 'No Stalingrad', 149–50.

Zhukov's intentions, created great confusion and opened up a gap through which the German troops were able to escape.

Soviet propaganda celebrated the battle as a complete victory, in the course of which not a single German had escaped. General Konev became the first front commander promoted to the rank of marshal of the Soviet Union during the war.<sup>359</sup> Zhukov commented bitterly in his memoirs: 'On 18 February our capital city saluted the troops of 2nd Ukrainian Front. Not a word was said about the fighters of 1st Ukrainian Front. I consider this an unforgivable error on the part of the Supreme Commander.'<sup>360</sup> The Red Army had lost a great opportunity. The prey escaped. There was no "Cannae at Korsun".

Cherkassy-Korsun was one of the strangest battles of the war in terms of its reception, for German propaganda too celebrated it as a victory. There was no basis for that at all, and it was no glorious chapter in Field Marshal von Manstein's career. The main blame for the debacle undoubtedly lay with Hitler, who had insisted on holding the salient at all costs, against the demands of his generals, even when encirclement was imminent. In retrospect, however, it can be seen as a mistake to have attempted to encircle the encircling Soviet troops by means of a complicated manoeuvre instead of conducting a relief attack by the direct route. In so doing, Manstein was complying with a basic requirement of Hitler's and could hardly have foreseen the sudden change in the weather which rendered the roads almost impassable for some time. Nevertheless, he stuck too long to the original plan of a wheeling attack in the direction of Medvin. As a result, the final push towards Lisyanka did not get under way until seven days after the first attempted attack and 14 days after the encirclement. And so the counter-attack, instead of striking the enemy in the rear or on the flank as was usually done, was directed frontally against his newly established front.

After the breakout from the pocket, the troops of Stemmermann Group learned that, back home, the counter-offensive at Cherkassy was being celebrated bombastically as a 'great victory'. Once again, the propaganda machine distorted the facts and turned them on their head. The press reported the following announcement by Führer headquarters: 'The troops cut off there since 28 January [...] fought off the assault by far superior enemy forces in heroic battle and then broke through the enemy's enclosing ring in bitter fighting. The commanders and their troops have thus written another glorious page in the history of German soldiery, a further shining example of heroic endurance, daring fighting spirit, and selfless comradeship.'<sup>361</sup> Lt.-Gen. Vormann, whose armoured corps had pushed in vain towards the pocket, commented: 'The troops who took part were astonished and unbelieving when they were told they had won a great victory at Cherkassy in the Ukraine in 1944.'<sup>362</sup>

<sup>359</sup> At the same time, the commander-in-chief of 5th Guards Armoured Army, P. A. Rotmistrov, was promoted to marshal of armoured troops.

## 7. THE WITHDRAWAL BATTLES OF FOURTH ARMOURED ARMY IN THE NORTHERN UKRAINE FROM THE END OF JANUARY TO APRIL 1944

The dilemma of Hitler's operational command is aptly summed up by the following observation: 'Hitler committed the strategic "deadly sin" of taking space as his prime operational objective, rather than enemy forces which had to be beaten wherever they were.'<sup>363</sup> In pursuing that objective, the price he had to pay for holding onto front salients that were difficult to defend was much too high. The losses suffered at Cherkassy-Korsun 'flew in the face of all military economy'.<sup>364</sup> But that error did not only affect the sector directly concerned. Since Army Group South had to concentrate all its reserves in the centre of the front at Korsun, both wings were left exposed. The Red Army, however, was so strong numerically that it was also able to conduct two offensives on the wings.

On 30 January, 3rd and 4th Ukrainian Fronts launched the Nikopol-Krivoy Rog Offensive.<sup>365</sup> More than 700,000 men attacked the exposed Sixth Army in the Dnieper bend.<sup>366</sup> Consequently, on 2 February Sixth Army was reassigned to Army Group A, which then consisted essentially only of Seventeenth Army (enclosed in Crimea). Army Group South, however, now had to contend with the problem of a breach in its right flank, where the advancing Soviet troops reached the Ingulets by the end of February. Once again, the price was paid for Hitler's refusal to abandon an untenable salient. Sixth Army barely managed to escape encirclement.

An even greater problem arose on the northern wing, where a gap had been torn in the German front in the autumn of 1943 between Fourth Armoured Army and its neighbour on the left, Army Group Centre. The gap was now over 100 kilometres wide, and the no-man's-land south of the Pripet could only be kept under surveillance but not defended. In addition, large tracts of the Pripet marshes, which stretched from east to west, were controlled by partisans. Field Marshal von Manstein saw the gap as a 'mortal danger' that was bound to lead to the collapse of his army group in the long run.<sup>367</sup> It would provoke the enemy into pushing westward through the breach and then swinging south in order to 'launch a large-scale flanking movement against Fourth Armoured Army, which would be synonymous with outflanking the whole of Army Group South'.<sup>368</sup> Manstein remained convinced that 'the issue was as destined as ever to be settled on the northern wing'.<sup>369</sup> A breakthrough by the enemy on the southern wing was 'the lesser evil', while the 'operational consequences' of a breakthrough on the northern wing 'would be irreparable'.<sup>370</sup> For that reason he once again demanded of Hitler that Seventeenth Army, which was enclosed in Crimea and standing uselessly on

<sup>363</sup> Rieker, *Ein Mann verliert einen Weltkrieg*, 296.

<sup>364</sup> Tippelskirch, *Geschichte des Zweiten Weltkrieges*, 372.

<sup>365</sup> See Part IV, Chapter IV.

the sidelines, be inserted in the gap between the two Army Groups.<sup>371</sup> For the dictator, however, possession of the peninsula (which was untenable in the long run) was a strategic chimera that took precedence over all operational necessities. The result was that Seventeenth Army ended up in voluntary imprisonment in Crimea and had to assume responsibility for guarding it.

### (a) The Kovel Gap

In the course of the Soviet Zhitomir–Berdichev Offensive Operation, Fourth Armoured Army had not only lost Korosten, its northern cornerstone, but had been thrown back far to the west beyond Sarny. For the first time, the Red Army crossed the former Polish–Soviet border. This was followed by 1st Ukrainian Front's Rovno–Lutsk Offensive Operation, which lasted from 27 January to 11 February 1944.<sup>372</sup> The offensive was conducted by 13th and 60th Armies, with a total of 19 rifle divisions supported by two armoured corps. What proved most dangerous, however, was the thrust by two cavalry corps on the northern wing, through the 'army group gap' south of the Pripet. I and VI Guards Cavalry Corps surged forward, with the partisans showing them the way through the difficult forest and marshland. After pushing west almost unhindered, they swung to the south, just as Manstein had feared, and took Rovno and Lutsk on 2 February.<sup>373</sup> The left wing of Army Group South had been outflanked.

Gauleiter Erich Koch, the hated Reich commissioner for the Ukraine, had lost no time getting out of Rovno, 'though not before enjoining the civilian agencies and police forces under his jurisdiction to fight to the last'.<sup>374</sup> He behaved similarly in East Prussia later on. Hitler, on the other hand, reacted as he often did when unwilling to admit to a mistake, by looking for a scapegoat. He immediately ordered a court-martial inquiry into the circumstances leading to the loss of Rovno and summoned the battle commander responsible for the town to Führer headquarters.<sup>375</sup> As a result of the inquiry, however, sentence of death was passed not upon the officer originally accused but on the divisional commander of the Rovno area, who had been summoned only as a witness. Nevertheless, following an intervention by Field Marshal von Manstein and General Raus, the commander-in-chief of Fourth Armoured Army, Hitler subsequently quashed the sentence.<sup>376</sup>

The Soviet advance into the Rovno area left Army Group South's left wing hanging in the air, with enemy units positioned deep in the rear of Fourth Armoured Army. Army Group Centre, its neighbour on the left, was also unable to plug the

<sup>371</sup> Ibid. 569–72, 578, 588.

<sup>376</sup> Manstein, *Verlorene Siege*, 588.

huge gap. It had swung its right wing back through ninety degrees to the west and moved Second Army into position along the Pripet. That gave the Red Army two possibilities: it could push further west towards Kovel, south of the Pripet, or veer south with other forces to cut the army group off from its connections to the rear. From the German viewpoint, a push to the west seemed the most threatening, since the Red Army had assembled a new army group, 2nd Belorussian Front, especially for such an operation. On 26 February the new formation was brought into position between 1st Ukrainian Front and 1st Belorussian Front (formerly Belorussian Front). It consisted of 47th, 61st, and 70th Armies and had been assigned the primary task of taking the Kovel transport node. Kovel was of paramount importance in the prevailing situation because of its position at the south-western end of the 400-kilometre-long Pripet marshes. Whoever wanted to circumvent that enormous obstacle had to gain possession of Kovel, when it would then be possible to swing northwards unimpeded to the Bug at Brest-Litovsk. Kovel became the nightmare of the two German army groups, since a successful manoeuvre in that direction could result in the collapse of the eastern front. On 19 March, 2nd Belorussian Front pushed forward to Kovel and encircled the town. On 27 March, with Army Group South unable to intervene, the front sector with the beleaguered town was placed under the command of Army Group Centre. On 5 April, as described above, Second Army's LVI Armoured Corps broke through the encircling ring around the Kovel 'marshes fortress'.<sup>377</sup> The Soviet high command then called off the offensive and the same day ordered the disbandment of 2nd Belorussian Front and the assignment of its units to 1st Belorussian Front.

### (b) The Soviet Attack towards the South

While the German forces managed to stop 2nd Belorussian Front's advance on Kovel, 1st Ukrainian Front's southward offensive from the Yampol area threatened to unhinge Manstein's army group. As a result of Hitler's refusal to withdraw the front on the southern wing of Army Group A and use the units thus freed up to plug the hole on the northern wing of Army Group South, the course of the German eastern front was now very unfavourable. In the Ukraine it had lengthened to 1,200 kilometres, with the northern and southern wings almost 500 kilometres apart. Moreover, the front was continuous only as far as Shepetovka, to the west of which the Yampol gap began. And even beyond the gap, as far as Kovel, there were only isolated sections of front. This problem affected Fourth Armoured Army, whose right wing (LIX Army Corps and XXIV Armoured Corps) ran eastwards from Yampol, while its fragmentary left wing, on which XIII Army Corps and the newly brought-in XXXXVIII Armoured Corps were deployed, ran from there to the west. On the outermost left wing, 'Von dem Bach Group' (later 'Gille Group') had to guard the marshland at Kovel. The town of Yampol, where a dangerous breakthrough was possible, was seen by General Raus as the 'springboard for the

<sup>377</sup> See Part IV, Chapter II.

enemy's southward thrust'.<sup>378</sup> Above all, immediately to the south, between Tarnopol and Proskurov, lay the army group's 'most sensitive place'.<sup>379</sup> Through that area ran the strategically important Lvov–Odessa railway line, the only remaining connection north of the Carpathians, and from there the Red Army could push further south over the Dniester and through Romania to the Black Sea.

Fourth Armoured Army was in an exceptionally critical situation. Its actual strength on 1 March was 115,613 men.<sup>380</sup> Four days later its right wing (LIX Army Corps and XXIV Armoured Corps) was assigned to First Armoured Army east of Yampol, so that it could concentrate on securing the army group's threatened northern flank. That considerably reduced the units available to Fourth Armoured Army. As for operational fighting vehicles, it was left with only 10 tanks, 20 assault guns, and 13 anti-tank cannon on self-propelled carriages.<sup>381</sup> Manstein later commented on the situation on the eastern front as follows:

In non-stop combat since mid-July, the German divisions were literally burned out. Regimental strengths were down to a fraction of their former level [...] How were any further effective counter-strokes to be carried out when, for example, a whole armoured corps possessed only 24 operational tanks? [...] All in all, there were simply not enough men and weapons to cover the large areas in which a many times superior adversary could push time and again through undefended gaps.<sup>382</sup>

In this phase, however, Hitler ruined any attempt at a sensible conduct of operations by refusing to obtain reserves by shortening the front. Instead, he told Col.-Gen. Zeitzler: 'The Russians are bound to stop attacking some time. They have been attacking non-stop since last July and can't go on for ever.'<sup>383</sup> On this Manstein commented in his memoirs: 'In March 1944 it was time to foot the bill for the Supreme Command's cardinal error of never having been willing to give anything up (either in the east itself or in some other theatre) for the sake of being stronger than the enemy, or at least as strong, at the decisive spot.'<sup>384</sup>

Hitler also acted contrary to the findings of Maj.-Gen. Gehlen's Foreign Armies East Department. On 10 February Gehlen had already determined that:

a particularly strong threat exists for the whole of the German forces located between the Black Sea and the Pripet area. This continues to be the *Soviet point of concentration* [...] A decisive success against Army Group South would both completely clear the way for the enemy to the *Balkans* and *Poland* and also render the present course of the eastern front untenable. The outcome of the present operations in the area of Army Group South will therefore [...] determine, first and foremost, the fate of the German eastern front.<sup>385</sup>

<sup>378</sup> KTB 4. Panzerarmee, 29 Feb. 1944, fo. 271, BA-MA RH 21-4/181.

<sup>385</sup> Abt. Fremde Heere Ost (I), No. 103/44 g.Kdos., (No. 85): 'Zusammenfassende Beurteilung der Feindlage vor der deutschen Ostfront im großen, Stand 10.2.1944', fo. 226, BA-MA RHD 18/249.

On 1 March Gehlen correctly predicted the Soviet operational intentions. Observing with concern 1st Ukrainian Front's build-up of a point of concentration in the Yampol area, he assumed that a 'large-scale offensive involving two or three armoured armies' was imminent, with the objective of 'finally smashing the northern wing of Army Group South and cutting off the vital connections of Army Groups A and South while the forces of 3rd and 2nd Ukrainian Fronts conduct a frontal pinning attack'.<sup>386</sup>

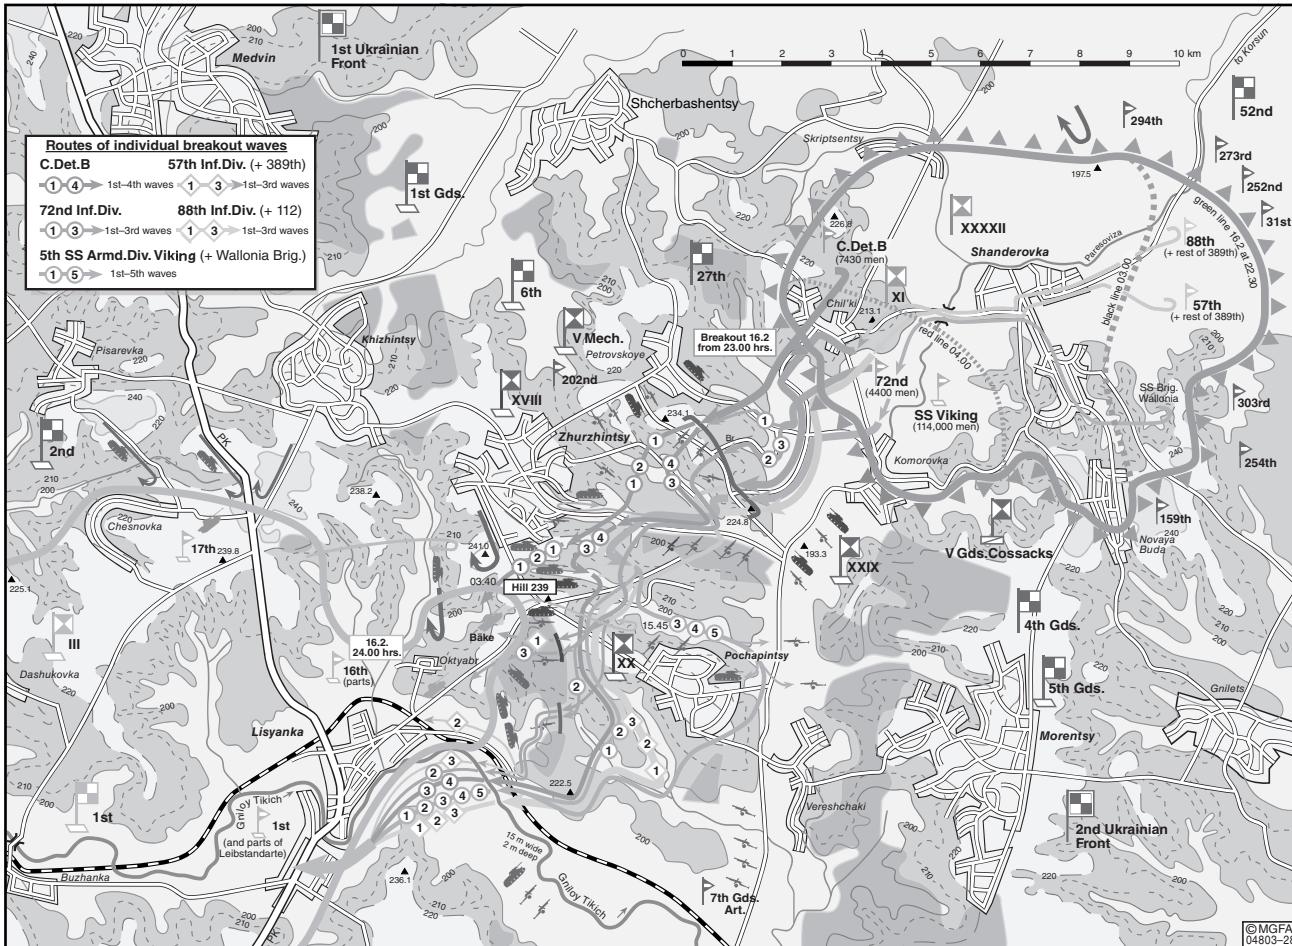

A few days later, on 4 March, 1st Ukrainian Front launched the Proskurov-Chernovits Offensive Operation from the Yampol area. This offensive, which led to the encirclement of First Armoured Army, is discussed in detail in section 8. With regard to Fourth Armoured Army, 1st Ukrainian Front confined itself to a local operational thrust, though with the ambitious aim of penetrating into Galicia as far as Lvov. Fourth Armoured Army's weak northern wing was harried by 18th and 69th Armies, but the attack by 13th and 60th Armies from the Yampol area was more dangerous, as it was supported by units of the Soviet 1st and 4th Armoured Armies. At the same time, the left wing of Army Group South was hanging in the air.

Right at the beginning of the offensive, Fourth Armoured Army's front collapsed on the southern wing. Following the Soviet breakthrough at Yampol, the connection with its neighbour to the right, 1st Armoured Army, was broken. The right wing was therefore pulled back far to the south with the aim of establishing a new defensive line behind the Seret river. Fourth Armoured Army now consisted of only two corps. XIII Army Corps was given the task of holding the northern wing and XXXVIII Armoured Corps the southern wing. The latter, however, had to give up its remaining armoured units for urgent redeployment in a counter-attack to assist the even harder-pressed First Armoured Army and close the gap between the two armies. Some of the German armoured divisions, which had been in action non-stop since the summer, were little more than debris. On 5 March, immediately after the Soviet breakthrough, when 7th Armoured Division was supposed to conduct a counter-thrust, the commander-in-chief of Fourth Armoured Army was informed that the division had 'not a single operational tank. In 2–3 days, after repairs, 10 tanks will again be operational'.<sup>387</sup> The two German armoured armies nevertheless succeeded in re-establishing a continuous front, even though weakly manned, on the inner wings between Tarnopol and Proskurov. 1st Ukrainian Front continued its offensive on 21 March and again achieved a breakthrough. As a result, 7th Armoured Division, 1st SS Armoured Division 'Leibstandarte', and 68th Infantry Division were cut off on Fourth Armoured Army's right wing and had to be reassigned to 1st Armoured Army.<sup>388</sup> Fourth Armoured Army was left with hardly any fighting vehicles.

### (c) The Tarnopol Disaster

Fourth Armoured Army's withdrawal battles in the spring of 1944 might not have aroused any great interest on the part of military historians, had it not been for the fact that a fateful idea of Hitler's was born at that time and first put into effect in that sector of the front. This was the establishment of 'fortified places', as required by Führer Order No. 11 of 8 March 1944:

The 'fortified places' will fulfil the function of fortresses in former historical times. They will ensure that the enemy does not occupy these areas of decisive operational importance. They will allow themselves to be surrounded, thereby holding down the largest possible number of enemy forces [...] Each 'fortified place commandant' should be a specially selected, hardened soldier, preferably of general's rank.<sup>389</sup>

Hitler had had 'another of his "inspired" ideas'.<sup>390</sup> He actually believed he had found a new means of permanently stopping the Red Army's irresistible advance on all sectors of the front. The 'fortified places' were to act as breakwaters. In fact, Hitler had fallen back into the thinking of the First World War, when fortresses like Verdun still had a role to play. In the course of the Second World War, however, even costly modern fortifications, such as Eben-Emael and the Maginot Line, had been overrun in an astonishingly short time. The fixed defensive points ordered in the spring of 1944 were mostly towns which possessed no noteworthy fortifications and were proclaimed 'fortified places' from one day to the next. In Manstein's opinion, Hitler's 'invention' of such strongholds was useless because 'in practice they required more troops to defend them than was worth devoting to their retention. Apart from which, the forces required for such purposes could not be made available.'<sup>391</sup> The stipulation that a fortified place could be surrendered only with the personal approval of the Führer<sup>392</sup> was particularly disastrous. Since their encirclement was programmed in advance, these fortress towns, like Kolberg in 1807, became traps for the troops that manned them. The controversy over Hitler's 'fortified places' is dealt with in detail later on in the discussion of the collapse of Army Group Centre.<sup>393</sup>

Tarnopol, in the front sector of Fourth Armoured Army, was the first place to be so designated by Hitler. Soviet units penetrated the city on 9 March, and the following day it was declared a 'fortified place'.<sup>394</sup> Army Group South HQ expressed strong reservations about the proclamation of fortified places in general and Tarnopol in particular. The city possessed neither fortifications nor an airfield for supplying it by air. There were not even enough troops or sufficient supplies

available in the event of a siege. Maj.-Gen. Schrepffer, who had been appointed ‘fortified place commandant’, also protested that it was hopeless to attempt to hold the city against a massive attack. In the defence of Tarnopol he would have to resort to messengers, since no communications equipment was available.<sup>395</sup> That same day, 10 March, Army Group South HQ nevertheless received a telex stating that ‘the Führer has decided that Tarnopol remains a “fortified place” and must be held to the last’.<sup>396</sup> On 11 March, moreover, Maj.-Gen. Schrepffer was relieved of his command and replaced by Maj.-Gen. Heinrich Kittel, despite having that day managed to drive out the Soviet troops who had penetrated the city.

A new attack took place on 23 March, completely enclosing the city. The resulting pocket lay 20 kilometres east of the front to which the German units had been forced to withdraw. What now followed was a remarkable military folly on the part of Hitler, whose stubbornness was steadily increasing. Tarnopol did not remotely meet the criteria which he himself had laid down for the establishment of a fortified place. Enclosure by the Red Army had occurred so quickly that it had been impossible to lay in sufficient supplies for the troops in the city. In response, Hitler ordered an armoured unit to advance on Tarnopol—not in order to help the enclosed troops break out, but to bring them supplies. On the morning of 25 March, however, when Armoured Combat Group Friebe stood ready as the escort, it transpired that the supply convoy from Lvov, 130 kilometres away, would not arrive in time. Thereupon the tanks were ordered to attack by themselves in the direction of Tarnopol. The action turned into a farce, since the combat group neither had the task of escorting the supply convoy, nor of bringing back the troops enclosed in Tarnopol, nor even of remaining in the city as a reinforcement. Instead, it was ordered to carry out a ‘relief attack’. This episode does not reflect well on the responsible military leadership either, and especially not on Fourth Armoured Army’s commander-in-chief, General Raus. But the generals were increasingly resigning themselves to Hitler’s interventions and carried out his nonsensical orders with a shake of the head. It was the troops who paid the price.

Colonel Werner Friebe’s combat group consisted of an armoured battalion with 36 fighting vehicles, reinforced by two armoured infantry battalions with infantry fighting vehicles and several smaller units. In the initial phase it was temporarily supported by 507th Heavy Armoured Battalion (22 Tigers).<sup>397</sup> On the morning of 25 March the combat group attacked from Ozerna in the direction of Tarnopol, but met with strong resistance.<sup>398</sup> The road was mined, and the group had repeatedly to break through anti-tank gun barriers and massive artillery fire.

<sup>398</sup> On the course of the fighting, see Col. Friebe’s combat report, repr. in Fricke, ‘Fester Platz’ Tarnopol, 148–51. See also KTB XXXXVIII. Panzerkorps, 25 Mar. 1944, 93–7, BA-MA RH 24-48/144.

It was attacked on the flanks by Soviet tanks and came under fire from enemy ground-attack aircraft. On the other hand, no support from the Luftwaffe was possible because of the critical situation on the rest of the front. The group even had to do without preparatory air reconnaissance. Its losses piled up, especially when the command post was attacked by low-flying aircraft during a briefing. A regimental commander, two battalion commanders, and other officers lost their lives. In the end, Colonel Friebe took the only right decision: although a thrust towards Tarnopol 'would probably have been possible with the last forces', he broke off the operation on his own authority,<sup>399</sup> considering it pointless to continue the mission. The fact that the tanks had set out without the supply convoy proved fortunate in retrospect, since given the enemy fire, as Colonel Friebe observed somewhat ironically in his report, all the supply trucks would have gone up in flames.<sup>400</sup>

While Hitler was indulging in the luxury of a 'fortified place' 20 kilometres from his own front lines, the front itself was threatening to collapse. Colonel Friedrich-Wilhelm von Mellenthin, chief of staff of XXXXVIII Armoured Corps, urgently called for the six battalions tied down to no purpose in Tarnopol to be withdrawn and used to close the gap between 357th and 359th Infantry Divisions.<sup>401</sup> In the end, Hitler's calculation that the 'fortified place' would influence the Red Army's conduct of operations and induce it to halt its offensive was not borne out. Although four Soviet divisions were used to form a ring round the city, Soviet superiority was so great that 60th Army, together with IV Guards Armoured Corps, was able to continue attacking the front held by XXXXVIII Armoured Corps. The aim was to surround the wings while conducting a frontal pinning attack. It appeared to be only a matter of days before the hopelessly inferior defenders of Tarnopol were overrun by the Soviet troops. After the supply convoy failed to arrive on time, the armoured thrust by Combat Group Friebe on 25 March was conducted as a 'relief attack', but even that minimal objective was not achieved. That same day, the Soviet troops even managed to step up their attacks and breach the city's defences. Their concentrated thrusts increasingly constricted the German pocket. On the side of the defenders, serious shortages of all supplies were making themselves felt. They had to watch helplessly as the Soviet artillery moved into position on the hills around the town and opened a barrage of fire. For the encircled German troops, artillery ammunition was in short supply and was saved by many batteries for single shots against tanks. As Tarnopol had no airfield, the Luftwaffe attempted to drop ammunition containers by parachute. Because of the great danger from Soviet anti-aircraft fire, however, the planes could mostly fly only at night, and so most of the supply containers landed in enemy hands. There were spectacular exploits by German pilots who flew transport gliders through the enemy fire and made extremely difficult spot landings, but the supplies they brought in

<sup>401</sup> Ibid. 80.

were a mere drop in the ocean. These were, in any case, suicide missions, since for the pilots there was no way back. From 10 March to 1 April the defenders lost half of the troops fit for action. Out of an original garrison of some 4,600 men, 2,325 were lost (of whom 674 dead or missing).<sup>402</sup>

Maj.-Gen. Egon von Neindorff, who had meanwhile been appointed the third commander of the Tarnopol 'fortified place' in the space of twelve days, considered defence of the city just as pointless as his two predecessors had. On 1 April he sent the following radio message from the pocket: 'Despite bitter resistance, unable to hold out against far superior enemy. Request Führer decision to attempt breakout.'<sup>403</sup> The shattering, laconic reply came only a few hours later: 'Führer decision: Tarnopol must be held.'<sup>404</sup> It was a death sentence for the vast majority of those trapped in the city. The besieging ring closed tighter and tighter around them. The ruined city was under relentless fire from the Soviet artillery, which included heavy-calibre cannon: 'Over the city itself hung a black, brown and grey cloud deck. Fiery flashes shot from the fountains of smoke and dust which marked the points of impact of incoming artillery rounds. The air was filled with thundering, crashing, and roaring sounds. Flames leapt high into the air, houses collapsed, and walls crashed to the ground. Projectiles howled and whistled in from all sides.'<sup>405</sup> The Soviet air force rained bombs on the smoking field of ruins, while four divisions of infantry, supported by tanks, attacked repeatedly. Within the murderous encirclement, every street and house was fought over. Flamethrowers and explosives were used. Conditions were especially bad for the wounded, who lay practically untended in the cellars. On 4 April a radio message reported that 850 seriously wounded were in a disastrous condition.<sup>406</sup> Medical supplies were running out, and even drinking water was lacking.

Hope flared up again on 8 April, when a radio message announcing a relief attack was received from XXXXVIII Armoured Corps. Hitler had finally given in. Now, however, such a thrust had much less chance of success than on 25 March. At that time Colonel Friebe would have been quite capable of conducting a successful relief attack, although that was not what the supreme command had in mind. Since then, the Red Army had established a multiply staggered cordon of anti-tank gun barriers and massed large numbers of troops. Above all, the encircled defenders were now so weakened that they were no longer capable of launching a serious attack from inside the pocket in the direction of the relief units. Once again, the counter-attack was to be conducted by Armoured Combat Group Friebe (with 33 battle tanks), together with 9th SS Armoured Division 'Hohenstaufen', which could deploy 30 tanks and

30 assault guns.<sup>407</sup> The thrust was to be made from a south-westerly direction, via Gorodishche, on the morning of 11 April.

But then a torrential downpour began, rendering the roads virtually impassable. The war diary reads: 'The mud is so deep that even caterpillar-tracked vehicles get hopelessly stuck; the infantry's speed of movement is around 1 km per hour.'<sup>408</sup> Fourth Armoured Army's commander-in-chief described the prospects of the relief attack as 'hopeless'. 'Everything depends on the weather,' he wrote. 'It is very doubtful whether the garrison in Tarnopol can hold out until better weather makes it possible to resume the relief attack.'<sup>409</sup> VIII Air Corps was also barely able to intervene. After heavy fighting the German troops finally managed to gain a bridgehead at Mlyniec on the east bank of the Vosushka, but construction of the military bridge took a disproportionately long time because a 135-metre-long corduroy track had to be built to enable the tanks to get across. The first vehicles did not cross the bridge until the morning of 14 April.<sup>410</sup>

Meanwhile, the final battle for Tarnopol was under way. The day before, the pocket had been split into two parts joined only by a narrow causeway. A race now began, as the Red Army strove to liquidate the pocket before the arrival of the German relief troops. The Germans were fighting their way forward laboriously and had broken through several blocking positions, although the Soviet troops, entrenched in field fortifications, defended stubbornly and were steadily reinforced with more armoured units and 1st Guards Artillery Division. Velikiy Khodachkov fell on the evening of 15 April, and the German tanks pushed towards the hill to the east of the village. Then the unexpected happened. On Hill 363 there suddenly appeared several dirty, decrepit figures with beaming faces, hardly recognizable as German soldiers. The ten men identified themselves as returning stragglers from Tarnopol and reported that the breakout had already taken place.<sup>411</sup> The attacking German armoured unit therefore expected the rest of the garrison to follow shortly, but only 33 more men arrived that day.

Events in the pocket had taken the following course. On 14 April the defenders' final agony began. Tarnopol came under such massive Soviet fire that the city had to be evacuated. The German troops withdrew to the Zagrobela district on the west bank of the Seret. Once again the cruel moment arrived when over 700 seriously wounded,<sup>412</sup> whimpering from pain and fear, had to be abandoned to a highly uncertain fate at the hands of the Red Army. In Zagrobela there were hardly any cellars in which transportable wounded could be sheltered. The houses were made of clay or wood. The pocket in which the remaining 1,500 men were crammed together was no more than 1,000 metres in diameter. The attackers fired into it with weapons of all calibres, and the Soviet air force flew waves of bombing and strafing missions. The end came on 15 April. At 11.02 Fourth Armoured Army

<sup>412</sup> Buchner, *Ostfront 1944*, 92; Fricke, 'Fester Platz' Tarnopol, 120.

received a desperate radio message: ‘Relief extremely urgent. Well destroyed. Ammunition?’<sup>413</sup> With the only remaining well destroyed, there was no more drinking water.<sup>414</sup> The last radio message from the pocket, received around noon, reported the death of the commandant, Maj.-Gen. von Neindorff, in an air raid.<sup>415</sup>

Colonel Carl August von Schönfeld, the commander of 949th Infantry Regiment, then took command in the pocket and ordered the breakout on his own authority. Two groups of around 700 men were formed, one of which was to break out westwards and the other towards the southwest. At 02.00 on 16 April both groups succeeded in breaking through the inner encirclement ring, having taken the Soviet troops completely by surprise. The south-westerly group pushed past Yanovka and crossed through the woods to its west, but in the open terrain around Pochapintsy they were surrounded by Soviet troops and cut down. Colonel von Schönfeld fell at the head of the breakout group. On 16 April, as already mentioned, only 43 men reached the spearhead of Combat Group Friebe some 3 kilometres further on. Two days later, another five soldiers arrived. The westerly group, which set out towards Kozlov, fared even worse. Only seven men got through to the German lines.<sup>416</sup> Thus, all in all, only 55 of the original garrison of 4,600 men escaped from the pocket.<sup>417</sup>

On 18 April the curtain fell. Tarnopol, where Hitler first tested the ‘fortified place’ concept, had turned into a ‘miniature Stalingrad’.<sup>418</sup> But the dictator was still convinced he had been right, claiming that the fortified place had tied down strong enemy forces. The military reality was quite different, however. The Red Army had advanced in depth past Tarnopol without allowing itself to be disturbed by the German troops in its rear. It had indeed been obliged to leave strong encircling forces behind for a while but, given its huge numerical superiority, that had not weighed particularly heavily in the balance. The Tarnopol ‘fortified place’ had become an end in itself. Rather than relieving the burden on Fourth Armoured Army, it was itself a burden. The troops sacrificed there to no purpose could have been deployed much more usefully at the front, where dangerous gaps had arisen. Moreover, instead of tying down the Soviet attackers, Tarnopol tied down the few remaining German armoured reserves that had to be assembled for the relief attack. Open criticism of Hitler’s ‘fortified place’ obsession was a risky business, but General Raus, the commander-in-chief of Fourth Armoured Army, was unmistakably clear: ‘The point is whether the loss of a whole garrison of 4,200 troops with

<sup>417</sup> The list of names of those 55 returning stragglers is found in Pz.AOK. 4: ‘Kampfkommandant Tarnopol, April 1944: Zurückgekehrte Tarnopolkämpfer’, BA-MA RH 21-4/215, fos. 227–8.

<sup>418</sup> Fricke, ‘Fester Platz’ Tarnopol, 129.

their valuable material, as well as human losses of 1,200 men in the relief attack, are in tolerable proportion to what was achieved.<sup>419</sup> But Tarnopol was only the prologue to a much greater disaster that befell Army Group Centre the following summer. Whereas in Tarnopol only troops of regimental strength had been obliged to let themselves be encircled, Hitler went on to apply the 'fortified place' system at the level of divisions and army corps. As a result, the combined mass of three armies ended up in a 'super Tarnopol'.

#### (d) The Behaviour of the Population in the Ukraine and Galicia

In most historical accounts of military operations, events are described as if they took place on an uninhabited battlefield. In the German–Soviet war, however, the dividing line between soldiers and civilian population was blurred.<sup>420</sup> On the one hand, civilians were victims of military violence; on the other, they too engaged in violence as partisans. The front was often invisible, and in the Ukraine it ran through the middle of the population, so that in the hinterland it was often no longer possible to distinguish between friend and foe. On 29 February 1944 General Vatutin, the commander-in-chief of 1st Ukrainian Front, was travelling to Sixtieth Army headquarters. As he passed through the village of Milyatyn, escorted by an armed convoy, he was shot by Ukrainian nationalist partisans and died of his wounds soon afterwards.<sup>421</sup> Here some discussion of the behaviour of the Ukrainian population is called for. In the west there is very little awareness that the Ukrainians were among the greatest victim peoples of the bloody twentieth century. In the space of some 30 years they lost around 11 million lives through democide (excluding military operations).<sup>422</sup> The paroxysm was reached in the winter famine of 1932–3, when the Soviet leadership sealed off the Ukraine hermetically after removing all the foodstuffs it could lay hands on. Within a few months the artificially induced famine cost 7 million people their lives.<sup>423</sup> It was 'the fastest mass murder committed against a single ethnic group in the twentieth century, and possibly in all history'.<sup>424</sup> By such ruthless cruelty Stalin broke the Ukrainians' will for freedom for a long time to come.

When the Wehrmacht marched into the Ukraine in 1941, the German troops were welcomed enthusiastically in many parts of the country. Many Ukrainians

<sup>419</sup> Oberkommando der 4. Panzerarmee No. 2885/44 geh., 24 Apr. 1944: 'Erfahrungen über feste Plätze', BA-MA RH 21-4/192 b, fo. 143. The figure of 4,200 men refers to 23 March, when Tarnopol was finally encircled. On 10 March, when it was proclaimed a 'fortified place', there were as many as 4,600 troops in the city. The figure of 1,200 human losses by the relief troops, however, includes the wounded.

<sup>420</sup> This subject can be dealt with here only in outline. On this see *Germany and the Second World War*, ix/II (chapters by Bernhard Chiari).

<sup>421</sup> Zhukov, *Erinnerungen* (8th edn.), 229.

<sup>422</sup> In a table of the largest democides suffered to date, repr. in Heinsohn, *Lexikon der Völkermorde*, 59, the Ukrainians take third place. Apart from the Chinese and Russians, it was they who suffered the most victims; see *ibid.* 335.

<sup>423</sup> *Ibid.* 58.

<sup>424</sup> *Ibid.* 336, see also 178. An estimated total of 42,672,000 Soviet citizens fell victim to Stalin's terror; see *ibid.* 56, 245, 295–7, 310.

fought on the German side during the war or helped as auxiliaries. The Nazi regime soon showed its true face, however, above all in its intention to destroy 'Judeo-Bolshevik subhumanity'. Two distinct partisan movements arose: one pro-Soviet, the other a Ukrainian nationalist movement directed against both the Germans and the Soviets, with the aim of an independent Ukraine. When the Red Army reconquered the country in the summer of 1943, many inhabitants had mixed feelings about the return of the Soviet commissars. A new wave of terror was unleashed against real or alleged collaborators, but the seemingly uninvolved population was also plunged into the maelstrom of war. Because of its horrendous losses, the Red Army was temporarily short of personnel. Special troops surrounded whole villages and forcibly recruited the majority of the male population, in some places from the age of 13 upwards and in others from 16. Engagements took place in which half of the prisoners captured by the Wehrmacht were less than 18 years old. Such 'booty Ukrainians' were frequently incorporated directly into Red Army combat units, although they had no training or combat experience whatsoever. In some cases they made up 40 per cent of the Soviet infantry, serving in fact only as 'cannon fodder'.<sup>425</sup> 'If these hordes encountered intact German units,' General von Vormann remarked, 'they suffered terrible losses, beyond all imagining.'<sup>426</sup> Instead, many Ukrainians joined the ranks of the partisans. It was they or their sympathizers who killed General Vatutin. The Red Army now experienced a new situation, since it too was henceforth obliged to 'set aside strong forces to combat partisan formations'.<sup>427</sup> What is more, a third group of partisans had formed in the western Ukraine, consisting of members of the Polish minority who were fighting above all against the Ukrainians. The hostilities in the region thus became increasingly complex and confusing.<sup>428</sup>

## 8. THE BREAKOUT BY FIRST ARMOURED ARMY FROM THE KAMENETS PODOLSKY 'MOVING POCKET'

While Fourth Armoured Army was only touched on the edge by the Soviet Proskurov–Chernovits Operation, that offensive hit First Armoured Army full on. It nevertheless consisted of only one of four simultaneously launched Soviet attacks aimed at destroying the German southern wing on which Army Groups A and South were positioned in the spring of 1944. That could have resulted in the collapse of the entire eastern front. The Stavka's plan was to split the southern wing by means of several armoured wedges, surround the German armies, and destroy them one after the other.<sup>429</sup> First Armoured Army was specially threatened, since it was in danger of a gigantic encirclement by the massed forces of two Soviet army

fronts. The main attack was to be carried out by 1st Ukrainian Front. Its task was to push southwards to the Dnieper as quickly as possible at the interface between the German First and Fourth Armoured Armies in order to cut off First Armoured Army's retreat to the west. At the same time, 2nd Ukrainian Front would smash the left wing of the neighbouring Eighth Army, push forward in turn to the Dnieper, and then swing west with several armies so as to enclose First Armoured Army in a second pincer. The two Soviet army fronts constituted a concentration of 19 armies which included all six Soviet armoured armies and several independent mechanized units.<sup>430</sup> To the east, 3rd Ukrainian Front was to conduct an offensive from the Krivoy Rog area in the direction of Odessa and destroy the German Sixth Army, belonging to Army Group A, on the Black Sea. These three operations were to be launched at daily intervals starting on 4 March. As already discussed, 2nd Belorussian Front on the flank had the task of encircling the northern wing of Army Group South at Kovel.

1st Ukrainian Front alone had 800,000 men, 1,400 tanks and assault guns, 11,900 cannon and grenade launchers, and 477 combat aircraft,<sup>431</sup> and 2nd Ukrainian Front had 691,000 men, 670 tanks and assault guns, 8,890 cannon and grenade launchers, and 551 aircraft.<sup>432</sup> On the other side, the German First Armoured Army had an actual strength 211,545 men and Eighth Army 152,637.<sup>433</sup> How inferior the defenders were in terms of material can be seen from the number of battle tanks, which were the Germans forces' premier weapons system. Although the bulk of all Army Group South's armoured units were concentrated in First Armoured Army, the latter had only 96 tanks and 64 assault guns to deploy against the mass of Soviet armour.<sup>434</sup> Its fleet of motor vehicles was also wretchedly small in comparison with that of the Soviet units. Given the forced de-motorization, the role of the lorry was increasingly taken over by horses, of which First Armoured Army, for example, deployed around 50,000.<sup>435</sup> Field Marshal von Manstein also complained that personnel replacement had come to a halt. His army group had incurred total losses of 405,409 dead, missing, or wounded from July 1943 to January 1944, but only 221,893 replacements had been provided.<sup>436</sup> Of the new arrivals, 25 to 40 per cent did not even have small

<sup>430</sup> 1st Ukrainian Front comprised: 1st and 4th Armoured Armies; 3rd Guards Armoured Army; 13th, 18th, 38th, and 60th Armies, and 69th Army (temporarily on the right wing). 2nd Ukrainian Front: 2nd and 6th Armoured Armies; 5th Guards Armoured Army; 4th, 5th, and 7th Guards Army; 27th, 40th, 52nd, and 53rd Armies.

arms, and 10 per cent had to be sent back as physically unfit.<sup>437</sup> This applied above all to the newly formed infantry divisions of the 24th wave, which were 50 per cent composed of fleetingly trained 18-year-olds.<sup>438</sup>

Furthermore, in the spring of 1944 the consequences of involvement in a war on several fronts on land, at sea, and in the air were increasingly perceptible. Many of the troop and material transports urgently needed on the eastern front were diverted to Italy or, above all, to the western front in order to concentrate strong forces there in view of the expected invasion. At the same time, the Soviet Union was receiving large quantities of weapons, vehicles, and supplies from the western powers, increasing still further the huge country's already massive armament.

At the beginning of March, Manstein's army group had to hold an 850-km-long front with only 33 decimated divisions.<sup>439</sup> The weak German forces were no longer sufficient to form defensive positions, but only thin security lines without reserves. Their only chance of avoiding encirclement and destruction was to withdraw, while fighting a rearguard action, to the rivers Bug, Dniester, and Prut, which ran parallel to their lines, in a race against time with the armoured units of the Red Army. But the German generals had another dangerous adversary, namely Hitler. His operational plan can be summarized in the single phrase: 'Hold firm!' In the front sector of First Armoured Army, it resulted in the following weeks in the greatest battle of encirclement since Stalingrad.

### (a) The Encirclement of First Armoured Army

From 1 March 1st Ukrainian Front was commanded by Marshal Zhukov in person, and on 4 March it launched the Proskurov–Chernovits Offensive Operation. Field Marshal von Manstein had clearly identified the Soviet point of concentration and endeavoured to place his weak forces as best he could. To that end he moved First Armoured Army further to the northwest as a counter-weight. First Armoured Army transferred the corps on its right wing, VII Army Corps, to Eighth Army and took over from Fourth Armoured Army the combat sector and the units of XXIV Armoured Corps and LIX Army Corps.<sup>440</sup> Nevertheless, Army Group South had too few troops to form a continuous front and had to put up with the 'Yampol gap', for example. Not surprisingly, it was there that the attacking forces achieved the breakthrough. The Soviet 60th Army made the decisive breach, through which the fighting vehicles of 3rd Guards Armoured Army and 4th Armoured Army then streamed southward. By 10 March the first wedges had already reached the Proskurov area. Then Manstein launched his pre-planned counter-attack. The flanks of the Soviet breakthrough corridor were attacked from the east by III Armoured Corps, while XXXXVIII Armoured Corps, belonging to Fourth Armoured Army, attacked from the west. The advancing avalanche of the superior Soviet forces was brought to a halt. However, the right wing of

<sup>437</sup> BA-MA, Study ZA 1/2074, 431.

<sup>438</sup> BA-MA, Study ZA 1/2076, 476.

<sup>439</sup> BA-MA, Study ZA 1/2074, 431–2.

<sup>440</sup> KTB 1. Panzerarmee, 3 and 4 Mar. 1944, BA-MA RH 21-1/123, fo. 4–5.

Fourth Armoured Army was broken off during the fighting and was transferred to First Armoured Army. From then on, as the 'Mauss Group' (7th Armoured Division, 1st SS Armoured Division 'Leibstandarte', 68th Infantry Division), it formed the left cornerstone of First Armoured Army.<sup>441</sup>

In his superabundant reserves Zhukov still had 1st Armoured Army, which was put into action later. On 21 March it achieved the decisive breakthrough in the gap between the German First and Fourth Armoured Armies.<sup>442</sup> With that, the dam was finally broken. The three armoured armies of 1st Ukrainian Front pushed south along First Armoured Army's western flank, which had been torn open. At the same time, First Armoured Army was subjected to holding attacks by 1st Guards Army and 18th Army, while 38th Army pushed forward on the eastern flank to strike it from the rear. The Soviet 1st Armoured Army, commanded by General Mikhail Yefimovich Katukov, attacked on the extreme western flank and advanced almost unimpeded deep into the area to the south. On 24 March it crossed the Dniester and five days later reached Chernovits on the Prut.<sup>443</sup> Meanwhile, the Soviet 4th Armoured Army swung east and on 27 March joined up at Kamenets Podolsky with 38th Army, which was advancing apace from the opposite direction. The two arms of 1st Ukrainian Front's pincer attack had closed. The Soviet losses were nevertheless considerable, with 3rd Guards Armoured Army losing 70 per cent of its tanks<sup>444</sup> and Fourth Armoured Army left with only 60 fighting vehicles.<sup>445</sup> The German units had defended vigorously, but in the face of such overwhelmingly superiority they were unable to prevent encirclement. Things went even worse for the German First Armoured Army, since 40th Army, belonging to 2nd Ukrainian Front, was now approaching from the north-east in another (external) pincer movement aimed at forestalling any attempt by the German troops to break out to the south. On 31 March it closed the pincer arms of the two army fronts (4th Armoured Army and 40th Army) at Khotyn. The German First Armoured Army was now trapped in a double encirclement both north and south of the Dniester.

On 5 March, the day after 1st Ukrainian Front began its offensive, 2nd Ukrainian Front launched the Uman–Botoşani Offensive Operation. In the main thrust alone, Marshal Konev deployed three general armies and three armoured armies, with a total of 651 tanks and assault guns.<sup>446</sup> Against such superior forces Eighth Army, still suffering from the consequences of the Cherkassy–Korsun battle, had no chance at all. After Manstein concentrated almost all armoured units with 1st Armoured Army, Eighth Army had been left with only three armoured divisions, equipped with a rudimentary fleet of fighting vehicles, and one armoured infantry division. On 10 March the Soviet units already took Uman, and on 12 March their first troops crossed the Southern Bug. They suffered considerable

<sup>441</sup> Unfortunately there are no Army Group South documents for this period, and the entries from 12 March to 2 April are missing from First Armoured Army's war diary.

<sup>446</sup> Konev, *Aufzeichnungen eines Frontoberbefehlshabers*, 147, 156.

losses nevertheless, and 6th Armoured Army had to be ordered back to the reserves after only a few days as only 20 per cent of its original fleet of fighting vehicles remained available.<sup>447</sup> The German units too were in a 'shattering' condition, as XXXXVII Armoured Corps' chief of staff noted after a visit to the front: 'Troops rendered apathetic by exhaustion. Artillery, assault guns, and tanks have no more ammunition. Most field kitchens lost, troops have had no hot food for days.'<sup>448</sup> On 17 March advance troops of the Soviet 5th Guards Army reached the Dniester and crossed it a few days later after constructing a military bridge.

Then, however, there came a fundamental change in the Soviet operational plan which worked to the advantage of the German troops of First Armoured Army, who were fighting for their lives. On 22 March an order arrived from Moscow that 2nd Ukrainian Front was no longer to veer south-west to complete the encirclement manoeuvre by 1st Ukrainian Front.<sup>449</sup> Wrongly assuming that the fate of the German First Armoured Army was already sealed, the Stavka now ordered most of the armies of 2nd Ukrainian Front to be directed towards the south-east to support 2nd Ukrainian Front's faltering operation against the German Sixth Army north of the Black Sea. Given the abundance of forces, numerous units were diverted to the destruction of First Armoured Army. While the Soviet 40th Army entered the fray immediately, other units lunged south into Romanian territory in a movement designed to deny First Armoured Army any possibility of retreating to the Carpathians. In Moscow they believed the encircled German troops would see flight to the south as the only way out. Meanwhile, the Soviet attacking units had driven a huge wedge between First Armoured Army and Eighth Army. The latter was split from Army Group South and pressed more and more tightly against the left flank of Sixth Army, which belonged to Army Group A. Eighth Army was now reliant on Army Group A for supplies too. Unified operational command seemed an urgent necessity.<sup>450</sup> In this situation Field Marshal von Kleist, the commander-in-chief of Army Group A, took an independent decision fraught with consequences. On the morning of 26 March he informed the OKH chief of staff by telephone that 'he had this morning placed Eighth Army under his command, because the situation so demanded. That afternoon he intended to take the momentous decision to withdraw from the Bug to the Dnieper, and to issue the necessary orders. He could no longer take responsibility for remaining in the present position. Someone had to stick his neck out.'<sup>451</sup> Col.-Gen. Zeitzler accepted the takeover of Eighth Army but referred Kleist's intention to withdraw on his own authority to Hitler. Hitler finally gave his agreement, though very reluctantly, and his reluctance later had negative personal consequences for Kleist.

<sup>451</sup> KTB H.Gr. A (26 Mar. 1944), BA-MA RH 19-V/25, 214. On this, see KTB 8. Armee, 26 Mar. 1944, BA-MA RH 20-8/126, fo. 8; AOK 8, I a No. 445/44 g.Kdos., 26 Mar. 1944, 16.10: 'Fernschreiben an 8. Armee usw.', BA-MA RH 20-8/135.

The reassignment of the separated Eighth Army to Army Group A was doubtless correct on the higher operational level, but it meant that the encircled First Armoured Army was even more isolated and could no longer expect any help from its former neighbour on the right. Its left-hand neighbour, Fourth Armoured Army, was now separated from it by a gap of 80 kilometres, which was widening all the time. On 24 March encirclement already seemed inevitable, and it first took the form of a pocket open to the west. The units of First Armoured Army were positioned in a half-circle: XXXXVI Armoured Corps, which stretched to the Dniester to the west of Mogilev Podolsky, formed the right cornerstone, while the Mauss Group, as the left cornerstone, was left completely hanging in the air at Gusyatin (on the Zbruch). This gave rise to the following configuration: the army's front faced north and east; the south (in the rear) was covered by the Dniester; but in the west there was, so to speak, a vacuum. Between the Mauss Group at Gusyatin and Khotyn on the Dnieper there were no German troops. The Soviet 3rd Guards Army and 4th Armoured Army advanced from the west through the 70-kilometre-wide gap, forcing the commander-in-chief of the German First Armoured Army, General Hube, to evacuate his headquarters in Kamenets Podolsky. The situation map now showed a terrible picture, in which First Armoured Army seemed to be caught in the tentacles of an octopus. It was surrounded by seven Soviet armies, three of them armoured. They included the newly arrived 40th Army of the neighbouring 2nd Ukrainian Front, which was advancing in depth from the north-east with other units in order to block the southward escape route. The River Dniester, a major obstacle, had turned from a shield into a barrier blocking the way south, although there was still a crossing at Khotyn with a bridgehead on the far bank. The situation thus looked even worse than at Stalingrad, where the pocket had at least had a continuous circular front. On 27 March, Goebbels wrote in his diary: 'In the east we are now facing the most serious crisis for a long time [...] our troops are partly engaged in hopeless battles.'<sup>452</sup>

There were about 220,000 men in the Kamenets Podolsky pocket.<sup>453</sup> They belonged to First Armoured Army, three divisions which had been split off from Fourth Armoured Army (the Mauss Group), and the Wehrmacht retinue (rear services, Todt Organization, police, paramilitary auxiliaries, and so on). The actual front-line units were considerably reduced in number. The combat strength of XXXXVI Armoured Corps (excluding 18th Artillery Division), for example, was only 3,677 men.<sup>454</sup> Against the Soviet armoured units fast approaching on several sides, the troops in the pocket could muster only 43 tanks and 50 assault guns.<sup>455</sup> On paper there were 22 divisions, which was a respectable number, but in fact all of them possessed only a fraction of their normal combat capability and some were not even up to regimental strength. While 1st Infantry Division still had 600 men

<sup>452</sup> Goebbels, *Tagebücher*, pt. 2, ix. 563 (27 Mar. 1944).

(combat strength) and two batteries of its original artillery equipment, it did not possess a single anti-tank cannon.<sup>456</sup> All the units were extremely short of weapons and vehicles, as well as ammunition and fuel.<sup>457</sup> Ignoring the lessons of the encirclement battles of Stalingrad and Cherkassy–Korsun, Hitler again hoped the logistic problems could be solved by supply from the air. Here too, he overestimated the possibilities of the Luftwaffe, especially as the nearest airfield was 200 kilometres away. The report of 30 March on the supply situation reads: ‘Today air supply once again wholly insufficient [ . . . ] ammunition and fuel supply situation extremely critical. Weapons blown up, vehicles set alight. Supplies for the wounded catastrophic’.<sup>458</sup> And on 1 April: ‘the supply situation is so serious that special requirements are superfluous. The fuel retrieved from burnt-out trucks is used up. Unless fuel arrives tonight, the first tanks will be unable to move.’<sup>459</sup> The same day came the brief report: ‘Fuel exhausted. Tanks of 7th and 16th Armd.Div. already at a standstill.’<sup>460</sup> In addition, the extremely difficult road conditions once again revealed the eastern army’s insufficient supply of tractors. With the weather alternating between snowstorms and thaw, the roads, almost all of which were unpaved, turned into a deep morass. Many vehicles got stuck and had to be destroyed.<sup>461</sup> Food was extremely scarce, and many of the food-supply trucks failed to reach their destination. The psychological condition of the wholly overstrained troops needs no further description.

### (b) Manstein’s Ultimatum to Hitler

Meanwhile, the conflict between Hitler and the commander-in-chief of Army Group South was escalating. In Manstein’s words, ‘it was time to foot the bill for the Supreme Command’s cardinal error’.<sup>462</sup> His army group was facing a catastrophe that would put even Stalingrad in the shade. The whole southern front threatened to collapse like a house of cards. On 19 March, when Vinnitsa had to be evacuated, Manstein made the full seriousness of the situation clear to Hitler at a meeting on the Obersalzburg. Since Sixth Army, at that time belonging to Army Group A, was still positioned far east of the Bug, he demanded that it be withdrawn to behind the Dniester and that the troops thus freed be used to stabilize Eighth Army. That proposal was supported by Field Marshal von Kleist, the commander-in-chief of Army Group A, but Hitler refused. Two days later, as recounted above, the front also collapsed at the interface between First and Fourth Armoured Armies.

<sup>461</sup> Ibid.      <sup>462</sup> Manstein, *Verlorene Siege*, 591.

Strong Soviet armoured units pushed forward in depth towards Chernovits on the Dniester, and First Armoured Army was enclosed on three sides. On 23 March, Manstein demanded immediate permission to break out before the trap closed completely. He also asked for new forces to be brought in from the east to close the gap between Fourth and First Armoured Armies. As in the case of Cherkassy-Korsun, however, Hitler was not prepared to authorize withdrawal even in view of the threatening encirclement. He also refused to make additional units available to help First Armoured Army fight its way free. Col.-Gen. Zeitzler shared the views of the commander-in-chief of Army Group South but could do nothing in the face of Hitler's unbending will.

In this situation Manstein took an unprecedented risk: he gave Hitler an ultimatum. At noon on 24 March he reported that he would give First Armoured Army the breakout order on his own authority unless he received an instruction to that effect by 15.00 hours.<sup>463</sup> The reply from Führer headquarters can only be described as sheer cynicism. Permission was given for First Armoured Army to clear its way to the west, but the previous position should continue to be held. On this Manstein later wrote:

Where the army was to find the forces to drive west and clear its communications zone of the enemy was quite beyond us. It was exactly the same as at Stalingrad in December 1942, when Hitler had likewise been ready to let Sixth Army attempt to break out in the direction of Fourth Panzer Army. In that case, too, he had demanded the simultaneous retention of the city, which simply meant that Sixth Army could not assemble any forces for a breakout.<sup>464</sup>

The next day the field marshal was summoned to Führer headquarters at Berchtesgaden, but before his plane took off he demonstratively issued the order to make preparations for the breakout.<sup>465</sup>

The fate of First Armoured Army was decided on 25 March, far from the eastern front, against the backdrop of the Alps at Hitler's Berghof headquarters. A 'sharp exchange' took place. The dictator bluntly refused Manstein's request for withdrawal and accused him of always 'playing at operations'. For his part, Manstein coolly confronted Hitler with all his operational errors of recent weeks. Probably no one had ever dared criticize the Führer in such a way in front of his closest staff. More and more furious, Hitler finally brought the dispute to an end and ordered a resumption of the talks after the evening's situation conference. Immediately afterwards, Field Marshal von Manstein asked Lt.-Gen. Rudolf Schmundt, the Führer's chief adjutant, to inform Hitler that he considered it futile to remain in

<sup>463</sup> Ibid. 608.

<sup>464</sup> Ibid. 609.

<sup>465</sup> Ibid. 610; telex from OB H.Gr. Süd to 1. Panzer-Armee, 24 Mar. 1944, 17.35, g.Kdos., HZDX/FD 2110, BA-MA RH 21-1/131, fo. 294, which resulted in the First Armoured Army commander-in-chief's warning order for breakout to the west: 'Panzerarmee-Oberkommando 1, Abt. Ia, No. 741/44 geh.', 24 Mar. 1944, BA-MA RH 21-1/387, 11-12. Unfortunately there are no Army Group South documents available for that period. The entries for the period 12 March to 2 April are also missing in the First Armoured Army war diary, while the volumes of annexes to that war diary have survived.

command of the Army Group unless Hitler accepted his recommendations. If that were not the case, he 'wished the command of Southern Army Group to be entrusted to someone else'.<sup>466</sup>

When Hitler appeared at the evening conference, he was in a completely different mood and treated Manstein in a distinctly friendly manner. His first words were: 'I have been thinking the matter over again and agree with your plan to make First Armoured Army fight its way through to the west.'<sup>467</sup> He even acceded to Manstein's request for powerful reinforcements. II SS Armoured Corps would be brought in from France immediately for the proposed assault group, as would two infantry divisions from Hungary. The field marshal had won all along the line, but little knew, as yet, the personal price he would have to pay for his victory.

### (c) **The Breakout by First Armoured Army**

At this time Manstein had to contend with three conflicts simultaneously: Soviet superior force, Hitler's intransigence, and disagreement on the part of his own generals. His plan for rescuing First Armoured Army appeared so bold that by no means all were willing to go along with it, especially not First Armoured Army's commander-in-chief, General Hube. On 24 March Hube's army was enclosed on the north, west, and east, and had been thrown back to the Dniester. At that moment both Soviet wing armies were crossing the river to join up to the south and cut off the last escape route. General Hube's reflex reaction was to demand immediate retreat to the south before the trap snapped shut. Instead, Field Marshal von Manstein decided on a breakout to the west, straight through the middle of the two advancing Soviet armoured armies. At first sight, everything seemed to speak in favour of Hube's preference for a southward breakout. It was, after all, the path of least resistance. His plan could be implemented much more easily, and with far less risk, than a breakout to the west, which would involve getting through enemy lines and crossing several intervening rivers. One of First Armoured Army's corps had similarly run the gauntlet of an encircling ring during the breakout from the Cherkassy–Korsun pocket, but only at the cost of painful losses. On the face of it, and from a tactical viewpoint, General Hube was undoubtedly right. Manstein, however, was thinking several moves ahead, like a chess player, and was guided by the following operational and strategic considerations:

- In the event of a breakout to the south, First Armoured Army would escape encirclement north of the Dniester only to end up enclosed south of the river. Strong Soviet armoured forces pursuing at speed had already crossed the Dniester and were beginning a further pincer movement on both flanks. And even if Hube's army managed to avoid encirclement south of the river, it would be forced back to the Carpathians.
- Withdrawal to the south would open a huge gap between the army and its neighbour, Fourth Armoured Army. The Soviet forces would be able to

<sup>466</sup> Manstein, *Verlorene Siege*, 612.

<sup>467</sup> Ibid. 613.

advance through that gap via Lvov to Cracow and Breslau. First Army would then have failed in its main task of preventing a Soviet breakthrough to Galicia north of the Carpathians.

- In the event of a breakout to the west, the German forces would mainly encounter the enemy's supply columns, since several armoured units had already crossed the Dniester. They could thus break through the Soviet pincer arm and cut it off from its supplies.
- The distance to the German front was shortest to the west, so a relief group could advance towards the breakout forces from the opposite direction. In that way the gap with Fourth Armoured Army could be closed.
- For Manstein, however, the decisive factor, which had brought him success in many seemingly hopeless situations, was surprise.<sup>468</sup>

As we have said, the commander-in-chief of Army Group South had already ordered preparations for a breakout to the west before flying to Führer headquarters at Berchtesgaden on 24 March, and General Hube had issued the corresponding warning order to First Armoured Army.<sup>469</sup> The crisis between Manstein and Hitler reached its peak the following day, when the field marshal submitted his resignation ultimatum. In the middle of that nerve-racking situation he received further disastrous news from the front.<sup>470</sup> In view of the dramatic worsening of the situation, General Hube considered breakout to the west 'impracticable' and insisted that 'the correct solution was to head southwards'.<sup>471</sup> He was so sure of the logic of his situation assessment that during Manstein's absence he rescinded the previous warning order for breakout to the west and replaced it by a new one,<sup>472</sup> stating that 'First Armoured Army shall break through southwards across the Dniester'.<sup>473</sup> Manstein was unimpressed and stuck to what he considered the right decision. Shortly after midnight on 26 March, after Hitler had surprisingly approved Manstein's operational plan at the evening situation conference, the commander-in-chief of Army Group South gave the final order for breakout to the west.<sup>474</sup> Following this, General Hube had to rescind his own order once again and order the breakout to the west.<sup>475</sup>

Manstein did not give the order to start the breakthrough attack until 28 March. With astonishing mastery and cool-headedness, he watched the encirclement growing ever tighter around First Armoured Army and chose exactly the right

<sup>468</sup> On Manstein's thinking, see Manstein, *Verlorene Siege*, 609–11; BA-MA, Study ZA 1/2074, 455–8; Study ZA 1/2346, 7–8; Wagener, *Heeresgruppe Süd*, 286–7.

time and place for the breakthrough. The field marshal was fully aware of the enemy's intentions, however, since German radio intelligence had managed to break the Soviet radio code in this important phase too. His army group's Ic Department had even deciphered the twice-daily strength reports of the individual armoured brigades.<sup>476</sup> In the opposite direction, the army group's own intelligence service managed to give Soviet radio surveillance the impression, by means of operational radio deception, that First Armoured Army's breakthrough attack would be carried out southwards across the Dniester.<sup>477</sup> There then arose the paradoxical configuration of a 'pocket within the pocket'. Strong forces of the Soviet 4th Armoured Army and XXX Rifle Corps had broken into the pocket through the originally existing gap in the west and taken Kamenets Podolsky.<sup>478</sup> Those units were now enclosed in turn and, like the German First Armoured Army, had to be supplied from the air. Strangely enough, the two airfields were very close to each other.<sup>479</sup> The German troops nevertheless managed to wear down the encircled Soviet units and retake the town.

When the breakout from the pocket began on 28 March, the Soviet encircling forces in the west were taken completely by surprise and overrun. General Hube had formed two attack groups: in the north the Chevallerie Group (LIX Army Corps and XXIV Armoured Corps) and in the south the Breith Group (III and XXXVI Armoured Corps). In addition, the Gollnick Group already held a bridgehead south of the Dniester at Khotyn. During the first days of the breakout operation there were repeated snowstorms, which provided protection against reconnaissance and, above all, against the enemy air force. By 29 March the Zbruch had already been crossed in several places, while Marshal Zhukov, who had still not seen through the German deception manoeuvre, continued to send troops across the Dnieper towards the south.<sup>480</sup> His orders were as follows: 'On 29 March 1944 the enemy is expected to make determined attempts to break through to Khotyn via Kamenets Podolsky [...] I order the armies to continue the rapid attack and finally destroy the enclosed group by 31 March 1944.'<sup>481</sup> Meanwhile Hube's armoured army, surrounded by seven Soviet armies, was pushing westwards in the form of a 'moving pocket'.

It was only on 1 April, when the foremost German units had already crossed the Seret, that Marshal Zhukov realized he had been taken in by a deception manoeuvre.<sup>482</sup> The commander-in-chief of 1st Ukrainian Front had made a huge mistake, fatally overestimating his own strength because of the overwhelming superiority of the Soviet forces. Thinking the battle already won, he was still concentrating on the destruction of the enemy and sought to close the last loophole

to the south. With characteristic determination, Zhukov rushed as many armoured units as possible across the Dniester. He also fragmented his forces, fanning the Soviet 1st Armoured Army out in three different directions: towards Stanislav, Kolomyia, and Chernovits. Above all, he wholly misunderstood the enemy's real operational intentions. As he admits in his memoirs, he counted on the Germans' taking the 'rational and possible decision' to break out southwards.<sup>483</sup> His opponent, Field Marshal von Manstein, however, owed his greatest successes to seemingly irrational and impossible decisions. In the western campaign of 1940 it had been his idea—at first considered 'crazy' by the AOK—to attack with tanks through the Ardennes mountain forests. Zhukov had been outmanoeuvred by Manstein on several previous occasions, and this time he must have felt completely duped. But there was no Soviet general less capable of accepting defeat than Zhukov. Normally, when success evaded him, he attacked like a battering-ram, throwing his troops into battle *en masse* without regard for losses.<sup>484</sup> Now, however, they were in the wrong place at the wrong time. Moreover, some of his armoured units south of the Dniester were cut off from their supplies, because the German First Armoured Army had thrust straight through the middle of their supply columns during its breakout north of the river. What now followed can be explained only by Zhukov's excessive frustration. In the afternoon of 2 April several of the German staffs in the pocket received an astounding radio message, written in clumsy, ungrammatical German:

Offer from Front Commander Zhukov, Marshal of the Soviet Union, to the commanders of III and XXXVIII Armoured Army Corps [etc.]:

- (1) To spare further victims, I propose you end pointless resistance by end of 2 April and surrender with supported [*sic*] units. You are surrounded on all sides. No hope from the side [*sic*]. You cannot get out of pocket.
- (2) If not surrender [*sic*] by end of 2 April 44, of all soldiers who do not fulfil the offer to end the pointless resistance, the third [i.e. one in three] will be shot. That is the punishment for pointless resistance. Surrender in groups, you are enclosed in three rings. All officers who voluntarily cease resistance, their arms, decorations, and transport will be kept.<sup>485</sup>

A few hours later a new demand from Marshal Zhukov arrived, this time in correct German. Apparently he had cooled down a bit, as now he only threatened to shoot all the commanders 'in front of their units' unless they surrendered by the evening.<sup>486</sup> This brutal demand for capitulation, which was also propagated

<sup>483</sup> Zhukov, *Erinnerungen* (8th edn.), 232.

<sup>484</sup> A well-known example is the battle of Seelow on the Oder in April 1945, when the breakthrough was initially unsuccessful and Zhukov added 1st and 2nd Guards Armoured Armies to the attack in order to force a tactical breakthrough, carrying the principle of massed deployment to absurd lengths with distinctly counter-productive results.

<sup>485</sup> KTB 1. Panzerarmee, 2 Apr. 1944, BA-MA RH 21-1/123, fo. 8; see also 'Die Kapitulationsaufforderung' in file BA-MA RH 21-1/387, 21.

<sup>486</sup> KTB 1. Panzerarmee, 2 Apr. 1944, BA-MA RH 21-1/123, fo. 8.

by leaflets,<sup>487</sup> met only with scornful laughter, but it should not be forgotten that it was a glaring breach of the international laws of war.

That same day, 2 April, another event occurred which hit the troops of Army Group South like a shock. By order of Hitler, Field Marshal von Manstein was relieved of his command and replaced by Field Marshal Walter Model. That measure, which marks a turning point in the conduct of the war on the eastern front, is discussed in detail in section 9. At all events, it had no further impact on First Armoured Army's breakthrough operation, which was already well under way. In the following days there was again bitter fighting. Zhukov tried furiously to stop the 'moving pocket'. The armies in the encirclement ring thrust into the flanks from the north and south and followed hard in the rear from the east. Above all, Zhukov sent several armoured units westwards to try to overtake First Armoured Army and block its way forward. During those few days, however, the weather thawed, impeding in particular the movements of the Soviet units, which had been wrongly positioned and needed to be extensively regrouped. First Armoured Army was indeed surrounded by seven Soviet armies, but at the decisive point in the west it had relative superiority. Zhukov was no longer able to overcome the operational disadvantage: his measures came too late. Moreover, he had made another mistake with serious consequences. Unlike at Stalingrad and Cherkassy–Korsun, he had not considered it necessary to reinforce the outer encirclement ring against the right wing of the German Fourth Armoured Army.<sup>488</sup> Apparently he had not reckoned with a relief attack, since the two German armies were then more than 100 kilometres apart. Now, however, the reinforcements which Manstein had wrested from Hitler at the dramatic conference at Berchtesgaden rolled in from the north-west. Designated as the 'Hauser Attack Group', they were commanded by SS Obergruppenführer Paul Hauser, the commanding general of II SS Armoured Corps, which had been rushed in from France. It consisted of 9th SS Armoured Division 'Hohenstaufen' and 10th SS Armoured Division 'Frundsberg', plus two units, 100th Light Infantry Division and 367th Infantry Division, brought in from Hungary. The relief attack began on 5th April and immediately achieved a breakthrough. The Hauser Attack Group then pushed 50 kilometres south-east to Buchach on the Stripa. The next day, at 17.05, it joined up with 6th Armoured Division, the attacking spearhead of First Armoured Army,<sup>489</sup> thus breaking the encirclement and restoring the connection with Fourth Armoured Army. Two days later the last rearguard units had reached the German front.

#### (d) Outlook

The Kamenets Podolsky encirclement battle (21 March to 8 April 1944) was the mightiest breakout battle of the war and differed fundamentally from the Cherkassy–Korsun breakout battle which had taken place a few weeks earlier.

<sup>487</sup> Stoves, *1. Panzer-Division*, 604–5.

<sup>488</sup> BA-MA, Study ZA 1/2074, 471.

<sup>489</sup> KTB 1. Panzerarmee, 6 Apr. 1944, BA-MA RH 21-1/123, fo. 22; Tieke, *Im Feuersturm*, 35–72.

This time the breakout was carried out under tight, deliberate leadership. There was no panic or disintegration. Moreover—and this was very important for morale—all the wounded were taken along, as was the heavy material, especially the tanks. First Armoured Army thus remained an operational large formation and could be deployed in a new attack immediately after the breakout. The air supply to the pocket also functioned properly, after a few initial difficulties. The landing places had to be moved constantly as First Armoured Army pushed westwards, and in the end only air drops were possible. Nonetheless, a total of 7,270 wounded were flown out.<sup>490</sup> The breakout succeeded after ‘heavy fighting, but without high losses’.<sup>491</sup> First Armoured Army lost only 2,311 dead, 3,567 missing, and 8,364 wounded,<sup>492</sup> while destroying 399 Soviet tanks and assault guns and 280 cannon.<sup>493</sup> Such a difficult manoeuvre, conducted so swiftly, would have been impossible for the Soviet army. As a First Armoured Army analysis concluded, ‘the Russian middle and lower-level command was probably not capable—in terms of either command or supply—of conducting such an extensive large-scale operation successfully. The Red Army lacked the tradition of a highly trained general staff. Its inferiority in a war of movement became clearly apparent.’<sup>494</sup> Given the disastrous overall situation, such a feeling of superiority was rather rare, but it seems to have been one of the secrets of the successful breakout. Without a heightened awareness of their own qualitative superiority, the German officers would have simply given way to despair and succumbed to the maelstrom of the onrushing enemy masses. The success was also due to General Hube, who implemented Manstein’s audacious operational plan, which he had first considered utopian, with energy and determination. On 20 April he was summoned to Führer headquarters and awarded the Knight’s Cross of the Iron Cross with Oak Leaves, Swords, and Diamonds. He did not enjoy his success for long, however. He died on the return flight from Berchtesgaden, when the plane crashed shortly after taking off. Hube was an invalid, having lost an arm in the First World War, but he was known as a particularly resolute and energetic general. He was very popular with his troops, who called the Kamenets Podolsky breakout battle the ‘Hube moving pocket’ in his honour.<sup>495</sup> By the end of May the front was finally stabilized. North of the Dniester the positions of First Armoured Army ran along the Stripa, while some more ground was gained south of the Dniester in a counter-attack from Stanislav towards the east. The newly arrived 1st Hungarian Army also took part in these engagements.<sup>496</sup> Fourth Armoured Army was able to fend off all further Soviet attacks on the northern wing, so that the

<sup>496</sup> This army’s actual strength was only 33,669 men; see Organisationsabteilung (I) No. I/17246/44 g.Kdos., 26 May 1944, ‘Iststärke des Heeres. Stand 1.5.1944’, BA-MA RH 2/1341, fo. 18.

Army Group succeeded in establishing a new front line between the Carpathians and Pripet.

In the spring of 1944 one of the longest and bloodiest offensives of the war came to an end on the eastern front. According to official accounts, the 'right-bank Dnieper campaign', also known as the 'Dnieper–Carpathian Strategic Offensive Operation', lasted from 24 December 1943 to 17 April 1944. However, Soviet historiography concealed the fact that the fighting by two of the army fronts involved actually continued for another 19 days before it was abandoned for lack of success. In recent Russian research the concluding date has been corrected to 6 May.<sup>497</sup> All four Ukrainian Fronts took part in the operation, as did 2nd Belorussian Front for some of the time. The combined strength of the Soviet forces (as at 1 January 1944) was 2,230,000 men.<sup>498</sup> The figure given for Soviet losses is extraordinarily high at 1,192,900 men, of whom 288,600 dead or missing.<sup>499</sup> The highest casualty count was that of 1st Belorussian Front, most recently commanded by Zhukov himself, with losses totalling 456,369.<sup>500</sup> In this operation in particular, however, the number of casualties must have been much higher.<sup>501</sup> Numerous newly recruited Ukrainians, for example, were not taken into account in the Soviet reporting system. They were incorporated into the ranks of the Red Army immediately after the liberation of their towns and villages, and often lost their lives in their first action. The vehemence with which the Soviet units were thrown into battle can be seen from the magnitude of the material losses, which are given as 4,666 tanks and assault guns, 7,532 cannon, and 676 aircraft.<sup>502</sup> The combined efforts of these five Soviet army groups—or fronts, as they are called—were directed against four German armies (First and Fourth Armoured Armies, Sixth and Eighth Armies). Although total German losses from January to April were 'only' 250,956 men (of whom 41,907 dead and 51,161 missing),<sup>503</sup> their impact was much more serious than that of the Soviet casualties, which were at least five times higher, since at this stage the German eastern front was only sporadically receiving replacement personnel.

On a higher strategic level, the interdependencies of a war on several fronts were increasingly making themselves felt. In his Directive No. 51, issued in November

<sup>497</sup> The new edition of the standard work, 'The Great Patriotic War', has this to say on the subject: 'The date given in Soviet historiography for the end of the strategic operation (17 April) is incorrect. On that day, on orders from the Stavka, only 1st Ukrainian Front went over to the defensive. Dating the end of the operation in that way avoids analysis of the unsuccessful action of two army fronts which were given another 19 days in which to achieve their initial objectives (after which they too went over to the defensive).' See Eliseyev and Mikhalev, 'Osvobozhdenie', 33.

<sup>498</sup> Ibid. This figure does not include 51st Army, which belonged to 4th Ukrainian Front but was deployed to block off the Crimea, where the German Seventeenth Army (Army Group A) was encircled.

<sup>499</sup> Ibid. 52.      <sup>500</sup> *Grif sekretnosti sniat*, 197.

<sup>501</sup> The Ukrainian historian Viktor Yefimovich Korol postulates the figure of 1,300,000 dead and wounded in this operation (Korol, 'The Price of Victory', 421). For the whole duration of the war, he estimates the corresponding figure for the Red Army at approx. 23 million men (ibid. 423).

<sup>502</sup> *Grif sekretnosti sniat*, 371.

<sup>503</sup> See German casualty tables (Heeresarzt OKH Generalquartiermeister) for the period January to April 1944, including update reports, in BA-MA RW 6/v. 559.

1943, Hitler had announced his intention to transfer the strategic point of concentration from the eastern to the western front.<sup>504</sup> Accordingly, more and more troops were moved to the Atlantic Wall in France to repel the impending Allied invasion. In the spring of 1944, however, the dramatic developments on the eastern front forced Hitler to yield to Manstein's demand and send II SS Armoured Corps right across the continent to support Army Group South. After the successful Allied landing in Normandy, Hitler complained of the absence of that corps, which was to have constituted the operational reserve.<sup>505</sup> The SS armoured units, whose modern fighting vehicles were superior to those of the Americans and British, would have caused the western Allies considerable difficulties if they could have been deployed in the right place at the right time. As this example shows, Germany's military situation had deteriorated so alarmingly that even the absence of two armoured divisions now had operational, rather than merely tactical, consequences. German strategy had literally become a 'system of expedients', in which Hitler's command decisions no longer consisted in anything more than plugging a gap in one front while opening a new one in another.

## 9. MANSTEIN'S DISMISSAL AND THE 'END OF OPERATIONS'

To the troops of the encircled First Armoured Army, their rescue subsequently seemed 'almost like a miracle'.<sup>506</sup> Field Marshal von Manstein had pulled off a brilliant operational coup. Even Russian historiography, which treats German military achievements with great reserve, speaks of a 'daring breakthrough'.<sup>507</sup> Yet Manstein again became the victim of his own ideas. Once before, during preparations for the western campaign in 1940, the OKH had removed him from his command because his proposed plan of an armoured breakthrough through the Ardennes had been considered 'foolhardy'.<sup>508</sup> That plan was finally adopted, but Manstein had to follow its unexpected success from a post in the hinterland. Now, in March 1944, the seemingly impossible happened to him again. His paradoxical idea of a breakout to the west through the Soviet columns, instead of a breakout to the south through the only remaining loophole, resulted in the rescue of First Armoured Army. But it was to be his last great operational achievement.

On 30 March 1944, five days after Manstein had wrested permission from Hitler for First Armoured Army's breakout, he was again summoned to Führer headquarters. On board the plane which Hitler sent to bring him to Berchtesgaden there was already Field Marshal von Kleist, the commander-in-chief of Army Group A. Even before take-off, Manstein had been informed that he and Kleist were to be removed

<sup>504</sup> *Hitlers Weisungen*, 233.

<sup>508</sup> Frieser, *Blitzkrieg-Legende*, 110–16.

from their command. The news had been conveyed to him by the OKH chief of staff, Col.-Gen. Zeitzler, who had been so angered by Hitler's intention that he tendered his own resignation, which the Führer had summarily rejected with the words 'a general must remain at his post'.<sup>509</sup> In the evening a meeting took place at which Hitler adopted the attitude of a magnanimous elder statesman. He began by awarding Field Marshal von Manstein a medal, before informing him that he had decided to place the command of Army Group South 'in other hands'. Hitler's reason for doing so seems of great importance, since it signalled a paradigm change in the future conduct of war on the eastern front. According to Manstein's account, Hitler announced that 'the time for grand-style operations in the east, for which I had been particularly qualified, was now past. All that counted now was to cling stubbornly to what we held. This new type of leadership must be inaugurated under a new name and a new symbol'.<sup>510</sup> On 2 April, Field Marshal Model took over Manstein's command, while Kleist was replaced by Col.-Gen. Ferdinand Schörner. The two new commanders-in-chief had in common a reputation as 'stayers', earned in tenacious defensive battles.

There were several reasons for Manstein's dismissal. For one thing, the Führer did not tolerate strong, self-assured individuals in his proximity, especially if, like Manstein, they were far superior to him in terms of operational competence. In that respect Manstein's dismissal was revenge for the fact that, a few days earlier, Hitler had been forced to yield to the pressure of the field marshal's arguments. Another factor was the dictator's aversion to members of the Prussian military aristocracy, who had regarded him from the outset as a rabble-rouser from the gutter whose vulgarity was just as repulsive as his undisguised brutality. For his part, Hitler the 'revolutionary' despised that caste for its reactionary mentality. Conservative aristocrats did not fit in with his idea of an atavistic ideological war. Manstein, who had been a page at the Kaiser's court in his youth, was therefore suspect from their first encounter,<sup>511</sup> as can be seen from a remark by Hitler to his chief adjutant: 'I don't trust Kleist and Manstein; they're clever chaps but no National Socialists'.<sup>512</sup> Their successors, Model and Schörner, came from the upper middle class, as did Erwin Rommel, for example, whom Hitler, with his petit-bourgeois origins, treated as a special favourite.

Opposing concepts of operational command, however, were much more important factors in determining Hitler's behaviour than the above-mentioned sources of resentment. For Hitler, the very word 'operational' was an irritant. Guderian subsequently commented sarcastically: 'But if Hitler heard the word "operational" he lost his temper. He believed that whenever his generals spoke of operations they meant withdrawals; and consequently Hitler insisted with fanatical obstinacy that ground must be held, all ground, even when it was to our disadvantage to do so'.<sup>513</sup> This was essentially a conflict between the principles of 'static' and

<sup>509</sup> Philippi and Heim, *Der Feldzug gegen Sowjetrussland*, 241.

<sup>510</sup> Manstein, *Verlorene Siege*, 615.

<sup>511</sup> Heusinger, *Befehl im Widerstreit*, 81, 93.

<sup>512</sup> Ibid. 262.

<sup>513</sup> Guderian, *Erinnerungen eines Soldaten*, 293.

'mobile' defence.<sup>514</sup> The battles of Tarnopol and Kamenets Podolsky can be seen as symbolic for both concepts. With his notorious Führer Order No. 11 of 8 March 1944, Hitler had ordered the establishment of 'fortified places', in what was nothing less than a perversion of the principle of 'static' defence. The first such fortified place, Tarnopol, turned into a 'Stalingrad' on a smaller scale. Had Hitler's 'static defence' principle been applied in the encirclement battle of Kamenets Podolsky, First Armoured Army would have been enclosed by seven Soviet armies and crushed to pieces. Thanks to Manstein's mobile defence approach, however, the army was manoeuvred out of the trap. Its commander-in-chief subsequently had his staff draw up a memorandum which can be regarded as a key document in the controversy between Manstein and Hitler. In it we read:

We play into the enemy's hands if we continue to defend and expose ourselves to his superior numbers and barrage of fire without seeking an opportunity for a counter-attack against his weak side by means of mobile warfare [...] The enemy cannot be defeated simply by defending, taking what comes to us, and stubbornly holding our ground. His forces are eroded in the process, but experience shows that the defender's forces are consumed to the same extent. The numerically superior Russians will therefore [...] be able to endure this erosion of forces longer than we can.<sup>515</sup>

The memorandum concludes with a clear statement against a 'war of position' and in favour of mobile defence by means of delaying action and counter-attack, as demanded by Manstein.<sup>516</sup>

On 2 April, when Manstein had to give up his command, Hitler took two measures which seem at first sight mutually contradictory. On the one hand, he did what he always liked to do in crisis situations: he issued an order to hold firm. In Operational Order No. 7 he drew a new line which had to be 'held unconditionally'.<sup>517</sup> On the other hand, he ordered Army Group South and Army Group A to be renamed 'Army Group North Ukraine' and 'Army Group South Ukraine' respectively. That designation was geographically illogical, however, since only a small corner of the Ukraine was still occupied by German troops. For Hitler, the new names were intended to maintain the fiction of a subsequent reconquest of the Ukraine.<sup>518</sup> These two measures make sense, however, if seen against the background of Hitler's two-front strategy of the summer of 1944, which can be summed up in the simple phrase 'strike in the west, hold firm in the east'. The dictator planned to shift the point of concentration temporarily to the western front and fend off the Allied invasion on the Channel coast. Once that was achieved, the divisions thus freed up would be transported back east to reconquer the Ukraine. The temporary period of weakness on the eastern front was to be bridged by

<sup>514</sup> Heusinger, *Befehl im Widerstreit*, 284.

<sup>518</sup> Philippi and Heim, *Der Feldzug gegen Sowjetrußland*, 241.

Hitler's creation of the 'fortified places' system of static defence. His intention, therefore, was to 'barricade' the eastern front for a certain time, and to do so, moreover, in immeasurably distant Russia against a massively superior enemy. The Prussian military reformer General August Graf Neidhardt von Gneisenau defined strategy as 'the science of the use of time and space'.<sup>519</sup> According to that principle, Hitler should have given up space to gain time. Instead, he rejected Manstein's proposal to use space as a weapon for outmanoeuvring the numerically superior enemy.

But the time of Manstein's combat victories was also past. While he managed to make a fool of his adversary, Zhukov, at Kamenets Podolsky, it was only an intellectual triumph. In physical terms the Red Army had won once again, as is clear from a glance at the situation map. Zhukov's troops conquered a vast area, even if, to his chagrin, the prey escaped. For Manstein it had long since ceased to be a matter of 'lost victories', as he entitled his memoirs, but only of 'victoriously' prevented disasters. But even that much was to be made considerably more difficult for the German generals in future, since Hitler decided not on the successful Kamenets Podolsky strategy but on the system that had failed at Tarnopol. Manstein's dismissal thus meant more than the recall of a general. His name symbolized an operational concept, and his dismissal finally paved the road to ruin on the eastern front. From then on, Hitler's troops would no longer counter the rapidly advancing superior Soviet forces by active operational manoeuvres but would defend passively and let themselves be slaughtered in the killing fields of the 'fortified places'.<sup>520</sup>

<sup>519</sup> Letter from Gneisenau to Stein, 27 Jan. 1814, repr. in Stein, *Briefe und amtliche Schriften*, iv. 482.

<sup>520</sup> The 'fortified places' system is analysed in detail in Part V, Chapter I.5 of the present volume, in the discussion of the collapse of Army Group Centre in the summer of 1944.

## IV. The Withdrawal of Army Group A through the Crimea to Romania

*Klaus Schönherr*

With the debacle at Stalingrad the Axis powers lost the military initiative in the eastern theatre of war at the end of 1942. As a result, they found themselves forced onto the defensive from the start of the enemy's winter offensive. At this point the Soviets exploited the advantage they had gained by concentrating their attack on the unstable southern section of the eastern front. This confirmed the indications at the end of the year that the Red Army's winter offensive would be directed primarily against Army Groups Don and A, with a view to encircling them at the Sea of Azov and cutting their rear communication lines. The main threat was to Army Group A, which, in December 1942, still occupied forward positions extending into the Caucasus and south of the Terek river. In view of this danger, the OKH needed to take immediate steps to withdraw the army group from the Caucasus to the Don in order to form a stable defence front to protect the Donets Basin, which was vital to the conduct of the war. But only when Army Group B collapsed in the mid-Don area in December and the position came to a head for the German troops in the Caucasus was Gen. Kurt Zeitzler able to order the withdrawal of Army Group A. Although a rapid retreat over the Don at Rostov was imperative in the tense situation at the end of 1942, Hitler only authorized the gradual withdrawal of the army group from the Caucasus. As a result, only the northern section of First Armoured Army was able to cross the Don at Rostov, while the rest of Army Group A was obliged to withdraw to the Taman peninsula.<sup>1</sup> There, in the Kuban estuary, Seventeenth Army established a bridgehead that was to determine the military situation in the southern section of the eastern front over the coming months. Even so, four weeks were to pass before Hitler took the decision on the redeployment of Army Group A. In accordance with that decision, four of the army group's own divisions and First Armoured Army HQ were to be transferred to Army Group Don, while the southern section of First Armoured Army was placed under the command of Seventeenth Army. In his order of

<sup>1</sup> The promontory in the Kuban estuary between the Black Sea and the Sea of Azov is described in Russian as the Taman peninsula. This area on the Kerch Strait is also known, in connection with the battles on the eastern front, as the Kuban bridgehead or under its operational name, the 'Gothic Head'.

27 January 1943, Hitler gave Army Group A the task of defending the Kuban bridgehead and protecting the Crimea from enemy incursions.<sup>2</sup> The decision was bound up with Hitler's plan to launch a new offensive from the 'Gothic Head' positions in the summer of 1943 in order to recapture the Maikop oilfields, which were vital to the conduct of the war. However, Hitler's decision was influenced not only by this operational objective but also by political considerations. Possession of the Crimea, in particular, would be threatened if the territory to the east of the main battle lines were surrendered. Germany could not afford to lose the peninsula, because this might affect the political attitude of the friendly 'neutral' power, Turkey, and of Germany's allies, Bulgaria and Romania.<sup>3</sup>

At the beginning of February 1943, when the withdrawal had been completed, 20 divisions numbering close on 400,000 men were still stationed in the Kuban bridgehead and the Crimea. In this situation the commanders-in-chief of Army Groups Don and A, unlike Hitler, were in favour of strengthening the front to the north of Rostov and on the Don in order to protect the Donets Basin, which was vital to the war economy. The withdrawal from the Caucasus provided temporary relief and also stabilized the southern section of the eastern front.<sup>4</sup>

## 1. THE KUBAN BRIDGEHEAD

At the end of March 1943 the thaw had set in and Seventeenth Army had largely taken up the necessary defensive positions in the Kuban bridgehead. Then, on 27 March, Hitler gave the army group the task of holding the Taman peninsula and disposing of the enemy beachhead to the south of Novorossiysk. In addition to defending the Gothic Head, the army group was also responsible for military matters in the Crimea, where the commander of the Crimea<sup>5</sup> was supposed to prevent a Soviet invasion. For the defence of the bridgehead, Seventeenth Army had at its disposal the 'Wetzel Group' (V Army Corps, Gen. Wilhelm Wetzel), XXXXIV Army Corps, and XXXIX Army Corps, and a Romanian corps, comprising six German and two Romanian divisions deployed along the 120-kilometre front from Novorossiysk to Kurchanskaya. Despite the numerous combat units at its disposal, there was clearly a danger that Seventeenth Army might not be able to hold these defensive positions in view of its drastically reduced manpower and the shortage of materials. The combined German and Romanian forces, which still comprised some 200,000 men at the beginning of April, faced North Caucasus Front, which had 69 units with a combined strength of more than 350,000 men.<sup>6</sup> As only 60 per cent of these were deployed on the front line, the opposing forces on the southern flank of the eastern front were almost equally matched.

The Luftwaffe had sent I Air Corps to the Crimea at the end of March, to support the army group. That left the enemy with only marginal air superiority in that area of operations. The army group also required considerable support from the navy, which was obliged above all to keep Seventeenth Army supplied in the Gothic Head. In this connection, the responsible Caucasus naval commander in Kerch managed to arrange the transport of the necessary 4,000 tonnes of supplies every day until the Kuban peninsula was evacuated.<sup>7</sup>

Even if it had been possible to form a stable defence front between the Sea of Azov and the Black Sea in the spring of 1943, Seventeenth Army HQ believed that North Caucasus Front under Gen. Ivan Ivanovich Maslennikov would attack again soon. By the end of March the Soviet leadership had already begun planning the 1943 summer campaign, in which the centre of operations was to be in the Kursk area, where they expected a major German offensive. The Soviet high command decided to build up deep and stable defences in all sections of the front, and to launch an offensive from this system of fronts.<sup>8</sup> In the case of North Caucasus Front, the military high command's plan was to liquidate the enemy bridgehead quickly, destroy Seventeenth Army, and so prevent the German and Romanian troops from withdrawing to the Crimea. This objective was to be achieved by Operation KRASNODAR, launched at the beginning of February. Despite a number of attempts, which continued until the middle of March, the Soviet offensive ended in complete failure because the German defence stood firm against almost all attacks. As a result, on instructions from the Stavka, North Caucasus Front went onto the defensive, in order to prepare a new offensive.

For this purpose the Stavka drew up plans for a new operation, in which forces from the north and the south would surround Krymskaya, liberate the town, and attack both wings of the enemy forces, causing the German defence to collapse.<sup>9</sup> Despite the daunting experience in Operation KRASNODAR, Moscow was again pressing for an attack to start as soon as possible, so North Caucasus Front responded by launching the first of a number of offensives in Operation TAMAN on 4 April. However, the first attack, directed against the centre of the German defence line to the east of Krymskaya, met with little success because, on the one hand, XXXXIV Corps stood firm under pressure from the Soviet 56th Army, and on the other, the attacking forces had no air support because of the weather. On the contrary, the German I Air Corps managed to gain temporary air superiority at the beginning of April, enabling the Soviet attackers to be effectively fought off.<sup>10</sup> Above all, the heavy losses on the first day of the attack,<sup>11</sup> and the unexpectedly bad weather, which made the marshes in the northern section of the Kuban front impassable, prompted Marshal Georgii K. Zhukov to conduct an inspection of the Kuban front, as a result of which, with Stalin's consent, he gave orders on 17 April

<sup>7</sup> Hillgruber, *Die Räumung*, 86, n. 3.

<sup>9</sup> Danilevich, 'Srazhenie za kubanskii platsdarm', 135.

<sup>10</sup> Ibid. 135 ff.

<sup>11</sup> On 5 April the Soviet 56th Army lost not only approximately 2,300 men but also 13 tanks. KTB AOK 17, Abt. Ia, No. 6 (5 Apr. 1943), BA-MA RH 20-17/178, fo. 160.

for operations on that front to be temporarily suspended.<sup>12</sup> A further attempt, ten days later, to get Operation TAMAN going again also had to be abandoned in the face of fierce German resistance.<sup>13</sup> Seventeenth Army too had resumed operations in the first half of April, endeavouring with little success to clear the Soviet beachhead at Novorossiysk.<sup>14</sup>

Although the two enemy offensives did not find Seventeenth Army unprepared, they nevertheless caused multiple crises because the units involved were still suffering from a serious shortage of manpower. Since the withdrawal to the Taman peninsula, Seventeenth Army had lost some 10,000 German troops in the period 1 to 30 April 1943 and had received only about 4,700 men to replace them. The Romanian ally too had lost some 2,000 men. Anticipating the offensive, Seventeenth Army HQ had already applied to the OKH at the end of April for permission to return to the main base west of Krymskaya. But, as it so often did, the OKH put off taking a final decision. Only when North Caucasus Front, with the Soviet 56th Army and strong air support, attacked the centre of the German–Romanian defence line and sent three armies to attack the positions occupied by XXXXIX Mountain Corps at Novorossiysk and on the Kuban river, did the OKH allow parts of Seventeenth Army to return to its main base, on 3 May.<sup>15</sup> As the OKH's decision came too late, the withdrawal took place under constant pressure from the enemy, with the result that the Soviet forces were able to achieve some of their objectives. Nevertheless, in a defensive engagement that lasted for two weeks, Army Group A managed to stand firm in the face of the Taman offensive and to hold the peninsula. Despite this success, dearly bought with the loss of 2,000 men between 1 and 20 May 1943, the army group command believed that Maslennikov would launch another offensive against the Kuban bridgehead after a short rehabilitation and regrouping phase. Previous attempts to break through the centre of the German–Romanian defence system had failed, so Seventeenth Army HQ expected the next Soviet offensive to concentrate mainly on the area between Novorossiysk and Krymskaya.<sup>16</sup>

Anticipating further massive attacks, and under the impact of heavy losses, Hitler approved the transfer of a division to the Gothic Head. By removing these forces from Army Group South, he weakened the defences in the Donets Basin, a move that was to have serious repercussions in the coming weeks. Also, Seventeenth Army was in urgent need of replacements if it was to continue to perform its task. On 26 May, before Seventeenth Army had completed its preparations for the next defensive action, the Soviet 37th Army advanced against XXXXIV Corps in the north-western section of the line, in order to take the important positions on the

high ground at Kievskoye.<sup>17</sup> Although the German forces were already seriously depleted and the Soviet attack again caused heavy losses,<sup>18</sup> the remaining forces sufficed to halt the enemy offensive once again, forcing the new commander-in-chief, Gen. Ivan E. Petrov, to end the operation at the beginning of June. From June on, in view of the German preparations for an attack in the Kursk salient, the Red Army moved its centre of operations to the area between the Sea of Azov and the Pripet,<sup>19</sup> and was consequently less active in other sections of the front. As a result, Seventeenth Army had time, between early June and mid-July, to reorganize and revive its shattered forces. Field Marshal Ewald von Kleist was well aware that the Stavka would not abandon its plan to press forward into the Kuban bridgehead. Although Seventeenth Army made excellent use of the temporary suspension of operations, by the end of June it still needed more than 23,000 German and 11,000 Romanian troops to bring it up to full strength. In addition to manpower, equipment was a source of deep concern. And it was also short of air support, most flying units having been withdrawn and sent to serve in the Kursk offensive.<sup>20</sup> At the beginning of July, even before the new offensive on the 16th of the month, there were already signs that North Caucasus Front was again preparing to do battle. Seventeenth Army's manpower situation was clearly still a source of extreme tension after the five-week rest, and by the middle of July the shortfall recorded at Seventeenth Army HQ had risen to 26,400 German and 18,500 Romanian troops.<sup>21</sup> Even so, Army Group A and North Caucasus Front were equally matched in respect of manpower at this point. Kleist had about 430,000 men at his disposal, and North Caucasus Front had a total strength of approximately 460,000 men. However, the Soviet enemy forces were considerably better equipped with tanks and artillery.<sup>22</sup> Nevertheless, XXXXIV Corps had the necessary strength to withstand the Soviet 56th Army's four-week onslaught at Krymskaya. At the same time, to the north of Novorossiysk, V Corps was engaged in fierce defensive battles against the Soviet 18th Army, which failed to break through the German lines despite all its efforts. Once again, the defence front between the Sea of Azov and the Black Sea stood firm, with the result that North Caucasus Front ended the operation in the middle of August.<sup>23</sup>

Seventeenth Army had succeeded in withstanding the enemy onslaught in a number of defensive engagements since the beginning of April. By the end of July,

<sup>17</sup> Danilevich, 'Srashenie za kubanskii platsdarm', 139; Study P-114c, pt. 5, ch. 1, 106–9, BA-MA, Study ZA 1/2071, fos. 132–5.

<sup>21</sup> Ibid.

<sup>22</sup> Army Group A had 65 tanks (53 operational) and 575 heavy artillery weapons at its disposal, whereas the Soviet forces had approximately 200 tanks and 2,000 heavy artillery weapons. OKH, OpAbt, 'Kräftegegenüberstellung vom 20.7.1944', BA-MA RH 2/2649.

<sup>23</sup> KTB AOK 17, Abt. Ia, No. 7, 16 July–12 Aug. 1943, BA-MA RH 20-17/198, fos. 27–91; Danilevich, 'Srashenie za kubanskii platsdarm', 139 ff.

however, developments in the military situation north of the Sea of Azov had been so unfavourable to the German–Romanian side that there no longer appeared to be any justification for continuing to hold the Kuban bridgehead. The heavy losses that had been incurred and the lack of sufficient replacements prompted Seventeenth Army HQ to review the situation on 31 July and to address the question of evacuating the bridgehead. Regardless of the fact that neither the OKH nor Hitler had taken a position on this important issue, Army Group A produced a study on the ‘evacuation of the Gothic Head’. Abandoning the bridgehead, which was now of little operational use, would release about four of the eleven German divisions stationed on the Taman peninsula in the summer of 1943, which could then be deployed at other focal points in the OKH theatre of war. Following the failure in the battle for Kursk and the widespread moves to withdraw to the southern and central sections of the eastern front, there was a strong military and operational case for immediate evacuation. When, in the middle of August, Marshal Ion Antonescu and Tsar Boris of Bulgaria both absolutely rejected any evacuation of the Taman peninsula, Hitler decided to maintain the status quo.<sup>24</sup> Only when the military situation in the area north of the Sea of Azov had deteriorated dramatically, with the result that the southern section of the eastern front was forced to retreat from Mius to the Melitopol–Zaporozhye position, was Hitler obliged to withdraw Seventeenth Army from the Taman peninsula. As the Stavka had already made plans to drive the German enemy out of the peninsula, the evacuation, which started on 7 September, had to be conducted under increasing enemy pressure. The Stavka, on the other hand, intended to penetrate the German–Romanian front in a two-pronged attack and destroy the enemy forces before they reached the Kerch Strait, in order to prevent them from mounting a strong defence of the Crimea.<sup>25</sup> Nevertheless, within a month Army Group A, with support from naval units of Admiral Black Sea, had managed in Operation BRUNHILD to convey not only the entire German–Romanian Seventeenth Army, comprising more than 200,000 men, but also 100,000 tonnes of military equipment and supplies, together with all weapons, motor vehicles, and horses, over the Kerch Strait to the Crimea.

For almost six months Army Group A had fulfilled its mission and held the Kuban bridgehead, with the result that Hitler’s delusions about using the Taman peninsula as a base for recapturing the Maikop oilfields persisted until the summer of 1943. From the Soviet military leaders’ point of view, it was true that the Caucasus had been liberated and the German and Romanian defenders had abandoned the bridgehead, but the Stavka nevertheless regarded the battles in the spring and summer of 1943 as a failure. North Caucasus Front had failed to fulfil its mission to encircle and destroy Seventeenth Army.<sup>26</sup> And Seventeenth Army had shown that, despite the reverses it had suffered in the winter of 1942/3, it still had the necessary strength to prevent a superior enemy force from achieving its operational goals. Once the centre of operations moved to the central section of the eastern front and the area between the Seym river and the Sea of Azov,

<sup>24</sup> Hillgruber, ‘Die Krise’, 664.

<sup>25</sup> Danilevich, ‘Srazenie za kubanskii platsdarm’, 140 ff.

<sup>26</sup> Ibid. 144.

the bridgehead became available, because some of the units deployed in the Gothic Head were urgently needed to meet the Soviet offensives north of the Sea of Azov. Although, for political reasons, Hitler was reluctant to evacuate the bridgehead, military developments in Army Group Centre and also in Army Group South left him with no alternative. If a decision had been taken earlier, the German side would at least have been able to achieve some local and fleeting successes. Fortunately for Army Group A and for the whole of the eastern front, the Soviet centre of operations had moved north and the enemy forces consequently did not take full advantage of the German withdrawal.<sup>27</sup>

While Army Group A had succeeded in defending itself against the North Caucasus Front attacks, the situation in the area north of the Sea of Azov had deteriorated dramatically during the summer of 1943. Hitler had hoped that the Kursk offensive would ‘ensure that the German army had the initiative in the coming spring and summer’,<sup>28</sup> but when the offensive collapsed in the middle of July and the Soviets finally gained control of events on the eastern front, the Axis powers were increasingly obliged to withdraw in the face of superior enemy forces. This applied particularly in the southern section of the eastern front, where the Red Army summer offensive began in the second half of July with an attack on the Mius–Donets salient. Prior to the Mius operation, opinion in Moscow had been divided as to how the forthcoming battle should be conducted. Zhukov wanted to organize the attack so that the German troops would be cut off and encircled in the Don Basin, but Stalin would not have it. His idea was to mount a frontal attack on the enemy positions and force the Germans to abandon their defences, and he had his way.<sup>29</sup>

In view of the critical situation in the summer of 1943, Field Marshal Erich von Manstein suggested that the Donets Basin should be abandoned in order to reduce the length of the southern section of the eastern front and build up urgently needed reserves. Hitler categorically rejected this proposal on war-economy grounds. So Army Group South was obliged to remain in the exposed ‘balcony position’ overlooking the Donets and the Mius, where the newly formed Sixth Army had taken over the defence of the right wing. On the Mius, the Soviet South Front launched its offensive against the 200-km-long section of Sixth Army on 18 August. Thanks to superior equipment and air power, it succeeded in breaking through Sixth Army’s defensive positions in the first onslaught.<sup>30</sup> Once again, Sixth Army was in danger of being hemmed in. All attempts to close the gap in the Mius front failed, and Sixth Army HQ was obliged to withdraw its forces and abandon the front. Sixth Army retreated to the ‘Tortoise Line’, where it remained until 4 September.<sup>31</sup> However, even this line of defence could not be held for long, because the Red Army had succeeded in breaking through at a number of points

<sup>27</sup> Duțu, Dobre, and Loghin, *Armata Română*, 134, 262–4; Forstmeier, *Die Räumung*; Hillgruber, *Die Räumung*, 11–14.

<sup>30</sup> Ibid. 293.

<sup>31</sup> The ‘Tortoise Line’ extended from the Sea of Azov east of Mariupol along the Kalmius river east of Stalino-Konstantinovka to the Donets north of Slavyansk.

in the area held by First Armoured Army, posing a threat to Sixth Army's left flank. In order to avoid encirclement, the OKH approved its withdrawal from the Tortoise Line. Only when Sixth Army reached the Zaporozhye–Melitopol–Sea of Azov line, the so-called 'Wotan Line', in the middle of September before the advancing Soviet forces, was it able to build up new defences, starting on 20 September.<sup>32</sup> In view of the military situation, the OKH had already placed Sixth Army under the command of Army Group A on 17 September, with the result that Army Group A was now also responsible for the area of operations north of the Crimea.<sup>33</sup>

## 2. FROM THE WOTAN LINE TO THE DNIEPER

Despite the rapid move to the Wotan Line, Sixth Army barely had time to prepare its defence in the new line because Gen. Fedor Ivanovich Tolbukhin's South Front was in hot pursuit and launched an attack on the defensive block. Tolbukhin wanted to complete the Stavka's mission without delay, that is, to break through 'the defensive position established by the enemy on the Molochna river [the Wotan Line] and press forward to the lower Dnieper'.<sup>34</sup> The aim of the operation was to establish a bridgehead on the right bank of the Dnieper and cut off Seventeenth Army in the Crimea. In parallel to the South Front operation, South West Front was to advance towards Dnepropetrovsk and Zaporozhye, take the Dnieper Line, and liberate both cities.<sup>35</sup>

On 26 September Tolbukhin launched an attack on the defensive block between the Konka lowlands and the Sea of Azov with 15 divisions and strong tank forces. Although Sixth Army only had 83 tanks,<sup>36</sup> 98 assault guns, and 173 batteries, compared with the enemy force of almost 800 tanks and 400 artillery batteries, it enjoyed a territorial advantage in the Wotan Line.<sup>37</sup> However, supplies were a source of concern. The only available way for supplies to reach Sixth Army was via the single-track Zaporozhye–Melitopol–Crimea railway line. This had ceased to operate even before the battle for the Wotan Line came to a head, when First Armoured Army was obliged to abandon Zaporozhye.<sup>38</sup> Even so, and despite heavy losses,<sup>39</sup> Sixth Army was able to establish itself in the blocking position on the Molochna river, with the result that Tolbukhin ended his offensive on 2 October.

<sup>32</sup> See Part IV, Chapter III of the present volume; AOK 6, 'Die Abwehrschlacht der 6. Armee zwischen Mius und Dnjestr vom 18.8.–20.9.1943', BA-MA RH 20-6/315, fos. 3–25.

<sup>33</sup> KTB H.Gr. A, Abt. Ia, No. 2, ix. 151 (17 Sept. 1943), BA-MA RH 19 V/18, fo. 153.

<sup>34</sup> Geschichte des zweiten Weltkrieges 1939–1945, vii. 259. <sup>35</sup> Ibid. 258 ff, 317.

<sup>36</sup> Only 29 of these were operational. BA-MA RH 20-6/327, fo. 4.

<sup>37</sup> The 'Wotan Line' extended along the eastern edge of the Nogai Steppe and made use of the high ground on the banks of the Molochna river. This territorial advantage was further strengthened by a forward anti-tank ditch.

<sup>38</sup> See Part IV, Chapter III.4(c) of the present volume; AOK 6, 'Die Abwehrschlacht der 6. Armee im Donez-Becken und in der Nogaischen Steppe vom 18.8.–3.11.1943', 31, BA-MA RH 20-6/326; Geschichte des zweiten Weltkrieges 1939–1945, vii. 316 ff.

<sup>39</sup> Sixth Army reported the loss of 5,034 men between 21 October and 3 November 1943. BA-MA RW 6/v. 558, fo. 63.

As Sixth Army had mounted a surprisingly successful defence, Tolbukhin strengthened his forces very considerably over the next few days<sup>40</sup> and, in a fresh advance, broke through the defence line on the edge of the Nogai Steppe. To meet this superior enemy force, Sixth Army had only 13 divisions—12 German and one Romanian—and they were at a particular disadvantage in respect of heavy weapons.<sup>41</sup> Army Group A's primary concern was to continue to provide access to the Crimea. Hitler, on the other hand, insisted that the Dnieper salient must be held in order to prevent the enemy from recapturing the mineral-rich mining areas

<sup>40</sup> 45 rifle divisions, 5 tank corps, and 400 artillery batteries were transferred to South Front. AOK 6, 'Die Abwehrschlacht im Donez-Becken', 31, BA-MA RH 20-6/326.

<sup>41</sup> Sixth Army had 30 tanks, 22 assault guns, and 173 artillery batteries that were operational on 24 September 1943; KTB H.Gr. A, Abt. Ia, No. 2, x. 262 (24 Sept. 1943), BA-MA 19 V/19, fo. 49.

of Krivoy Rog and Nikopol, which were vital to the conduct of the war.<sup>42</sup> Army Group A was accordingly required to defend the Wotan Line at all costs.

Although the Red Army had succeeded in recapturing the eastern Ukraine in its summer offensive, it still had a long way to go to achieve the real aim of the operation, which was to liberate the Ukraine from German occupation. In view of this situation, the Stavka proposed to liberate Kiev in the autumn, establish bridgeheads on the right bank of the Dnieper, outflank the defensive positions on the Molochna river, and recapture the mineral-rich mining areas in the Dnieper salient. This, it hoped, would provide the basis for a rapid advance into the western Ukraine. While South-West Front was to advance towards Dnepropetrovsk and Krivoy Rog, Tolbukhin's South Front had to attempt, in a second advance, to break through the German positions on the eastern edge of the Nogai Steppe. The offensive against Army Group A was conducted in close cooperation with units of 3rd Ukrainian Front, the new name of South-West Front, which had been renamed on 20 October (South Front was renamed 4th Ukrainian Front as from the same date), and these units were to attack the right wing of Army Group South.<sup>43</sup>

On 9 October Tolbukhin started the second advance against the Wotan Line with an attack by the Soviet 5th Shock Army and 44th Army on the dividing line between the German IV and XXIX Corps. As both corps withstood the enemy assault, save for small incursions, South Front moved its centre of operations to the south after only two days, with the result that XXXXIV Corps saw more action south of Melitopol after 11 October.<sup>44</sup> This corps too withstood the assault and succeeded in preventing South Front from destroying Sixth Army and opening the gateway to the Crimea and the western Ukraine. But it was not the situation on its own defence front at Melitopol that gave Army Group A cause for concern in mid-October 1943, but the position of its neighbours to the left, where 3rd Ukrainian Front was advancing on the Zaporozhye bridgehead and XVII Corps had difficulty in withstanding the pressure. There was thus a danger that, if the enemy succeeded in breaking through on the left flank, Sixth Army would be under threat and the Soviet forces might be able to outflank the Wotan Line from the north and cut off IV and XXIX Corps from the rear. In these circumstances, Kleist asked for XVII Corps to be placed under the command of Army Group A, in order to take over the conduct of operations in the bridgehead. Without informing Army Group South, the high command in Kherson discussed the request with the OKH and, by the middle of October, the discussions had reached a point where Hitler ordered the commander-in-chief of Army Group A to report to him at Führer headquarters. However, Kleist distanced himself from his intentions when the OKH ordered XVII Corps to be strengthened with the army group's resources. Army Group A was not in a position to do this, in view of the strong Soviet pressure

<sup>42</sup> Manstein, *Verlorene Siege*, 549.

<sup>44</sup> XXXXIV Army Corps HQ was transferred from Seventeenth Army to Sixth Army HQ on 3 October 1943. KTB AOK 6, Abt. Ia, No. 7, 61 (3 Oct.1944), BA-MA RH 20-6/327, fo. 80.

on Sixth Army's southern wing. Hitler finally decided, after the discussion, that Army Group South should continue to be responsible for the bridgehead.<sup>45</sup>

Despite all the German and Romanian efforts to defend the position, the Soviet 28th Army succeeded in breaking through the defensive block after ten days of continuous assault. After these long battles and heavy losses, Sixth Army no longer had the necessary forces to close the gap in the front, and the Soviet 51st Army was consequently able to advance westwards without encountering any appreciable resistance. The five-week war of attrition had decimated XXXXIV Corps to such an extent that, after Melitopol fell, it could only establish a weak security line.

Although the corps was still able to withstand the Soviet 28th Army's assault on 23 and 24 October, the losses on both days were so heavy that it no longer had the necessary forces to man a complete defence line.<sup>46</sup> Col.-Gen. Karl Adolf Hollidt therefore had no alternative but to withdraw troops from other sections to restore the balance in XXXXIV Corps' front.<sup>47</sup> In taking this measure, Sixth Army HQ weakened its left wing to an almost intolerable extent. In addition to the tactical troop movements resulting from the change in the enemy's point of main effort, logistics were a major source of deep concern to the army group HQ. The relatively inadequate supply lines passed through the area under the command of Army Group South, which had the same difficulties to contend with, and also through Romanian territory, where the Axis partner's agencies handled the passage of transport in a highly restrictive manner. As a result, there was a shortage of supplies and particularly of munitions in the southern part of the area under the army group's command.<sup>48</sup>

Despite all the difficulties, XXXXIV Corps was able to withstand the attacks in the last ten days of October. Finally, on 26 October, the Soviet 51st Army gathered all the enemy forces together and mounted a concentrated attack to the north-west in order to force the units on the corps' left wing to retreat northwards. The corps was divided, creating a 15-kilometre-wide gap in the front, through which the enemy spearheads advanced continuously to the west and north-west. As a result, the enemy spearheads were more than 20 kilometres behind the XXXXIV and XXIX Corps lines at the end of the day. Only by dint of major regrouping and by moving the right wing west was XXIX Corps able to avoid encirclement.<sup>49</sup>

After 26 October Sixth Army was split into a northern group and an extremely depleted southern group. As Sixth Army HQ no longer had any reserves and the OKH could not send reinforcements,<sup>50</sup> the gap in the front could not be closed. 4th Ukrainian Front now had an opportunity to advance rapidly through the Nogai

<sup>45</sup> KTB H.Gr. A, Abt. Ia, No. 3, i. 29 ff., 39, 50 ff. (12, 13 Oct. 1943), BA-MA RH 19 V/20, fos. 31 ff., 41, 52 ff. See Part IV, Chapter III.4(c) of the present volume.

<sup>46</sup> On 25 October 1943 the combined fighting forces of Sixth Army Infantry Division, including reconnaissance and mobile units, numbered only 21,945 men. KTB H.Gr. A, Abt. Ia, No. 3, i. 259 (27 Oct. 1943), BA-MA RH 19 V/20, fo. 261.

Steppe to the Dnieper. But lack of the necessary forces combined with the difficult terrain meant that Sixth Army had little chance of forming an effective defence line east of the Dnieper. In this situation, Kleist had to take steps to restore some stability in the face of these threats. There were two possible ways to re-establish a united front, and the major solution—to close the gap in accordance with the ‘holding line’<sup>51</sup>—appeared to present a considerable risk. In view of the available forces and resources, the breach in the front could be closed only by attacks on the flanks. A more feasible solution would be for the northern group to withdraw to the extended Lepetykha–Nikopol bridgehead and the southern group to the ‘Friesen Line’.<sup>52</sup> On 27 October the army group HQ decided on the riskier solution, according to which XXIX Corps was to attack the flank from the Pokrovka–Veseloye line while an armoured division practising mobile warfare was to prevent any further enemy advance in the breakthrough area.<sup>53</sup> If the army group’s plan were to fail, there was a danger that the whole of the southern section of the eastern front would be in trouble. In fact, the armoured division proved not to be strong enough to halt the enemy advance, and Sixth Army HQ lacked the necessary forces to conduct a successful attack on the flank, so the project had to be broken off after two days.<sup>54</sup>

The danger at Zaporozhye had been averted by the middle of October, but Army Group A faced a new threat on its left flank as October drew to a close. At the end of the month, 3rd Ukrainian Front broke through the dividing line between First Armoured Army and Eighth Army, into the defence position of Army Group South. It was therefore able to advance westwards to Krivoy Rog. This meant that the Soviet spearheads were now located to the west of IV and XXIX Corps’ defence line and presented a considerable threat to the heart of Sixth Army’s left flank.<sup>55</sup>

By 28 October it was already clear that the army group’s aims could not be achieved, and Kleist accordingly decided to arrange for IV and XXIX Corps to withdraw to the Lepetykha–Nikopol bridgehead. However, this measure did not suffice to stabilize the position of Sixth Army, and XXXXIV Corps too was obliged to withdraw to the Friesen Line on the following day. While the northern group was establishing the bridgehead on 30 October, the central section of Sixth Army was in crisis. On 29 October the OKH had again insisted that the position must be held unconditionally. The army group accordingly gave orders that Sixth Army ‘was to defend the Friesen Line protecting the Crimea and was to receive reinforcements from the northern group for the purpose’. Also, XXXXIV Corps was to strengthen its left wing ‘to ensure that the Friesen Line was manned along the whole of its length and, by defending it, to maintain the connection with Seventeenth Army and the Dnieper’.<sup>56</sup> While Sixth Army HQ was still in the process of

<sup>51</sup> The ‘holding line’ was a 130-km-long stretch from the Konskaya lowlands at Balki to the Molochnoye Lagoon, based on old Soviet anti-tank ditches.

<sup>52</sup> The Friesen Line was a weak security line extending from the Dnieper at Kakhovka to the bank of the Sivash, east of the Perekop isthmus.

carrying out the army group's orders and making arrangements to withdraw completely to the Friesen Line, 4th Ukrainian Front was redeploying its forces. On 30 October the Soviet 51st Army had an opportunity to advance round the left flank of XXXXIV Corps, north of Agaymon, and press forward in a south-westerly direction. In this way, the Soviet 51st Army spearhead was able, virtually without impediment, to reach a position where it broke through the defensive block on both sides of Askania Nova. This decisive blow opened a 30-kilometre-wide breach in the line defended by XXXXIV Corps. The Soviet 51st Army and 2nd Guards Army advanced through the gap, cutting off the escape route of the southern group, which was still stationed on the line between Salkovo (approximately 60 kilometres south of Agaymon on the Sea of Azov) and Agaymon. It was now clear that the enemy intended to reach the mouth of the Dnieper before Army Group A, to advance over the Perekop isthmus to the Crimea, and to cut Seventeenth Army's rear communication lines. In this precarious situation XXXXIV Corps had to fight its way back west through the enemy spearheads. But any semblance of unity was completely lost in the process. The corps, split up into a number of separate combat groups, attempted to reach either the Dnieper Line at Kherson or Seventeenth Army's security line at Perekop. While the bulk of the corps reached the Dnieper estuary before the Soviet enemy forces and prepared to defend itself in a bridgehead on the right bank at Kherson, the right wing was driven onto the Perekop isthmus, where Seventeenth Army took in the units in question. Sixth Army was unable to halt the Soviet advance before it reached the Kherzon-Perekop road, so the land link with the Crimea was lost, and Seventeenth Army was cut off at the beginning of November. However, it was able to check the Soviet 51st Army's advance at the Tatar Trench on the land link with the Crimean peninsula at Perekop.<sup>57</sup>

On the army's northern wing, XXIX Corps had launched an attack on 30 October on the flank of 2nd Guards Army at Rubanovka (60 kilometres south of Agaymon) with a view to re-establishing the connection with the southern group of Sixth Army, XXXXIV Corps. Although the initial results were good, XXIX Corps was obliged to suspend the action on instructions from the OKH, because it became clear that the gap between the two corps could not be closed. The Army General Staff then ordered a substantial bridgehead to be established at Nikopol, which Sixth Army was to hold 'until the planned counter-attack could be launched in the area where the breach had occurred'.<sup>58</sup> Both the corps in the northern group were sent back to the Lepetykha-Nikopol bridgehead to prepare for the counter-attack. Surprisingly, the OKH decided on 4 November to place IV and XXIX Corps under the command of First Armoured Army, leaving the responsibility for the conduct of operations in the Nikopol bridgehead entirely in the hands of Army Group South. Sixth Army, with its limited forces, now established a defence line on the lower Dnieper, extending from the mouth of the Bug through Kherson to the

<sup>57</sup> KTB AOK 6, Abt. Ia, No. 7, 199–247 (28 Oct.–3 Nov. 1943), BA-MA RH 20-6/327, fos. 218–66. KTB AOK 6, Abt. Ia, 'Die Abwehrkämpfe der 6. Armee in der "Wotan-Stellung" und in der Nogaischen Steppe vom 26.9. bis 3.11.1943', 7–16, BA-MA RH 20-6/327, fos. 9–19.

army group boundary at Lepetykha. After hard-fought engagements, in which Sixth Army suffered heavy losses,<sup>59</sup> the southern section of the eastern front came to a halt on the Dnieper at the end of November 1943.

In the middle of September Army Group A, which had been responsible for defending the Crimea and the Kuban bridgehead since April 1943, was obliged to take on the additional task, with Sixth Army, of withstanding the massive attacks by South Front on the northern shore of the Sea of Azov and the eastern edge of the Nogai Steppe. Sixth Army HQ was hardly capable of meeting this demand, given its own limited manpower and material resources, and Soviet air superiority.<sup>60</sup> By refusing to evacuate the Kuban bridgehead, Hitler tied forces up in a section of the front that was of only minor importance to the military situation on the eastern front. His decision deprived Army Group A, and also Army Groups South and Centre, of troops that were essential to stabilize the central and southern sections of the eastern front. Although the OKH withdrew a number of units from Seventeenth Army after September 1943, these measures generally came too late to have any decisive effect on the operational situation. Particularly in the case of Sixth Army, the decision to hold the Gothic Head proved to be completely counter-productive because, in spite of everything, the Soviet enemy withdrew forces from the Kuban bridgehead in order to strengthen 4th Ukrainian Front's offensive capabilities. Kleist and Hollidt nevertheless succeeded, with Sixth Army's limited resources, in preserving or restoring the unity of the front to the very last. Only after a three-month defensive battle were the forces no longer sufficient, in view of the shortage of reinforcements, to prevent an operational enemy breakthrough. As a result, not only was Seventeenth Army cut off in the Crimea but Sixth Army was also obliged to use its remaining forces to form a weak security line on the lower Dnieper.<sup>61</sup>

### 3. THE CRIMEA IN THE WINTER OF 1943/4

When the evacuation of the Taman peninsula had been completed at the beginning of October, Seventeenth Army HQ took over the defence of the Crimean stronghold. In view of the tense situation in the central and southern sections of the eastern front, it would have been a good time to abandon the Crimea and, with the help of Seventeenth Army, to stabilize the precarious conditions north of the Sea of Azov. The Crimean peninsula was not of paramount importance to the Stavka's operational plans either, but it was nevertheless of considerable military, political,

<sup>59</sup> Sixth Army reported the loss of some 23,300 men between 1 October and 3 November 1943, of whom 6,400 dead or seriously injured. Study P-114c, pt. 6, ch. 2, 259, BA-MA, Study ZA 1/2073, fo. 334.

<sup>60</sup> As most of the combat units of Air Fleet 6, responsible for the south-eastern front at the time in question, were deployed in Army Group South, the only flying units available to support Sixth Army were Romanian. I Air Corps took part in Sixth Army's battles on the ground for the first time at the end of October. KTB H.Gr. A, Abt. Ia, No. 3, i. 10–31 Oct. 1943, BA-MA RH 19 V/20.

<sup>61</sup> KTB AOK 6, Abt. Ia, 'Die Abwehrkämpfe in der "Wotan-Stellung"', 1–17, BA-MA RH 20-6/327, fos. 3–19.

and strategic significance. It commanded the Black Sea and the Sea of Azov, and provided a useful air base for industrial and military missions.<sup>62</sup>

Even after the evacuation of the Kuban bridgehead, the Crimea was still a highly relevant factor in the OKH's operational plans for defending the southern section of the eastern front, because the peninsula protected its flank. It was this consideration, above all, that made it impossible for Seventeenth Army HQ to evacuate the peninsula. Despite the political and military importance that both Hitler and the OKH attached to possession of the peninsula, Seventeenth Army had only one-and-a-half German and seven Romanian divisions at its disposal in the autumn of 1943. Seventeenth Army HQ had to transfer the rest of the units that became available when the bridgehead was evacuated at once, to strengthen the front on the mainland. It was true that this measure enabled a disaster north of the Sea of Azov to be temporarily averted, but the potential was not enough to strengthen the southern section of the eastern front in the long term.

The danger that Seventeenth Army might be trapped on the peninsula became even greater in late October, when Sixth Army was forced to abandon the Wotan Line under pressure from the enemy forces. Gen. Erwin Jaenecke therefore decided to prepare to evacuate the Crimea. Although Army Group A and Zeitzler were in favour of 'Operation Michael', as it was called, Hitler refused to approve it, and the OKH decreed that 'the Crimea was to be held, even in the event of the overland connection being cut within the next few days, as expected'.<sup>63</sup> On 28 October the first Soviet tanks had already reached the Perekop isthmus, where the Soviet advance was brought to a halt. Even so, the connection with Sixth Army was lost, and the German–Romanian Seventeenth Army was consequently trapped in the Crimea from 1 November on.<sup>64</sup>

On 25 October Hitler had for the first time formally insisted that the Crimea must continue to be held. He explained to the chief of the Romanian General Staff, Gen. Ilie řteflea, that the reason for this decision was that the peninsula 'might serve as a base for an enemy attack on the Romanian–Bulgarian coast'.<sup>65</sup> Hitler's intention did not coincide with the Romanian position on the subject because, for Ion Antonescu, the Crimea was not only of military importance but it was also, above all, a political issue in that Romanian troops bore the main burden of defending it in the autumn of 1943. The peninsula was in danger of being cut off as a result of Sixth Army's situation, and the 'Conducător' therefore thought it likely that the seven Romanian and two depleted German divisions would scarcely suffice to defend the Crimea successfully. He considered that the risk 'associated with evacuating the Crimea was less than the risk of subsequently losing the Romanian units deployed there. He could not be politically responsible for another reverse like Stalingrad.'<sup>66</sup> Hitler responded as usual, glossing over the situation on

the eastern front and making promises that he could not possibly keep, given the dire shortage of manpower and materials. He accordingly informed the Romanian head of state on 29 October that he had decided that:

1. The Crimea will be defended in all circumstances and with all available means.
- 2.–3. Sixth Army will be provided with additional forces, and the situation will probably be restored.
4. Sixth Army is in any case to pull back in order to block access to the Crimea.
5. Further German battalions are being sent to the Crimea by land, sea, and air.<sup>67</sup>

The German dictator's position was supported, above all, by the commander-in-chief of the navy. Grand Admiral Karl Dönitz had assured him two days earlier that 'adequate supplies could be conveyed to Seventeenth Army by sea'.<sup>68</sup> This promise led to considerable disputes with Zeitzler, who had recognized the threat to the Crimea at a very early stage and had called for the peninsula to be evacuated immediately in view of the steadily deteriorating situation on the mainland. The chief of the Army General Staff and Seventeenth Army HQ both had extremely serious doubts about the military situation in the Crimea at the end of October.

In Moscow, the decision on the operational arrangements for the liberation of the peninsula had already been taken. In considering the matter, the Stavka had decided at the beginning of October that the Crimea should be attacked from the north by 4th Ukrainian Front and also from the east by North Caucasus Front under Petrov's command. Petrov's troops were to take the Kerch Strait and establish a bridgehead on both sides of the city in 'Operation Kerch–Eltingen', while 4th Ukrainian Front was to advance along the north shore of the Sea of Azov to the Perekop isthmus, and press on into the peninsula from there. North Caucasus Front's plan was to advance westward from the Kerch bridgehead and take possession of the peninsula. At the end of October 1943 the Soviet enemy's preparations for the attack were nearing completion, and the two parallel operations could begin.<sup>69</sup>

<sup>67</sup> KTB OKW, iii/2, 1230 (29 Oct. 1943).

<sup>68</sup> Hillgruber, *Die Räumung*, 15.

<sup>69</sup> Geschichte des zweiten Weltkrieges 1939–1945, vii. 279–81, 321 ff.

The invasion attempts on the north bank of the Sivash and on the Kerch Strait appeared to confirm Seventeenth Army HQ's prognosis. In the first few days of November, 4th Ukrainian Front succeeded in breaking through the front at the Tatar Trench near Perekop, taking the Chigary peninsula (approximately 30 kilometres east of Armyansk), and establishing a bridgehead on Seventeenth Army's northern front. The situation of XXXIX Mountain Corps deteriorated considerably as a result of the enemy success. V Corps too was unable to prevent the enemy from landing and establishing a substantial bridgehead north of Kerch. The Soviet forces also occupied a narrow coastal strip south of Eltingen, which was subsequently encircled but not retaken in a German–Romanian counter-attack. Despite the tense manpower situation, the forces of XXXIX Mountain Corps and V Corps proved strong enough in fierce defensive battles to prevent major enemy incursions. The Soviet forces consequently took no further action after 10 November.<sup>70</sup>

The loss of the land link and the Soviet invasion attempts prompted Army Group A to request that the Crimea be evacuated according to plan. If Hitler refused to agree, the army group had no alternative but to strengthen Seventeenth Army's defence forces and, at the same time, to make preparations on the lower Dnieper for a relief operation to re-establish the land link with the Crimea. The chances of doing so were still relatively good in November 1943. But Kleist had to proceed on the assumption that Hitler would not accept the proposal. The army group and Seventeenth Army HQ therefore endeavoured in the next few weeks to convince Hitler that Seventeenth Army did not have the necessary forces to provide a comprehensive defence, given the length of the coastline. In these circumstances the peninsula should be evacuated without delay. But Hitler held to his decision and was only prepared to send a few battalions, which had originally been intended for Army Group South, to strengthen Seventeenth Army's defence force in the Crimea.<sup>71</sup>

The deteriorating situation on the southern wing of the eastern front forced the high command in Nikolayev to inform Seventeenth Army on 21 November that Hitler still intended 'to re-establish the connection with the Crimea. The army group does not know, and the OKH too cannot say, whether or when this can be done. Personally of the opinion that it will not be possible to relieve the Crimea in the foreseeable future.'<sup>72</sup> This fear, expressed by Gen. Hans Röttiger, was not unjustified, as developments at the end of 1943 in the area north of the Black Sea showed. When Manstein again asked for the Nikopol bridgehead to be evacuated in January 1944, any hope of relieving Seventeenth Army vanished. With the start of the Soviet winter offensive in mind, the commander-in-chief of Army Group South asked the OKH to withdraw Seventeenth Army from the Crimea so that its

<sup>70</sup> KTB H.Gr. A, Abt. Ia, No. 3, ii. 1, 20, 35, 54, 65, 78, 89, 101, 115, 124 (1–10 Nov. 1943), BA-MA RH 19 V/21, fos. 2, 20, 35, 54, 65, 78, 89, 101, 115, 124.

<sup>71</sup> Study P-114c, pt. 6, ch. 3, 336–40, BA-MA, Study ZA 1/2074, fos. 74–8; Hillgruber, *Die Räumung*, 17–19; Hillgruber, 'Die Krise'.

<sup>72</sup> KTB H.Gr. A, Abt. Ia, No. 3, ii. 212 (21 Nov. 1943), BA-MA RH 19 V/21, fo. 212.

forces could be used to support the southern section of the eastern front, but Hitler was not to be swayed. As he did not accept Manstein's requests, and as the requests were also 'completely contrary to his firmly held strategic convictions',<sup>73</sup> Seventeenth Army's fate was sealed.

After the loss of the land link, Seventeenth Army established all-round defences along the 700-kilometre coast in the winter of 1943–4. The army had XXXIX Mountain Corps, V Corps, and the Romanian 1st Mountain Corps at its disposal to complete this task.<sup>74</sup> The German mountain corps protected the Perekop isthmus, the Sivash front, and the west coast, while the Romanian corps was responsible for fighting the partisans in the Yaila Mountains (a mountain range on the south coast of the Crimea) and for protecting the coast in the southern part of the peninsula. V Corps was stationed on the Kerch peninsula, where it was primarily engaged in trying to prevent the invasions attempted at Eltingen and in the Kerch Strait. From January on, the army was able to call on the Crimean Mountain Rifle Regiment as an active reserve force.<sup>75</sup> As for armour, the army had only 45 assault guns, supported in anti-tank defence by 9th Anti-Aircraft Division. The combined German and Romanian forces were nevertheless not strong enough to withstand a massive Soviet invasion and to hold the peninsula for long.<sup>76</sup>

XXXIX Mountain Corps fought the first battles at Perekop from the end of October, while the Soviet 51st Army barred access to the peninsula at the Tatar Trench. The mountain corps was also able to stop, at least in part, the 4th Ukrainian Front invasion on the Sivash front at the beginning of November, with the result that only the Chigary peninsula was lost. The battles on the Crimean front in the first half of November were concentrated on the eastern shore of the Kerch peninsula, where the Soviet forces established bridgeheads at the beginning of the month to the north of Kerch and south of Eltingen. North Caucasus Front managed to extend its territorial gains to the north of Kerch in the course of November, before V Corps brought its advance to a halt. Seventeenth Army HQ planned to launch a counter-offensive to clear the bridgehead at Eltingen when the fighting eased up at the beginning of December. Jaenecke had decided on this move because the prospects of success on this narrow headland appeared to be really good. The combined German and Romanian units launched their offensive at the beginning of December, after the navy had blocked access to the bridgehead for five weeks, and three days later the area was once again in their hands. By means of this successful operation, V Corps forestalled the enemy plans for a pincer movement.<sup>77</sup>

<sup>75</sup> This unit consisted of additional field battalions from 4th Mountain Division, and 97th and 101st Rifle Divisions.

<sup>76</sup> Up to April 1944 Seventeenth Army still had 73rd Infantry Division (Jan. 1944) and 111th Infantry Division (Mar. 1944) under its command.

<sup>77</sup> KTB AOK 17, Abt. Ia, No. 8 (4–10 Dec. 1943), BA-MA RH 20-17/221, fos. 173–201; *Geschichte des zweiten Weltkrieges 1939–1945*, vii. 279–83.

If Seventeenth Army HQ had hoped that it could now proceed to drive the Soviet 51st Army too out of the Chigary peninsula, it was soon obliged to recognize that this plan could not be carried out with the forces currently at its disposal. Although 73rd Infantry Division had been transferred to the Crimea in January 1944, the high command in Simferopol could not achieve its aim of reconquering the peninsula because the division only made up for the heavy losses suffered in the past few weeks. The reinforcement was a mere drop in the ocean, and by the end of January the situation in the Crimea had deteriorated to such an extent that the front at Kerch was in danger of collapse. Fortunately for the German and Romanian troops and to their surprise, the Soviet attacks had become less frequent. After almost three months' fighting, the battle for the Crimea now eased off. However, it was clear to Army Group A and also to Seventeenth Army HQ that the pause would not last and it would not be long before the Soviet forces launched a major offensive to regain possession of the peninsula. The developments in the situation on the mainland indicated that the period of German–Romanian occupation of the Crimea was about to come to an end.

#### 4. NIKOPOL

Despite all the reverses in the southern section of the eastern front, the German and Romanian forces prevented any operational breakthrough by Soviet forces north of the Black Sea at the end of 1943. The Axis powers were able to achieve this success only at a heavy price in men and materials. Moreover, the Axis forces now had no reserves. The critical situation might possibly have been resolved, especially if the length of the front between the Black Sea and the Baltic had been compatible with the available forces and if the Crimea had been evacuated. Also, in view of the dangerous position, Hitler would have had to stop giving<sup>78</sup> ‘express priority to equipping the western theatre of war rather than the eastern theatre of war with men and materials’.<sup>79</sup>

While Army Groups South and A were still endeavouring to establish a defence front along the Dnieper, the operational conduct of the 1943/4 winter offensive was already being discussed in Moscow. Stalin’s impression that the Soviet ‘troops could continue their active operations against the German army [and] move straight on from the summer campaign to the winter campaign’<sup>80</sup> played a central part in the discussions. By continuing the offensive without a break, the Stavka hoped to exploit their past successes to the full and give the German forces no time to draw breath. A massive strategic attack was to be launched against the enemy’s flanks, concentrating on the southern section of the front. The Stavka planned to liberate the Crimea and the Ukraine west of the Dnieper, and destroy Army Groups South and A in its winter offensive. To that end, the Soviet forces engaged in action south of the Pripet marshes would have to concentrate their attack on the

<sup>78</sup> See Directive No. 51 of 3 Nov. 1943, in *Hitlers Weisungen*, 233–9.

<sup>79</sup> Gruchmann, ‘Der Zweite Weltkrieg’, 187.

<sup>80</sup> Stalin, *Briefwechsel*, 577.

south-west. However, the main aims of the operational plan were economic as well as military, because regaining possession of the western Ukraine would mean acquiring a region that was famous for its highly developed mining industry and intensive farming. At the same time, Moscow hoped that a successful winter campaign would have an impact on domestic politics in Bulgaria, Romania, and Hungary, to the benefit of its allies in those countries. Stalin approved the operational plan in mid-December, and the Red Army immediately began making intensive preparations for the attack.<sup>81</sup>

The Wehrmacht, on the other hand, had no detailed plans for conducting operations against the Red Army in the winter of 1943/4. Essentially, they accepted Hitler's maxim that the front lines were to be held at the point where the withdrawal had come to a standstill. Directive No. 51 had a particularly damaging effect on the eastern front, because it reduced the operational capability between the Baltic and the Black Sea to a minimum.<sup>82</sup> In view of the fact that the war was being fought on more than one front, the OKW had no alternative but to reduce the length of the defence front and evacuate the Crimea, if the German forces were to continue to hold the occupied territory for some time to come. An effective defence could be mounted only if the human and material resources were deployed on the shortest possible front. In this connection, the Dnieper salient with the mineral-rich mining areas of Krivoy Rog–Nikopol would have to be abandoned, and the front would have to be taken back to the Cherkassy–Kirovograd–Ingulets–Nikolayev line.

For Army Group A, which had established a weak security line on the lower Dnieper and in Transnistria on the Black Sea coast, 1944 got off to a relatively quiet start, as 1st Ukrainian Front's winter offensive had only an indirect bearing here. However, the major Soviet offensive west of Kiev meant that the Dnieper Line could not be held with the small German forces that were available. The aim of the Red Army's 'Nikopol–Krivoy Rog' operation was to split Army Group A into separate groups so that it could press on to the west through the gaps in the front. 3rd and 4th Ukrainian Fronts had 47 divisions and three special corps at their disposal for this offensive, representing a total force of approximately 700,000 men.<sup>83</sup> However, in view of the massive advances against the left wing of Army Group South, the OKH naturally assumed that the enemy intended to encircle Sixth and Eighth Armies from the north in order to drive them to the Romanian border and the Black Sea.<sup>84</sup>

At the beginning of 1944 Army Group A had under its command the Romanian 3rd Army,<sup>85</sup> which covered the Black Sea coast from the Dniester estuary to Kherson, and also XXXIV Army Corps, with 79th and 370th Infantry Divisions

<sup>81</sup> *Geschichte des zweiten Weltkrieges 1939–1945*, viii. 63–73.

<sup>82</sup> See detailed account in Part III, Chapter III of the present volume.

<sup>83</sup> *Geschichte des zweiten Weltkrieges 1939–1945*, viii. 98.

<sup>84</sup> Wosnenko, 'Die Schlacht', 326–8; see also Part IV, Chapter III of the present volume.

<sup>85</sup> At the beginning of 1944 the Romanian 3rd Army was under Commander West Tauria, together with 5th Luftwaffe Field Division, the Slovakian 1st Division, the Romanian 4th/24th Mountain Division, and the Romanian 15th and 21st Mountain Divisions.

on the lower Dnieper. Sixth Army<sup>86</sup> was deployed to the north, with five corps protecting the mineral-rich mining area of Nikopol in a 'balcony position' covering an extensive area to the east. Although the iron ore that was vital to the conduct of the war had not been extracted or shipped out for some weeks, Hitler held to his decision to defend the area round Nikopol in all circumstances. As a result, forces that were needed to stabilize the southern section of the eastern front and to provide operational reserves were needlessly tied up. The section of the front between Kirovograd and Kherson was inevitably open to a pincer movement by the Soviet forces, cutting off Sixth Army east of the Ingulets river, and an attack in the Nikopol area was therefore to be expected any day. Army Group A had about 550,000 German and allied troops to defend the area against an enemy offensive,<sup>87</sup> and the gravely endangered Sixth Army still had some 260,000 men at its disposal in February 1944.<sup>88</sup>

However, 3rd Ukrainian Front did not start the 'Nikopol-Krivoy Rog' operation against XXX Corps' defensive positions until 30 January.<sup>89</sup> Having suffered heavy losses at the beginning of the action, the corps could not halt the advance of some six rifle divisions, with the result that the enemy was able to break through to Apostolovo in the south. The attack to the east of Krivoy Rog was to be only a diversion from the main attack on Apostolovo, which followed two days later.<sup>90</sup> In this situation, Sixth Army was again placed under the command of Army Group A. 'The transfer, which had been on the cards for weeks in view of developments in the position of Army Group South [...], came at a time when Sixth Army was in an extremely difficult position.'<sup>91</sup> The Soviet spearheads had already reached the Kamenka, a tributary on the right of the Dnieper, and they were now only a few kilometres from Apostolovo. So it seemed certain that 3rd Ukrainian Front would move south, in order to cut off the units of Sixth Army that were still endeavouring to advance eastwards. When 4th Ukrainian Front too began to advance against the southern section of the front at Nikopol, the OKH decided to move Sixth Army back to the Kamenka line. By making this move, which began on 3 February, the Army General Staff's intention was to ward off the major Soviet attack on the Kamenka. However, this rapidly proved to be a delusion. The withdrawal was severely hampered by the dwindling strength of the German units and by the poor condition of the roads as a result of the weather, so some of Gen. Rodion Y. Malinovsky's troops were able to pass the German forces, cross the Kamenka, and advance westwards. As a result, XVII and IV Corps, which were engaged in defending Nikopol in the eastern section of the bridgehead as part of the 'Schörner Group',<sup>92</sup> had to withdraw through the enemy

<sup>86</sup> Sixth Army HQ had been transferred to Army Group South on 29 December 1943. KTB AOK 6, Abt. Ia, No. 8, 115 (29 Dec. 1943), BA-MA RH 20-6/336, fo. 131.

<sup>87</sup> This figure does not include the Seventeenth Army strength of approximately 100,000 men (Jan. 1944). BA-MA, Study ZA 1/2076, fo. 258.

<sup>92</sup> The Group, named after its commander Gen. Ferdinand Schörner (commander of XXXX Army Corps), consisted of XXXX Armoured Corps HQ, and the XXIX, IV, and XVII Army Corps HQs attached to it. The Schörner Group included 10th Inf.Div., 1st Lt.Inf.Div., and 1st Mtn.Div.; KTB H. Gr. A, Abt. Ia, No. 3, v. 10 (2 Feb. 1944), BA-MA RH 19 V/24, fo. 12.

lines. When, on 5 February, the Soviet 46th Army took Apostolovo and continued to advance southwards, Kleist decided to marshal the Schörner Group west of Nikopol in order to prepare it for an attempt to break out. Starting on 8 February, the group, with IV Corps on its left, endeavoured to liberate Apostolovo from the south-east, in order to cut off the Soviet 8th Guards Army in the rear and establish a security line along the Krivoy Rog–Apostolovo–Nikopol line. This plan was not really feasible, as Soviet superiority combined with bad weather conditions meant that it was no longer possible to recapture the Kamenka line.<sup>93</sup> Although the IV Corps offensive had broken through, Sixth Army HQ was again ordered by Army Group A HQ to gather its forces together and advance through Apostolovo north-west to Krivoy Rog. Kleist hoped that this tactical move would leave less room for a possible enemy breakthrough and slow the pace of the Soviet attack. Meanwhile, 3rd Ukrainian Front was endeavouring to destroy the German forces in the Nikopol area, in order to focus on continuing the advance to the south-west and forcing Sixth Army back over the Ingulets river. In this way, the Soviet forces intended to stop the relief of the Crimea by land.<sup>94</sup> All sections of the Schörner Group had finally reached the west bank of the Kamenka on 11 February, so the group was able to escape the threat of encirclement and annihilation.<sup>95</sup>

The desperate situation in Sixth Army's area of operations, where 'the capability of almost all units had now been reduced to such a low level in every respect that a successful campaign was no longer being conducted in what was now a very extensive defence area',<sup>96</sup> prompted the army group HQ to request the OKH to move the front back either to the lower 'Bug–Ingul line' or even to the line of the Bug. That would reduce the length of the front from 320 to 200 kilometres, releasing three or four divisions for redeployment.<sup>97</sup> On 17 February, while the high command in Nikolayev was still awaiting the OKH's decision, Malinovsky launched a pincer movement against Krivoy Rog, in which his troops 'closed in on the main German position from the north and the south',<sup>98</sup> in order to encircle LVII Armoured Corps and destroy it. In this critical situation the army group again asked the OKH to move Sixth Army back, at least to the Ingulets section of the front. At the same time, the army group HQ ordered Sixth Army HQ to 'launch an attack to close' the gap between the army's right and left flanks north-west of Krivoy Rog, 'and establish a permanent link between the two groups in all circumstances, at the very latest on the Ingulets'.<sup>99</sup> XXXIX Corps had already succeeded in establishing the missing connection between the southern and northern groups, in a counter-offensive launched on 19 February. The OKH

disbanded the Schörner Group on the following day, after the unit had escaped encirclement in the Nikopol area.<sup>100</sup> However, the successful withdrawal was inevitably accompanied by substantial losses in heavy weapons and motor vehicles.<sup>101</sup>

Although the Schörner Group had managed to escape encirclement by enemy forces, its success was immediately followed by a further crisis, when Soviet forces attacked LVII Armoured Corps with a view to recapturing Krivoy Rog. The Schörner Group had lost almost all its heavy weapons, so Sixth Army lacked the necessary resources to provide the armoured corps with adequate support in its defence. The army group now decided to move Sixth Army back to the Dudkhina (Dnieper)–Arkhangelskoye (Ingulets) line according to plan, and to prepare the withdrawal to the Ingulets between Arkhangelskoye and Ternovatka, starting on 18 February. XXXXIX Corps and the troops under Commander West Tauria on the army group's right wing were to continue to hold the positions on the lower Dnieper and in the Bug estuary. While the army group HQ in Nikolayev was still waiting for OKH approval to withdraw to the Ingulets, the Soviet 46th Army pressure on Krivoy Rog had increased to such an extent that, on 21 February, Kleist allowed Sixth Army HQ to evacuate the city and move LVII Armoured Corps back to a position behind the Ingulets. It was only on the next day that Hitler gave permission for Sixth Army to withdraw to the Dudkhina–Arkhangelskoye–Ternovatka line. Despite considerable enemy pressure, Sixth Army succeeded in establishing a shorter defence front by the end of February.

However, the position of its neighbour on the left, where the front extended to the west in a wide loop, meant that Sixth Army's defence positions were in danger of being rolled up from the north. In order to forestall this threat, at least to some extent, the OKH transferred LII Corps to Sixth Army HQ on 26 February. Although this measure increased the length of Army Group A's front by 110 kilometres, it had the advantage of enabling operations in the southern section of the eastern front to be conducted homogeneously.<sup>102</sup>

Although Army Group A was able to deal with the critical situation at Nikopol in February 1944 and essentially maintain its position under enemy pressure by employing delaying tactics until the end of the month, there was still a danger that the enemy forces might break through.<sup>103</sup> At this delicate point in the proceedings the thaw set in at the end of February, with the result that operations were put on hold and Army Group A had time to consolidate its position. However, conditions improved only to a limited extent, because Hitler refused to approve withdrawal to the Ingulets, leaving LII Army Corps stationed south-east of Kirovograd. Meanwhile, the Stavka had already made preparations for the next offensive. It intended 'to destroy the enemy section by section in a series of

powerful parallel strikes on a 700-km-long front extending from Lutsk to the Dnieper estuary, and complete the liberation of the Ukraine on the right bank of the river'.<sup>104</sup>

## 5. THE WITHDRAWAL TO THE BUG

Army Group A's defensive measures had prevented 3rd and 4th Ukrainian Fronts from achieving their operational objectives, and the result of the winter campaign consequently failed to fulfil the Stavka's expectations, at least in the southern section of the front. It is true that the Soviet forces had succeeded in driving the German forces from the Dnieper, and liberating the mineral-rich mining area of Krivoy Rog–Nikopol, but they had been unable to achieve their real aim—to destroy Army Groups South and A, and recapture the whole of the Ukraine—by the end of February 1944. 1st and 2nd Ukrainian Fronts, which faced Army Group South, had largely completed their respective tasks but the two neighbouring Fronts to the south were still far from having done so. The Stavka was therefore obliged to reduce its operational objectives in the middle of February, with the result that Malinovsky was given only the task of breaking through the Ingulets front so as to outflank the German defensive positions on the lower section of the river and liberate the Nikolayev area. The Stavka withdrew 4th Ukrainian Front from the front line altogether, so that it could prepare to liberate the Crimea.<sup>105</sup>

After Hollidt had taken Sixth Army back to the positions on the Ingulets, with great difficulty and heavy losses,<sup>106</sup> operations in the southern section of the eastern front were temporarily suspended on account of the weather. In the light of the OKH's information on the enemy's intentions, the Army General Staff assumed that the Soviet offensive would continue once the thaw was over. The OKH thought that the spring operation would be directed primarily against the southern section, where the severely depleted Army Groups South and A were stationed on an extremely long front, without adequate supply lines. They were therefore hardly in a position to withstand a massive enemy assault, even for a short time.<sup>107</sup>

As the OKH had feared, the Red Army launched its offensive against the southern section of the eastern front on 3 March. At this point the southern wing of Sixth Army was still stationed on the Dnieper, while the central section of its defence front was on the Ingulets and the left-hand section was already west of the Ingul. The position, which formed a near-semicircle projecting to the east, was approximately 400 kilometres long in all, and was consolidated only on the banks of the Dnieper and at a few points on the Ingulets.<sup>108</sup> At the beginning of March, 3rd Ukrainian Front had completed its approach to the German defence lines with

six armies (7th and 8th Guards Armies, and 6th, 37th, 46th, and 57th Armies), while 4th Ukrainian Front covered the lower Dnieper with two armies (5th Shock Army and 28th Army). Malinovsky launched the operation on 3 March, with two armies south of Krivoy Rog and one army north of the city. The attack concentrated on the section covered by XXIX Army Corps, where the Soviet 8th Guards Army succeeded in breaching the front line and pressing through to the west on the very first day. Although the advance of the Soviet forces was subsequently held up, Sixth Army ultimately lacked the necessary strength to close the gap, especially as the enemy also broke into the complex of positions held by LVII Armoured Corps. By 7 March the 3rd Ukrainian Front spearheads had almost reached Novy Bug, which surrendered on the following day. In view of the critical situation, Sixth Army ought to have been moved west into a shorter defence line. But once again, the army group's plan met with stubborn opposition from Hitler, who issued an order on 8 March that Sixth Army was to 'hold on and close the gap'.<sup>109</sup>

While Sixth Army was still endeavouring to close the gap in the front, the Soviet 8th Guards Army, having taken Novy Bug, was pressing on towards the Bug estuary in the south-west. Malinovsky's decision to advance into the area between the Ingul and the Ingulets rivers created a life-threatening situation for the army group's southern flank, where four corps were still fighting in forward positions some considerable distance to the east. The order to withdraw from the Dnieper to the Ingulets was issued only on 9 March, when developments in the situation left Hitler with no alternative. Once again, Hitler's reaction came too late, destroying any chance Army Group A might have had of taking up new defensive positions according to plan. While the two corps on Sixth Army's extreme right wing managed to withdraw to the Bug estuary after 9 March without too much trouble, and to establish a bridgehead south-east of Nikolayev after 13 March, the withdrawal from the section of the front between Berislav, on the Dnieper 60 kilometres east of Kherson, and Krivoy Rog proved to be fraught with problems. The Soviet 8th Guards Army spearheads had already reached Barmasovo on 11 March, cutting off the withdrawal route to the west for large sections of the southern group. Fortunately for the threatened southern group, Malinovsky divided the 3rd Ukrainian Front spearheads after the capture of Novy Bug. So only the Soviet 8th Guards Army was deployed in the area between Novy Bug and the Bug estuary. The southern group of Sixth Army now found itself obliged to fight its way back to the Bug through the enemy lines and it managed, with strong support from I Air Corps,<sup>110</sup> to break through the weak defences on the Soviet 8th Guards Army's flank. By the middle of March, the southern group had reached the Nikolayev-Trikhati bridgehead and the Bug, where it established a weak security line. The northern group of Sixth Army—the Kirchner Corps Group<sup>111</sup>—returned, in

<sup>109</sup> Quoted in AOK 6, 'Zweite Winterschlacht Dnjepr', 16, BA-MA RH 20-6/380; see also KTB AOK 6, Abt. Ia, No. 11, 81–125 (3–8 Mar. 1944), BA-MA RH 20-6/372, fos. 123–67.

<sup>110</sup> KTB H.Gr. A, Abt. Ia, KTB No. 3, vi. 63 (9 Mar. 1944), BA-MA RH 19 V/25, fo. 65.

<sup>111</sup> The Kirchner Corps Group, comprising LVII and LII Armoured Corps, was formed on 9 March 1944. KTB AOK 6, Abt. Ia, No. 11, 132 (9 Mar. 1944), BA-MA RH 20-6/372, fo. 174.

collaboration with the right wing of Army Group South, to the line between Oligopol (25 kilometres west of Novy Bug) and Annovka, where it was still some 50 kilometres east of the Bug.

The loss of unity in the front undoubtedly posed an existential threat to Sixth Army, but developments in the situation of its neighbour on the left represented a far greater danger to the southern section of the eastern front. 2nd Ukrainian Front had already crossed the Bug at Gayvoron and was pressing on south, advancing with two armies against Army Group South's security line at Bălți and Balta. So Gen. Ivan Stepanovich Konev's armies threatened the deep left flank of Army Group A, which was engaged in the middle of March in a desperate attempt to get Sixth Army to the Bug before the enemy spearheads reached it. The situation gave particular cause for concern, in that the forces deployed between the Bug and the Dniester south of the Bălți–Balta–Pervomaysk line were not really in a position to halt a Soviet advance to the Black Sea.<sup>112</sup>

When the Soviet forces recaptured North Transnistria in February and pressed on into North Bessarabia, the military situation acquired a political dimension. Now that the military operations had moved into Romanian territory, the possibility could no longer be precluded that political opinion in Romania might change, and the kingdom might withdraw from its alliance with Germany and take no further part in the action.<sup>113</sup>

## 6. FROM THE BUG TO THE DNIESTER–IAȘI POSITION

When Army Group A moved to the Bug position in the middle of March 1944, the Red Army had not only reached the eastern border of Transnistria but had also liberated the northern part of the territory annexed by Romania.<sup>114</sup> The first measures to evacuate the area between the Bug and the Dniester had already been taken when the Soviet troops crossed the upper Dnieper in the course of their 1943 summer offensive, and the military operations were approaching the Bug. As a result of the military developments, Antonescu transferred the civil and military control of the narrow strip of land to Gen. Gheorghe Potopeanu in January 1944.<sup>115</sup> When the Red Army advanced towards the Bug and entered the northern part of the Romanian district, Army Group A took full control and Romanian rule in Transnistria effectively came to an end.<sup>116</sup>

<sup>113</sup> This possibility was not ruled out, in view of soundings taken with the Allies since February 1944 on the subject of a ceasefire. Hillgruber, *Hitler*, 180–3.

<sup>114</sup> See, on Transnistria, *Germany and the Second World War*, iv. 1022–6.

<sup>115</sup> Lt.-Gen. Gheorghe Potopeanu (1889–1966) was responsible for the civil and military administration of Transnistria from 1 February to 15 March 1944. Duțu, Dobre, and Loghin, *Armata Română*, 325.

<sup>116</sup> Although Army Group A had assumed executive powers, the German side continued to regard Transnistria as Romanian; Völk, *Transnistrien*, 97–100.

Army Group A had withdrawn to the Bug line at the beginning of the second half of March. It was endeavouring to establish a stable defence line against the approaching forces of 3rd Ukrainian Front, and it had to pay particular attention to developments in the situation of the neighbour on its left. As for Army Group South, 2nd Ukrainian Front had succeeded in breaking through Eighth Army's left flank west of Zvenigorodka at the beginning of March, permanently severing the link between First Armoured Army and Eighth Army, and advancing southwards. By the middle of the month, the 2nd Ukrainian Front spearheads had crossed the upper Bug at Gayvoron, and were approaching the Dniester at Yampol.

In view of the overextended front line, the most sensible move would have been to withdraw Army Groups South and A to the Dniester without delay, consolidate the southern section of the eastern front, and build up urgently needed reserves by reducing the length of the front. The state of the units, in respect of manpower and materials, called for measures that would offer some chance of withstanding the massive onslaught of superior enemy forces, and reviving the exhausted and decimated units. Since the beginning of the year, the commanders-in-chief, Manstein and Kleist, had both repeatedly sought permission to withdraw and reduce the length of the front, but Hitler remained absolutely determined not to surrender voluntarily a single metre of the ground that had been won. By the middle of March, the situation in Army Group South was close to disaster and Army Group A was in danger of destruction, but Hitler was prepared to take this desperate situation into account only on certain conditions.<sup>117</sup> Even when, during a visit to Obersalzberg on 19 March, the two commanders-in-chief asked Hitler to withdraw Army Group A to the Dniester, and to use the forces released by this move to stabilize the front between the Dniester and the Prut and support the northern wing of Army Group South, Hitler refused to approve this broad operational concept. He decided instead that 'Army Group A must remain on the Bug, and announced only minimal measures to support the north wing of Army Group South'.<sup>118</sup>

While the two field marshals were pleading with Hitler for a limited measure of operational control, 2nd and 3rd Ukrainian Fronts were already receiving further orders from Moscow, the execution of which would shortly destroy the German position in the western Ukraine. Konev was to advance to the Prut with the bulk of his troops and take the northern part of Bessarabia. 3rd Ukrainian Front was instructed to continue the offensive in order to ensure that Sixth Army did not establish itself on the west bank of the Bug. The Stavka also expected Malinovsky's troops to liberate Odessa and Tiraspol, and to reach the Prut and the lower Danube. Tolbukhin received orders on 16 March 'to launch the operation in the Crimea as soon as the troops on 3rd Ukrainian Front's left wing had secured the Nikolayev area and were proceeding to Odessa'.<sup>119</sup>

The critical situation at the beginning of the second ten days in March forced Sixth Army HQ to move IV Corps to the Chișinău area with an infantry division,

<sup>117</sup> In this connection, see in particular Part IV, Chapter III.7 of this volume.

<sup>118</sup> Manstein, *Verlorene Siege*, 604 ff.

<sup>119</sup> *Geschichte des zweiten Weltkrieges 1939–1945*, viii. 110.

in a tactical move to delay an enemy advance. By the middle of the month the enemy had succeeded in steadily widening the gap between First Armoured Army and Eighth Army, advancing in force against the Balta–Bălți line, and finally coming to a halt in the Răut–Cula section of the front.<sup>120</sup> At this point, Sixth Army with five corps was stationed in defence positions on the west bank of the Bug, where the Soviet 8th Guards Army had managed to establish a small bridge-head at Nova Odessa. A week later, 3rd Ukrainian Front closed in and ordered seven leading armies in the front line to advance with a view to recapturing Transnistria. On 21 March the OKH moved the boundary of Army Group A west, extending the army group's front line to Pervomaysk in the north.<sup>121</sup>

As Eighth Army's situation was steadily coming to a head, Sixth Army HQ was again obliged to withdraw troops from the Bug and move them to the Balta area. In the light of these grave threats, Hollidt considered that, 'in view of Eighth Army's situation, there is no alternative but to withdraw from the Bug with all speed [...]. If orders to that effect are not issued by the higher authorities, the withdrawal will have to proceed on our own initiative.'<sup>122</sup> On 25 March the army group HQ accordingly ordered Sixth Army HQ and the Romanian 3rd Army high command to prepare to withdraw to the Tiligul estuary–Dniester bridgehead position at Dubossary.<sup>123</sup> When, likewise on 25 March, Eighth Army was obliged to surrender Balta, it was clear that 3rd Ukrainian Front would shortly resume operations on the Bug.

It would now have made sense to place Eighth Army under the command of Army Group A. This would have unified the conduct of operations on the southern flank of the eastern front. As the OKH had not taken a decision in this connection by 26 March, Kleist seized the initiative, and 'placed [...] Eighth Army [...] under his own command [...] by his own decision'.<sup>124</sup> He informed the OKH that he was taking this step and, at the same time, that he proposed to move Sixth Army back from the Bug to the Dniester. The OKH approved the independent decision to take command, but Col.-Gen. Zeitzler refused to sanction Sixth Army's withdrawal to the Dnieper. He accordingly referred Kleist to Hitler, to clarify the matter directly with the dictator. Surprisingly, Hitler accepted the army group's proposal, in that he gave permission for the army to withdraw to the Odessa–Tiraspol bridgehead position, but he insisted categorically that the Crimea must be held. The day after Army Group A took over Eighth Army HQ, the Romanian Grand General Staff placed the Romanian 4th Army under the army group's command, a move that appeared to offer some prospect of relief in the critical situation obtaining in the southern section of the eastern front.<sup>125</sup> Sixth Army's

withdrawal from the Bug started promptly on 28 March, and was to be completed on 5 April according to the plans.<sup>126</sup>

At the end of March, when Army Group A had three German armies and two Romanian armies under its command, the command structure in the context of German–Romanian cooperation was reorganized. The two armies fighting on the left wing, the German Eighth Army and the Romanian 4th Army, were combined to form Army Detachment Wöhler under the command of Eighth Army HQ. The German Sixth Army and the Romanian 3rd Army were combined as Army Detachment Dumitrescu, in a rather obscure military structure commanded by Col.-Gen. Petre Dumitrescu of the Romanian 3rd Army.<sup>127</sup> As Sixth Army was wedged between the areas in which Army Detachment Wöhler and the Romanian 3rd Army were operating, this singular command structure, which was probably the result of an agreement between Hitler and Antonescu, was contrary to all the criteria for efficient conduct of operations.

In the operational phase at the end of March, Army Group A's intention was that Army Detachment Wöhler should cover the deep left flank of Sixth Army as it withdrew. At the same time, Eighth Army was to delay 2nd Ukrainian Front's continuing southward advance in a holding operation, and finally bring it to a halt at Sculeni, 20 kilometres north of Iași on the Dubossary–Orgeyev–Prut line. The Romanian 4th Army was given the task of preventing Soviet forces from crossing the Prut for as long as possible. When, on 26 March, the Soviet 27th Army captured the first bridgeheads on the upper Prut, in the vicinity of Ștefănești about 50 kilometres north of Iași, and when three Soviet armies moved south and mounted a massive attack on Balta, it became clear that the enemy intended to advance along the Dniester to the Black Sea. Konev's aim, in making these moves, was 'to prevent Army Group A from withdrawing to the other side of the Dniester and, in collaboration with 3rd Ukrainian Front, to encircle and destroy the enemy forces'.<sup>128</sup> Army Group A responded to the Soviet offensive by sending a combat group to cover Iași, and moving the Romanian 4th Army back to the Iași–Târgu Frumos line. It also moved the right wing of Eighth Army and the northern section of Sixth Army south again, to protect Sixth Army's rear on the Tiraspol–Dubossary–Răut (section)–Orgeyev line.<sup>129</sup>

Kleist was endeavouring to deal with the crisis on the southern wing of the eastern front without excessive loss of men and materials, and to establish a united front. But Hitler relieved him of his command on 30 March and appointed Col.-Gen. Ferdinand Schörner to replace him. In doing so, the Führer parted with a commander-in-chief whose warnings he had come to find tedious. He set out his operational intentions in detail, explaining to Manstein that 'the time for grand-style operations in the east [...] was now past. All that counted now was to cling

stubbornly to what we held.<sup>130</sup> In addition to making changes in command, Hitler issued an order two days later, Operational Order No. 7, laying down the framework conditions for the conduct of operations in the southern section of the eastern front.<sup>131</sup> However, the instructions entailed no changes for Army Group A, which was to continue to defend the Dniester line and the front between the Dniester and the Carpathians to the north of Chișinău–Iași, and to hold the Crimea. The army group was renamed Army Group South Ukraine on 5 April but the organizational structure remained the same.

Insofar as the army group had had any hopes that its defence front would be stabilized, at least for a time, as a result of the withdrawal to the Tiligul estuary–Dniester bridgehead position, it was very soon forced to abandon them. Malinovsky's troops were hot on its heels, and the withdrawal operation was already under serious threat from the Soviet 46th Army on 2 April. Two days later the Soviet forces broke through XXIX Corps' front line and split Sixth Army; the idea of evacuating Odessa according to plan and shipping supplies to the Crimea from Constanța went up in smoke. Schörner immediately ordered an attack on the enemy flank, in order to cut off the units that had broken through and establish a security line. Sixth Army's strength had been reduced considerably in the course of the withdrawal, so the counter-attack failed and Odessa had to be evacuated, starting on 9 April.<sup>132</sup> Hitler now had no alternative but to approve withdrawal to the right bank of the Dniester.<sup>133</sup> The operation was completed by 14 April, and Army Detachment Dumitrescu set about establishing a defence front on the eastern border of Bessarabia. While Sixth Army HQ attempted to protect the west bank of the Dniester during the first half of April, the danger of being cut off in the rear became slightly less acute because the threatened Soviet counter-attack west of Iași failed to materialize. Although Army Detachment's front line was still under strong pressure from 2nd Ukrainian Front at the beginning of April, Eighth Army strengthened the line from the Răut section to the edge of the Carpathians at Târgu Neamț in a skilful defensive action, in which the German–Romanian army profited from the bad weather conditions.<sup>134</sup>

The battle for the Crimea—4th Ukrainian Front had launched its major offensive to recapture the peninsula—affected operations on the mainland only to a limited extent. There, Army Group South Ukraine withdrew during the second ten days in April to the line approved by the OKH; 3rd Ukrainian Front pressed on towards the Dniester, and 2nd Ukrainian Front advanced from the north in the area between the Prut and the Carpathians. The enemy forces succeeded in establishing bridgeheads on the Dniester in the Tiraspol area.

Meanwhile, Army Detachment Wöhler and the Romanian 4th Army managed to intercept the advancing Soviet forces in the Târgu Frumos–Iași area on 10 and

<sup>134</sup> AOK 6, 'Abwehrschlacht Bug', 4–37, BA-MA RH 20-6/390, fos. 6–33.

11 April.<sup>135</sup> On the strength of this positive result, the detachment was in a position to keep its northern flank between the edge of the Carpathians and the Dniester. On the other hand, the gap between the group and its neighbour on the left gave cause for considerable concern, and Army Group North Ukraine accordingly brought the Hungarian 1st Army in to establish a security line on the edge of the Carpathians west of Cernăuți. However, the Hungarian Army had to spend almost a month on the operation, which was successfully completed at the beginning of May.

When the Soviet forces reached the Dniester in the middle of April, the high command in Galați thought that, after a short rehabilitation phase, 2nd and 3rd Ukrainian Fronts would continue the offensive 'that was to lead to a decisive breakthrough to the Balkans'.<sup>136</sup> This was a reasonable assumption, given the 120 rifle divisions and twelve mobile corps deployed opposite the army group's front line. However, it was decided at Soviet headquarters to take no further action in the Romanian area of operations, in view of the bitter resistance from the German and Romanian forces. The Stavka accordingly issued orders on 6 May that 2nd and 3rd Ukrainian Fronts were now to defend the lines they had reached.<sup>137</sup>

Since the end of December 1943, when the Soviet winter offensive was launched, Army Group A had been forced to withdraw westwards from the lower Dnieper for almost 400 kilometres before halting at the Dniester. During that time, the army group had had nothing at its disposal to match the enemy's crushing superiority in manpower and materials. Although the army group had faced a number of crises that posed existential problems, Kleist's troops had nevertheless succeeded above all in preventing 3rd Ukrainian Front from achieving the goal it had been set, namely to advance to the Prut. Thanks to skilful conduct of operations—despite Hitler's restrictive interventions—and to the German units' willingness to fight on, it proved possible to offset the Soviet superiority sufficiently to prevent the complete collapse of the southern section of the eastern front. It must also be acknowledged that the German defence received some help from operational errors and a rigid conduct of operations on the other side. Even so, this successful defence was achieved at the cost of heavy losses,<sup>138</sup> which, given the limited manpower at the Wehrmacht's disposal, could never be made good. Had the army group possessed more freedom of action, operations could probably have been conducted in a more flexible way, and this, in turn, might have improved the army group's situation.

<sup>138</sup> Sixth Army lost about 76,550 men between 1 January and 20 May 1944, of whom 49,500 wounded, 13,850 dead and 13,200 missing; BA-MA RW 6/v. 559, fos. 3–18. 3rd Ukrainian Front recorded the loss of approximately 270,000 men between 24 December 1943 and 17 April 1944, of whom approximately 215,000 wounded and about 55,000 dead or missing; *Grif sekretnosti sniat*, 197 ff.

## 7. THE LOSS OF THE CRIMEA

Tolbukhin launched the offensive to recapture the Crimea with 4th Ukrainian Front on 8 April. According to the Stavka's plans for the operation, 4th Ukrainian Front was to lead the main attack from the north and the north-west, while Primorye Army was to break through the German defences at Kerch and advance on Sevastopol in a pincer movement. Almost 470,000 men were available for the operation to liberate the Crimea.<sup>139</sup> Seventeenth Army had only 165,000 German and 65,000 Romanian troops at its disposal to meet this powerful superior force.<sup>140</sup> Despite the discrepancy in manpower, Schörner still felt able to inform the OKH on 7 April, after visiting Seventeenth Army, that 'he was convinced [...] that the defence of the Crimea [was] secured for some time to come. In his opinion, contrary to the view taken by some, the defence could also be conducted on offensive lines.'<sup>141</sup> In expressing this opinion, Schörner was completely at odds with the Seventeenth Army commander-in-chief, who had been vehemently insisting since October 1943 that the peninsula should be evacuated.

In view of the Soviet attack, Seventeenth Army was obliged to establish two defence centres, with XXXXIX Mountain Corps covering the Perekop isthmus and the Sivash coastline in the north, and V Corps defending the Kerch peninsula in the east. As Seventeenth Army had no tanks and only a few assault guns at its disposal, the Luftwaffe's 9th Anti-Aircraft Artillery Division provided backing in anti-tank operations. The anti-aircraft artillery successfully supported XXXXIX Mountain Corps in the battle against armoured forces on the ground, especially at the Tatar Trench. The German 51st and 336th Infantry Divisions initially succeeded in withstanding the massive onslaught of the Soviet 2nd Guards Army and 51st Army at Perekop and the Sivash. But the superior strength of the enemy forces was so overwhelming that, on 10 April, 50th Infantry Division's defence line was moved back to the positions at Išun, and it became necessary to bring in 111th Infantry Division, which had been held in reserve. Despite these measures, the situation in the area did not remain stable for long, as it was already clear on 9 April that the Romanian 10th Infantry Division could no longer hold its positions in the south-eastern Sivash area.<sup>142</sup> The breach in the German-Romanian defence front at Išun enabled 4th Ukrainian Front to advance rapidly to the centre of the peninsula, as Seventeenth Army had already called up all its reserves on the third day of the operation, and the centre of the Crimea lay unprotected, at the mercy of the advancing Soviet forces. In view of the catastrophic developments, the general commanding XXXXIX Mountain Corps ordered the corps to withdraw to Sevastopol. For the corps, which already had units of the Soviet 51st Army operating behind it, this meant withdrawing across more than 160 kilometres of steppe, where the German troops were completely exposed and had no protection against enemy

<sup>139</sup> *Geschichte des zweiten Weltkrieges 1939–1945*, viii. 132 ff.

<sup>140</sup> Dutu, Dobre, and Loghin, *Armata Română*, 134.

<sup>141</sup> KTB H.Gr. 'Südukraine', Abt. Ia, No. 3, vii. 49 (7 Apr. 1944), BA-MA RH 19 V/26, fo. 50.

air attacks. The withdrawal started on 11 April, and by 14 April XXXXIX Mountain Corps—essentially in good order, despite setbacks—had reached Sevastopol, where it proceeded to establish a defence front to the north and east of the fortified area.<sup>143</sup>

The northern front was in trouble, and V Corps was still occupying positions to the east of Kerch. On 10 April General Andrei Ivanovich Yeremenko finally launched the operations on the Kerch front. On the same day, Seventeenth Army HQ ordered V Corps to withdraw to the Parpach line at Feodosiya.<sup>144</sup> V Corps did not remain in the line position for long because the Soviet 51st Army was approaching Simferopol and threatening the corps' withdrawal. V Corps and the Romanian I Mountain Corps were therefore instructed to use the narrow coast road when withdrawing to the west. V Corps' late withdrawal too developed into a race with the vastly superior enemy force, culminating in a fiasco for the German and Romanian troops. Both corps reached the fortified area by 17 April, albeit with heavy losses.<sup>145</sup>

The order to withdraw, issued by Seventeenth Army, was directly contrary to Hitler's intentions. He regarded the order as a piece of deliberate disobedience and accused Jaenecke of having 'lost his nerve'.<sup>146</sup> In view of the chaotic situation, Hitler was nevertheless obliged to approve the withdrawal to the fortified Sevastopol area.<sup>147</sup> He qualified his approval the next day, noting that Sevastopol was to be held indefinitely, 'so no combat troops of any kind were to be evacuated'.<sup>148</sup> However, the first evacuations to Constanța, primarily of members of the armed forces, members of the civil and military administration, staff and auxiliary services, started on 12 April, and the navy was able to transport about 100,000 people to the Romanian mainland by the beginning of May.

With V Corps now in the Sevastopol area, Seventeenth Army had a ration strength of about 125,000 men (78,000 Germans, 46,000 Romanians); the active strength amounted to about 20,000 troops.<sup>149</sup> What was left of Seventeenth Army was defending the Sevastopol area and the Crimean peninsula in a semicircular front line about 40 kilometres long. XXXXIX Mountain Corps, with the remnants of 50th and 336th Infantry Divisions, was fighting in the northern section, while V Corps, with combat groups from 73rd, 98th, and 111th Infantry Divisions, continued to occupy the eastern section. In addition to what was left of the divisions, amounting to regimental strength at most, Seventeenth Army HQ continued to deploy combat groups consisting of members of the auxiliary services, navy, and air force, and remnants of Romanian units. 9th Anti-Aircraft Artillery Division was the mainstay of the defence in the fortified area, successfully combating the massive onslaught of enemy tanks and aircraft, alone and unaided, with the 300 cannon remaining at its disposal.

<sup>149</sup> Of whom 9,500 Germans and 10,400 Romanians; Hillgruber, *Die Räumung*, 40.

Despite the heavy losses they had suffered during the withdrawal, the German and Romanian forces succeeded in occupying the fortified front and repelling the first onslaught of the massive enemy forces pursuing them. In the middle of April, Seventeenth Army faced three Soviet armies, 8th Guards Army, 51st Army (4th Ukrainian Front), and the independent coastal army, with a combined strength of almost 470,000 men, and 200 tanks supporting the infantry. In this dangerous phase of the operation, the German combat groups bore the main burden of the defence because, as Schörner informed the Chief of the General Staff, 'the Romanians [...] were worn out'.<sup>150</sup> The steadily deteriorating situation prompted Schörner and Jaenecke to approach Hitler in person and seek his permission to surrender Sevastopol and evacuate the remaining German and Romanian troops. Even in this hopeless situation, Hitler was not to be persuaded to change his mind. His decision was based on political considerations, without regard to military factors. His attention was focused on 'neutral' Turkey, which, he assumed, 'already had strong feelings about the forced withdrawal in the Crimea. If Sevastopol were to be lost, Turkey might join the other camp'.<sup>151</sup> In this critical situation Hitler, as usual, promised Seventeenth Army more men and materials. But the Wehrmacht no longer had the necessary resources to comply with this undertaking, so Seventeenth Army only got some anti-tank guns which had actually been earmarked for Army Group South Ukraine's front on the mainland. Although Hitler forbade withdrawal from the Crimea even in the second half of April, he nevertheless agreed to the evacuation of Romanian troops and auxiliary services in response to a request from Antonescu. As 4th Ukrainian Front's attacks diminished at the end of March, Hitler thought that Sevastopol could be held for a few more weeks. But Tolbukhin was only preparing for the final offensive, giving his units an opportunity to regroup, recover, and prepare for the fresh assault.<sup>152</sup>

On 1 May 1944, even before the final Soviet offensive was launched, Hitler relieved Jaenecke of his command of Seventeenth Army on the ground that 'he [Jaenecke] could no longer be entirely trusted to bring the battle for Sevastopol to a successful conclusion in accordance with the orders he had been given'.<sup>153</sup> This measure was Hitler's response to a situation report submitted by the commander-in-chief on 29 April, in which Jaenecke took a highly critical view of the situation in the Crimea and expressed the opinion that Sevastopol could not be held for much longer.<sup>154</sup> Hitler appointed, as his successor, the commander of V Army Corps, Gen. Karl Allmendinger, who had Hitler's sympathetic support because his position on the Crimean problem was more agreeable to the dictator.<sup>155</sup>

Hitler's decision 'sealed Seventeenth Army's fate'.<sup>156</sup> When the final Soviet offensive was launched on 5 May, with an impressive assembly of material, there were still about 60,000 German and Romanian troops in the Sevastopol–Crimean area ready and willing to defend their position against the enemy attack.<sup>157</sup> The operation was opened by the Soviet 2nd Guards Army north of the fortified front, where XXXIX Mountain Corps endeavoured to keep its hold on the harbour and city of Sevastopol. Although they suffered considerable losses, the German and Romanian defenders did not give way under the massive enemy pressure. Two days later Tolbukhin extended the offensive to the south, ordering the Soviet 51st Army to advance on the positions held by V Corps. While XXXIX Mountain Corps overcame the strong advances in its section of the front without losing much ground, the German troops had been forced to abandon the strategically important Sapun Hills. The fortified area extending to the western end of the Crimean peninsula was now open to the advancing Soviet troops.<sup>158</sup> This meant that 'Sevastopol [...] had effectively fallen [and] Seventeenth Army had been placed in an impossible situation'.<sup>159</sup> Under the impression, after 7 May, that Sevastopol could no longer be held and that the front line would have to be moved back to the Crimean position, Schörner again sought permission on 8 May to evacuate the Crimea immediately. In view of the desperate situation, Hitler gave his consent on the following day. And by 13 May the navy had managed to rescue about 30,000 men, safely conveying them from the Crimean peninsula to the Romanian mainland, despite massive enemy intervention.<sup>160</sup> Some 10,000 men died during the last few days of the operation or were lost at sea during the rescue, and almost 12,000 men who surrendered to 4th Ukrainian Front on 13 May, together with all military equipment, had to be left behind in the Crimea.

Holding on to the Crimea, which made very little sense in military terms, cost the lives of almost 60,000 German and Romanian<sup>161</sup> and 17,800 Soviet troops.<sup>162</sup> By taking this decision, Hitler blocked for months on end manpower and material resources that were needed to stabilize the southern section of the eastern front. Despite all the catastrophes during the last days and weeks on the peninsula, the fact remains that it was an extraordinary achievement to get almost 150,000 men out of the inferno within a month.

## COLLAPSE IN THE EAST

*The Withdrawal Battles from the Summer  
of 1944*

# I. Errors and Illusions

## The German Command's Miscalculations in the Early Summer of 1944

*Karl-Heinz Frieser*

'If ignorant both of your enemy and of yourself, you are certain in every battle to be in peril.'<sup>1</sup> This maxim, coined two-and-a-half thousand years ago by Sun Tzu, the 'Chinese Clausewitz', was eerily apposite in the summer of 1944. In that phase of the war the German command made a series of miscalculations. The point of concentration of the Soviet offensive was wrongly predicted, with the result that the defeat of Army Group Centre, which was in any case inevitable, became a catastrophe. But it was not only the enemy's situation that was miscalculated. The German command also misjudged the situation of its own forces. Hitler and his closest advisers operated with a mixture of fact and delusion that led to a frightening loss of touch with reality, as shown by their overestimation of Germany's remaining potential and options.<sup>2</sup> Hitler lived at Führer headquarters—far from actual events at the front—where he was interested only in the virtual reality of the situation maps. But the divisions shown on those maps were often no more than a façade. Instead of replenishing increasingly weakened and depleted units, Hitler constantly created new formations. As a result, the deployment of forces on the eastern front was becoming 'a gigantic bluff in which regiments were called divisions, battalions were called brigades and brigades corps, and the time was shortly to come when mobile tank-destroyer units were in reality companies of cyclists equipped with anti-tank grenades'.<sup>3</sup> Instead of deceiving the enemy, however, the dictator increasingly succumbed to self-deception.

<sup>1</sup> Sun Tzu, *The Art of War*, 84.

<sup>2</sup> See also the telling subtitle of Messerschmidt's article, 'Die Wehrmacht. Vom Realitätsverlust zum Selbstbetrug' [The Wehrmacht: from loss of touch with reality to self-deception].

<sup>3</sup> Seaton, *The Russo-German War 1941–45*, 527. The growing tendency to self-deception on the part of Hitler and his close advisers was already apparent to Lt.-Gen. Adolf Heusinger, chief of the OKH operations department, at the beginning of 1944. See Heusinger, *Befehl im Widerstreit*, 292.

### 1. 'ATTACK OR PERISH': HITLER'S AUTO-SUGGESTIVE VICTORY EUPHORIA

In the final phase of the war Hitler repeatedly fell into apocalyptic moods in which he envisaged his own end, and that of the greatest possible number of Germans, as a 'twilight of the gods'. But in the early summer of 1944 he still seemed by no means ready to accept defeat. In his monologues he talked himself into what Albert Speer later called an 'auto-suggestive euphoria'.<sup>4</sup> Hitler's former armaments minister recounted that, even during the depressing second half of the war, the Führer repeatedly fell prey to a victory mania, characterized by such declarations as: 'All we have to do is to show the enemy once more, by a smashing success, that he cannot win the war. Without Stalin's fanatical determination, Russia would have collapsed in the autumn of 1941. Frederick the Great, too, in a hopeless situation fought on with indomitable energy [...] Gentlemen, the will always wins!'<sup>5</sup>

Percy Ernst Schramm, keeper of the Wehrmacht Operations Staff war diary, wrote of Hitler's extreme voluntarism:

In every situation he emphasized willpower as the decisive positive factor. It reflected the accumulated experience of his revolutionary rise to power. He thought that if he had ever learned to think like a General Staff officer, at every single step he would have had to stop and calculate the impossibility of reaching the next one. Consequently, he concluded, he would never have even tried to come to power since on the basis of objective calculations he had no prospect of success in the first place.<sup>6</sup>

Instead, Hitler was guided by a principle which Schramm called the 'avalanche effect'.<sup>7</sup> At the beginning of the National Socialist movement he had fought for his ideas with a handful of followers, until he eventually succeeded in rallying hundreds, thousands, and finally millions to his cause. He believed in the law of impetus, whereby a decisive initial success can develop an unforeseeable momentum of its own. Hitler trusted that:

further developments would shoot ahead beyond calculations once the first success was achieved and that, with the help of the energy generated on one's own side and sapped on the other, the improbable would then be within reach. That was what he meant by the word 'fanaticism', which he used so often and repeatedly demanded of the Wehrmacht [...] Had he been fond of quoting the Bible, it would surely have been the assurance that faith can move mountains which would have come most readily to his lips.<sup>8</sup>

<sup>4</sup> Speer, *Spandau: The Secret Diaries*, 16.

<sup>5</sup> Ibid. 16–17. On Hitler's astonishing assurance of victory, see also Grier, 'Hitler's Baltic Strategy', 594–5, 608.

<sup>6</sup> 'Major der Reserve Prof. Dr. Schramm über den Unterschied zwischen dem militärischen Denken Hitlers und dem des Generalstabs (Herbst 1945), mit Randnotizen des Generalobersten Jodl (April 1946)', in *KTB OKW*, iv/2, 1705–12, hereinafter: Schramm, 'Hitlers militärisches Denken'.

<sup>7</sup> Introduction to *KTB OKW*, iv/1, 52.

<sup>8</sup> Schramm, 'Hitlers militärisches Denken', 1709.

For that reason, dismissing Hitler's ideas as merely irrational and unrealistic falls short of the mark. Rather, he prided himself on being 'the real realist who had predicted actual developments more accurately, precisely because he had included the incalculable in his calculations'.<sup>9</sup> As a politician he had risen miraculously from street agitator to Reich chancellor. And as a military commander he fed above all on the myth of the 'miracle of 1940', when the western powers were overrun in a blitzkrieg.<sup>10</sup> The generals had been appalled by Hitler's plan for a western offensive, privately describing it as 'madness', since according to the General Staff's calculations such a campaign was unwinnable.<sup>11</sup> But the Führer had apparently been right, and that aura clung to him even in the second half of the war when failures were piling up. To the pessimism of many generals who secretly anticipated defeat on the basis of their military calculations, Hitler opposed his positive belief in final victory. It was only a matter of inflicting a new powerful blow, and the impetus of that success would soon burst all the dams.

That mood carried over to Hitler's close circle, as shown, for example, by Alfred Jodl's famous declaration that 'we shall win because we must win, for otherwise world history will have lost all meaning'.<sup>12</sup> Grand Admiral Karl Dönitz, whom Hitler ultimately appointed as his successor because of Dönitz's unconditional determination to hold out, wrote in retrospect: 'Moreover, despite all the difficulty of the situation, there were still reasons to hope for a last-minute turnaround'.<sup>13</sup> Hitler was convinced that the First World War had been lost because the German leadership had given up too soon. In seeking to gain time, he was sustained mainly by two hopes. The first was that the technological superiority of German armaments would result in a turnaround. In the summer of 1943 he was already promising miracles from deployment of the new Tiger and Panther tanks. A year later his expectations lay in the development of jet aircraft and new U-boats, which would reverse the situation in the air and sea war, as well as rockets and other 'miracle weapons'. His second hope was that the 'unnatural alliance' between the enemy powers would eventually collapse.<sup>14</sup> 'We shall fight,' he declared, 'if necessary even on the Rhine. That is a matter of complete indifference. We shall go on fighting at all costs until, as Frederick the Great once said, one of our damned enemies gets tired of fighting'.<sup>15</sup> In his view, the inherent contradictions within the Allied coalition were too great for it to last long. It was, he stressed, a coalition of 'the greatest extremes imaginable in this world: ultra-capitalist states on one side

<sup>9</sup> Ibid.

<sup>10</sup> In reality, the western campaign was an unplanned blitzkrieg whose success was achieved despite—not thanks to—Hitler's interventions, owing to independent initiatives on the part of several armoured-forces generals. On this, see Frieser, *Blitzkrieg-Legende*, 433–5.

<sup>15</sup> Hitler's *Lagebesprechungen*, 615 (31 Aug. 1944).

and ultra-Marxist states on the other'. Those states would collide with each other day to day simply because of their objectives.<sup>16</sup> In his 'stand firm' speeches he constantly invoked the 'Miracle of the House of Brandenburg' in the Seven Years War, when Frederick the Great was saved out of the blue by the collapse of the enemy coalition following the death of Empress Elizabeth.

The more desperate the situation, the more Hitler tended to plunge ahead regardless, convinced that the war could be won only by attacking. He had always adhered to the principle of attack and fundamentally rejected Clausewitz's contention that 'the defensive form, with a negative object, is the stronger form, the attack, with the positive object, the weaker'.<sup>17</sup> He had striven 'from the outset to fight the war offensively wherever possible', so as not to let himself be manoeuvred into a position like that of the First World War.<sup>18</sup> Accordingly, he wanted to go over from 'the fruitless defensive to the offensive', since that was the only way to force a decisive turn in the war.<sup>19</sup> At the beginning of 1945 Hitler continued to assure his generals that he was 'still determined, gentlemen, to wage the fight in the east offensively. The defensive strategy of our generals helps only the Bolsheviks! But I have never in my life been a man for the defensive. Now we shall go over from the defence to the attack once more'.<sup>20</sup> According to Speer, who was one of those who knew Hitler most intimately, the dictator followed that maxim almost always. He had already done so in the early Munich years, and he continued in the same way in his aggressive foreign policy, which, after a series of unexpected successes, finally led to the outbreak of war. Given the disastrous setbacks in the second period of the war, it was 'as if Hitler had always known that he had only the choice between the offensive and defeat, and that the loss of the initiative itself was virtually equivalent to his downfall'.<sup>21</sup>

It would be a mistake to interpret Hitler's decisions, which repeatedly drove his generals to despair, in purely operational terms. His obsessions and reckless flights of the imagination, which conflicted with the military reasoning of the general staff, make sense, if only inherently, when seen against the background of his strategic all-or-nothing mentality.

## 2. 'WINDOW OF VULNERABILITY': THE RISKY NEGLECT OF THE EASTERN FRONT IN FAVOUR OF THE WESTERN

After the Red Army's spring offensives abated, a deceptive calm settled on the eastern front. Within the German leadership there then took place a remarkable change of mood that was in total contradiction to the reality of the military situation. That situation could hardly have been worse. The Wehrmacht was on

<sup>16</sup> Ibid. 722 (12 Dec. 1944), 722.

<sup>17</sup> Ibid. 720. For the quotation, see Clausewitz, *Vom Kriege*, 615.

<sup>18</sup> Hitler's *Lagebesprechungen*, 720. <sup>19</sup> Ibid. 741–2 (18 Dec. 1944).

<sup>20</sup> Speer, *Spandau: The Secret Diaries*, 15.

<sup>21</sup> Ibid.

the defensive on all fronts. In the east the Red Army had finally gained the initiative, in the Balkans German troops were increasingly entangled in the web of partisan warfare, and in Italy the Allies were advancing irresistibly. The U-boats had lost the fight in the Atlantic, and the Luftwaffe was able to pit hardly anything against the Allied air raids on the territory of the Reich. Instead of a two-front war, the constant nightmare of German strategists, there was now the threat of a war on all fronts, especially as the western powers had assembled a huge landing-fleet in Britain. The invasion battle was imminent, and its outcome had become 'the issue that would finally decide the war'.<sup>22</sup>

Paradoxically, this expectation aroused a strange euphoria on Hitler's part.<sup>23</sup> He was looking forward to the imminent clash of arms, seeing it as the last chance to turn the situation round by a victory in the west. And when the report that the invasion had started came at last, the dictator was clearly elated.<sup>24</sup> His military advisers were also temporarily carried away by this manic mood. Lt.-Gen. Rudolf Schmundt, the Führer's chief adjutant, went so far as to declare that they had only to beat off the invasion and the war was won.<sup>25</sup> Likewise Joseph Goebbels, though never one for metaphors, invoked the 'new Dunkirk' in store for the Allies.<sup>26</sup> As can be seen from the secret public-mood reports from the Reich Leader SS's security service, the German population also awaited the invasion 'with great hopes'.<sup>27</sup> The news of the start of the Normandy landing was 'welcomed as a release from unbearable tension and oppressive uncertainty' and 'greeted in some parts with great enthusiasm'.<sup>28</sup> The new mood is also apparent in the war diary of the Naval War Staff. An entry for 6 June, the day of the invasion, reads: 'Once again we have the possibility for a rapid decision of the war by means of a short but powerful engagement'.<sup>29</sup>

In his Directive No. 51, issued in November 1943, Hitler had already announced his intention to shift the point of concentration from the eastern to the western front: 'The danger in the east remains, but a greater danger now appears in the west: an Anglo-American landing! In the east, the vast extent of the territory makes it possible for us to lose ground, even on a large scale, without a fatal blow being dealt to the nervous system of Germany. It is very different in the west'.<sup>30</sup> Certain that the war would be decided in the west, Hitler saw the imminent invasion not as a great danger but as a great opportunity.<sup>31</sup> The OKW's assessment

<sup>22</sup> Oven, *Mit Goebbels bis zum Ende*, ii. 8.

<sup>23</sup> See Weinberg, *A World at Arms*, 665 ff., and Salewski, 'Die Abwehr der Invasion', 210 ff.

<sup>24</sup> Most telling is the account by Gen. (ret.) Walther Warlimont, then a member of the OKW: 'With a completely relaxed smile on his lips, and the demeanour of a man who has at last found the long-awaited opportunity to settle scores with his enemy, he approached the maps and, in an unusually strong Austrian dialect, let fall the words "Also, anganga is" [So, we're off]'; see Warlimont, *Im Hauptquartier*, 457. <sup>26</sup> *Wollt ihr den totalen Krieg?*, 228.

<sup>27</sup> *Meldungen aus dem Reich. Auswahl*, 509.

<sup>28</sup> Ibid. 511.

<sup>29</sup> KTB Skd, pt. A, lviii/I, 93.

<sup>30</sup> *Hitlers Weisungen*, 233. See also Wegner, 'Im Schatten', 126 ff.

<sup>31</sup> Salewski, 'Die Abwehr der Invasion', 215 ff.; id., *Deutschland und der Zweite Weltkrieg*, 274–5, 280–3.

was similar. On the one hand, it feared that a successful enemy landing would 'quickly lead to the loss of the war',<sup>32</sup> especially as the Ruhr district, 'Germany's industrial heartland' was in dangerous reach of the western powers. On the other, it saw the imminent invasion battle on the Atlantic as the last opportunity to give the war a decisive turn. This was expressed with particular clarity in Jodl's address to the Reich cabinet on 5 May: 'I look forward to this battle with full confidence. A defensive victory will change the military and political situation from top to bottom, because a landing operation of that kind, for which detailed preparations have been years in the making, cannot simply be repeated—not to mention the political repercussions in Britain and America.'<sup>33</sup> In this phase of the war Hitler's overriding strategic objective was to split the western powers from the enemy coalition. At bottom, he saw the dispute with them as no more than a conflict which had been forced upon him and was preventing him from pursuing his real aim, the conquest of 'Lebensraum' in the east. He hoped that victory in the battle on the Channel coast would be decisive both militarily and politically, since he saw the western powers as the weaker enemy that could most easily be shaken by military force.<sup>34</sup> The prospect of a negotiated peace with the western Allies would be further strengthened by the military successes of the Red Army, which were bound to increase fears of Bolshevik domination in Europe.<sup>35</sup>

Hitler's aim of seeking a decision in the west seemed perfectly plausible and in accordance with continued action on internal lines. Given its unfavourable position in the centre of Europe, Germany had always faced the threat of war on two fronts. Mainly under the influence of Count Alfred von Schlieffen, it had developed a quick-decision strategy aimed at prostrating the most important enemy in a 'battle of annihilation' while remaining on the defensive on the opposite front, after which the whole potential could be concentrated on the second enemy. In that way a two-front war could be turned into two wars, each on a single front. According to Michael Salewski, these ideas are reminiscent of 'the old "blitzkrieg" concept, only this time in reverse'.<sup>36</sup> Once again in German military history, strategic disparities were to be circumvented by operational manoeuvres.<sup>37</sup>

From the spring of 1944 on, Hitler and the higher operations staffs awaited the invasion with growing impatience. Interest focused entirely on the western front. As a result of the shift in the strategic point of concentration, the eastern front was now felt to be a secondary theatre, and the threat from the increasingly superior Red Army was disastrously repressed. The plan was to reinforce the western front, first and foremost, with freshly replenished units and newly manufactured arms, especially tanks. With regard to the necessary distribution of forces, however, Hitler was not entirely consistent. In the first half of 1944 a number of units actually

<sup>32</sup> Wehrmacht Operations Staff, 13 Apr. 1944., 'Strategischer Überblick und Verteilung der Gesamtstreitkräfte des deutschen Heeres', BA-MA RW 4/v. 876, 23.

<sup>34</sup> Oven, *Mit Goebbels bis zum Ende*, ii. 8. <sup>35</sup> Ibid.

<sup>36</sup> Salewski, *Die deutsche Seekriegsleitung*, ii. 408.

<sup>37</sup> Ibid. As Salewski points out, the later Ardennes offensive against the western powers would be conceived on the same pattern.

intended for the western front were transferred to the east or to Italy to help deal with the repeated crises on those fronts.<sup>38</sup> Nevertheless, every division stationed in the west, or held in reserve for that theatre, was sorely missed in Russia. With regard to armaments and supplies, the eastern front had been relegated to the status of 'poor relation'.<sup>39</sup> In any case, the Red Army's impending summer offensive was not supposed to be countered actively by means of counter-attacks, as in the west, but passively by stubborn resistance in 'fortified places'. Hitler's dual strategy can be summed up in the simple phrase 'strike in the west, hold firm in the east'. It was clear that the divisions fighting on the eastern front were by themselves too weak to withstand the assault by the Red Army permanently. They had to be reinforced as soon as possible by units freed up on the western front. Hitler, who had repeatedly shown himself to be a gambler in the past, was ready to stake everything on one card.<sup>40</sup> This was admitted indirectly in an OKW memorandum of 14 April, which reported that 'the Supreme Command, in full knowledge of the crises in the east, has taken a risk which is at the limit of answerability to history and the nation'.<sup>41</sup>

The OKH, which was responsible for the eastern front, viewed the increasing prioritization of the OKW's western theatre with some mistrust. In the eastern army, unease grew all the stronger as the wait for the expected invasion went on. After all, the units on the eastern front were engaged in bloody defensive battles against the Red Army, while the troops in the west were apparently idly enjoying life in France. Sarcastic comparisons were already being made between the western army and the German High Sea Fleet, which had lain idle during the First World War. At that time, a mocking ditty had made the rounds: 'Lieb Vaterland magst ruhig sein, / die Flotte schläft im Hafen ein' ('Dear Fatherland rest easy, the fleet's asleep in harbour').<sup>42</sup> Now the aphorism arose that in 1918 the war had been lost because of the 'fleet in being', while in 1944 the war in the east would be lost because of the 'army in being' in the west. With growing impatience, the OKH asked why only 53 per cent of the army's forces were deployed in the vast expanse of the east.<sup>43</sup> The above-mentioned OKW memorandum purported to show that, of the 341 divisions and comparable units of the army and the Waffen SS, only 131, that is, less than 40 per cent, were deployed in other theatres, but in that apologetic calculation all the units in the territory of the Reich, including all the reserves, were added to those on the eastern front.<sup>44</sup> No amount of juggling with the figures,

<sup>38</sup> Magenheimer, *Die Militärstrategie Deutschlands 1940–1945*, 279 ff.

<sup>42</sup> Stumpf, *Warum die Flotte zerbrach*, 25.

<sup>43</sup> OKH Operations Staff, 13 Apr. 1944, 'Strategischer Überblick und Verteilung der Gesamtstreitkräfte des deutschen Heeres', BA-MA RW 4/v. 876, 2.

<sup>44</sup> Ibid., appendix to the memorandum, 1–2. The OKW attempted to counter criticism from the OKH by arguing that, of the troops deployed elsewhere than on the eastern front, only 41 divisions were fit for action in the east (*ibid.*, memorandum, 5, and appendix, 3). That argument was shaky, however, since many of the divisions deployed in Russia were themselves so weakened that they too could no longer be considered fit for action on the eastern front.

however, could hide the fact that German inferiority to the constantly growing strength of the Red Army threatened to assume dramatic proportions. The OKW's dream of a decisive victory in the west became, for the OKH, the nightmare of a decisive defeat in the east.

The German dictator was already making new plans in anticipation of a turnaround in the west. He 'welcomed the landing' by the enemy, since 'we shall beat him', after which '30 to 35 divisions will be free for operations in the east'.<sup>45</sup> Apparently he was already dreaming of a new Operation BARBAROSSA.<sup>46</sup> At the beginning of May 1944 he went so far as to tell Herbert Backe, the minister of agriculture, that 'Germany would soon retake the richest part of the Ukraine, and that preparations for its control and exploitation should begin immediately'.<sup>47</sup> Significantly, immediately after the loss of the Ukraine in the spring of 1944, he had Army Groups South and A rebaptized 'North Ukraine' and 'South Ukraine' respectively—names which clearly proclaimed his intention to reconquer those territories.<sup>48</sup> As will be discussed later, some of Hitler's mistaken operational decisions in the summer of 1944 were described by German officers as 'crazy'. They are understandable only in the context of his all-or-nothing strategy and conqueror mentality. For example, the front salient in the area of Army Group Centre, which protruded far to the east, had to be held in order to serve as a springboard for a subsequent offensive against the Ukraine. Only that explains why Hitler insisted on holding onto bridgeheads even in the most endangered sectors, despite the urgent demands of the generals on the eastern front for the front to be withdrawn behind rivers such as the Dnieper at Mogilev. Bridgeheads are of interest only to an attacker, whereas a defender, for practical reasons, withdraws behind natural barriers. Hitler, however, seemed instinctively drawn only to the offensive, to 'world power' or downfall.<sup>49</sup> His all-or-nothing maxims assumed increasingly grotesque forms.

An examination of the breakdown of forces on the eastern front immediately raises the question of the operational reserve. It seems impossible to attempt to hold such a long front line against a numerically superior enemy without having freely available forces at hand to react to breakthroughs. Incredible as it may seem, Hitler's 'reserve' was some 2,300 kilometres away (as the crow flies) on the Atlantic coast. As already mentioned, this scenario is reminiscent of the all-or-nothing approach of the Schlieffen Plan before the First World War. At that time the German chief of staff wanted first to throw almost all the German units into the offensive in the west in order to force a rapid decisive victory, and then move the troops from the Seine to the Vistula to halt the oncoming Russian steamroller.<sup>50</sup>

<sup>45</sup> 'Aufzeichnungen des Botschafters z.b.V. [Walter] Hewel über den Empfang des Botschafters Graf [Hiroshi] Oshima beim Führer am 22.1.1944', ADAP, Series E, vii, doc. 179, 345–6.

<sup>46</sup> See, e.g., Philippi and Heim, *Der Feldzug gegen Sowjetrußland*, 226.

<sup>47</sup> Weinberg, *A World at Arms*, 665.

<sup>48</sup> Philippi and Heim, *Der Feldzug gegen Sowjetrußland*, 241.

<sup>49</sup> In *Mein Kampf* (220th edn., 742) Hitler had already written: 'Germany will either be a world power or there will be no Germany.'

<sup>50</sup> Ritter, *Der Schlieffenplan*, 145–60.

In the same way, Hitler apparently planned to transfer his troops to the eastern front at top speed after the victorious invasion battle in the west. The determining factors of his behaviour thus resemble those of 1914. In the west, it was not simply a matter of victory, but of a *rapid* victory. Nevertheless, the temporary relegation of the eastern front to a secondary theatre of war was a serious headache for the OKH. Even if there was a rapid decisive victory on the Channel coast and the 35 divisions envisaged by Hitler were made available immediately, how could they be transported to the east quickly enough? Furthermore, the Soviet command would certainly time its summer offensive to coincide with the invasion by the western powers, so as to take advantage of the Germans' acute moment of weakness. So even with the best possible outcome of German operations in the west, a dangerous 'window of vulnerability' would open at the same time on the eastern front. The Red Army would be able to launch a decisive offensive against the fragile German front at that precise moment and shatter it with a single powerful blow. Clearly, that nightmare weighed heavily on the minds of the German military decision-makers, and it led to a disastrous misreading of actual Soviet offensive intentions.

### 3. 'THE BALKANS OR THE BALTIC': THE DELUSION OF A DECISIVE SOVIET OFFENSIVE

In the summer of 1944 the eastern front comprised an oddly shaped salient, rather like a question mark, dissected by the long stretch of the Pripet marshes. In the northern half the 'Belorussian balcony', occupied by Army Group Centre, protruded to the east, while in the southern half the 'Ukrainian balcony', recaptured by the Soviet forces, bulged out far in the opposite direction. The southern bulge looked like a new, oversized version of the Kursk salient from the summer of 1943. Now, however, the Wehrmacht no longer had any armoured units available with which to attack it on the flanks. The 'Ukrainian balcony' was considered an ideal springboard for future Soviet offensives. As a result, the military operations staffs, above all Foreign Armies East, had their eyes fixed hypnotically on that salient. Since the Red Army had concentrated a large part of its attacking potential there at the end of the spring offensives, the German command took it for granted that, after a break of a few weeks, the enemy would resume his offensive operations in precisely that area, south of the Pripet.

In the assessment of Soviet offensive intentions, two likely directions of thrust crystallized: one to the south-west and another to the north-west. These two variants were designated the 'Balkans option' and the 'Baltic option'.<sup>51</sup> The fear

<sup>51</sup> On this, see the following BA-MA documents: Abt. Fremde Heere Ost (I), No. 1428/44 gKdos, 'Zusammenfassende Beurteilung der Feindlage vor der deutschen Ostfront im großen', RHD 18/249, as at 10 Feb. (226), 19 Apr. (259–60), 3 May (262 ff.), 21 May (272–3), 30 May (274), 13 June (280–1), and 27 June (290 ff.); OKW/WFSt, Ic Ag. Ausland, Feindlagebericht No. 33, 15 May, RW 5/v. 386, 10, fo. 122; Fr.H. Ost (I), 'Kurze Beurteilung der Feindlage vom 19.4.1944', RH 2/1966, 3–4, fos. 27–8; 'Kurze Beurteilung der Feindlage vom 21.5, 28.5, und 27.6.1944', RH 2/1967, fos. 46, 60, 133 ff.; Chef des Generalstabes des Heeres, 'Abwehrmeldung aus im allgemeinen zuverlässiger

was that the Soviet command would launch a large-scale encirclement operation from the Ukrainian balcony against either the northern or the southern German wing, delivering a powerful blow that would cause the collapse of the eastern front.<sup>52</sup> The ‘window of vulnerability’ was thus both temporal and spatial. On the one hand, there would be a dangerous gap in time between the start of the Soviet summer offensive and the expected arrival of German reserves from the west. On the other, there was a geographical window, the ‘Galician gap’, between the Carpathians and the Pripet, into which the ‘Ukrainian balcony’ protruded dangerously. That space, free of significant terrain obstacles, was bound to provoke the Soviet command into attempting the decisive breakthrough right there, in the sector of Army Group North Ukraine. The latter’s commander-in-chief, Field Marshal Walter Model, managed to secure priority of reinforcements for his own army group, since it was assumed that the opposing points of concentration would meet precisely in its area. For Foreign Armies East, too, the question of which front sector was under threat and should be therefore take priority seemed clear in advance. The only remaining question was whether, after the breakthrough in the sector of Army Group North Ukraine, the Soviet command would swing its encirclement forces south towards the Balkans or north towards the Baltic.

### The Balkan Option

At first, the German operations staffs feared that the Soviets intended to thrust into the rear of Army Group South Ukraine, which was positioned between the Carpathians and the Black Sea. The enemy would probably try to break through the eastern front to the north of the army group, in the area of Lvov, and advance westwards across the San. The Soviet attacking units could then veer south through the Carpathians to the Hungarian lowland plain and push into the Romanian hinterland.<sup>53</sup> The Balkan option was rendered probable by the fact that, at the end of the spring offensive, the bulk of the Soviet units were concentrated in the southern sector of the front. All six armoured divisions were stationed between

<sup>52</sup> For a while it was even thought that the Red Army, with its massive superiority, would try to carry out both encirclement operations simultaneously.

<sup>53</sup> See in particular Heusinger, *Befehl im Widerstreit*, 322.

the Pripet marshes and the Black Sea. The Soviet command was clearly concerned that its troops be able to secure a foothold in the Balkans before the western Allies. In addition, two goals of traditional Russian expansionist policy, which had already fascinated the Tsars, lay within immediate reach: the Dardanelles and access to the Mediterranean. There was also the war-economy factor of Romanian oil, the loss of which would severely handicap German conduct of the war.<sup>54</sup>

### The Baltic Option

In the spring of 1944 German intelligence still considered the Balkan option as definitely the most probable. Its assessment of enemy intentions changed at the beginning of the summer, however, following numerous reports of Red Army troop relocations. The presumed point of concentration of the enemy attacks shifted ever more clearly northwards.<sup>55</sup> The course of the spring offensive had led to a strong concentration of Soviet troops in the north-western corner of the Ukrainian balcony, known as the 'Kovel bend'. This bulge pointed towards Warsaw and seemed to indicate the direction of thrust of the Red Army's forthcoming attacks. Kovel itself formed the hinge between Army Group Centre and Army Group North Ukraine, and the front made a sharp 90-degree turn to the south at that point. In the spring of 1944 the heavily contested town, which was considered the cornerstone of German defence, became the focal point of the eastern front. As the Red Army had at first attacked only south of the Pripet river, the southern flank of Army Group Centre had grown longer and longer. At Kovel, however, which is near the source of the Pripet, the geographical obstacle of the river and the difficulty of passing through its marshes ended. After taking the town, the Soviet forces would be able to swerve north unimpeded, between the Pripet marshes and the Vistula, towards Warsaw. In the spring of 1944 the front had already threatened to collapse here, but the situation had been stabilized once again with the help of the last reserves. On 5 April LVI Armoured Corps, under General Friedrich Hossbach, had broken through the encircling ring and relieved the Kovel 'fortified place'. At first the spring thaw had prevented the Red Army from resuming its attack. Now the fear was that it would concentrate its forthcoming offensive wholly on this sensitive point—this time with a strategic, rather than merely operational objective, that is, a thrust towards the Baltic coast.

Army Group Centre HQ, above all, was alarmed by this terrifying prospect. On 21 April Field Marshal Ernst Busch already warned of the gathering danger in

<sup>54</sup> Fr.H. Ost (I), No. 1256/44 gKdos, 'Kurze Beurteilung der Feindlage vom 19.4.1944', BA-MA RH 2/1966, 259–60, and Fr.H. Ost (I), No. 1428/44 gKdos, 'Zusammenfassende Beurteilung der Feindlage vor der deutschen Ostfront im großen: Stand 3.5.1944', BA-MA RHD 18/249, 263 ff.

<sup>55</sup> In this connection, a study of the operations maps drawn up by Foreign Armies East in the period February to June 1944 is particularly instructive. The red arrows denoting the suspected offensive intentions of the Red Army drift increasingly to the north, showing how the anticipated point of concentration of the enemy attacks shifted more and more clearly from Army Group South Ukraine to Army Group North Ukraine. They also reveal the beginnings of an encirclement movement from the Ukrainian balcony in a north-westerly direction towards Warsaw. See BA-MA RH 2/1990 (K), 2155 (K), 2156 (K), and 2157 (K).

the rear of his army group: 'A large-scale marshalling of forces is currently under way in the Kovel area. It can be assumed that the Russian command is aiming to overrun Army Group Centre by a thrust via Brest–Warsaw in the direction of Königsberg–Danzig. The first stage of this operation will probably aim at reaching the Lvov–Lublin–Brest line, while the second stage will be a push towards the Baltic.' All in all, he considered that the Soviet command had 'very wide-ranging operational objectives'.<sup>56</sup>

A successful Soviet push to the Baltic would enclose not only Army Group Centre but Army Group North too in an enormous pocket on the coast. Most worrying of all, a breakthrough at Kovel would leave the two army groups with no chance of reacting to the mortal danger in their rear. Because of the unfavourable curve of the front salient, their main forces were far to the east, near Vitebsk, in anticipation of a frontal Soviet attack. Rapid withdrawal to the Vistula near Warsaw also seemed impossible because of the distance.

Moreover, the 'Belorussian balcony' bulged like an enormous shield in front of the section of the Vistula that would have to be crossed in a thrust towards Berlin. Starting from Vitebsk, the Soviet attacking units would have to fight their way to the Vistula through 700 kilometres of Belorussian forests and swamps, whereas from Kovel the distance was less than 200 kilometres and the terrain was favourable to tanks. That being so, rather than beating down the German troops in the Belorussian balcony by means of a direct frontal attack, the Soviet command must have been tempted to achieve the collapse of the front by the 'indirect' method of a thrust in the rear in the direction of Warsaw. The German General Staff officers, trained in the Schlieffen school of thought, were particularly obsessed by the idea of a Soviet 'sickle cut' to the Baltic. For the Soviet encircling forces, a thrust to the Baltic would also have the advantage that their left (western) flank would be covered by the Vistula, so that any relief attack by German reserves from the territory of the Reich could be easily blocked.

It was clear to Foreign Armies East that such an enemy operation would be 'potentially decisive for the outcome of the war'.<sup>57</sup> Let the Red Army achieve a breakthrough at any other place, only not here. Kovel was perceived as the 'solar plexus' of the eastern front, where the Wehrmacht could be dealt a knock out blow, and the horizon of expectation for an enemy offensive narrowed increasingly to that single sector of the front. The one-dimensional fixation of German intelligence on that particular place must also be seen as a result of Hitler's all-or-nothing strategy. Since the dictator was seeking a decisive battle in the west, it was to be expected that the Red Army too would exploit the temporary German weakness to launch a decisive offensive. So while the OKW sought to inflict a 'Dunkirk' on the western Allies on the Channel coast, the OKH feared a 'Dunkirk' on the Baltic coast.

The spectre of a decisive Soviet major operation seems also to have obscured the thinking of Foreign Armies East. In this phase the enemy intelligence section made

<sup>56</sup> 'KTB-Notiz 21.4.1944, Betr.: Feldmarschall-Besuch', BA-MA RH 21-3/v. 336.

<sup>57</sup> Fr.H. Ost (I), No. 1428/44 gKdos, 'Zusammenfassende Beurteilung der Feindlage vor der deutschen Ostfront im großen: Stand 3.5.1944', BA-MA RHD 18/249, 263.

the fatal mistake of paying too little attention to another danger that appeared less terrifying but was nevertheless very real. The Soviet high command chose an option that was less plausible from the German viewpoint. It placed the point of concentration north, rather than south, of the Pripet marshes, and attacked Army Group Centre in the Belorussian balcony frontally from the east. Although the two options favoured by German intelligence, namely a Balkan or Baltic offensive, were taken into consideration, they were both subsequently rejected. Too strong a commitment in the Balkans was less of an option for the Soviet high command at this stage of the war, since it was concerned, first and foremost, to liberate the remaining areas of its own territory still occupied by the Wehrmacht. On the other hand, the idea of a thrust to the Baltic from the Kovel area was very tempting. The Stavka fully recognized the opportunity for a huge encirclement operation that would enable it to eliminate two German army groups at once and would then clear the way for an advance on Berlin from Warsaw.<sup>58</sup> That plan was most probably discussed, but it was nevertheless rejected.<sup>59</sup> Did the Soviet high command make an unforgivable mistake in shrinking from a decisive large-scale offensive in the summer of 1944, thus passing up the chance of an early end to the war? That question is discussed conclusively in the following sections.

#### 4. THE DANGER IGNORED: GERMAN ENEMY INTELLIGENCE AND THE BELORUSSIAN BALCONY

##### (a) The Confusion about the Soviet Point of Concentration

If enemy intelligence ever played a decisive role in the eastern campaign, it was in the early summer of 1944 in the run-up to the expected Soviet large-scale offensive. Normally speaking, an enemy breakthrough does not necessarily signify a catastrophe. It is a fundamental rule of military science to keep an operational reserve ready behind the front in order to react to just such an eventuality. In the summer of 1944, however, there was no such reserve on the eastern front. Instead, the divisions intended for that purpose were in the west, on the Atlantic coast, and were supposed to be transferred to the east as soon as possible after the Allied invasion had been repelled. For the time being, the units on the eastern front had only themselves to rely on in the face of overwhelming Soviet superiority. In the

<sup>58</sup> According to information in the possession of German enemy intelligence, a plan had already been drawn up under Stalin's chairmanship between 24 and 30 March, with the slogan: 'All roads lead to Rome, but the road to Berlin runs via Warsaw.' See *Chef des Generalstabes des Heeres, 'Abwehrmeldung aus im allgemeinen zuverlässiger Quelle'*, 27 Apr. 1944, BA-MA RH 2/v. 2090, 1, fos. 53–4.

<sup>59</sup> Glantz, *Soviet Military Deception*, 348–9; id., 'Strategische Operation', 292 ff.; id., *The Role of Intelligence*, 141; Glantz and House, *When Titans Clashed*, 195–6; Adair, *Hitler's Greatest Defeat*, 49. Another variant was the proposal by Gen. Konstantin Konstantinovich Rokossovsky to begin Operation BAGRATION with the left wing of 1st Belorussian Front from Kovel in the direction of Brest-Litovsk, so as to get to the rear of Army Group Centre. On this the author is grateful for important suggestions from P. Tsygankov of the Moscow Institute of Military History.

first phase of the eastern campaign the Wehrmacht had predominantly initiated the action. In the following phase it had almost only reacted—albeit time and again successfully—in accordance with Erich von Manstein's mobile tactics of striking on the backhand. Now, however, the nadir had been reached. Until the hoped-for reinforcements arrived, the eastern army was no longer even capable of reacting. Confined to static operations, its only chance was to detect the exact time and direction of thrust of the impending Soviet summer offensive and establish the appropriate defensive point of concentration to meet the point of concentration of the enemy attack. Instead of the German General Staff's traditional 'a posteriori' mode of operation, the only remaining possibility was to deploy its own forces 'a priori', in anticipation of the enemy attack. Yet never had it been more difficult for German intelligence to determine the enemy's point of concentration.

The reason was that, instead of launching a single decisive strategic offensive, the Soviet leadership had decided to carry out a series of operational strikes along the entire front. The operations were to be staggered in time, beginning consecutively so as to make it difficult for the Germans to shift their reserves, until all four German army groups were simultaneously entangled in defensive battles with the attacking units of the Red Army. In official Soviet historiography this plan was celebrated as an overall strategic and operational concept of true genius.<sup>60</sup> But one may legitimately ask whether the real reason for it was not simply fear of being too audacious. During that very period of the Wehrmacht's blatant weakness, the Soviet high command did not dare deal its enemy the decisive blow. However impressively the cumulative operational successes and the number of square kilometres of ground conquered are presented in the historiography, they did not bring about the end of the war but only postponed it.

For the summer of 1944, the Stavka planned to begin with an offensive against the Finnish army in Karelia. That was to be followed by the main blow against Army Group Centre in the Belorussian balcony, combined with a secondary thrust against Army Group North. After that, there would be strikes against Army Group North Ukraine and, last of all, Army Group South Ukraine. The Red Army's superiority was then so great that it could attack using a system of multiple simultaneous points of concentration. For each of the successive major offensives, at least two points of concentration and one reserve point of concentration were planned. The individual Soviet army fronts, in their turn, had to form various different points of concentration.<sup>61</sup> This plan achieved at least one objective, that of throwing Foreign Armies East into confusion. Since powerful enemy offensive forces were detected simultaneously in front of Army Group North Ukraine, Army Group South Ukraine, and Army Group Centre, the German defence forces found themselves in the role of the fabled hunting dog whose instinct was blocked when it spotted three equally distant hares.

The Red Army's strongest offensive, Operation BAGRATION, was to be directed against Army Group Centre. Contrary to the Germans' original assumptions,

<sup>60</sup> *Geschichte des zweiten Weltkrieges 1939–1945*, ix. 27 and 609 ff.

<sup>61</sup> Hinze, *Der Zusammenbruch* [1995], 88–9.

however, it was planned as a frontal attack from the east on the exposed Belorussian balcony, and an unprecedented concentration of offensive forces was massed in preparation. Since that time, historians have repeatedly asked how it was possible to assemble such a gigantic attacking potential and yet take the enemy by surprise. In the following section we shall consider whether enemy intelligence really did have so little idea of Soviet intentions.

### (b) Army Group Centre's Inconsistent Assessment of the Enemy Situation

The starting position in the early summer of 1944 was as follows. Army Group Centre had to defend the Belorussian balcony, which was divided on the eastern side into three front sectors: Third Armoured Army in the northern sector near Vitebsk, Fourth Army in the centre near Mogilev, and Ninth Army in the southern sector near Bobruisk. The focus of the semicircular salient was Minsk, the capital of Belorussia, where Army Group Centre's headquarters was also situated. The right wing, which swung far back to the west, ran along the Pripet marshes to Kovel and was covered by Second Army. Army Group Centre was positioned on territory steeped in history. Napoleon's troops had marched on Moscow through the forests of Belorussia across the land bridge between the Dvina and the Dnieper known as the 'Smolensk gate'. Army Group Centre had also pushed towards Moscow through that traditional gateway to the Russian heartland in the summer of 1941, when its forces had attacked along long stretches of the Minsk–Moscow highway.

In the winter of 1943/4 the Red Army had also tried to push across the land bridge in the opposite direction. It had been repelled in the winter battles of Vitebsk and Orsha, although the Soviet forces nevertheless managed to advance south of the Pripet marshes as far as Kovel. That sector was now assigned to Army Group Centre's southern neighbour, Army Group North Ukraine, under Field Marshal Model, thus enabling Army Group Centre to concentrate its attention on the Belorussian balcony in the east. Although the Belorussian balcony was considered to be of secondary importance as a theatre of war, in May and June 1944 there were increasingly frequent instances of intelligence reports which did not match the given picture. It seemed as if a peculiar danger was brewing in that sector, but the threat was assessed differently by the individual army staffs and the army group headquarters.

The assessment of the enemy situation by *Second Army*, which was deployed on the right wing and thus formed the hinge with Army Group North Ukraine, is particularly instructive. Its war diaries show that the threatened point of concentration was perceived as shifting from the right to the left wing.<sup>62</sup> Second Army was at first convinced that the greatest threat lay in the neighbouring Kovel sector on

<sup>62</sup> On this, see Second Army's war diaries for the period from the beginning of April to the beginning of July, which were considered missing until recently but have resurfaced as captured files in the Russian State Military Archives in Moscow: RGVA F 1275-2/270-75.

the northern wing of Army Group North Ukraine, where the Red Army had massed a huge concentration of troops. But it then received more and more reports of an increasing concentration of Soviet forces on the left flank, in the sector of Ninth Army near Bobruisk. That clearly indicated that the threat to Army Group Centre was not from the southern flank but from the east. Maj.-Gen. Henning von Tresckow, Second Army's chief of staff, accordingly informed Lt.-Gen. Heusinger that the enemy was planning to attack Army Group Centre's protruding salient, rather than Second Army.<sup>63</sup>

*Third Armoured Army* was also proved correct in its assessment of the enemy situation. The Vitebsk salient, considered the army group's sensitive point, lay in its sector of the front. During the previous winter the city had been held in the course of heavy defensive fighting but was now increasingly closed in. In those circumstances, *Third Armoured Army* predicted a two-flank pincer attack on the exposed sector.

*Fourth Army* too noted a massing of Soviet offensive forces near the front. Its reconnaissance focused particularly on the area of the Moscow–Minsk highway. An intelligence report of 17 June, for example, stated that 'in the Dnieper highway sector the enemy has almost completed preparations for an attack'.<sup>64</sup> Lt.-Gen. (ret.) Heinz-Georg Lemm recalled that 'during my time in Russia I had seldom seen all the signs point so clearly to an impending attack'.<sup>65</sup> He also described the mood of the officer corps as a mixture of resignation and despair at the way in which the reports from the front were apparently dismissed by the higher operations staffs.

*Ninth Army HQ* went particularly far in predicting the coming disaster. Not only did it analyse the enemy's marshalling of forces directly opposite its own sector of the front, but it also drew operational conclusions about the danger threatening both Army Group Centre and Army Group North. Its enemy intelligence report of 17 June 1944 is particularly instructive. The otherwise soberly written document includes some dramatic emphasis, and the first two sentences should already have alarmed the higher command authorities: '*The situation facing the army has changed fundamentally in a short time.* While the distribution of enemy forces near the front remains unchanged, *a large-scale marshalling of forces* is taking place in depth along the whole of the army's sector of the front'.<sup>66</sup> The first signs had already been detected on 3 June. The Soviet reinforcements brought in by 15 June were estimated at 10 to 15 divisions and one to two armoured corps. Furthermore, enemy intelligence assumed there were many undetected movements, since over large stretches the thickly wooded terrain 'makes insight into the enemy situation almost impossible'.<sup>67</sup> It clearly drew attention to the enemy's intention of 'splitting the army's front by means of independent large-scale offensive thrusts so as to free

<sup>63</sup> Scheurig, *Henning von Tresckow*, 211.

<sup>64</sup> AOK 4, Ic, No. 283/44 g, 'Ic-Abendmeldung vom 17.6.1944', BA-MA RH 20-4/541, 2.

<sup>65</sup> Lemm, 'Die Verteidigung Mogilevs', 358.

<sup>66</sup> AOK 9, Abt. Ic/A.O., No. 1831/44 g, 17 June 1944, 'Feindnachrichtenblatt Nr. 164', BA-MA RH 20-9/314, 1.

<sup>67</sup> Ibid. 3.

the way forward to Minsk via Bobruisk'. The report also referred to 'plans for wide-ranging encirclement'.<sup>68</sup>

Information according to which Rokossovsky and Zhukov would be coordinating the enemy's offensive operations was considered particularly significant.<sup>69</sup> Above all, Ninth Army HQ reached the conclusion that the Soviet command had 'provisionally abandoned its old south-westerly objective (Lvov, the Balkans) [...] in favour of the *reconquest of Belorussia*'.<sup>70</sup> It considered that 'the point of concentration of the enemy offensive should therefore lie undoubtedly in the area of Army Group Centre'.<sup>71</sup> On 22 June, when the staggered Soviet large-scale offensive began, Ninth Army remained largely unscathed. Nevertheless, the war diary contains an entry which, in the words of Lt.-Gen. Gerd Niepold, anticipated the imminent disaster 'in almost prophetic fashion'.<sup>72</sup> It begins as follows: 'Ninth Army is on the eve of a mighty new battle whose extent and duration can only be guessed at. One thing is certain, however: in the last few weeks and days, the enemy has assembled an enormous concentration of forces opposite the army's front, and AOK is convinced that this concentration puts even the enemy's massing of forces opposite the northern wing of Army Group North Ukraine in the shade.'<sup>73</sup>

The following interim conclusion may be drawn regarding the situation as seen by the armies deployed in the Belorussian salient: at the beginning of the summer offensive the Soviet forces were unable to achieve a tactical surprise attack in any single place, since the German armies' Ic sections had correctly identified the points of concentration. While there was still uncertainty about the reserves assembled in depth, the intelligence findings in the area near the front were in themselves so alarming that a major threat had to be assumed. Predicting the starting date of the offensive was no problem either, as 22 June, the third anniversary of the German attack on the Soviet Union, seemed the obvious choice. The spectacular partisan actions which immediately preceded it were also a warning signal.

In comparison, the enemy situation analyses of Army Group Centre HQ seem astonishingly unclear and ambivalent. Vitebsk is a very good example. As already explained, the heavily contested city was the army group's main cornerstone, and its exposed position made it, so to speak, a salient within the salient. From today's viewpoint, the assessment of enemy intentions by Third Armoured Army HQ, whose forces were directly threatened, was perfectly correct.<sup>74</sup> It anticipated that the Soviet forces would attack not frontally but 'on the shanks of the protruding

<sup>68</sup> Ibid. 4.

<sup>72</sup> Niepold, 'Führung der Heeresgruppe Mitte', 64.

<sup>73</sup> KTB AOK 9, 22 June 1944, BA-MA RH 20-9/176, fo. 266.

<sup>74</sup> Kröker (*Fehleinschätzung*, 100–1 and 104 ff.) reached a different conclusion, but his assessment of Third Armoured Army's enemy situation analysis is not entirely logical. Admittedly, not all the sources were available to him at the time, especially not the situation maps marked up by Army Group Centre's intelligence department, which have surfaced as captured files in the Central Archives of the Ministry of Defence of the Russian Federation (CAMO) in Podolsk; see CAMO F. 500, op. 12454, d.1690 to 1703.

Vitebsk salient'.<sup>75</sup> Neighbouring Army Group North also predicted an 'impending attack on both sides of Vitebsk', and accordingly feared a thrust against its own southern wing.<sup>76</sup> Foreign Armies East likewise expected 'an attack on both sides' against the salient.<sup>77</sup>

Given this remarkable concordance in the assessments of the enemy situation, it is hard to understand why Army Group Centre HQ made such a wrong prediction. The Ic section's summary assessment of 19 June categorically asserts that 'assessment of the enemy's situation at the present time does not permit the conclusion that it intends a concentrated attack on Vitebsk'.<sup>78</sup> Three days later the army group realized its mistake. An entry in the army group's war diary dated 22 June reads: 'The large-scale attack north-west of Vitebsk came [...] as a complete surprise.'<sup>79</sup>

This partial perception disorder is explained by the fact that on 20 May Field Marshal Busch had dared to refer insistently to the threat to Vitebsk, thereby provoking an angry reaction from Hitler, who bluntly rejected the idea. The shock of Hitler's reaction had a lasting effect, making mention of the Vitebsk scenario taboo, and Army Group Centre HQ thereafter avoided any too obvious reference to that sensitive point. This will be discussed in detail later.

The enemy situation reports conveyed to Army Group Centre HQ from April to June testify to a development whose dynamics were not properly appreciated by the army group's Ic section. At first, the focus was entirely on the area east of Kovel. Lt.-Gen. Hans Krebs, Army Group Centre's chief of staff, asserted that 'the point of concentration of the enemy's operational intentions will be directed against Second Army'.<sup>80</sup> In May, however, there were increasingly frequent reports which strongly suggested a different point of concentration. They pointed to a considerable build-up of Soviet forces in the east, opposite the 'Belorussian bulge'. From 2 June especially,

<sup>75</sup> KTB PzAOK 3, 15 Apr. 1944, BA-MA RH 21-3/v. 286, 6. Personal diary of Col.-Gen. [Georg-Hans] Reinhardt, entry for 16 June 1944 (fo. 69), BA-MA, Reinhardt papers, N 245/3. On this, see [Karl-Heinz] Collee, Major i.G., Ic/AO der 3. Pz.-Armee an den Chef des Generalstabes der 3. Pz.-Armee, 21 Sept. 1944, BA-MA RH 21-3/v. 352, 1, fos. 2-3; Grün, Major i.G., 9 Sept. 1944, 'Stellungnahme zur Entwicklung der Lage bei der 3. Panzerarmee vom 22.6. bis 25.6.1944', *ibid.* 1, fo. 11. Also instructive are the daily enemy intelligence reports in app. C2 (BA-MA RH 21-3/508), in which there are constant reports of enemy activities to the northwest of Vitebsk in the area of IX Army Corps.

<sup>76</sup> KTB HGr Nord, 19 June 1944, BA-MA RH 19 III/310, fo. 15.

<sup>77</sup> This is expressed most clearly in BA-MA RH 2/196, which contains 'brief assessments of the enemy situation' drawn up under the responsibility of Maj.-Gen. Gehlen. From mid-May on, there is repeated reference to the threat to the sector north-west of Vitebsk, especially in the assessments dated 16, 21, 23, and 30 May, and 5, 9-12, 16, 17, 21, and 22 June. The summary assessment of the enemy situation ('Zusammenfassende Beurteilung der Feindlage') dated 13 June also draws attention to the threat 'on both sides of Vitebsk'. See FHO (I), No. 1931/44 gKdos, 13 June 1944, BA-MA RHD 18/249, fo. 279.

<sup>78</sup> Abt. Ic/A.O., No. 917/44, 19 June 1944, 'Zusammenfassende Beurteilung der Feindlage', BA-MA RH 19 II/298, 4, fo. 58.

<sup>79</sup> KTB HGr Mitte, 22 June 1944, BA-MA RH 19 II/197, 1247-8, fos. 95-6.

<sup>80</sup> OK HGr Mitte, Ia, No. 4502/44 g.Kdos, 'Aufzeichnungen über die Besprechung der Chefs der Generalstäbe der Armeen der HGr Mitte am 10.4.1944', BA-MA RH 20-2/908, 6, fo. 62). See also OK HGr Mitte, Abt. Ic/A.O./Auswertung, No. 615/44 g.k., 22 Apr. 1944, 'Aufmarsch einer feindlichen Kräftegruppe im Raum Kowel', BA-MA RH 19 II/298, 3, fo. 44.

the enemy activities took on a new quality, but Army Group Centre's Ic section interpreted the Soviet offensive preparations as diversions or feints.<sup>81</sup>

The decisive turning point in assessment of the enemy situation was 14 June. The entry in the army group's war diary for that date contains the striking statement that 'the enemy situation opposite the eastern front has become increasingly acute'.<sup>82</sup> For the first time, it speaks of a 'systematic build-up of troops'.<sup>83</sup> That same day, the OKH held a meeting of chiefs of staff of the army groups and armies on the eastern front. At the meeting Lt.-Gen. Krebs revised Army Group Centre's assessment of the enemy situation and concluded that 'the point of concentration of the enemy attack' would be directed 'against the wings of the army group's eastern front'.<sup>84</sup> It transpired that only Army Group Centre possessed unequivocal indications of an enemy marshalling of forces which had almost been completed. That was not the case of any other major formation, not even Army Group North Ukraine. The meeting would have been the right moment to react to the danger—eight days before the large-scale offensive expected on 22 June—but there is not the slightest sign that Army Group Centre's chief of staff succeeded in alarming the other participants. Instead, he gave in and accepted the assurance that the (fairly weak) 20th Armoured Division would also be assigned to him.<sup>85</sup>

Meanwhile, the signs of an imminent large-scale offensive continued to mount up. The massing of artillery at the subsequent breakthrough points, for example, was sufficiently detected. The most important pointer, however, was the regrouping of the Soviet air force. In the event of an operational change of point of concentration it is notoriously difficult to move armoured units over a long distance, and even more difficult to move infantry units. In the case of air forces, however, it can be done very quickly, so Ic sections are particularly alert to movements of air squadrons. Such operations are in fact the most conclusive sign of imminent offensives, and it was precisely in that sector that a dramatic development was taking place. On 29 May the 438 German aircraft in the sector of Army Group Centre had been faced with 3,495 identified Soviet planes.<sup>86</sup> By 19 June, in the space of only three weeks, that number had increased by 1,000 to 4,500 aircraft, in a sector that was supposedly in the lee of the wind.<sup>87</sup> The time had come to sound the alarm bells. The situation cried out for action against the impending catastrophe.

In the summary assessment of the enemy situation dated 19 June, which was the last before the start of the attack, Army Group Centre's Ic section noted: 'The picture has [...] changed considerably since 2 June. Until then, what was to be anticipated was local offensive action [...] aiming at operational encirclement.'

<sup>81</sup> KTB HGr Mitte, 11 June 1944, BA-MA RH 19 II/197, 1199–200, fo. 46–7.

<sup>82</sup> Ibid., 14 June 1944, 1211, fo. 58. <sup>83</sup> Ibid.

<sup>84</sup> Ibid. 1212, fo. 59.

<sup>85</sup> On this point, Kröker is right (*Fehleinschätzung*, 160) in contradicting Gackenholz's account ('Der Zusammenbruch der Heeresgruppe Mitte', 454).

<sup>86</sup> App. 2 to Ic/A.O. No. 795/44, 'Russische Luftwaffe vor Heeresgruppe Mitte. Stand 29.5.1944', BA-MA RH 19 II/298, fo. 54.

<sup>87</sup> Abt. Ic/A.O., No. 917/44, 19 June 1944, 'Zusammenfassende Beurteilung der Feindlage', BA-MA RH 19 II/298, 1, fo. 55.

Developments on the army group's eastern front since that date indicate [...] more extensive enemy intentions.<sup>88</sup> The Ic section now suspected that the aim of the impending enemy offensive was to 'break through the front and bring about the collapse of the protruding salient at several points'.<sup>89</sup> If the enemy situation report had ended with that sentence, the higher operations staffs would have been forced to react. It seems typical of the inconsistency of Army Group Centre HQ, however, that this alarming prediction was immediately tempered in the next sentence by the statement that the disposition of the Red Army forces 'does not permit the conclusion that the enemy has a more ambitious objective, such as Minsk'.<sup>90</sup> Thereupon, the preceding operational conclusions collapsed like a house of cards.

The erroneous interpretation of the situation by Army Group Centre command seems all the more incomprehensible in the light of the Ic section's annotations on the situation maps.<sup>91</sup> These, given the large number of Soviet divisions detected, show a very alarming scenario. Above all, the high concentration of troops on the flanks of the Belorussian bulge near Vitebsk and Bobruisk—that is, just where the subsequent main breakthrough took place—is unmistakable. It takes no great effort of the imagination to see the thrust groups linking up in depth in the area of Minsk. Evaluation of the situation maps with regard to the ongoing Soviet reinforcements shows a dynamic development over time that was unprecedented in the course of the campaign. It is, therefore, puzzling why Army Group Centre HQ played the threat down to such an extent.

The army group's Ic section had clearly detected the operational massing of forces in the area near the front. The only problems concerned detection of the second staggered line of forces and the armoured reserves deeper in the hinterland. Thus, the movement of a Soviet army to each of the wings went undetected or was considered of concern to the neighbouring army group. Nor was there any unambiguous mention of the transfer of 5th Guards Armoured Army to the Smolensk area.<sup>92</sup> Nevertheless, the intelligence results were more than sufficient for a correct appreciation of Soviet offensive intentions. The Red Army's superiority was 'enormous and in some places quite fantastic'.<sup>93</sup> The overkill was such that a fraction of the 4,000 tanks deployed in the first phase of the offensive would have been sufficient to ensure success. To appreciate the enemy's intentions, therefore, it was by no means necessary to identify the full Soviet assembly of forces down to the

<sup>88</sup> Ibid.      <sup>89</sup> Ibid. 5, fo. 59.      <sup>90</sup> Ibid.

<sup>91</sup> This important source was long inaccessible to historians. The maps are stored in a collection of captured German files in the CAMO archives in Podolsk. See CAMO, F. 500, op. 12454, d. 1690 to 1703.

<sup>92</sup> Reports that Gen. Pavel Alekseyevich Rotmistrov, the C-in-C of 5th Guards Armoured Army, had been sighted there seem to have been taken more seriously by the OKH than by Army Group Centre HQ. The Soviet 5th Guards Armoured Army, which had previously been deployed in the southern sector of the eastern front, had virtually disappeared from the German situation maps at that time. For that reason the OKH operations division paid great attention to this new indication of its presence (verbal communication by retired Bundeswehr general Count Johann Adolf von Kielmansegg).

<sup>93</sup> Van Nes, 'Bagration', 243.

last tank. That is even more true of the artillery, which had been massed near the front in unprecedented concentration. The following comparison of numbers is instructive: at the beginning of the Russian campaign, the whole German eastern army had only 7,000 artillery cannon at its disposal,<sup>94</sup> whereas in the summer of 1944 the Red Army deployed a total of 45,000 cannon and grenade launchers against Army Group Centre in Operation BAGRATION alone, of which 24,383 were already used in the initial phase.<sup>95</sup> So even if only the tip of the iceberg was visible, the signs of an imminent large-scale offensive must have been more than obvious. General Kurt von Tippelskirch was therefore right to conclude in retrospect that ‘the picture of the enemy situation was exceptionally clear, and the multitude of observations no longer left any room for belief that it was a case of feigned troop concentrations and diversionary manoeuvres’.<sup>96</sup> Why then did Army Group Centre HQ—first and foremost Field Marshal Busch—not have the courage to draw the irresistible conclusion and sound the alarm? The underlying reason, a factor of decisive importance, is discussed separately at the end of this chapter.

### (c) The ‘Trilemma’ Faced by Foreign Armies East

The attempt to predict the point of concentration of the Soviet summer offensive involved an equation with three unknowns, since the Red Army’s superiority had increased to such an extent that it was capable of launching a major offensive against three German army groups simultaneously. At first, the Foreign Armies East Department of the OKH had speculated only on whether the point of concentration would be directed against Army Group South Ukraine or Army Group North Ukraine. The dilemma became a trilemma when, from May 1944, enormous preparations for an offensive against Army Group Centre were also reported. Foreign Armies East, under Maj.-Gen. Gehlen, was thus confronted with one of the most difficult tasks of the whole eastern campaign. Surprisingly, it attributed greater significance to the threat to Army Group Centre than did the army group’s own HQ. In its enemy situation assessment of 13 June, it reported that the enemy was ‘planning to go beyond holding attacks and to launch an offensive operation from the Gomel–Smolensk area ultimately aimed at Minsk’.<sup>97</sup>

Foreign Armies East had detected that the Red Army intended to deploy independent ‘mobile armoured groups’ for the first time, which indicated a deep operational thrust.<sup>98</sup> That raised the question as to the main objective of the Soviet summer offensive. Maj.-Gen. Gehlen was not in an enviable position. His Soviet opponents were generally well informed about German plans since the fighting was taking place on Soviet territory, where the civilian population was able to provide sufficient information about German troop movements in the hinterland. The enemy

<sup>96</sup> Tippelskirch, *Geschichte des Zweiten Weltkrieges*, 460.

<sup>97</sup> FHO (I), No. 1931/44 gKdos, 13 June 1944, ‘Zusammenfassende Beurteilung der Feindlage’, BA-MA RHD 18/249, fo. 280.

<sup>98</sup> *Ibid.*, fo. 278.

intelligence departments of the western Allies were also surprisingly well informed about German intentions. Their strategic reconnaissance planes kept a watch on the German hinterland. Above all, British intelligence had managed to break the German 'Enigma' radio code, so that the plans and orders of the German operations staffs could be read like an open book. Gehlen's department, on the other hand, was often groping in the dark. While it could monitor Soviet units deployed near the front, it was scarcely able to detect the assembly of forces in the rear. Thus, Foreign Armies East was sometimes forced to resort to blind guesses based on intuition rather than empirical data.

On 13 June Gehlen made a fundamental assessment of the enemy situation in which he attempted to put the expected Soviet offensives on the eastern front in chronological order. He predicted an operation in two stages. The Red Army would begin with heavy attacks on the wings of Army Groups Centre and South Ukraine in order to 'deceive the German command as to the point of concentration and withdraw the reserves from the area between the Carpathians and Kovel'.<sup>99</sup> Once the centre had been weakened in favour of the wings, the real main offensive would be launched against Army Group North Ukraine. Col.-Gen. Kurt Zeitzler, the OKH chief of staff, agreed with that enemy situation assessment. There was also extensive agreement on the part of the OKW.<sup>100</sup> Hitler too thought the point of concentration of the expected Soviet offensive would be in the area of Army Group North Ukraine, and specifically on the northern wing near Kovel.<sup>101</sup>

On 22 June the offensive against Army Group Centre began exactly as the German armies involved had anticipated, at the expected time and in the expected sectors of the front, but with totally unexpected force. Since then, Foreign Armies East has been repeatedly blamed for the disaster, with Army Group Centre HQ already at the time seeking to divert attention from its own failure. In the post-war period this myth was mainly established by Hermann Gackenholz, formerly the keeper of Army Group Centre's war diary.<sup>102</sup>

To be quite clear: Foreign Armies East was well aware that Army Group Centre was under great threat. Maj.-Gen. Gehlen even considered that threat greater than the army group's own HQ was prepared to admit. But he was also aware of the far greater danger that would arise if the Soviet forces broke through in the area of Army Group North Ukraine, especially at Kovel. That is why his attention remained focused on the sector of the neighbour to the south.<sup>103</sup>

The latter threat had to be considered as very real indeed, since 1st Ukrainian Front, under Marshal Ivan Stepanovich Konev, was massed directly opposite the

<sup>99</sup> Ibid., fo. 280; see also KTB HGr Mitte, 14 June 1944, BA-MA RH 19 II/197, 1212–13.

<sup>100</sup> At an NSFO meeting in Sonthofen on 20 June, Wilhelm Keitel declared that the point of concentration of the Soviet offensive was expected to be in the south rather than in the area of Army Group Centre; see Gackenholz, 'Der Zusammenbruch der Heeresgruppe Mitte', 454.

<sup>101</sup> Kröker, *Fehleinschätzung*, 77–8.

<sup>102</sup> See Gackenholz, 'Der Zusammenbruch der Heeresgruppe Mitte 1944', esp. 453 ff., as well as the 'Dokumentation zum Zusammenbruch der Heeresgruppe Mitte im Sommer 1944', on which Gackenholz's account is based.

<sup>103</sup> Abt. Fremde Heere Ost, 27 June 1944, No. 2096/44 g.Kdos., 'Kurze Beurteilung der Feindlage vom 27.6.1944', fos. 133 ff., BA-MA RH 2/1967.

centre of Army Group North Ukraine. According to Soviet sources, it was 'the largest army front ever assembled for offensive operations in the Great Patriotic War'.<sup>104</sup> In the same official account we read: 'Once the fascist high command had concluded that the main action was taking place there [in the area of Army Group Centre], and had transferred its reserves there from the south, the troops of 1st Ukrainian Front would launch the offensive resolutely in the direction of Lvov'.<sup>105</sup> On 13 July 1st Ukrainian Front broke through the positions of Army Group North Ukraine from the outset. A few days later, on 18 July, the reinforced left wing of 1st Belorussian Army, commanded by Marshal Rokossovsky, attacked near Kovel and also achieved an operational breakthrough.

Looking at the whole eastern front in the early summer of 1944, rather than just the sector of Army Group Centre, it is hard to sustain the allegation of total failure repeatedly levelled at Foreign Armies East since that time.<sup>106</sup> All three enemy offensives predicted by Maj.-Gen. Gehlen did in fact take place within a short time on the front sectors in question. On 20 August, after the attacks on Army Groups Centre and North Ukraine, the Red Army launched a powerful offensive against Army Group South Ukraine which led to the collapse of the whole Balkan front. The fact remains, however, that Foreign Armies East (owing to its fixation on Kovel) classified the offensive against Army Group Centre as no more than a secondary operation. Had the full extent of the danger been recognized in time, defeat could not have been avoided, but the extent of the catastrophe suffered by the units in the exposed salient could have been reduced decisively by timely counter-measures.

#### (d) The Causes of the Erroneous Assessment by German Enemy Intelligence

##### *Distraction by Events on Other Fronts*

For Germany, June 1944 was the most crisis-ridden month in the war so far. On 4 June the Allies liberated Rome, on 6 June the Normandy invasion began, and on 9 June the Red Army launched an offensive in Karelia that resulted in the defection of Finland from the war against the Soviet Union. News of all these disasters distracted attention from the danger to Army Group Centre that was brewing in the east at the same time. In this situation the concentration of power in the person of Hitler played a fateful role, especially the fact that he was not only supreme commander of the OKW but supreme commander of the OKH as well. In June

<sup>104</sup> *Geschichte des zweiten Weltkrieges 1939–1945*, ix. 97.

<sup>105</sup> Ibid. 27.

<sup>106</sup> Kröker (*Fehleinschätzung*, 72 ff.) passes an excessively retrospective judgement on the intelligence findings of Foreign Armies East and focuses too one-sidedly on the sector of Army Group Centre. On p. 72, moreover, he overlooks a crucial slip in one of his key documents; see Fremde Heere Ost (Chef), Aktennotiz, 25 June 1944, BA-MA RH 2/1967, fo. 55. There is clearly a typographical error in the original file note, where the date '26.5' is wrongly rendered as '25.6'. The error is clear both from the chronological arrangement in the file itself and from the substance, since the Soviet-imposed radio silence resulting in the lack of German radio surveillance was lifted after the start of the offensive on 22 June. In any case, Gehlen's situation assessment of 25 June, which Kröker criticizes, was a different one from that of 26 May.

1944 he criminally neglected the latter function, focusing his attention one-sidedly on the OKW theatre in the west and less on the OKH theatre in the east.

### *Lack of Aerial Reconnaissance*

The Luftwaffe had far too few reconnaissance aircraft to cover the vast expanse of Russian territory, and many of them had been transferred to the west in view of the imminent Allied invasion. But even for the aircraft that remained, there was not enough fuel. The forced rationing meant that sometimes reconnaissance flights could be conducted only in good weather, when the Soviet forces suspended their troop movements anyway. In-depth reconnaissance was virtually impossible, given the density of Soviet fighter defence. The aerial reconnaissance results were depressingly poor, as can be seen from a letter of 26 June 1944 from the commander-in-chief of Army Group North, Col.-Gen. Georg Lindemann, to the commander-in-chief of Air Fleet 1, in which he reproached the latter with the fact that the Soviets had withdrawn 37 rifle divisions, eight armoured units, and one artillery division from the front facing his army group, 'without any information to that effect from aerial reconnaissance'.<sup>107</sup>

### *Insufficient Depth of Ground Reconnaissance*

The Soviet front facing Army Group Centre was so densely occupied by troops that German reconnaissance patrols were barely able to get through it. As a result, in most sectors only units located near the front were detected. The undetected number of enemy troops and reserves actually assembled was almost impossible to calculate. Yet in order to assess Soviet operational intentions correctly, it would have been necessary, above all, to reconnoitre the enemy's second staggered line of forces in the hinterland.

### *Radio Silence*

Soviet radio traffic had previously been one of the most important sources of information for German enemy intelligence. But just before this decisive offensive, the Red Army succeeded for the first time in doing without their insecure radio communications and maintaining strict radio discipline. In this crucial phase, the 'electronic oracle' fell silent.

### *Simultaneous Soviet Points of Concentration*

The superiority of the Red Army was so overwhelming that it could prepare and carry out several offensives at the same time. That gave rise to problems, especially for Foreign Armies East, in predicting the main point of concentration.

<sup>107</sup> OB HGr Nord, 26 June 1944, to OB Luftflotte 1, in KTB HGr Nord, 26 June 1944, BA-MA RH 19 III/310, fos. 107–10.

### 'Maskirovka'

The Soviet forces were masters of 'maskirovka' (camouflage and deception). They successfully concealed the massing of forces by exploiting the terrain to best advantage and moving units at night, while simulating offensive preparations in remote sectors of the front. When the decision was taken to direct the main offensive against Army Group Centre rather than against Army Group North Ukraine at Kovel, they continued to divert the enemy's attention to Kovel. The Soviet high command sent empty goods trains to Kovel at night, and then had them return during the daytime, when they were clearly visible to German reconnaissance.<sup>108</sup> Such measures contributed to Foreign Armies East's initial assumption that the main point of concentration would be at Kovel. Only in the final phase of the Soviet assembly of forces did the German Ic sections of the individual armies see through the deception. In any case, the offensive units detected at Kovel were not necessarily a deceptive manoeuvre by the Stavka. That was seen on 18 July, when the Red Army did indeed launch a powerful offensive in that area. Shortly before, an average of 35 tanks and 178 cannon per kilometre of front had been deployed against the armies of Army Group Centre stationed in the Belorussian bulge in the main concentration sectors; at Kovel the average was 83 tanks and 356 cannon per kilometre.<sup>109</sup>

### *Field Marshal Busch's Subservience to Hitler*

The main responsibility for the disaster which befell Army Group Centre lay with its own commander-in-chief. Instead of duly passing on the reports he received and sounding the alarm, he even made light of the danger. Although far from all of the deeply staggered Soviet attacking units had been detected, the intelligence results were more than sufficient. But the army group command seemed blind to the danger. The key to this apparently inexplicable behaviour is an event that took place on 20 May 1944, far from the eastern front, at Führer headquarters. When Busch tried to draw attention to the impending danger of a large-scale Soviet offensive against his army group, Hitler flew into a rage. Brutally rejecting the idea, the dictator delivered himself of a cynical, calculated jibe. He had not known, he said, that Busch too was 'one of those generals who always look backwards'.<sup>110</sup> Hitler, a master of malicious insinuation, had hit the field marshal exactly at his sore point. Busch, who thought of himself as a convinced National Socialist and an absolutely loyal follower of the Führer, was shaken to the core.<sup>111</sup> From then on, he spared no effort to regain Hitler's trust and give proof of unconditional obedience. There could be no more passing on of 'defeatist' reports about an impending Soviet offensive, irrespective of the enormous danger threatening his army group.

<sup>108</sup> Hinze, *Das Ostfront-Drama 1944*, 27.

<sup>109</sup> 'Belorusskaya operatsiya v tsifrakh', 80. The forces deployed at Kovel belonged to the left wing of 1st Belorussian Front.

<sup>110</sup> Gackenholz, 'Der Zusammenbruch der Heeresgruppe Mitte', 452.

<sup>111</sup> On Field Marshal Busch's blind loyalty, see Kröker, *Fehleinschätzung*, 160–1.

Not daring to resist the ideological overruling of his professional judgement, Field Marshal Busch remained strangely silent. Such behaviour, however, had meanwhile become only too typical of part of the German corps of generals. In December 1942 Col.-Gen. Paulus had not dared break out of Stalingrad against Hitler's orders. In the summer of 1944 Field Marshal Busch, faced with the threat of a 'super Stalingrad', did not even dare pass on unambiguous intelligence findings for fear of angering his leader.

## 5. HITLER'S 'FORTIFIED PLACES': THE DOCTRINE OF SELF-IMPOSED ENCIRCLEMENT

The foregoing discussion raises the question of how the German command ought to have reacted to the intelligence findings that forces were being assembled for an offensive against Army Group Centre. Reinforcement by reserves was no solution, since even if all the reserves on the eastern front had been brought in, they would not have been nearly sufficient to stop the avalanche. The other alternative was for Army Group Centre to go over to mobile defence and withdraw to positions in the rear. That would have made it possible to slow the enemy attack and save the exposed units in the Belorussian bulge from the threatening encirclement and destruction. Army Group Centre HQ logically envisaged two withdrawal options.<sup>112</sup>

### ‘Smaller Solution’

In the event of a major Soviet offensive, Fourth Army would withdraw behind the Dnieper, where construction of the 'Bear Line' had already begun on the west bank. That line of defence continued north of Orsha with the 'Tiger Line' prepared by Third Armoured Army, which ran as far as the Dvina. Apart from shortening the front by 80 kilometres, this would also have meant giving up the Vitebsk salient, which was especially threatened with enclosure.

### ‘Larger Solution’

Withdrawal of the front behind the Berezina was considered much more effective operationally. With the silent consent of Army Group Centre HQ, the armies had already prepared the 'Beaver Line', which ran behind the Berezina river from Bobruisk to Polotsk. Withdrawal to that position in good time, with troops intact, was also advisable in view of the intense partisan activity in the forests east of the Berezina. The greatest advantage, however, was that the front would be shortened by some 250 kilometres, thereby freeing up large numbers of reserves. This would also have been in line with the thinking of the OKH, which was contemplating the

<sup>112</sup> BA-MA, Study ZA 1/2054, 2–3; Gackenholz, 'Der Zusammenbruch der Heeresgruppe Mitte', 451; Röhricht, *Probleme der Kesselschlacht*, 106; Niepold, *Mittlere Ostfront*, 19.

formation of a reserve army behind the northern wing of Army Group Centre. The Red Army's ability to take the Germans by surprise by developing unexpected points of concentration could be countered only by means of a freely available large formation. As things stood, the Wehrmacht had to hold a 2,240-kilometre front line in the east without any reserves. Col.-Gen. Jodl had already put the most radical solution to the OKW at the beginning of 1944. He considered it unreasonable that, because of the unfavourable course of the eastern front, with its many salients and bulges, numerous units were tied down unnecessarily when they were urgently needed elsewhere. He had therefore proposed withdrawing to the shortest line between the Baltic and the Black Sea and taking up a defensive position running from Riga to Odessa. Straightening the front in that way would free up 20 divisions at a stroke, which could then be deployed either for operational counter-attacks in the east or for defence against the impending invasion on the Channel coast.<sup>113</sup> Hitler had categorically rejected the proposal. Field Marshal Busch similarly received a curt rebuke on 20 May, when, drawing attention to the disproportion between the length of the front which Army Group Centre had to hold and the forces available to it, he had proposed withdrawal to the Dnieper or Berezina line.<sup>114</sup>

Hitler's strategy of 'holding on' reached its peak with the notorious Führer Order No. 11 of 8 March 1944, decreeing the establishment of 'fortified places' on the eastern front. Hitler declared categorically: 'The "fortified places" will fulfil the function of fortresses in former historical times. They will ensure that the enemy does not occupy these areas of decisive operational importance. They will allow themselves to be surrounded, thereby holding down the largest possible number of enemy forces.'<sup>115</sup> The following passage had a particularly fatal effect in the summer of 1944: 'Only the commander-in-chief of an army group in person may, with my approval, relieve the fortified place commandant of his duties, and perhaps order the surrender of the fortified place.'<sup>116</sup>

Hitler's 'fortified places' were supposed to act as breakwaters to stop the 'Red tide'.<sup>117</sup> These imaginary fortifications were located all over the eastern front, but they had particularly disastrous consequences in the case of Army Group Centre, where at the beginning of the Soviet summer offensive 12 to 13 German divisions fell victim to Hitler's absurd self-containment order.<sup>118</sup> Above all, the troops deployed in the 'fortified place' on the eastern edge of the Belorussian bulge risked being cut off in the very first days of a Soviet attack. For Bobruisk, Mogilev, and Orsha, Hitler had stipulated an occupying force of one to two divisions each, for Vitebsk as many as three. These provisions were criticized by Army Group Centre, whose operations department invoked the following counter-arguments:

- There were too many 'fortified places' in the area of the army group, tying down a number of units that was 'debilitating' for the rest of the front.

- The necessary quantities of building and barrier materials, and so on, as well as the number of sapper units needed to do the work, would be lacking for the construction of the main battle line and for the establishment of rearward positions.
- In view of the tight ammunition situation, no stocks could be laid in for the fortified places.
- Given the shortage of general staff officers, such a concentration of command personnel appeared unjustified.
- The security units needed for the fortified places would be lacking for anti-partisan combat.<sup>119</sup>

On 20 May, however, the highly consequential meeting at Führer headquarters took place. As already mentioned, Field Marshal Busch did a sharp about-turn and rigorously implemented Hitler’s ‘hold on’ orders. He defended the concept of fortified places and invoked Hitler’s maxim: ‘The word “withdraw” no longer exists.’<sup>120</sup> From then on, the commanders-in-chief of the armies had the impression that Busch ‘had no mind of his own and did not even defend the interests of the troops’.<sup>121</sup> This gave rise to a vehement dispute with Col.-Gen. Reinhardt concerning the Vitebsk fortified place, which would tie down three of Reinhardt’s ten divisions. All in all, there were five divisions in the narrow Vitebsk salient, inside a sack that could be tied shut at any moment. Reinhardt considered it a ‘fundamental error’ to concentrate defence efforts on such an exposed city. In his view, it was

<sup>119</sup> HGr Mitte Ia/op, 15 Mar. 1944, ‘Welche Gesichtspunkte stehen gegen die Errichtung einer größeren Anzahl von festen Plätzen im Bereich der H.Gr. Mitte?’, BA-MA RH 19 II/240, fos. 22–3.

<sup>121</sup> Hinze, *Der Zusammenbruch* [1980], 27.

'more important that the whole army front should hold'.<sup>122</sup> In a communication to the OKH dated 15 April, he spoke against giving 'one-sided priority' to the Vitebsk fortified place.<sup>123</sup> At the same time he began, on his own authority, to withdraw from the city personnel intended for the construction of fortifications.

Field Marshal Busch played an ambivalent role, staunchly defending Hitler's concept of fortified places despite his own professional doubts. This led him into remarkable intellectual contortions, such as responding to Reinhardt's arguments with Hitler's assertion that 'the Vitebsk fortified place is certainly tying down 30–40 enemy divisions and so holding back forces that would otherwise be free for the offensive in a westerly or south-westerly direction'.<sup>124</sup> Reinhardt adduced two convincing reasons for his opposition. First of all, it was unrealistic to assume that the Soviet command would actually allow itself to be tied down by the Vitebsk fortified place. After enclosing the city, the Red Army attacking units would probably just continue their advance. In fact, Reinhardt added, the Vitebsk traffic node was already being circumvented by the Russians.<sup>125</sup> The fortified place was thus having exactly the opposite effect to that intended: it was not Soviet but German troops who were tied down in Vitebsk—troops who were urgently needed to hold the whole undermanned German front line. Secondly, once Vitebsk was enclosed, there would be no more troops available to plug the gaps arising and establish a new front line further back. And a relief attack on Vitebsk was out of the question anyway, because of the lack of reserves. It therefore made no sense to 'declare Vitebsk a fortified place and hold it'.<sup>126</sup> On the contrary, in the event of a renewed large-scale offensive, 'everything should be removed from Vitebsk'.<sup>127</sup> Busch was unable to refute Reinhardt's arguments but, invoking Hitler, he nevertheless refused to make any changes to the order already issued.

Reinhardt's reservations were shared by the commanders-in-chief of the group's other armies. An entry in Ninth Army's war diary, for example, reads:

The army command considers that the orders designating the larger towns in the combat zone as 'fortified places' are particularly dangerous [...] The knowledge that one is chained to combat methods that caused enemy defeat in earlier victorious campaigns but of whose correctness in the present circumstances one cannot in all conscience be convinced [...] makes one contemplate coming events with a sense of foreboding.<sup>128</sup>

At this point, it will be helpful to examine the various aspects of Hitler's 'fortified places' concept.

### Strategic Aspect

As already mentioned, Hitler's strategy in the summer of 1944 can be summed up in the simple phrase 'strike in the west, hold firm in the east'. The European theatre of war as a whole was like a room with two doors, one of which—the eastern one—was to be barricaded in order to shut out the attackers on one side, at least temporarily, while the defenders strove with all their might to expel the intruders on the opposite side of the room through the other door. The problem was, however, that barricading the eastern front against a superior enemy with strong armoured forces was no easy matter. Above all, Hitler made the mistake of failing to adopt a favourable defensive line. Instead, he was absolutely determined to defend every salient like a fortress. His frequently invoked role model, Frederick the Great, had maintained to the contrary that 'he who seeks to retain everything, retains nothing'.<sup>129</sup> Faced with a scarcely winnable war on multiple fronts, the Prussian king unhesitatingly gave up whole provinces—even including, for a time, his own capital—in order to concentrate on one theatre at a time, and defeated his enemies one after the other in 'lightening campaigns'. Hitler, however, whose troops were deployed in the depths of the Russian interior, could not bring himself to give up territory. Instead of responding flexibly to the Red Army's expected onslaught, he ordered rigid defence and thereby risked the total collapse of the front. Thus, a basically logical concept of strategic defence was opposed by a fundamentally wrong operational approach.

### Operational Aspect

Whereas the Schlieffen school's motto had been 'Operation is movement',<sup>130</sup> Hitler's maxim was 'holding on at all costs'.<sup>131</sup> In the summer of 1944 there was a permanent conflict between him and the corps of generals on the eastern front over the issue of *rigid* versus *mobile* defence. Manstein had always insisted that space be used as a weapon to outmanoeuvre an enemy superior in terms of mass. He demonstrated the correctness of that concept by his 'strike on the backhand' approach after the Stalingrad crisis.<sup>132</sup> In the same sense, Col.-Gen. Heinz Guderian, as inspector-general of armoured troops, declared to the Führer in a presentation on 27 March 1944: 'This war can never be decided in our favour by defence alone. We have to attack again'.<sup>133</sup> Whenever the armoured units had been deployed without regard to the principle of mobility, he said, they had been 'ground to pieces'.

<sup>129</sup> *Unterricht des Königs in Preußen*, 44.

<sup>130</sup> Quoted in Wallach, *Kriegstheorien*, 175.

<sup>131</sup> Manstein, *Verlorene Siege*, 459; see also 315.

<sup>132</sup> See, above all, Klein and Frieser, 'Mansteins Gegenschlag', 12 ff.

<sup>133</sup> Generalinspekteur der Panzertruppen 810/44 g.Kdos, 23 Mar. 1944, 'Führervortrag am 27.3.1944', BA-MA RH 10/89, 1, fo. 53.

Guderian therefore called for a return to 'the form of combat suited to us', with the constitution of an operational reserve as a precondition for mobile defence.<sup>134</sup> For Hitler, however, 'the idea of free operation in free space' was 'a load of rubbish'.<sup>135</sup> On the offensive the dictator was fascinated by bold concepts and technical innovations, but on the defensive he remained a prisoner of the ideas of the First World War. In 1940 the Wehrmacht had achieved its legendary 'blitzkrieg' victory in France by switching from the *positional warfare* of the First World War to an *operational war of movement*, whereas Führer Order No. 11 on the establishment of 'fortified places' sounded like a resurrection of the spirit of Verdun, Fort Douaumont, and the subsequent Maginot Line. Hitler's operational thinking seemed static, linear, and one-dimensional, hardening more and more into a fanatical insistence on 'holding firm'. He demanded that 'every square metre be defended to the last man'.<sup>136</sup> 'I consider it a crime', he declared, 'to give up without bloody combat something that was won through bloody combat'.<sup>137</sup> He accordingly demanded unconditional defence of the fortified places 'to the last breath',<sup>138</sup> or 'until destruction of the garrison force'.<sup>139</sup> Schramm later reported that 'Hitler, in an increasingly irrational manner, ordered positions to be held that it was no longer possible to hold, and at the same time forbade the timely reconnaissance and possible construction of rearward positions'.<sup>140</sup> Schramm considered that Hitler's dogmatic attitude originated in his subjective experience as a corporal in the First World War. In the spring of 1917 the bulge in the front between Arras and Soissons was to be shortened by withdrawal to the Siegfried Line. When the troops learned of this, the retreat took place more quickly than the army leadership had planned. The units deployed in the bulge apparently no longer did their utmost to defend territory which, as everyone knew, was to be evacuated in a few days anyway. 'With Hitler, the memory of that retreat hardened into the principle that fighting troops were "magnetically" attracted to rearward positions and should therefore never be exposed to temptation by premature preparation of defences in the hinterland'.<sup>141</sup>

Manstein's dismissal as commander-in-chief of Army Group South on 30 March 1944 was highly significant in this respect. Hitler explained that 'the time for grand-style operations in the east [...] was now past. All that counted now was to cling stubbornly to what we held'.<sup>142</sup> That concept was heavily criticized by the generals, and Col.-Gen. Zeitzler's judgement is particularly damning: 'Hitler saw his own role as issuing orders from his East Prussian headquarters to "hold firm", "hold on at all costs", "hold on no matter what", meddling in the tiniest details of

the affairs of the commanders-in-chief, and reserving even the smallest decisions for himself.<sup>143</sup>

### Tactical Aspect

According to a widespread cliché, Hitler applied the defensive tactics of the First World War. In point of fact, his tactical thinking was even more backward. In 1914–18 the Germans had used a system of mobile defence later known as *Großkampfverfahren* ('major battle procedure'). Under that system, the front-line troops withdrew from the first line of defence shortly before the start of the enemy attack, so that the artillery barrage fell only on positions that had already been evacuated. If the attackers pushed forward in depth, they were no longer covered by their own artillery and suddenly came up against the 'major battle line' to which the defenders had pulled back. The attacking units, now within optimum range of the defenders' staggered artillery, were crushed by the bombardment. The fact that this procedure could lead to notable tactical success in the Second World War too was seen in April 1945 in the battle of the Seelow Heights just before Berlin, where Marshal Zhukov ran straight into the 'open knife' of his adversary, Col.-Gen. Gotthard Heinrici.<sup>144</sup> In the summer of 1944, however, Hitler, in his obstinacy, often refused to allow the preparation of such rearward positions, so that the troops should not 'look backwards'.

It is precisely at the tactical level that psychological factors play an important role. Nothing made the German troops feel more uncomfortable than being deployed in purely static defence, since that involved from the outset the risk of encirclement. According to an occurrence report, the men associated 'the concept of "fortified place" with thoughts of death or imprisonment'.<sup>145</sup> Hitler's 'hold firm' paranoia led to an 'encirclement psychosis' among his soldiers.<sup>146</sup>

### Political/Propaganda Aspect

Short of arguments for retaining the Vitebsk fortified place in his confrontation with Col-Gen. Reinhardt, Field Marshal Busch revealed Hitler's real motive, namely prestige. Vitebsk, he explained, was 'the only place on the eastern front whose loss would make the world sit up and take notice'.<sup>147</sup> Thus, the spectre of Stalingrad loomed on the horizon. That city too had been retained as a 'fortified place', against all military logic. Now that Hitler wanted to extend the dogma of 'holding on at all costs' to the whole eastern front, more than just one army was in danger.

<sup>146</sup> Ibid. 7, fo. 39.                   <sup>147</sup> Ibid.

### **Hitler's Most Important Reason: The Bridgehead Function**

The foregoing considerations do not sufficiently account for the frenetic intensity of Hitler's insistence on the retention of 'fortified places' in front salients and bridgeheads. His irrational behaviour drove the military experts to the brink of despair. A new interpretation suggests itself, however, if the idea behind Hitler's 'hold on' tactics is carried to its logical conclusion. Given the disastrous situation, the dictator's ideas appear visionary and utopian. But Hitler thought only in terms of victory or downfall, and staked everything on a turnaround in the war that might still be possible. Seen in that light, his apparently irrational 'hold on' paranoia has some intrinsic meaning. With his conqueror mentality, Hitler always thought offensively, never defensively. In short, his 'fortified places' were intended not only as defensive 'breakwaters' but also to serve as bridgeheads, even springboards, for future offensives once the tide of war had turned again in his favour. However illusory such thinking appears to us today, in Hitler's obsessional view of the world it was not entirely illogical. The dictator's utopian offensive strategy will be discussed again in detail in connection with Army Group North's Courland pocket, which was designated as a single, oversized fortified place. It was for this folly that the dictator sacrificed so many of his troops.

## II. The Collapse of Army Group Centre in the Summer of 1944

*Karl-Heinz Frieser*

### 1. THE ASYMMETRY OF FORCES

#### (a) The Soviet Potential: An Unprecedented Concentration of Force

The Red Army had repeatedly mobilized huge masses of troops and material in the eastern theatre, but the build-up of forces in June 1944 for the attack on the ‘Belorussian balcony’ put into the shade every concentration of firepower and strike force previously mustered for a single operation. The deployment was staggered over time, in the following stages:

- The first phase of the major Soviet offensive against the Belorussian balcony, in which three of the four armies of Army Group Centre were located, began on 22 June. The German armies were faced by four Soviet army fronts, of which 14 general armies and one armoured army were deployed at the outset. In addition to their organic units, the Soviet armies were reinforced by a multitude of independent armoured units, artillery units, and so on, taken mainly from the central reserve (see Table V.II.2). In the initial phase the attacking forces already consisted of 1,254,300 troops (see Table V.II.3), supported by 24,383 cannon, heavy grenade launchers, and rocket launchers ('Stalin organs'), and 4,070 fighting vehicles (2,715 tanks and 1,355 assault guns). A total of 6,334 aircraft were also deployed. Of these, 5,327 came from the four air armies of the individual army fronts, while 1,007 were long-range bombers (see Table V.II.4).
- On 18 July the left wing of 1st Belorussian Front launched a further offensive on the southern flank of Army Group Centre, where the German Second Army was positioned. Five general armies and one armoured army were deployed in the attack, supported once again by a large number of independent units. They comprised a total of 416,000 troops, 8,335 artillery cannon, grenade launchers, and rocket launchers, 1,748 tanks and assault guns, and 1,465 aircraft specially assigned to the left wing (see Table V.II.3).
- In the course of the operation, which lasted from 22 June to 29 August, in addition to the 172 divisions deployed from the outset, a further 24 divisions

**Table V.II.1.** Breakdown of Soviet forces for the Belorussian operation (1st Phase: 22 June to 4 July 1944)

Stavka coordinator	Army Fronts	Armies	Corps and Divisions	Mobile Groups (Reserve)
Marshal Vasilevsky	1st Baltic Front	4th Shock Army	8th Rfl.Corps	I Armoured Corps
		6th Guards Army	24th Rfl.Div.	
		43rd Army		
		39th Army	11th Rfl.Corps	5th Guards Armoured Army
		5th Army	33rd Rfl.Div.	(initially Stavka reserve)
	3rd Beloruss. Front	31st Army		II Guards Armoured Corps
		11th Guards Army		(of 11th Guards Army)
				Mechanized Cavalry Group (III Guards Cavalry Corps, III Guards Mech. Corps)
		33rd Army	7th Rfl.Corps	several armoured brigades

		28th Army		I Guards Armoured Corps (of 65th Army)

Source: Niepold, *Mittlere Ostfront*, 48.

(including the operations staffs of 2nd Guards Army and 51st Army), plus 19th Armoured Corps, were thrown into the battle to exploit the initial successes.<sup>1</sup> All in all, the forces deployed in the Belorussian operation numbered over 2.5 million troops, over 45,000 cannon and launchers, 6,000 tanks and assault guns, and around 7,000 front-line aircraft (not including over a thousand long-range bombers deployed at various stages).<sup>2</sup>

<sup>1</sup> *Grif sekretnosti sniat*, 202–3. The list of 172 divisions comprises 160 rifle divisions (four of them Polish) and 12 cavalry divisions. There is a contradiction in the Soviet literature, however. According to Table 1 on p. 75 of ‘Belorusskaya operatsia v tsifrakh’, the number of rifle divisions deployed in the initial phase was 154, not 160. Apparently the four Polish divisions and another two rifle divisions were not taken into account.

<sup>2</sup> *Geschichte des Großen Vaterländischen Krieges*, iv. 226.

### (b) Army Group Centre: A House of Cards about to Collapse

The example of Army Group Centre strikingly illustrates the discrepancy between appearance and reality that increasingly characterized the German high command's assessment of its own force potential. The figures which Hitler so wanted to hear and with which he operated in his headquarters had long lost all relation to reality at the front. In theory, Army Group Centre, with its four armies and the units of the Wehrmacht commander in Belorussia deployed in the hinterland, had an impressive 47 divisions available (see Table V.II.5), giving the corresponding number of little flags on Hitler's situation map.<sup>3</sup> In reality, however, some were still in the process of being created or restructured, while others were simply burned out. Many units, especially the security divisions, were not at the front anyway, but were engaged in the rear on surveillance tasks and anti-partisan combat. During the first phase of the operation, when Second Army on the southern flank was not yet under attack, the three armies in the Belorussian balcony, including the army group's reserves, possessed at most 34 functional divisions,<sup>4</sup> of which 29 were directly at the front.

Attention must be drawn at this point to the striking discrepancy between the target strength of the army group and the daily strength of its divisions and independent combat units. On 1 June the former was 849,000 men, while the latter was only about 486,000.<sup>5</sup> How is the difference of 363,000 men to be explained? For one thing, the target figure includes a conglomeration of all sorts of agencies and units in the army group's huge hinterland which had something to do with the Wehrmacht but were scarcely suitable for deployment at the front. These included administrative departments, security units, the Reich Labour Service, 390th Field Training Division, 103,000 Russian paramilitary auxiliaries, and so on. Moreover, target strength was only a notional quantity used to 'compute the total strength of the German army'.<sup>6</sup> It included men on leave, men seconded to other units, and the sick and wounded. On the reference date in question (1 June), Fourth Army, for example, had 18,069 men on leave and 7,500 sick or wounded in hospital.<sup>7</sup> At Führer headquarters, however, they happily juggled with theoretical target figures instead of recognizing the actual strength, or rather weakness, of the troops at the front. If Second Army<sup>8</sup> is deducted from the daily strength of the army group (486,493), that leaves a total of 336,573 men for the three armies under

<sup>3</sup> The two corps detachments, D and E, were each counted as a division.

<sup>4</sup> This figure excludes 201st and 286th Security Divisions, which were deployed in the rearward area, as well as the units of Second Army.

<sup>5</sup> Note dated 24 July 1944, 'Iststärken und Tagesstärken des Feldheeres aufgegliedert nach Kriegsschauplätzen (Stand 1.6.1944)', BA-MA RH 2/1339, fo. 29.

attack in the Belorussian balcony. That is the figure used for the comparison of strength on 22 June (see Table V.II.6). However, even this figure needs further refinement. If combat strength is calculated instead of daily strength, the result (excluding Second Army)<sup>9</sup> is the alarmingly low figure of 166,673.<sup>10</sup> It was that number of men who faced the Soviet avalanche at the beginning of the offensive.

Army Group Centre's greatest problem, however, was its lack of tanks. Significantly, the designation ‘Third Armoured Army’ was also wholly misleading. That formation had long possessed not a single tank, but only 76 assault guns. As

<sup>9</sup> Ibid., where the combat strength of Second Army is given as 70,099 men.

<sup>10</sup> The combat strength of the army group, including Second Army, was 236,772 men; see OKH, OrgAbt I, 26 Jul. 1944, ‘Notiz: 1) Verbände: Stand 1.6. sowie 2) Fechtende Heerestruppen: Stand 1.6.’, BA-MA RH 2/1341, fos. 31–2.

inconceivable as it may seem, at the beginning of June there was only one major armoured unit in the whole northern half of the eastern front, namely 12th Armoured Division, which belonged to Army Group North. In view of the threatening Soviet concentration of forces, 20th Armoured Division was transferred to Army Group Centre from Army Group North Ukraine immediately before the start of the offensive. But even including its 56 fighting vehicles,<sup>11</sup> the total number

of tanks was only 118.<sup>12</sup> Assault guns had long been obliged to take over the role of tanks, even though their rigidly built-in cannon were of limited use in mobile

<sup>12</sup> The other 62 tanks were with Fourth Army; see AOK 4, Ia Stopa, 'Einsatzbereite Panzer, Sturmgeschütze u. s.Pak, Stand vom 20.6.1944', BA-MA RH 20-4/1115.

Table V.II.6. Strength of Army Group Centre on 22 June 1944

	Belorussian Balcony (Fourth and Ninth Armies, Third Armoured Army)	Right wing (Second Army)	Total strength
Personnel (daily strength at 1 June 1944)	336,573	149,920	486,493
Artillery cannon	2,589	647	3,236
Tanks	118	—	118
Assault guns	377	75	452
Aircraft	—	—	602

counter-attacks. Of those too, the three armies in the Belorussian balcony had only 377.<sup>13</sup> That was not exactly an impressive number compared with the more than 6,000 tanks and assault guns (4,070 in the opening phase) deployed by the Red Army.

The German inferiority in artillery was to prove particularly disastrous. In the Belorussian balcony (Third Armoured Army and Ninth Army) there were no more than 2,589 artillery systems, of which 1,305 were field guns.<sup>14</sup> As for the infantry, it was not even possible to equip all groups with a machine gun.<sup>15</sup> There was also a shortage of ammunition.<sup>16</sup> While the Soviet artillery was so abundantly supplied with ammunition that at the beginning of the Belorussian operation it was able for the first time to apply a double rolling barrage on an operational scale,<sup>17</sup> the German gun teams were obliged to use most types of ammunition very sparingly.<sup>18</sup>

The main problem, nevertheless, was the lack of mobility of the German units. In the summer of 1944 the Red Army was motorized to an enviable extent, helped by extensive supplies of motor vehicles from the United States and Britain, whereas the German forces, once feared as a 'blitzkrieg army', were engaged in an anachronistic transition from motor vehicles to horse-drawn wagons.<sup>19</sup> 'De-motorization'

<sup>13</sup> Fourth Army (see *ibid.*) had 225 assault guns, and Third Armoured Army 76 (see Pz.AOK 3, Ia, 'Sturmgeschützlage, Stand vom 16.6.1944', BA-MA RH 21-3/v. 326). Ninth Army also had 76 assault guns (see table 'Pak, St.Gesch., Art.Rohre der 9. Armee, Stand 24.6.1944', BA-MA RH 20-9/199, fo. 84. Second Army's 75 assault guns are not included here; see AOK 2, Ia, No. T 175/44 geh., 'Tagesmeldung vom 22.6.1944', BA-MA RH 20-2/902).

<sup>14</sup> Army Group Centre possessed a total of 3,236 artillery systems (of which 2,589 were in the Belorussian balcony); see Fremde Heere Ost (II c), Prüf'No. 1633, 'Kräftegegenüberstellung 1.6.-6.7.', BA-MA RH 2/2649, fo. 22. Of that total, 647 were with Second Army. A calculation based on the figures for the individual units gives a similar result. The 1,305 field guns of Third Armoured Army, Fourth, and Ninth Armies, are listed in detail in Hinze, 'Der Zusammenbruch' [1980], 278 ff. Second Army, on the other hand, possessed 260 field guns; see KR communication of 18 June 1944, 'Wöchentliche Zustandskurzberichte', BA-MA RH 20-2/901.

<sup>15</sup> See Kröker, *Fehleinschätzung*, 174–6.

<sup>16</sup> In the spring of 1944 the shortage of ammunition had already assumed 'catastrophic forms'; see Germany and the Second World War, v/II. 603.

<b>Total strength:</b>	<b>904</b>	<b>920</b>	<b>602</b>

Sources: OKL LwFüSt, Ia op 1, Prüf Nr. 1869, 20 June 1944, BA-MA: Kart 40/140; on target strength, see Gen.Qu. 6. Abt. (V), 27 June 1944, 'Einsatzbereitschaft der fliegenden Verbände, Stand: 20.6.1944', BA-MA, RL 2 III/731, fos. 1–46.

became the watchword, for two reasons. On the one hand, the German war industry was unable to deliver a sufficient number of motor vehicles. On the other, the fuel shortage was so acute that some motorized divisions were forced to give up their motor vehicles and convert to horses. The 14th and 36th Infantry Divisions had already been de-motorized. Now 18th and 25th Armoured Infantry Divisions had to give up all but 120 of their motor vehicles because the few vehicles available were to be combined in divisions deployed at major points of concentration.<sup>20</sup> The increasing immobility of the German forces is strikingly illustrated by the fact that Third Armoured Army, which did not possess a single tank, instead had 60,000 horses.<sup>21</sup> As a result of this process, the tempo of German military operations in the summer of 1944 was increasingly determined by the marching pace of the infantry and the trotting speed of the horse-drawn wagons. Long-distance troop movements could be effected only by rail, but the railway lines were a highly endangered Achilles' heel, since vast stretches of forest in the Belorussian hinterland were controlled by partisans.

In the course of the campaign so far, the Luftwaffe had repeatedly intervened to compensate for the weakness of the army, but its condition too was now giving rise to considerable concern. Admittedly, the build-up of Soviet air strength had been detected and Air Fleet 6, the force assigned to Army Group Centre, had been reinforced accordingly. Indeed, its actual strength of 920 aircraft was now greater than its target strength of 904.<sup>22</sup> But the lack of spare parts kept many planes grounded, so that only 602 were operational at the beginning of the offensive.<sup>23</sup>

<sup>20</sup> Kröker, *Febleinschätzung*, 176–7.

<sup>21</sup> PzAOK 3, O.Qu./Qu. 1, No. 612/44 g.Kdos., 4 June 1944, 'Monatl. Beurteilung der Versorgungslage', BA-MA RH 21-3/v. 670.

<sup>22</sup> The disproportionately large number of bombers is striking. It is explained by the fact that IV Air Corps contained a concentration of long-range bombers which were required to intervene on other fronts too. On this, see the sketches in Müller, *The German Air War*, 194, 203.

<sup>23</sup> OKL LwFüSt, Ia op 1, Prüf Nr. 1869, 20 June 1944, BA-MA: Kart 40/140. On the target strength see Gen.Qu. 6. Abt. (V), 27 June 1944, 'Einsatzbereitschaft der fliegenden Verbände, Stand: 20.6.1944', BA-MA R, L 2 III/731, fos. 1–46). The calculation was made with help from Ulf Balke (Freiburg).

And even these few aircraft were able to fly only a limited number of missions because fuel had been rationed. The necessary conclusion, therefore, is that the Luftwaffe was in the same situation as the army: the ‘operational air war’ of the initial phase of the war had degenerated into purely tactical support, and Soviet air superiority had assumed overwhelming proportions.<sup>24</sup>

*Direct Comparison of Forces:* Comparison of the Soviet attacking units at the ready on 22 June with the forces available to Army Group Centre yields the following ratios for Soviet superiority in the first phase of the operation: personnel 3.7:1, artillery 9.4:1, tanks 23:1, assault guns 3.6:1, aircraft 10.5:1. On closer examination, however, these figures still appear too favourable to the Germans. In June 1944 Army Group Centre had to fight a war on two fronts: on one side against a frontal attack by three-and-a-half Soviet army groups; on the other, in the rear against some 150,000 partisans.

The length of front which Army Group Centre had to cover was strikingly disproportionate to its front-line forces. Along its 1,100 kilometres of front the army group had 35 divisions (excluding reserves and security units),<sup>25</sup> that is, a 30-kilometre stretch per division. In the Belorussian balcony it had on average (without Second Army) two to three artillery cannon and one to two tanks or assault guns per kilometre of front.<sup>26</sup> The opposing Soviet rifle divisions attacked in breakthrough sections with an attack frontage of around 1.3 kilometres, deploying an average of 178 artillery cannon and 36 tanks or assault guns per kilometre (in staggered lines). The massive deployment of forces on the left wing of 1st Belorussian Front in the second phase was even more concentrated. There the attack frontage of a rifle division was around 1 kilometre, and an average of 356 artillery cannon and 83 tanks or assault guns were deployed per kilometre of front.<sup>27</sup>

In the summer of 1944 the German army had to fight a ‘poor man’s war’ with ‘burned-out’ units.<sup>28</sup> That assessment is particularly apt in the case of Army Group Centre. In the first years of the Russian campaign it had acquired a fearsome reputation, mainly because of its armoured operations. In the winter of 1943/4 it had still managed to beat back all enemy attacks and had been the only German army group to hold its lines until the spring. Since then, however, it had been only a shadow of its former self. To put it in a nutshell: in the summer of 1944 Army Group Centre was no longer capable of action *at operational level*. While its units could still carry out tactical defensive tasks, an operational-style defence involving large-scale counter-attacks (including attacks to relieve temporarily encircled ‘fortified places’) no longer appeared realistic, given its under-armed, under-motorized, and under-supplied units. Nor were there any reserves worth mentioning on the eastern front, as all available German troops had been tied down since 6 June by the invasion battle in Normandy. The only possibility of avoiding disaster was to conduct a delaying withdrawal to in-depth positions, taking advantage of the

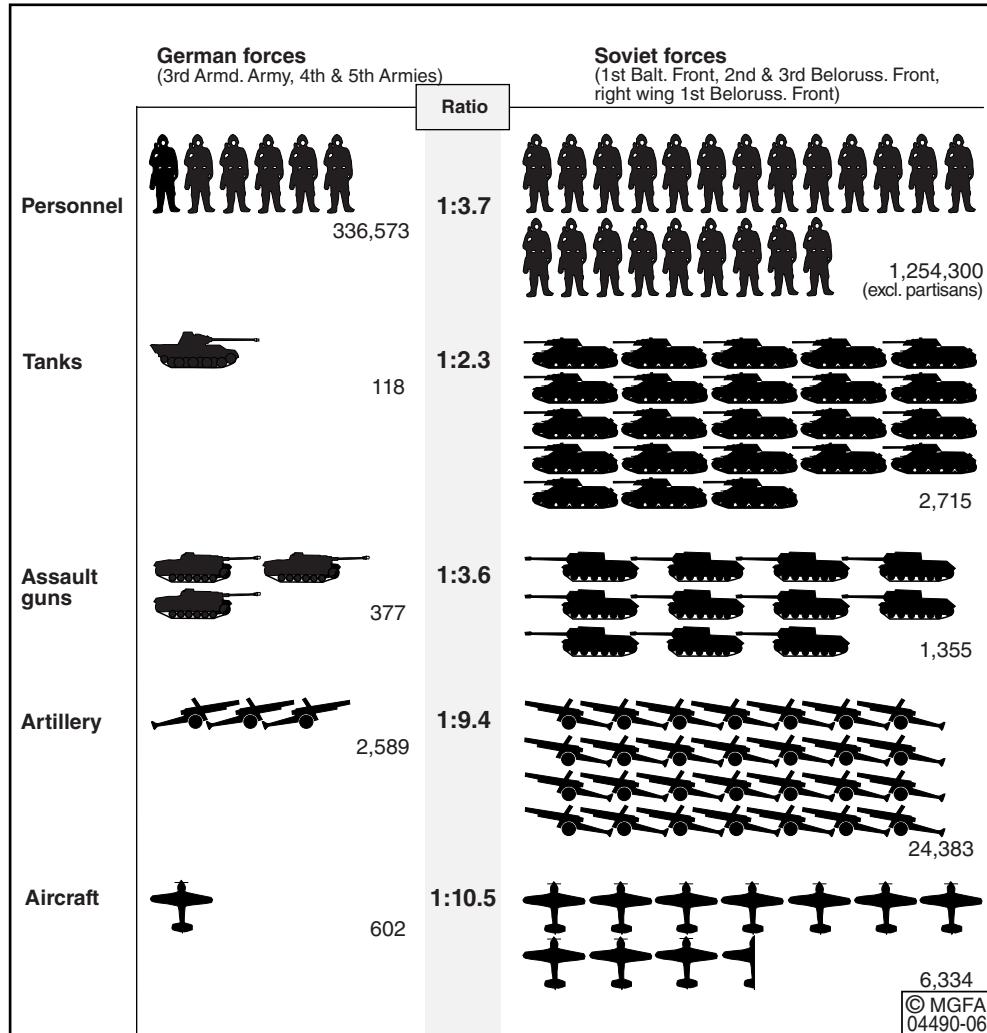

Diagram V.II.1 Strength ratios in the Belorussian balcony (22 June 1944)

river obstacles. But that was precisely what Hitler had forbidden. The conclusion is that, in the summer of 1944, the weakened German eastern front was no more than a façade. Army Group Centre in the Belorussian balcony was a house of cards about to collapse. The generals in charge must have realized that defeat was inevitable and that continuation of the war would involve the senseless sacrifice of still more victims.

## 2. THE MILITARY PLANNING

The operational plan imposed by Hitler—if, given its lack of operational depth, it can be described as such—was very simple. The army group's units were to defend on the foremost front in a linear alignment, alongside each other like a string of pearls. This static system was rendered particularly rigid by Hitler's designation of 'fortified places'.<sup>29</sup> In the Belorussian balcony, the front stretched in the form of a half-circle from Polotsk to Kovel:

- Third Armoured Army, under Col.-Gen. Georg-Hans Reinhardt, was deployed in the northern section, where defence of the Vitebsk salient was particularly problematic.
- In the centre of the Belorussian balcony stood Fourth Army, commanded by Col.-Gen. Gotthard Heinrici. Since, on Hitler's orders, the defensively favourable Dnieper was not to be used as the foremost front line, a large number of Fourth Army units were positioned in a narrow bridgehead further to the east, with their backs to the river. The main defensive point of concentration lay in the northern wing, where the terrain, favourable to armour, was traversed by the Smolensk–Minsk highway.
- Ninth Army, under Gen. Hans Jordan, had to defend the Bobruisk sector in the south-eastern part of the balcony.
- The Army Group's long southern flank, stretching along the Pripet marshes, was covered by Second Army, under Col.-Gen. Walter Weiss. That formation played no part during the first phase of the offensive, when the Soviet units concentrated on smashing the three armies in the northern part of the balcony.

Only two divisions of OKH and army group reserves were available immediately, while another, 20th Armoured Division, was being brought in and was still on its way.

The aim of the Soviet plan for Operation BAGRATION was to crush Army Group Centre and liberate Belorussia. The preliminary decision had already been taken in Moscow on 12 April, and on 31 May Stalin instructed the Stavka to convey the basic directive to the army fronts. The operation was code-named 'Bagration' after a Russian commander who died in 1812 in the battle against Napoleon. In view of the huge concentration of troops, the Stavka decided to assign its two best strategists to coordinate action at the front. Marshal Aleksandr Mikhailovich Vasilevsky was responsible for coordinating the actions of the northern attacking group, which consisted of 1st Baltic Front, under Gen. Ivan Khristoforovich, and 3rd Belorussian Front, under Col.-Gen. Ivan Danilovich Chernyakhovsky. Marshal Georgii Konstantinovich Zhukov was responsible for coordinating the actions of the army fronts deployed in the south, namely 2nd Belorussian Front, under Col.-Gen. Georgii Fedorovich Zakharov, and 1st Belorussian Front, under Gen. Konstantin Konstantinovich Rokossovsky. Only the right wing of 1st Belorussian

<sup>29</sup> See Part V, Chapter I.5.

Front was to take part immediately in the first phase of the offensive, but it had been reinforced to such an extent that it was even larger than a normal army front.

The attacking forces were deployed in two staggered rows. In front, the general armies, supported by armoured units used as battering-rams, had the task of forcing a breakthrough in the sectors of main effort. Behind them, the 'mobile groups' stood ready to make an operational thrust with massed armoured forces through the breaches opened up by the first row, and surround the German front-line units. In the case of 3rd Belorussian Front, for example, II Guards Armoured Corps, with 252 tanks and assault guns, was deployed as a 'mobile group' of 11th Guards Army, while the 'Cavalry Mechanized Group', with 322 fighting vehicles, served as a 'mobile group' of the army front. In addition, 5th Guards Armoured Army, with 524 fighting vehicles, which had initially been kept back as a Stavka reserve, was sent into battle as a further 'mobile group' of the army front.<sup>30</sup>

The plan was for the operation to be carried out in three phases. In the *first phase*, the front row of the attacking forces was to smash the German front-line units and achieve a breakthrough on the two wings of the attack, at Vitebsk in the north and Bobruisk in the south.

The plan for the *second phase* was a pincer attack from the wings to encircle the German troops in the Belorussian balcony, with 1st and 3rd Belorussian Fronts advancing concentrically on Minsk. In this phase the armoured units of the 'mobile groups' would be brought to the front. In the preliminary attack they were to push forward in depth regardless of open flanks and join up in the rear of the German front at Minsk. The force attacking the German balcony in the centre, 2nd Belorussian Front, was considerably weaker. Its task was to hold down the units of the German Fourth Army positioned in the Mogilev area and prevent them from withdrawing rapidly in depth. The main task of 1st Baltic Front, deployed on the right wing, was to protect the flank against possible counter-attacks by Army Group North.

In the *third phase*, for which planning had not yet been finalized, the remaining German units were to be chased westwards in the direction of the Polish border.

A special role in the operation was played by the left wing of 1st Belorussian Front, which stretched along the Pripet marshes to Kovel. It was not to start its attack immediately but to wait until the German armies had been encircled at Minsk and the units of the right wing, which were advancing westward, had reached Baranovichi.<sup>31</sup> It would then break through the northern wing of Army Group North Ukraine and swing north-west into the rear of Army Group Centre. However, this was not the 'major solution' of a thrust along the Vistula to the Baltic so feared by the German operations staffs, but only the 'lesser solution' of an advance on Warsaw. Nor was it planned that the units of the enormously reinforced 1st Ukrainian Front should take part in the swing towards Warsaw: the intention was for them to push frontally westwards. Thus, instead of outmanoeuvring the two German army groups located between the Baltic and the Pripet by

<sup>30</sup> Niepold, *Mittlere Ostfront*, 48.

<sup>31</sup> Rokossovsky, *A Soldier's Duty*, 195.

means of a thrust in the rear, the Red Army attacked Army Group Centre with its main forces directly from the east.

### 3. OPENING PHASE: THE OPERATIONAL BREAKTHROUGH ON THE WINGS (22 TO 28 JUNE 1944)

The start of the battle of Belorussia was staged by the partisans. While the Germans troops stared spellbound at the front ahead of them, they received a blow in the back from what was probably the largest partisan operation of the Second World War. Belorussia, with its vast forests and inaccessible marshes, was ideal territory for partisan warfare.<sup>32</sup> Around 143,000 partisans were active in the region, organized in 150 brigades and 49 independent detachments.<sup>33</sup> They were directed by the Red Army, which supplied them with weapons and ammunition. As well as these, there were autonomous partisan groups fighting both against the Germans and against Soviet rule. Army Group Centre had constantly to devote large numbers of troops to 'bandit repression'. Although it developed successful tactics, such as 'shrinking encirclement',<sup>34</sup> the enemy was too numerous for it make a lasting impact. The partisans were hard to catch, since they confined themselves to sporadic tactical stabs. Then came the great surprise: partisan action on an operational scale in the 'railway war'. On the night of 19 to 20 June all railway links in the hinterland of Army Group Centre as far as west of Minsk were severed by a total of 9,600 explosions. A further 2,500 explosive charges were discovered in time and defused. This operation partially paralysed supply traffic for more than 24 hours,<sup>35</sup> but it also had the probably unwanted side effect that all German troops in the area of Army Group Centre, down to the last man, were now on the alert. The blocking of the lines of retreat in the hinterland could only mean the start of a large-scale operation at the front.

As generally expected, the Red Army began its offensive against Army Group Centre on 22 June, the third anniversary of the German attack on the Soviet Union.<sup>36</sup> The attacks were staggered, however, to allow the bulk of the air combat forces to be concentrated each time on the sector of main effort. Third Armoured Army was attacked on 22 June, Fourth Army on the 23rd, and Ninth Army on

<sup>32</sup> On this, see *Germany and the Second World War*, v/II. 179–85.

<sup>33</sup> *Geschichte des Großen Vaterländischen Krieges*, iv. 174.

<sup>34</sup> These hunting methods were applied, for example, in the anti-partisan operations code-named CORMORANT, RAIN SHOWER, and SPRING FESTIVAL.

<sup>35</sup> OKH, FHO, appendix to Lagebericht Ost No. 1101, 21 June 1944, 'Feindlage (Banden)' No. 464, BA-MA RH 2/1944, fo. 111; OKH HGr Mitte Ia, No. T 2891/44 geh., 'Bandenmeldung vom 21.6.1944', BA-MA RH 19 II/245, fo. 26. Reports that 40,000 railway tracks were blown up and 147 trains derailed in the course of that night (see, e.g., Grenkevich, *The Soviet Partisan Movement*, 259) are clearly propaganda exaggerations.

<sup>36</sup> Some Soviet accounts give the date of the actual start of the offensive as 23 June, considering 22 June as a day of preliminary attacks. According to the German view, however, the attacks on 22 June were already so massive as to mark the beginning of the battle of Belorussia.

the 24th. The Wehrmacht had been fighting the Red Army for years and thought it knew the enemy inside out. Now, after the long summer pause, came a great surprise. The Soviet attacks were conducted with unimaginably superior numbers and the force of an avalanche. Moreover, the Red Army did not attack, as it always had done, on the broadest possible front. This time it concentrated its forces tightly on the German pattern at the points of main effort, and in those sectors Soviet superiority attained grotesque proportions. For example, 3rd Belorussian Front deployed 204 cannon per kilometre of front against only two to three per kilometre on the German side.<sup>37</sup> Since the Soviet artillery was, for the first time, firing a double rolling barrage 'of operational dimensions', two curtains of fire swept back and forth over the German trenches for more than two hours without pause. Rejecting the tactic which had proved effective up till then, Hitler had refused to allow the front-line troops to withdraw from the foremost trenches to a major battle line in the rear just before the start of the enemy attack. His obstinacy sealed the fate of many German soldiers, since much of the foremost defence system was literally pulverized.

The Soviet air force was an even greater surprise. After suffering extensive destruction in the early months of the campaign, it had been gradually rebuilt at great effort. Now, with large numbers of German aircraft tied down by the invasion in the west, it ruled the skies. In the sector of Army Group Centre the Luftwaffe was able to deploy only 61 fighters against a total of 6,334 Soviet aircraft (see Tables V.II.7 and V.II.4). Maj.-Gen. Schürmann, who managed to escape from the pocket to the east of Minsk, reported the 'absolutely enormous deployment of enemy ground-attack aircraft and the total absence of our own planes'.<sup>38</sup>

In the weeks preceding the offensive, the commanders-in-chief of the German armies had warned repeatedly that the trenches were seriously undermanned, with an average of only 80 infantrymen per kilometre of front. The German lines were now attacked by an average of 750 Soviet infantrymen per kilometre, a numerical superiority of almost 10:1. And that calculation takes account of only the first wave of attacking forces. If the following waves are included, the ratio increases to at least 15:1.<sup>39</sup> That figure, however, is purely theoretical, since it assumes a 100 per cent survival rate for the defenders. In reality, not many were left after the barrage of fire by the Soviet artillery and aircraft. In addition, the Red Army already employed large masses of tanks and assault guns in the first wave of the attack. So all hell broke loose on the German front-line forces, who had no chance whatever of withstanding the attack. It was now up to the higher operations staffs to react to this catastrophic development.

### (a) The Disaster of Third Armoured Army at Vitebsk

Col.-Gen. Reinhardt now had to carry out a defensive task which he had vehemently opposed. In his view, the Vitebsk salient was a trap, and the German troops had to get out before it was too late. Hitler, however, was obsessed with the idea of defending the Vitebsk ‘fortified place’ to the last extremity. Immediately after the start of the Soviet offensive, the German forces were faced with the scenario of which Reinhardt had warned, that is, a pincer attack on either side of Vitebsk. On the east of the salient, IX Army Corps was attacked by 1st Baltic Front’s 43rd Army and 6th Guards Army, followed by the I Army Corps ‘mobile group’.<sup>40</sup> On the south-east, VI Army Corps was attacked by 3rd Belorussian Front’s 39th and 5th Armies, followed by the armoured units of the Cavalry Mechanized Group. After only two days the front collapsed in both sectors. The Soviet armies which had broken through now swung in concentrically, threatening to encircle LIII Army Corps in Vitebsk. On 22 June, given the force of the Soviet attack, Col.-Gen. Reinhardt had already requested permission to withdraw parts of his army’s left wing to a rearward position. Field Marshal Ernst Busch initially played it down, arguing that ‘once we start moving back, we’ll soon be completely adrift’,<sup>41</sup> but as the situation became increasingly acute, he soon had to accede to Reinhard’s request. Nevertheless, since Vitebsk had been declared a ‘fortified place’, it was, so to speak, beyond the field marshal’s territorial jurisdiction, and was subject to Hitler’s sole authority.

The fate of Army Group Centre was decided on 24 June. On that date it would still have been possible to avoid the catastrophe and withdraw the front-line units threatened with encirclement and destruction. But the tragedy of Vitebsk quintessentially illustrates Hitler’s operational dilettantism and cynical inhumanity. The battle of Vitebsk was fought not only on the battlefield but also inside the German command, between the Führer and his generals. Col.-Gen. Reinhardt, who only four months earlier had been hailed by the press as the ‘victor of Vitebsk’ after successfully beating off the Soviet winter offensive, now requested, indeed adjured, his superiors to abandon the city. The fate of almost five divisions threatened with encirclement was in the balance, and the whole of the Third Armoured Army front was in danger of collapse. LIII Army Corps, deployed in the Vitebsk salient, had initially been spared by the Soviet attacking forces, which had passed by to the left and right of it, forcing back the two corps on the wings of Third Armoured Army. On 24 June there was a wide gap between those two major formations, through which more and more Soviet troops were pouring in the rear of LIII Army Corps. That morning Col.-Gen. Kurt Zeitzler, the OKH chief of staff, arrived at Army Group Centre HQ in Minsk to inform himself about the critical situation. Field Marshal Busch explained that the front could no longer be held, and urgently requested the abandonment of Vitebsk and withdrawal to the Tiger Line.<sup>42</sup>

<sup>40</sup> Bagramyan, *So schritten wir zum Sieg*, 268 ff., 278 ff.

<sup>41</sup> KTB HGr Mitte, 22 June 1944, BA-MA RH 19 II/197, 1254.

<sup>42</sup> Ibid., 24 June 1944, 1270.

Zeitzler flew straight back to Berchtesgaden to convey the request in person to the Führer. From there, at 15.20, he again telephoned Col.-Gen. Reinhardt, who insisted that the last possible moment had come for ordering the breakout.<sup>43</sup> Immediately afterwards, however, Zeitzler had to pass on Hitler's incomprehensible decision that Vitebsk, as a fortified place, must still be held.<sup>44</sup> A few minutes later Reinhardt received an alarming radio message. Soviet troops had just taken possession of the last passable road to Vitebsk, thereby almost closing the ring round LIII Army Corps.<sup>45</sup> The bad news was immediately conveyed to Hitler via Busch, but the dictator continued to insist that the city be defended. Meanwhile, precious time was being lost. Finally, the Führer decided on a strange compromise: the Vitebsk fortified place would continue to be held, but only by a single division, while the bulk of LIII Army Corps was given permission to break out to the west.<sup>46</sup>

A more foolish decision is hard to imagine. On the one hand, it was impossible for a single division to defend Vitebsk on its own, as the defensive positions had been constructed for three divisions. On the other, every man was needed in order to force a breakout and subsequently close the huge gap in the front, which had meanwhile been pushed back far to the west. In response to this half-measure, Field Marshal Busch tried once again, that same evening, to persuade Hitler to release all the units for the breakout attempt. But Hitler refused, insisting that, 'for political reasons (the threat of defection by Finland), Vitebsk had to be held at all costs'.<sup>47</sup> That argument made no sense either, since the threatened encirclement and destruction of an army corps in Vitebsk would necessarily cause much more damage in terms of foreign policy than a successful breakout. Hitler's considerations of political prestige were only an excuse. What he was really concerned about was his own prestige. For him, Vitebsk was a precedent. If he gave up the city of his own free will, that would mean the general abandonment of his principle of 'fortified places' and his whole doctrine of static defence. So he kept putting off permission for the breakout until it was too late. For that reason too, not all divisions were allowed to break out: at least one, 206th Infantry Division, had to remain in Hitler's imaginary fortress. He maintained that it was too soon to abandon the Vitebsk fortified place, which needed to be held for at least another six or seven days. And so the men of 206th Infantry Division were to be sacrificed to the dictator's folly.

The next day, 25 June, he reaffirmed his intention: '206th Div. shall hold Vitebsk until relieved'.<sup>48</sup> This order met with bewilderment and outrage at Army Group Centre HQ.<sup>49</sup> It was not only a lie, but a demonstration of pure cynicism with regard to the desperate situation of the encircled troops. The dictator had

<sup>49</sup> Ibid. 463.

neither the possibility nor the intention to liberate the encircled units by means of a relief attack. Friedrich Gollwitzer, the commanding general of LIII Army Corps, considered himself no longer bound by Hitler's order, and intended to break out with all units. But the tragedy now took on farcical overtones. Despite the fact that the order for 206th Infantry Division to hold Vitebsk had already been delivered by radio message, the Führer demanded in all seriousness that a general staff officer of Third Armoured Army be parachuted into Vitebsk in order to deliver it personally to General Gollwitzer in writing.<sup>50</sup> Col.-Gen. Reinhardt, however, was not prepared to play a part in the farce, and asked Field Marshal Busch to 'inform the Führer that I refuse to order a general staff officer or any other soldier to be parachuted into Vitebsk'.<sup>51</sup> When Reinhardt explained that only he personally would perform that task, Hitler withdrew his order. Meanwhile, the situation was becoming increasingly hopeless. On 25 and 26 June the encircled defenders made several breakout attempts. As the enclosing ring had already been massively reinforced, however, it became clear that permission to break out had come much too late. In the early hours of 27 June, when much of the front was already 80 kilometres from Vitebsk, the men of LIII Army Corps tried once again, with the courage of despair, to break out to the west. The following radio message was received; it was sent at 03.45 from a point some 13 kilometres south-west of Vitebsk: 'Breakthrough by night with pers. involvement of CG [commanding general] started successfully'.<sup>52</sup> That was the last sign of life from LIII Army Corps. Of the 28,000 men trapped in the encirclement, around 10,000 were taken prisoner,<sup>53</sup> while most of the others perished in the forests and marshes of Belorussia. Only a few units got through to the German lines.

In the maelstrom of the destruction of LIII Army Corps, the whole of Third Armoured Army threatened to break up. Through the gap in the centre of the front, which had widened to 100 kilometres, the Soviet units, mainly the Cavalry Mechanized Group and the newly brought-in 5th Guards Army, were pushing westwards with almost no resistance. German VI Army Corps, deployed on the right wing, was forced so far south by the advancing Soviet forces that it had to be assigned to the neighbouring Fourth Army. Reinhardt now had available only IX Army Corps on the left wing, which consisted of two divisions reinforced by a conglomeration of rear service units, security units, and fragments of combat units. The army was left with only 70 artillery cannon. Since, on Hitler's orders, 252nd Infantry Division had not been allowed to withdraw in time behind the Ulla, the retreat turned into an undisciplined flight in which many soldiers were able to save their bare skins, quite literally, only by swimming across the river.<sup>54</sup> Every minor withdrawal required authorization from above, and that had to be obtained 'in

<sup>50</sup> Prior telephone call: 'Befehl Feldmarschall im Gespräch an O.B., 25.6.1944, 18.45 Uhr', BA-MA RH 21-3/v. 354, fo. 89; KTB 3. Pz.Armee, 25 June 1944, BA-MA RH 21-3/v. 345, 11.

most cases not even from the army group' but only from Führer headquarters.<sup>55</sup> By the time the order finally reached the troops, if it ever did, it had usually long been overtaken by events. In a subsequent analysis by Third Armoured Army, we read: 'during those days scarcely an order or decision reached the army which did not have to be marked "too late".<sup>56</sup> Col.-Gen. Reinhardt was so enraged by this constant interference in his conduct of operations that he applied to be relieved of his command.<sup>57</sup> Field Marshal Busch refused, however, knowing how much support he had from Third Armoured Army's commander-in-chief. In the chaos of a withdrawal battle against overwhelming superiority, Reinhardt employed the only correct tactics, using the remains of his army as 'one large blocking unit' to 'prevent breakthroughs' by means of delaying action.<sup>58</sup> His situation was made worse by the fact that, following a thrust by 1st Baltic Front on the northern wing, the link with Army Group North on the left of his army was also broken. Although the gap was only about 10 kilometres wide at first, the erosion continued in the following weeks until Reinhardt's forces were completely cut off from Army Group North.

### (b) The Withdrawal of Fourth Army at Mogilev

Vitebsk was only the beginning of the catastrophe. Fourth Army, deployed further to the south, was facing an even worse disaster. The situation was particularly critical on the left wing at Orsha, where, on 23 June, XXVII Army Corps was attacked head-on by three Soviet armies. But the real danger arose when the southern wing of neighbouring Third Armoured Army was broken through and a gap opened up between the two armies. The mass of 3rd Belorussian Front stormed westward through the breach, following an operational preliminary attack by the armoured units of II Guards Armoured Corps, the Cavalry Mechanized Group, and, above all, 5th Guards Armoured Army. The main thrust followed the course of the Moscow–Minsk highway. Remnants of VI Army Corps, which really belonged to Third Armoured Army but had been forced southwards, were now deployed to protect the increasingly long left flank. The right flank, where XII Army Corps was positioned, was also hanging the air, since the lines of the neighbouring Ninth Army had been overrun at Rogachev. In the centre of the Fourth Army front stood XXXIX Armoured Corps, which in fact consisted of four weak infantry divisions. It was able to withstand the pressure from 2nd Belorussian Front for only a short time before Soviet units broke through the main battle line and pushed forward to the Dnieper behind the German front, to the north of Mogilev. The Red Army's numerical superiority was so great that often a single German battalion

was pitted against one or two Soviet divisions.<sup>59</sup> In this critical situation the only way to avoid encirclement and destruction was to withdraw to rearward positions as fast as possible.

On the evening of 24 June, given the impossibility of fulfilling the defensive mission assigned to Fourth Army, Field Marshal Busch had already applied unsuccessfully to Hitler for permission to withdraw the front. The next day, with the enemy pressure constantly increasing, Busch authorized the partial withdrawal of two divisions—a wholly inadequate measure that further aggravated the situation of the divisions remaining in the foremost positions, which were now even more exposed. Thereupon General Kurt von Tippelskirch, in command of Fourth Army while Col.-Gen. Heinrici was on leave, took a brave decision. On his own authority he ordered the whole army to withdraw to the Dnieper Line, a prepared defensive position between the existing main battle line and the Dnieper. When Busch learned of this, he reacted very sharply: ‘You are acting contrary to Hitler’s orders.’ He ordered the troops to return to their former positions, accompanying his order by the instruction: ‘notify on completion’.<sup>60</sup> Clearly the field marshal, in his dedication to Hitler, had lost touch with reality. In the chaotic situation of a collapsing front, such an order was bound to create total confusion. The German divisions were in the process of retreat, pursued by an enemy who had already caught up with them in several places. Now that retreat was supposed to be halted in the middle of the night, in darkness, and turned into an attack in the opposite direction, although the former positions were already in Soviet hands. General von Tippelskirch, however, found a way out by framing his new order in diplomatic terms: the troops were instructed to ‘remain on all sections of the front that were not under attack [...] until attacked and forced back by superior enemy forces’.<sup>61</sup> The corps commanding generals immediately understood that a back door was open to them, and managed to continue the retreat in almost all places. Things had gone so far that German generals had to resort to trickery and, often enough, false reports in order to save their troops from the senseless destruction caused by Hitler’s ‘stand firm’ paranoia.

The following day, 26 June, Busch flew to Berchtesgaden to present Hitler with the extent of the danger facing his troops. But the Führer was primarily interested in how the Mogilev und Orsha ‘fortified places’ were holding up as supporting pillars of the Dnieper Line. His ‘stand firm’ orders had long been overtaken by events, however, since Soviet advance forces had already crossed the Dnieper before the German units, which had been pulled back far too late, had been able to establish a new front. But the real danger was brewing on the wings. North and south of Fourth Army, Soviet armoured units had advanced far to the west and were threatening the lines of retreat. Field Marshal Busch still felt bound by Hitler’s

directive that the withdrawal to the Berezina should be carried out only in stages, but the next day the situation accelerated and the race to the river began. At first with the silent consent of General von Tippelskirch, then with the permission of the army group, the divisions set out on the perilous march west. Before them lay a vast area of forest and marshland which had only a few roads and was under concentrated attack by the enemy air force. The terrain was controlled by partisans, who had destroyed the river crossings and lay in ambush. The roads on the edge of the primeval thicket were already being used by the Red Army to pursue the retreating German forces. Its armoured units rolled westward with infantry riding on the tanks. Alongside, sometimes even in between the enemy columns, the German units attempted to fight their way through. Some were encircled but fiercely attacked the encircling forces, forcing them further and further to the west. A number of units forced a way to the Berezina through several encirclements and were already in sight of the road to Minsk, their escape destination, when they met with a dreadful surprise. After escaping tactical encirclement by Soviet divisions, they unexpectedly found themselves in an operational encirclement by two Soviet army fronts, whose two pincers were beginning to close irresistibly at Minsk. In this situation, despite the general retreat of the army, Hitler continued to demand the defence of Mogilev and Orsha, insisting that the two fortified places be held 'for at least a few days'.<sup>62</sup> In reality, by the time the order reached Fourth Army, both towns had long been in the hands of the Soviet attackers.<sup>63</sup>

### (c) The Encirclement of Ninth Army at Bobruisk

Ninth Army was the last to be attacked but the most swiftly overtaken by disaster. The main reason for this was the particularly overwhelming quantitative superiority of the Soviet forces, but the brilliant operational command of Konstantin Rokossovsky, the commander-in-chief of 1st Belorussian Front, was also an important factor.<sup>64</sup> Against initial resistance from Stalin and the Stavka, Rokossovsky had implemented the plan of a pincer attack on Bobruisk from the east and south. It was compounded by the surprise effect of the massive deployment of tanks in a marshland area generally considered impassable. The Russian troops, accustomed to that sort of terrain, again proved their talent for improvisation by transporting weapons and material on swamp sledges. In the previous weeks, moreover, they had secretly built numerous corduroy tracks for heavy vehicles. Although the work of the Soviet sappers had by no means gone unnoticed everywhere, the Germans did not have enough artillery ammunition to disrupt the construction activities effectively.

On the morning of 24 June all hell broke loose on Ninth Army. The hail of shells from the Soviet artillery was so dense that the German infantrymen, and even the gun crews, scarcely dared leave cover. The Soviet air attacks, especially the waves of

<sup>62</sup> Telex OB HGr Mitte, Ia No. 8141/44 g.Kdos. Chefs., 28 June 1944, BA-MA RH 20-4/565.

<sup>63</sup> See Lemm, 'Die Verteidigung Mogilevs', 352 ff., 363 ff.

<sup>64</sup> On 29 June, immediately after Bobruisk was taken, Rokossovsky was promoted to the rank of marshal of the Soviet Union.

ground-attack aircraft, also reached unprecedented intensity. On the left wing, XXXV Army Corps was subjected to the onslaught of two massively reinforced armies, followed by the Soviet IX Armoured Corps. According to Soviet accounts, 27 Soviet infantry battalions plus 15 companies of sappers were deployed on every 5 kilometres of front against three German battalions.<sup>65</sup> The defenders were forced back but were nevertheless able to prevent an operational breakthrough. The attack on XXXXI Armoured Corps (a complete misnomer, given its lack of tanks) in the southern sector at Parichi was even fiercer. On the first day the two Soviet armies achieved a breakthrough 30 kilometres wide and 10 kilometres deep. In the evening, when I Guards Armoured Corps was sent forward in a second wave, the breakthrough increased to a total depth of 20 kilometres.<sup>66</sup> The next day Rokossovsky deployed the Cavalry Mechanized Group in a third wave to exploit the breakthrough in operational depth.

The great lack of an operational reserve on the eastern front now became frighteningly clear to the German generals. Army Group Centre had a reserve of only one-and-a-half infantry divisions, although 20th Armoured Division had also been assigned to it in view of the identified Soviet offensive intentions. The confusion surrounding deployment of that armoured division shows the dilemma facing the German operations staffs, since it was needed simultaneously at several critical points. On 24 June it was first sent to stabilize the situation at a breach on the northern wing of Ninth Army. Then, when alarming reports of a breakthrough in the southern sector were received, Field Marshal Busch ordered 20th Armoured Division to make a 180-degree turn in the middle of the attack and set off in the opposite direction. It now had to march 100 kilometres at night on bad roads. By the time it began its attack at noon on 25 June, it was already too late. Its remaining 40 operational tanks made little impact, given the breadth of the enemy breakthrough. Although the division managed to destroy 213 enemy tanks at Bobruisk within a few days, this was operationally insignificant in view of the overwhelming Soviet superiority.<sup>67</sup> The senseless transposition of 20th Armoured Division calls for the following remarks: its deployment on the northern wing came too late, but its sudden redeployment on the southern wing was an even greater mistake, because it was bound to arrive there too late. As a result, it was unable to achieve anything on either sector of the front. But even an attack by the division's 40 tanks at the best possible time and place could certainly not have stopped the 900 or so fighting vehicles which Rokossovsky deployed on the front sector in question.<sup>68</sup> Hitler blamed the failure on the commander-in-chief of Ninth Army, General Jordan, who was dismissed and replaced by General Nikolaus von Vormann, but the

<sup>65</sup> According to an account by the Frunze Military Academy in Moscow, quoted in Hinze, 'Der Zusammenbruch' [1980], 133–4.

<sup>66</sup> Rokossovsky, *A Soldier's Duty*, 201.

<sup>67</sup> On this, see Hinze's chronicle of the division, *Hitze, Frost und Pulverdampf*, 294.

<sup>68</sup> Ninth Army did not possess a single tank, but only—as already pointed out—76 assault guns. It was faced on the right wing of 1st Belorussian Front by a concentration of 896 tanks and assault guns; see 'The Defeat of the Germans in Belorussia', 871.

dictator's anger was directed at the wrong person, since Field Marshal Busch had been solely responsible for the decision to give up the army group's reserve.<sup>69</sup>

Events now escalated rapidly, and not only because of the massive Soviet attacks. On 27 June the crisis of command in Ninth Army far exceeded the confusion which Hitler's constant interference had caused in the other two armies. XXXV Army Corps and XXXX Armoured Corps had been forced back into the area around Bobruisk and were almost completely enclosed. Now the army group finally gave permission to break out from the threatening encirclement, which Ninth Army HQ had been urgently demanding for 24 hours. At 09.00 Ninth Army received the long-overdue order for a breakout by both corps in the direction of Osipovich, supported by an attack by 20th Armoured Division.<sup>70</sup> Immediately, a mad rush began by troop components of all kinds attempting to escape through the corridor still held open.

Then, at 09.15, came a counter-order from the army group, at the instigation of Führer headquarters, cancelling permission for the breakout.<sup>71</sup> Instead of breaking out, the encircled units were now ordered to continue defending the area around Bobruisk. Chaotic scenes ensued. While some troop components obeyed the order and streamed back into the pocket, they collided at the intersections with other units which had not received the counter-order or did not believe that such an insane order could be genuine. The chaos was made even worse by the fact that several units had been left without commanders. The commander of 134th Infantry Division committed suicide out of despair.

Around 16.00 Ninth Army received yet another counter-order almost identical to that received at 09.00, again ordering retreat to the north-west.<sup>72</sup> But by now it was too late, since the pincer attack by the two Soviet armoured corps had meanwhile closed the pocket. Some 70,000 men were caught in the trap. 'Total confusion! Operational madness'—such were the comments in Ninth Army HQ on the orders issued by the higher command.<sup>73</sup> When the second counter-order was received around 16.00, the army's chief of staff exclaimed: 'It's a madhouse! That's the very thing we had to call off this morning.'<sup>74</sup>

The situation was even more paradoxical, however, since Hitler's permission to break out did not apply to all troop units.<sup>75</sup> As in Vitebsk and Mogilev, one of the encircled divisions was ordered to remain in the Bobruisk pocket. This time the victim was 383th Infantry Division. Hitler's disastrous decision showed once again how little he cared about the fate of his troops. He was more concerned about his

<sup>69</sup> On this, see Kröker, *Fehleinschätzung*, 286.

<sup>70</sup> KTB 9. Armee, 27 June 1944, BA-MA RH 20-9/176.

<sup>71</sup> Ibid.; see also 'Gefechtsbericht der 9. Armee über die Schlacht in Weißruthenien', BA-MA RH 20-9/201, 11.

<sup>72</sup> KTB 9. Armee, 27 June 1944, BA-MA RH 20-9/176.

<sup>73</sup> AOK 9, handwritten notes by the keeper of the war diary, 26 June 1944, BA-MA RH 20-9/177, fo. 88.

<sup>74</sup> Ibid., 27 June 1944, fo. 91, reverse side.

<sup>75</sup> Hitler did not authorize abandonment of the Bobruisk 'fortified place' until 28 June, by which time the order was totally meaningless; see KTB HGr Mitte, 28 June 1944, BA-MA RH 19 II/197, fo. 138.

obsession with 'fortified places'. But reality made nonsense of Hitler's order. Since every breakout attempt failed, all the other encircled divisions also had to remain in the Bobruisk pocket. All attempts to break out to the north were thwarted, above all, by the Soviet air force. In the space of one-and-a-half hours the major intersection at Titovka alone, where the columns of trucks piled up, was attacked in waves by a total of 526 aircraft from 16th Air Army.<sup>76</sup> For Ninth Army, the situation on the evening of 27 June was that the bulk of two of its corps was encircled, while the remaining LV Army Corps had been transferred to Second Army, its neighbour on the right. Although preparations for a relief attack were under way, Ninth Army had ceased to exist as an operationally available major formation.

On 28 June Field Marshal Busch was removed from his post as commander-in-chief, and his dismissal met with obvious satisfaction within the army group. He had shown great loyalty to his supreme commander but astonishingly little consideration for the troops entrusted to his command. While his army group was suffering a catastrophe without precedent, he took not a single independent decision but carried out Hitler's stupid 'stand firm' orders like a puppet in marshal's uniform. A typical description of his 'command activity' at the time reads: 'No combat instructions at all from the army group. Only stand firm, stand firm!'<sup>77</sup> Seldom had a top-level military commander on the eastern front failed so strikingly as Busch. Although he clearly recognized that Hitler's static defence concept was doomed to failure, he caved in completely after his reprimand at Führer headquarters on 20 May. From then on, he no longer dared properly report the alarming build-up of enemy forces against his army for fear of provoking his Führer once again. He carried out Hitler's 'stand firm' orders against his better judgement, thereby condemning tens of thousands of his troops to their doom. Thus, he remained to the end the faithful servant of his master, until the latter finally dropped him, although he had always carried out his instructions to the letter. Now he had to render his leader one last service by assuming the role of scapegoat.

#### 4. THE FORMATION OF THE POCKET AT MINSK (28 JUNE TO 4 JULY)

When Field Marshal Walter Model, the new commander-in-chief of the army group, arrived on 28 June, he was confronted with a crisis that could hardly have been worse. The German front had broken down over a breadth of more than 400 kilometres, and Soviet units had advanced in places as far as 150 kilometres to the west. As well as two army corps, almost all the army group's divisions were either already encircled or threatened with encirclement. Until then, Fourth Army had been attacked only head-on by the relatively weak 2nd Belorussian Front, but the Soviet plan for its twofold concentric envelopment was now clearly apparent. In the

<sup>76</sup> *Geschichte des zweiten Weltkrieges 1939–1945*, ix. 65.

<sup>77</sup> AOK 9, handwritten notes by the keeper of the war diary, 26 June 1944, BA-MA RH 20-9/177.

first phase the Red Army had put the main effort on the wings against Third Armoured Army and Ninth Army. After the encirclement of strong German forces at Vitebsk and Bobruisk, however, the armoured units of 1st and 3rd Belorussian Fronts swung inwards towards Minsk. As a result, Fourth Army was not only in danger of being cut off in its withdrawal from the Drut to the Berezina, but was also threatened in its rear with enclosure by another huge pincer movement at Minsk, 150 kilometres further west. The trap had already closed on Ninth Army, most of whose units were encircled in the area of Bobruisk, but there was still a chance of breaking through the still weak Soviet encircling forces in the north. Before the start of the Soviet summer offensive Ninth Army HQ had already warned of an intended operational pincer movement, as had Foreign Armies East. Now a further threat appeared, which no one had taken into account. After the encirclement of numerous units and the concentrated thrust on Minsk, the Soviet command was clearly planning a third phase of the offensive in which it would push further west beyond Minsk and take possession of the transport nodes of Molodechno and Baranovichi.<sup>78</sup> If that happened, Army Group Centre would finally be cut off from any possibility of westerly retreat. The situation called for all units still capable of combat to force their way west as fast as possible, out of the deadly trap.

That was precisely when Hitler issued one of the most absurd ‘stand firm’ orders of the war, Operational Order No. 8, according to which the withdrawal was to be halted well to the east, right in the middle of the emerging Minsk pocket, along a categorically designated holding line. By the time that order arrived on 29 June, however, that line—from Lake Chernovo in the south, through Berezino, to Lake Lukomlskoye and ‘the present position of Third Armoured Army’—lagged one or two days behind actual developments and sounded totally anachronistic. Hitler further insisted that ‘no longer shall an inch of ground be given up without a fight’.<sup>79</sup> He ordered withdrawal to the designated holding line to be carried out ‘as slowly as ever possible’, and went so far as to demand a counter-attack, ‘with ruthless deployment of all available forces’ (even deeper into the trap) in the event that ‘the enemy has already passed this line’.<sup>80</sup>

With such an immense disaster looming, only a counter-attack of operational proportions could have gone some way towards saving the situation. But the forces Hitler so grandly referred to, which were supposed to achieve a turnaround ‘through rapid, hard offensive blows’,<sup>81</sup> turned out to be two incomplete armoured divisions capable only of inflicting tactical pinpricks. Since Army Group Centre no longer had any reserves worth mentioning, Army Group North had to sacrifice its only large armoured unit, 12th Armoured Division, and 5th Armoured Division was transferred from Army Group North Ukraine. The deployment of those two divisions, which first had to be brought in by rail, is described in the following section.

<sup>78</sup> KTB HGr Mitte, 28 June 1944, BA-MA RH 19 II/197, fos. 128–31, and KTB HGr Mitte, 1 Jul. 1944, BA-MA RH 19 II/198, 3.

### (a) The Counter-Attacks by 5th and 12th Armoured Divisions

The directives for 12th Armoured Division, which was assigned the task of relieving the encircled units of Ninth Army, make it absolutely clear that Hitler was living in a military dream world. The so-called ‘intervention group’, which was pitted against the overwhelming force of 1st Belorussian Front, consisted on paper of two armoured divisions. One of those divisions, however, namely 20th Armoured Division, was itself already trapped in the Bobruisk pocket when the order was issued. So all hopes rested with 12th Armoured Division, whose designation was nothing more than a euphemism anyway, since it was at best half a division and lacked some of its structural components, for example the armoured reconnaissance battalion and the anti-aircraft artillery battalion. As for tanks, this ‘armoured division’ had only one tank battalion (II Battalion of 29th Armoured Infantry Regiment) with 44 Panzer IIIs and IVs.<sup>82</sup> There were delays in transporting the units from Army Group North, so they arrived only gradually, one after the other. On the evening of 30 June all that was ready for the relief attack on Bobruisk was I Battalion of 25th Armoured Infantry Regiment (minus one company), reinforced by one armoured company. In other words, the operational counter-attack of Hitler’s imagination was in reality a mere tactical assault by one incompletely mechanized infantry battalion, supported by a dozen tanks. Against all expectation, however, the action, led by the battalion commander, Capt. Gustav-Adolf Blancbois, was successful. The main factor was surprise. Clearly, the Soviet operations staffs did not consider the likelihood of any German counter-action at that time, and were certainly not expecting so foolhardy an attack by such a weak force. When the assault began at 02.00 on 1 July, under cover of darkness, the Soviet troops were taken completely by surprise. Another factor which worked in favour of the German troops was the use of mission-type tactics, which were still applied at the middle and lower levels of command, especially when rapid improvisation was needed and there was no possibility of intervention by Hitler. Both the divisional commander and the battalion commander entrusted with execution of the attack had freedom of action. In a swift attack, the German assault troops advanced southwest towards Bobruisk from the direction of Marina Gorka and created a narrow corridor. The encircled units had meanwhile begun the attempt to break out from the south, and in the early afternoon the spearheads of the two German attacks met at Svisloch. Around half of the 70,000 men trapped in the pocket were freed,<sup>83</sup> but the Soviet units thrust forward after them to cut off the retreat of the German troops, most of whom had escaped with only their small arms. In the end, about 25,000 men from the two encircled army corps managed to get through to the area south-west of Minsk.<sup>84</sup>

<sup>83</sup> ‘Gefechtsbericht der 9. Armee über die Schlacht in Weißruthenien’, BA-MA RH 20-9/201, 13.

<sup>84</sup> To the 25,000 rescued troops should be added a number of wounded men evacuated shortly before the pocket was enclosed; see Hinze, ‘Der Zusammenbruch’ [1980], 210.

The task of 5th Armoured Division, which had also been brought in, was even more difficult. Reinforced by a few units that had been cobbled together,<sup>85</sup> it was assigned the mission of repelling the Soviet armoured forces in the Borisov area which were pouring westwards through the gap, around 100 kilometres wide, between Third Armoured Army and Fourth Army.<sup>86</sup> Such a mission must have seemed wholly illusory, however, since the Soviet forces attacking through the gap now comprised 5th Guards Armoured Army, II Guards Armoured Corps, and both corps of the Cavalry Mechanized Group, followed by several armies which also had strong armoured units.

Against them, 5th Armoured Division had only 55 Panzer IVs and 70 Panzer Vs,<sup>87</sup> reinforced by 505th Heavy Armoured Battalion with 20 Panzer VIIs. Within six days it nevertheless destroyed 295 Soviet tanks,<sup>88</sup> mainly owing to the fighting power of its Panthers and Tigers, against which the Soviet tanks were clearly at a disadvantage. However, given the 1,810 fighting vehicles with which 3rd Belorussian Front started its offensive, such losses were negligible.<sup>89</sup> The successes of the German tanks, depicted so impressively in the combat reports, were of a purely tactical nature and had scarcely any operational effect. During the fighting the following radio message was intercepted by 77th Armoured Reconnaissance Battalion: 'On contact with 5th Armoured Division, fall back wherever possible.'<sup>90</sup> The message filled the men of 5th Armoured Division with pride, but on closer consideration it showed that the Soviet tank commanders had learnt the right lesson from earlier engagements. They avoided tactical clashes with German tanks, which brought them little apart from high losses, and instead pressed forward in depth as fast as possible to fulfil their operational mission, just as the German armour had done in 1941. At first, 5th Armoured Division managed to stop the advance of 5th Guards Armoured Army, under General Pavel Alekseyevich Rotmistrov, bringing the Soviet frontal attack along the highway in the direction of Minsk to a halt at Borisov. Then, however, the Soviet armoured units shifted the point of concentration and attacked to the north and south of the Germans' Borisov bridgehead. On 1 July they crossed the Berezina at Studenka.<sup>91</sup> As it now risked being outflanked, 5th Armoured Division had to be pulled back. Above all, a much greater danger was looming. While strong forces of 1st and 3rd Belorussian Fronts streamed towards Minsk from the north and south, other Soviet units were pushing further west on the wings to take possession of the Molodechno and Baranovichi narrows. In view of the danger, 5th Armoured Division had to be

<sup>85</sup> On the composition of the 'Von Saucken Group', which was also assigned to 5th Armoured Division, see KTB 4. Armee, 28 June 1944 BA-MA RH 20-4/554, 59.

<sup>91</sup> This was where Napoleon had had two bridges built over the Berezina during his retreat at the end of November 1812, in which he had suffered such heavy losses.

withdrawn to the area west of Minsk, leaving the way free for 5th Guards Armoured Army to advance on Minsk from the north on 3 July. There it joined up with I Guards Armoured Corps of 1st Belorussian Front, which was attacking from the south. Fourth Army, still standing far in the east, was now threatened with a fate like that of Sixth Army at Stalingrad.

### (b) The Downfall of Fourth Army in the 'Moving Pocket'

Of all the armies belonging to Army Group Centre, Fourth Army was the worst-affected by Hitler's 'stand firm' order. According to Operational Order No. 8, received on 28 June, it was to withdraw to the Berezina line 'as a compact front'.<sup>92</sup> That order turned into a farce, however, since the Soviet forces had already advanced far to the west on both wings. Hitler's permission to withdraw from the Dnieper Line, where the Mogilev and Orsha fortified places had to be defended at all costs, had been granted so late that the withdrawal was tantamount to flight in places. Discipline was still intact, but the officers, who were repeatedly exposed in the midst of the confusion, suffered unusually high losses. On 28–9 June four commanding generals or their up-and-coming deputies were killed in the space of 24 hours, mostly in air raids.

The Wehrmacht had already had considerable problems advancing through the marshy primeval thicket of some regions of Belorussia during its 1941 offensive. The same miserable road conditions now proved fatal to Fourth Army on its way back. There was only one major road, albeit unsurfaced, namely the Mogilev–Berezino–Minsk highway. The events which took place during the 'highway battle', as it was called, were some of the most harrowing which German troops had to endure during the whole eastern campaign. For them too, as for Napoleon's troops in 1812, the Berezina was the river at which they met their fate. There were few possible crossings, so the bridge at Berezino became the eye of the needle through which the numerous units of 13 divisions tried to pass. In addition, there were independent units, security units, supply troops, administrative units, and so on, all converging on the Berezino bridge. On the highway to Berezino there was 'a column of vehicles around 60 km long, often two or three abreast, constantly brought to a complete standstill'.<sup>93</sup> A combat report tells of chaotic scenes on the approach to the Berezino bridge, where 'an immeasurable multitude of horse-drawn and motor vehicles of all kinds piled up: cannon, howitzers, supply trucks, assault guns, tanks, light and heavy anti-aircraft artillery. Column after column [...] all heading for the bridge crossing. The only thing that counted was to get across the river'.<sup>94</sup>

In view of the permanent enemy air attacks to which the retreating Wehrmacht troops were exposed almost without defence, the virtual absence of any Luftwaffe support was particularly frustrating. On the morning of 29 June the Berezino

<sup>92</sup> Telex OB HGr Mitte, Ia No. 8141/44 g.Kdos. Chefs., 28 June 1944, BA-MA RH 20-4/565, 2.

<sup>93</sup> KTB 4. Armee, 30 June 1944, BA-MA RH 20-4/554, 73.

<sup>94</sup> Combat report quoted in Hinze, 'Der Zusammenbruch' [1980], 225.

bridge was shattered by a direct bombing hit. It took seven hours to repair, but in the meantime the German sappers managed to erect several emergency bridges and put a number of ferries into operation.

Any German soldiers who managed to escape from the Berezino inferno, however, found themselves facing even greater dangers west of the river. Numerous Soviet units had already crossed the Berezina to the north and south of Fourth Army, and were converging in a pincer movement to cut off the German troops' retreat. On 1 July they reached the highway at Cherven, about 40 kilometres (linear distance) south-west of Berezino. The German units fought their way forward in desperation: they were pursued in the rear, stopped by obstructions in front, attacked on the flanks, shot at and bombed from the air. In addition, the enemy employed diversionary tactics which further increased the confusion. Several times, German-speaking Soviet agents or German POW collaborators appeared, dressed in the uniforms of Wehrmacht officers, and sent columns in the wrong direction.<sup>95</sup> Nightmarish scenes took place on the highway, at Poplav, for example, where a German combat group broke through an enemy position and witnessed Soviet atrocities: 'Behind the position we had overcome, a horrific picture met our eyes. A kilometre-long stretch of highway was covered with vehicles that had been shot to pieces, mutilated soldiers, and the half-naked bodies of murdered Russian women.'<sup>96</sup> Such descriptions recur constantly in Fourth Army's collected reports on returning stragglers. The Red Army troops behaved with particularly brutality towards their own countrymen, that is, Russian paramilitary auxiliaries and civilians who had attached themselves to the retreating German troops. 'Their dead bodies lay in the road, mutilated and defiled.'<sup>97</sup>

The greatest shock of all came on 3 July, with the news that Minsk had fallen. It meant that, in addition to the inner encirclement ring at Cherven, an outer ring had closed more than 60 kilometres (linear distance) further west. The situation of the doubly encircled units of Fourth Army was now almost hopeless, but there were, nevertheless, hardly any signs of disintegration. The troops managed to break through the inner ring, but on 5 July three pockets formed: the most westerly at Gatovo, immediately before the outer encirclement ring, containing units of 110th Infantry Division; the second around the ammunitions depot at Dubniki, 15 kilometres east of Minsk, to which three divisions had fought their way; and the largest, in which six divisions were enclosed, between Belya Luzha and Pekalin, some 40 kilometres east of Minsk. On 5 July a conference of generals took place in the largest pocket, attended by the commanding generals of the two army corps and four divisional commanders.<sup>98</sup> The situation was now utterly desperate. Owing to

<sup>95</sup> Buchner, *Ostfront 1944*, 163–4; on this subject, see also Frieser, *Krieg hinter Stacheldraht*, 92–3.

<sup>96</sup> Auffrischungsstab AOK 4, Ic, 6 Aug. 1944, 'Niederschrift der Aussagen des Rückkehrers Hptm. Haun, Heinrich, FEB der 57. Inf.Div., geb. 10.6.1908', BA-MA RH 20-4/566, files, fo. 8.

<sup>97</sup> Ibid., 'Bericht des Uffz. Hans Döbert, 10./A.R. 256', 8 Aug. 1944, 3, fo. 19. See also the Fourth Army assessment of returnees' testimony, BA-MA RH 20-4/618, e.g. 86, 88, 104.

<sup>98</sup> The sources are in contradiction on this point. According to the summary account 'Vorgänge bei den abgesprengten Verbänden' (BA-MA RH 20-4/618, 89), the conference of generals took place on 4 July. However, the minutes kept by Lt.-Gen. Schürmann, who was the only general to get back to the

lack of fuel, it had been necessary to blow up almost all the tanks, motor vehicles, and cannon. Ammunition too was largely exhausted, so that many men were fighting with bladed weapons. There was hardly any food. Most depressing of all was the fact that the front had been pushed back even further to the west. The new marching destinations, Molodechno and Baranovichi, were 95 and 170 kilometres distant as the crow flies. In the Pekalin pocket it was therefore decided to merge the splintered units in two corps: XXVII Army Corps was ordered to fight its way past Minsk to the south-west, and XII Army Corps to the north-west. That attempt failed because of the enemy's overwhelmingly superior firepower. It was then decided to dissolve the still existing two-corps command structure. Instead, each division was to fight its own way through. That day, 5 July, the last signs of life were received at army group HQ in the form of a radio message from XII Army Corps at 08.30 and one from XXVII at 17.10.<sup>99</sup>

The last halfway coordinated action by the encircled divisions began on 5 July at 22.30. Most of the assault groups managed to overrun the encircling Soviet forces, who were taken by surprise. But the Soviet troops were motorized, and so they set off in pursuit the next morning, overtook the Germans, and formed new positions together with partisan units. The German units fought their way desperately through the rough terrain in 'moving pockets'. Remnants of XII Army Corps, mixed with splinter units from other divisions, broke out of Pekalin and pushed north-west. They managed to cross the highway to Minsk and reach the German lines at Molodechno in separate groups. Lt.-Gen. Vincenz Müller, on the other hand, abandoned the troops of his XII Army Corps and gave himself up voluntarily at the Polevtsy–Minsk highway on 8 July.<sup>100</sup> The components of XXVII Army Corps pushing in a south-westerly direction seemed to have more success at first, but then came up against several blocking positions. Conditions were better for the units enclosed in the Gatovo and Dubniki pockets further to the west. The remnants of 110th Infantry Division managed to cross the Minsk–Dzherzhinsk railway line, but on 9 July they fell into an ambush 10 kilometres further to the west and were dispersed.<sup>101</sup> Meanwhile all tactical cohesion had been lost and the units split into smaller and smaller groups.

According to Russian accounts, the fighting against the dispersed groups lasted until 13 July. As shown by recent research in the files,<sup>102</sup> however, the final

German lines, give the date and time as 5 July, 16.30. (BA-MA RH 20-4/566, 127). It can therefore be assumed that the correct date is 5 July.

<sup>99</sup> KTB 4. Armee, 5 July 1944, BA-MA RH 20-4/554, fo. 125.

<sup>100</sup> The euphemistic account by Lt.-Gen. Müller (subsequently chief of staff of the National People's Army) in *Ich fand das wahre Vaterland*, 396–9, 411–12, is not borne out by the reports in the archives. See, e.g., OKH HGr Mitte, IIa, 'Zusammenfassung der Berichte von Rückkämpfern. Rekonstruiertes KTB des XII. AK', entry for 5 July 1944, BA-MA RH 19 II/315, fos. 34, 130: 'When the mass of 18th Armd.Inf. Div. [...] encountered another enemy blockade, Lt.-Gen. Müller and his staff left them in order to break through alone. By so doing, he resigned command of the corps.' A note in the same source reads: 'Lt.-Gen. cannot have surrendered together with compact components of his corps since he was no longer in command of same.'

<sup>101</sup> Hinze, 'Der Zusammenbruch' [1980], 252–3.

<sup>102</sup> See Timokhovich, 'Operatsiya Bagration', 68.

destruction of the groups enclosed in the pockets was by no means as easy for the Red Army as official Soviet historiography subsequently claimed. The formation tasked with destroying the remnants of Fourth Army was 2nd Belorussian Front, reinforced by 3rd Belorussian Front's 31st Army. Col.-Gen. Zakharov, commander-in-chief of 2nd Belorussian Front, described the first days of the arduous fighting as follows: 'Liquidation of the encircled enemy groups is surprisingly slow and disorganized. Owing to the indecision and lack of initiative of the army high command, the enemy is switching from one side to the other in search of a way out, attacking corps and army staffs, depots and vehicle columns, thereby disrupting smooth operation of the rear service units and command posts.'<sup>103</sup>

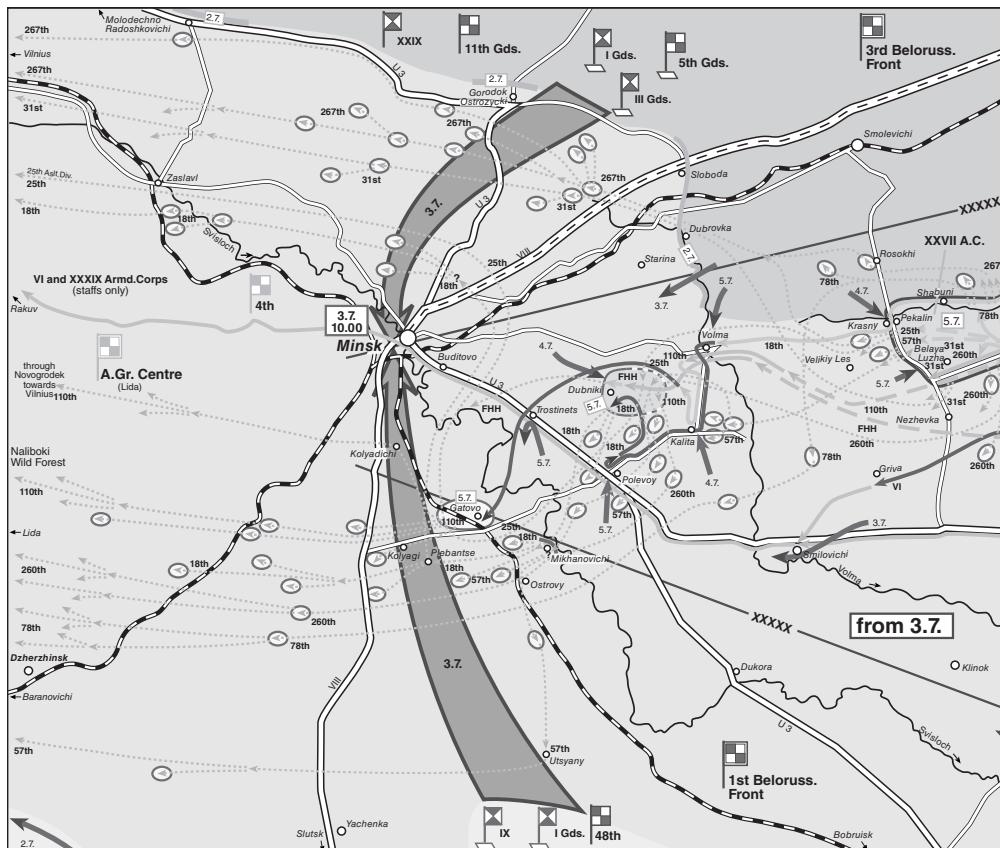

The dispersion of the German units was by no means the end of the drama. A new figure came to the fore, that of the 'returning straggler' making his way back to the German lines.<sup>104</sup> The fear of falling prisoner to the Soviets gave many soldiers unsuspected strength. They were not prepared to give up, preferring to embark on the long trek west, regardless of all the dangers and hardships, and make their way back to the ever more distant German front. Small groups formed, but they were primary groups endowed with enormous cohesion and endurance. Some dispersed soldiers even tried to struggle back alone. Returning stragglers were hunted by raiding parties and under constant threat from partisans. They crossed dense forests, swam wide rivers, and waded through swamps, surrounded by clouds of mosquitoes. Often their only food consisted of berries, mushrooms, and raw vegetables. Some fell ill, especially after drinking swamp water, and struggled on with difficulty. As many reports on returning stragglers show, some survived only thanks to the help of the local population. In the former area of eastern Poland, above all, but also in Lithuania, many needy German soldiers found surprisingly friendly support.<sup>105</sup> Until mid-July the chances of reaching the German lines were still relatively good. Thereafter the prospects worsened by the day as the front was forced back further and further to the west. The number of returnees declined rapidly in August, but 'miracles' still happened. From 10 August to the end of October a total of 80 officers and 838 NCOs and other ranks rejoined the German forces as returning stragglers from the former Fourth Army. Many of them had made their perilous way back to the East Prussian border, over a distance of almost 400 kilometres.<sup>106</sup>

A detailed balance-sheet of the Army Group Centre disaster is drawn up at the end of this chapter. The Belorussian operation (BAGRATION) lasted until 29 August, but the Germans suffered by far their greatest losses during the first phase, from

<sup>103</sup> Quoted ibid. <sup>104</sup> See, above all, Hinze, *Rückkämpfer*.

<sup>105</sup> This is testified above all by a file of collected reports on returning stragglers, BA-MA RH 20-4/566, fos. 7, 33, 47, 75, 80, 176. On Belorussian soil the behaviour of the civilian population varied, but in Lithuania 'the mass of the population was well disposed towards the Germans'. The Polish population in particular was 'praised unanimously by all returning stragglers'. German soldiers falling into the hands of Polish nationalist partisans were usually merely relieved of their weapons, which, they were told, were needed to fight the Red Army. See also Hinze, 'Der Zusammenbruch' [1980], 260.

<sup>106</sup> See 'Die Entwicklung der Lage bei der 4. Armee [...] und die Vorgänge bei den abgesprengten Verbänden', BA-MA RH 20-4/618, 106; also Niepold, *Mittlere Ostfront*, 227.

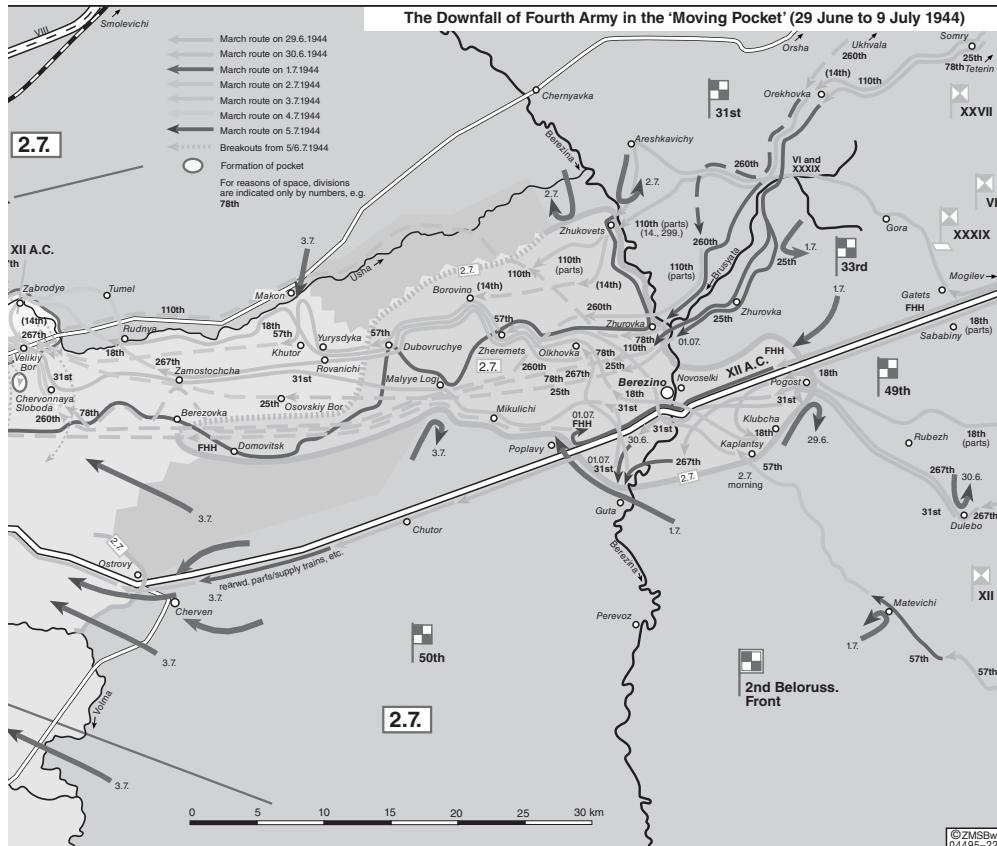

Map V.II.1. The downfall of Fourth Army in the 'moving pocket' (29 June to 9 July 1944)

KTB 8.6–25.6.1944, attach. vol., No. 248, RH 24-06/186; VI A.C. KTB 26.6–22.7.1944, RH 24-06/187.

22 June to 10 July, that is, up to the final liquidation of the Minsk pocket. Neither before nor afterwards did the Wehrmacht incur such horrendous losses as in those nineteen days. They certainly exceeded those of Sixth Army in the Stalingrad pocket (60,000 dead and 110,000 taken prisoner),<sup>107</sup> but the estimates put forward in the literature so far, ranging from 300,000 to 400,000 men, seem greatly exaggerated. Computation of the OKW's 'Wehrmacht-Verlustwesen' statistics for the period 22 June to 10 July, including all update reports, yields total losses of

<sup>107</sup> Overmans, 'Das andere Gesicht des Krieges', 446.

264,444 men (22,165 wounded, 6,622 dead, 235,657 missing).<sup>108</sup> By far the greatest number were incurred by Fourth Army, which lost 130,670 men (16,870 wounded, 5,315 dead, 108,485 missing).<sup>109</sup> The number of soldiers who were initially reported missing but subsequently managed to get back to the German lines is estimated at around 15,000,<sup>110</sup> which means that actual losses were approximately 250,000 men. While Fourth Army was reduced to a few units,

<sup>108</sup> See the detailed lists of the OKH medical officer dated 4 and 14 July, and the summary of the update reports of 14 Sept. and 14 Nov. 1944 in 'Wehrmacht Verlustwesen' file BA-MA RW 6/v. 559. The figure for total losses is nevertheless somewhat too high, since there was a residue in the case of Fourth Army, where the loss reports took 20 July as the reference date, rather than 10 July, which was the case for the other armies.

<sup>109</sup> See *ibid.* The Fourth Army's study of developments from 22 June to 4 July also gives losses of 130,000 men; see BA-MA RH 20-4/618, 78.

<sup>110</sup> Most estimates of the number of returning stragglers missing from the statistics run to five figures; see e.g. Hinze, *Rückkämpfer*, 134.

Ninth Army and Third Armoured Army each still possessed a reinforced army corps. All in all, 28 divisions were so shattered or weakened as to be no longer operational.

Comparable losses by the Red Army, however, were treated for decades as a state secret, and were revealed only as a result of research in the files by a historian from the Institute of Military History in Moscow. Despite the favourable course of the operation, the victorious Soviet troops suffered astonishingly high losses. From 23 June to the end of July they totalled 440,879 men (29.8 per cent of personnel), of whom 97,232 dead.<sup>111</sup>

In Belorussia, where the Germans had exercised brutal occupational rule for years, there were now numerous revenge atrocities. Many Wehrmacht soldiers who fell into enemy hands suffered a gruesome fate. Where larger units were taken into custody *en bloc* after formal surrender negotiations, the Soviet officers predominantly adhered to the rules of international law. Nevertheless, anyone unable to keep up with the convoy in the exhausting march to the transit camps was shot immediately.<sup>112</sup> The wounded scarcely had any chance of survival anyway. A particularly dreadful massacre was perpetrated by Soviet troops in the Bobruisk citadel, where around 5,000 wounded soldiers from Ninth Army were slaughtered. That orgy of violence was subsequently reported by the few survivors who had managed to hide in the cellars.<sup>113</sup> There were thus very real reasons for the panicky fear of Soviet captivity felt by many German soldiers.<sup>114</sup> Anyone taken prisoner alone or in a small group was entirely at the victors' mercy. Worst of all, the Red Army finally moved on west with its motorized troops, leaving the hunt for dispersed German soldiers to the partisans, who now took cruel revenge on Wehrmacht soldiers for the long years of the 'war on bandits'. They took pleasure in humiliating and torturing them, and thought up 'barely imaginable sadistic forms of death'.<sup>115</sup> Rolf Hinze, a lawyer speaking from personal experience who has thoroughly researched the tragic subject, concludes that for German soldiers who fell into the hands of the partisans death by shooting must have been 'the less frequent but more pleasant form of death'.<sup>116</sup>

On 17 July the prisoners from Army Group Centre entered the international limelight, when Stalin had 55,000 prisoners of war paraded through the streets of Moscow like an ancient triumphal procession.<sup>117</sup> Escorted by Red Army soldiers with raised bayonets and Cossacks on horseback, the German prisoners were

<sup>111</sup> Timokhovich, 'Operatsia Bagration', 77.

<sup>112</sup> Such treatment was not specific to the summer of 1944 but was the usual practice in the Red Army throughout the war. See the author's aforementioned dissertation, *Krieg hinter Stacheldraht*, 36 ff.

<sup>113</sup> Hinze, *Rückkämpfer*, 59–60, 121–2; Hinze, *Hitzé, Frost und Pulverdampf*, 300.

<sup>114</sup> See, *inter alia*, the above-mentioned Fourth Army study, BA-MA RH 20-4/618, 88, 104. Numerous reports of such atrocities run like a red thread through the literature on returning stragglers; see, e.g., the discussion of the topic by Rolf Hinze.

<sup>115</sup> Hinze, *Das Ostfront-Drama 1944*, 14. See also Hinze, *Rückkämpfer*, 28.

<sup>116</sup> Hinze, 'Der Zusammenbruch' [1980], 261.

<sup>117</sup> Wolkogonow, *Stalin*, 644–5.

forced to march past the crowds of onlookers in the direction of the Kremlin. Such a public display of prisoners was a flagrant contravention of international law, but it saved the lives of many who would otherwise have been killed, since Stalin wanted to put the greatest possible number of German troops on show.

## 5. THE FIGHTING DURING WITHDRAWAL TO POLAND AND LITHUANIA (4 TO 31 JULY)

### (a) Model's Crisis Management

'A greater crisis [...] is hard to imagine. When Field Marshal Model arrived, Army Group Centre was nothing but a hole.'<sup>118</sup> That was how Hitler described Model's seemingly impossible task. He took over command of Army Group Centre from Busch on 29 June while retaining command of Army Group North Ukraine, and was thus now in charge of more than half of the eastern front. Never before had Hitler placed so much military responsibility in the hands of a single general. Model was a specialist in crisis situations, and had the reputation of a man without nerves whom nothing could faze. Full of energy and with a talent for improvisation, he had time and again saved near hopeless situations. Now, however, he shocked the high command of his new army group with the sober announcement that there was nothing left to save. On the contrary, if the few reserves continued to be deployed to relieve the units trapped east of Minsk, the whole army group would be threatened with destruction. Model saw that the Red Army command was already aiming at deep operational objectives in the area west of Minsk. There, the primeval Naliboki forest formed a difficult-to-penetrate barrier, with the Molodechno and Baranovichi narrows to the north and south. The two passages were of military importance, since they channelled all movement in a westerly direction. Although Hitler was still issuing orders to stand firm and wanted Minsk defended as a 'fortified place', Model managed to have the city evacuated on 2 July. The next day the Soviet armoured units were able to take the city without resistance and complete the encirclement of Fourth Army. Meanwhile, 5th and 12th Armoured Divisions, which had also been threatened with encirclement, had pulled back and were available for battle at Molodechno and Baranochi.

After the fall of Minsk the situation looked bleak indeed. The remnant of Third Armoured Army was isolated on the north wing, separated from Army Group North by a gap of 60 kilometres.<sup>119</sup> In the centre, where hardly anything was left of Fourth Army, there was no longer a connected front. On the right wing, the units of the decimated Ninth Army had been assigned to Second Army on 3 July. Second

<sup>118</sup> Hitlers *Lagebesprechungen*, 615 (31 Aug. 1944 in the Wolf's Lair).

<sup>119</sup> OB HGr Nord, Ia, No. 90/44 g. Kdos. Chefs., 29 June 1944, to Chef d. Genst. des Heeres, BA-MA RH 19 III/15, fo. 110.

Army had scarcely come under attack so far, but most of its units were tied down in defence of the long-drawn-out southern flank. There, to the east of Kovel, stood the left wing of 1st Belorussian Front. It was the strongest concentration of troops ranged against Army Group Centre, but had as yet taken hardly any part in the fighting. There had been a gross disproportion between the strengths of the Soviet attackers and German defenders from the very start of the offensive. Now, as a result of Army Group Centre's enormous losses and the arrival of many new Soviet units, Soviet superiority assumed monstrous dimensions. As Model explained, he had to fight on the breakthrough front with eight mostly depleted divisions against superior forces of 116 rifle divisions, 6 cavalry divisions, 16 motorized rifle brigades, and 42 armoured brigades.<sup>120</sup> In a report dated 6 July, the army group pointed out that '155 kilometres of its 430-km-long eastern front were still unmanned'.<sup>121</sup> In its assessment of the situation the Army General Staff also concluded that Army Group Centre was 'no longer able to pit anything more than regiments and battalions against whole armies'.<sup>122</sup> Yet Field Marshal Model nevertheless managed to stabilize the situation. His recipe for success was very simple: since he was too weak to defend, he chose to attack. He did not even attempt to establish a linear defensive front in accordance with Hitler's concepts, but deployed his few forces in mobile fashion. Using newly brought-in armoured reserves, he attacked the enemy spearheads by surprise, hitting them in the flanks. After Model took command of Army Group Centre, the Red Army created no more pockets worth mentioning.

How greatly Model's command of operations contrasted with that of his predecessor Busch (and thus with Hitler's) is clear from Marshal Zhukov's memoirs. With reference to the first phase of the operation, Zhukov wrote:

Observing and analysing the behaviour of the German troops and their high command [...] we were somewhat surprised, frankly speaking, by their gross errors, which boded a catastrophic outcome for the German forces. Instead of withdrawing rapidly to rearward defensive lines and deploying strong covering detachments on the flanks threatened by Soviet shock troops, the German troops let themselves be entangled in protracted frontal battles to the east and north-east of Minsk.<sup>123</sup>

His judgement of Model's operational command was quite different. Model:

found the right method in this extremely critical situation. Since the Germans no longer had a continuous defensive front nor the forces necessary to form a new one, the German high command decided to stop our offensive mainly by means of short counter-attacks, under cover of which German troops brought in from Germany and other sectors of the Soviet-German front built up rearward defensive positions.<sup>124</sup>

Field Marshal Model also differed fundamentally from his predecessor in his behaviour towards Hitler. Whereas Busch had passively carried out orders from the OKW, Model acted independently, repeatedly presenting Hitler with a fait

<sup>120</sup> KTB HGr Mitte, 3 July 1944, BA-MA RH 19-II/198, fo. 30.

<sup>121</sup> Ibid., fo. 57.

<sup>123</sup> Zhukov, *Erinnerungen* (1969 edn.), 523.

<sup>122</sup> KTB Skl, pt. A, lviii/II. 821 (30 June 1944).

<sup>124</sup> Ibid. 530.

accompli. In this, the high regard in which Hitler held him, and which the Führer accorded to scarcely any other general, stood him in good stead, although he often strained it to the limits of Hitler's tolerance. Model had already given a sample of his temerity at the Wolf's Lair on 28 February. Although he should have been grateful to Hitler for his promotion to colonel-general, which had just taken place, and for the award of the oak leaves to his Knight's Cross, he had the nerve to contradict Hitler vehemently and forbid him to interfere in the command of his army, famously demanding to know: '*Mein Führer*, who commands Ninth Army, you or I?'<sup>125</sup>

Model's method of 'defence by attack' is exemplified by his deployment of 5th Armoured Division, which mostly faced enemy superiority of 20:1 in tanks and 25:1 in artillery, with the Soviet air force frequently proving the most dangerous adversary.<sup>126</sup> In such a situation it would have been absurd for the division to seek a frontal engagement or to let itself be tied down in defence in accordance with Hitler's concepts. Instead, its armoured units flexibly evaded confrontation and exploited every opening in the ranks of the westward advancing Soviet forces to strike a rapid counter-blow and withdraw from contact with the enemy in good time. In the space of a month or so, 5th Armoured Division destroyed a total of 486 tanks, 11 assault guns, 119 anti-tank cannon, and 100 trucks.<sup>127</sup> The German tank commanders repeatedly sought meeting engagements, in which they were able to exploit the weak point of the Soviet front-line officers, that is, their inflexibility in situations of surprise, and take advantage of their own ability to react swiftly in a tactical environment. It has often been asked why the German front did not simply collapse. The answer is to be found in a multitude of individual tactical successes directed flexibly by Model. The field marshal was, nevertheless, unable to do more than disrupt the enemy's operational command and delay his advance. Given the Red Army's immense superiority, Model had no chance of bringing the Soviet offensive to a lasting halt. That would have required a large-scale operational solution.

### (b) The 'Zeitzler Plan' Controversy

At the end of June, faced with the threatening collapse of Army Group Centre, the OKH had developed an operational idea for a bold manoeuvre that could solve the two fundamental problems on the eastern front at a single stroke. Col.-Gen. Zeitzler, the chief of staff, had no reserves available with which to stop the Soviet assault on Army Group Centre. In addition, a gap had opened up on the army group's north wing through which strong Soviet forces were advancing towards the Baltic, threatening to enclose the neighbouring Army Group North on the Baltic coast. To cope with the situation, Zeitzler conceived an operational plan

<sup>125</sup> See Görlitz, *Model. Der Feldmarschall*, 116; Stein, *Model*, 74–5.

<sup>126</sup> Plato, 'Der Abwehrkampf der 5. Panzerdivision', 397; Adair, *Hitler's Greatest Defeat*, 397.

<sup>127</sup> Plato, 'Der Abwehrkampf der 5. Panzerdivision', 401.

reminiscent of Manstein's 'castling manoeuvre' of February 1943.<sup>128</sup> The idea was the same: to give up territory so as to gain forces for a counter-attack on the backhand. Zeitzler called for evacuation of the northern Baltic area and the withdrawal of Army Group North to the lower reaches of the Dvina. That would achieve two aims at the same time:

- Army Group North could pull back from the 'Baltic trap' in time and free up half its troops by shortening the front.
- The troops thus released would be used to support Army Group Centre by attacking southwards in a thrust into the flank of the far-advanced Soviet forces.

At the end of June Hitler's Berghof at Berchtesgaden witnessed one of the fiercest operational controversies of the war.<sup>129</sup> For several days Col.-Gen. Zeitzler tried to convince Hitler of the merits of his plan, but to no avail. Meanwhile, an 'enormous operational danger' had arisen at the interface of the two army groups.<sup>130</sup> As a result of Third Armoured Army's withdrawal on the left wing of Army Group Centre, the right wing of Army Group North was left 'hanging in the air'.<sup>131</sup> Units of the Soviet 1st Baltic Front were pushing inexorably through the 40-kilometre-wide gap between the two army groups, aiming to advance on Riga south of the Dvina and enclose Army Group North on the Baltic coast. The 'Baltic hole', as it came to be called, was getting larger by the day. In addition, 2nd Guards Army and 51st Army were drawing closer, which would further increase Soviet offensive strength at this critical location.<sup>132</sup> Hitler wanted to close the gap in the front by means of local counter-attacks—an idea which Field Marshal Model dismissed as a 'pointless experiment'.<sup>133</sup> It would have required both of the armies which were threatened at their interface to withdraw units from an already overburdened front. Like Col.-Gen. Lindemann, the commander-in-chief of Army Group North, Model also rejected Hitler's 'lesser solution' as a purely tactical action and called for a 'major solution' on an operational scale.

Meanwhile Lt.-Gen. Adolf Heusinger, the head of the operations division, was standing in as chief of staff for Col.-Gen. Zeitzler, who had fallen ill. Heusinger, who had worked with Zeitzler on the plan for a castling manoeuvre, now turned to the commanders-in-chief of the two army groups for help in pushing the proposal through. Given the dramatic situation, switching Army Group North from Lake Peipus to the Dvina seemed the only effective solution, and Heusinger considered it 'the cardinal issue on the eastern front'.<sup>134</sup> In his view, most of the Baltic area could

not be held for long anyway, so the troops stationed there should be withdrawn behind the Dvina between Riga and Daugavpils. As a result of the shortening of the front and the use of the wide river as an obstacle, half of Army Group North would be freed up to form a new operational reserve, which could then carry out a counter-attack in support of Army Group Centre. The conditions for rescuing both army groups would thus be created by a single manoeuvre. In the meantime, the increasingly long right flank was making the Soviet high command nervous. As Marshal Bagramyan, the commander-in-chief of 1st Baltic Front, later wrote: 'In the north, Army Group North hung over our heads like the sword of Damocles.'<sup>135</sup>

The OKH's plan met with the full agreement of the commanders-in-chief of both army groups as the only remaining way to avoid disaster. Significantly, the agreement on a 'major operational decision' is recorded in the war diaries of both army groups in almost identical terms.<sup>136</sup> Notwithstanding that agreement, however, there now began 'a new disaster in the history of the German eastern army'<sup>137</sup>—the battle between Hitler and his generals over the withdrawal of Army Group North. Once again, the Führer refused to give up territory voluntarily. His largely implausible reasoning, based mainly on grounds of maritime strategy and political considerations, is discussed later in the section dealing with Army Group North. Now not a day went by without the generals—Model, first and foremost—challenging what they considered a nonsensical decision. Col.-Gen. Lindemann officially requested withdrawal of his army group behind the Dvina, and announced that he would tender his resignation in the event of a refusal.<sup>138</sup> Hitler promptly reacted by replacing him with General Johannes Friessner on 4 July. Much to Hitler's annoyance, however, immediately upon taking command Friessner embraced the idea which had cost his predecessor his post. He flew with Model to Führer headquarters, where Hitler once again rejected the 'major solution' on 9 July.<sup>139</sup>

By this time a counter-attack by Army Group North to rescue Army Group Centre would have been too late anyway, since most of the units in the Belorussian balcony were already enclosed. The real fateful day must be considered to have been 30 June, when the conflict with Zeitzler took place at Hitler's Berghof. At that juncture it might still have been possible to avoid the worst. When all attempts to change Hitler's mind had failed, Zeitzler accused him of bringing catastrophe upon them. '*Mein Führer*', he added, 'you have twice forced me to act against my convictions. Once at Stalingrad, and again in the Crimea. I shall not allow you to do so a third time.'<sup>140</sup> Declaring that the war was 'militarily lost' and must be

ended, he requested Hitler to relieve him of his command.<sup>141</sup> Following that dramatic meeting, Zeitzler fell so ill that he was no longer able to carry out his duties anyway. In retrospect, he commented sarcastically: ‘The chief of staff left. The Courland encirclement arrived.’<sup>142</sup>

How decidedly Hitler’s lone decision concerning Army Group North was rejected by the generals is shown clearly by the fact that, when the attempt to assassinate Hitler on 20 July was assumed to have succeeded and the conspirators tried to seize power, one of their first measures was to order the withdrawal of Army Group North. The order came from Col.-Gen. Ludwig Beck, who was supposed to take over from Hitler as provisional head of state, whereupon Army Group North HQ asked the OKH operations division which of the conflicting orders it was supposed to obey.<sup>143</sup> But the coup was defeated. The disaster took its course, and not only for Army Group North.

### (c) The Counter-Attack at Vilnius and Withdrawal to the Brest-Litovsk–Kaunas Line

The rigid defence of the Vitebsk, Mogilev, and Bobruisk ‘fortified places’ had brought disaster on Army Group Centre, but Hitler was still not prepared to change his approach. He now sought to set a real example by declaring Vilnius too a fortified place. Meanwhile, the Red Army had forced its way through the Molodechno and Baranovichi narrows after heavy fighting and had reached Lithuanian territory. Vilnius was attacked by strong forces of 3rd Belorussian Front, and on 8 July the city was completely surrounded by 5th Guards Armoured Army, 5th Army, and parts of 11th Guards Army and the Cavalry Mechanized Group.<sup>144</sup> A total of 4,000 German troops were caught in the trap. Now, however, it was Model, not Busch, who was in command. Moreover, after the Minsk fiasco the generals were no longer prepared to accept Hitler’s ‘stand firm’ orders without opposition. Yet the stronger the resistance Hitler encountered, the more stubborn he became. He declared categorically that, because of its ‘enormous operational importance’, Vilnius had to be ‘defended to the last breath’.<sup>145</sup> Instead of withdrawing troops in time, he even sent more men into the impending encirclement. On the evening of 7 July, that is, just before Vilnius was finally enclosed, 16th Paratroop Regiment’s II Battalion landed at the city’s airport on a ‘suicide mission’. Hitler then had Maj.-Gen. Rainer Stahel flown into the already encircled city as the newly appointed ‘fortified place’ commander. Some of the reinforcements sent to the area arrived too late anyway. A combat group led by Lt.-Col. Tolsdorff was itself enclosed in another pocket near Lentvaris,

<sup>141</sup> Ibid. 166.      <sup>142</sup> Ibid. 167.

<sup>143</sup> Verbal communication from Gen. (ret.) Count Johann Adolf von Kielmansegg, who, as Ia of the OKH operations division at the time, personally received the inquiry from Army Group North HQ.

<sup>144</sup> Glantz and House, *When Titans Clashed*, 208–9.

10 kilometres from Vilnius, and never reached the city. The decision to hold the fortified place at all costs—moreover, with wholly insufficient forces—met with total incomprehension on the part of the generals in charge. According to an entry dated 9 July in Third Armoured Army's war diary, Col.-Gen. Reinhardt described this Führer order to his superior, Field Marshal Model, as ‘insane’.<sup>146</sup> The war diary goes on to state that the field marshal ‘endorsed the view of the commander-in-chief [of Third Armoured Army]’ and presented it ‘to the higher leadership’.<sup>147</sup> But not even Model could get Hitler to change his mind.

Lt.-Gen. Heusinger then succeeded in doing something very rare: he persuaded Hitler to rescind a decision that had already been confirmed. On 11 July he repeatedly pressed the Führer to allow the garrison to break out of Vilnius, but each time his request was brusquely rejected and only made Hitler even angrier. Hitler declared categorically that Maj.-Gen. Stahel was to ‘hold the city or go under with it’. That was what was required of every warship captain.<sup>148</sup> His answer was a death sentence for the 4,000 troops enclosed there. With barefaced cynicism, Hitler added that it made no difference anyway whether those men died in hopeless defence or in a hopeless attempt to break out. Thereupon Heusinger had the surprising idea of asking Hitler to allow the encircled troops at least to choose the manner of their death, and therefore to permit a breakout attempt. ‘It is easier to die on the attack’, he urged, ‘than in hopeless defence’.<sup>149</sup> The Führer was so irritated by Heusinger’s proposal that he gave way.

The unexpected turn of events gave rise to great euphoria at Third Armoured Army HQ. Col.-Gen. Reinhardt immediately formed a combat group for a relief attack. It consisted of parts of 6th Armoured Division, which was just arriving from the Reich, and a Panther battalion from Armoured Regiment ‘Grossdeutschland’. The Vilnius garrison began the breakout in the night of 12–13 July, and the relief attack was launched the next morning from the area to the east of Kaunas, led by Col.-Gen. Reinhardt in person. The attackers managed to break through the Soviet front and pushed forward some 30 kilometres to the pocket occupied by Toldorff’s group. Meanwhile the Vilnius garrison, swimming a river en route, fought their way through to Lt.-Col. Tolsdorff’s troops. The relief forces, ‘led by the commander-in-chief in the foremost armoured spearhead’,<sup>150</sup> succeeded in breaking the encirclement. Reinhardt, as he later wrote, was greeted by liberated troops ‘beaming and waving’.<sup>151</sup> Of a total of 4,000 men trapped in the pocket, 3,000 were rescued.<sup>152</sup>

Baron Rudolf von Waldenfels was published with annotations in Newton, *German Battle Tactics*, 207–18. For secondary literature, see Hinze, *Das Ostfront-Drama 1944*, 103 ff., 120–1.

The conflict at Führer headquarters over the counter-attack at Vilnius is a typical example of the ‘two-front war’ which the German generals had to wage on the eastern front and in the OKH: on the one hand, against the superior strength of the Red Army, and on the other, against the overriding will of Hitler, who had barricaded himself behind a doctrine of rigid defence. His erroneous operational decisions seemed increasingly divorced from reality, and his contempt for human life was now frighteningly clear. The Führer would rather sacrifice whole armies than correct a mistake. Above all, his instinct for aggression and his destructive urge were increasingly directed against his own troops. He showed not the slightest sympathy for the men whom he sent to their doom, regarding their cruel fate as just punishment for a supposed failure to fight hard enough for him.

On 20 July the rage and despair which many officers felt towards Hitler erupted in a bomb attack at the Wolf’s Lair. But the Führer survived the assassination attempt led by Count Claus von Stauffenberg, a colonel on the general staff. He vented his rage both on the conspirators and on the general staff itself, which he had always considered ‘politically unreliable, spiritless, and intellectually contaminated’.<sup>153</sup> Of the officers of Army Group Centre, Maj.-Gen. Henning von Tresckow, the chief of staff of Second Army, was probably the most active in resistance to the Nazi regime. He committed suicide to escape inevitable seizure by Hitler’s agents.<sup>154</sup> Lt.-Gen. Heusinger, head of the operations divisions of the OKH general staff, and his Ia, Col. Count von Kielmannsegg, were also held under arrest for a while as suspected accomplices to the conspiracy, and Col.-Gen. Zeitzler was replaced as chief of the OKH general staff by Col.-Gen. Heinz Guderian.

The attempt to assassinate Hitler nevertheless had no mentionable effect on the course of operations on Army Group Centre’s front. The Red Army offensive had slackened considerably since 16 July, mainly as a result of logistic problems due to overextended supply lines. In this phase, the greatly decimated Soviet armour no longer played the main role, which now fell to the infantry. Moreover, Model had used his newly brought-in reserves to establish a new defence line well to the rear—rather than at the forefront, as Hitler had intended—to which his forward-deployed units now withdrew, fighting a delaying action. Along that line, stretching between the cornerstones of Kaunas and Brest-Litovsk, the German troops managed to stabilize the front. In the Kaunas area, on the army group’s northern wing, Third Armoured Army successively beat off assaults by 3rd Belorussian Front, which attacked from Vilnius. However, the gap to Army Group North, through which 1st Baltic Front was advancing, was widening all the time. Unable to close the ‘Baltic hole’, Model had to be content with sealing off the northern flank as far as possible. In the middle section of Army Group Centre’s front, where the newly established Fourth Army was deployed, 2nd Belorussian had crossed the Niemen at Grodno but was stopped by a German counter-attack. Since Ninth Army HQ had been temporarily withdrawn from the front, Second Army formed the southern wing.

<sup>153</sup> Heusinger, *Befehl im Widerstreit*, 257.

<sup>154</sup> Scheurig, *Henning von Tresckow*, 218 ff.

It was slowly forced back by the right wing of 1st Belorussian Front past Pinsk to Brest-Litvosk. Soviet superiority was still very impressive. As Field Marshal Model had shown in a situation analysis, even if all the scheduled reinforcements arrived by 21 July according to plan, the army group would have to continue the unequal fight with at most 16 operational units against 160 Soviet formations.<sup>155</sup> Despite this, after retreating almost 400 kilometres the German forces managed to bring the enemy advance to a halt. A mood of cautious optimism was spreading at Army Group Centre HQ, when the front held by Army Group North Ukraine, its neighbour on the right, collapsed dramatically.

#### (d) Danger on the Flanks: 1st Belorussian Front's Advance to the Vistula

Col. Gehlen, head of Foreign Armies East, had rightly drawn attention to the enormous concentration of enemy forces massing opposite Army Group North Ukraine in the area to the south of Kovel. The Soviets had brought up 1st Ukrainian Front, which was then 'the largest army front ever assembled for offensive operations in the Great Patriotic War'.<sup>156</sup> On 13 July it launched the attack, led by Marshal Ivan Stepanovich Konev as commander-in-chief, and within a few days it had smashed the German front to pieces. The Soviet armoured units then pushed deep into Galicia, forcing Army Group North Ukraine back towards the Carpathians.<sup>157</sup>

A few days later, on 18 July, the army group's stationary northern wing, on which two corps of Fourth Armoured Army were deployed, was attacked by the left wing of 1st Belorussian Front. For weeks the German operations staffs had been staring as if hypnotized at this Kovel section of the front, where they expected by far the most dangerous attack on the whole eastern front. In the event of a successful breakthrough in that sector, the Red Army would be able to advance north-west as far as Warsaw and the Baltic Sea, and cut off the retreat of both of Germany's northern army groups. Paradoxically, the operational configuration of the German forces was now more favourable after Army Group Centre's withdrawal than it had been before 22 June. Then the Belorussian balcony, seen from Kovel, had extended more than 500 kilometres to the east, so that, following a successful breakthrough, the left wing of 1st Belorussian Front would have been able to advance without resistance into the rear of Army Group Centre. In the meantime, however, the German front in that sector had been pushed back so far to the west that Army Groups Centre and North Ukraine were almost level with each other. Moreover, Field Marshal Model had evacuated the difficult-to-defend Kovel salient over the period 4 to 8 July as a precautionary measure,<sup>158</sup> in order to

<sup>155</sup> KTB HGr Mitte, 13 July 1944, BA-MA RH 19-II/198, fo. 136.

<sup>156</sup> *Geschichte des zweiten Weltkrieges 1939–1945*, ix. 97.

<sup>157</sup> On this, see the detailed account in Part V, Chapter V.

<sup>158</sup> BA-MA, Study ZA 1/2077, 13.

avoid a pre-programmed encirclement—as had happened at Vitebsk—and gain reserves by shortening the front.

What happened now, however, should have been prevented at all costs, namely an immediate operational breakthrough right in the most securely defended section of the German eastern front. Against the two German corps deployed at Kovel, Rokossovsky had massed five general armies, one armoured army, and numerous independent units, with a total of 416,000 men. Following a devastating barrage by 8,335 artillery cannon, grenade launchers, and rocket launchers, the Soviet units launched their onslaught with the support of 1,748 tanks and assault guns. A total of 1,465 aircraft were assigned to this specific sector of the front, supported during the breakthrough phase by planes from other fronts and long-range aircraft.<sup>159</sup> The concentration of forces was even greater than that amassed for the breakthrough in the sector of Army Group Centre. The attack frontage of a rifle division was about 1 kilometre, with an average deployment of 356 artillery cannon and 83 tanks or assault guns per kilometre of front.<sup>160</sup> The Red Army's superiority was so crushing that the German defenders were simply overrun. After only two days the Soviet units had crossed the Bug into Polish territory. Then, on 22 July, 2nd Armoured Army launched a deep operational thrust. On the German side, VIII Army Corps, positioned on the left wing, had been separated from Army Group North Ukraine. Its remaining units withdrew hastily to the north, where they were incorporated in the right wing of Army Group Centre at Brest-Litovsk. At the same time, LVI Armoured Corps, which had been deployed on the right wing, was forced to withdraw south-west to the Vistula. As result, a gap of 100 kilometres opened up between the two army groups, through which Rokossovsky's armies were able to advance unopposed. Lublin was taken on 24 July. The next day, the first advance troops were already on the Vistula. The Soviet 69th Army crossed the river and established a first bridgehead on 29 July at Puławy.

The left wing of 1st Belorussian Front had then pushed directly west with most of its units, forcing Army Group North Ukraine back to the Vistula. In their 180-kilometre-long advance, the Soviet attacking forces had far outflanked Army Group Centre's southern cornerstone at Brest-Litovsk and, by swinging northwards, were able to push forward in its rear without resistance.

The situation now developed very much to Rokossovsky's advantage. The two wings of his army front had originally been separated by the Pripet marshes, but had since left that obstacle behind them. With his right wing, Rokossovsky now attacked Second Army frontally on the southern wing of Army Group Centre, while swinging his left wing, which had advanced far to the west, in a northerly direction to get to Second Army's rear. The manoeuvre comprised three directions of thrust. The Soviet 70th Army, which formed the lynchpin of the rotation, attacked the southern cornerstone of Second Army at Brest-Litovsk. To the south-west, XI Armoured Corps and II Guards Cavalry Corps, followed by 47th Army, moved on Siedlce to cut off Second Army's retreat. The greatest threat,

<sup>159</sup> 'Belorusskaya operatsiya v tsifrakh', 77.

<sup>160</sup> Ibid. 77, 80.

however, came from the armoured units which had advanced far to the west in the gap between the two German army groups. After 2nd Armoured Army reached the river at Puławy, Rokossovsky swung it north in a decisive thrust towards Warsaw. In the meantime, the armoured forces massed on 1st Belorussian Front's right wing had broken frontally through Second Army's positions at Kleszczele, between Brest-Litovsk and Białystok. The two wings of 1st Belorussian Front were closing like gigantic jaws, and Second Army appeared to be facing the same fate of encirclement as Army Group Centre's other three armies at the beginning of Operation BAGRATION. The crisis was made even more acute by the fact that the northern wing was under attack by units of 2nd Belorussian Front. Białystok, Second Army's northern cornerstone, had already had to be abandoned.

Now, of all times, a new operational controversy erupted within the German leadership, when Hitler ordered the Brest-Litovsk 'fortified place' to be held at all costs. The events of 20 July must have been an indirect factor in the dictator's decision, since some changes of personnel had taken place in the OKH general staff on his instructions and he apparently believed he would encounter less resistance from the new incumbents. In fact, the behaviour of Col.-Gen. Guderian, the new chief of staff, was causing some irritation on the part of the generals on the eastern front, since the former champion of the modern war of movement now supported Hitler's 'stand firm' orders, as if he wanted to emulate the French generals whom he had outmanoeuvred with his armoured units in the western campaign of 1940. Guderian's temporary change of heart is probably explained by gratitude to Hitler for appointing him chief of staff. However, his military know-how soon dispelled his ambivalence. Given his fiery temper, conflict with Hitler was inevitable.

On 23 July confusion was caused by a new Führer directive concerning the conduct of operations on the eastern front. On the one hand, Hitler demanded that the existing front line be held, including the Brest-Litovsk 'fortified place'. On the other, obviously on Guderian's advice, he called for an offensive conduct of operations by means of counter-attacks, quoting the aphorism 'attack is the best form of defence'.<sup>161</sup> The two demands were mutually contradictory, since the only way to release forces for a counter-attack was to straighten the front, and above all to abandon untenable strong points. Model's concept of mobile defence while giving up territory was diametrically opposed to Hitler's categorical 'stand firm' orders. In view of the threatening disaster, he was not prepared to share responsibility for the senseless maintenance of a 'continuous front',<sup>162</sup> and, on his own authority, he withdrew the endangered front line of Fourth Army to a rearward position west of Grodno.<sup>163</sup> By that time, however, the situation at the front was so critical that Hitler put up with Model's open disobedience. Thereupon Model, in view of the enemy's breakthrough at Kleszczele, demanded the withdrawal of

<sup>161</sup> KTB HGr Mitte, 23 July 1944, BA-MA RH 19 II/198, fo. 257. Significantly, only extracts from this remarkable Führer directive were transmitted to the armies; see telex of 24 July 1944, Okdo. H.Gr. Mitte an AOK 2 usw., Ia No. 9612/44 g.Kdos, BA-MA RH 19 II/209, fo. 136.

<sup>162</sup> KTB HGr Mitte, 23 July 1944 BA-MA RH 19 II/198, fo. 257.

<sup>163</sup> Ibid., fos. 258–9.

Second Army's sector of the front and the abandonment of Brest-Litovsk. The exposed 'fortified place' was under attack by three Soviet Armies from the south, east, and north. But Hitler—probably again under the influence of the events of 20 July—now proved even more obdurate and merciless than before. On 26 July, when Brest-Litovsk had already been encircled for a day, he ordered unconditionally that the city be defended 'until the destruction of the garrison'.<sup>164</sup> He relented only when Model graphically evoked the consequences of such a decision and declared categorically that he could not again afford to lose two divisions. That same evening, the Führer gave permission for the enclosed units to break out. The breakout, which was supported by relief forces from the west, led to bitter fighting from 27 to 29 July. Losses were very high, because once again, as at Vilnius, Hitler's permission for the breakout had come much too late.

Meanwhile Model had started two counter-attacks which led to the rescue of Second Army. The first was a pincer attack directed against the enemy forces advancing from the east, in which SS Armoured Division 'Viking', newly placed under Model's command, was deployed together with Fourth Armoured Division. The two German armoured divisions succeeded in stopping the enemy forces which had broken through to the north of Brest-Litovsk in the Kleszczele area. This pincer attack enabled the endangered German troops to retreat in good order. Even more important was Model's decision to withdraw SS Armoured Division 'Totenkopf' from the Fourth Army front further to the north, and deploy it rapidly in a south-westerly attack on the Soviet units advancing in the rear of Second Army. At Siedlce (approx. 100 kilometres west of Brest-Litovsk) a fierce engagement ensued on 27 July with the Soviet XI Armoured Corps, II Guards Cavalry Corps, and parts of 47th Army. The Soviet attacking forces were beaten back and lost a large number of tanks. Model was thus able to swing the right wing of Second Army to the west and temporarily establish a new front line. Nevertheless, the loss of Brest-Litovsk was highly symbolic, since the assault on that stronghold had marked the start of the eastern campaign on 22 June 1941.

## 6. THE STABILIZATION OF THE FRONT BETWEEN WARSAW AND RIGA UP TO THE END OF AUGUST

### (a) The Tank Battle before Warsaw as an Operational Turning Point

Model's temporary stabilization of the front in the second half of July proved deceptive. At the end of that month a new disaster took shape that put all previous calamities in the shade. This time it was not confined to Army Group Centre but spread like wildfire to the whole eastern front. On 30 July Army Group North was struck by the crisis which Zeitzler, the former chief of staff, had predicted to Hitler. The Soviet 1st Baltic Front broke through at the interface with Army Group Centre and reached the Baltic at Tukums, thereby enclosing Army Group North on the

<sup>164</sup> Ibid., KTB HGr Mitte, 26 July 1944, fo. 289.

Baltic Coast. Army Group Centre's neighbour on the right, Army Group North Ukraine, had also been unable to withstand a new major Soviet offensive. As a result, Model, who had been personally commanding both army groups since 29 June, now had to transfer command of Army Group North Ukraine to Col.-Gen. Josef Harpe. But Harpe too was unable to prevent the breakthrough in Galicia. The front only came to a halt some 200 kilometres further west, along the Vistula and the Carpathians, so that the whole southern flank of Army Group Centre was torn apart. Meanwhile, there were growing signs that Army Group South was also about to face a large-scale offensive by the Red Army. Army Group Centre could therefore no longer expect any reinforcement by units from that quarter. Worst of all, at this very time the German western front in Normandy collapsed. After repeated unsuccessful attempts to break out of their bridgehead, the Allies had achieved the decisive breakthrough at Avranches, and their armoured units were advancing deep into the French hinterland. Hitler's risky strategy of temporarily shifting the main effort to the west, and then sending the troops freed up after defeat of the invasion to the eastern front, had failed.

The situation of Army Group Centre had also become extremely critical. On the left wing, the connection with Army Group North had been severed by the Soviet advance to the Baltic Coast. Third Armoured Army had to throw all available forces to the north to secure the endangered flank. To the south of Kaunas, Soviet units had broken through at the interface between Fourth Army and Third Armoured Army and had almost reached the German border. On 2 August Wehrmacht units came under fire for the first time on German soil, near the East Prussian town of Schirwindt, from 33rd Army's 142nd Cannon Artillery Brigade.<sup>165</sup> Most alarming of all, however, was the situation of Second Army, with its southern wing entirely hanging in the air. It was now separated by a gap of around 100 kilometres from Army Group North Ukraine, whose northern wing reached to the bridge over the Vistula at Puławy. The rear of Second Army, still standing far to the east, was also threatened by a thrust through that gap from the south. Although Second Army's right wing had meanwhile been swung westwards into the Siedlce area, the distance to the Vistula was still around 60 kilometres, and between Siedlce and Warsaw there were hardly any German troops. In the meantime, Army Group Centre HQ had decided to build a new front along the Vistula. Joining up with Army Group North Ukraine, the new line was intended to run from Poławy to Warsaw and from there to extend east of the Vistula to create a connection with the right wing of Second Army. On 25 July this task was assigned to Ninth Army, which actually existed only on paper and had first to be replenished by troops yet to be brought in. Following the disaster at Bobruisk, Ninth Army HQ had been withdrawn from the front and moved all the way back to Warsaw, where the formation of a new army was planned. For the time being, 'Ninth Army' consisted only of a conglomeration of stand-by and security units, some of which had exotic-sounding names like '1st Company 818th Azerbaijani Battalion' or '2nd Company 791st Turkish

<sup>165</sup> *Geschichte des zweiten Weltkrieges 1939–1945*, ix. 80.

Battalion'.<sup>166</sup> The only large unit was the newly assigned 73th Infantry Division, which was still being restructured and trained. It was deployed south-east of Warsaw to protect the district of Praga on the east bank.

Foreign Armies East was alarmed by the developments. In its enemy-situation assessment of 23 July it already assumed that 'the Soviet command would see the present operations as decisive for the outcome of the war'.<sup>167</sup> It noted with some relief, however, that for the time being the Red Army was conducting the greatly feared thrust on Kovel only in a westerly direction, rather than north-west towards Warsaw and the Baltic Sea. Gehlen's department nevertheless feared a 'turn in a general northerly direction' for a 'thrust into East Prussia'.<sup>168</sup> Similarly, on 23 July Army Group Centre HQ was already reckoning with the 'marshalling of forces for the battle for Warsaw'.<sup>169</sup>

After reaching the Vistula near Puławy, the Soviet 2nd Armoured Army did indeed swing northwards, and on 27 July it began the assault on Warsaw. In it were concentrated some 800 fighting vehicles out of the original total of almost 1,800 tanks and assault guns belonging to the left wing of 1st Belorussian Front.<sup>170</sup> It was followed by 8th Guards Army and 1st Polish Army. Forward and to the right of it, a preliminary attack by XI Armoured Corps, II Guards Cavalry Corps, and 47th Army, directed at the southern flank of the German Second Army at Siedlce, had already begun. The aim of the thrust by 2nd Armoured Army was to cut off Army Group Centre's retreat westwards.<sup>171</sup> According to Marshal Rokossovsky's memoirs, the plan was first to neutralize the Warsaw suburb of Praga on the right bank of the Vistula.<sup>172</sup> But clearly the main objective, in accordance with the Stavka directive of 27 July, was a northward thrust, passing by Warsaw on the east, to take possession of the important Narew crossings at Zegrze and Serock.<sup>173</sup> Following the course of the Vistula, the Soviet spearheads could then go on to capture the bridges at Modlin. By doing so, they would cut off the Germans in the Vistula–Narew–Bug river triangle from all possibility of retreat to Warsaw. The Polish capital would fall into the hands of the Red Army like a ripe fruit. Moreover, the whole German hinterland in East Prussia lay unprotected before the advancing Soviet armoured units, since there were practically no Wehrmacht forces between Warsaw and the Baltic.

The attack by 2nd Armoured Army in the direction of Warsaw, which began on 27 July, initially encountered a vacuum. The Soviet forces broke through the

thin German blocking line the following day, severing the connection between Second Army and the still rudimentary Ninth Army. In this phase only the Luftwaffe was able to intervene by deploying ground-attack aircraft. On 29 July the Soviet 2nd Armoured Army crossed the important Warsaw–Siedlce highway, advancing with three armoured corps. On the left wing, XVI Armoured Corps pushed along the Vistula directly towards the Warsaw suburb of Praga, but was stopped at first by the German 73th Infantry Division. Less resistance was encountered in the centre by VIII Guards Armoured Corps in its advance towards Okuniew. On the right wing, III Armoured Corps was able to advance northwards almost unopposed, and on 30 July it reached Radzymin, approximately 15 kilometres north-east of Warsaw. The Soviet armoured units were thus already deep in the rear of the German front and only about 3 kilometres from the important bridge over the Narew at Zegrze. On 31 July Siedlce, the southern cornerstone of Second Army's defensive front, was lost.

The decisive escalation of the crisis came on 1 August. On that day 8th Guards Army, commanded by Col.-Gen. Vasily Ivanovich Chuikov, crossed the Vistula at Magnuszew, south of Warsaw, and established a bridgehead. Ninth Army, with its insufficient forces, now faced the task of blocking a second bridgehead in addition to the one at Puławy. Above all, 1 August 1944 saw the beginning of the Warsaw Uprising, an event which has since occupied the attention of many historians. The situation in the rear of the German front-line units was now extremely critical, since Warsaw was a central node for road and rail traffic. The crucial supply lines of Second, Fourth, and Ninth Armies passed through the city, in which numerous rear supply facilities, hospitals, arms factories, and so on were also located. So the German operations staffs also feared logistic collapse. The disaster facing Army Group Centre, threatened with being completely cut off, seemed almost inevitable. In this phase, the Warsaw area was not only the decisive basis of Army Group Centre's lines of supply and retreat, but also, according to German enemy intelligence, the springboard for continuation of the Soviet offensive towards the Baltic Sea. Given the alarming prospect of the amputation of the whole of the eastern front's northern wing, Warsaw was of strategic importance. From the German viewpoint, therefore, 1 August was the fateful day, since the eastern front threatened to collapse like a house of cards.

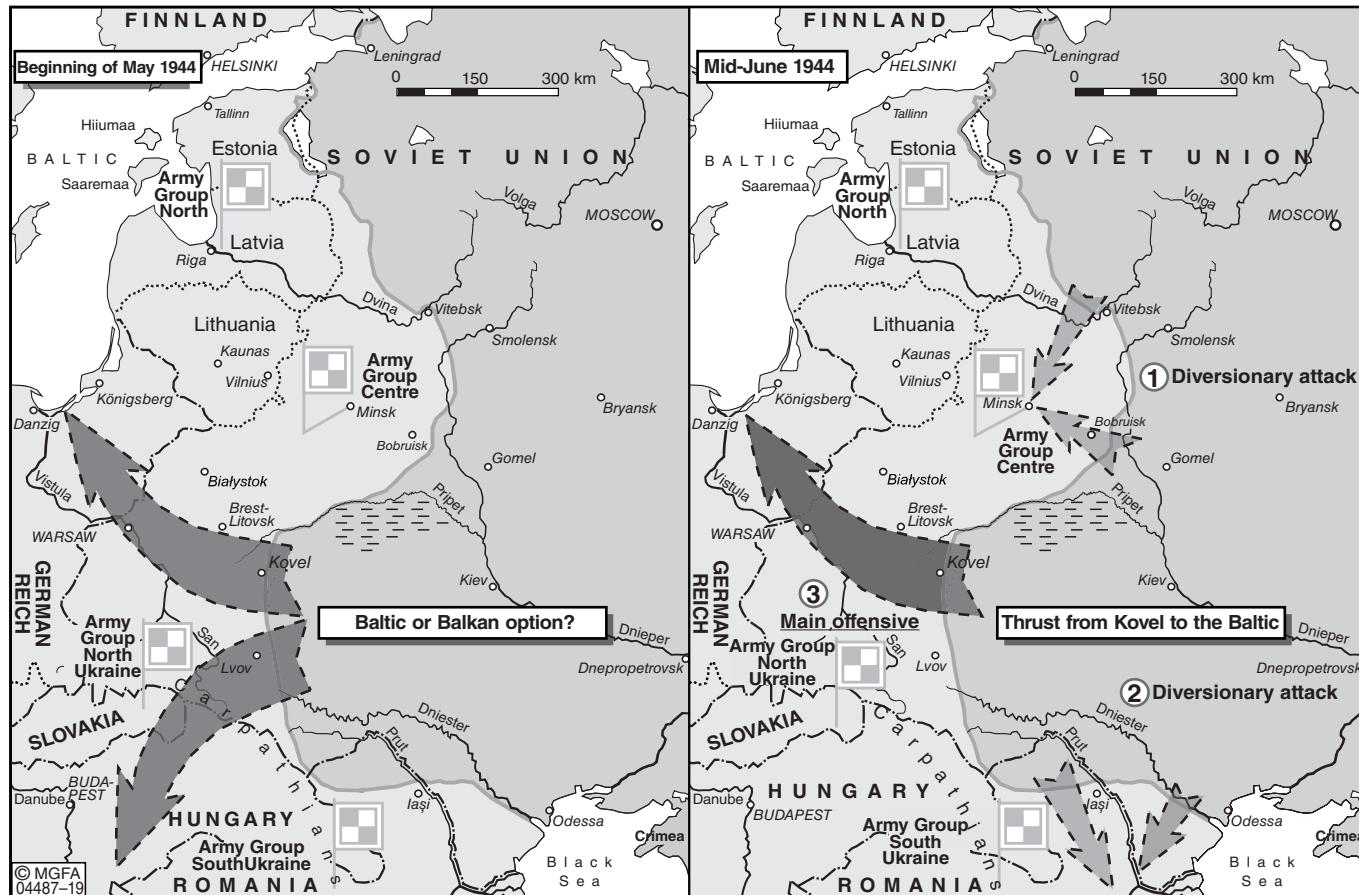

What now followed was a complete surprise. As if from nowhere, four German armoured divisions launched a sudden concentric attack on the area to the east of Warsaw, and the Soviet armoured units which had thrust forward in a preliminary attack were caught in the trap. The situation of Army Group Centre in July 1944 was similar to that of Army Group South on the Donets in February 1943, when the southern wing of the eastern front was threatened with encirclement and a 'super-Stalingrad'. On that occasion Manstein had gained an armoured army as a mobile reserve by shortening the front, and had deployed it in a counter-blow after a wide-ranging castling movement.<sup>174</sup> Exactly the same situation repeated itself in

<sup>174</sup> See Klein and Frieser, 'Mansteins Gegenschlag', 13 ff.

the summer of 1944 before Warsaw, although this time everything went much faster. Model had no time left to argue with Hitler for operational freedom of action. He simply took it for granted. In the given crisis, he had no alternative but to scrap Hitler's rigid principle of linear defence and, like Manstein, pursue free combat in the rear. Model too took remarkably bold risks, withdrawing three armoured divisions from his army group's shaky front for a counter-attack, which could only be done by yielding territory. In addition, Armoured Paratroop Division 'Hermann Göring' had just arrived in Warsaw. Together, these four armoured divisions possessed 223 tanks, plus 54 assault guns and tank destroyers. Those figures are purely theoretical, however, since the divisions in question did not arrive all at the same time but one after the other, and sometimes had to be withdrawn again at the height of the battle in order to 'put a fire out' at other places on the front. On the other side, 2nd Armoured Army had around 800 tanks and assault guns, although an unknown number had been lost in the meantime. The initial armoured strength of the Germans divisions on 2 August was as follows:<sup>175</sup>

- 19th Armoured Division: 26 Panzer IVs, 26 Panzer Vs, 18 light tank destroyers;
- Armoured Paratroop Division 'Hermann Göring': 35 Panzer IVs, 5 Panzer Vs, 23 Panzerjäger IVs;
- SS Armoured Division 'Viking': 8 Panzer IVs, 45 Panzer Vs, 13 assault guns;
- 4th Armoured Division: 40 Panzer IVs, 38 Panzer Vs.

According to Model's operational plan, the first phase was to be a pincer attack on Okuniew to cut off the rear of the Soviet III Armoured Corps, which had advanced far to the north. The second phase was to be a concentrated attack by the four armoured divisions to destroy the units of the encircled Soviet corps. After that, the plan was to attack VIII Guards Armoured Corps, and finally XVI Armoured Corps. The assembly phase was the most complicated, however, since the four armoured divisions were located in completely different front sectors, from which they had to be withdrawn. Once that was done, they were to be shifted in a castling manoeuvre to the area east of Warsaw, and then to attack simultaneously from the four points of the compass. Given the far greater strength of the enemy, the right troops had to be concentrated in the right place at exactly the right time. The encirclement manoeuvre was extremely difficult to coordinate at operational level. Owing to the rapid course of events, tactical implementation could be carried out successfully only by officers trained in mission-type command. Knowing how much depended on the success of the operation, Field Marshal Model led the attack himself, leading his troops from the front.

At first only Armoured Paratroop Division 'Hermann Göring' was available, having just arrived in Warsaw from Italy. Although the bulk of the division was temporarily classified as 'inoperational',<sup>176</sup> on 28 and 29 July its few already

<sup>175</sup> AOK 9, Ia, 'Panzer u. Panzerabwehrwaffen, Stand 2.8.1944', BA-MA RH 20-9/231; AOK 2, Ia No. T 215/44 geh., daily report, 2 Aug. 1944, BA-MA RH 20-2/949.

<sup>176</sup> KTB HGr Mitte, 26 Jul. 1944, BA-MA RH 19 II/198, fo. 289.

available tanks were able, together with 73rd Infantry Division, to prevent the Warsaw suburb of Praga from being taken in short order by the advance troops of the Soviet 2nd Armoured Army. In the meantime, 19th Armoured Division had been withdrawn from its sector of the front at Białystok. Its first units arrived on 29 July, just in time to stop the Soviet tanks a little way short of the important Narew bridge at Zegzre. In a combined pincer attack, SS Armoured Division 'Viking' and 4th Armoured Division had just stopped the enemy forces which had broken through at Kleszczele. Now they too were hastily withdrawn from the front and reached the new deployment zone on 31 July and 2 August respectively.

The tank battle before Warsaw began on 1 August with a pincer attack on Okuniew. The spearheads of a combat group of 19th Armoured Division attacking from the west, and SS Armoured Division 'Viking' from the east, met to the north of Okuniew at 19.15, thereby cutting off the Soviet III Armoured Corps, which had advanced as far north as Radzymin. The attack by 4th Armoured Division, which had just arrived in the area, and by parts of 19th Armoured Division, was led by Field Marshal Model in person. The tank battle reached its climax on 3 August, when the Soviet III Armoured Corps was tightly concentrated in the area of Wołomin. The four German armoured divisions attacked concentrically from four directions: 4th Armoured Division from the north-east, SS Armoured Division 'Viking' from the south-east, Armoured Paratroop Division 'Hermann Göring' from the south-west, and 19th Armoured Division from the north-west. That day most of the Soviet units in the Wołomin area were destroyed, and the noise of the battle could be heard as far away as the centre of Warsaw. The next day, 4 August, the remaining sections of the Soviet 2nd Armoured Army were attacked, together with 47th Army, which had rushed to its assistance. The fighting was concentrated on Okuniew, where the Soviet VIII Guards Armoured Corps had taken up position. The plan had been to enclose and destroy that major formation too, but more bad news had since arrived from other sectors of the front. That same day 19th Armoured Division had to be withdrawn, and the following day it was the turn of Armoured Paratroop Division 'Hermann Göring'. One after the other, the two divisions set off round the contested city of Warsaw towards Magnuszew to attack the Soviet bridgehead west of the Vistula, where 8th Guards Army, supported by 1st Polish Army and strong armoured forces, was trying to enlarge the bridgehead. In the evening of 4 August the German units at Okuniew went back on the defensive. The purpose of the operation—to prevent the enemy from advancing into the area east of Warsaw by means of 'offensive defence'—had been achieved.<sup>177</sup>

<sup>177</sup> Surprisingly, the literature contains no comprehensive account of the crucial tank battle before Warsaw, which coincided with the Warsaw Uprising. One of the reasons must be that Second Army's war diary is missing for that period. The author was able to examine the almost complete war diaries of Second Army when looking through the captured German files in the Moscow special archive. But precisely for the crucial days around 1 August (the start of the Warsaw Uprising), the file was missing. It may possibly be located in another, difficult-to-access Russian archive. However, the course of the battle can be reconstructed by consulting the Second Army volumes of annexes in the BA-MA. See daily reports 20 July to 5 Aug. (BA-MA RH 20-2/946-952). See also KTB AOK 9, 28 July to 7 Aug.,

It was probably the still continuing controversy about the Warsaw Uprising, which began at the same time, that cast Model's counter-blow into the historiographical shade. Yet that tank battle was, for the Germans, by far the most important action during the BAGRATION offensive. Without that successful counter-attack before Warsaw, Army Group Centre's front would probably have collapsed and the Soviet armour would have been able to advance to the Baltic Sea unimpeded. With regard to the starting position and course of the operation, the tank battle before Warsaw in August 1944 is astonishingly similar to the battle of encirclement at Tannenberg in August 1914. On the earlier occasion Eighth Army, stationed in East Prussia, was attacked frontally by Russia's Nieman Army, while the Narew Army attacked it in the rear from the south in order to block its retreat to the Vistula and enclose it on the Baltic Coast. Thereupon the strongest German units were withdrawn from the front in a castling manoeuvre and shifted south in a straight line through East Prussia. Four army corps suddenly advanced from four different directions on the area around Tannenberg, where they established a pocket into which the Russian Narew Army marched unsuspectingly. In 1944 an operation on exactly the same lines was carried out some 100 kilometres further south, but this time at top speed. Under Model's command, four armoured divisions withdrawn from the front thrust into the area to the east of Warsaw, and the advanced units of the Soviet 2nd Armoured Army fell into the trap.

The tank battle was exceptionally fierce, and the Soviet units suffered painful losses. On 4 August 2nd Armoured Army, which had begun the thrust in depth on 22 July with 810 tanks and assault guns, was left with only 263 fighting vehicles.<sup>178</sup> III Armoured Corps was completely shattered, VIII Armoured Corps badly hit, and XVI Armoured Corps also incurred considerable losses.<sup>179</sup> By 5 August the condition of 2nd Armoured Army was so bad that it had to be withdrawn from the front.

Given the bitter fighting at the gates of Warsaw, it is hard to believe that the Soviet command had from the outset deliberately refrained from taking the city. This raises an interesting point of discussion. According to many Poles, what happened then was a cynical conspiracy, a second Hitler–Stalin pact, whereby the Soviet tanks deliberately stopped outside Warsaw so that Hitler, as Stalin's

BA-MA RH 20-9/205, and the daily reports in the volumes of annexes RH 20-9/210, 212, 214, 215, 220, and 231; KTB HGr Mitte, 28 to 31 July 1944, BA-MA RH 19 II/198, and for the period 1 to 5 Aug. 1944, BA-MA RH 19 II/199. The army group's operational orders for the period in question are contained in file RH 19 II/208. See also Hinze, *19. Infanterie- und Panzer-Division*, 678–88; Neumann, *Die 4. Panzerdivision*, 437–48. In the Soviet literature, this surprising defeat is either ignored or mentioned only in passing. Essentially, there is only an essay by Col.-Gen. Aleksei Ivanovich Radzievsky, who (then a major-general) was replacing the army's wounded commander-in-chief at the time and led the failed armoured thrust towards Warsaw; see Radzievsky, 'Na puti k Varshave', 74–7. On this, see Glantz and House, *When Titans Clashed*, 212–13, and Glantz, 'The Failures of Historiography', 800 ff.

<sup>178</sup> Bezymensky, 'Der sowjetische Vorstoß', 92.

<sup>179</sup> For the German view, see KTB 9. Armeec, 3 Aug. 1944, BA-MA RH 20-9/205, 26, fo. 29, and the corresponding daily report in RH 20-9/210, fo. 45. For 4 August there is a very informative daily report from Ninth Army in a Second Army file, BA-MA RH 20-2/951. See also Neumann, *Die 4. Panzerdivision*, 442, 447.

'willing executioner', could liquidate the bourgeois resistance movement. This theory seems inapplicable to the first phase at least, since on 27 July the Soviet 2nd Armoured Army suddenly raced towards Warsaw as if the devil were on its tail. The attack took place so quickly that all the basic military rules were ignored: there was no reconnaissance, no intelligence, no flank protection, no logistic back-up. That is all the more astonishing as, up to that point, Stalin had been remarkable restrained about the thrust on Warsaw which the German high command so feared. Then, all at once, there was a swing to the opposite extreme. Stalin's change of mind seems plausible, however, since he clearly wanted to forestall the Polish resistance movement. The Red Army was supposed to take Warsaw, or at least the suburb of Praga on the right bank of the Vistula, in short order. Moreover, Soviet units had already crossed the Vistula at Magnuszew and established a bridgehead, which appeared to have created the precondition for enclosing Warsaw from the south as well by means of a second pincer movement. In those circumstances, Model's counter-strike came as a complete surprise.<sup>180</sup>

This unexpected turn of events, however, led, by a tragic chain of circumstances, to a catastrophe for the Polish capital. The first thing to note is that the Warsaw Uprising, which broke out at the same point in time, is judged in very different ways by Polish historians too. For some, it was a heroic battle for the honour of the nation. For others, it was irresponsible, self-destructive activism.<sup>181</sup> In terms of its objectives, the uprising seems very ambivalent. It was directed militarily against the Germans, but politically against the Soviet Union. The Polish underground army, *Armia Krajowa*, was strictly anti-Bolshevik, rejecting both Hitler's regime and Stalin's rule. Its leaders wanted to liberate the capital with their own hands and so light a beacon for a future sovereign Poland. They began the uprising without any significant logistic reserves, however, assuming that the fighting would last only about three days (in fact it lasted 63 days), and that on the fourth day the Red Army would march in.<sup>182</sup> At first their calculation seemed to make sense, for on 31 July the seemingly unstoppable Soviet troops reached Praga, the eastern suburb of Warsaw. Thereupon the leaders of the uprising decided to start fighting the next day, 1 August. They could not know that the Germans, who seemed already beaten, would then be launching a counter-attack. Even the renowned Soviet enemy intelligence was taken completely by surprise. The tank battle before Warsaw, which resulted in the encirclement and destruction of large parts of the Soviet 2nd Armoured Army, began at exactly the same time as the uprising.

However, after several Soviet armies had arrived as reinforcements, something happened which the insurgents had even less expected: the Red Army units waited—as the Poles see it—at the gates of Warsaw, without doing anything, until the Germans had defeated the uprising. The situation may perhaps be

<sup>180</sup> According to Guderian's memoirs (*Erinnerungen eines Soldaten*, 324), 'We Germans had the impression that it was our defence which halted the enemy rather than a Russian desire to sabotage the Warsaw uprising.'

<sup>181</sup> See, e.g., Ciechanowski, 'Die Genese des Aufstandes', 100–17.

<sup>182</sup> Sawicki, 'Strategie', 127.

summed up as follows: at first the Soviets wanted to take Warsaw but could not; later, they could have taken Warsaw but no longer wanted to. There are no accessible files in the Soviet archives which could answer the question unambiguously, and so the controversy among historians concerning Stalin's 'hold back' order continues to this day.<sup>183</sup>

The tank battle before Warsaw was a dramatic turning point in Operation BAGRATION. For the first time, the German troops, constantly defeated and on the retreat, reversed the course of events and again achieved a victory. This decisive turnaround clearly showed that the Soviet offensive had, in Clausewitz's terms, passed its culminating point. After weeks of uninterrupted combat, the Red Army's troops were exhausted and its supply lines overstretched. A report by Maj.-Gen. Radzievsky, then in command of 2nd Armoured Army in its advance on Warsaw, typifies the situation. On 30 June he radioed his commander-in-chief, Marshal Rokossovsky: 'I'll soon be out of breath.'<sup>184</sup> At that very moment he was hit by Model's counter-attack. Army Group Centre's front, which had threatened to collapse, was stabilized once again.

From the German point of view, things could have turned out much worse. In mid-June, as already mentioned, Foreign Armies East had feared the Red Army would try to bring about the collapse of the German front at one stroke by means of a decisive offensive from Kovel to the Baltic. Seen from Warsaw, the Kovel salient was only about 250 kilometres away, whereas the distance to the Belorussian balcony, which protruded far to the east, had been around 700 kilometres. The Red Army command nevertheless decided on a frontal offensive from the east. At the decisive moment, however, the Soviet troops were exhausted after struggling through the forests and swamps of Belorussia, and their offensive force was insufficient.

It is worth noting in this connection that, at a situation conference in Moscow on 8 July, Zhukov called for a change in the point of main effort in view of the surprisingly favourable course of the operation. Invoking the plan for an encirclement offensive, Zhukov proposed that the Soviet attacking forces in the central sector turn northwards in the direction of Warsaw and advance on East Prussia.<sup>185</sup> That bold manoeuvre would have cut off the whole northern wing of the German eastern front. Interestingly, the idea was a revival of the old Soviet plan drawn up by Boris Mikhailovich Shaposhnikov in 1938 and of Zhukov's plan of 15 May 1941 for a preventive strike against the assembling German forces.<sup>186</sup> All these operational ideas were inspired by the same geographical determinants, above all, the course of the Vistula. As in 1941, however, Stalin again rejected Zhukov's proposal. And so both 1st Ukrainian Front and the left wing of 1st Belorussian Front attacked only frontally to the west, with the aim of conquering the territory around

<sup>183</sup> On this, see the two collective works *Der Warschauer Aufstand 1944* and *Die polnische Heimatarmee*. Notable recent works include Borodziej, *Der Warschauer Aufstand 1944*, and Davies, *Rising '44*. See also Part V, Chapter III.1 and Chapter III.2 of the present volume.

<sup>184</sup> Quoted in Bezymensky, 'Der sowjetische Vorstoß', 92.

<sup>185</sup> Ibid. 90–1; see also Zhukov, *Erinnerungen* (8th edn.), 259–63.

<sup>186</sup> Bezymensky, 'Der sowjetische Vorstoß', 91.

Lvov and Lublin. These two parallel offensives, however, both of which deployed very powerful forces, by no means led to the collapse of the eastern front. Instead, they were brought to a halt frontally at the Carpathians and the Vistula. Significantly, Zhukov dealt resolutely with his dispute with Stalin only in the revised eighth edition of his memoirs. At the time he had called for a pincer-type thrust north-westwards to the Vistula estuary: 'That could have been done if our troops had been reinforced in time. According to the calculations, 1st Belorussian Front would have needed another 300 to 400 tanks and self-propelled guns, and 2nd Belorussian Front one general army and one armoured army, one rifle corps, and a few armoured and self-propelled gun regiments.' 'With those reinforcements,' Zhukov continues, 'all three Belorussian fronts would, in my opinion, have been capable of taking East Prussia and advancing to the Vistula, including the Bay of Danzig, or could at the same time have cut East Prussia off from the rest of Germany by means of the thrust to the Vistula.'<sup>187</sup> In retrospect, Zhukov is highly critical of Stalin's refusal: 'I believe it was a serious mistake on Stalin's part, which subsequently made necessary the extremely complicated East Prussian operation that cost us such heavy losses.'<sup>188</sup>

It was not until 27 July 1944 that Rokossovsky was instructed to turn part of the forces on his left wing northwards 'in the general direction of Warsaw'.<sup>189</sup> Now the thrust came too late. Moreover, it was carried out with only a fraction of the troops which the Red Army could have concentrated in that area if the decisive point of main effort had been moved there in the early summer of 1944. Then—rather than Radzievsky's 800 fighting vehicles—8,000 tanks, or even more, could have attacked in the direction of Warsaw. Instead, the Red Army spread its huge mass of forces along the whole eastern front, with the point of main effort in the marshy primeval forests of Belorussia. The ease with which the operational breakthrough was achieved at Kovel at the outset shows how much greater a disaster the German eastern army would have suffered if the decision had already been forced at the strategically most effective point in June 1944. But even Radzievsky's thrust, though no longer carried out with full force, was extremely dangerous from the German viewpoint, since it was directed behind the German front at the wholly unprotected area east of Warsaw. Ultimately, Army Group Centre was saved by Stalin's decision to have the left wing of 1st Belorussian Front attack first westwards towards Lublin and Puławy, rather than directly north-west in the direction of Warsaw. That gave Model enough time to stop the exhausted Soviet armoured units at the last moment. And so there was a second 'miracle on the Vistula' after that of 1920, when Stalin had been to blame for the Red Army's decisive defeat in the same place in a counter-attack by Poland's Marshal Józef Piłsudski.

**(b) Operation DOPPELKOPF: Reconnection with Army Group North**

Hitler had rejected a ‘major solution’ on an operational scale, despite the fact that Army Group North was threatened with encirclement. That put him in opposition to his generals, especially Col.-Gen. Zeitzler, who was then the OKH chief of staff. At the end of June 1944 the generals had already demanded abandonment of the northern Baltic area, which could not be held in any case. They wanted the troops thus freed up to be used for a counter-attack on the flank of the Soviet units advancing against Army Group Centre. That would have made it possible to close the gap between Army Group Centre and Army Group North. Meanwhile, three Soviet armies and strong armoured units of 1st Baltic Front had thrust into the ‘Baltic hole’ and increased it to a width of more than 100 kilometres by the end of July. The spearhead of the attack was III Guards Mechanized Corps, which reached the Gulf of Riga at Tukums on 31 July. Soviet tanks now stood on the coast, and Army Group North was enclosed in the Baltic area. Since that army group was at the same time under frontal attack from the east by superior forces, it was unable to react to the crisis on its right flank. Nor did it have a single armoured division with which to carry out a powerful counter-thrust. It was now up to Army Group Centre to close the dangerous gap, although that would increase the length of its front line to 1,100 kilometres. Third Armoured Army, deployed on its northern wing, was also in trouble and no longer able to withstand the pressure of the frontal attack by 3rd Belorussian Front. Following a Soviet breakthrough to the south of Kaunas, it was thrown back to Vilkaviškis, just before the East Prussian border. At the same time its left flank was endangered by the advancing 1st Baltic Front, so that it had to withdraw its northern wing, threatened with encirclement, to Raseiniai. Between Raseiniai and the Gulf of Riga there were only a few weak blocking groups, so Courland too was now exposed, almost without protection, to the assault of the Red Army.

Army Group Centre had just repelled the Soviet armoured thrust towards Warsaw on its right wing and was attempting to deploy all available forces against the Vistula bridgeheads at Magnuszew and Puławy. Now an even greater threat appeared on its left wing. The OKH, with its newly appointed chief of staff Guderian, also saw the point of main effort as being on the left wing, and on 8 August it put forward an initial plan for a counter-attack. The aim of the operation, code-named ‘Doppelkopf’, was for two improvised armoured corps to thrust through the ‘Baltic hole’ in a north-easterly direction and re-establish the connection with Army Group North. Two of the five armoured divisions in question, however, were still on their way from Romania. The following deployment of forces was planned:<sup>190</sup>

- XXXIX Armoured Corps, consisting of 4th, 5th, and 12th Armoured Divisions and commanded by General Dietrich von Saucken, was to assemble in the area

<sup>190</sup> See OK HGr Mitte, Ia No. 10 729/44 g.Kdos. Chefs., 10 Aug. 1944, BA-MA RL 7/522, fos. 18–21; see also KTB HGr Nord, 18 Aug. 1944, RH 19 III/316, fos. 140–1.

between Memel and Liepāja and from there, after breaking through the lines of 1st Baltic Front, push forward 80 kilometres straight across the enemy's hinterland to the positions of Army Group North at Jelgava. Once the fighting vehicles still on their way by sea had arrived, the 'Strachwitz Group' was to follow with two armoured brigades and take over protection of the northern flank.

- For XXXX Armoured Corps, commanded by General Otto von Knobelsdorff, a secondary thrust on the right wing was envisaged. At first the attack was to be carried out by 14th Armoured Division and Armoured Infantry Division 'Grossdeutschland', to be followed by 7th Armoured Division and 1st Infantry Division. The aim was to attack from the area of Tauragė and secure the right flank by taking Šiauliai.

These armoured divisions, however, were no longer comparable to those of earlier years. The German counter-offensive began not with 1,000 tanks, as Marshal Bagramyan later claimed,<sup>191</sup> but with the pitiful number of 141 tanks and 54 assault guns.<sup>192</sup> After further units were brought in, the final total on 26 August was 299 tanks and assault guns.<sup>193</sup> On the opposite side, 1st Baltic Front had started the summer offensive with three armies, supported by 687 tanks and assault guns,<sup>194</sup> and had since been reinforced by 51st Army, 2nd Guards Army, and III Guards Mechanized Corps. In addition, 5th Guards Armoured Army and XIX Armoured Corps were also brought in for the decisive battles in August. The inferiority of the two German corps in their attack on several Soviet armies possessing strong armoured units must have given cause for concern, so it is hard to understand why the original German operational plan was blown up by Hitler into the crazy idea of a huge battle of encirclement in Lithuania. The envisaged north-easterly push through the 'Baltic hole' to Jelgava was in itself an almost impossible task. Now, in addition, 'after establishing the connection with Army Group North', the troops were required to 'turn south in the direction of Kaunas [...] and thrust into the rear of the enemy forces facing the eastern front of Third Armoured Army'.<sup>195</sup> By means of this grandiose castling manoeuvre, the two German armoured corps, supported by infantry divisions of Army Group North, were supposed to encircle several armies of the Soviet 1st Baltic Front and 3rd Belorussian Front simultaneously.<sup>196</sup> Hitler even deluded himself that the manoeuvre would result in the encirclement of 'as many as 50 or 60 divisions'.<sup>197</sup> This was yet another example of the Führer's extreme mood swings. Only a short while

before, wholly committed to rigid defence, he had described ‘the idea of free combat in free space’ as ‘rubbish’.<sup>198</sup> Now he himself indulged in a dizzying flight of fancy. Apparently, Model’s successful castling manoeuvre with the armoured units at Warsaw had gone to his head.

On 16 August Field Marshal Model was appointed GOC West in France, Col.-Gen. Reinhardt took over command of Army Group Centre, and Col.-Gen. Erhard Raus succeeded Reinhardt as commander-in-chief of Third Armoured Army. Operation DOPPELKOPF began that same day, and at first made considerable territorial gains.<sup>199</sup> The Soviet operations staffs had not been expecting such an offensive, but this time they reacted quickly, which was relatively easy owing to their multitude of motorized troops. The front-line units went over temporarily to the defensive, while in the rear, armoured units—I Armoured Corps, III Guards Mechanized Corps, and 5th Guards Armoured Army—were made ready for counter-attacks. This procedure, taken over from the Wehrmacht, was by no means unfamiliar to the German attackers. What did come as a surprise, however, was the encounter with the Soviet anti-tank fronts. The Red Army had amassed such a multitude of anti-tank cannon that it was now able to form special anti-tank brigades. These were deployed in threatened sectors in a staggered anti-tank front which, partly protected by minefields, constituted a considerable danger for German tanks breaking through. The fact that during this attack a total of 595 Soviet anti-tank cannon were reported destroyed within 12 days shows how great the threat had been.<sup>200</sup>

Soviet air superiority was another problem. Although the German advance on 17 August was supported by 114 ground-attack aircraft, 116 fighters, and 30 reconnaissance planes,<sup>201</sup> on other days almost only Soviet aircraft were seen in the sky. The essential precondition for the blitzkrieg successes of earlier years, namely massive deployment of the Luftwaffe as flying battlefield artillery, was long a thing of the past. The tank and dive-bomber combination invoked by Guderian had also become obsolete. Not only did the Germans not have enough aircraft as a supporting component of their armoured forces, but the multitude of Soviet ground-attack aircraft was a permanent threat to movements of the Wehrmacht’s armoured units. The Luftwaffe’s insufficiency was not only a matter of grotesque numerical inferiority. The shortage of fuel was also a major factor. The Air Fleet 6 order for the provision of support to Operation DOPPELKOPF contained the following instruction: ‘Careful calculation of fuel allocation is an urgent operational

<sup>198</sup> Ibid. (31 July 1944), 598–9.

<sup>201</sup> Niepold, *Panzeroperationen*, 40.

measure taking precedence over all other considerations.<sup>202</sup> The following passage is also significant: 'Combat units of IV Flying Corps are standing ready but will probably not be deployed owing to the fuel situation.'<sup>203</sup>

The German armoured thrusts were very successful at first, but eventually the main problem proved to be the lack of motorized infantry support, which was urgently needed to secure the flanks and take action against the Soviet anti-tank defences. XXXIX Armoured Corps' thrust towards Jelgava came to a halt halfway at Žagarē. XXXX Armoured Corps, advancing on the right wing, was also unable to take the key area around Šiauliai from far superior enemy forces.

At this critical juncture, just when Operation DOPPELKOPF seemed to have failed, another breakthrough was achieved by the Strachwitz Group, a unit which had only been thought of as flank cover. It had been assigned the task of attacking along the coast on the northern wing, but Maj.-Gen. Count Hyazinth Strachwitz was unable to engage his two brigades in the operation until 19 August, owing to a delay in arrival of the tanks for his unit, which were brought in by sea. Although he had only 60 fighting vehicles,<sup>204</sup> Strachwitz launched a furious attack, helped by the fact that the attention of the Soviet operations staffs was distracted by the two German thrusts on Šiauliai and Žagarē. After achieving the breakthrough, the Strachwitz Group rapidly pushed forward in depth. The next day, 20 August, it reached an advance unit of Sixteenth Army to the east of Tukums, thereby re-establishing the connection with Army Group North.

A noteworthy aspect of this operation was that the German armoured units lacked artillery support, which the Soviet enemy had in abundance. That was the great weak point of the Strachwitz Group, which consisted mainly of tanks. Massive help arrived, nevertheless, although from an unusual source. For the first time ever, a unit of Army Group Centre was supported by warships. On the morning of 20 August a naval unit commanded by Vice-Admiral August Thiele entered the Gulf of Riga. The heavy cruiser *Prinz Eugen* fired 284 rounds from its 203-mm gun turret at the Soviet positions at Tukums to clear the way for the Strachwitz Group. At the same time, the two destroyers Z-25 and Z-28 fired 168 rounds in support of the advance forces of Army Group North pushing forward from the east.<sup>205</sup> The effect was enormous, both practically and psychologically,

and the German navy thus played a very important part in re-establishing the connection between the two army groups.

The point of main effort now shifted to the northern wing, where the fighting continued, with territorial gains by the Germans, until 27 August, after which a long pause set in on both sides. Operation DOPPELKOPF had lasted for 12 days in all, covering an area 180 kilometres wide and around 50 kilometres deep.<sup>206</sup> Its success led to the abandonment of the Soviet offensive (Operation BAGRATION). Even if the German counter-attack did not fulfil all the high expectations of the German command, especially Hitler, it was now quite clear that the Red Army units had worn themselves out. They needed a long period of recuperation and rehabilitation, and above all a new logistic base. It remains to conclude that, contrary to reports at the time, Operation DOPPELKOPF had in fact already failed when the situation was reversed by the individual exploit of a single tank general.

This episode is symptomatic of that phase of the war, when there were numerous individual successes which mostly remained tactical and fragmentary. They could not affect the outcome of the war, which had long been lost, but only influence its duration. The German counter-measures, especially those taken by Model, had now saved the eastern front once again, and a continuous front was re-established. This led Hitler to the dangerously wrong conclusion that the tide of war could yet be turned by an offensive in another theatre of operations. Guderian, however, had advised him to adopt a consistent defensive strategy. He urged Hitler to evacuate the Balkans and Norway and shorten the Apennine front in Italy, since that was the only way to obtain reserves for the highly endangered eastern front. But Hitler, determined to forge ahead regardless, switched the main effort back to the western front.<sup>207</sup> The Allies had marched into Paris from Normandy on 25 August and were pushing further east. The Führer now decided to strike the decisive blow and, with the last German armoured reserves, carry out the operation later known as the Ardennes offensive. In reality, however, in the summer of 1944 the German military effort was already entering its death throes. The retired Bundeswehr general Count von Kielmansegg expressed it as follows: 'It was the beginning of the end—the end of the eastern front—and in conjunction with the Allied invasion in France, it was also the beginning of the end of the war.'<sup>208</sup>

## 7. ANALYSIS OF THE WORST DEFEAT IN GERMAN MILITARY HISTORY

### (a) Importance in the Framework of the Eastern Campaign

Operation BAGRATION, also known as the 'Belorussian Operation', took place on historic terrain. The Red Army units pushed west along the same axis along which

<sup>206</sup> Niepold, *Panzeroperationen*, 82.

<sup>207</sup> Philippi and Heim, *Der Feldzug gegen Sowjetrussland*, 256–7.

<sup>208</sup> Verbal communication of 10 Oct. 1997 by Gen. (ret.) Count von Kielmansegg.

Army Group Centre had previously attacked eastwards. Nor was it a coincidence that the Soviet offensive was launched on 22 June 1944, three years to the day after the beginning of the German attack. At that time, Army Group Centre had stormed forward from the border at Brest-Litovsk with dizzying success. After only six days Armoured Groups 2 and 3, the two arms of the pincer attack, had joined up at Minsk. The battle of Białystok–Minsk was the first battle of encirclement of the campaign and became a model for all subsequent German battles of encirclement, as well as for those conducted by the Soviet forces. A total of 40 Soviet divisions, with some 324,000 Red Army troops,<sup>209</sup> were caught in the trap. According to Russian sources, total losses during the Belorussian defensive operation were 417,729 men<sup>210</sup> and 4,799 tanks and assault guns.<sup>211</sup> Army Group Centre's most comprehensive operation was the double battle of Vyazma–Bryansk, where the Red Army suffered personnel losses of around a million men, of whom 673,000 taken prisoner.<sup>212</sup>

The hazardous nature of the enterprise on which the German command had embarked can be seen from the fact that it was able to deploy only 3,350 tanks, 7,042 artillery cannon, and 2,549 operational aircraft in a 'blitzkrieg' attempt to overrun the huge Soviet empire.<sup>213</sup> Nevertheless, the initial successes were enormous. Within half a year 3.35 million<sup>214</sup> Soviet troops had been taken prisoner, and—according to Russian statistics—20,500 tanks and assault guns, 101,100 artillery cannon and grenade launchers, and 17,900 aircraft had been destroyed.<sup>215</sup> Then, however, the German blitzkrieg came to a standstill in the icy winter before Moscow. The Wehrmacht troops could not understand how the Red Army was able to survive such defeats. While Germany, now cut off from supplies of raw materials, had to expend more and more energy in a war on multiple fronts, the Soviet Union, with its almost inexhaustible resources, was building a huge armament industry. In the end, the Red Army's superiority was so overwhelming that in the summer of 1944 it was able to attack all four German army groups almost simultaneously, with enormously superior force in each case. It put the point of main effort, however, in the offensive against Army Group Centre.

Operation BAGRATION was one of the biggest operations of the Second World War, surpassed only by the battle in the Kursk salient (which consisted of three separate operations). In four army fronts the Red Army concentrated 2.5 million

<sup>209</sup> See *Germany and the Second World War*, iv. 536.

<sup>210</sup> *Grif sekretnosti sniat*, 163. The number of irretrievable losses is given as 341,012 men.

<sup>211</sup> Ibid. 368. <sup>212</sup> Glantz and House, *When Titans Clash*, 337, n. 18.

<sup>213</sup> See *Germany and the Second World War*, iv. 318; *ibid.* 371.

<sup>214</sup> The OKW's original estimate was almost 4 million Soviet POWs for the period from 22 June to end of December 1941; see the OKW table reproduced in Schustereit, *Vabanque*, 73. An amended calculation gave a total of 3.35 million up to mid-December (OKH/GenQu., No. I/6562/41 gKdos. v. 25.12.1941, App. 5); see *KTB OKW*, i. 1106. It is striking that the standard Russian work on military losses, *Grif sekretnosti sniat*, often gives personnel losses that are obviously far too low. That applies particularly to the war's chaotic initial phase, when the Soviet reporting system collapsed just like the armies beaten in the encirclement battles. More recent Russian accounts assume much higher losses; see Sokolov, 'The Cost of War', 183, where the Red Army's losses in the initial period of the campaign from 22 June to the beginning of December 1941 are put at 8,235,000 dead, missing, or wounded.

<sup>215</sup> *Grif sekretnosti sniat*, 367.

men, 45,000 cannon, grenade launchers, and rocket launchers, more than 6,000 tanks and assault guns, and over 8,000 planes (including long-range aircraft). In addition, the biggest partisan operation of the German–Soviet war, in which around 150,000 combatants were deployed, was taking place in the rear of Army Group Centre. As Soviet accounts stress, the frontage of Operation BAGRATION was approximately 1,100 kilometres and the depth of the thrust 550 to 600 kilometres. The operation's duration of 69 days (22 June<sup>216</sup> to 29 August) also seems astonishingly long, given the intensity of the fighting. The Soviet attacks were conducted with great force and without regard to losses. The price of victory was correspondingly high, with personnel losses totalling 770,888 men (180,040 dead or missing and 590,848 wounded).<sup>217</sup> In addition, the Soviet units lost 2,957 tanks and assault guns, 2,447 artillery cannon, and 822 aircraft.<sup>218</sup>

The collapse of Army Group Centre was the heaviest defeat in German military history. According to OKW statistics ('Wehrmacht-Verlustwesen'), personnel losses for the period 21 June to 31 August (including update reports) were 26,397 dead, 262,929 missing, and 109,776 wounded. That gives a total of 399,102 personnel losses.<sup>219</sup> Allowing for returnees, who are not taken into account in the statistics, the actual figure must have been around 390,000. Apart from the battle of the Somme in 1916, in which the Germans and British massacred troops to no avail without any territorial gain worth mentioning, there is no battle in German military history that can be compared with this Armageddon. Even the battle of Verdun, the notorious 'mill on the Meuse', cost the Germans 'only' 330,000 men (including wounded). In the Stalingrad pocket the Wehrmacht lost 60,000 dead and 110,000 wounded.<sup>220</sup> In contrast, German losses in the first phase of the Belorussian Operation (22 June to 10 July 1944), in the course of the battle of encirclement at Minsk, already amounted to around 250,000 men (including wounded).

In comparison with Operation BAGRATION, the battle of Stalingrad, where individual ruined buildings were bitterly fought over, was a microcosm in terms of its spatial dimensions. It nevertheless became the symbolic synonym for German defeat in the war against the Soviet Union. German propaganda had played down the winter battle before Moscow as a setback due only to weather conditions, so it was on the Volga, at Stalingrad, that the myth of German invincibility was shattered. The far worse defeat in Belorussia, on the other hand, seems strangely absent from the awareness of the German public even today. There are two main reasons for this. The first is that, at the time, interest was concentrated almost entirely on the western front, where the battle of Normandy invasion was

<sup>216</sup> In some Soviet accounts the start of the offensive proper is given as 23 June, while 22 June is accounted as a day of preliminary attacks. See this chapter, n. 36.

raging. The second is the attempt on Hitler's life on 20 July 1944, which Nazi propaganda placed in the foreground.

### (b) The Causes of the Catastrophe

#### *The Quantum Leap in Soviet Superiority*

As Clausewitz teaches us: 'Superiority of numbers [...] is in tactics, as well as in strategy, the most general principle of victory.'<sup>221</sup> The weapons potential of the Red Army was many times superior at the start of the campaign in the summer of 1941, but within a few months it had been largely destroyed. Yet the Wehrmacht troops were thrown into despair by their pyrrhic victory. However great the losses they inflicted, the enemy seemed to be getting stronger and stronger. In the course of the war, according to the most recent Russian accounts, the Red Army lost 96,500 tanks and assault guns,<sup>222</sup> 106,400 aircraft,<sup>223</sup> and 317,500 cannon and grenade launchers.<sup>224</sup> But the production figures of the Soviet factories were even higher, in addition to which the western powers were supplying huge quantities of weapons and materials. The summer of 1944 saw a veritable quantum leap. The Soviet potential had grown so much that it was no longer a matter of quantitative increase. What had happened was a qualitative transition to a new manner of operational warfare. This will now be demonstrated by reference to the two main combat parameters, that is, firepower and mobility.

In the sectors of main effort, the destructive power of the consolidated Soviet artillery units had attained such a degree of efficiency that rigid defence of a front sector was no longer possible. Everything in the foremost line was simply pulverized. From now until the end of the war, the Red Army rapidly achieved an *operational* breakthrough in almost all major offensives. It did so even in the particularly well-secured Kovel sector, where all Soviet attacks were still beaten off in the spring of 1944. The greatest surprise, however, was the massive deployment of the Soviet air force, which had not played a major role since its enormous losses in the first year of the campaign. Now, with numerous German fighter units tied down on the western front, it had mastery of the skies. The greatest danger came from the huge number of ground-attack aircraft, which constantly intervened in the fighting. In the breakthrough sectors the German artillery was pinned down for hours by waves of bombing and strafing missions. According to Soviet accounts, the air force flew 55,000 sorties in the first twelve days alone, and 153,000 in the course of the whole operation.<sup>225</sup> This is also described as unprecedented in the 'Great Patriotic War'.<sup>226</sup>

Increasing motorization and mechanization had also enabled the mobility of the Soviet units to attain a new *operational* dimension. Hitherto, the losses incurred by Soviet armour during a breakthrough had mostly been so high that successful

<sup>221</sup> Clausewitz, *Vom Kriege*, 373.

<sup>222</sup> *Grif sekretnosti sniat*, 358.

<sup>223</sup> Ibid. 360.

<sup>224</sup> Ibid. 356.

<sup>225</sup> *Geschichte des zweiten Weltkrieges 1939–1945*, ix. 68, 81.

<sup>226</sup> Ibid. 81.

penetration could not be followed up by an operational thrust in depth. Now, however, its huge arsenal of tanks allowed the Red Army to form large reserves for the second staggered wave. It should also be borne in mind that the western powers sent 22,800 tanks to the Soviet Union during the war.<sup>227</sup> Even more important were the 456,000 trucks and jeeps which the western Allies supplied.<sup>228</sup> They alone made it possible for deep armoured thrusts to be accompanied by infantry and technical supplies. In the opinion of David M. Glantz and Jonathan House, without these deliveries of vehicles from the west, every Soviet offensive from 1943 to 1945 would have ended quickly with only a shallow inlet in the German front. The Wehrmacht would have had enough time to build a new line of defence in the rear.<sup>229</sup> At the end of the war, two-thirds of all the Red Army's trucks had been produced in the west. In the summer of 1944 it was already normal to see Wehrmacht troops marching on foot, accompanied by horse-drawn wagons, pursued by Red Army soldiers on tanks and trucks.

### *Hitler's Disastrous Operational Command*

The motto of the Schlieffen school had been 'Operation is movement.'<sup>230</sup> In the summer of 1944 it would have been 'Immobility means destruction.' Rigidly holding defensive positions inevitably meant delivering up all the personnel and material exposed at the front to the firestorm of the Red Army. Hitler's demand to stand firm in 'fortified places' was thus literally self-destructive. He did not even allow withdrawal to a staggered defence line<sup>231</sup> but insisted that, even in the foremost line, 'every square metre be fought for to the last man'.<sup>232</sup>

The armoured units of the Soviet 'mobile groups' advanced far to the rear of the German front-line troops in order to encircle them. There now remained only the alternatives of withdrawal or destruction. But Hitler was completely fixated on rigid defence and forbade any mobile conduct of operations. Instead, units threatened with encirclement were to remain in place and, if necessary, go over to perimeter defence. The 'fortified places' were a perversion of purely static defence, since encirclement was determined in advance. This obsession of Hitler's was alone responsible for the loss of 12 to 13 divisions of Army Group Centre.<sup>233</sup>

Hitler's style of command was another defect. He 'had extended his dictatorship to the very battlefield'.<sup>234</sup> The more critical the situation became at the front, the more Germany's political and military leader was inclined to decide everything himself, meddling even in tactical details. Field Marshal von Manstein reported a discussion with Field Marshal von Kluge in which the latter complained that 'he

<sup>227</sup> Of these, however, 1,981 fighting vehicles were sunk by German U-boats; see Tsouras, *The Great Patriotic War*, 246.

<sup>234</sup> Niepold, 'Der Abwehrkampf der 12. Panzerdivision', 431.

had to consult Hitler before any operation involving forces of a battalion or more could be mounted'.<sup>235</sup> Hitler's incapacitation of the military experts went so far that battalion commanders were sometimes afraid 'to move a sentry from the window to the door',<sup>236</sup> as Col.-Gen. Heinrici later sarcastically remarked. 'You are bound by the Führer's order. No freedom of decision!'<sup>237</sup>—such were the stereotypical instructions governing command of the eastern front in the summer of 1944. Hitler sought to render inoperative one of the most important principles behind German success, namely mission-type tactics. He really believed he could assess the situation better at the map table in Führer headquarters than the officers responsible at the front. However, by the time a new development was marked on his map, it had often been overtaken by events at the front. Simultaneous critical developments in several theatres of operations repeatedly led to decision bottlenecks. As a result, important decisions where every hour counted frequently arrived at the front 24 to 48 hours too late.

In the disastrous months of June and July 1944 Hitler's dilettantism as a military commander, and above all his operational incompetence, were clearly apparent. All he achieved was tactical tinkering, as can be seen from the comment by retired Bundeswehr general Count von Kielmansegg, who was then serving in the operations division of the Army General Staff: 'The only decisions taken by Hitler and the OKW concerned the transfer of troop units from one sector of the front to another.' That was 'simply opening up a new hole in order to plug another one'.<sup>238</sup> The collapse of Army Group Centre thus marked the absolute nadir of 'the art of operational command' in the German military. Although defeat in Belorussia was inevitable, given the German army's inferiority in forces, it was only Hitler's disastrous wrong decisions that turned it into a complete catastrophe. His ridiculous 'stand firm' orders led to the encirclement of whole armies.

### *Reciprocal Developments in the Two Armed Forces*

The course of the German–Soviet war was marked by a strange phenomenon: the two sides came increasingly to resemble each other, albeit conversely. Thus, in 1944 the Wehrmacht conducted the same war of position which the Red Army had fought in 1941, whereas in 1944 the Soviet forces, at least in part, conducted the operational war of movement fought by the Wehrmacht in 1941. In the first years of the Second World War the Soviet leadership, in an overestimation of its own abilities bordering on hubris, had ignored the German blitzkrieg successes, especially those against Poland and the western powers. All the greater was the shock at the beginning of the German attack, when the Red Army units, many

<sup>237</sup> This was the radio message which Third Armoured Army HQ had to send to the commander of LIII Army Corps encircled in the Vitebsk pocket, after Col.-Gen. Reinhardt had applied in vain to the commander-in-chief of Army Group Centre for permission to break out. See radio message from Pz. AOK 3, Ia, 26 June [1944], 12.50, to Gen. Gollwitzer and Gen. Hutter, BA-MA RH 21-3/v. 392.

<sup>238</sup> Kielmansegg, 'Verteidigungskonzeptionen 1944', 575.

times superior in material resources, were literally overrun. The Soviet officers had only outmoded methods with which to resist the modern German war machine. The learning process lasted until the summer of 1944, by which time the Red Army had managed to copy most of the German recipes for success and to develop successful methods of its own.<sup>239</sup>

In the initial phase of the campaign, the deployment of Soviet troops was dreadfully ineffective. Minimal success was achieved at the cost of maximum losses. The Germans, on the other hand, operated with relative small attacking units, but were repeatedly able to concentrate their forces in the right place at the right time. In comparison, the numerically superior Red Army seemed like a clumsy giant unable to use its strength effectively. Instead of forming a point of concentration, the Red Army's reserves were spread over the whole front, as in the Soviet spring offensives of 1942 and 1943. Even breakthrough battles were launched on a broad front according to the method adopted by Brusilov in the First World War, which the Germans dubbed 'the steamroller tactic', with the Soviet troops attacking in tight successive waves. The human losses were horrendous, for no particularly notable successes. All the greater was the surprise when, in the summer of 1944, the Red Army applied the principle of concentration long practised by the German forces. The Soviet commanders massed their units, which were in any case numerically stronger, in a narrow sector, thus achieving overwhelming superiority at the decisive place. Within its 140-kilometre-wide sector of the front, for example, 3rd Belorussian Front established a breakthrough sector 37 kilometres wide, where it concentrated 25 of its 37 divisions.<sup>240</sup>

The change was most striking in the case of the Soviet armour. According to the German armoured warfare expert Friedrich Wilhelm von Mellenthin, the deployment of Soviet armour in 1941 and 1942 was 'still very awkward', and the first armoured operations were 'a complete failure'.<sup>241</sup> The learning process continued in 1943, when success at Kursk was purchased at the cost of dramatic losses.<sup>242</sup> The great transformation came with the summer offensive of 1944, when, in Mellenthin's words, Soviet armour developed into a 'highly mobile, sharply honed tool in the hands of daring, capable Russian commanders'.<sup>243</sup> It is well illustrated by the conduct of the noted armour commander General Pavel Rotmistrov. On 12 July 1943, at Prokhorovka, Rotmistrov had still launched the newly established 5th Guards Armoured Army in a cavalry-style frontal attack on two German armoured divisions, which ended in disaster. By the beginning of Operation BAGRATION, however, he had learned how to deploy his armoured army operationally, and thrust deep into the German hinterland without getting involved in tactical skirmishes. His pincer attack on Minsk, deep in the rear of Fourth Army, was the decisive blow that led to the collapse of Army Group Centre. But then the Germans adapted to the change, and Model's tactic of short counter-blows inflicted

<sup>239</sup> See Glantz and House, *When Titans Clashed*, 286 ff.; Niepold, *Mittlere Ostfront*, 252.

<sup>240</sup> Niepold, *Mittlere Ostfront*, 249. <sup>241</sup> Mellenthin, *Panzerschlachten*, 256.

<sup>242</sup> Soviet losses at Kursk totalled 6,064 tanks and assault guns (*Grif sekretnosti sniat*, 370).

<sup>243</sup> Mellenthin, *Panzerschlachten*, 258.

painful losses on the Soviet armour. From 26 June to 16 July, 5th Guards Armoured Army shrank from 524 tanks to only 50, which was too much even for a Soviet leadership rather insensitive to losses. Rotmistrov was relieved of his command and transferred to an administrative post.<sup>244</sup> It remains to be said, however, that no other major formation gave the German command such problems as those caused by 5th Guards Armoured Army, ruthlessly driven forward by Rotmistrov.

Whereas in the first phase of the campaign Soviet tanks were mainly deployed in support of infantry, from the summer of 1944 Soviet armour was predominantly used operationally. In the Belorussian operation overall, only 38 per cent of Soviet fighting vehicles were assigned to tactical breakthrough. The remaining 62 per cent, that is, the mass of Soviet armour, was kept back in 'mobile groups' for operational deployment as a second wave during thrusts in depth.<sup>245</sup> Those groups were composed of armoured armies, independent armoured corps, mechanized corps, and cavalry corps. Previously, the armoured forces of the second wave had been thrown into battle on the first day, as soon as a breakthrough 3 to 8 kilometres deep had been achieved. In the 1944 summer offensives, however, the Soviet command waited until the breakthrough was 25 to 40 kilometres deep.<sup>246</sup> Only then did the 'mobile groups' thrust forward with collective force. In this phase of the war, the first wave already had so many tanks available that it was able to force a breakthrough by itself.

The Red Army now adopted the German practice of attacking with strong advance detachments, with disastrous consequences for Army Group Centre. The advance detachments were ordered to push forward in depth without regard to enemy units left in position or to open flanks, and without getting involved in time-consuming engagements with the enemy. Their task was to capture important pieces of territory such as road junctions, or to establish bridgeheads and hold them until the main forces arrived, so as to prevent the enemy from bringing up operational reserves and establishing a new line of defence in the rear. During Operation BAGRATION, Soviet advance detachments often penetrated as far as 50 kilometres to the fore of the main forces, and the armoured corps sometimes attacked more than 60 kilometres to the fore of the general armies.<sup>247</sup> Like the Germans in 1941, the Soviet armoured units now engaged in 'overtaking pursuit', thrusting forward parallel to the paths of retreat of the enemy forces so as to join up in their rear and encircle them. Both the range and speed of the thrusts exceeded those of all previous Soviet offensives. Within ten days 5th Guards Armoured Army, together with 11th Guards Army, had reached Minsk, which was 217 kilometres away, covering an average of 21.7 kilometres a day.<sup>248</sup> That attack came as a shock to the Wehrmacht command, although the Soviet thrusts were still appreciably

<sup>244</sup> Glantz and House, *When Titans Clashed*, 209, 360 (nn. 22 and 29). The recently published (fully revised) Russian account of the Great Patriotic War also speaks of 'the inadequate operations of 5th Guards Armoured Army'; see Timokhovich, 'Operatsiya Bagration', 78.

<sup>245</sup> Niepold, *Mittlere Ostfront*, 249.

<sup>246</sup> Piekalkiewicz, *Krieg der Panzer*, 272.

<sup>247</sup> Niepold, *Mittlere Ostfront*, 250.

<sup>248</sup> Zetterling and Frankson, 'Analyzing World War II', 196–7.

slower than those of the German forces in 1941. At the beginning of the Russian campaign, XXXIX Army Corps (motorized) had advanced 325 kilometres to the Minsk area in four days, covering an average of 81.3 kilometres a day.<sup>249</sup> Model, then in command of 3rd Armoured Division, had needed only six days for the 460 kilometres from Brest-Litovsk to Bobruisk.

A further surprise was the Red Army officer corps' increasing capacity for initiative and flexibility. Breakthrough operations were still carried out by detailed-order tactics, but once a breakthrough had been achieved there was now a tendency to allow commanders greater autonomy in pursuing the attack. In the summer of 1944 there was 'a tendency towards improvisation wholly unknown in 1942 and 1943'.<sup>250</sup> The struggle over the operational plan for the attack on Bobruisk in May 1944 is a telling illustration of the Soviet generals' increasing self-confidence. In opposition to the Stavka, Rokossovsky argued for a two-sided pincer attack rather than a single attacking wedge. What happened next was previously unthinkable. The commander-in-chief of 1st Belorussian Front stood up against the plan endorsed by Stalin and even threatened to resign his command. After heated discussions with Stalin, he finally managed to get his opinion accepted.<sup>251</sup>

The main reason for this unexpected development is to be found in the contrasting behaviour of the two main protagonists, Hitler and Stalin. For the Soviet dictator, the fact that he had made his mistakes at the beginning of the war had a positive effect. From then on, he paid attention to advice from military experts like Vasilevsky and Zhukov. Hitler, on the other hand, increasingly lost touch with reality after the Wehrmacht's initial successes. Succumbing to the delusion that he was a great military commander, he surrounded himself with uncritical 'extras' like Wilhelm Keitel. His mistakes in the final phase of the war were very similar to those of Stalin in the initial phase. The Soviet dictator had used draconian methods to enforce the rigid defence of all front lines, and was thus to blame for creation of the pocket to the west of Minsk, for example. Three years later, Hitler's 'stand firm' orders led symmetrically to the creation of a similar pocket to the east of that city. As Count Alfred von Schlieffen put it, a complete battle of encirclement like the battle of Cannae requires 'on one side a Hannibal' and 'on the other side a Terentius Varro'.<sup>252</sup> In 1941 the role of Terentius Varro was played by Stalin, and in 1944 by Hitler.

Operation BAGRATION in the summer of 1944 marked the decisive turning point in the Red Army's development into a modern, efficient fighting force. It was nothing less than a mutational leap, since the Soviet leadership had used the preceding long spring break to reform the combat forces assigned to the offensive. The Soviet command also took the risk of adopting, for the first time, new methods regarding the operational deployment of its troops. The fact that the Soviet units suddenly attacked in the manner of a German blitzkrieg caused huge surprise and

<sup>249</sup> Ibid. 194.

<sup>250</sup> Glantz, 'Strategische Operation', 348.

<sup>251</sup> Erickson, *Stalin's War*, ii. 203.

<sup>252</sup> Schlieffen, *Cannae*, 262.

contributed considerably to their success.<sup>253</sup> For that reason, BAGRATION was probably the most brilliant Soviet operation of the whole Great Patriotic War.

Some qualification is needed, nonetheless. The new flexibility was demonstrated only at the top level of command, while the middle and lower levels continued to act in a mechanical, stereotypical fashion.<sup>254</sup> Despite the very noticeable progress in the deployment of armour, by the end of the war the Red Army had still not succeeded in harmonizing its armour with other arms and in waging a fully effective ‘combined-arms combat’, which the Germans had already mastered in 1941. As a result, the armour in particular suffered considerable erosion. Every second fighting vehicle deployed in Operation BAGRATION had to be totally written off.<sup>255</sup> According to Russian statistics, the Red Army lost a total of 23,700 tanks and assault guns in the course of 1944.<sup>256</sup> As already discussed, this was partly due to technological factors.<sup>257</sup> In the summer of 1943 the German armoured forces had been raised to the peak of technical development with the Panther and Tiger tanks. Although the Red Army introduced improved tank models such as the T-34/85 in 1944, the modern German tanks were still far superior, as can be seen clearly from a technical comparison.<sup>258</sup> In the summer of 1944 the numerically small but qualitatively superior German armour was thus once again able to save the front. In carrying out rapid improvised counter-strokes, on which Hitler was able to exert only limited influence, mission-type tactics still prevailed, allowing middle- and lower-level commanders a high degree of flexibility. Despite the astonishing metamorphosis of the Red Army, which the Germans had thought impossible, the Soviet command continued to suffer from the main problem of insufficient military efficiency. Right until the end of the war, against the background of seemingly inexhaustible reserves, it tended to crush the enemy by force of numbers, suffering horrendous losses in the process. Such was the case even in Operation BAGRATION, when it was only in the first phase that the enemy was outmanoeuvred operationally instead of being overwhelmed at the tactical level. In the course of that operation, according to the calculations of the Swedish military historian Niklas Zetterling, the ‘casualty-inflicting capability’<sup>259</sup> of the German forces was 5.4 times

<sup>253</sup> Dunn, *Soviet Blitzkrieg*, 2 ff.

<sup>254</sup> See Niepold, ‘Der Abwehrkampf der 12. Panzerdivision’, 430; id., *Mittlere Ostfront*, 60.

<sup>255</sup> 2,957 of the approximately 6,000 tanks and assault guns were lost in the course of the operation; *Grif sekretnosti sniat*, 371.

<sup>256</sup> Ibid. 367.

<sup>257</sup> See the technical and tactical analysis of the tank battle of Kursk in Part II, Chapter III.3 of the present volume.

<sup>258</sup> The result of an OKH study in the summer of 1944 is very revealing: (a) the Panther (75 mm KwK 42/L70) was far superior to the improved, newly introduced T-34/85 for frontal fire, and approximately equal for side and rear fire; it was superior to the Josef Stalin-122 for frontal fire, but inferior for side and rear fire; (b) the Tiger I (88 mm KwK 36/L56) was superior to the T-34/85 and inferior to the Josef Stalin-122 at long range; (c) the Königstiger (88 mm KwK 43/L71) was far superior to the T-34/85 and the Josef Stalin-122; (d) the Jagdtiger (128 mm Pak 44/L 55) was far superior to both the T-34/85 and the Josef Stalin-122. See Panzeroffizier beim Chef GenSt d H, No. 793/44 g.Kdos., 29 June 1944 BA-MA RH 10/59, fos. 25–31. Probably the clearest graphical comparison of the combat strengths of the German and Soviet tanks is found in Baginski, ‘Übersicht’, 340–5.

<sup>259</sup> For the definition of this term, see Zetterling, ‘Loss Rates’, 900–1.

greater than that of the Red Army.<sup>260</sup> The Wehrmacht's ability to inflict many times more losses on the enemy (in relation to its own strength) was significant even in the case of this bitter defeat.

### *Wrong Assessment of the Enemy Situation*

The importance of this factor, discussed previously in the context of German enemy intelligence, is overestimated in most of the accounts which have appeared so far. Even if the Soviet operational plan had fallen into German hands in advance, it would have made no difference to inevitable defeat. Soviet superiority was simply too great for the Wehrmacht to react successfully, and its own 'operational reserve' was tied down in the west defending against the Allied invasion forces. Furthermore, it is illusory to assume that Hitler would have abandoned his fanatically held 'fortified places' principle and evacuated the Belorussian balcony in time, if it had been identified as the point of main effort of the Soviet offensive. Nevertheless, the Red Army leadership was itself very surprised by its overwhelming victory and by the penetrating effect of the newly adopted methods. This raises the question whether the Soviet command had not also made an inaccurate assessment of the enemy position and underestimated its own possibilities.

### **(c) Operation BAGRATION: The Soviet Missed Opportunity for a Swift End to the War**

The Soviet operation in Belorussia doubtless achieved a great deal, but it did not do what appears to have been possible with hindsight, that is, bring about the collapse of the German eastern front with a single mighty blow. In the spring of 1944 the war was not only lost for Germany, but was already almost over. The situation was particularly critical in the east, where the Wehrmacht's inferiority had attained dramatic proportions.

In those circumstances the OKH feared the Soviet command would exploit Germany's acute vulnerability at the beginning of the invasion in the west to launch an offensive that would decide the war. It was believed that the Russians would concentrate all available forces in one place to deliver a death blow to the German eastern army. Foreign Armies East, under Maj.-Gen. Gehlen, had long since located the Archimedean point at which the German front could be operationally dislodged. That point was the Kovel salient, from which Red Army armoured units could rapidly advance to the Baltic via Warsaw and enclose two German army groups. Then the whole eastern front would collapse and the road to Berlin would be open.

In retrospect it seems highly likely that such an encirclement attack would have succeeded. Today, unlike the Soviet leadership in the early summer of 1944, we possess precise information as to the real relative strength of the two sides and the

<sup>260</sup> Ibid. 902.

subsequent course of events. At all events, in the summer of 1944 the Red Army rapidly achieved an operational breakthrough in every offensive. On 18 July, 1st Belorussian Front began a secondary offensive at Kovel and, although only its left wing took part in the attack, the German defenders were simply swept away. Only a few days later there was a gap almost 100 kilometres wide in the German front. It is therefore easy to imagine the avalanche that would have been set in motion if Operation BAGRATION had been carried out from Kovel in the direction of Warsaw, rather than from the Belorussian balcony in the direction of Minsk. It was, after all, the greatest mass of forces ever deployed in an offensive till that time. The Red Army command nevertheless made the mistake of dispersing its strategic potential at operational level. The glorificatory Soviet historiography repeatedly invoked Stalin's 'ten blows' (offensives) of 1944, but close examination shows that they were several blows too many. The fact is that in the summer of 1944 the Soviet command did not risk mustering its forces for the decisive death blow, but contented itself with inflicting a multitude of wounds on the enemy. Instead of a decisive strategic offensive in a single sector, it conducted a series of operational strikes along the whole front. Operation BAGRATION against Army Group Centre was only the main blow of the summer of 1944. It was followed by other major offensives, staggered from the outset, with the result that all four German army groups on the eastern front were attacked simultaneously.

So why did the Soviet command shrink from the risk of a decisive offensive? In previous years it had repeatedly pursued excessive strategic objectives and taken great risks. But that was precisely the reason for what the Germans saw as its unexpected restraint. Past experience of failed offensives with huge losses proved too painful. The Soviet command had already tried to force a decisive battle in the winter of 1941–2, and in so doing had 'neglected the possible in quest of the impossible'.<sup>261</sup> Even more painful were the memories of February–March 1943, when the Red Army high command, intoxicated by victory after the triumph of Stalingrad, tried to bring about the collapse of the whole eastern front and fell into Field Marshal von Manstein's trap. Whereas on several occasions the Soviet command had fatally underestimated the Wehrmacht and considered it beaten, it now strangely overestimated its hopelessly inferior enemy. The Red Army high command suddenly showed a reluctance to take risks that was inversely proportional to its actual strength.

Moreover, the idea of a bold thrust on Warsaw evoked a personal trauma of Stalin's. It seems to have conjured up the spectre of Warsaw in 1920, when the Red Army pushed far into Poland at the end of the Russian Civil War, despite its overextended front lines. At that time the offensive had been continued in the direction of Warsaw mainly at the initiative of Stalin, who was a member of the military council, after which Marshal Piłsudski had launched the counter-offensive against the Red Army's exposed flank which led to the famous 'miracle on the Vistula'. Stalin clearly shrank from attempting a decisive offensive by means of an

<sup>261</sup> For the aphorism, see Clausewitz, *Vom Kriege*, 1040.

advance along the Vistula at Warsaw, which would again expose the Red Army's flanks, and the Soviet command considered a pincer attack in the style of Manstein's 'sickle cut' in 1940 during the western campaign to be too risky.

During the ongoing offensive there was nevertheless a second chance to put that idea into practice. On 8 July, given the surprisingly favourable course of the operation, Zhukov called for the establishment of a new point of concentration. The plan which the German general staff so feared was now on the table. The Soviet attacking forces concentrated near Kovel were to turn north towards Warsaw, and from there advance on East Prussia in a bold manoeuvre that would have cut off the whole north wing of the German eastern front. But Stalin refused. Not until 27 July did he instruct Rokossovsky to turn a section of his troops north towards Warsaw. It was too late, however, since Field Marshal Model had meanwhile brought up his last armoured reserves, with which he was able to stop the advance on Warsaw at the last moment. The result was a second 'miracle on the Vistula'. Having lost the first battle by risking too much, Stalin lost the second by risking too little. Thus, the end of the war was needlessly postponed. Hitler and his regime were granted another stay of execution, and the bloody battles ended only in 1945.

### III. The Defensive Successes of Army Group Centre in the Autumn of 1944

*Karl-Heinz Frieser*

The Soviet Operation BAGRATION offensive had been stopped, but Army Group Centre now had its back to the wall, with several of its units already positioned just before the border of East Prussia. What ought to have been done then was to concentrate all available forces on defence of Germany's heartland, the territory of the Reich. That, however, was contrary to Hitler's operational approach, which was eccentric in the literal meaning of the word. The Army General Staff (OKH), as well as the commanders-in-chief of the army groups involved, wanted a 'concentric' solution, that is, withdrawal of Army Group North, which was stationed on the northern periphery in the Baltic area, to behind the threatened central front. Those units would then make up the operational reserve without which defence of the eastern front appeared unthinkable. Hitler, however, was completely fixated on the idea of the 'Baltic stronghold', and went so far as to transfer even more units from the centre to the northern wing. The transfer of Third Armoured Army to Army Group North, ordered on 20 September, was felt by the Army Group Centre command to be a serious reduction of its forces, leaving it with only 29 infantry divisions and five armoured divisions.<sup>1</sup> In terms of equipment, moreover, Army Group Centre's remaining units had little similarity to those which had formerly fought in its ranks. Its air force too was only a shadow of its former self, as can be seen from the following two reports. In September, 52nd Fighter Wing, deployed in the area of Army Group Centre, reported its 10,000th kill, although by far the greater part of the tally had been scored during the first phase of the Russian campaign.<sup>2</sup> All the more sobering is a contemporaneous report from the commander-in-chief of Air Fleet 6, Col.-Gen. Robert Ritter von Greim, pointing out that fuel rationing had become inevitable. According to von Greim, in the area of Army Group Centre only three sorties a day of 20 to 25 ground-attack aircraft and a total of 40 fighters were now possible. He added that further very stringent economy measures were to be expected, so that in future it would sometimes be impossible to fly at all.<sup>3</sup>

## 1. THE PROBLEM OF THE VISTULA BRIDGEHEADS

Ninth Army was deployed on Army Group Centre's right wing along the west bank of the Vistula, although its front line protruded eastwards across the river in an 'L' shape just before Warsaw, seeking to connect with Second Army's positions on the Bug. At the end of June it was disbanded and its HQ was withdrawn to the Warsaw area, where a completely new Ninth Army was to be formed. However, the units intended for the new formation arrived only sporadically, so that it was able to cover only part of the front sector assigned to it on 25 July.<sup>4</sup> On 29 July the Soviet 69th Army had already crossed the Vistula at Puławy and established a bridgehead ultimately 25 kilometres wide and 3 to 4 kilometres deep, of which only the northern third lay in the combat zone of Ninth Army while the larger part came within the front sector of Army Group North Ukraine. The Vistula bridgehead at Magnuszew, south of Warsaw, which was 40 kilometres wide and 20 kilometres deep, appeared even more dangerous. There 8th Guards Army had crossed the river on 1 August, followed by 1st Polish Army and XVI Armoured Corps.

On the same day, 1 August, the Polish Home Army (*Armia Krajowa*) had begun the Warsaw Uprising, which the Germans did not finally manage to suppress until 2 October.<sup>5</sup> Surprisingly, the files of Ninth Army make very little reference to the fighting in the Polish capital.<sup>6</sup> The reason is that the city was temporarily 'extra-territorial', since suppression of the uprising had been assigned to Reich Leader SS Heinrich Himmler. The forces deployed in the fighting were, first and foremost, units of the police and General SS (not the Waffen SS), but they distinguished themselves more by the atrocities they committed than by their professional conduct of combat operations, so that later troops of Ninth Army also had to be deployed. From the operational viewpoint, the uprising failed after only a few hours, since the Polish resistance fighters were able to occupy neither a bridge over the Vistula nor any other important strongpoint. Although German transport movements had to be diverted around Warsaw during the first days of the insurrection, the Germans soon succeeded in enclosing the insurgents in individual quarters of the city. Once that had been done, the danger point was isolated and did not weigh decisively on Ninth Army's operational command. Rather, its main problem was containment of the two Vistula bridgeheads at Puławy and Magnuszew.

The German operations staffs were getting very nervous about the different offensive options open to the Soviet forces, which were in a position to attack both westwards and northwards.<sup>7</sup> They feared a double encirclement of Warsaw, on the

<sup>4</sup> KTB 9. Armee, 25 Jul. 1944, BA-MA RH 20-9/205, 2, fo. 4.

<sup>5</sup> The controversy about the Red Army's halt before Warsaw is discussed in Part V, Chapter II.6(a): 'The Tank Battle before Warsaw as an Operational Turning Point'. See also *Germany and the Second World War*, v/II. 188–90.

<sup>6</sup> An exception is a sub-chapter of the army's war diary entitled 'On the Warsaw Uprising'; see BA-MA RH 20-9/205, 70–4, fos. 73–7.

<sup>7</sup> On German assessments of the enemy situation, see Winkler, 'Abwehrkämpfe der Heeresgruppe Mitte', 76 ff. and 327 ff.; Abt. Fremde Heere Ost (I), 'Kurze Beurteilung der Feindlage', esp. the reports of 31 July to 27 Aug. 1944, BA-MA RH 2/1968, fos. 16–91; Abt. Fremde Heere Ost (I), 'Beurteilung der Feindlage im großen (Stand 4.8. abends)', BA-MA RH 2/2158; Abt. Fremde Heeres

one hand by a pincer movement from the south from the Magnuszew bridgehead, and on the other, from the northern part of the Vistula bend.<sup>8</sup> In the event, most of the units of 1st Belorussian Front first advanced north towards the Vistula–Narew–Bug river triangle north-east of Warsaw. Their main objective was the Vistula crossing at Modlin, from which a second pincer movement to encircle the Polish capital could be launched. This dangerous northward thrust failed at the beginning of August, but a new danger had arisen in the meantime, that of a concentric Soviet attack on Radom from the bridgeheads at Magnuszew and Puławy. If that offensive succeeded, it would inevitably lead to an operational breakthrough and an in-depth advance of the Red Army to the west. What caused the OKH most concern, however, was the even larger bridgehead at Sandomierz (also referred to as the Baranów bridgehead), which lay further to the south in the sector of Army Group North Ukraine. From there, there was the possibility of a westward advance by 1st Ukrainian Front in the direction of Silesia, especially if such an offensive were supported by a push by the southern wing of 1st Belorussian Front from the Puławy bridgehead. Col.-Gen. Heinz Guderian considered the threat on the Vistula south of Warsaw particularly serious. While a deeply staggered system of defences had been established in the Narew sector in the forefield of the East Prussian border, such defensive preparations were lacking in the Vistula bend. If the front were to collapse there, then in Guderian's opinion there would no longer be any chance of 'halting the enemy before Silesia'.<sup>9</sup>

At that point in time Ninth Army was able to form only a thin security line to contain the Soviet bridgeheads, so two infantry divisions and a few smaller units were hastily brought in. The situation became so acute, however, that at the height of the tank battle before Warsaw, 19th Armoured Division and Armoured Paratroop Division 'Hermann Göring' had to be pulled out and moved past the embattled city to the west bank of the Vistula.<sup>10</sup> Their allotted task was to carry out counter-attacks on the two Soviet bridgeheads as soon as possible,<sup>11</sup> but an assault against such overwhelmingly superior forces seemed absurd, especially when the Soviets put a multitude of anti-tank and artillery cannon into position and concentrated strong armoured units behind them. In bitter fighting, the German units nevertheless managed to constrict the bridgeheads but not to eliminate them. Soviet attempts to break out of the two Vistula bridgeheads were similarly

Ost (I), No. 2683/44 g.Kdos., 15 Aug. 1944, 'Beurteilung der Gesamtfeindlage vor deutscher Ostfront', BA-MA RH 2/2086; KTB HGr Mitte, 12 and 18 Aug. 1944, BA-MA RH 19 II/199, fos. 120 and 171; KTB 9. Armee vom 17.8.1944', BA-MA RH 20-9/225; AOK 9, Ia, No. 4250/44 g.Kdos., 21 Aug. 1944, 'Lagebeurteilung' (*ibid.*).

<sup>8</sup> This situation assessment corresponded to the actual Soviet planning; see Stemenko, *Im Generalstab*, ii. 103 and 111 (map).

<sup>9</sup> KTB HGr Mitte, 26 Aug. 1944, BA-MA RH 19 II/199, fo. 256.

<sup>10</sup> *Ibid.*, 2 Aug., fo. 28.

<sup>11</sup> On the action taken by Ninth Army against the Vistula bridgeheads, see BA-MA, Study ZA 1/2054, 82 ff., 109–10, 113–14, 116–17; Winkler, 'Abwehrkämpfe der Heeresgruppe Mitte', 332 ff., 336 ff., 341 ff.

unsuccessful. In September the fighting died down and the situation stabilized. This was due partly to the arrival of German reserves but mainly to the fact that the Red Army had transferred its point of main effort to the Narew sector north-east of Warsaw. On 25 November the OKH took the incisive step of transferring Ninth Army to the command of Army Group A (formerly North Ukraine). As a result, the whole Vistula sector, including Warsaw, now came within the area of responsibility of Army Group A, leaving Army Group Centre free to concentrate on the defence of East Prussia. Front-line activity on the Vistula had meanwhile taken on the form of a war of position, but that was only the calm before the storm which was unleashed from those bridgeheads on 12 January 1945.

## 2. PREVENTION OF THE BREAKOUT TO THE NORTH IN THE BUG–NAREW SECTOR

The boundary between Ninth and Second Armies ran about 35 kilometres east of Warsaw. That proved to be the location of a neuralgic point on the eastern front, that is, the Vistula–Bug–Narew triangle. It was becoming increasingly clear that the main Soviet thrust was directed northwards past Warsaw towards East Prussia. Although the Soviet 2nd Armoured Army had been beaten back in the tank battle before Warsaw, most of the German armoured units had had to be withdrawn again. The Red Army, on the other hand, had brought up new forces and continued to direct its attacks against the endangered front sector to the east of Warsaw, where Ninth Army had deployed the two armoured divisions of IV SS Armoured Corps and 73rd Infantry Division. On 17 August the balance of forces was as follows. Ninth Army had four armoured divisions and three infantry divisions with which to defend its 180-kilometre stretch of front (including the Vistula line). Arraigned against it were five Soviet armies and several armoured or mechanized corps, giving the enemy a superiority of around 7 to 1 in infantry and armour.<sup>12</sup>

In the case of the neighbouring Second Army, which consisted mainly of 12 infantry divisions, the enemy superiority seemed less dramatic,<sup>13</sup> but it had been obliged to give up its two armoured divisions and no longer had a single large armoured unit at its disposal. The Red Army command nevertheless concentrated the mass of 1st Belorussian Front against the interface between Second and Ninth Armies. As already discussed, there was nothing the OKH feared more than an offensive with precisely that direction of thrust. Following a breakthrough in the lower reaches of the Bug and Narew, the Soviet attacking forces would be able to advance almost unimpeded along the Vistula to the Bay of Danzig. At the same time, 2nd Belorussian Front stepped up the pressure on the left wing of Second

<sup>12</sup> AOK 9, Ia No. 4142/44 g.Kdos. an Obkdo. HGr Mitte, 17 Aug. 1944, 'Lagebeurteilung der 9. Armee vom 17.8.1944', BA-MA RH 20-9/225; see also BA-MA, Study ZA 1/2054, 219.

<sup>13</sup> See BA-MA, Study ZA 1/2054, 219.

Army, while Fourth Army, its neighbour to the north, was hard pressed by 3rd Belorussian Front, which was attacking frontally towards East Prussia.

On 18 August, 1st Belorussian Front opened a new offensive exactly at the expected place.<sup>14</sup> Second Army had to yield to the overwhelming pressure and withdraw its right wing to the Bug, but it nevertheless managed to prevent an operational breakthrough by the enemy. Ninth Army pulled back only part of its left wing, otherwise continuing to hold a strong bridgehead on the Vistula next to the Warsaw suburb of Praga. On 22 August Second Army's left wing was also attacked by 2nd Belorussian Front from the east and forced back. Then, towards the end of the month, the exhausted Soviet units halted their offensive.

At the conclusion of Operation BAGRATION, the German troops had been thrown back almost to their starting position at the outset of the eastern campaign in June 1941. The front now ran more or less along the line established by the Hitler–Stalin pact for the partition of Poland. It therefore seemed logical for the Soviet general staff to turn once again to the plan conceived at that time as a hypothetical study for an attack on Germany.<sup>15</sup> Georgii Konstantinovich Zhukov, as chief of staff of the Red Army, had drawn up a plan in which the second phase was a thrust along the Vistula to the Baltic, aimed at enclosing the German troops stationed in East Prussia in an enormous pocket on the coast. When he put the idea to Stalin on 15 May 1941, however, the latter rejected the concept as too risky, and the plan was shelved.<sup>16</sup> We shall not enter here into the discussion of the preventive war thesis. The concept of military geography determinants which channel the advance of attacking forces is a more interesting idea. In this particular case, it is the lower reaches of the Vistula, running into the Baltic Sea, which, in the course of military history, have repeatedly predetermined the operational direction of thrust. Thus, the Russian pincer attack on East Prussia at the beginning of the First World War had been carried out according to a plan similar to that adopted in the autumn of 1944. In 1914 Russia's Narev army had advanced from the south towards the Baltic to cut off the German troops stationed in East Prussia from retreat behind the Vistula, while the Neman army attacked frontally from the east. On that occasion, however, the Narev army suffered a debacle at Tannenberg.

A similar pincer attack seemed to be in the offing in the spring of 1944, with German enemy intelligence fearing a Soviet advance from Kovel to the Vistula estuary via Warsaw. That plan, as we have seen, was initially rejected by the Soviet leadership, but the unexpectedly favourable course of Operation BAGRATION had put it back on the table. On 8 July Zhukov had again put to Stalin his proposal to

<sup>14</sup> On the fighting in the Bug–Narew sector in the second half of August, see *ibid.* 114 ff.; Winkler, 'Abwehrkämpfe der Heeresgruppe Mitte', 352 ff., 406 ff. See also the daily reports of Second Army, BA-MA RH 20-2/959 to 970.

<sup>15</sup> This plan had been drawn up by Zhukov in collaboration with Semyon Konstantinovich Timoshenko, the People's Commissar for Defence, in a memorandum entitled 'Considerations on the Plan for Strategic Deployment of the Armed Forces of the Soviet Union in Case of War with Germany and its Allies'; see Danilow, 'Präventivschlag', 42, 49–51, and the collective volume *Präventivkrieg?*

<sup>16</sup> Bezymensky, 'Zur Frage des Zhukov-Plans', 133 ff., 137–8.

cut off East Prussia in a huge pincer operation. In operational terms it was an updated version of his earlier plan of 15 May 1941.<sup>17</sup> However, Stalin had once again refused, and subsequently made only insufficient forces available for a push in the direction of Warsaw. As a result, Model managed to halt the dangerous Soviet advance.

At the end of August the course of the front to the east of the Vistula was surprisingly similar to the ‘30-day line’ which was to have been reached at the end of the first operational phase under Zhukov’s plan of 1941.<sup>18</sup> It may, therefore, be reasonably assumed that he was again planning an offensive thrust aimed at the Vistula estuary. While 3rd Belorussian Front was to advance frontally against East Prussia from the east, strong forces of 1st and 2nd Belorussian Front were to cross the Narew and push forward along the lower reaches of the Vistula as far as the Baltic. After the conclusion of Operation BAGRATION, which had been extremely exhausting, there was a noticeable decline in combat operations throughout the northern half of the eastern front. Nevertheless, the Soviet leadership considered the Vistula–Narew–Bug triangle to the east of Warsaw so important, as the springboard for an advance to the Baltic Coast, that it resumed its attacks in that key area after only a short break.<sup>19</sup>

On 3 September several armies belonging to 1st and 2nd Belorussian Fronts began a new offensive against the right wing of Second Army.<sup>20</sup> The pressure was so great that withdrawal behind the Narew was authorized only a day later. For Army Group Centre HQ, ‘the deployment of forces and direction of thrust’ left ‘no doubt that this was the anticipated decision-seeking enemy attack on East Prussia’.<sup>21</sup> Clearly, the Red Army wanted to take possession of the Bug–Narew crossings at Serock, Pułtusk, Różan, and Ostrołeka, so as to be able to continue the operation in a north-westerly direction against the lower reaches of the Vistula. It now became apparent once again that the German eastern army was no longer capable of mobile conduct of operations. It lacked motor vehicles everywhere and, for the few which it did have, there was hardly enough fuel.<sup>22</sup> As the German units attempted to withdraw behind the Narew, mostly on foot and with numerous horse-drawn vehicles, the pursuing Soviet troops, massively equipped with armoured and motor vehicles, overtook them in various places and reached the river first. By 4 September the Soviet advance forces had already reached the Narew, and in the following days they succeeded in establishing a bridgehead to the north of Serock

<sup>17</sup> Bezymensky, ‘Der sowjetische Vorstoß’, 90–1.

<sup>18</sup> Danilow, ‘Präventivschlag’, 44, 49. See also Winkler, ‘Abwehrkämpfe der Heeresgruppe Mitte’, 312.

<sup>19</sup> Stemenko, *Im Generalstab*, ii. 110.

<sup>20</sup> Unfortunately, apart from the Second Army’s daily reports (BA-MA RH 20-2/972–986), the German archives contain only a few files relating to these combat operations. On this topic, see the captured German files in the Russian State Military Archives in Moscow (RGVA), which include the following Second Army war diaries, hitherto considered missing: KTB 1 to 9 Jun. 1944, RGVA, F. 1275-2-279; KTB 7 to 11 Sept. 1944, RGVA, F. 1275-2-278), and KTB 12 to 19 Sept. 1944 (RGVA, F. 1275-2-280).

<sup>21</sup> KTB HGr Mitte, 4 Sept. 1944, BA-MA RH 19 II/200, fo. 24.

<sup>22</sup> Winkler, ‘Abwehrkämpfe der Heeresgruppe Mitte’, 440.

and another to the south of Różan. Second Army was scarcely able to take immediate offensive action against those bridgeheads. The combat strength of 5th Light Infantry Division, for example, was down to 350 men.<sup>23</sup>

On 10 September 1st Belorussian Front opened an offensive against the left wing of the neighbouring Ninth Army east of the Vistula. As German enemy intelligence had established, the Soviets had massed nine armies, partly staggered in depth, in a 140-kilometre stretch of the Narew front between Warsaw and Łomża. They comprised a total of 71 rifle divisions, five armoured and mechanized corps, and one or two cavalry corps.<sup>24</sup> On 14 September the German troops had to evacuate Praga, the Warsaw district on the east bank of the Vistula, following which the Soviet 1st Polish Division crossed the river in the night of 16 September and established a temporary bridgehead in the western part of the capital, although its units were then forced to retreat with heavy losses. Stalin apparently considered a frontal attack too unlikely to succeed: 'To take Warsaw in a frontal attack, we would have to bring heavy armour and heavy artillery over to the far bank.'<sup>25</sup> Instead, Warsaw was to be taken by means of an outflanking movement. For the Polish resistance, the prolongation of the fighting caused by such an indirect attack would be fatal, since the insurgents in Warsaw were running out of food and ammunition and their situation was completely desperate.

The German operations staffs also got very nervous when 1st Belorussian Front again attacked with great force northwards along the Vistula in order to take possession of the strategically important Narew estuary at Modlin. If the Red Army succeeded in crossing the river there to the north of Warsaw, not only would the city be lost but the whole southern wing of Army Group Centre would threaten to collapse. Above all, the German command seemed hypnotized by the repeatedly conjured-up danger of a north-westerly thrust by the enemy to the Vistula estuary.<sup>26</sup> In the event, the Soviet attack encountered the strongest position on the German front, defended by Ninth Army's two SS armoured divisions. It failed, with painful losses. Attempts by 2nd Belorussian Front to break through the Narew line further to the east were equally unsuccessful.

On 2 October the last pocket of resistance in Warsaw surrendered and the insurgents gave themselves up as prisoners of war.<sup>27</sup> The capitulation was conducted 'on chivalrous terms', since there had meanwhile been a change of course in German policy and propaganda. It was recognized that the Polish Home Army (*Armia Krajowa*) was strenuously opposed to Bolshevism and feared Sovietization of its strongly Catholic country. Moreover, there was great bitterness among the

<sup>25</sup> Quoted in Timokhovich, 'Operatsia Bagration', 76.

<sup>26</sup> KTB 9. Armee, 16 Sept. 1944, BA-MA RH 20-9/205, 137, fo. 140; on this, see Winkler, 'Abwehrkämpfe der Heeresgruppe Mitte', 375, and the sketch 'Wichtige Frontaufklärungsmeldungen im September 1944' attached to App. 4 to Frd. H.Ost (I), No. 3508/44 g.Kdos., 7 Oct. 1944, BA-MA RHD 18/251.

<sup>27</sup> All in all, an estimated 16,000 *Armia Krajowa* combatants and up to 150,000 civilians lost their lives in the fighting in Warsaw; see Chiari, 'Die Heimatarmee', 2.

insurgents about the behaviour of the Red Army, which had halted its offensive just before Warsaw. As a result, attempts were made by the German side to win over the Poles for the common fight against the Stalin regime, but they appeared half-hearted and ambivalent. Above all, the change of direction came too late.<sup>28</sup> Since that time there have been accusations from the Polish side that Stalin cynically sacrificed the ‘bourgeois’ uprising to the Germans. Russian historians, on the other hand, invoke the vigorous defence put up by the Germans. Be that as it may, in August–September 1944, according to Russian sources, the Red Army lost 246,000 men (including 11,000 Polish soldiers fighting in its ranks) in combat in the Warsaw area.<sup>29</sup>

Despite the repression of the Warsaw Uprising, the situation of Army Group Centre remained extremely critical. In September the OKW issued a special directive warning of the threat posed by the Soviet bridgeheads on the Narew.<sup>30</sup> It resulted in Operation SONNENBLUME, in which Army Group Centre again massed all available forces for an attack on the Serock bridgehead. On 4 October, XX Army Corps, which was stationed in the area, launched the attack with the support of two armoured divisions. The opposing enemy force, 65th Army, was taken so much by surprise that the German units made considerable territorial gains at first, even reaching the bank of the Narew in some places. Then the Soviet resistance stiffened, and the operation was broken off in the evening of 8 October.<sup>31</sup>

In the meantime, preparations for a new Soviet large-scale offensive on the Narew had been detected. The Red Army was apparently planning a ‘breakthrough to the Baltic to cut off East Prussia’.<sup>32</sup> The offensive by 1st and 2nd Belorussian Fronts got under way on 10 October.<sup>33</sup> In the ensuing battle of the Narew, which lasted with some interruptions until 30 October, the Soviet troops managed to enlarge the Serock and Różan bridgeheads considerably, but they were unable to take Pułtusk, the key position between the two bridgeheads. In this battle too, the German units were threatened by logistic collapse, as can be seen from the following entry in the Second Army war diary: ‘The present shortage of ammunition cannot be stressed seriously enough.’<sup>34</sup> The front was several times on the point of collapse, mainly because many German regiments were left with no more

<sup>28</sup> On this, see Schwendemann, ‘Die Kapitulation’, 234 ff., 244 ff.

<sup>29</sup> Timokhovich, ‘Operatsia Bagration’, 76.

<sup>30</sup> KTB HGr Mitte, 20 Sept. 1944, BA-MA RH 19 II/200, fo. 163.

<sup>31</sup> The copy of the Army Group Centre war diary in the BA-MA unfortunately ends on 24 Sept. 1944. However, the copy held by the Central Archives of the Ministry of Defence of the Russian Federation (CAMO) in Podolsk continues until the end of September and thus includes the preparatory phase for Operation SONNENBLUME, which began in October; see CAMO Podolsk, F. 500, Op. 12454, d. 732. The RGVA in Moscow holds the Second Army war diary for October 1944 (RGVA, F. 1275-2/276), which was believed lost. It also holds numerous Second Army documents with daily reports and other messages, which also contain situation reports from neighbouring armies and Army Group Centre HQ: RGVA, F. 1275-2/130 to 153, F. 1275-2/179, F. 1275-2/217; see also the volumes of annexes F. 1275-2/124, 125, 256, 350.

<sup>32</sup> Fremde Heere Ost (I), ‘Kurze Beurteilung der Feindlage vom 11.10.1944’, BA-MA RH 2/1969, 2.

<sup>33</sup> In addition to Second Army, the left wing of Ninth Army east of the Vistula also came under attack in this offensive; see KTB 9. Armee, 10 Oct. 1944, BA-MA RH 20-9/205, 181 ff., fos. 184 ff.

<sup>34</sup> KTB 2. Armee, 17 Oct. 1944, RGVA, F. 1275-2/276.

than 40 officers, NCOs, and other ranks.<sup>35</sup> In the end, the German forces repelled the Soviet attacks once again with their last remaining strength, and the Red Army offensive petered out in purely tactical successes with considerable losses. According to a report from Army Group Centre, as many as 1,990 Soviet tanks may have been destroyed in the period from 1 to 28 October,<sup>36</sup> of which 609 kills were attributed to Second Army alone.<sup>37</sup>

After this disappointing operation, which official Soviet historiography subsequently mentioned only in passing or simply concealed, the Red Army ceased offensive action. From then until the beginning of the next year no more operationally significant engagements took place. Instead, the Soviets concentrated on preparations for a new major offensive, for which a huge attacking force was assembled.<sup>38</sup> So the Soviet thrust to the Vistula estuary, which the German operations staffs had already feared in the summer of 1944, did not come about until January 1945.

### 3. THE REPULSION OF THE SOVIET THRUST TOWARDS EAST PRUSSIA (16 OCTOBER TO 5 NOVEMBER 1944)

In the course of their withdrawal battles at the beginning of August, the German units had reached the forefield of East Prussia. On 17 August Soviet troops, namely advance forces of 5th Army's 184th Rifle Division, crossed the German border for the first time.<sup>39</sup> They were thrown back, however, and the front stabilized for several weeks following the conclusion of Operation BAGRATION. The defence of East Prussia against a frontal attack by 3rd Belorussian Front was the task of Fourth Army, and its commanders were therefore greatly concerned about developments on its right flank, where the front of the neighbouring Second Army bent back westwards along the Narew. After a breakthrough on the Narew, 2nd Belorussian Front, together with the right wing of 1st Belorussian Front, could push north towards the Baltic and cut Fourth Army off. Foreign Armies East also feared a Soviet pincer attack from the south and east.<sup>40</sup>

There was also the threat of an advance from the north, that is, an attack by 1st Baltic Front on Tilsit and Königsberg. On 5 October the three Baltic army fronts'

<sup>35</sup> Ibid., 21 Oct. 1944.

<sup>38</sup> With regard to events concerning Ninth Army up to the end of 1944, the main reference document in the BA-MA is the war diary (RH 20-9/205), which has been cited many times earlier in this chapter. Most of the Second Army written documents for this period are in Moscow. The most important are the war diaries for November and December (RGVA, F. 1275-2/126 and 277) and the volumes of annexes F. 1275-2/124, 125, 154 to 160, 256, 264 to 269, 350, and 385.

<sup>39</sup> *Geschichte des zweiten Weltkrieges 1939–1945*, ix. 80; see also KTB HGr Mitte, 17 Aug. 1944, BA-MA RH 19 II/199, fo. 164.

<sup>40</sup> Abt. Fremde Heere Ost (I), No. 3496/44 g.Kdos., 'Kurze Beurteilung der Feindlage vom 7.10.1944', BA-MA RH 2/1969, fo. 54, 2.

decisive major offensive against Army Group North began,<sup>41</sup> and by 10 October Soviet armoured units had already reached the Baltic coast at Memel. In the course of this Soviet advance, the bulk of Third Armoured Army, which was deployed on the southern wing, was split off. As a result, the army was reassigned on the same day to Army Group Centre.<sup>42</sup> It then turned its eastward-facing front through almost 90 degrees to face the lower reaches of the Memel river, which ran into the Baltic, in order to protect the left flank of Fourth Army against 1st Baltic Front's thrust from the north.

As a result of the German withdrawal movements on the Narew and the Memel, the course of the front was now very unfavourable for Army Group Centre. East Prussia formed an eastward-protruding balcony with highly endangered flanks. The main threat in mid-October, however, was a frontal attack by 3rd Belorussian Front directly from the east on the apex of the bend where Fourth Army was deployed. Army Group Centre HQ feared the offensive against East Prussia might be only the beginning of a 'large-scale enemy attack aimed at breaking through to Germany' before the onset of winter.<sup>43</sup> In fact, the plan approved by Stalin and the Stavka envisaged a far-reaching westward offensive by 3rd Belorussian Front.<sup>44</sup> Following a successful in-depth breakthrough in East Prussia, its units were to divide into two thrust wedges, one directed at Königsberg and the other at the Vistula delta. The Red Army general staff considered that 'a powerful attack right across East Prussia [...] representing a penetration of some 220–250 kilometres' was possible.<sup>45</sup>

In the collapse of Army Group Centre, Fourth Army had been most strongly sucked into the downward spiral. Since then, an attempt had been made to rebuild the army around its few remaining units. The result was a heterogeneous formation that in no way resembled the structure of other major units, such as those of Army Group North. The new Fourth Army's task was to hold a 350-km-long front between Memel and Narew. For that it had 15 divisions available, only seven of which had combat experience. Above all, in the opinion of the army's commander-in-chief, General Hossbach, the six newly formed Volksgrenadier ('people's infantry') divisions 'bore the hallmark of improvisation in instruction and training'. In terms of mobility, they were not even up to the standard of a division at the end of the First World War: 'Their fleet of horses and motor vehicles was wholly insufficient, so artillery could be repositioned only in stages.'<sup>46</sup> Even worse was the combat value of

<sup>41</sup> See Part V, Chapter IV, Section 4, 'The Final Separation of Army Group North in Courland'.

<sup>42</sup> Third Armoured Army, which actually belonged to Army Group Centre, had been placed under the command of Army Group North on 21 September, against the will of the OKH. The transfer was the result of a special order from Hitler, who was so fixated on the 'Baltic stronghold' that he even put East Prussia temporarily at risk.

<sup>43</sup> The start of the major offensive was anticipated between 20 and 27 October. If the Red Army command set a later starting date, it would run the risk of being unable to conclude the offensive before the onset of winter. On this, see 'Fernschreiben des Oberkommandos der Heeresgruppe Mitte an die Oberbefehlshaber der 2., 4. und 9. Armee vom 18.10.1944', file reference Ia No. 14783/44 geh. Kdos., BA-MA RH 19 II/211.

<sup>44</sup> Galitsky, *V boyakh za Vostochnuyu Prussiu*, 18–21 (see also the sketch on p. 20).

<sup>46</sup> Hossbach, *Die Schlacht um Ostpreußen*, 28.

the two security divisions, which were normally only good for policing the hinterland, since ‘their over-age personnel and wholly inadequate supply of artillery and modern weapons rendered them unsuitable for serious combat’.<sup>47</sup> A further problem was that Fourth Army had only 41 operational tanks at its disposal. Although it also possessed 277 assault guns and tank destroyers,<sup>48</sup> these were more suitable for defence than for counter-attack. The right wing and centre of the front were partly protected by natural obstacles such as rivers and lakes, but the largely open terrain on the left wing, where XXVI and XXVII Army Corps were deployed, held more problems in store.

The units of 3rd Belorussian Front were concentrated against this vulnerable sector, while Fourth Army’s southern wing came under pressure from the right wing of 2nd Belorussian Front. Headquarter reserves had been brought in to reinforce 3rd Belorussian Front, which now comprised five armies with a total of 40 rifle divisions, two armoured corps, and five armoured brigades.<sup>49</sup> According to the Soviet operational plan, 5th and 11th Guards Armies were to attack as the first wave, with the task of breaking through the German front. The second wave, consisting of 2nd Guards Armoured Corps and the newly brought-in 28th Army, would then push through the gap to achieve an operational thrust in depth. At the same time, 31st and 39th Armies would attack on the wings, with the additional task of shielding the flanks from possible German counter-attacks.<sup>50</sup>

On 16 October an exceptionally heavy artillery barrage broke out along a 40-kilometre stretch of front either side of Vilkaviškis, pounding the German positions for three or four hours.<sup>51</sup> At the same time, the German artillery was pinned down by Soviet air attacks of ‘a force unprecedented on the eastern front’,<sup>52</sup> while the Luftwaffe had almost nothing to pit against them. Then the armoured units of 3rd Belorussian Front began to roll, with an axis of attack along the Vilkaviškis–Gumbinnen–Insterburg railway line. Since Fourth Army had almost no reserves, the front seemed several times on the point of collapse. Fighting back desperately, the German units retreated westwards. On 18 October the Soviet troops crossed the border of the Reich on a broad front,<sup>53</sup> but the phase of ‘penetrating the tactical depth of the enemy defence’<sup>54</sup> lasted altogether from 16 to 19 October. The 3rd Belorussian Front command then decided to throw II Guards Armoured Corps forward to force an operational breakthrough. On 20 October the unit succeeded

<sup>53</sup> On 16 October there was already fighting on German territory near the border town of Schirwindt.

<sup>54</sup> Alekseyev, ‘Nachalo boyev v Vostochnoi Prussii’, 120.

in penetrating the German rear defence lines and advanced as far as Grosswaltersdorf (Walterkehnen) on the Rominte river. The next day, after the Soviet 28th Army had been deployed in a second wave at the interface between 5th and 11th Guards Armies, the central section of the German front finally collapsed. But the real crisis developed in the rear of the German front, where II Guards Armoured Corps was advancing in depth with almost no resistance. What happened next was something which, according to the German operational plan, should have been prevented at all costs. On 21 October a Soviet armoured unit captured an undestroyed bridge over the Angerapp river and established a bridgehead on the west bank around the village of Nemmersdorf, penetrating the Wehrmacht's planned Angerapp–Inster rearward defence line before it had even been occupied. The lightning capture of Nemmersdorf thus marked the high point of the Soviet offensive.<sup>55</sup>

To the Germans this seemed like the beginning of a catastrophe. The way west was now open, and the earlier German blitzkriegs had shown how great an effect even small armoured units could have if they paralysed the enemy's unprotected nerve centres in the hinterland. The Soviet armour could have exploited this success operationally to push on to Insterburg or turn in on both sides of the breakthrough point and attack the German front from the rear. Above all, it had the option of a thrust on Gumbinnen, the major detraining point for incoming German reserves, which was already outflanked. Simply disrupting the railway lines, which were within immediate reach, would have been enough to paralyse any German operational counter-measures, since the German armoured units were suffering from an acute shortage of fuel and were therefore dependent on rail transport. But at this decisive moment, to the astonishment of Fourth Army HQ, the Soviet units stayed put in Nemmersdorf, strikingly inactive.<sup>56</sup> This puzzling lack of action is discussed below in greater detail.

What, then, were the German counter-measures? *In extremis*, the German command adopted the procedure (anathema to Hitler) of shortening the front in the neighbouring sector in order to gain reserves for a counter-strike. To that end,

<sup>55</sup> Unfortunately, the surviving war diaries of Fourth Army and Army Group go only to the end of September, but the combat operations can be reconstructed from the comprehensive volumes of annexes; see above all BA-MA RH 20-4/551, 590, 594, 604, 605, 607–9, 619 (K), 620 (K), and N 24/39 (General Hossbach papers). Additional insight was gained by studying the captured German files in the RGVA in Moscow, where the almost wholly preserved files of the German Second Army were found to contain numerous situation reports of Fourth Army and Army Group Centre. See also BA-MA, Study ZA 1/2054, 131 ff.; BA-MA, Study ZA 1/1968 (= Dethleffsen, 'Durchbruch russischer Panzerkräfte im Oktober 1944 in Ostpreußen'); Hossbach, *Die Schlacht um Ostpreußen*, 26 ff.; Dieckert and Grossmann, *Der Kampf um Ostpreußen*, 57 ff.; Plato, *Die Geschichte der 5. Panzerdivision*, 367 ff.; Haupt, *Heeresgruppe Mitte*, 243 ff.; Tippelskirch, *Geschichte des Zweiten Weltkrieges*, 489 ff.; Philippi and Heim, *Der Feldzug gegen Sowjetrußland*, 267; Zeidler, *Kriegsende im Osten*, 67–75; Salomon, 'Die Panzerabwehrschlacht', 303–10; Schön, *Tragödie Ostpreußen*, 55–61; Winkler, 'Abwehrkämpfe der Heeresgruppe Mitte', 583 ff.; Galitsky, *V boyat' za Vostochnuyu Prussiu*, 16–179; Alekseyev, 'Nachalo boyev v Vostochnoi Prussii', 119 ff.; Glantz, 'The Failures of Historiography', 803 ff.

<sup>56</sup> That point was emphasized by Fourth Army's former chief of staff in a later study; see Maj.-Gen. (ret.) Erich Dethleffsen, 'Durchbruch russischer Panzerkräfte im Oktober 1944 in Ostpreußen', in BA-MA, Study ZA 1/1968, App. 5, 7–8, 10–11.

Third Armoured Army, which was under attack by 1st Baltic Front, was ordered to withdraw completely to a favourable defensive position behind the Memel and transfer a large part of its armoured force to Fourth Army. The units concerned were 5th Armoured Division, which was seriously battle-worn, and Armoured Paratroop Division 'Hermann Göring', for which the available units did not even amount to a complete armoured division and were still arriving one after the other by rail. The newly formed 'Führer Grenadier' Brigade was also brought in, but was wholly without combat experience.<sup>57</sup> No great penetrative force was to be expected from these three attack units anyway, since they had only 77 operational tanks and 39 assault guns available in all.<sup>58</sup> Moreover, General Hossbach was faced with the problem of having to fend off two Soviet thrusts at the same time: one in the area of Gumbinnen, the other further south near Goldap. Above all, Soviet armoured spearheads were already positioned further west in the German hinterland at Nemmersdorf. Hossbach's operational plan was therefore conditioned by the following two elements:

- At first, the counter-attack would be concentrated only on the Soviet thrust in the Gumbinnen area, at the cost of a considerable risk near Goldap.
- No attempt would be made to stop the westward-advancing armoured units frontally. Instead, the counter-strike would be aimed—as an indirect measure in the enemy's rear—at the narrowest point of the Soviet thrust wedge immediately behind the breakthrough area at Grosswaltersdorf. It would consist of a pincer attack by 5th Armoured Division from the north and Führer Grenadier Brigade from the south, which would encircle and destroy all enemy units west of the Rominte.

The German counter-blow deep in their flank took the Soviet attackers completely by surprise. This may seem strange in retrospect, as General Hossbach decided on a manoeuvre which, in German military history, had frequently resulted in success against superior Russian and Soviet attacking forces. It had been applied in East Prussia itself in August 1914. On that occasion, the German Eighth Army command initially ignored the advance of the Russian Neman army at Gumbinnen. Instead, it concentrated entirely on the Narev army, which was attacking in the south, and encircled it in a concentric attack at Tannenberg. In October 1944, however, the practical execution of the manoeuvre was made much more complicated by the overwhelming superiority of the Soviet forces. As a result, Armoured Corps 'Hermann Göring' took hardly any part in the pincer attack itself. Shortly after disembarking at Gumbinnen, it became tied up in a series of combat

<sup>57</sup> The numerical weakness of the three newly transferred units is shown by the fact that their combined combat strength (on the reference date of 30 October) was no more than 3,697 men. The breakdown was 453 in the Führer Grenadier Brigade, 1,543 in Armoured Paratroop Division 'Hermann Göring', and 1,701 in 5th Armoured Division; see AOK 4, Ia, 30 Oct. 1944, 'Kampfstärken, Stand 30.10.1944', BA-MA RH 20-4/593.

<sup>58</sup> App. to AOK 4 Ia, No. T 109/44 geh., 22 Oct. 1944, 'Panzer- und Sturmgeschützmeldung', BA-MA RH 20-4/592.

engagements, leaving 5th Armoured Division (with 22 operational tanks)<sup>59</sup> to attack Grosswaltersdorf largely on its own. Meanwhile, further potential breakthrough points had arisen all along the 150 kilometres of front, and especially on the southern wing.<sup>60</sup> But instead of plugging the ‘tactical gaps’, Fourth Army HQ decided on the operational solution of offensive defence, since only a surprise counter-strike could overcome the crisis. It began with preliminary attacks on 21 October. On 22 October, 5th Armoured Division succeeded in pushing south along the Rominte to Grosswaltersdorf, while at the same time Führer Grenadier Brigade thrust northwards through Daken into the same area. When the two spearheads met at Grosswaltersdorf, the pincer closed.<sup>61</sup>

The encirclement of superior Soviet armoured units by weaker German forces was, of course, a risky manoeuvre, but that act of desperation resulted in success. The unexpectedly encircled units (belonging to II Guards Armoured Corps and 11th Guards Army) immediately ceased their attack. In fact, under cool-headed and determined leadership they could have exploited their numerical superiority, in conjunction with other units advancing from further east, to enclose the two German pincer arms in their turn. Yet once again the psychological shock had its effect, and the extent to which the German bluff succeeded is confirmed indirectly by a Soviet account in which the number of German tanks supposed to have attacked at Gumbinnen is put at 500.<sup>62</sup> Apart from the failure of tactical reconnaissance, the Russian setback testifies to the lasting after-effect of the Tannenberg trauma of 1914.<sup>63</sup> Some Soviet units fled eastwards in panic, leaving their heavy material behind. Führer Grenadier Brigade, in particular, was broken through several times in the process but nevertheless managed to reclose the encircling ring. Even though some of the encircled units managed to escape, what was decisive was the operational effects, that is, the halting of the Soviet westward advance towards Königsberg. 3rd Belorussian Front command was so impressed by the German counter-strike that it immediately went over to the defensive in the central sector, and on 27 October halted its offensive in the other sectors too.

Of great importance was the fact that 1st and 2nd Belorussian Fronts’ offensive against the southern flank of East Prussia failed at the same time, and above all, that 1st Baltic Front’s thrust towards Tilsit from the north was also unsuccessful. Third Armoured Army had withdrawn behind the Memel with its remaining units and successfully repelled all attacks. As a result, the dangerous Soviet thrust into the rear, which would have trapped the whole northern wing of Fourth Army in the pincer, did not take place. After 3rd Belorussian Front withdrew, Fourth Army was

<sup>59</sup> Ibid.

<sup>60</sup> A crisis arose on the northern wing when 28th Army reinforced the Soviet attacking forces as a second staggered wave. The situation on the southern wing appeared even more dangerous as the front crumbled on either side of Suwałki. In the end, the German defenders were driven back westwards to a line between Augustów and Goldap.

<sup>61</sup> The final joining of the two pincer arms did not take place until 23 October (see Plato, *Die Geschichte der 5. Panzerdivision*, 367), but the onrushing Soviet units were already cut off from their rearward connections on the previous day.

<sup>62</sup> Alekseyev, ‘Nachalo boyev v Vostochnoi Prussii’, 120.

<sup>63</sup> Zeidler, *Kriegsende im Osten*, 73.

able to gather forces for a further counter-attack. By 3 November it had temporarily freed Goldap, which had fallen to the Soviet forces. The fighting in East Prussia ended on 5 November. Although it had seemed for a while as if a dam was about to burst, the German forces had managed to repel the enemy and stabilize the front once again. There were no more major combat engagements in the sector of Army Group Centre until the large-scale Soviet offensive in January 1945.

According to the American military historian David M. Glantz,<sup>64</sup> the 'Gumbinnen operation' (or 'Goldap operation') is one of a series of important operations that were largely blanked out by official Soviet historiography.<sup>65</sup> Clearly, the offensive operation by 3rd Belorussian Front under General Ivan Danilovich Chernyakhovsky, which failed despite considerable superiority, was not considered one of the Red Army's greatest deeds of glory. After the successful operational breakthrough, victory seemed within its grasp, but the expectation was frustrated by General Hossbach's surprise counter-attack right in the middle of the advancing Soviet units, which led to a complete turnaround. This 'first battle for East Prussia' was fought with exceptional bitterness and, given its short duration, the losses seem relatively high. According to German figures, 914 Soviet tanks and assault guns were shot down,<sup>66</sup> while the Wehrmacht's own losses totalled 48 tanks and 67 assault guns.<sup>67</sup> The Red Army suffered particularly high losses in breaking through the East Prussian border fortifications,<sup>68</sup> but the terrain was also strewn with wreckage after the four-day battle of encirclement south of Gumbinnen. In that narrow area alone, 295 tanks, 79 cannon, and 23 anti-tank guns were captured or destroyed.<sup>69</sup> According to Russian figures, 3rd Belorussian Front lost 79,527 of the 377,300 troops deployed (of whom 16,819 dead or missing).<sup>70</sup> At first sight, the German total losses of 16,236 men seem very low in comparison.<sup>71</sup> In percentage terms, however, they were higher than the Soviet losses, since the combat strength of the divisions was reduced by more than one-third, and on 30 October totalled no more than 29,916 men, including the newly assigned units.<sup>72</sup> The high number

<sup>64</sup> Glantz, 'The Failures of Historiography', 803 ff.

<sup>65</sup> Almost the only relevant work in the literature of Soviet origin is Alekseyev's short essay 'Nachalo boyev v Vostochnoi Prussii', which in any case conceals more than it reveals. The work by the former commander-in-chief of 11th Guards Army, Col.-Gen. Kuzma Nikitovich Galitsky, *V boyakh za Vostokhnuyu Prussiu*, is a highly apologetic account.

<sup>72</sup> Although the terminology was defined precisely in an OKH ordinance of 24 Feb. 1944, 'Festlegung der Stärkebegriffe', BA-MA RH 2/60, the term 'infantry combat strength' is also used in

of dead or missing, at 6,801, also shows how bitterly the men of Fourth Army had fought.<sup>73</sup>

The Wehrmacht troops' will to resist increased dramatically when the Red Army set foot on German soil. In particular, men from the German eastern territories fought with wild determination. But the fact remains that many of them were insufficiently trained and armed. For want of tanks of their own, they were often expected to eliminate Soviet fighting vehicles in infantry close combat. Nevertheless, after heavy resistance, they actually managed to stop the 'Soviet steamroller'. The Red Army had attacked on a front of 150 kilometres and advanced up to 60 kilometres to the west, pushing into German territory. The counter-attack forced the Soviet troops back, but a border strip about 100 kilometres wide and up to 27 kilometres deep remained in their hands.

#### EPILOGUE: NEMMERSDORF, THE WRITING ON THE WALL

The war had entered a new phase. For the first time, the German civilian population now also suffered the effects of a land operation.<sup>74</sup> The excesses committed by Red Army troops on German soil are discussed in volume x/I of the present series,<sup>75</sup> but in October 1944 Nemmersdorf experienced a brief prelude to the violence that was in store. The foregoing account of the military events left unanswered the question why the advance troops of 3rd Belorussian Front made a short pause on 22 October that was fraught with consequences, although they had already achieved an operational breakthrough and had taken possession of an undestroyed bridge over the Angerapp at Nemmersdorf. The German counter-attack would have had not the slightest chance of success if the Soviet offensive had continued immediately. In the event, however, it resulted that same day in the encirclement of the Red Army units that were positioned between the Rominte and the Angerapp. It was initially assumed that the Soviet troops had paused for logistic reasons. What really happened during the period in question in the areas 'liberated' by the Red Army

the Fourth Army files alongside the official term 'combat strength'. In any case, the discrepancies are not serious, since the figures were clearly based on similar criteria. According to that source, Fourth Army's 'infantry combat strength' was 48,532 men before the fighting began; see AOK 4, 8 Oct. 1944, 'Infanterie-Kampfstärken der Divisionen, Stand 7.10.44', BA-MA RH 20-4/588. For 30 Oct. the 'combat strength' is given as 29,916 men; see AOK 4, Ia, 30 Oct. 1944, 'Kampfstärken, Stand 30.10.1944', BA-MA RH 20-4/593. The files for 11 November contain a report entitled 'Infanteristische Kampfstärke der 4. Armee, Stand 11.11.44' (no file number), according to which the figure had risen to 38,904 men; see BA-MA RH 20-4/596.

<sup>73</sup> AOK 4, IIa, 30-31 Oct. 1944, 'Verluste vom 29./30.10. und Nachmeldungen', BA-MA RH 20-4/593.

<sup>74</sup> On the conflict between military and civilian agencies during evacuation, see Winkler, 'Abwehrkämpfe der Heeresgruppe Mitte', 169-221.

<sup>75</sup> See the chapters by Manfred Zeidler in *Germany and the Second World War*, x/I.

was revealed by eyewitness reports from German troops who entered the reconquered villages. They were met by scenes of apocalyptic horror, especially in Nemmersdorf.<sup>76</sup> The Soviet troops had fought their way for years through their own devastated territory to the border of the Reich. When they first set foot on German soil there was an explosion of violence, as they unleashed an orgy of revenge on the civilian population. In some of the reconquered villages German troops found the raped and mutilated corpses of women and girls.

Nemmersdorf (now Mayakovskoye), where the Soviet attacking units advanced furthest to the west, was not only the military culmination of the battle. It was also the place where the Soviet atrocities reached their climax, after a relatively large number of German civilians fell into the hands of the Red Army.<sup>77</sup> What was particular about Nemmersdorf, however, was that it was retaken by the Wehrmacht and the corpses were examined by an international medical commission. The Soviet attack had been carried out by 2nd Guards Armoured Corps under Maj.-Gen. Burdeinyi. On 21 October the spearhead of 25th Guards Brigade, consisting of 2nd Armoured Battalion, the motorized machine-gun battalion, and a battalion of 4th Motorized Rifle Brigade, took the village in a preliminary attack. In an astonishing understatement, Col. Bulygin, the commander of 25th Guards Armoured Brigade, noted in his combat report that Nemmersdorf had been 'cleared of infantry and the non-combatant population'.<sup>78</sup> Nemmersdorf etched itself into German consciousness as the synonym for Soviet atrocities. That 'place of horror' was the writing on the wall, the prelude to the immeasurable tragedy which befell the German population in the east from January 1945. Ralph Giordano, who, because of his Jewish origins, saw the Soviet advance as a liberation at the time,

<sup>76</sup> There is ample documentary evidence of the events in Nemmersdorf; see, e.g., AOK 4, Abt. Ic A.O. (Abw. III), 26 Oct. 1944, 'Bericht von Hauptmann Fricke', BA-MA RH 20-4/593, and 'Nachtrag zur Tagesmeldung Fs.Pz.K. H.G. vom 24.10.44 (Oblt. Hartmann vom 25.10.44, 2.00 Uhr)'. Some of these reports of Soviet war crimes in East Prussia are documented in file BA-MA RH 2/2684, 168, fos. 1–40 (= 382–434). See also 'Liste 1 über die von der RA in den besetzten deutschen Gebieten verübten Völkerrechtsverletzungen und Greuelaten', BA-MA RH 2/2685, fo. 168 = 39, and *Dokumentation der Vertreibung*, vol. I/1: Document No. 3, 'Erlebnisbericht des ehemaligen Landrats von Angerapp (Darkehmen) i. Ostpr., Uschdraweit', 4–7; Document No. 4, 'Erlebnisbericht des Volkssturmmannes K.P. aus Königsberg i. Ostpr.', 7–8. Bernhard Fisch quotes further sources in his work *Nemmersdorf, Oktober 1944*, in which he sought to refute certain exaggerations by those who reported the events and falsifications by Nazi propaganda. In so doing, however, Fisch adopted a strange yardstick, since he was to some extent only willing to accept testimony which he (as a former citizen of the GDR) was able to check half a century later by questioning surviving witnesses.

<sup>77</sup> A total of 46 civilians were probably murdered in Nemmersdorf itself, including a column of refugees run over in the immediate neighbourhood. But massacres took place in other villages too, e.g. in Brauersdorf; see the eyewitness report by Captain Jaedtke, quoted in Plato, *Die Geschichte der 5. Panzerdivision*, 368. The fate of the civilians in the villages which were not liberated by the Wehrmacht has not been established. Through the fault of NS Gauleiter Erich Koch, the evacuation order was given far too late, so that some refugee columns were unable to set off westwards in time.

<sup>78</sup> Quoted in Fisch, *Nemmersdorf*, 80 (nn. 2 and 5 on pp. 100–1). The source given is a file in the Russian Military Archive, ZAMV, F. 3105, L. 1, A. 28, Map 19502, fos. 60–76, which also contains the archive numbers of other relevant Soviet combat reports.

later described it as the 'darkest chapter in mankind's history of war, and probably the greatest mass rape of all time'.<sup>79</sup>

The 'Nemmersdorf factor' was to have serious consequences for Soviet conduct of the war:

- On the purely military level, it disastrously disrupted the relentless advance of the Soviet attacking forces. Instead of immediate operational exploitation of the breakthrough achieved, there ensued an interruption or delay of combat operations, because many Red Army soldiers were occupied at the time with plundering and excesses. With marauding troops, however, there is no chance of an operational war of movement, which is based on rapid combat operations. The Nemmersdorf factor repeated itself on a larger scale the following year when the German front collapsed and the Soviet armoured units, at the beginning of February, had crossed the Oder and were only a few kilometres from Berlin. Marshal Zhukov was later strongly criticized for failing to launch the thrust on the almost defenceless German capital at that time. One of his problems, however, was that some Soviet commanders had lost control of their troops, who were then interested in quite other things than their combat mission.
- The Red Army atrocities strongly boosted the motivation of the Wehrmacht troops. That can be seen, for example, from the memoirs of Count Heinrich von Einsiedel, then vice-chairman of the National Committee for a Free Germany, which collaborated with the Soviets. Von Einsiedel, who was one of the few Germans to accompany the Red Army's advance, reported his outrage at excesses 'which were out of control and had turned into a paroxysm of destructive fury'.<sup>80</sup> A captured Hitler youth told him: 'We East Prussians would rather go down fighting than suffer this without resistance.'<sup>81</sup> Stalin, however, could not, or would not, put an end to the excesses. His failure to do so led to a temporary stabilization of the rule of his already defeated adversary, Hitler. Joseph Goebbels' propaganda machine, forced onto the defensive by the many retreats and defeats, had now found a powerfully effective theme, constantly conjuring up the image of what the German population could expect if the Red Army invaded Germany. For many soldiers from Germany's eastern territories, surrender was no alternative, and they increasingly resorted to 'suicidal resistance'.<sup>82</sup> This in turn led to huge losses on both sides, wholly unjustified from the Soviet viewpoint, since the war had long been won.
- The Red Army's behaviour in Germany's eastern territories had a long-term effect whose importance cannot be overestimated, even if it did not become apparent until the post-war period. The rearming of West Germany would by no means have been a matter of course if not for the enduring memory of the

<sup>80</sup> Einsiedel, *Tagebuch der Versuchung*, 148; see also 154.

<sup>81</sup> Ibid. 155.

<sup>82</sup> Thus the British journalist Alexander Werth, who accompanied the Red Army's advance; Werth, *Russia at War*, 832.

dreadful trauma which had its beginnings in Nemmersdorf. Above all, NATO's nuclear strategy, criticized as defence through self-destruction, could scarcely have been implemented had many Germans not still been under the impression of the atrocities committed by Soviet troops. For the Red Army, therefore, Nemmersdorf 1944 was more than a military defeat. It was the first moral defeat in the dawning Cold War.

# IV. Army Group North's Withdrawal Battles to Courland

*Karl-Heinz Frieser*

In the summer of 1944 operational movements in the area of Army Group North mainly took place at the interface with Army Group Centre. In our discussion of the collapse of Army Group Centre, no satisfactory explanation was found for some of Hitler's 'stand firm' orders, which were contrary to military logic. Some of the questions can be given a plausible answer only if analysed in conjunction with the strategically much more revealing developments in the area of Army Group North. There too, the cardinal problem is Hitler's refusal to give up territory of his own free will. What was to be defended, however, was not an individual 'fortified place' like Vitebsk but the Baltic region as a whole, with its three countries, which Hitler wanted to hold onto as one gigantic fortress.

## 1. THE DISMAL STARTING POSITION IN THE SUMMER OF 1944

In the spring Army Group North had been obliged to withdraw from the forefield of Leningrad to the Panther Line, which stretched along the east coast of the Baltic. In the northern section, between the Bay of Finland and Lake Peipus, Army Detachment Narva was deployed along the river of the same name. From there, the positions of Eighteenth Army extended along the western shore of Lake Peipus and further south through Pskov to Ostrov. Sixteenth Army, continuing from Army Group Centre, had the task of holding the southern section with the cornerstone of Polotsk. In the summer of 1944 Army Group North was rapidly declining in strength as the OKH withdrew more and more of its units for deployment at other critical points on the eastern front. It now consisted of only 30 divisions, three more of which were due to be withdrawn by the end of July.<sup>1</sup> At the beginning of July, its (purely theoretical) actual strength was around

<sup>1</sup> OKH, Org.Abt. No. I/45556/44 g.Kdos., 6 July 1944, 'Stärke der Heeresgruppen der Ostfront (Gliederung vom 28.6.1944)', BA-MA RH 2/1336.

500,000. However, more than 140,000 of those men were not front-line troops<sup>2</sup> but were deployed, for example, as construction engineers, railway troops, army supply troops, and in various staff departments, as well as on security tasks in the hinterland. On 1 July the (hypothetical) actual strength of the divisions and independent combat units was 342,742 men. However, the only meaningful figure for a comparison of strength is daily strength, which was 215,664 men. The figure is much lower if only the combat strength of the army group, that is, 110,248, is taken into account.<sup>3</sup> The transfer of 12th Armoured Division to Army Group Centre at the end of July was a heavy loss, depriving Army Group North of its only armoured divisions and leaving it with only 30 tanks (502nd Heavy Armoured Battalion) and 206 assault guns.<sup>4</sup> With increasing frustration, Army Group North HQ discussed how it was to fend off the expected assault by four Soviet army fronts, supported by four air armies, with only such means at its disposal. No significant help was to be expected from the Luftwaffe either. At the end of June the only operational aircraft available to Air Fleet 1, apart from a few reconnaissance planes, were four bombers and 14 fighters. Other than that, it had only 85 outdated night ground-attack aircraft at its disposal.<sup>5</sup> In March Army Group North had already been obliged to reduce its fuel allocation for motor vehicles by 60 per cent, necessitating a total ban on motorized troop movements. Furthermore, a broad restriction on flight operations was imposed on 8 June owing to shortage of fuel.<sup>6</sup> The most serious problem in the summer of 1944, however, was the withdrawal of the neighbouring Army Group Centre, as a result of which Army Group North's southern flank increased in length and had to be secured by divisions withdrawn from the main front. While the Soviet army fronts were constantly reinforced, Army Group North even had to give up a few more units, so that its headquarters estimated the enemy's current superiority at 8 to 1.<sup>7</sup>

The forces arraigned against it were, in the south, at the interface with Army Group Centre, 1st Baltic Front; connected to it, in the centre, 2nd and 3rd Baltic Fronts; and far to the north, on the Bay of Finland, Leningrad Front. Each of the four army fronts had an air army attached to it, and there was also massive intervention by long-distance units during ongoing operations. At the outset, 12 armies and numerous independent units were standing ready to attack. A special role was played by 1st Baltic Front. In June, during the first phase

<sup>2</sup> OKH, Organisationsabteilung (I), No. I/18240/44 g.Kdos., 23 July 1944, 'Stärke der H.Gr. Nord', BA-MA RH 2/1341, fo. 29. As noted in the document, the strength on 1 July cannot be determined precisely. The figure of approximately 550,000 for 1 June must be reduced by around 50,000 men whose units had been transferred in the meantime.

<sup>3</sup> OKH, Organisationsabteilung (I), No. I/8897/44 geh., 11 Aug. 1944, BA-MA RH 2/1341, 14–15, fos. 35–6.

of Operation BAGRATION, it had been deployed *en masse* against the northern wing of Third Armoured Army, which was part of Army Group Centre. Then it had swung north-west into the open flank of Army Group North, and in the further course of the summer and autumn offensives it proved to be the most dangerous of all the attacking Soviet army fronts. It had originally consisted of three armies and an independent armoured corps, totalling 359,000 men,<sup>8</sup> but in July and August it was reinforced by 39th, 51st, and 2nd Guards Armies, plus 5th Guards Armoured Army, XIX Armoured Corps, and III Guards Mechanized Corps, which considerably increased its original stock of 687 tanks and assault guns.<sup>9</sup> For their part, 2nd and 3rd Baltic Fronts had 391,200 and 258,400 men respectively.<sup>10</sup> Leningrad Front tied down strong German forces in the northern sector but only took part in the combat operations later on.

It is noteworthy that, before the beginning of the Soviet summer offensive, Army Group North had only vague information about the enemy's strength.<sup>11</sup> The number of reconnaissance aircraft at its disposal was by no means sufficient to cover such a huge area, and fuel rationing meant that there were not enough supplies even for the few planes it had. Consequently, reconnaissance missions could be flown only in ideal weather conditions, when the Soviet units did not undertake troop movements in any case. Despite these difficulties, Army Group North managed to make an accurate assessment of enemy intentions. On 13 May it had already drawn the attention of the army's chief of staff to the danger at the interface with Army Group Centre. It calculated that 'the enemy will seek to divide the army groups by means of a thrust along the Dvina'.<sup>12</sup> On 25 May the enemy situation assessment indicated that the Soviet forces would probably attack 'via Polotsk–Daugavpils towards Riga'.<sup>13</sup> Thus, at this early stage, enemy intelligence already predicted a Soviet thrust to the Baltic coast with the aim of enclosing Army Group North in the Baltic region. It also forecast the timing of

the offensive correctly, although it was helped in this by the lucky chance that a Soviet air-force officer carrying highly informative documents had been shot down shortly before.<sup>14</sup> In contrast to Army Group Centre, whose commander-in-chief had blindly accepted Hitler's preconceived idea of the enemy situation, Army Group North arrived at a thoroughly correct assessment. But even this accurate analysis would prove to be of no significance, since the forces available were by no means sufficient to stop the accurately predicted Soviet thrust to the Baltic coast in the direction of Riga.

## 2. THE WITHDRAWAL IN THE BALTIC REGION UP TO THE END OF AUGUST

### (a) Hitler's Reasons for Holding on to the 'Baltic Fortress'

As previously during the 'Zeitzler Plan' controversy at the end of June, both the OKH general staff and the commanders-in-chief of the two army groups concerned pressed hard for evacuation of the northern Baltic area. They were unanimous that breakthrough in the sector of its southern neighbour necessitated Army Group North's withdrawal from Lake Peipus to the Dvina. The commander-in-chief of Army Group North, Col.-Gen. Georg Lindemann, argued for the withdrawal in order to avoid the threatening enclosure on the coast, while Field Marshal Walter Model saw it as the only chance of gaining forces for a counter-attack in support of Army Group Centre, since it would shorten the front considerably and free up half the units of Army Group North.

But despite all the arguments with which his generals assailed him, Hitler rejected the idea of voluntary evacuation. There ensued one of the fiercest conflicts of the whole campaign between the Führer and his generals. How resolutely it was pursued can be seen from the fact that it led not only to the resignation of Col.-Gen. Kurt Zeitzler and sharp clashes with his successor, Heinz Guderian, but also to the dismissal of two successive commanders-in-chief of Army Group North. The differences of opinion were particular evident during the conferences at Führer headquarters on 9, 14, and 18 July.<sup>15</sup> Hitler invoked the following five arguments:

- Evacuation of Estonia would lead to Finland's withdrawal from the Axis. The alliance with Finland was already very fragile since the repulsion, with heavy

<sup>14</sup> KTB HGr Nord, 20 Jun. 1944 (20.00), BA-MA RH 19 III/310. See also KTB Skl, pt. A, lviii/II, 17 Jun. 1944, 453, fo. 232.

losses, of a Soviet offensive in Karelia at the beginning of June. Moreover, Finland was Germany's only supplier of nickel.

- Estonia produced shale oil, which the German navy needed.
- Possession of the Estonian coast was a precondition for the blockade of the Soviet fleet. Following a German withdrawal, it would be able to break through the mine barriers in the Bay of Finland and penetrate the Baltic Sea.
- Loss of Germany's hitherto unrestricted command of the Baltic Sea would also harm relations with Sweden, resulting in cessation of the Swedish deliveries of 9 million tonnes of ore a year, which Germany urgently needed.
- Command of the Baltic Sea was a precondition for the testing and combat training of the new U-boat types, since the Baltic ports were important bases for the training fleets. The vessels in question were the newly developed Types XXI and XXIII, which represented a technical breakthrough in U-boat construction, and Hitler wanted to use them to regain the initiative in the war at sea and sever the British and American forces' sea connections. Hence his rejoinder to Lt.-Heusinger: 'Unless we resume the U-boat war, I can end the war right now.'<sup>16</sup>

The army generals too could contemplate such withdrawal only with a heavy heart. The emotional factor was by no means the least important, as the Baltic population, largely well disposed towards Germany, had already been left in the lurch by the Germans once before when Hitler did a deal with Stalin in the summer of 1939. Following the occupation of the area by Soviet troops, the dreaded NKVD security service had imposed a reign of terror which remained imprinted in the minds of the traumatized middle classes in particular. As a result, many men, especially from Estonia and Latvia, had voluntarily joined the Waffen SS after the German troops marched in. There was now a danger that the area would once again be Sovietized against the will of its inhabitants. Despite these misgivings, however, the German generals did not refrain from a sober analysis of the military situation. With the insufficient forces available, defence of the northern Baltic area appeared impossible, and it therefore had to be evacuated without delay. If that exposed sector of the front were to be held onto any longer, it would be not only the naval bases and raw-material supplies invoked by Hitler that would be lost, but also all the German troops deployed in the area. Ultimately, the whole of Army Group North was threatened with enclosure. That being so, the only right decision was to take the bull by the horns. The divisions freed up by withdrawal behind the Dvina should therefore come to the assistance of Army Group Centre by thrusting from the north into the flank of the Soviet attacking forces. That 'major solution' at operational level was the only remaining way of saving both army groups.<sup>17</sup> Reich Marshal Hermann Göring, the commander-in-chief of the Luftwaffe, also

<sup>16</sup> Heusinger, *Befehl im Widerstreit*, 335. See the chapters by Werner Rahn in volume x/I of the present series.

<sup>17</sup> See Part V, Chapter II.5(b), 'The "Zeitzler Plan" Controversy'.

supported the arguments of the army generals and pleaded for a withdrawal behind the Dvina.<sup>18</sup>

Surprisingly, Hitler's naval strategy considerations met with scepticism in the navy too, although he had expressed himself in decidedly pro-navy terms. In the sober analysis of the 'Assmann Report', Hitler's arguments were examined point by point and finally largely rejected. Captain Heinz Assmann, head of the naval division of the Wehrmacht operations staff, held the Führer's fears of the negative consequences of a withdrawal by Army Group North to be exaggerated. Above all, he estimated the threat from the Soviet Baltic fleet as 'very slight'. Instead, Assmann accepted Heusinger's argument that East Prussia could not be defended without forces from Army Group North, and he accordingly described withdrawal behind the Dvina as the 'lesser evil'. He held that if Army Group North were enclosed, it was very doubtful whether it could be supplied in the longer term. His conclusion, therefore, was that retention of the Bay of Danzig was more decisive than loss of the Baltic coast.<sup>19</sup>

At this point we must take issue with the claim that Karl Dönitz, as a commander-in-chief of the navy jealously guarding the interests of his own service, demanded of Hitler that the 'Baltic Fortress' be held at all costs. That is incorrect, at least for the summer of 1944. On 9 July Führer headquarters witnessed 'a conference of decisive importance for the further fate of the eastern front',<sup>20</sup> in which the commanders-in-chief of Army Groups Centre and North also took part. Dönitz began by pointing out that evacuation of the northern Baltic area would have considerable disadvantages for the navy, whereupon Hitler decided in favour of Dönitz's considerations of naval strategy and ordered Army Group North to remain in Estonia. It must be stressed, however, that the commander-in-chief of the navy then asked for the floor once again and performed a remarkable about-turn. He aligned himself completely with the army generals' argument that possession of the whole of Estonia, including the Baltic islands, would be worthless if the Soviets succeeded in pushing further south to the Lithuanian or East Prussian coast. Once they had established air-force bases, it would be perfectly possible for them to control the Baltic Sea from there. Dönitz ended his concluding remarks unequivocally with the assertion that the 'crucial requirement, to which everything else, including the possible withdrawal of Army Group North, must be subordinated, is thus the prevention of a Russian breakthrough to the Baltic Sea'.<sup>21</sup> In so doing, the commander-in-chief of the navy was following the insistent advice of several officers in his operations section who had already spoken out at the end of June in favour of the withdrawal of Army Group North from the Baltic area. In their view, Army

<sup>18</sup> KTB HGr Nord, 18 July 1944, BA-MA RH 19 III/313, fo. 134.

<sup>19</sup> See the previously mentioned 'Assmann Report' of 19 July 1944, BA-MA RM 7/101, fos. 99–103.

<sup>20</sup> BA-MA, Study ZA 1/2379, fo. 38.

<sup>21</sup> *Lagevorträge*, 596; KTB HGr Nord, 9 July 1944, BA-MA RH 19 III/311, fos. 177–8. On this, see letter to [Friedrich] Ruge, 11 July 1961, in the Dönitz papers, BA-MA N 236/7, fos. 61–4.

Group North had to ‘get out of the pincer before it closes’,<sup>22</sup> or it would share the fate of Army Group Centre. In the further course of the war, however, Dönitz adopted an ambivalent attitude and temporarily drew closer to Hitler’s position. This development will be examined in more detail in the discussion of the enclosure of Army Group North in Courland.

### (b) The Open Southern Flank and the Danger of Enclosure

Army Group North’s problem was Polotsk. Designated by Hitler as a ‘fortified place’, it was both the southern cornerstone of its front line and the hinge with its neighbour, Army Group Centre. When the Soviet Operation BAGRATION began on 22 June in the Belorussian balcony, Vitebsk had been enclosed within days and Third Armoured Army had collapsed. Its remnants were forced back far to the west, leaving the Polotsk hinge hanging in the air. That raised two problems for Army Group North. At the interface with Army Group Centre a gap opened up, dubbed the ‘Baltic hole’, into which the Soviet 6th Guards Army, supported by armoured units of 1st Baltic front, immediately plunged. By the end of June the breach had widened to some 40 kilometres. At the same time a new front had arisen on the southern wing, starting at Polotsk, and it was getting longer all the time as the Soviet attacking units pushed further and further west towards the Baltic Sea. By the end of June the ‘southern front’ was already 60 kilometres long, and in the following weeks it developed into the main front. To occupy the new defence line, numerous units had to be withdrawn from the eastern front on both sides of Lake Peipus, which was itself still under threat. Since more divisions also had to be transferred to the hard-pressed Army Group Centre, Col.-Gen. Lindemann reported to the Führer that Army Group North’s forces were ‘no longer sufficient’ for fulfilment of its defence task.<sup>23</sup> He also warned of the danger of enclosure on the Baltic coast, since the Soviet command was intending a thrust either via Vilnius and Kaunas to Königsberg (‘major Baltic operation’) or via Polotsk and Daugavpils to Riga (‘lesser Baltic operation’).<sup>24</sup> Lindemann accordingly requested freedom of action on the exposed right wing of Sixteenth Army, so as to be able to react to the enemy attacks ‘as the situation required, by occupying the shortest line’.<sup>25</sup>

Hitler, however, brusquely rejected any thought of voluntary withdrawal. The Polotsk ‘fortified place’ had to be defended unconditionally. Thereupon, Col.-Gen. Lindemann tendered his resignation.<sup>26</sup> But the Führer’s demands went much further. He ordered a forceful counter-attack to close the gap with Third Armoured Army, despite the fact that Army Group North could muster only two infantry divisions with a total of eight battalions and 44 assault guns for that purpose. Those units were to advance south-westwards from the Polotsk salient and break through

<sup>22</sup> KTB Skl, pt. A, lviii/II. 772, fo. 392, 28 June 1944; Salewski, *Die deutsche Seekriegsleitung*, ii. 460–1.

<sup>24</sup> Ibid., fo. 110.

<sup>25</sup> Ibid., fo. 111.

<sup>26</sup> Heusinger, *Befehl im Widerstreit*, 348.

the 'Baltic hole' along a '60-km-long stretch'<sup>27</sup> in which the Soviets had massed 6th Guards Army, I Armoured Corps, and parts of 43 Army.

When the two divisions began their thrust on 2 July, Polotsk was burning 'like a flaming torch'<sup>28</sup> after a bombardment by the enemy air force. The German counter-attack foundered immediately in the face of an attack by superior Soviet units. Although the latter were stopped south of Polotsk, the Soviet 4th Shock Army achieved a dangerous breakthrough north-east of the town. Col.-Gen. Lindemann then did the only right thing and stopped the pointless counter-attack on his own authority. Furthermore, he applied to Hitler for immediate evacuation of the Polotsk salient to avoid encirclement.<sup>29</sup> The Führer had no alternative but to give way to Lindemann, but shortly afterwards he relieved him of his command.

The new commander-in-chief of Army Group North from 4 July was Gen. Johannes Friessner, who was raring to go and determined to carry out the task personally assigned to him by Hitler. His optimism, however, did not last even 24 hours. Once he had studied the situation in detail, it was clear to him that Hitler's 'stand firm' order was illusory and that withdrawal of the right wing was inevitable. Shortening the front in that way was the only means of gaining units for an attack in support of Army Group Centre. Moreover, the counter-attack which he had been ordered to carry out appeared to have been already overtaken by events at operational level, given the rapid westward advance of the Soviet forces.<sup>30</sup> Friessner reported this to Hitler, who was considerably angered.

On 9 July the conference at Führer headquarters to which we have already referred took place, with both Model and Friessner pressing for evacuation of the northern Baltic region and withdrawal behind the Dvina. The Führer resolutely refused, but the increasingly critical situation soon showed how rash that decision had been. Until then, the Soviet offensive against Army Group Centre had only grazed the extreme left wing of Army Group North's Sixteenth Army. After the capture of Minsk on 3 July, however, the first phase of Operation BAGRATION was over, and 1st Baltic Front, on the right wing of the Soviet forces, was free to shift its point of main effort to encirclement of the southern wing of Army Group North. It was ordered to push towards the Baltic Sea via Šiauliai. There was now a mood of crisis on Army Group North's eastern front too. Although there was hardly any more fighting in that sector, the front was far too thinly occupied, and ten divisions had been withdrawn from it in a very short space of time: one to Finland, four to support Army Group Centre, and five to secure the newly established southern front.<sup>31</sup>

On 10 July the Soviet summer offensive entered its decisive second phase. The long-expected major offensive against the eastern front of Army Group North now

<sup>27</sup> Telex OB HGr Nord, Ia No. 1022/24 to the Führer, 30 June 1944, BA-MA RH 19 III/15, 2, fo. 131.

<sup>31</sup> Ibid., fo. 188.

began. The Soviet 2nd Baltic Front, with 391,200 men, attacked the left wing of Sixteenth Army in a thrust towards Rēzekne.<sup>32</sup> The next day 3rd Baltic Front, with 258,400 men, opened an offensive further to the north against the right wing of Eighteenth Army.<sup>33</sup> Its aim was to break through between Pskov and Ostrov and then push north-west to cut off Army Detachment Narva, which was deployed in the north and was also facing an imminent frontal attack by Leningrad Front. There the Soviets had brought up two armies with a total of 136,830 men in order to break through the isthmus between Lake Peipus and the Bay of Finland.<sup>34</sup> General Friessner was no longer in any doubt that the northern Baltic area had to be abandoned. On 12 July he criticized Hitler's conduct of operations in an astonishingly courageous letter to the Führer.<sup>35</sup> Friessner made it clear that the two tasks assigned to Army Group North were mutually contradictory. It was supposed to hold the existing front and at the same time carry out an attack to restore the connection to Army Group Centre, although the forces needed for such an attack were already tied down by Hitler's categorical 'stand firm' order. Hitler's refusal to pull back the exposed southern wing had even led to the formation of a new southern front that was now 200 kilometres long and required considerable forces. For Friessner, the best solution was to withdraw Sixteenth and Eighteenth Armies behind the Riga-Kaunas line and get Army Detachment Narva out by sea via Tallinn. Stressing that this would be 'the last chance to save the army group [...] from encirclement, if not destruction',<sup>36</sup> he demanded that Hitler either grant him freedom of action or 'relieve him of his duties'.<sup>37</sup>

In reaction to his 'threatening letter', as Hitler called it,<sup>38</sup> Friessner was summoned to Führer headquarters on 14 July. Model was also invited to attend. At this meeting, and at the following meeting on 18 July, both commanders-in-chief insistently stressed the critical situation of their army groups. They declared, in agreement with the OKH general staff, that the only remaining option was the radical operational solution of withdrawal behind the Dvina. Hitler nevertheless insisted that the whole Baltic area had to be held. He attempted to counter Friessner's arguments with a promise to bring in new forces for a counter-attack. Meanwhile, the situation had become dangerously acute, since the far superior attacking units of 2nd and 3rd Baltic Fronts had achieved a breakthrough at the interface between Sixteenth and Eighteenth Armies. Now Hitler too saw no other solution but to approve the withdrawal of Army Group North to the 'Latvia line' on Latvia's eastern border, which the army group had already begun.

<sup>32</sup> According to *Grif sekretnosti sniat*, in the offensive against Rēzekne and Daugavpils 2nd Baltic Front incurred personnel losses of 57,995 men from 10 to 27 July, 12,880 of which are classified as irretrievable.

<sup>33</sup> In the course of the Pskov-Ostrov Offensive Operation (11–31 July 1944), 3rd Baltic Front incurred 33,584 personnel losses, of which 7,633 were irretrievable; see *ibid.* 227.

<sup>34</sup> The Narva Offensive Operation began on 24 July 1944. It was conducted by 2nd Shock Army and 8th Army, with a total of 136,830 men, supported by 13th Air Army; see Gurkin, 'Liudskie poteri Sovetskikh Vooruzhennykh Sil', Table, No. 52, 'Narva Offensive Operation'.

The situation on the southern wing was becoming even more critical. On 16 July the 'Baltic hole' between the two army groups widened to 70 kilometres. In the gap, through which more and more Soviet units were pushing west, there stood only a few German blocking units, but between them and the Baltic Sea there was simply a vacuum. Daugavpils, the 'gateway to the Baltic', had meanwhile become the new cornerstone in the south. The city was attacked by two armies of 1st Baltic Front on both sides of the Dvina. Mechanized units also took part in the attack, some of them equipped with the new 'Joseph Stalin' heavy tank and its 122-mm cannon. On 22 July they clashed with the second company of 502nd Heavy Armoured Battalion at Krivani, northeast of Daugavpils. The company's eight Tigers shot down 17 Joseph Stalin tanks and five T-34s in the first encounter. After destroying the Soviet advance detachment, the German armoured company also beat off the attack by the main force, destroying another 28 enemy tanks without any losses of its own.<sup>39</sup> The astonishing thing about this is that Army Group North, which had to defend the whole Baltic area against assault by four Soviet army fronts, did not have a single armoured division at its disposal at that time. All it had was one armoured battalion, 502nd Heavy Armoured Battalion, whose 30 tanks, deployed like a 'fire brigade' against breakthroughs by Soviet armour, were on the move almost round the clock.<sup>40</sup> While the army group's 200 or so assault guns were effective in defensive combat, they could not take the place of tanks for counter-attacks in open terrain. On the German side, tanks were an almost exotic rarity. While a total of 792 enemy tanks destroyed were reported to Army Group North HQ from 24 June to 24 July, not all of the kills were effected by the army group's own fighting vehicles.<sup>41</sup> In some sections of the front, anti-tank close-combat infantry troops had become the main means of defence against the large number of Soviet tanks. At the risk of their lives, 'anti-tank close-combat specialists' let T-34s and Joseph Stalin tanks roll over them in order to attach explosive devices. That is what Hitler's one-time 'blitzkrieg army' had been reduced to. Because of the shortage of tanks, Army Group North had to fight a 'poor man's war' to an even greater extent than Army Group Centre.

Under the pressure from the Soviet attacking units, Army Group North Front threatened to collapse. In the end, Gen. Friessner demanded permission to withdraw to the Marienburg Line (between the Dvina and Lake Peipus) to avoid the encirclement of his southern wing. On 23 July he received notification of his

<sup>39</sup> Carius, *Tiger im Schlamm*, 172, 176; Kleine and Kühn, *Tiger*, 204–5; Schneider, *Tiger im Kampf*, 97. In its counter-attacks, Heavy Armd. Btln.'s 2nd Company zigzagged between I and II Army Corps. The files of both corps contain several reports of this Tiger company's astonishingly high kill rates. During a brief engagement at Viški on 22 July, for example, it destroyed 14 enemy tanks; see Tätigkeitsbericht I. AK, Abt. Ia/Stopak, 22 July 1944, BA-MA RH 24-1/225. In the evening of 24 July, three Tigers in the sector of 290th Infantry Division shot down 17 enemy tanks and one assault gun; see Morgenmeldung II. AK, 25 July 1944, 06.25, BA-MA RH 24-2/277.

<sup>40</sup> The figure of 30 operational fighting vehicles and 206 assault guns applies to the reference date of 30 June; see BA-MA, Study ZA 1/2046, 708. Since then, their number had been depleted considerably by constant deployment.

<sup>41</sup> Central Archives of the Ministry of Defence of the Russian Federation (CAMO), F. 500, Op. 12459, d. 73, fo. 518: KTB HGr Nord, 26 July 1944, 00.40.

dismissal. Formally, it looked like an exchange of command with Gen. Ferdinand Schörner, since Friessner was now to take over Schörner's command of Army Group South Ukraine, but there can be no doubt that Hitler had been angered by Friessner's protests and saw Schörner as the right man to carry out his orders unquestioningly.

Hitler had given the new commander-in-chief unusually extensive powers, and Schörner used them at once to implement the withdrawal movements for which his predecessor had vainly sought permission. On 26 July the OKH was informed by Army Group North HQ that Schörner had ordered the evacuation of Daugavpils and withdrawal to the Marienburg Line. Lt.-Gen. Walther Wenck, the new chief of the OKH operations staff,<sup>42</sup> pointed out that this measure would run counter to Hitler's instructions. But the army group's chief of staff replied laconically: 'Cannot be changed. Troops already in position.'<sup>43</sup> For a short time there were tensions with the OKH's newly appointed chief of staff, Col.-Gen. Guderian, who initially departed from the operational approach of his predecessor Zeitzler, and made Hitler's ideas his own. On 21 July, a day after the attempt on Hitler's life, Guderian had already tried to get the chiefs-of-staff of the army groups to agree to hold the existing defence positions unconditionally. Lt.-Gen. Eberhard Kinzel, who was dismissed as chief of staff of Army Group North shortly afterwards, had argued uncompromisingly that such a demand would inevitably result in 'destruction of the army group'. 'The Führer', he continued, 'would thereby lose not only two armies, but Germany's eastern territories too.'<sup>44</sup> Col.-Gen. Guderian had interrupted him angrily, declaring that he would not listen to 'defeatism and pessimism'.<sup>45</sup> Guderian's remarkable behaviour was partly due to the desire to show loyalty to Hitler for appointing him chief of staff, but also to the fact that he was not yet acquainted with the specific circumstances on the eastern front. Shortly afterwards, however, Guderian did a radical about-turn, to become the 'chief advocate'<sup>46</sup> of withdrawal from the Baltic.

Schörner's unauthorized order to withdraw to the Marienburg line had saved Army Group North from collapse. Not only had the pressure from 2nd and 3rd Baltic Fronts become overwhelming, but Leningrad Front had also launched an offensive in the northern sector at Narva. The really catastrophic threat, however, was on the southern wing, where more and more armies of 1st Baltic Front were pushing westwards through the 'Baltic hole'. On 28 July they took Šiauliai and the outer districts of Jelgava. The same day, the following message was received from a German reconnaissance plane: 'Approx. 900 vehicles, including heavy tanks, advancing from

<sup>42</sup> Lt.-Gen. Wenck had been appointed as Heusinger's successor. However, his newly created post put him in command not only of the operations department but also of the organization department and Foreign Armies East, since Guderian was keen to have the whole operations administration in one pair of hands; see Guderian, *Erinnerungen eines Soldaten*, 311.

<sup>43</sup> See Haupt, *Heeresgruppe Nord*, 214; also KTB HGr Nord, 26 July 1944, BA-MA RH 19 III/314, fos. 30, 33, 35, 37.

Jelgava in a north-easterly direction towards Tukums.<sup>47</sup> This information produced a mood of panic. The German operations staffs were powerless: they had no more troops with which to influence the further course of events. Army Group North's worst fears came true on 31 July, when Soviet tanks reached the Gulf of Riga at Tukums. The army group was now enclosed on the Baltic coast, cut off from the rest of the eastern front. That same day was fateful for Army Group Centre too. It saw the fall of Kaunas, the northern cornerstone of Army Group Centre's front. The gap between the two army groups was now 120 kilometres wide. What isolation from the territory of the Reich meant for Army Group North may be judged from a technical problem of telecommunications: henceforth telephone calls between the army group's headquarters and the OKH were possible only via the Sigulda (Latvia)–Helsinki–Oslo–Berlin–Zossen civilian telephone line.<sup>48</sup>

The connection with Army Group North was restored on 20 August by Operation DOPPELKOPF. That armoured operation was carried out almost exclusively by Army Group Centre<sup>49</sup> since, given its overextended frontage, Army Group North was not in a position to assign any significant units to removal of the danger in its rear. Although the success of the operation was celebrated in due form by German propaganda, the military operations staffs were not entirely satisfied. In their opinion, Hitler had imposed the wrong operational approach, obliging them to carry out an eccentric, rather than a concentric, operation. Army Group North, situated on the periphery, should have abandoned its untenable positions and broken through to Army Group Centre, instead of which Army Group Centre had been ordered to push through to Army Group North. Thus it was the Strachwitz Group which had restored the connection with Army Group North at Tukums. As subsequent events were to show, however, the operation was only a temporary success. The narrow connecting corridor which it had established on the coast was extremely threatened and was bound to provoke the Red Army into attempting another breakthrough to cut off Army Group North definitively.

The armoured thrust by Maj.-Gen. Count Hyazinth Strachwitz was certainly a tactical feat, but it was counter-productive at the strategic level since it further strengthened Hitler's disastrous 'stand firm' mindset. As Gen. Kurt von Tippelskirch puts it, 'fate again offered the chance of a "major solution"'.<sup>50</sup> What should have been done then was to bring the mass of Army Group North back through the Tukums corridor and deploy it in the defence of East Prussia. Guderian, above all, insistently demanded the 'major solution'. But Operation DOPPELKOPF resulted in the exact opposite of what the commanders-in-chief of the two army groups had been seeking to achieve. Instead of finally transferring troops from the exposed Army Group North to Army Group Centre, Hitler sent even more units northwards. Thus Maj.-Gen. Strachwitz and his tanks were dispatched to Estonia immediately after the breakthrough at Tukums, and Army Group North was

further reinforced by 14th Armoured Division. Now at last, having been deprived of its only armoured division in June, it once again possessed a large armoured unit. The army group's command, however, was not overjoyed at the equivocal gift, which came, so to speak, as an exclamation mark emphasizing Hitler's demand for unconditional defence of the Baltic region.

### 3. THE EVACUATION OF ESTONIA

The battle for the Tukums corridor was of great importance to Army Group North. At the same time, however, it had to focus most of its attention in the opposite direction, on developments in the east, where new waves of attack threatened to smash the German units to pieces. On 24 July Leningrad Front had also opened an offensive aimed at breaking through Army Detachment Narva's positions in the isthmus between Lake Peipus and the Bay of Finland. While the Germans were forced to abandon their bridgehead on the east bank of the Narva, they managed to hold the front, though at the cost of considerable losses. The main forces deployed in that sector were Waffen SS units of volunteers from Estonia, Finland, Norway, Denmark, and Belgium, who fought bitterly. On 1 August, 2nd Baltic Front, with 390,000 men, launched a new offensive in the direction of Madona.<sup>51</sup> It was followed on 10 August by yet another offensive operation by 3rd Baltic Front, with 273,800 men, aimed at Tartu, via Võru.<sup>52</sup> A few days later, 1st Baltic Front launched a powerful attack from the south in the direction of Riga.<sup>53</sup>

On 6 August Schörner had submitted the same proposal to the OKH as his predecessor Friessner, that is, that Sixteenth and Eighteenth Armies be withdrawn to a bridgehead position at Riga. He also proposed that, at the same time, Army Detachment Narva be evacuated by sea via Tallinn.<sup>54</sup> But Hitler again refused, holding out instead the prospect of reinforcements. In view of the imminent crisis, Schörner repeated his demands in the form of an ultimatum. He announced that, in the absence of sufficient support, he would have no alternative but to order withdrawal. Hitler and the OKH were alarmed and ordered the Luftwaffe to intervene.<sup>55</sup> Several Soviet armoured units were then attacked by Group III, 2nd Ground-Attack Wing, commanded by the famous dive-bomber pilot Maj. Hans-Ulrich Rudel. In addition, 31st Infantry Division and several other units were flown to Latvia by Ju-52 transport planes. The fact that Hitler approved such major logistic operations despite the fuel shortage clearly shows the importance which

<sup>51</sup> In the course of the Madona operation (1 to 23 Aug. 1944), 2nd Baltic Front suffered 65,406 personnel losses, of which 14,669 were irretrievable; see *Grif sekretnosti sniat*, 227.

<sup>52</sup> During the Tartu operation, 3rd Baltic Front incurred 71,806 personnel losses, of which 16,292 were irretrievable; see *ibid.*

<sup>53</sup> Most of the original (i.e. first copies) of Army Group North's war diaries for the period in question are in the Russian military archives in Podolsk (CAMO), where the author was able to examine them. They are mostly identical to the copies in the German Military Archives in Freiburg (BA-MA). In what follows, the references in the footnotes, unless otherwise stated, are to the Freiburg version.

<sup>54</sup> KTB HGr Nord, 6 Aug. 1944, BA-MA RH 19 III/315, fos. 95–6.

<sup>55</sup> Köhler, 'Einsatz der Luftwaffe', 58 ff.

possession of the Baltic area had attained in his eyes. In the ongoing defensive battles the greatest threat came from 3rd Baltic Front, which had broken through Eighteenth Army's positions south-west of Pskov and was now advancing northwards via Võru, west of Lake Peipus, to get to the rear of Army Detachment Narva. The German forces narrowly managed to stop the offensive at a blocking position north of Tartu.
